

# **Traffic Optimization with DRE**

#### **Table 1: Feature History**

Feature Name	Release Information	Description
Traffic Optimization with DRE	Cisco IOS XE Release 17.5.1a Cisco vManage Release 20.5.1	This release extends the DRE functionality to Cisco SD-WAN. DRE is a compression technology that reduces the size of data transmitted over the WAN and enables more effective utilization of the WAN.
DRE Profiles	Cisco IOS XE Release 17.6.1a Cisco vManage Release 20.6.1	This feature provides the flexibility to use resources for DRE based on your connection requirements by applying profiles such as S, M, L, and XL.
UCS-E Series Server Support for Deploying Cisco Catalyst 8000V	Cisco IOS XE Release 17.6.1a Cisco vManage Release 20.6.1	This feature lets you deploy Cisco Catalyst 8000V instances, on supported routers, using the UCS-E series blade server modules. With this feature, the supported routers can be configured as integrated service nodes, external service nodes, or hybrid clusters with both internal and external service nodes.

- Supported Devices for DRE, on page 2
- Disk Recommendations for DRE, on page 3
- Supported DRE Profiles, on page 3
- Supported UCS E-Series Server Modules for Deploying Cisco Catalyst 8000V, on page 6
- Restrictions for DRE, on page 6
- Information About DRE, on page 7
- Configure DRE, on page 9
- Configure Cisco Catalyst 8000V on UCS-E Series Server Modules for DRE Optimization, on page 12
- Configure DRE Using the CLI, on page 16
- Monitor DRE, on page 17
- Monitor and Troubleshoot DRE Using CLI, on page 18

# **Supported Devices for DRE**

#### **Integrated Service Nodes and Controllers**

Devices	Release	Memory Requirements
Cisco Catalyst 8300 Series Edge Platforms:  • C8300-1N1S-6T  • C8300-1N1S-4T2X  • C8300-2N2S-6T  • C8300-2N2S-4T2X	Cisco IOS XE Release 17.5.1a and later	• RAM: 16 GB • Storage: 600 GB
Cisco Catalyst 8200 Series Edge Platforms:  • C8200-1N-4T	Cisco IOS XE Release 17.6.1a and later	• RAM: 16 GB • Storage: 600 GB
Cisco Catalyst 8000V Edge Software (Cisco Catalyst 8000V)	Cisco IOS XE Release 17.5.1a and later	• RAM: 16 GB • Storage: 600 GB • vCPUs: 8

#### **External Service Nodes and Controllers**

Devices	Release	Memory Requirements
Cisco Catalyst	Cisco IOS XE Release 17.6.1a	• RAM: 32 GB • Storage: 2 TB • vCPUs: 16
8000V	Cisco IOS XE Release 17.5.1a	• RAM: 16 GB • Storage: 600 GB • vCPUs: 8
C8500L-8S4X	Cisco IOS XE Release 17.6.1a	• RAM: 32 GB • Storage: 2 TB
COSOVE OUTA	Cisco IOS XE Release 17.5.1a	• RAM: 16 GB • Storage: 600 GB

### **Disk Recommendations for DRE**

We recommend using solid-state drive (SSD) disks for deploying DRE as well as other AppQoE services.

Configure the following recommended parameters from Cisco Integrated Controller Manager (IMC). Ensure that you configure these before installing the hypervisor because some of the settings may require disk formatting.

**Table 2: Recommended Disk Parameters** 

Parameter	Value
RAID level	RAID10
Read Policy	Always Read Ahead
Disk Cache Policy	Disabled
Write Policy	Write Back Good BBU
Strip Size	256 KB
I/O Cache Policy	Direct

#### Disk Provisioning Recommendation for Cisco Catalyst 8000V Deployment

While deploying Cisco Catalyst 8000V instances, choose Thick Provision Eager Zeroed as the disk format. For information on deploying Cisco Catalyst 8000V instances on supported hypervisors, see:

- ESXi
- KVM

# **Supported DRE Profiles**

The following table provides this information:

- Devices that support DRE feature and their default DRE profiles.
- DRE profiles supported on the devices.
- The UTD profile supported along with the DRE profile size configured.
- Minimum resource recommendation for the supported DRE profiles.
- The maximum connections that the DRE profiles provide on the supported devices.
- The FanOut values that correspond to the DRE profiles configured on the devices. FanOut refers to the number of peers that a device can communicate with to form the DRE service.

Table 3: DRE Profiles, Resource Requirements, and Supported Connections and FanOut

Devices and Default DRE	DRE Profiles	Supported	Minimum Deployment Recommendations		Maximum	FanOut
Profile		UTD Profile	RAM	Disk	Connections	
C8200-1N-4T (S)	S	_	8 GB	120 GB	750	35
C8300-2N2S-6T (M)	S	_	8 GB	120 GB	750	35
C8300-INIS-4T2X (M) C8300-INIS-6T (M)	M	_	8 GB	280 GB	5000	70
	S	S, M	8 GB	120 GB	750	35
C8300-2N2S-4I2X (M)	M	S	8 GB	280 GB	5000	70
,	L	_	16 GB	500 GB	10,000	256
	S	_	8 GB	120 GB	750	35
C8500L-8G4X	M	_	8 GB	280 GB	5000	70
(M)	L	_	32 GB	500 GB	22,000	256
	XL	_	32 GB	1600 GB	36,000	256
Cisco Catalyst 8000V—6 core (S)	S	_	8 GB	120 GB	750	35
Cisco Catalyst	S	_	8 GB	120 GB	750	35
8000V—8 core (S)	M	_	8 GB	280 GB	5000	70
Ciggo Cotalyant	S	_	8 GB	120 GB	750	35
Cisco Catalyst 8000V—12	M	_	8 GB	280 GB	5000	70
core (S)	L	_	16 GB	500 GB	10,000	256
	S	_	8 GB	120 GB	750	35
Cisco Catalyst	M	<u> </u>	8 GB	280 GB	5000	70
8000V—16 core (S)	L	_	32 GB	500 GB	22000	256
	XL	_	32 GB	1600 GB	36000	256

Note

UCS E-Series servers only support 6 core, 8 core, and 12 core Cisco Catalyst 8000V instances. For more information, see Supported UCS E-Series Server Modules for Deploying Cisco Catalyst 8000V.

The following table provides this information:

• The memory, disk, and cache allocated based on the DRE profile configured on the supported devices.

Table 4: Profile-wise Resource Allocation

Devices and Default DRE Profile	DRE Profiles	Resource Allo	Resource Allocation (GB)			
		Memory	Disk	Cache Size		
C8200-1N-4T (S)	S	2	80	60		
C8300-2N2S-6T (M)	S	2	80	60		
C8300-1N1S-4T2X (M) C8300-1N1S-6T (M)	M	4	250	230		
	S	2	80	60		
C8300-2N2S-4T2X (M)	M	4	250	230		
	L	8	480	460		
	S	2	80	60		
C05001 0C4V (M)	M	4	250	230		
C8500L-8G4X (M)	L	8	480	460		
	XL	20	1200	1180		
Cisco Catalyst 8000V—6 core (S)	S	2	80	60		
Cisco Catalyst 8000V—8	S	2	80	60		
core (S)	M	4	250	230		
	S	2	80	60		
Cisco Catalyst 8000V—12 core (S)	M	4	250	230		
	L	8	480	460		
	S	2	80	60		
Cisco Catalyst 8000V—16	M	4	250	230		
core (S)	L	8	480	460		
	XL	20	1200	1180		

Note

UCS E-Series servers only support 6 core, 8 core, and 12 core Cisco Catalyst 8000V instances. For more information, see Supported UCS E-Series Server Modules for Deploying Cisco Catalyst 8000V.

# Supported UCS E-Series Server Modules for Deploying Cisco Catalyst 8000V

Starting from Cisco IOS XE Release 17.6.1a, Cisco Catalyst 8000V instances can be deployed on UCS E-Series server modules that reside in Cisco 4000 Series Integrated Services Routers and Cisco Catalyst 8300 Series Edge Platforms.

Device Family	Device Model	Supported UCS-E Module and DRE Profiles	
	Cisco 4461	UCS-E180D-M3/K9 (S, M)	
		UCS-E1120D-M3/K9 (S, M, L)	
Cisco 4000 Series	Cisco 4451	UCS-E180D-M3/K9 (S, M)	
Integrated Services Routers		UCS-E1120D-M3/K9 (S, M, L)	
	Cisco 4351	UCS-E160S-M3/K9 (S)	
	Cisco 4331	UCS-E160S-M3/K9 (S)	
	C8300-2N2S-4T2X	UCS-E180D-M3/K9 (S, M)	
		UCS-E1120D-M3/K9 (S, M, L)	
Cisco Catalyst 8300	C8300-2N2S-6T	UCS-E180D-M3/K9 (S, M)	
Series Edge Platforms		UCS-E1120D-M3/K9 (S, M, L)	
	C8300-1N1S-4T2X	UCS-E160S-M3/K9 (S)	
	C8300-1N1S-6T	UCS-E160S-M3/K9 (S)	

### **Restrictions for DRE**

- DRE is a dual-side solution. Therefore, flow symmetry is required to configure DRE optimization. DRE isn't supported for asymmetric flows.
- DRE is supported only if integrated service nodes or external service nodes are deployed at both ends of a Cisco SD-WAN overlay tunnel.
- DRE isn't supported on devices that are configured as service controllers.
- Starting from Cisco IOS XE Release 17.6.1a the default mode for SSL proxy is single-side. However, because DRE is a dual-side solution, it requires SSL on both, the sending and the receiving end, of the traffic. To optimize SSL performance for this dual-side use case, enable dual-side SSL optimization

using the dual-side optimization enable command in Cisco vManage CLI templates. We don't recommended enabling dual-side SSL if you use GRE tunnels over the WAN.

#### Restrictions for Installing Cisco Catalyst 8000V on UCS E-Series Servers

Note

UCS E-Series Server support is applicable for installing Cisco Catalyst 8000V as an external service node starting from Cisco IOS XE Release 17.6.1a only.

- Only the VMware vSphere ESXi (release 6.7) hypervisor is supported for deploying Cisco Catalyst 8000V instances on UCS-E Series server modules.
- Hyperthreading should be disabled on VMware vSpehere ESXi hypervisor.
- Hyperthreading is not supported for the app-heavy core allocation profile for Cisco Catalyst 8000V deployed on UCS E-Series servers.
- Cisco Catalyst 8000V instances on UCS-E series server modules can only have 6, 8, or 12 cores.
- Cisco Catalyst 8000V instances on UCS-E series server modules should be configured with the app-heavy core allocation profile to enable them to run the DRE service.
- Only one Cisco Catalyst 8000V instance can be installed on a supported UCS E-Series server.
- To change the DRE profile applied to a device, you need to uninstall DRE, reinstall it, and then apply the new DRE profile.

Note

Uninstalling DRE results in loss of cache data.

### Information About DRE

### **Overview of DRE**

Data Redundancy Elimination (DRE) is a compression technology that reduces the size of data transmitted over the WAN. DRE reduces the size of transmitted data by removing redundant information before sending the data stream over the WAN. The DRE compression scheme is based on a shared cache architecture where each peer involved in compression and decompression shares the same redundancy cache. With the integration of DRE with Cisco SD-WAN, DRE replaces repeated data in the stream with a much shorter reference, and then sends the shortened data stream across the SD-WAN overlay. The receiving end uses its local redundancy cache to reconstruct the data stream before passing it along to the destination client or server.

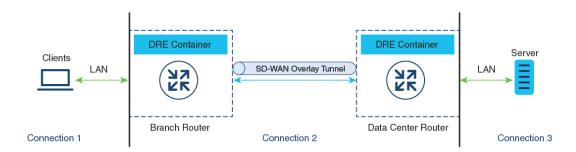

Note

Cisco IOS XE SD-WAN devices need to be deployed at both ends of the Cisco SD-WAN overlay tunnel.

#### **How DRE and TCP Optimization Work Together**

Figure 1: Interception of TCP Traffic

When DRE is configured, the TCP traffic is intercepted and it's separated into three connections:

Connection Type	Network
Client to the branch Cisco IOS XE SD-WAN device: This connection exists in Local Area Network (LAN)	LAN
Branch router to the data center router	Through Cisco SD-WAN overlay tunnel
Remote branch or data center router to the server	LAN

TCP connections in the Local Area Network (LAN) continue to send the original data. However, TCP connections through the Cisco SD-WAN overlay tunnel send data that is compressed by DRE. The DRE container in the Cisco IOS XE SD-WAN device at one side of the tunnel compresses the data before it's sent over the overlay tunnel. The DRE container in the Cisco IOS XE SD-WAN device at the other side of the tunnel decompresses the data before it's sent to the server at the remote branch or data center side.

#### **Components of DRE**

**DRE Cache:** DRE cache uses secondary storage so that it can store a large amount of data. DRE cache is stored on both sides of the WAN and is used by edge devices to decompress the data. DRE cache in both devices (branch and data center) is synchronized, which means that if a chunk signature is present on one side, the other side has it too.

**DRE Compression:** DRE uses the Lempel-Ziv-Welch (LZW) compression algorithm for compressing data. DRE operates on large streams of data, typically tens to hundreds of bytes or more, and maintains a much larger compression history.

### **Overview of DRE Profiles**

DRE profiles is a feature introduced in Cisco IOS XE Release 17.6.1a. This feature provides the flexibility to allocate resources to the DRE service based on the size of your branches and the number of connections required. DRE profiles are combinations of resource requirements and allocations that enable resource assignment based on your connection requirements.

The following DRE profiles are supported:

- Small (S)
- Medium (M)
- Large (L)
- Extra-large (XL)

To see the profiles supported on the devices that support the DRE feature, see the *Supported DRE Profiles* section in this chapter.

### **UCS-E Series Server Support for Deploying Cisco Catalyst 8000V**

Starting from Cisco IOS XE Release 17.6.1a, Cisco Catalyst 8000V instances can be configured as external service nodes on supported UCS E-Series server modules. These server modules reside in Cisco 4000 Series Integrated Services Routers (Cisco 4000 Series ISR) and Cisco Catalyst 8000 Series Edge Platforms. These routers come with integrated service nodes. However, you can use supported UCS E-Series servers to deploy Cisco Catalyst 8000V instances on these routers, therefore enabling them to act as hybrid clusters with integrated service nodes and external service nodes. This capability ensures that AppQoE services such as DRE, that require higher CPU, can run on routers that otherwise have lower CPU and RAM.

#### How Cisco Catalyst 8000V Works on Cisco UCS E-Series Servers

- You can install VMware vSphere ESXi 6.7 hypervisors on UCS-E series server modules that reside in Cisco 4000 Series ISR and Cisco Catalyst 8000 Series Edge Platforms.
- You can then install Cisco Catalyst 8000V on these servers.
- The installed Cisco Catalyst 8000V instances should be configured with the app-heavy profile. This ensures that more cores are allocated to the service plane. The app-heavy profile separates service plane and data plane cores, therefore improving service plane performance.

# **Configure DRE**

### **Upload DRE Container Image to the Software Repository**

#### **Prerequisite**

Download the DRE container image from Cisco software downloads page.

#### Upload the Container Image to Cisco vManage

- **1.** From the Cisco vManage menu, choose **Maintenance** > **Software Repository**.
- 2. Click Virtual Images.
- 3. Under Upload Virtual Image, choose vManage.
- **4.** Browse to the downloaded container image on your local machine, and then click **Upload**. When the upload is complete, the image appears in the **Virtual Images** window.

#### **Upgrade DRE Container Virtual Image**

To upgrade the container image, see Upgrade Software Image on a Device.

### **Enable DRE Optimization**

#### Configure AppQoE Template for DRE

- **1.** From the Cisco vManage menu, choose **Configuration** > **Templates**.
- 2. Click **Feature** and then click **Add Template**.
- **3.** From the **Selected Devices** list, choose a device that is supported for DRE.
- 4. Under Other Templates, click AppQoE.
- 5. Enter Template Name and Description.
- **6.** Choose on of the following device roles:
  - **Controller:** Choose **Controller** if you want to configure the device as a controller with an integrated service node. For devices that support an integrated service node, the **Enable** check-box is available. This option is grayed out for devices that don't support the integrated service node functionality.
  - **Service Node:** Choose the **Service Node** option if you want to configure the device as an external service node. The **External Service Node** check box is enabled by default.

The **Service Node** option is not visible if the device that you chose cannot be configured as an external service node.

7. Under Advanced, enable DRE Optimization.

Note

The Resource Profile field is applicable for DRE profiles. The DRE profiles feature was introduced in Cisco IOS XE Release 17.6.1a. Therefore, this option is not available in previous releases.

(Optional) In the **Resource Profile** field, choose **Global** from the drop-down list. Next, choose a profile size from the options available.

If you don't configure the **Resource Profile**, the default DRE profile size for the device is applied. For more information on the default profiles, see Supported DRE Profiles.

9. (Optional) To optimize HTTPS, FTPS, or any other encrypted traffic, enable SSL Decryption.

Note

If you enable **SSL Decryption**, you must configure an SSL/TLS decryption security policy so that the TLS service can decrypt the traffic before it is sent to the DRE container, and then encrypted again after the traffic is optimized.

10. Click Save.

### **Create Security Policy for SSL Decryption**

This procedure applies if you enable SSL decryption at the time of configuring the AppQoE feature template to enable DRE optimization.

#### Configure CA for SSL Proxy

To configure certificate authority for SSL proxy, see Configure CA for SSL/TLS Proxy.

#### **Configure Security Policy for SSL Decryption**

- 1. From the Cisco vManage menu, choose **Configuration** > **Security**.
- 2. Click Add Security Policy.
- 3. Choose Application Quality of Experience and click Proceed.
- 4. Click Add TLS/SSL Decryption Policy and choose Create New.
- 5. Click **Enable SSL Decryption**. Alternatively, toggle the **SSL Decryption** option to enable it.
- **6.** Enter **Policy Name** and other requested details.
- 7. Click **Save TLS/SSL Decryption Policy**. Your new policy appears in the window.
- 8. Click Next.
- 9. Enter Security Policy Name and Security Policy Description.
- 10. To view the CLI configuration for the policy, click **Preview**. Otherwise, click **Save**.

### **Update Device Template**

For the DRE configuration to take effect, attach the AppQoE policy with DRE enabled, to the device template of the device for which you created the AppQoE policy with DRE.

- 1. To create a new device template or update an existing one, see Create a Device Template from Feature Templates
- **2.** In the **Additional Templates** area, for **AppQoE**, choose the template you created in the Configure AppQoE Template for DRE section.

Note

To deactivate the DRE service, detach the AppQoE template from the device template.

### Create a Centralized Policy for TCP and DRE Optimization

- 1. From the Cisco vManage menu, choose **Configuration** > **Policies**.
- 2. Under Centralized Policy, click Add Policy.

**Note** For more information, see Configure Centralized Policies Using Cisco vManage.

- **3.** In the policy configuration wizard, click **Next** until you are on the **Configure Traffic Rules** window.
- 4. Click Traffic Data, and then click Add Policy.
- 5. Enter a name and description for your policy.
- Click Sequence Type and from the Add Data Policy dialog box, choose Custom. 6.
- 7. Click Add Sequence Rule.
- 8. Under the **Match** option, you can choose any match conditions that are applicable to a data policy, such as, Source Data Prefix, Application/Application Family List, and so on.
- 9. Under the Actions option, choose Accept. Choose TCP Optimization and DRE Optimization from the options.

Not all actions are available for all match conditions. The actions available to you depend on the match conditions you choose. For more information, see Configure Traffic Rules.

- Click Save Match And Actions.
- 11. Click Save Data Policy.
- **12.** Apply the centralized data policy to the edge devices at the sites between which DRE optimization should be triggered for traffic flows.
- **13.** Activate the centralized policy.

# Configure Cisco Catalyst 8000V on UCS-E Series Server Modules for DRE Optimization

From Cisco IOS XE Release 17.6.1a, Cisco Catalyst 8000V instances can be installed as external service nodes on supported UCS E-Series servers that reside in specific router models. This functionality enables the routers to act as hybrid clusters with integrated as well as external service nodes.

#### **Configuration Workflow**

- 1. Configure the UCS E-Series server on the supported router.
- 2. Deploy Cisco Catalyst 8000V on the supported UCS E-Series server.
- 3. In Cisco vManage, configure AppQoE feature template for Cisco Catalyst 8000V instances on UCS E-Series servers.
- 4. In Cisco vManage, configure the AppQoE feature template for the service controllers, and add additional configuration using Cisco vManage CLI template and CLI Add-on feature template.

### **Configure UCS E-Series Server**

#### **Before You Begin**

Insert the UCS E-Series server module into the supported device and connect two interfaces (TE2 and TE3) from the front panel. For more information, see UCS-E Series Servers Hardware Installation Guide.

#### **Configure UCS E-Series Server on the Supported Router**

The following is sample configuration to enable UCS E-Series server on a supported router:

```
Device(config) # ucse subslot 1/0 Device(config-ucse) # imc access-port shared-lom <ge1/te2/te3> Device(config-ucse) # imc ip address 10.x.x.x 255.x.x.x default-gateway 10.x.x.x Device(config-ucse) # exit Device(config) # interface ucse1/0/0 Device(config-if) # ip address x.x.x.1 255.255.255.0
```

### **Deploy Cisco Catalyst 8000V on UCS E-Series Server**

#### **Before You Begin**

- Install the hypervisor on the UCS-E server module.
- Download the Cisco Catalyst 8000V 17.6.1 OVA file from the Cisco software download page for Cisco IOS XE Release 17.6.1a, and install it..

#### Configure IP Addresses for Cisco Catalyst 8000V

The following is a sample for configuring IP addresses for Cisco Catalyst 8000V on the UCS E-Series server:

### Configure AppQoE Feature Template for Cisco Catalyst 8000V Instances

#### **Before You Begin**

Cisco Catalyst 8000V instances on UCS E-Series servers should be configured with the app-heavy resource allocation profile. This profile allows the Cisco Catalyst 8000V instances to participate in DRE optimization.

The following example shows how to configure a device as app-heavy using the Cisco vManage CLI Add-on feature template:

```
Device(config) # platform resource app-heavy
```

#### **Enable DRE Optimization for Cisco Catalyst 8000V Instances**

- **1.** From the Cisco vManage menu, choose **Configuration** > **Templates**.
- 2. Click Feature and then click Add Template.
- 3. From the Selected Devices list, choose C8000v.
- 4. Under Other Templates, click AppQoE.
- 5. Enter Template Name and Description.
- **6.** Choose the **Service Node** option.
- 7. Under the Advanced section, enable DRE Optimization.
- 8. Click Save.

### **Configure the Controller Cluster Types**

#### Add UCS E-Series Server Configuration in Cisco vManage

In Cisco vManage, create a CLI Add-on feature template and update it with UCS E-Series server configuration.

The following is sample configuration for UCS E-Series servers that can be added to the CLI Add-on feature template:

```
ucse subslot 1/0
imc access-port shared-lom te2
imc ip address 10.x.x.x 255.x.x.x default-gateway 10.x.x.x
interface ucse1/0/0
vrf forwarding 5
```

#### Option 1: Configure Service Controller as the Cluster Type

- 1. From the Cisco vManage menu, choose **Configuration** > **Templates**.
- 2. Click Feature and then click Add Template.
- In the Selected Devices list, choose the router that has Cisco Catalyst 8000V deployed on its UCS E-Series server.
- 4. Under Other Templates, click AppQoE.
- 5. Enter **Template Name** and **Description**.
- **6.** Leave the **Integrated Service Node** check box unchecked.
- 7. In the **Controller IP address** field, enter the IP address of the controller.
  - Alternatively, choose **Default** from the drop-down list. The AppQoE controller address is chosen by default.
- **8.** In the **Service VPN** field, enter the service VPN number.
  - Alternatively, choose **Default** from the drop-down list. The AppQoE service VPN is chosen by default.
- In the Service Nodes area, click Add Service Nodes to add service nodes to the AppQoE service node group.

- 10. Click Save.
- 11. Attach the following to the device template of the router that has Cisco Catalyst 8000V deployed on its UCS E-Series server:
  - CLI Add-on feature template with the UCS E-Series server configuration
  - AppQoE feature template

For the DRE service to be enabled, bring up DRE on the Cisco Catalyst 8000V instance configured as the integrated service node separately. For more information, see Enable DRE Optimization.

#### Option 2: Configure Hybrid as the Cluster Type

Routers that have Cisco Catalyst 8000V instances deployed on their UCS E-Series servers can be configured with cluster types as service-controllers or hybrid.

- **1.** From the Cisco vManage menu, choose **Configuration** > **Templates**.
- 2. Click Feature and then click Add Template.
- **3.** From the **Selected Devices** list, choose the router that has Cisco Catalyst 8000V deployed on its UCS E-Series server.
- Under Other Templates, click AppQoE.
- 5. Enter Template Name and Description.
- 6. For the Integrated Service Node field, check the Enable check box.
- 7. Click Save.
- 8. Create a CLI template to add the cluster-type hybrid configuration.

The following is a sample configuration to configure the cluster type as hybrid on the router that has Cisco Catalyst 8000V deployed on its UCS E-Series server:

```
interface VirtualPortGroup2
vrf forwarding 5
 ip address 192.168.2.1 255.255.255.0
interface ucse1/0/0
vrf forwarding 5
ip address 10.40.17.1 255.255.255.0
service-insertion service-node-group appqoe SNG-APPQOE
 service-node 192.168.2.2
service-insertion service-node-group appqoe SNG-APPQOE1
service-node 10.40.17.5
service-insertion appnav-controller-group appqoe ACG-APPQOE
appnav-controller 10.40.17.1 vrf 5
service-insertion service-context appgoe/1
cluster-type hybrid
appnav-controller-group ACG-APPQOE
 service-node-group SNG-APPQOE
 service-node-group SNG-APPQOE1
vrf global
enable
```

- **9.** Attach the following to the device template of the router that has Cisco Catalyst 8000V deployed on its UCS E-Series server:
  - AppQoE feature template
  - CLI Add-on feature template with the UCS E-Series server configuration
  - CLI template with the hybrid cluster configuration

For the DRE service to be enabled, bring up DRE on the Cisco Catalyst 8000V instance configured as integrated service node separately. For more information, see Enable DRE Optimization.

## **Configure DRE Using the CLI**

#### **Install DRE Container Package**

To install the DRE container package, use the following command:

```
app-hosting install appid < name > package bootflash:<name>.tar
```

#### **Configure Virtual Port Group and Map it to DRE**

The following example shows how to configure a virtual port group and map it to the DRE service, and then start the DRE service:

```
Device(config) # interface VirtualPortGroup 0
Device(config-if) # no shutdown
Device(config-if) # ip address 192.0.2.1 255.255.252
Device(config-if) # app-hosting appid dre

Device(config-app-hosting) # app-vnic gateway0 virtualportgroup 0 guest-interface 1
Device(config-app-hosting-gateway) # guest-ipaddress 192.0.2.2 netmask 255.255.252
Device(config-app-hosting-gateway) # start
```

#### Configure Virtual Port Group and Map it to DRE, and Assign a DRE Profile

Note

The DRE Profiles feature is available starting from Cisco IOS XE Release 17.6.1a only. This feature is not applicable to releases before Cisco IOS XE Release 17.6.1a.

The following example shows how to configure a virtual port group, map it to the DRE service and assign a DRE profile to the device. This example shows the small (S) profile being assigned.

```
Device(config)# interface VirtualPortGroup 0
Device(config-if)# no shutdown
Device(config-if)# ip address 192.0.2.1 255.255.252
Device(config-if)# app-hosting appid dre
```

```
Device(config-app-hosting)# app-resource profile-package small
```

```
Device(config-app-hosting) # app-vnic gateway0 virtualportgroup 0 guest-interface 1
Device(config-app-hosting-gateway) # guest-ipaddress 192.0.2.2 netmask 255.255.252
Device(config-app-hosting-gateway) # start
```

#### **Activate DRE Service**

The following example shows how to activate DRE service for the application named Bangalore:

Device# app-hosting activate appid Bangalore

Note

Use the **app-hosting activate appid** command if you've already configured the DRE application, but haven't enabled it. Alternatively, you can use the **start** command in application hosting gateway configuration mode, as shown in the example in the preceding section.

#### **Uninstall DRE**

Follow these steps to deactivate and uninstall the DRE service.

1. Use the following command in privileged EXEC mode to stop the DRE service.

```
Device# app-hosting stop appid Bangalore
```

In this example Bangalore is the name of the DRE application to be stopped.

2. Use the following command in privileged EXEC mode to deactivate the DRE service.

```
Device# app-hosting deactivate appid Bangalore
```

In this example Bangalore is the name of the DRE application to be deactivated.

3. Use the following command in privileged EXEC mode to uninstall the DRE service.

```
Device# app-hosting uninstall appid Bangalore
```

In this example Bangalore is the name of the DRE application to be uninstalled.

### **Monitor DRE**

You can monitor the traffic or applications optimized by DRE using Cisco vManage.

- 1. From the Cisco vManage menu, choose **Monitor** > **Devices**.
  - Cisco vManage Release 20.6.x and earlier: From the Cisco vManage menu, choose **Monitor** > **Network**.
- 2. Click the hostname of the device you want to monitor.
- 3. Under Service, choose AppQoE DRE Optimization.
- 4. Choose Optimized Traffic or Application, depending on what you want to monitor.
- **5.** Choose **Controller** or **Service Node**.

If the chosen device has an integrated service node, you can view the data for either the controller role or the service node role. If the chosen device is an external AppQoE service node, you can view the monitoring data for the external service node, as well as the controller that it's connected to.

#### **Chart and Table View Options**

The monitoring data for your selected device displays in the form of a chart, followed by a table. You can view the data in form of a graph or bar chart by toggling between the two options.

- From the Chart Options drop-down list, you can view the data by Bytes or Percentage Reduction.
- You can filter the data for a specified time range: (1h, 3h, 6h, and so on), or click **Custom** to define a time range.

# **Monitor and Troubleshoot DRE Using CLI**

#### **DRE Optimization Status**

The following is a sample output of the **show sdwan appqoe dreopt status** command:

Device# show sdwan appqoe dreopt status

DRE ID : 52:54:dd:d0:e2:8d-0176814f0f66-93e0830d

: Active

: 91%

DRE uptime : 18:27:43

Health status : GREEN

Health status change reason : None

Last health status change time : 18:25:29

Last health status notification sent time : 1 second

Disk latency : 16 ms

Active alarms:

None

Configuration:

DRE cache status

Disk cache usage

Profile type : Default

Maximum connections : 750

Maximum fanout : 35

Disk size : 400 GB

Memory size : 4096 MB

```
CPU cores : 1
Disk encryption : ON
```

To view the status in more detail, use the **show sdwan appqoe dreopt status detail** command.

#### Device# show sdwan appqoe dreopt statistics detail

```
Total connections
