CONTROL FROM ANYWHERE

Flexibility to automate, monitor, or control climate settings remotely with the Nexia mobile app.

Trane® XL824

Now ENERGY STAR® certified, the XL824 thermostat is powered by cloud-based learning software that saves energy without sacrificing home comfort.

This smart thermostat comes with Nexia® built-in, bringing integrated smart home comfort to your fingertips and allowing you to remotely control your home and energy use. It's easily accessible from a smartphone, tablet or computer, which makes adjusting the temperature for your family's comfort a breeze.

WHOLE SYSTEM HEALTH

As a manufacturer of HVAC equipment with over 100 years of experience, Trane® brings more expertise to smart thermostats. The XL824, with Nexia® Diagnostics, analyzes not only how your thermostat is controlling your HVAC equipment but also has the ability to determine if issues need attention with your indoor or outdoor equipment.

The newest feature, Dealer Remote Access, allows you to grant limited access to your connected control so that your HVAC dealer or technician can remotely access it. They can then view, edit and adjust your settings if necessary. This offers you the convenience and flexibility to avoid any unnecessary service appointments.

- ✓ ENERGY STAR® Certified*
*824B model only
- ✓ 4.3" Diagonal Color Touchscreen
- ✓ Indoor relative humidity display
- ✓ Built-in Nexia Bridge
- ✓ Wi-Fi or Ethernet Connectivity

WIRELESS ROOM SENSORS

Adding wireless temperature and humidity sensors is a great way to take advantage of connected controls and to enhance comfort.

Sensors pair with the thermostat's built in Nexia bridge, and can be placed in rooms where you want to be sure the climate is just right!
