# INTELLIGENT PROTECTION

At Bosch Professional we develop and manufacture power tools with integrated, active PROtection features to reduce the risk of injury and exposure to hazards. This provides you with the best performance even under the toughest conditions.

## KickBack Control

The built-in sensor detects quick rotation reaction forces and if the device is blocked, the motor is shut down immediately and the LED flashes white. This stops tools going out of control, protecting against injury.

## Drop Control

If the tool is dropped on the floor, the built-in sensor detects the impact. Immediately, the motor is shut down, the disc is braked and the user interface lights up in red.

## Vibration Control

In a reciprocating saw, the motor moves the stroke rod with the saw blade and causes vibrations.

By adding a counterweight that moves in the opposite direction and balances the movement of the stroke rod, vibrations are significantly reduced.
