# **Laboratories Introduction**

SIEMIC, headquartered in the heart of Silicon Valley, with superior facilities in US and Asia, is one of the leading independent testing and certification facilities providing customers with one-stop shop services for Compliance Testing and Global Certifications.

In addition to testing and certification, SIEMIC provides initial design reviews and compliance management throughout a project. Our extensive experience with China, Asia Pacific, North America, European, and International compliance requirements, assures the fastest, most cost effective way to attain regulatory compliance for the global markets.

# **Accreditations for Conformity Assessment**

# 4. Equipment under Test (EUT) Information

| Description of | EUT: | Tablet PC |
|----------------|------|-----------|
|                |      |           |

Main Model: A725

Serial Model: A721,A722,A723,A724,A726,A727,A728,A729

Date EUT received: July 21, 2016

Test Date(s): July 22 to August 05, 2016

Equipment Category : DSS

ntenna Gain: Bluetooth/BLE/WIFI: 0dBi

Antenna Type: PIFA antenna

802.11b/g/n: DSSS, OFDM

Type of Modulation: Bluetooth: GFSK, π /4DQPSK, 8DPSK

**BLE: GFSK** 

WIFI: 802.11b/g/n(20M): 2412-2472 MHz RF Operating Frequency (ies):

Bluetooth& BLE: 2402-2480 MHz

Max. Output Power: 4.068dBm

WIFI:802.11b/g/n(20M): 13CH

Number of Channels: Bluetooth: 79CH

BLE: 40CH

Port: Earphone Port, USB Port, SD Card Port

| Test Report | 16070822-FCC-R1 |
|-------------|-----------------|
| Page        | 7 of 59         |

Adapter:

Model:LFS0501500D-A8S

Input: AC 100-240V~50/60Hz;0.5A

Input Power:
Output: DC 5.0V,1500mA

Battery:

Spec: 3.7V,2500mAh(9.25Wh)

Trade Name : AOC

FCC ID: 2AEB5-A725

| Test Report | 16070822-FCC-R1 |

# 5. Test Summary

The product was tested in accordance with the following specifications.

All testing has been performed according to below product classification:

| FCC Rules                    | Description of Test                 | Result     |
|------------------------------|-------------------------------------|------------|
| §15.203                      | Antenna Requirement                 | Compliance |
| §15.247(a)(1)                | Channel Separation                  | Compliance |
| §15.247(a)(1)                | 20 dB Bandwidth                     | Compliance |
| §15.247(b)(1)                | Peak Output Power                   | Compliance |
| §15.247(a)(1)(iii)           | Number of Hopping Channel           | Compliance |
| §15.247(a)(1)(iii)           | Time of Occupancy (Dwell Time)      | Compliance |
| §15.247(d)                   | Band Edge& Restricted Band          | Compliance |
| §15.207(a)                   | AC Line Conducted Emissions         | Compliance |
| §15.205, §15.209, §15.247(d) | Radiated Emissions& Restricted Band | Compliance |

### **Measurement Uncertainty**

| Emissions                                 |   |               |  |
|---|---|---------------|--|
| Test Item                                 | Description   | Uncertainty   |  |
| Band Edge and Radiated Spurious Emissions | Confidence level of approximately 95% (in the case where distributions are normal), with a coverage factor of 2 (for EUTs < 0.5m X 0.5m X 0.5m) | +5.6dB/-4.5dB |  |
| -   | -   | -             |  |

|-------------|-----------------|
| Page        | 9 of 59         |

### 6. Measurements, Examination And Derived Results

### 6.1 Antenna Requirement

#### Applicable Standard

According to § 15.203, an intentional radiator shall be designed to ensure that no antenna other than that furnished by the responsible party shall be used with the device. The use of a permanently attached antenna or of an antenna that uses a unique coupling to the intentional radiator shall be considered sufficient to comply with the provisions of this section. The manufacturer may design the unit so that a broken antenna can be replaced by the user, but the user of a standard antenna jack or electrical connector is prohibited. The structure and application of the EUT were analyzed to determine compliance with section §15.203 of the rules. §15.203 state that the subject device must meet the following criteria:

- a. Antenna must be permanently attached to the unit.
- b. Antenna must use a unique type of connector to attach to the EUT.

Unit must be professionally installed, and installer shall be responsible for verifying that the correct antenna is employed with the unit.

And according to FCC 47 CFR section 15.247 (b), if the transmitting antennas of directional gain greater than 6dBi are used, the power shall be reduced by the amount in dB that the directional gain of the antenna exceeds 6 dBi.

#### Antenna Connector Construction

The EUT has 1 antennas:

A permanently attached PIFA antenna for Bluetooth/BLE/WIFI, the gain is 0dBi.

The antenna meets up with the ANTENNA REQUIREMENT.

Result: Compliance.

| Test Setup        |   |  |  |  |  |  |
| Test<br>Procedure | The test follows FCC Public Notice DA 00-705 Measurement Guidelines.  Use the following spectrum analyzer settings:  - Span = approximately 2 to 3 times the 20 dB bandwidth, centered on a hopping channel  - RBW ≥ 1% of the 20 dB bandwidth  - VBW ≥ RBW  - Sweep = auto  - Detector function = peak  - Trace = max hold.  - The EUT should be transmitting at its maximum data rate. Allow the trace to stabilize. Use the marker-to-peak function to set the marker to the peak of the emission. Use the marker-delta function to measure 20 dB down one side of the emission. Reset the marker- |  |  |  |  |  |
|                   |   | delta function, and move the marker to the other side of the emission, until it is (as close as possible to) even with the |  |  |  |  |

| Tested By:           | Loren Luo       |

# Requirement(s):

| Spec                   | Item  | Requirement   | Applicable |
|------------------------|---|---|------------|
| §15.247(a)<br>(1)(iii) | a)  | In any 100 kHz bandwidth outside the frequency band in which the spread spectrum or digitally modulated intentional radiator is operating, the radio frequency power that is produced by the intentional radiator shall be at least 20 dB below that in the 100 kHz bandwidth within the band that contains the highest level of the desired power, based on either an RF conducted or a radiated measurement, provided the transmitter demonstrates compliance with the peak conducted power limits. | V          |
| Test Setup             | Ant. Tower  Support Units  Turn Table  Ground Plane  Test Receiver  |   |            |
| Test<br>Procedure      | The test follows FCC Public Notice DA 00-705 Measurement Guidelines.  Radiated Method Only  1. Check the calibration of the measuring instrument using either an internal calibrator or a known signal from an external generator.  2. Position the EUT without connection to measurement instrument. Put it on the Rotated table and turn on the EUT and make it operate in transmitting mode. Then set it to Low Channel and High Channel within its operating range, |   |            |

| Test Report | 16070822-FCC-R1 |
|-------------|-----------------|
| Page        | 29 of 59        |

|           | and make sure the instrument is operated in its linear range.                    |
|-----------|--|
|           | - 3. First, set both RBW and VBW of spectrum analyzer to 100 kHz with a          |
|           | convenient frequency span including 100kHz bandwidth from band edge, check       |
|           | the emission of EUT, if pass then set Spectrum Analyzer as below:                |
|           | a. The resolution bandwidth and video bandwidth of test receiver/spectrum        |
|           | analyzer is 120 kHz for Quasiy Peak detection at frequency below 1GHz.           |
|           | b. The resolution bandwidth of test receiver/spectrum analyzer is 1MHz and       |
|           | video bandwidth is 3MHz with Peak detection for Peak measurement at              |
|           | frequency above 1GHz.  |
|           | c. The resolution bandwidth of test receiver/spectrum analyzer is 1MHz and the   |
|           | video bandwidth is 10Hz with Peak detection for Average Measurement as           |
|           | below at frequency above 1GHz.   |
|           | - 4. Measure the highest amplitude appearing on spectral display and set it as a |
|           | reference level. Plot the graph with marking the highest point and edge          |
|           | frequency.   |
|           | - 5. Repeat above procedures until all measured frequencies were complete.       |

| Test Setup   |      | Ant. Tower  Support Units  Turn Table  Ground Plane  Test Receiver  |                       |  |  |  |  |  |
| 1. The EUT was switched on and allowed to warm up to its normal oper condition.  2. The test was carried out at the selected frequency points obtained for characterization. Maximization of the emissions, was carried out by EUT, changing the antenna polarization, and adjusting the antenna following manner: |      |   |                       |  |  |  |  |  |

| Test Report | 16070822-FCC-R1 |
|-------------|-----------------|
| Page        | 43 of 59        |

|        |    | a.     | Vertical or horizontal polarization (whichever gave the higher emission       |
|--------|----|--------|---|
|        |    |        | level over a full rotation of the EUT) was chosen.                            |
|        |    | b.     | The EUT was then rotated to the direction that gave the maximum               |
|        |    |        | emission.   |
|        |    | C.     | Finally, the antenna height was adjusted to the height that gave the          |
|        |    |        | maximum emission.   |
|        | 3. | The re | esolution bandwidth and video bandwidth of test receiver/spectrum analyzer is |
|        |    | 120 kl | Hz for Quasiy Peak detection at frequency below 1GHz.                         |
|        | 4. | The re | solution bandwidth of test receiver/spectrum analyzer is 1MHz and video       |
|        |    | bandw  | vidth is 3MHz with Peak detection for Peak measurement at frequency above     |
|        |    | 1GHz.  |   |
|        |    | The re | esolution bandwidth of test receiver/spectrum analyzer is 1MHz and the video  |
|        |    | bandv  | vidth is 10Hz with Peak detection for Average Measurement as below at         |
|        |    | freque | ency above 1GHz.  |
|        | 5. | Steps  | 2 and 3 were repeated for the next frequency point, until all selected        |
|        |    | freque | ency points were measured.  |

| 41.09              | PK                        | Н                   | 45.22             | 11.35                    | 32.38                 | 65.28                        | 74                        | -8.72             | 41.09          |

#### Note:

- 1, The testing has been conformed to 10\*2480MHz=24,800MHz
- 2, All other emissions more than 30 dB below the limit
- 3, X-Axis, Y-Axis and Z-Axis were investigated. The results above show only the worst case.

### Annex E. DECLARATION OF SIMILARITY

# AOC

To: SIEMIC,775MontagueExpressway,Milpitas,CA95035,USA

# **Declaration Letter**

Dear Sir,

For our business issue and marketing requirement, we would like to list 9model numbers on the FCC certificates and reports, as following:

Model No.: A725, A721, A722, A723, A724, A726, A727, A728, A729

We declare that, all the model PCB, Antenna and Appearance shape, accessories are the same. The difference of these is listed as below:

| Main Model No | Serial Model No                         | Differenc            |  |
|---------------|---|----------------------|--|
| A725          | A721,A722,A723,A724,A726,A727,A728,A729 | Different model name |  |

Thank you!
