MORTISE LOCKSETS

8800 SERIES MORTISE LOCKSETS

The 8800 provides steadfast dependability and is the choice of architects and owners who require superior performance in even the toughest applications. As a longtime industry standard of quality, the Yale® steel case mortise lock continues to provide the highest level of security. This mortise lock brings versatility as well as uncompromising strength and durability. With quick lever handing and a patent-pending, tamper-proof, quick-reversible latchbolt, lockset handing takes only seconds. Options, such as an occupancy indicator for privacy functions, provide flexibility and ease of use.

When it comes to strength, the *Yale* 8800 Series brings a new measure of security to the door. Its 1" throw stainless steel deadbolt extends further back into the reinforced steel case when in the locked position, providing added stability and resistance to abuse. Solid trim packages also provide deterrence to vandalism, making the 8800 Series number one in the total opening package. See page 31 and 32 for electrified information.

CYLINDERS AND KEYING/SECURITY CYLINDERS

CYLINDERS AND KEYING

All Yale® locksets are available in a wide choice of cylinder and keying options:

Cylinder Types and Options:

- Fixed Core (standard)
- Large Format Interchangeable Core
- Conventional Keyways
- Patented Keyways
- Security Cylinders (Not UL437 Certified)
- High Security Cylinders (UL437 Certified)

Keying Options:

- Keyed Different (KD)
- Keyed Alike (KA)
- Master-Keyed (MK)
- Grand Master-Keyed (GMK)
- Great Grand Master-Keyed (GGMK)
- Construction Keying (CMK)

INTERCHANGEABLE CORES

Yale® cylinders with interchangeable cores allow your master key systems to be flexible. With the special “Control” key any cylinder can have its core interchanged quickly. Any *Yale* core can be interchanged into any other *Yale* lock provided it has a interchangeable core. As a result, security for any given lock can be changed in a matter of minutes. *Yale* interchangeable core cylinders can be used throughout the entire master key system. They can be used selectively within the system along with *Yale* fixed core cylinders. There are two types of interchangeable cores that are offered by *Yale*.

1. Large Format (LFIC) - These cores are available in both standard *Yale* cylinders and also *Yale* KeyMark® (see Patented Keyway) cylinders. Note that standard *Yale* cylinders and *Yale* KeyMark cylinders cannot be keyed to the same master key system.

2. Small Format (SFIC) - These cores are only available master-keyed in *Yale* KeyMark cylinders.

PATENTED KEYWAY CYLINDERS

Yale's utility patented keyway cylinders are available by choosing Yale® KeyMark®. *Yale* KeyMark cylinders include mortise, rim, key-in-lever, key-in-knob, auxiliary, and interchangeable core. IC core is available in both large and small formats. All formats can be tied into one master key system.

SECURITY/HIGH SECURITY CYLINDERS

Yale's security/high-security cylinders contain two independent locking mechanisms. The first is a traditional 6 or 7-pin tumbler mechanism with spool drivers for increased picking resistance.

The second is a 5-tumbler rotating disc mechanism with sidebar engagement. The rotating discs are spring loaded and block the bottom of the keyway. Only a specially cut key will move the discs and allow entrance of the key. This key has a special side bitting and must align all five discs perfectly before the cylinder plug will rotate to open the lock.

When the door is opened without authorization, an alarm is triggered to alert the security violation. This alarm features a Peizo horn which blasts a deafening 105+ decibels to alert the violation.

This unit is ideal for emergency doors as well as stairwell doors and rear exit doors in retail environments. The unit, which can also be hardwired, easily complements existing hardware, making any opening alarmed. The SDA16 door alarm is typically mounted on the interior of the door frame or door and is paired with a magnet mounted on the opposing side of the door gap.
