

Directions:

Step 1:

IMPORTANT! Cleanse and dry application area. Perspiration and oils may lessen the effects of Rapid Reduction Serum.

Step 2:

Use about half the size of a pea under each eye, and gently apply with fingertip. (Each well contains more than needed for both eyes.)

FOR USE ON: UNDER EYE BAGS, CROWS' FEET, DARK CIRCLES, SMILE LINES, FACIAL WRINKLES, AND NECK AREA.

Step 3:

Gently apply a thin, even layer to target areas, being careful to avoid contact with eyes.

Step 4:

Allow serum to set and dry (10 minutes for optimal results). **DO NOT TALK OR MAKE FACIAL EXPRESSIONS.**

Results:

As Rapid Reduction Serum dries, you will feel your skin start to tighten. This is normal. Effects can last up to 10 hours.

Results are not permanent and vary by individual. Excessive perspiration may lessen effects. Additional applications may be applied if needed.

Correct Application

Perfecting the Application Process

The application process is the most important. It may take a few attempts to perfect.

1. Product Residue indicates too much product has been applied. Remove excess by gently tapping the area with a damp cloth. Avoid rubbing as this may break the bond with your skin. If this occurs, clean area and start over.

2. Uneven application or facial movement during the setting process may cause a lesser effect. An additional application of serum may be applied if needed.
