

Greatly reduces sediments suspended in your water, including, but not limited to, rust, flakes, sand grains, clay particles, and some organic matter. While this list may seem insignificant, the filter's ultimate purpose is to increase the performance and lifespan of all proceeding filters.

## NANOFIBERS Water is directed down, through the rifled core. Pressure then forces the water outward through the filter's woven, nanofiber structure. Large particulates remain trapped, preventing them from creating early blockages in the later stage filter(s) - effectively extending their lifespan.
