# Optimization Notice

## Optimization Notice

Intel's compilers may or may not optimize to the same degree for non-Intel microprocessors for optimizations that are not unique to Intel microprocessors. These optimizations include SSE2, SSE3, and SSE3 instruction sets and other optimizations. Intel does not guarantee the availability, functionality, or effectiveness of any optimization on microprocessors not manufactured by Intel.

Microprocessor-dependent optimizations in this product are intended for use with Intel microprocessors. Certain optimizations not specific to Intel microarchitecture are reserved for Intel microprocessors. Please refer to the applicable product User and Reference Guides for more information regarding the specific instruction sets covered by this notice.

Notice revision #20110804

# Today's News

Intel® Xeon® Processor D-1500 now in production  
*1<sup>st</sup> ever Xeon SoC - 3<sup>rd</sup> generation 64-bit SoC*

Up to 3.4x<sup>1</sup> more performance vs. Intel® Atom™ Processor C2750  
*Foundation for extending intelligence beyond core data center*

>50 systems in design  
*Network, Storage, IoT, Microservers*

<sup>1</sup> Up to 3.4x better performance on Dynamic Web Serving

Intel® Xeon Processor D-based reference platform with one Pre-Production Xeon Processor D (8C, 1.9GHz, 45W, Turbo Boost Enabled, Hyper-Threading enabled, 64GB memory (4x16GB DDR4-2133 RDIMM ECC), 2x10GBase-T X552, 3x S3700 SATA SSD, Fedora\* 20 (3.17.8-200.fc20.x86\_64, Nginx\* 1.4.4, Php-fpm\* 15.4.14, memcached\* 1.4.14, Simultaneous users=43844

Supermicro SuperServer\* 5018A-TN4 with one Intel Atom Processor C2750 (8C, 2.4GHz, 20W), Turbo Boost Enabled, 32GB memory (4x8GB DDR3-1600 SO-DIMM ECC), 1x10GBase-T X520, 2x S3700 SATA SSD, Ubuntu\* 14.10(3.16.0-23 generic), Nginx\* 1.4.4, Php-fpm\* 15.4.14, memcached\* 1.4.14, Simultaneous users=12896

Software and workloads used in performance tests may have been optimized for performance only on Intel microprocessors. Performance tests, such as SYSmark and MobileMark, are measured using specific computer systems, components, software, operations and functions. Any change to any of those factors may cause the results to vary. You should consult other information and performance tests to assist you in fully evaluating your contemplated purchases, including the performance of that product when combined with other products. 2

Today's Focus

# Introducing: Intel® Xeon® Processor D-1540 and D-1520

ANNOUNCING TODAY

## Two Optimized SoCs Available Today

- D-1540 (8c/16t, 2GHz, 45W)
- D-1520 (4c/8t, 2.2GHz, 45W)

## Intel® Xeon® Processor Performance

- Up to **3.4x<sup>1</sup>** better performance
- Up to **1.7x<sup>1</sup>** better performance/watt

## Integrated 2 x 10GbE Intel® Ethernet, I/Os

- Up to **5x<sup>2</sup>** better network bandwidth
- Integrated I/Os (24x PCIe 3, 8x PCIe 2, 6x SATA3, 4x USB etc.)

## Enhanced Memory Architecture

- DDR4 DIMMs, up to 12MB L3 cache
- 128 GB addressable memory

Compared to Intel Atom™ C2750

<sup>1</sup> Up to 3.4x better performance and perf/watt on Dynamic Web Serving

Intel® Xeon Processor D-based reference platform with one Pre-Production Xeon Processor D (8C, 1.9GHz, 45W, Turbo Boost Enabled, Hyper-Threading enabled, 64GB memory (4x16GB DDR4-2133 RDIMM ECC), 2x10GBase-T X552, 3x S3700 SATA SSD, Fedora\* 20 (3.17.8-200.fc20.x86\_64, Nginx\* 1.4.4, Php-fpm\* 15.4.14, memcached\* 1.4.14, Simultaneous users=43844

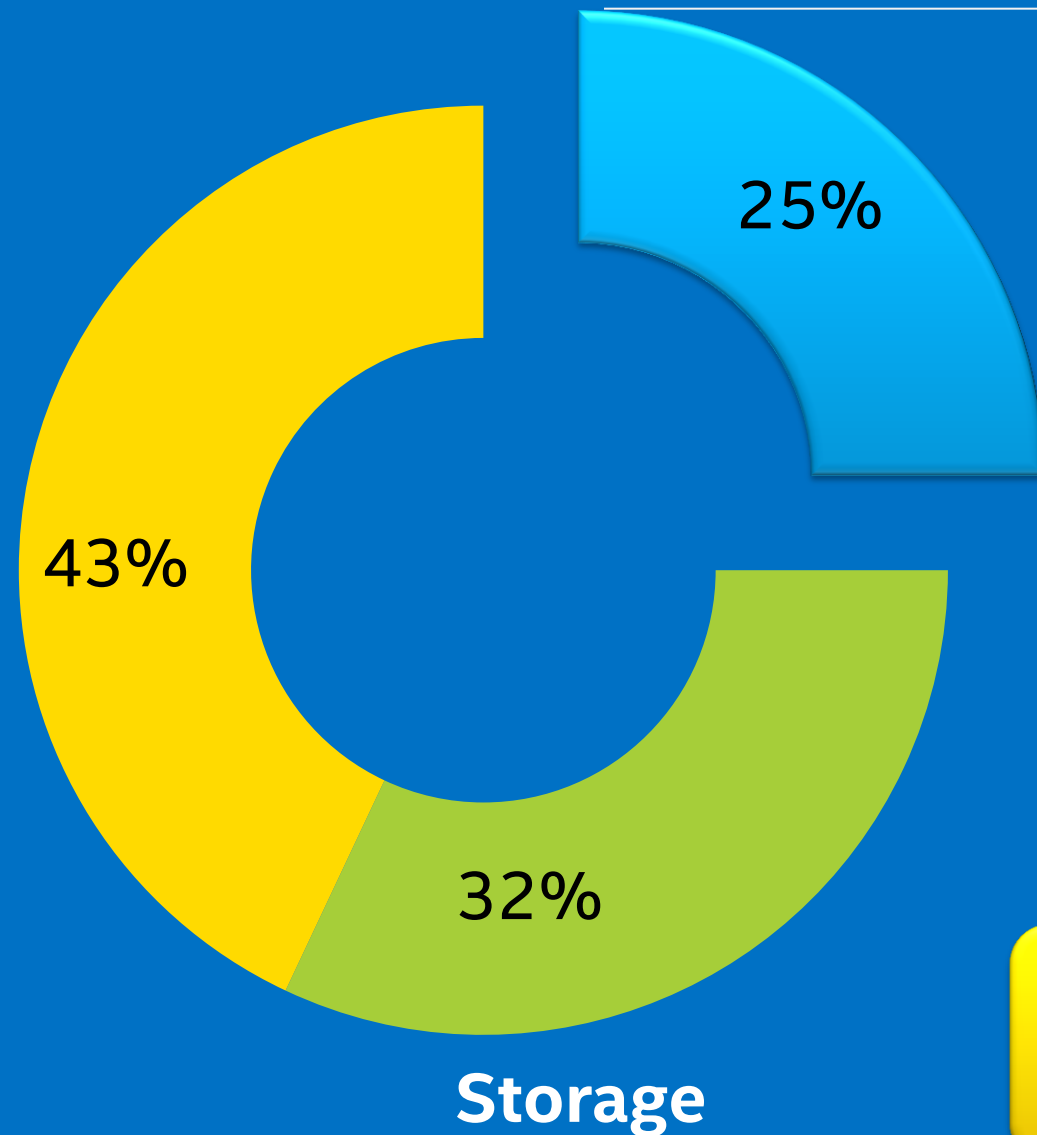

Supermicro SuperServer\* 5018A-TN4 with one Intel Atom Processor C2750 (8C, 2.4GHz, 20W), Turbo Boost Enabled, 32GB memory (4x8GB DDR3-1600 SO-DIMM ECC), 1x10GBase-T X520, 2x S3700 SATA SSD, Ubuntu\* 14.10(3.16.0-23 generic), Nginx\* 1.4.4, Php-fpm\* 15.4.14, memcached\* 1.4.14, Simultaneous users=12896

<sup>2</sup> Calculated bandwidth – 1 Gbps x 4 for Atom C2750. 10 Gbps x 2 for Xeon D-1540 = 5x increase in bandwidth.
