Design brings charm to any setting

VINTAGE LED BULBS

GE current
a Daintree company

Express

An earlier age with Vintage LED Bulbs.

Everything old is new again, only better. There's something remarkable about the first light bulbs Mr. Edison designed over 100 years ago; his first commercialized solutions showed the world what was possible with electric light. Those iconic designs still represent a dramatic expression of what the human spirit can accomplish when steely determination and profound creativity come together. We celebrate that lineage with modern versions that combine all the advantages of LED technology—energy efficiency, long life, reduced maintenance—in attractive, dimmable, vintage shapes. They're charming, old-fashioned and high-tech all at the same time.

EDISON

This classic evokes Edison's very first product. When it was installed in homes and businesses, jaws dropped as people experienced electric light for the first time. More than a game changer, it was a world changer. Imagine the dynamic design possibilities in store when you use them in sophisticated restaurant, retail, fashion or historic vintage settings.

OVERSIZED SMOKE FINISH

Developed to reduce the glaring light produced by the very first bulbs, these smoke finish lamps bring a dramatic sensibility to any setting when they're on or off. The combination of vintage shapes and smoky finish provide a striking, unexpected look that adds visual interest as they deliver cool, modern LED light.

CANDELABRA

Producing a glass lamp in the shape of a flame was quite a feat of engineering when these products were first introduced; they were the beginning of a new era in naturalistic bulb design. Our LED versions recall that era, adding a special something to chandeliers, sconces and other fixtures.
