Note: Provide by applicant.

1.1 Applicant and Manufacturer Information

Applicant:	Linkplay Technology Inc.	
Applicant Address:	3000 Jarvis Avenue Suite #130, Newark, CA 94560	
Manufacturer:	Linkplay Technology Inc.	
Manufacturer Address	8F-8036, Qianren Building, No.7, Yingcui Road, Jiangning	
Manufacturer Address:	District, Nanjing, China	

1.2 Equipment under Test (EUT) Description

Product Name:	IoT Module		
Sample No.:	1#		
Hardware Version:	V02		
Software Version:	v4.2-beta1-328-g97688dc2-dirty		
Modulation Technology	Bluetooth	GFSK	
Modulation Technology:	WLAN 2.4GHz	DSSS, OFDM	
Operating Frequency	Bluetooth 2402MHz-2480MHz		
Range:	WLAN 2.4GHz 2412MHz-2462MHz		
Antenna Type:	PCB Antenna		
Antenna Gain:	2.64dBi

2. Device Category and RF Exposure Limit

Per user manual, based on 47 CFR 2.1091, this device belongs to mobile device category with General Population/Uncontrolled exposure.

Mobile Devices:

47 CFR 2.1091(b)

For purposes of this section, a mobile device is defined as a transmitting device designed to be used in other than fixed locations and to generally be used in such a way that a separation distance of at least 20 centimeters is normally maintained between the transmitter's radiating structure(s) and the body of the user or nearby persons. In this context, the term "fixed location" means that the device is physically secured at one location and is not able to be easily moved to another location. Transmitting devices designed to be used by consumers or workers that can be easily re-located, such as wireless devices associated with a personal computer, are considered to be mobile devices if they meet the 20 centimeter separation requirement.

General Population/Uncontrolled Exposure:

The general population/uncontrolled exposure limits are applicable to situations in which the general public may be exposed or in which persons who are exposed as a consequence of their employment may not be made fully aware of the potential for exposure or cannot exercise control over their exposure. Members of the general public would come under this category when exposure is not employment-related; for example, in the case of a wireless transmitter that exposes persons in its vicinity. Warning labels placed on low-power consumer devices such as cellular telephones are not considered sufficient to allow the device to be considered under the occupational/controlled category, and the general population/uncontrolled exposure limits apply to these devices.

	CH 6	2437	14.04	14.50	99.04
	CH 9	2452	12.85	13.00	99.04

Note 1: According to KDB 447498, MPE assessment is based on source-based time-averaged maximum conducted output power of the RF channel requiring assessment, adjusted for tune-up tolerance, and the minimum test separation distance required for the exposure conditions. **Note 2:** The output power refers to report (Report No.: SZ23050028W01/W02).

4. RF Exposure Assessment

> Standalone Transmission Assessment:

	Frequency				Power	Limit for
Bands	Frequency	Tune-up	Antenna	E.I.R.P.	Density	MPE
	(MHz)	Power(dBm)	Gain(dBi)	(mW)	(mW/cm²)	(mW/cm²)
Bluetooth	2480	7.50	2.64	10.33	0.002	1.0
WLAN 2.4GHz	2412	16.50	2.64	82.04	0.016	1.0

Note:

1. According to KDB 447498, MPE assessment is based on source-based time-averaged maximum conducted output power of the RF channel requiring assessment, adjusted for tune-up tolerance, and the minimum test separation distance required for the exposure conditions.

2. MPE calculate method

$S = PG/4\pi R^2$

Where: S= Power density (in appropriate units, e.g. mW/cm²)

P = Time-average maximum tune-up power (in appropriate units, e.g. dBm)

- G = numeric gain of the antenna (in appropriate units, e.g. dBi)
- R = Separation distance to the centre of radiation of the antenna (20cm)

> Simultaneous Transmission Assessment:

According to the user manual, both the WLAN and Bluetooth transmitters in the device cannot operate simultaneously, therefore simultaneous transmission analysis is not required.

> Conclusion:

According to 47 CFR §2.1091, this device complies with human exposure basic restrictions.

Annex A Testing Laboratory Information

1. Identification of the Responsible Testing Laboratory

Laboratory Name:	Shenzhen Morlab Communications Technology Co., Ltd.		
	FL.3, Building A, FeiYang Science Park, No.8 LongChang		
Laboratory Address:	Road, Block 67, BaoAn District, ShenZhen, GuangDong		
	Province, P. R. China		
Telephone:	+86 755 36698555		
Facsimile:	+86 755 36698525		

2. Identification of the Responsible Testing Location

Name:	Shenzhen Morlab Communications Technology Co., Ltd.		
FL.3, Building A, FeiYang Science Park, No.8 LongC			
Address:	Road, Block 67, BaoAn District, ShenZhen, GuangDong		
	Province, P. R. China		

3. Facilities and Accreditations

All measurement facilities used to collect the measurement data are located at FL.3, Building A, FeiYang Science Park, Block 67, BaoAn District, Shenzhen, 518101 P. R. China. The test site is constructed in conformance with the requirements of ANSI C63.10-2013 and CISPR Publication 22; the FCC designation number is CN1192, the test firm registration number is 226174.
