EXCEPT AS PROVIDED IN INTEL'S TERMS AND CONDITIONS OF SALE FOR SUCH PRODUCTS, INTEL ASSUMES NO LIABILITY WHATSOEVER AND INTEL DISCLAIMS ANY EXPRESS OR IMPLIED WARRANTY, RELATING TO SALE AND/OR USE OF INTEL PRODUCTS INCLUDING LIABILITY OR WARRANTIES RELATING TO FITNESS FOR A PARTICULAR PURPOSE, MERCHANTABILITY, OR INFRINGEMENT OF ANY PATENT, COPYRIGHT OR OTHER INTELLECTUAL PROPERTY RIGHT.

A "Mission Critical Application" is any application in which failure of the Intel Product could result, directly or indirectly, in personal injury or death. SHOULD YOU PURCHASE OR USE INTEL'S PRODUCTS FOR ANY SUCH MISSION CRITICAL APPLICATION, YOU SHALL INDEMNIFY AND HOLD INTEL AND ITS SUBSIDIARIES, SUBCONTRACTORS AND AFFILIATES, AND THE DIRECTORS, OFFICERS, AND EMPLOYEES OF EACH, HARMLESS AGAINST ALL CLAIMS COSTS, DAMAGES, AND EXPENSES AND REASONABLE ATTORNEYS' FEES ARISING OUT OF, DIRECTLY OR INDIRECTLY, ANY CLAIM OF PRODUCT LIABILITY, PERSONAL INJURY, OR DEATH ARISING IN ANY WAY OUT OF SUCH MISSION CRITICAL APPLICATION, WHETHER OR NOT INTEL OR ITS SUBCONTRACTOR WAS NEGLIGENT IN THE DESIGN, MANUFACTURE, OR WARNING OF THE INTEL PRODUCT OR ANY OF ITS PARTS.

Intel may make changes to specifications and product descriptions at any time, without notice. Designers must not rely on the absence or characteristics of any features or instructions marked "reserved" or "undefined". Intel reserves these for future definition and shall have no responsibility whatsoever for conflicts or incompatibilities arising from future changes to them. The information here is subject to change without notice. Do not finalize a design with this information.

The products described in this document may contain design defects or errors known as errata which may cause the product to deviate from published specifications. Current characterized errata are available on request.

Available on select Intel® Core™ processors. Requires an Intel® HT Technology-enabled system. Consult your PC manufacturer. Performance will vary depending on the specific hardware and software used. For more information including details on which processors support HT Technology, visit <http://www.intel.com/info/hyperthreading>.

Contact your local Intel sales office or your distributor to obtain the latest specifications and before placing your product order.

Copies of documents which have an order number and are referenced in this document, or other Intel literature, may be obtained by calling 1-800-548-4725, or go to: <http://www.intel.com/design/literature.htm>

Intel may make changes to specifications and product descriptions at any time, without notice.

Designers must not rely on the absence or characteristics of any features or instructions marked "reserved" or "undefined." Intel reserves these for future definition and shall have no responsibility whatsoever for conflicts or incompatibilities arising from future changes to them.

Results have been estimated based on internal Intel analysis and are provided for informational purposes only. Any difference in system hardware or software design or configuration may affect actual performance.

All products, computer systems, dates and figures specified are preliminary based on current expectations, and are subject to change without notice.

Intel processor numbers are not a measure of performance. Processor numbers differentiate features within each processor family, not across different processor families: Go to: [Learn About Intel® Processor Numbers](#)

Date	Revision	Description
October 2013	001	Initial release.

§

# 1 Introduction

This document provides the Embedded Application Power Guidelines (APG) data for Intel® Xeon® Processors E3-1125C v2 and E3-1105C v2, the Intel® Core™ i3-3115C Processor, and the Intel® Pentium® Processor B925C, while running real-life applications. This document complements the specifications published in the product datasheet.

These guidelines should be used for reference only. The power data provided in this document are not design points or specifications and should not be used as such.

The specifications contained in this document complement documents listed in the Reference Documents table. Additional information about the APG can be found in the documents listed in the Related Documents table.

## 1.1 Reference Documents

SKU	Stock Keeping Unit
TAT	Thermal Analysis Tool
TDP	Thermal Design Power

## 2 *Application Power Guidelines*

---

The APG values in this document are intended to reflect the nominal use conditions. Factors such as temperature, platform configuration, and other variables can influence the values. Specific information about platform, benchmarks, and temperatures, etc., is provided in this document to enable a repeatable power measurement. Since the Application Power Guidelines are provided on limited applications and SKUs, it is expected that users understand these values and apply them in their own use cases.

## 2.1 Application Power Guidelines for the Intel® Xeon® Processor E3-1125C v2

Figure 1 indicates the APG of various embedded applications for the Intel® Xeon® Processor E3-1125C v2 with a 40W TDP specification.

Figure 1. APG for the Intel® Xeon® Processor E3-1125C v2

Application/Benchmark	Processor Power (W)	Junction Temperature (°C)
Idle with C-states Enabled	2.4	29
Idle with C-states Disabled	4.1	30
CINT400	19.3	46
CFP416	20.9	48
Power Thermal Utility Tool	22.9	52

**Notes:**

1. Software and workloads used in performance tests may have been optimized for performance only on Intel microprocessors. Performance tests, such as SYSmark and MobileMark, are measured using specific computer systems, components, software, operations and functions. Any change to any of those factors may cause the results to vary. You should consult other information and performance tests to assist you in fully evaluating your contemplated purchases, including the performance of that product when combined with other products. For more information go to <http://www.intel.com/performance>.
2. Configuration details are listed in Section 3.  
Source: Intel internal testing as of June 2013.

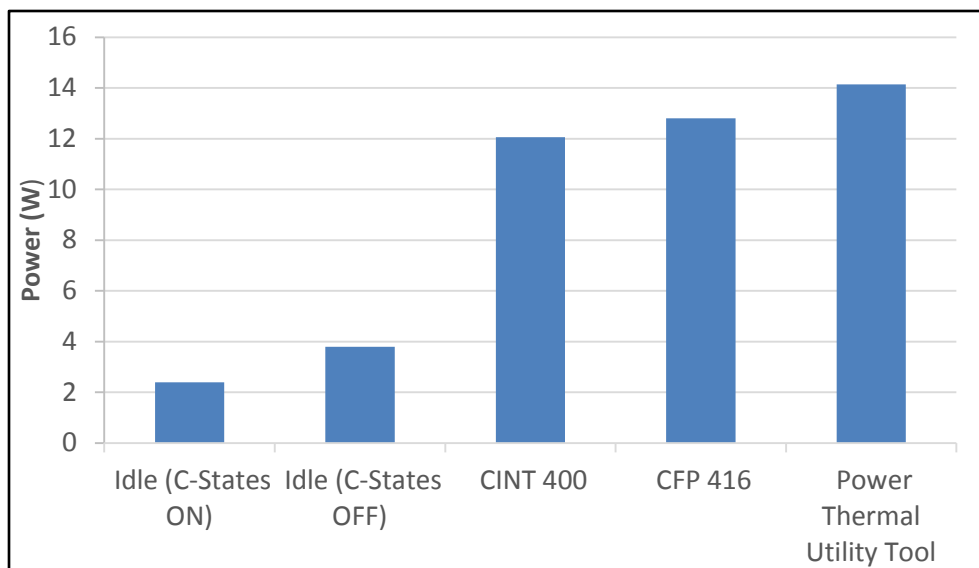

## 2.2 Application Power Guidelines for the Intel® Xeon® Processor E3-1105C v2

Figure 2 indicates the APG of various embedded applications for the Intel® Xeon® Processor E3-1105C v2 with a 25W TDP specification.

Figure 2. APG for the Intel® Xeon® Processor E3-1105C v2

Application/Benchmark	Processor Power (W)	Junction Temperature (°C)
Idle with C-states Enabled	2.4	30
Idle with C-states Disabled	3.8	36
CINT400	12.1	43
CFP416	12.8	45
Power Thermal Utility Tool	14.1	46

**Notes:**

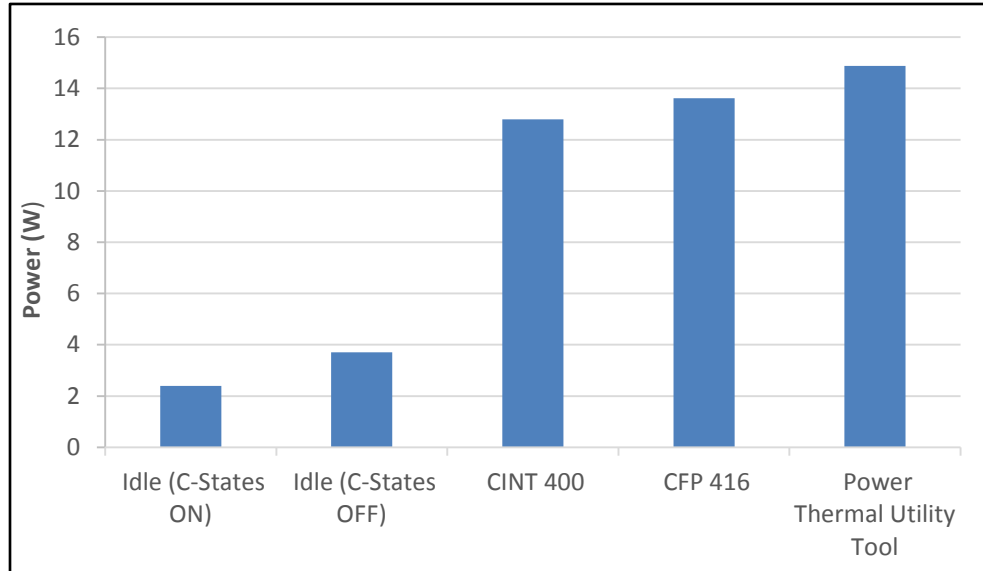

- Software and workloads used in performance tests may have been optimized for performance only on Intel microprocessors. Performance tests, such as SYSmark and MobileMark, are measured using specific computer systems, components, software, operations and functions. Any change to any of those factors may cause the results to vary. You should consult other information and performance tests to assist you in fully evaluating your contemplated purchases, including the performance of that product when combined with other products. For more information go to <http://www.intel.com/performance>.
- Configuration details are listed in Section 3.  
Source: Intel internal testing as of June 2013.

## 2.3 Application Power Guidelines for the Intel® Core™ i3-3115C Processor

Figure 3 indicates the APG of various embedded applications for the Intel® Core™ i3-3115C Processor with a 25W TDP specification.

Figure 3. APG for the Intel® Core™ i3-3115C Processor

Application/Benchmark	Processor Power (W)	Junction Temperature (°C)
Idle with C-states Enabled	2.4	30
Idle with C-states Disabled	3.7	31
CINT400	12.8	42
CFP416	13.6	43
Power Thermal Utility Tool	14.9	46

**Notes:**

1. Software and workloads used in performance tests may have been optimized for performance only on Intel microprocessors. Performance tests, such as SYSmark and MobileMark, are measured using specific computer systems, components, software, operations and functions. Any change to any of those factors may cause the results to vary. You should consult other information and performance tests to assist you in fully evaluating your contemplated purchases, including the performance of that product when combined with other products. For more information go to <http://www.intel.com/performance>.
2. Configuration details are listed in Section 3.  
Source: Intel internal testing as of June 2013.

## 2.4 Application Power Guidelines for the Intel® Pentium® Processor B925C

Figure 4 indicates the APG of various embedded applications for the Intel® Pentium® Processor B925C with a 15W TDP specification.

Figure 4. APG for the Intel® Pentium® Processor B925C

Application/Benchmark	Processor Power (W)	Junction Temperature (°C)
Idle with C-states Enabled	3.0	35
Idle with C-states Disabled	4.5	39
CINT400	11.0	47
CFP416	11.4	49
Power Thermal Utility Tool	12.2	52

**Notes:**

1. Software and workloads used in performance tests may have been optimized for performance only on Intel microprocessors. Performance tests, such as SYSmark and MobileMark, are measured using specific computer systems, components, software, operations and functions. Any change to any of those factors may cause the results to vary. You should consult other information and performance tests to assist you in fully evaluating your contemplated purchases, including the performance of that product when combined with other products. For more information go to <http://www.intel.com/performance>.
2. Configuration details are listed in Section 3.  
Source: Intel internal testing as of June 2013.

## 3 Configuration and Disclaimer

---

Values presented represent a typical or average processor SKU and do not guarantee a customer will achieve these exact values for each silicon sample. These values are not intended to replace TDP, nor are they intended to be used for reliability assessments. Individual test results may vary.

Software and workloads used in performance tests may have been optimized for performance only on Intel processors. Performance tests, such as SYSmark and MobileMark, are measured using specific computer systems, components, software, operations, and functions. Any change to any of those factors may cause the results to vary. You should consult other information and performance tests to assist you in fully evaluating your contemplated purchases, including the performance of that product when combined with other products.

### 3.1 Application Power Guidelines Configuration

The results presented in this document were collected from a single sample. The data has not been post-processed to account for part-to-part variation.

- Platforms:
  - Platform 1: Intel® Xeon® Processor E3-1125C v2 with Intel® Communications Chipset 8920
  - Platform 2: Intel® Xeon® Processor E5-1105C v2 with Intel® Communications Chipset 8920
  - Platform 3: Intel® Core™ i3-3115C Processor with Intel® Communications Chipset 8920
  - Platform 4: Intel® Pentium® Processor B925C with Intel® Communications Chipset 8920
- BIOS Rev: CIVGCC1.86C.0008.P00
- Memory: 2x 2 GB Crucial 1Rx8 PC3-12800U-11-1-A1 1600 MHz
- Peripherals: Standard keyboard, mouse, and Gigabyte (GV-NX84S512HP) graphics card
- OS: Linux\* Ubuntu\*11.10 (kernel 3.10.1) , Windows\* 7 64-bit Professional
- Linux\* Ubuntu\* Software: CPU2006v1.2 (400.Perlbench for CINT (specint) and 416.Gameess for CFP (specfp) with AVX binaries. ICC Compiler version 13.1
- Windows\* 7 Software: Intel® Power Thermal Utility v1.0
- Intel® Hyper-Threading Technology enabled and C-States enabled
- A reference heat sink with fan was used while running benchmarks
- Measurement tool: Power Profiler 2.0 (National Instruments\* USB-6255 DAQ with signal conditioning breakout board)

APG testing was conducted by Intel Corporation in June 2013.

For more information go to <http://www.intel.com/performance/>.

### 3.2 Additional Information

- In case of conflict, the datasheet supersedes this document.
- Temperature values shown represent the mean temperatures measured throughout the duration of the test.
- APG configuration is provided for repeatability of the test.
- SPEC\* CPU2006v1.2 is an industrial standard benchmark designed to provide performance measurements that can be used to compare compute-intensive workloads on different computer systems. SPEC\* CPU2006 test on Intel microprocessors were measured using particular, well-configured systems. These results may or may not reflect the relative performance of Intel microprocessor in systems with different hardware or software designs or configurations (including compilers). Buyers should consult other sources of information, including system benchmarks, to evaluate the performance of systems they are considering for purchase. For more information about SPEC\* CPU2006, please visit [www.spec.org/cpu2006/](http://www.spec.org/cpu2006/). The CINT benchmark used in this test was 400.Perlbench. The CFP benchmark used in this test was 416.gamess.
- Intel developed the Power Thermal Utility tool (PTU) and Thermal Analysis tool (TAT) to generate TDP-like workloads on a system, "Non-disclosure Agreement (NDA) required."
- The Idle Power shown in the figures above occurs while displaying the Window7\* desktop screen.

§
