

## **Certification Test Report**

**FCC ID: SK9OW1  
IC: 864G-OW1**

**FCC Rule Part: 15.247  
ISED Canada Radio Standards Specification: RSS-247**

**ACS Report Number: 16-0295.W06.1B**

**Manufacturer: Itron, Inc.  
Models: OW1**

**Test Begin Date: August 10, 2016  
Test End Date: October 11, 2016**

**Report Issue Date: December 8, 2016**

FOR THE SCOPE OF ACCREDITATION UNDER Certificate Number: AT-2021

This report must not be used by the client to claim product certification, approval, or endorsement by ANAB, NIST, or any agency of the Federal Government.

**Prepared by:**

**Ryan McGann  
Wireless Program Manager  
Advanced Compliance Solutions, Inc.**

**Reviewed by:**

**Thierry Jean-Charles  
EMC Engineer

## 1 GENERAL

### 1.1 Purpose

The purpose of this report is to demonstrate compliance with Part 15 Subpart C of the FCC's Code of Federal Regulations and Innovation, Science, and Economic Development Canada's Radio Standards Specification RSS-247 Certification for modular approval.

### 1.2 Product description

The Itron OW1 is a communications module which includes a 902.4 MHz to 927.6 MHz transmitter. The module operates on DC voltage which is supplied by a host device.

This test report documents the compliance of the 902.4 MHz to 927.6 MHz transceiver mode of operation.

Technical Details:

Detail	Description
Frequency Range	902.4 – 927.6 MHz
Number of Channels	64
Modulation Format	FSK, OFDM, DSSS
Data Rates	FSK: 50kbps, 150kbps OFDM: 200kbps, 600kbps DSSS: 6.25kbps, 12.5kbps
Operating Voltage	24Vdc
Antenna Type(s) / Gain(s)	Monopole / 2.8dBi

Manufacturer Information:

Itron, Inc.  
313 N Hwy 11  
West Union, SC 29696

EUT Serial Numbers: 9110000595 (All modulations except FSK 50kbps)  
9110000593 (FSK 50kbps)

Test Sample Condition: The test samples were provided in good working order with no visible defects.

### 1.3 Test Methodology and Considerations

All modes of operation, including all available data rates, were evaluated for each mode. The data presented in this report represents the worst case where applicable. A single test sample was not capable of supporting all modulation formats in test mode, therefore multiple samples were used to evaluate the compliance of all available modulation formats.

For radiated emissions the EUT was evaluated in three orthogonal orientations for each modulation. The worst case orientation was the Y-orientation for the FSK modulation and Z-orientation for the OFDM and DSSS modulations. See test setup photos for more information. All data rates were evaluated for worst case operation for each modulation format. The worst case data rates evaluated were FSK 50kbps, OFDM 600kbps, and DSSS 12.5kbps.

For AC power line conducted emissions the EUT was evaluated with a commercially available wall wart power supply.

For RF conducted emissions, the EUT was modified with a temporary u.fl connector for coupling to the measurement equipment.

Software power settings during test:

- FSK Modulation: -2
- OFDM Modulation: +4
- DSSS Modulation: +2

## **2 TEST FACILITIES**

### **2.1 Location**

The radiated and conducted emissions test sites are located at the following address:

Advanced Compliance Solutions  
5015 B.U. Bowman Drive  
Buford, GA 30518  
Phone: (770) 831-8048  
Fax: (770) 831-8598

### **2.2 Laboratory Accreditations/Recognitions/Certifications**

ACS is accredited to ISO/IEC 17025 by the ANSI-ASQ National Accreditation Board/ANAB accreditation program, and has been issued certificate number AT-2021 in recognition of this accreditation. Unless otherwise specified, all tests methods described within this report are covered under the ISO/IEC 17025 scope of accreditation.

The Semi-Anechoic Chamber Test Site, Open Area Test Site (OATS) and Conducted Emissions Site have been fully described, submitted to, and accepted by the FCC, Innovation, Science, and Economic Development Canada and the Japanese Voluntary Control Council for Interference by information technology equipment.

FCC Registration Number: 391271

Innovation, Science, and Economic Development Canada Lab Code: IC 4175A

VCCI Member Number: 1831

- VCCI OATS Registration Number R-1526
- VCCI Conducted Emissions Site Registration Number: C-1608

## 2.3 Radiated Emissions Test Site Description

### 2.3.1 Semi-Anechoic Chamber Test Site

The Semi-Anechoic Chamber Test Site consists of a 20' x 30' x 18' shielded enclosure. The chamber is lined with Toyo Ferrite Grid Absorber, model number FFG-1000. The ferrite tile grid is 101 x 101 x 19mm thick and weighs approximately 550 grams. These tiles are mounted on steel panels and installed directly on the inner walls of the chamber.

The turntable is 150cm in diameter and is located 160cm from the back wall of the chamber. The chamber is grounded via 1 – 8' copper ground rod, installed at the center of the back wall, it is bound to the ground plane using 3/4" stainless steel braided cable.

The turntable is all steel, flush mounted table installed in an all steel frame. The table is remotely operated from inside the control room located 25' from the range. The turntable is electrically bonded to the surrounding ground plane via steel fingers installed on the edge of the turn table. The steel fingers make constant contact with the ground plane during operation.

Behind the turntable is a 3' x 6' x 4' deep shielded pit used for support equipment if necessary. The pit is equipped with 1 – 4" PVC chases from the turntable to the pit that allow for cabling to the EUT if necessary. The underside of the turntable can be accessed from the pit so cables can be supplied to the EUT from the pit.

A diagram of the Semi-Anechoic Chamber Test Site is shown in Figure 2.3-1 below:

Figure 2.3-1: Semi-Anechoic Chamber Test Site

### 2.3.2 Open Area Tests Site (OATS)

The open area test site consists of a 40' x 66' concrete pad covered with a perforated electro-plated galvanized sheet metal. The perforations in the sheet metal are 1/8" holes that are staggered every 3/16". The individual sheets are placed to overlap each other by 1/4" and are riveted together to provide a continuous seam. Rivets are spaced every 3" in a 3 x 20 meter perimeter around the antenna mast and EUT area. Rivets in the remaining area are spaced as necessary to properly secure the ground plane and maintain the electrical continuity.

The entire ground plane extends 12' beyond the turntable edge and 16' beyond the antenna mast when set to a 10 meter measurement distance. The ground plane is grounded via 4 – 8' copper ground rods, each installed at a corner of the ground plane and bound to the ground plane using 3/4" stainless steel braided cable.

The turntable is an all aluminum 10' flush mounted table installed in an all aluminum frame. The table is remotely operated from inside the control room located 40' from the range. The turntable is electrically bonded to the surrounding ground plane via steel fingers installed on the edge of the turn table. The steel fingers make constant contact with the ground plane during operation.

Adjacent to the turntable is a 7' x 7' square and 4' deep concrete pit used for support equipment if necessary. The pit is equipped with 5 – 4" PVC chases from the pit to the control room that allow for cabling to the EUT if necessary. The underside of the turntable can be accessed from the pit so cables can be supplied to the EUT from the pit. The pit is covered with 2 sheets of 1/4" diamond style re-enforced steel sheets. The sheets are painted to match the perforated steel ground plane; however the underside edges have been masked off to maintain the electrical continuity of the ground plane. All reflecting objects are located outside of the ellipse defined in ANSI C63.10.

A diagram of the Open Area Test Site is shown in Figure 2.3-2 below:

Figure 2.3-2: Open Area Test Site

## 2.4 Conducted Emissions Test Site Description

The AC mains conducted EMI site is located in the main EMC lab. It consists of an 8' x 8' solid aluminum horizontal ground reference plane (GRP) bonded every 3" to an 8' X 8' vertical ground plane.

The site is of sufficient size to test table top and floor standing equipment in accordance with section 6 of ANSI C63.10.

A diagram of the room is shown below in figure 2.4-1:

Figure 2.4-1: AC Mains Conducted EMI Site

**NOTE: All test equipment was used only during active calibration cycles as reported above.**

## 5 SUPPORT EQUIPMENT

Table 5-1: Support Equipment

Item	Equipment Type	Manufacturer	Model/Part Number	Serial Number
1	DC Power Supply	TRIAD	WSU120-1000	N/A

## 6 EQUIPMENT UNDER TEST SETUP BLOCK DIAGRAM

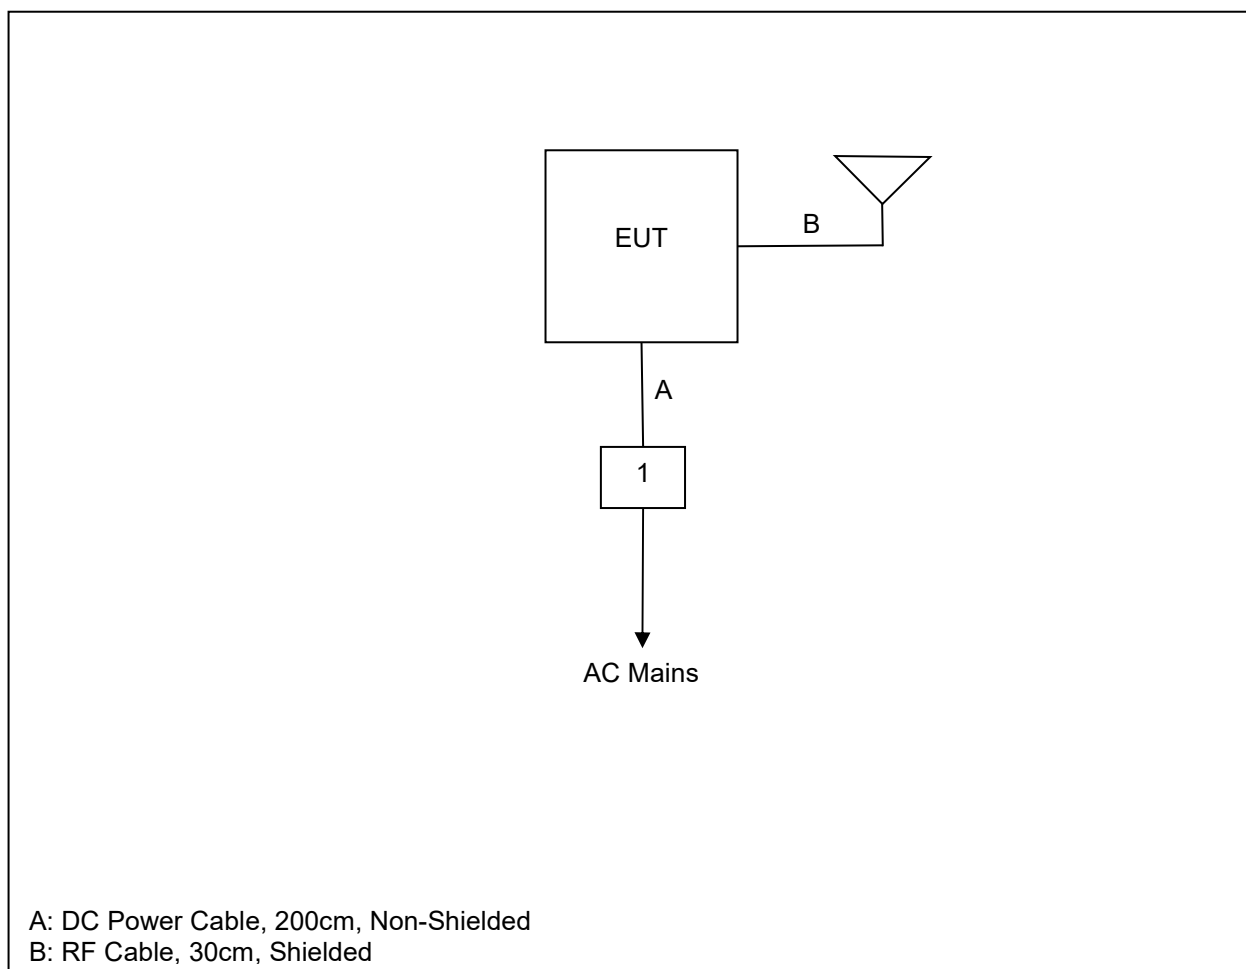

Figure 6-1: Test Setup Block Diagram

## 7 SUMMARY OF TESTS

Along with the tabular data shown below, plots were taken of all signals deemed important enough to document.

### 7.1 Antenna Requirement – FCC: Section 15.203

The OW1 utilizes a monopole antenna connected to the module via a cable using specialized connectors, therefore satisfying the requirements of Section 15.203. The antenna gain is 2.8dBi.

### 7.2 Power Line Conducted Emissions – FCC 15.207, ISED Canada: RSS-Gen 8.8

#### 7.2.1 Measurement Procedure

ANSI C63.10 was the guiding document for this evaluation. Conducted emissions were performed from 150kHz to 30MHz with the spectrum analyzer's resolution bandwidth set to 9kHz and the video bandwidth set to 30kHz. The calculation for the conducted emissions is as follows:

$$\text{Corrected Reading} = \text{Analyzer Reading} + \text{LISN Loss} + \text{Cable Loss}$$

$$\text{Margin} = \text{Applicable Limit} - \text{Corrected Reading}$$

#### 7.2.2 Measurement Results

Table 7.2.2-1: Conducted EMI Results Line 1

Frequency (MHz)	Corrected Reading		Limit (dBuV)	Margin (dB)	Line	Correction (dB)
	Quasi-Peak (dBuV)	Average (dBuV)				
0.156904	---	28.93	55.59	26.66	L1	9.7
0.156904	41.79	---	65.60	23.81	L1	9.7

**7.3 Peak Output Power - FCC 15.247(b)(2) ISED Canada: RSS-247 5.4(1)****7.3.1 Measurement Procedure**

The RF output port of the EUT was directly connected to the input of a power meter using suitable attenuation. The device employs > 50 channels at any given time therefore the power is limited to 1 Watt.

**7.3.2 Measurement Results****Table 7.3.2-1: Maximum Conducted Peak Output Power**

Frequency [MHz]	Level [dBm]	Modulation Format	Data Rate [kbps]
902.4	27.57	FSK	50
915.2	29.09	FSK	50
927.6	28.51	FSK	50
902.4	25.19	FSK	150
915.2	27.52	FSK	150
927.6	27.13	FSK	150
902.4	28.39	OFDM	200
915.2	29.54	OFDM	200
927.6	29.20	OFDM	200
902.4	28.34	OFDM	600
915.2	29.50	OFDM	600
927.6	29.19	OFDM	600
902.4	27.00	DSSS	6.25
915.2	28.78	DSSS	6.25
927.6	28.46	DSSS	6.25
902.4	26.97	DSSS	12.5
915.2	28.77	DSSS	12.5
927.6	28.46	DSSS	12.5

## **7.4 Channel Usage Requirements**

### **7.4.1 Carrier Frequency Separation – FCC 15.247(a)(1) ISED Canada: RSS-247 5.1(2)**

#### **7.4.1.1 Measurement Procedure**

The RF output port of the EUT was directly connected to the input of the spectrum analyzer using suitable attenuation. The span of the spectrum analyzer was set wide enough to capture two adjacent peaks. The RBW was set to approximately 30% of the channel spacing and adjusted as necessary to best identify the center of each channel. The VBW was set > RBW.

## 7.4.1.2 Measurement Results

Figure 7.4.1.2-1: Freq. Separation – FSK – 50kbps

Figure 7.4.1.2-2: Freq. Separation – FSK – 150kbps

Figure 7.4.1.2-5: Freq. Separation – DSSS – 6.25kbps

Figure 7.4.1.2-6: Freq. Separation – DSSS – 12.5kbps

**7.4.2 Number of Hopping Channels – FCC 15.247(a)(1)(i) ISED Canada: RSS-247 5.1(3)****7.4.2.1 Measurement Procedure**

The RF output port of the EUT was directly connected to the input of the spectrum analyzer using suitable attenuation. The span of the spectrum analyzer was set wide enough to capture the frequency band of operation. The RBW was set to < 30% of the channel spacing and VBW set to  $\geq$  RBW.

Figure 7.4.2.2-5: No. of Hopping Ch – DSSS – 6.25kbps

Figure 7.4.2.2-6: No. of Hopping Ch – DSSS – 12.5kbps

### **7.4.3 Channel Dwell Time – FCC 15.247(a)(1)(i) ISED Canada: RSS-247 5.1(3)**

#### **7.4.3.1 Measurement Procedure**

The EUT was not capable of producing a worst case channel dwell time. A detailed analysis of the channel dwell time is available in the Theory of Operations accompanying this report.

**7.4.4 20dB / 99% Bandwidth - FCC 15.247(a)(1)(i) ISED Canada: RSS-247 5.1(3)****7.4.4.1 Measurement Procedure**

The RF output port of the EUT was directly connected to the input of the spectrum analyzer using suitable attenuation. The span of the spectrum analyzer display was set between two times and five times the occupied bandwidth (OBW) of the emission. The RBW of the spectrum analyzer was set to approximately 1 % to 5 % of the OBW. The trace was set to max hold with a peak detector active. The marker delta and ndB down measurement functions of the analyzer were utilized to determine the 20 dB bandwidth of the emission.

The occupied bandwidth measurement function of the spectrum analyzer was used to measure the 99% bandwidth. The span of the analyzer was set to capture all products of the modulation process, including the emission sidebands. The resolution bandwidth was set to 1% to 5% of the occupied bandwidth. The video bandwidth was set to 3 times the resolution bandwidth. A peak detector was used.

## 7.5 Band-Edge Compliance and Spurious Emissions

### 7.5.1 Band-Edge Compliance of RF Conducted Emissions - FCC 15.247(d); ISED Canada RSS-247 5.5

#### 7.5.1.1 Measurement Procedure

The RF output port of the EUT was directly connected to the input of the spectrum analyzer using suitable attenuation. The EUT was investigated at the lowest and highest channel available to determine band-edge compliance. For each measurement the spectrum analyzer's RBW was set to 100 kHz, and the VBW was set to 300 kHz.

## 7.5.2 RF Conducted Spurious Emissions - FCC 15.247(d); ISED Canada RSS-247 5.5

### 7.5.2.1 Measurement Procedure

The RF output port of the EUT was directly connected to the input of the spectrum analyzer using suitable attenuation. The EUT was investigated for conducted spurious emissions from 30MHz to 10GHz, 10 times the highest fundamental frequency. Measurements were made at the low, center and high channels of the EUT. For each measurement, the spectrum analyzer's RBW was set to 100kHz. A peak detector function was used with the trace set to max hold.

### 7.5.3 Radiated Spurious Emissions - FCC 15.205, 15.209;ISED Canada RSS-Gen 8.9/8.10

#### 7.5.3.1 Measurement Procedure

Radiated emissions tests were made over the frequency range of 30MHz to 10GHz, 10 times the highest fundamental frequency.

The EUT was rotated through 360° and the receive antenna height was varied from 1m to 4m so that the maximum radiated emissions level would be detected. For frequencies below 1000MHz, quasi-peak measurements were made using a resolution bandwidth RBW of 120 kHz and a video bandwidth VBW of 300 kHz. For frequencies above 1000MHz, peak and average measurements were made with RBW and VBW of 1 MHz and 3MHz respectively.

The EUT was caused to generate a continuous modulated carrier on the hopping channel.

Each emission found to be in a restricted band was compared to the applicable radiated emission limits.

**7.5.3.3 Sample Calculation:**

$$R_C = R_U + CF_T$$

Where:

$CF_T$	=	Total Correction Factor (AF+CA+AG)-DC (Average Measurements Only)
$R_U$	=	Uncorrected Reading
$R_C$	=	Corrected Level
AF	=	Antenna Factor
CA	=	Cable Attenuation
AG	=	Amplifier Gain
DC	=	Duty Cycle Correction Factor

**Example Calculation: Peak – FSK Modulation**

Corrected Level:  $51.80 - 4.07 = 47.73\text{dBuV/m}$

Margin:  $74\text{dBuV/m} - 47.73\text{dBuV/m} = 26.3\text{dB}$

**Example Calculation: Average – FSK Modulation**

Corrected Level:  $43.90 - 4.07 - 0 = 39.83\text{dBuV}$

Margin:  $54\text{dBuV} - 39.83\text{dBuV} = 14.2\text{dB}$

**8 CONCLUSION**

In the opinion of ACS, Inc. the OW1, manufactured by Itron, Inc. meets the requirements of FCC Part 15 subpart C and Innovation, Science, and Economic Development Canada's Radio Standards Specification RSS-247.

**END REPORT**
