Supervisory Controls

## HYDROLINK SUPERVISORY CONTROLS

The HydroLink Supervisory Control is a Niagara AX based platform, designed to consolidate all mechanical room chillers and hydronic components under one controller. This turn-key solution features a 10" tablet-based touchscreen interface and provides complete plant room management that helps ensure proper operation with easier servicing. WaterFurnace provides custom programming of the Supervisory Control based upon your specific requirements for the whole chiller mechanical room to manage not only the chillers but also the pumps and other hydronics specialties.

A U R O R A

HydroLink Supervisory Controls provide a custom programmed turnkey solution with over 2 square feet of mounting area for custom controls.

### KEY FEATURES & BENEFITS

- Control is based upon the powerful and flexible Niagara AX software platform.
- Customized supervisory control programming to meet your site specification needs.
- Allows the engineer to specify graphics required for ease in monitoring and troubleshooting.
- Improves the integration of mechanical room components such as variable speed pumps and other hydronic specialties of the plant room into the site BAS.
- Guaranteed compatibility of the supervisory controller with the unit controllers.
- The sophistication of the Niagara based control provides improved equipment support and servicing.
- Enables tight integration to peripheral devices for reliable sequencing.
- Improved system visibility.
- Control with standard I/O 34 and up to two optional I/O 16 modules can be added for flexibility.
- Internal power supply and 120V convenience outlet (field wired).

HydroLink Supervisory Controls make it simple to manage your complete chiller mechanical room.

Control your chiller mechanical room with a detailed 10" touchscreen
