1. Precautions

1-1. Precautions for the Service

- **Use the correct parts when changing the electric parts.**
  – Please check the labels and notices for the model name, proper voltage, and proper current for the electric parts.
- **Fully repair the connection for the types of harness when repairing the product after breakdown.**
  – A faulty connection can cause irregular noise and problems.
- **When disassembling or assembling, make sure that the product is laid down on a work cloth.**
  – Doing so will prevent scratching to the exterior of the rear side of the product.
- **Completely remove dust or foreign substances on the housing, connection, and inspection parts when performing repairs.**
  – This can prevent fire hazards for tracking, short, etc.
- **Please tighten the service valve of the outdoor unit and the valve cap of the charging valve as securely as possible by using a monkey spanner.**
- **Check whether the parts are properly and securely assembled after performing repairs.**
  – These parts should be in the same condition as before the repair.

1-2. Precautions for the Static Electricity and PL

- **Please carefully handle the PCB power terminal during repair and measurement when it is turned on since it is vulnerable to static electricity.**
  – Please wear insulation gloves before performing PCB repair and measurement.
- **Check if the place of installation is at least 2m away from electronic appliances such as TV, video players, and stereos.**
  – This can cause irregular noise or degrade the picture quality.
- **Please make sure the customer does not directly repair the product.**
  – Arbitrary dismantling may result in electric shock or fire.

1-3. Precautions for the Safety

- **Do not pull or touch the power plug or the subsidiary power switch with wet hands.**
  – This may result in electric shock or fire.
- **If the power line or the power plug is damaged, then it must be changed since this is a hazard.**
- **Do not bend the wire too much or position it so that it can be damaged by a heavy object on top.**
  – This may result in electric shock or fire.
- **The use of multiple electric outlets should be prohibited.**
  – This may result in electric shock or fire.
- **Ground the connection if it is necessary.**
  – The connection must be grounded if there is any risk of electrical short due to water or moisture.
- **Unplug the power or turn off the subsidiary power switch when changing or repairing electrical parts.**
  – Doing so will prevent electric shock.
- **Explain to workers that the battery for the remote control needs to be separated for storage purposes when the product will not be used for a long time.**
  – This can cause a problem for the remote control since battery fluid may trickle out.

1-4. Precautions for Handling Refrigerant for Air Conditioner

Environmental Cautions: Air pollution due to gas release

- **Safety Cautions**
  If liquid gas is released, then body parts that come into contact with it may experience frostbite/blister/numbness.
  If a large amount of gas is released, then suffocation may occur due to lack of oxygen. If the released gas is heated, then noxious gas may be produced by combustion.
- **Container Handling Cautions**
  Do not subject container to physical shock or overheating. (Flowage is possible while moving within the regulated pressure.)

1-5. Precautions for Welding the Air Conditioner Pipe

- **Dangerous or flammable objects around the pipe must be removed before the welding.**
- **If the refrigerant is kept inside the product or the pipe, then remove the refrigerant prior to welding.**
  If the welding is carried out while the refrigerant is kept inside, the welding cannot be properly performed. This will also produce noxious gas that is a health hazard. This leakage will also explode with the refrigerant and oil due to an increase in the refrigerant pressure, posing a danger to workers.
- **Please remove the oxide produced inside the pipe during the welding with nitrogen gas.**
  Using another gas may cause harm to the product or others.

1-6. Precautions for Additional Supplement of Air Conditioner Refrigerant

- **Precisely calculate the refrigerant by using a scale and S-net, and proceed with the test operation.**
  Excessive supplement can cause harm to the product since it can cause an inflow of the liquid refrigerant into the compressor.
- **Do not heat the refrigerant container for a forced injection.**
  This may cause harm to the product or others since the refrigerant container may burst.
- **Do not operate the product after removing the product safety pressure switch and sensor.**
  If the product is blocked inside, then this may cause harm to the product or others due to the excess pressure increase of the refrigerant gas.

1-7. Other Precautions

- **There should be no leakage of the pipes after installation. When withdrawing the refrigerant, the compressor should be stopped before removing the connecting pipe.**
  If the compressor is operating while the refrigerant pipe is not correctly connected and the service valve is opened, then air and other substances can enter the pipe. The interior of the refrigerant cycle may then build up excessive high pressure resulting in explosion and damage.
- **If the Wall Mounted type(Wind free) indoor unit is included in the installation combination, please contact us before changing the Capacity correction for heating function to 33kg/cm2g during Outdoor unit key function setting.**

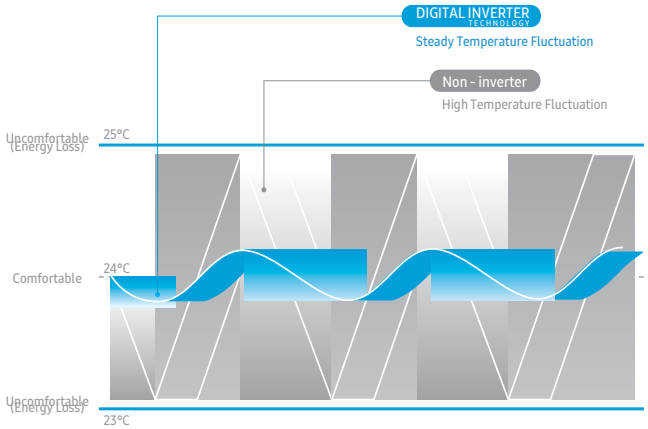
2. Product Specifications

2-1. CAC Single

■ **Stabilize the atmosphere with broad temperature allowance and control**
Samsung is dedicated to supporting comfortable living and working environments based on the strength of its technologies. With a single unit, CAC Single delivers reliable comfort and control over multiple areas to ensure a pleasant atmosphere in any climate.

■ **Wide temperature performance**
No matter how extreme the temperature, the highperforming CAC Single can handle the conditionwithout the need for an additional unit. Featuring a wide temperature allowance, it can cool in heat of up to 50 and provide warmth in the freezing cold of -20℃ to ensure a constant and comfortable home environment.

■ **Ideal comfort in minutes**
The CAC Single digital inverter air conditioner works at maximum capacity at startup. As soon as the temperature reaches the desired or set temperature, CAC Single performs fine adjustments to cope with any changes. This means less temperature fluctuation and ideal comfort in a matter of minutes.



■ **Versatile piping installation**
CAC Single outdoor units offer a selection of pipe directions. The internal pipe connection ports allow four different pipe directions, supporting a neater, more organized-looking unit upon installation.

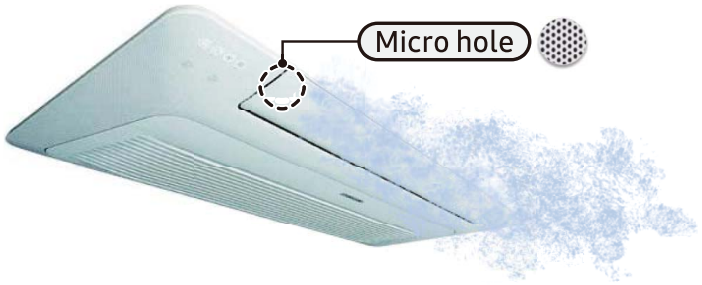
2-2. The Feature of Product

2-2-1. Features (Wind-Free 1Way CST)

■ **Wind-Free cooling**

Comfort wind implementation by Wind-Free cooling.

※ Wind-Free implementation : Still air by the velocity of flow below 0.15m/s.



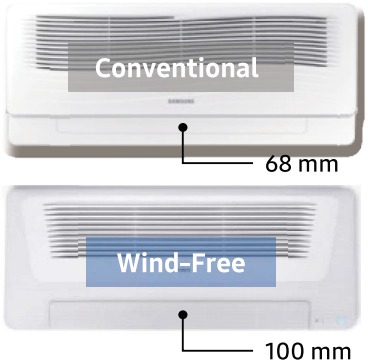
■ **Big blade**

Max. 8m Horizontal reach

※ Blade enlargement about 47% compare to conventional product

※ Reach : 8m (Height 0.6m, Wind speed 0.3m/s) Conventional product (Samsung) : 5m

※ Based on Wind-Free 1Way 7.1kW



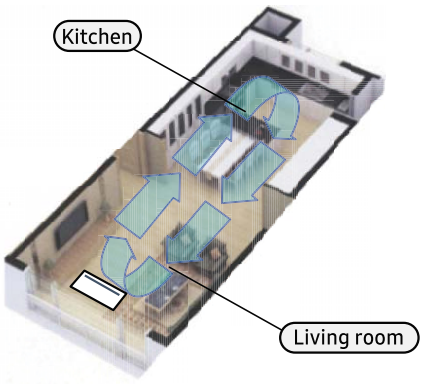
※ Reach : 5.5m (Height 0.6m, Wind speed 0.3m/s)
Conventional product (Samsung) : 3m

※ Based on Wind-Free 1Way 3.5kW

■ **Even cooling**

Even cooling For spacious space

※ Expand the blade angle from 30˚ to 80˚
Conventional product (Samsung) : 40~80 ˚



2-3. The Feature of Product

2-3-1. Features (Wind-Free 4Way CST)

■ **Wind-Free Cooling with Micro holes**

The Wind Free Air conditioner pushes air out through 15,000 micro holes in the panel, producing a dispersed and gentle flow of air actually defined as “still air” and the key here is all of those holes create a still, cooled air flow that infiltrates the room gently and softly.

2-4. Features & Benefits

2-4-1. 4Way Cassette (600 x 600)

■ **Add chic flair to your interior design with a stylish yet powerful AC system**
Samsung's advanced 4Way Cassette (600 x 600) builds on the aesthetic appeal and performance of the standard 4Way Cassette with an enhanced design. The 4Way Cassette (600 x 600) comes in a variety of patterns to complement any interior. The stylish cassette unit visually harmonizes with the indoor space, while efficient cooling and heating performance make it a dependable and practical air conditioning solution. The 4Way Cassette (600 x 600) indoor air conditioning system provides high-performance heating and cooling in an elegant design with features such as:

• Tasteful design and compact, lightweight build.
Create a polished ambiance with a discreetly sized design and a choice of attractive panel patterns.

• Enhanced comfort control.
Optimize comfort and save energy with optional motion detection.

• Low maintenance and powerful airflow.
Ease installation and maintenance and maximize airflow with an efficient design and robust performance.

2-4-2. 4Way Cassette (600 x 600) - Tasteful design, Compact, Lightweight build

■ **Refine the interior with an elegant, compact design**
The enhanced Samsung 4Way Cassette (600 x 600) indoor air conditioner features a selection of simple panel patterns to blend seamlessly into any interior design. Its uniquely lightweight frame blends effortlessly and beautifully into any décor, while clever blade construction keeps the unit clean for a tidyappearance.

■ **Attractive panel and display**
The 4Way Cassette (600 x 600) features a fashionable panel with a simple, beveled corner design. The rounded panel frame promotes a neat, tidy look for an aesthetic flair that blends perfectly with any ambience.

Waffle Pattern

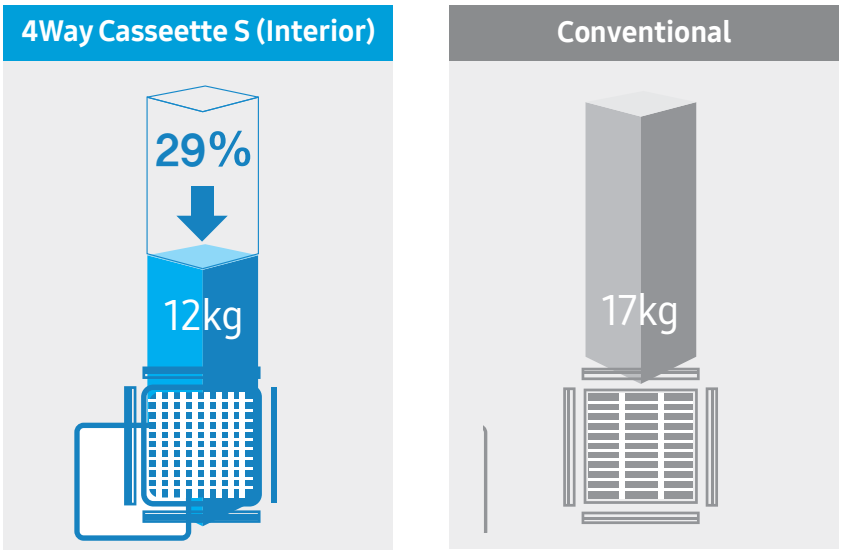
Classic Pattern

■ **Ultra-compact size**

Samsung's 4Way Cassette (600 x 600) air conditioner can be installed on a single standard ceiling tile (600W x 600D) which helps minimize installation time and effort.

■ **Light, robust design**

The Samsung 4Way Cassette (600 x 600) indoor unit is now lighter in weight at 11kg. It is the lightest indoor unit in the industry, about 35 percent lighter than our conventional products.



2-4-3. 360 Cassette

■ **All round cooling and comfort**

The Samsung 360 Cassette air conditioner offers a brand new way of staying comfortably cool in every corner of the room. Its innovative circular design not only means it perfectly fits in everywhere, adding a sophisticated look to many different sites, but it also blows cool air in all directions, so that the whole room is the same temperature*. And its bladeless outlet ensures that cool air is gently dispersed, without creating a cold draft**, and doesn't block the air flow, even at low angles, so it expels 25% more air* and spreads it farther.

■ **EVENLY CIRCULATES & COOLS EVERY CORNER**

Unike 4-way, cassette type air conditioners that create areas of uneven airflow where cool air can't reach*, a circular outlet blows cool air in all directions, so every corner of a room is the same temperature**.

* Samsung testing compared to a general 4 way cassette type air conditioner.
** Within an 9.3m radius the temperature difference is less than 0.6°C.

* Within an 9.3m radius the temperature difference is less than 0.6°C.

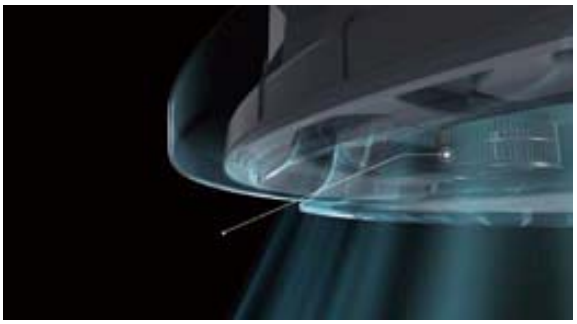
■ **Comfortably cool, not cold**

A bladeless design softly disperses cool air across the room, making you comfortably cool without feeling a cold draft**. With no blades to block the air flow, it also expels 25% more air* and spreads it farther.

* Within a 5m radius, no cold draft between 0~1.5m in height (with 14.0kw).

■ **Circular to perfectly fit in everywhere**
Its innovative circular design can match a multitude of interior designs, so it perfectly fits in everywhere. Its minimalist modern styling creates a sophisticated look and its circular shape stands out beautifully.

■ **Spreads more air in more ways**
An innovative Booster Fan enables cool air to be expelled at much lower angles. It creates a low pressure area around the outlet, so that cool air comes out parallel to the ceiling and disperses across a wider area.



■ **All round simpler & intuitive control**
Intuitively control its performance and see where the air is going. The Wireless Remote Controller's* Jog shuttle and button offer a fun way to adjust the air flow and a Circular LED Display shows its direction.

2-4-4. Duct S

■ **Overview**

Samsung Ducted Type air conditioning units are a smart solution for low-maintenance, consistent cooling and heating performance in any environment. Their compact, slim frame blends seamlessly into ceilings, enhancing the beauty of the interior space and affording users more flexible installation options. Offering a comprehensive lineup, Samsung Ducted Type air conditioning units offer just the right solution for every need--from the office or shop to the restaurant kitchen.

■ **Experience performance and convenient comfort for any weather condition**

Samsung Duct S delivers unparalleled cooling and heating and flexible management with customizable comfort settings in any climate—all year round. Plus, it boasts a slim, compact size and multiple access points for easy setup exactly where needed.

■ **Smart pressure control**

Samsung Ducted Type units feature a smart pressure control system. This system adjusts the fan speed based on the external static pressure (ESP), delivering consistent cooling and heating power, regardless of the surrounding environment.

■ **Convenient installation**

The optional lift-up drain pump lifts condensed water up to 750 mm, compared to a limit of 700 mm on conventional models, for flexible and convenient installation.
The Duct S indoor air conditioning unit delivers smooth, consistent operation and convenience with features such as:

• Efficient operation. Stage the desired atmosphere with energy-efficient performance and customized airflow.
• Smart management. Cool spaces efficiently and manage the air conditioning unit even while away, with features designed for efficiency and control.
• Easy, flexible setup. Install and maintain even multiple units with a compact and easily accessible design.

2-4-5. Wall Mount Type

- **Breathe easily with wall-mounted systems designed for all-day freshness**
  Samsung Wall Mount Type air conditioners have been designed from the ground up to be exceptionally efficient. With their stylish, innovative designs, these wall-mounted air conditioners optimize comfort with cool, clean, healthy freshness for everyday living.

- **Improved blade operation**
  Samsung's wide twin blade can open up to 90° for more effective cooling. The longer twin blade ensures that air reaches every corner of the room with greater control.

- **Superior dust filtration**
  A Full High Density (HD) filter creates cleaner air through enhanced filtration, reducing microscopic dust particles by up to 90 percent.

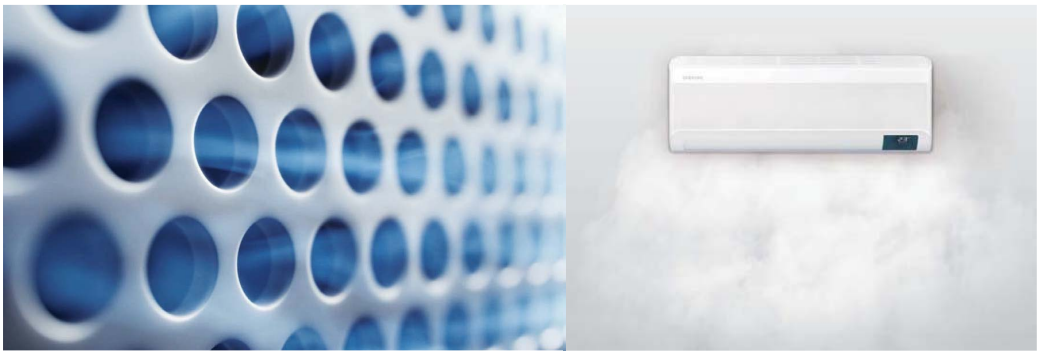
- **Cleaner, healthier air**
  Virus Doctor eliminates the harmful substances and viruses breeding in the atmosphere of living spaces, thus providing the highest level of indoor air quality. This smart solution creates a purified zone, eliminating the hazards of airborne allergens and controlling the active oxygen that contributes to disease, cancer and accelerated aging.

- **Good's sleep**
  Samsung's Wall Mount Type units feature Good'sleep mode for a comfortable bedroom climate perfectly tempered for a restful night. With automatic temperature and moisture adjustment, all three vital stages of sleep are protected from humidity and heat so users wake up fully rested and refreshed.

2-4-6. Wall Mounted Wind Free - Wind Free, Auto Clean

■ **Wind-Free™ Cooling**

With Wind-Free™ Cooling mode, cool air is gently dispersed across the room through 23,000 micro air holes. It creates a 'still Air' environment with a very low air speed of just 0.15m/s and no temperature fluctuation – so there are no annoying cold draft and you don't feel too cold, just pleasant comfort.



■ **Auto Clean**

Keep the inside of your air conditioner hygienic without much effort at all! After it's been working, the Auto Clean function automatically dries the Heat Exchanger using a 3-step process. It removes moisture by blowing air for between 10 to 30 min. So it prevents the build-up of bacteria and odors.

*Only available in Wind-Free™ models that have a humidity sensor.

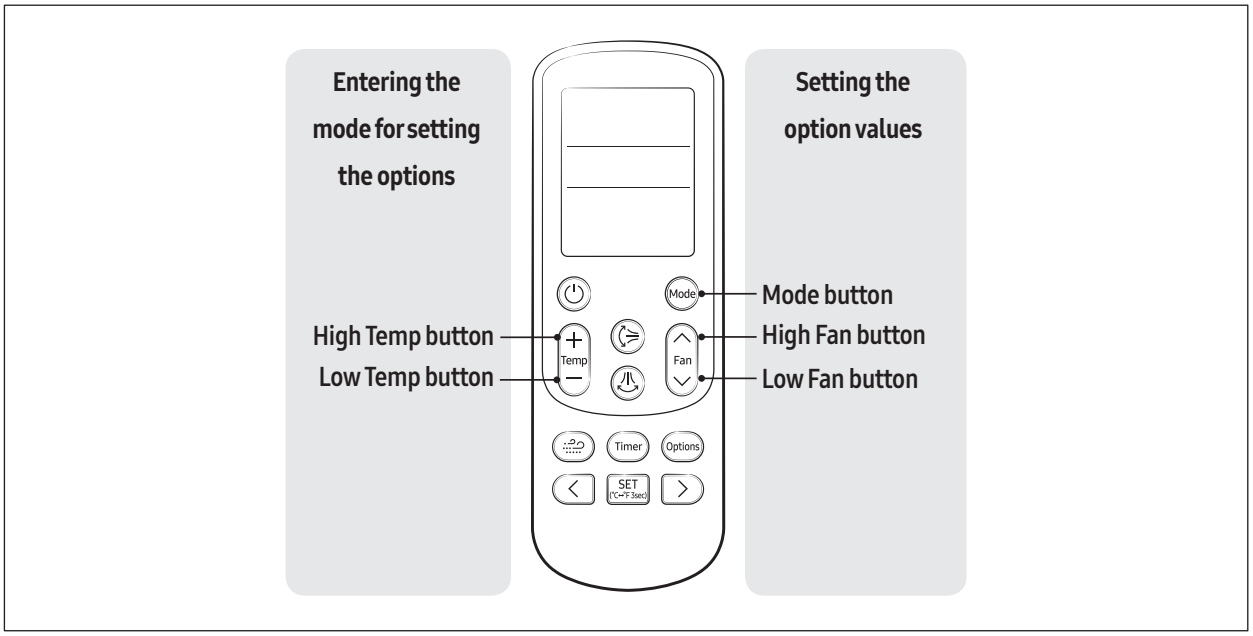
4. Troubleshooting

4-1. Setting an indoor unit address and installation option

▶ Set the indoor unit address and installation option with remote controller option.
Set the each option separately since you cannot set the ADDRESS setting and indoor unit installation setting option at the same time. You need to set twice when setting indoor unit address and installation option.

4-1-1. The procedure of setting option



Step 1 Entering mode for option setting.

1. Remove batteries from the remote controller.
2. Insert the batteries while you press [+ Temperature] and [- Temperature] button at the same time.
3. Check if you have entered the option setting status. 

Step 2 Option setting procedure. (The option setting procedure is the same for other models.)

After entering the option setting status, select the option as listed below.

CAUTION

- Option setting is available from SEG1 to SEG 24.
- SEG1, SEG7, SEG13, SEG19 are not set as page option.
- Set the SEG2~SEG6, SEG8~SEG12 in the ON status and SEG14~18, SEG20~24 in the OFF status.

4-1-4. Setting the indoor unit addresses

Before installing an indoor unit, be sure to set an address for the indoor unit by taking the following steps:

1. Make sure that the power is supplied to the indoor unit. If the indoor unit is not plugged in, it must include a power supply.

2. Set an address for each indoor unit using the remote control, according to your air conditioning system plan, by referring to the following table and by following the steps in Common steps for setting the addresses and options on page 4-1.
   - The indoor unit addresses (main and RMC addresses) are set to 0A0000-100000-200000-300000 by default.
   - If indoor units and outdoor units match 1:1, you don't need to set the main address because it is automatically set by the outdoor unit.
   - If you are using on or off controller, set RMC address.

Option No. for an indoor unit: 0AXXXX-1XXXXX-2XXXXX-3XXXXX

By SEG4 setting, Minimizing fan operation when thermostat is off.
- Fan operates for 20 seconds at an interval of 5 minutes in heat mode.
- Fan stops or operates Ultra low in Cooling when thermostat is off.

• 2) SEG18
If you set the Maximum filter usage time option to a value other than 2 and 6, it is automatically set to 2 (1000 hours).

• 3) SEG20
If you set the Individual control with remote control option to a value other than 0 to 4, it is automatically set to 0 (Indoor1)

• 4) SEG21
Default value of Heating setting compensation is 9°F(5°C).

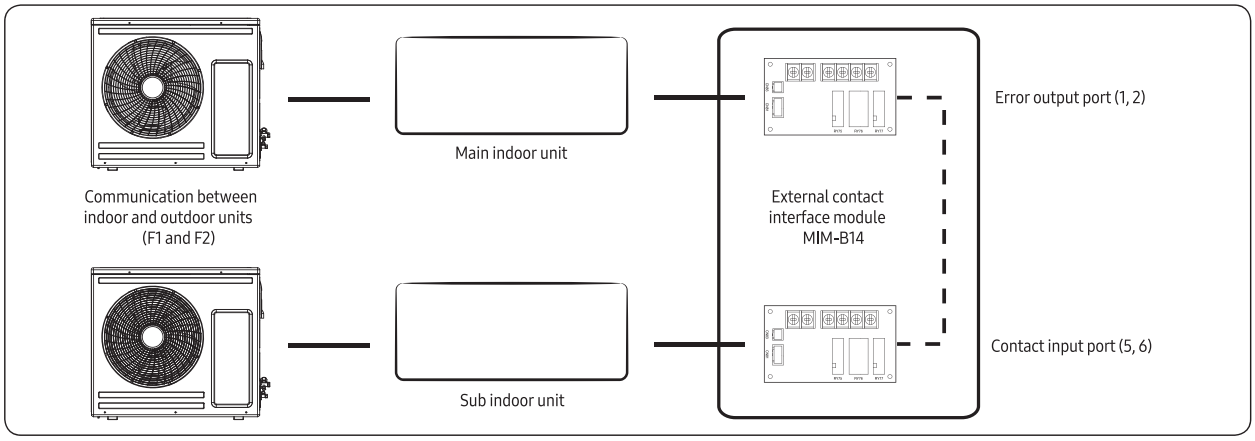
4-1-7. Emergency Temperature Output (ETO) function

CAUTION

- In order to deploy the ETO function, the MIM-B14, an external contact interface module, must be installed in each indoor unit.
- The ETO is a concept of emergency operation of indoor units. If the indoor unit 1 (main indoor unit) stops because of an error, the indoor unit 2 (sub indoor unit) starts to operate.
- Basically, the indoor unit 2 operates in the previous mode. [For the first time operation, it starts in 24 °C Auto mode.]
- To set more detailed operation conditions for the indoor unit 2, use the S-net Pro.

■ Setting up the ETO

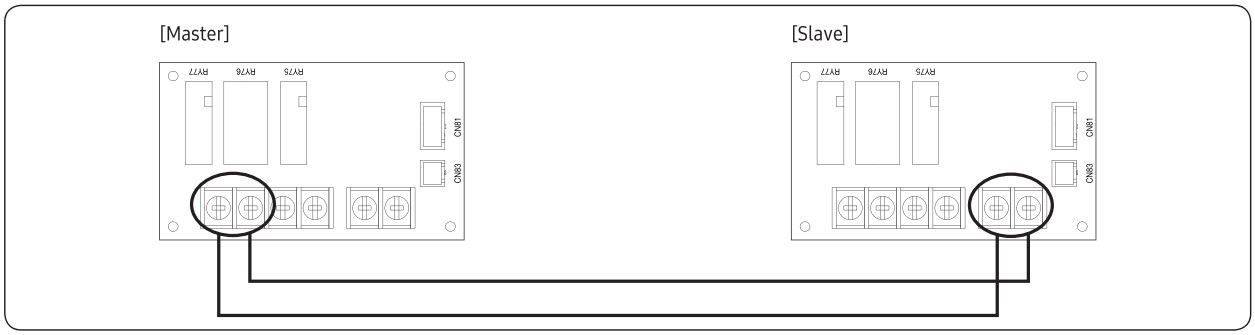


1 Main indoor unit

- Disable the external contact control (Default).
- Connect the S-net pro2 to F1 and F2.
- Enable the ETO function and set the temperature and time.

2 Sub indoor unit

- (Required) Enable the external contact control (with the installation option SEG14 - Reverse Control).
- Connect the S-net pro2 to F1 and F2.
- Enable the entrance control and set the mode, set temperature, and fan speed.



Emergency Temperature Output (ETO) function (Cont.)

■ ETO operation specifications

1 Main indoor unit

- Based on the external contact control settings, the main indoor unit decides whether to generate output when an error (indoor unit stop) occurs.
- Based on the ETO settings, the main indoor unit decides whether to generate output according to the temperature and time conditions.

2 Sub indoor unit

- Based on the entrance control settings, the sub indoor unit decides the mode, set temperature, and fan speed when contact inputs are given.

	Enable of ETO	Enable of external contact	Error port output
Main indoor unit	X	X	N/A
	X	O	Output due to an error
	O	X	Output by ETO entrance conditions (temperature / time / error occurrence)
	O	O	Output by ETO entrance conditions (temperature / time / error occurrence) * Ready to control the main contact input

	Enable of entrance control	Enable of external contact	Operation when outputting Main
Sub indoor unit	X	X	N/A
	X	O	On with the previous operation conditions
	O	O	On with the entrance control enabled

[1] Defrost test mode
Condition 1: The outdoor temperature is below 10°C.
Condition 2: All the temperature conditions should meet the defrost conditions.

[2] Auto check (Installation commissioning mode)
To ensure normal operation of the product, first make sure to complete auto check.

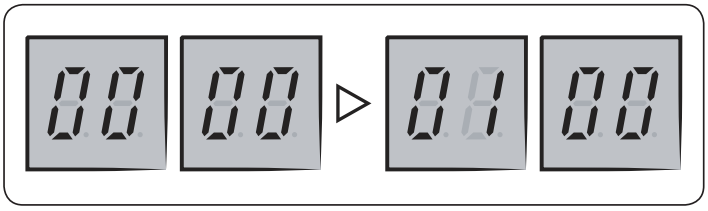
■ Setting outdoor unit option switch and address manually

► Setting the option

- Press and hold K2 to enter the option setting. (Only available when the operation is stopped)
  – If you enter the option setting, display will show the following.

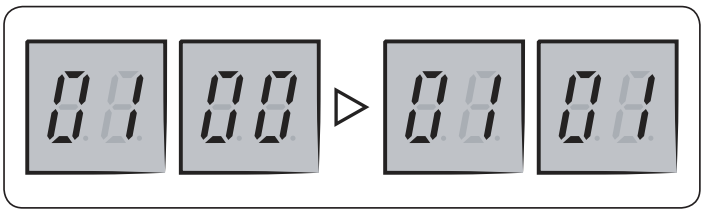
  – Seg 1 and Seg 2 will display the number for selected option.
  – Seg 3 and Seg 4 will display the number for set value of the selected option.
- If you have selected desired option, you can shortly press the K2 switch to adjust the value of the Seg 3, Seg 4 and change the function for the selected option

Example)



- If you have selected desired option, you can shortly press the K2 switch to adjust the value of the Seg 3, Seg 4 and change the function for the selected option.

Example)



- After selecting the function for options, press and hold the K2 switch for 2 seconds. Edited value of the option will be saved when entire segments blinks and tracking mode begins.

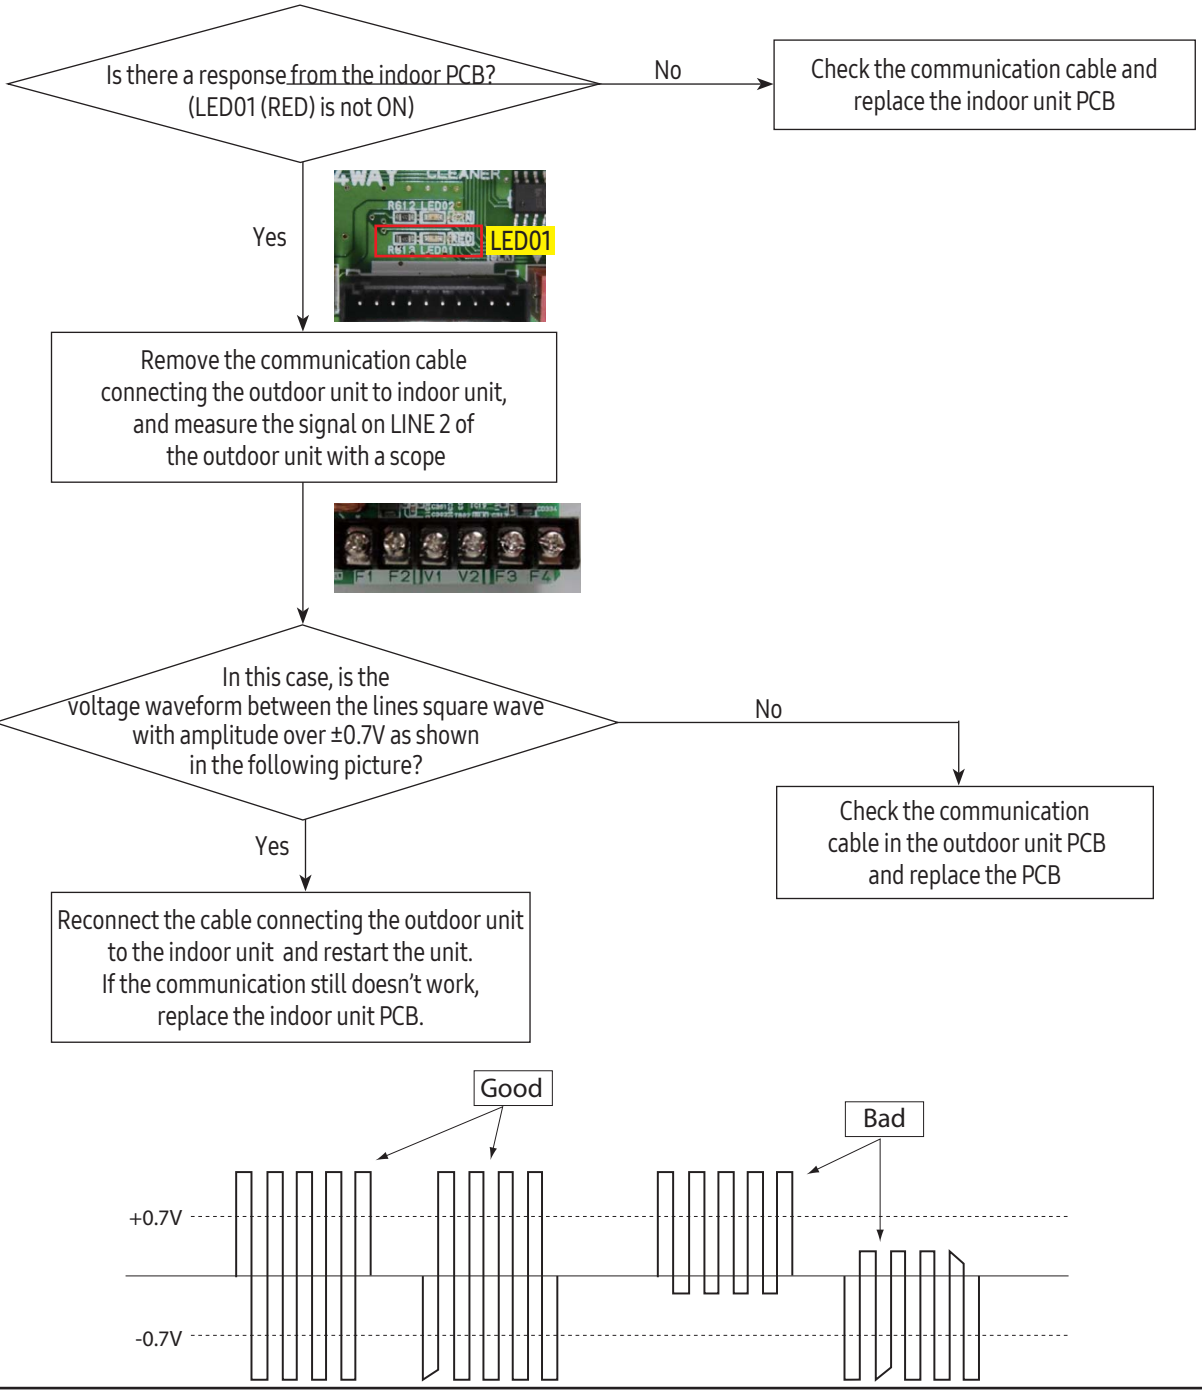
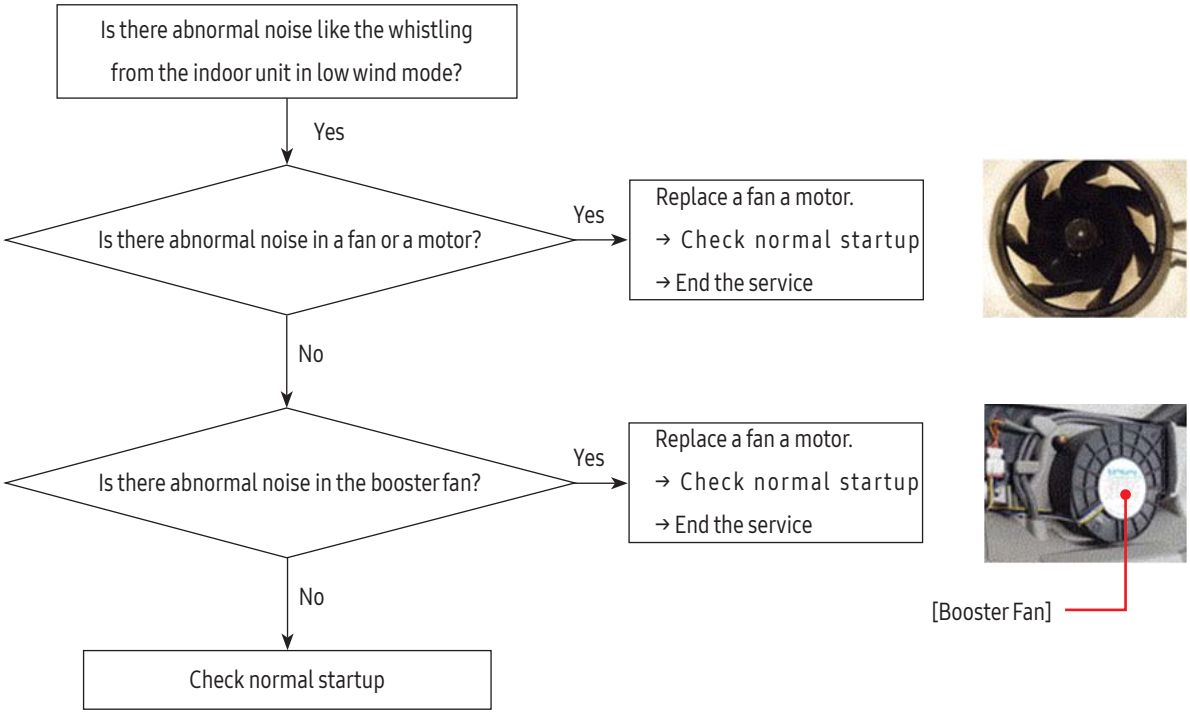
Symptom	Communication error between the indoor and outdoor unit for two minutes	



4-4-7. The whistling noise from the indoor unit in low wind mode

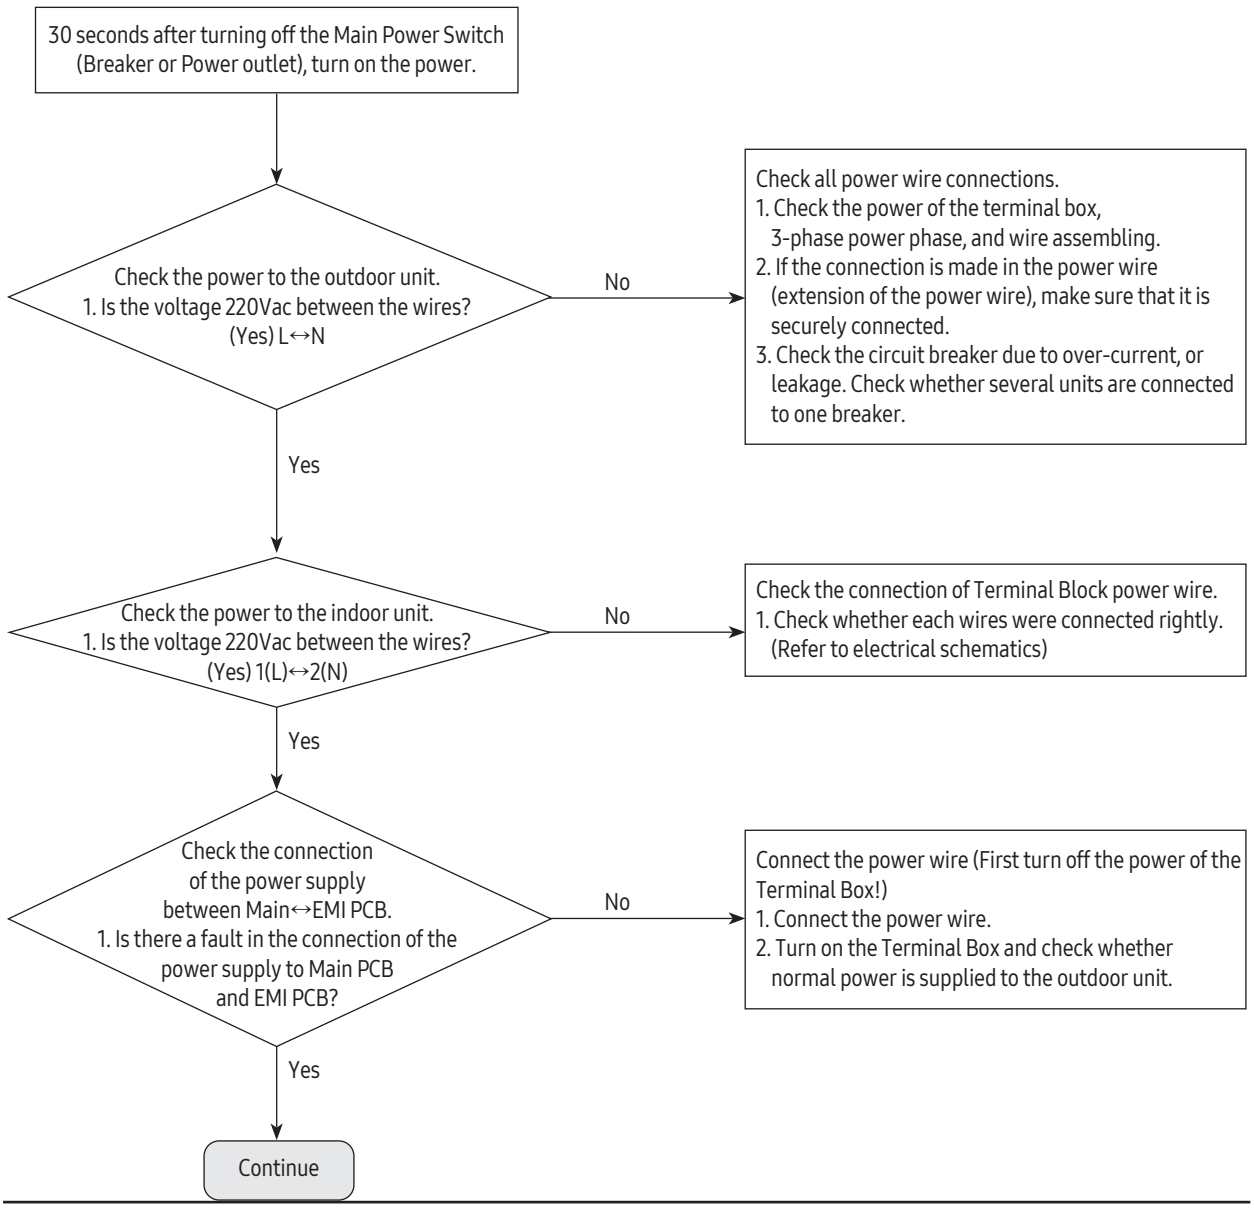


4-4-8. When the outdoor unit power is not ON - Initial Diagnosis : 1-phase products

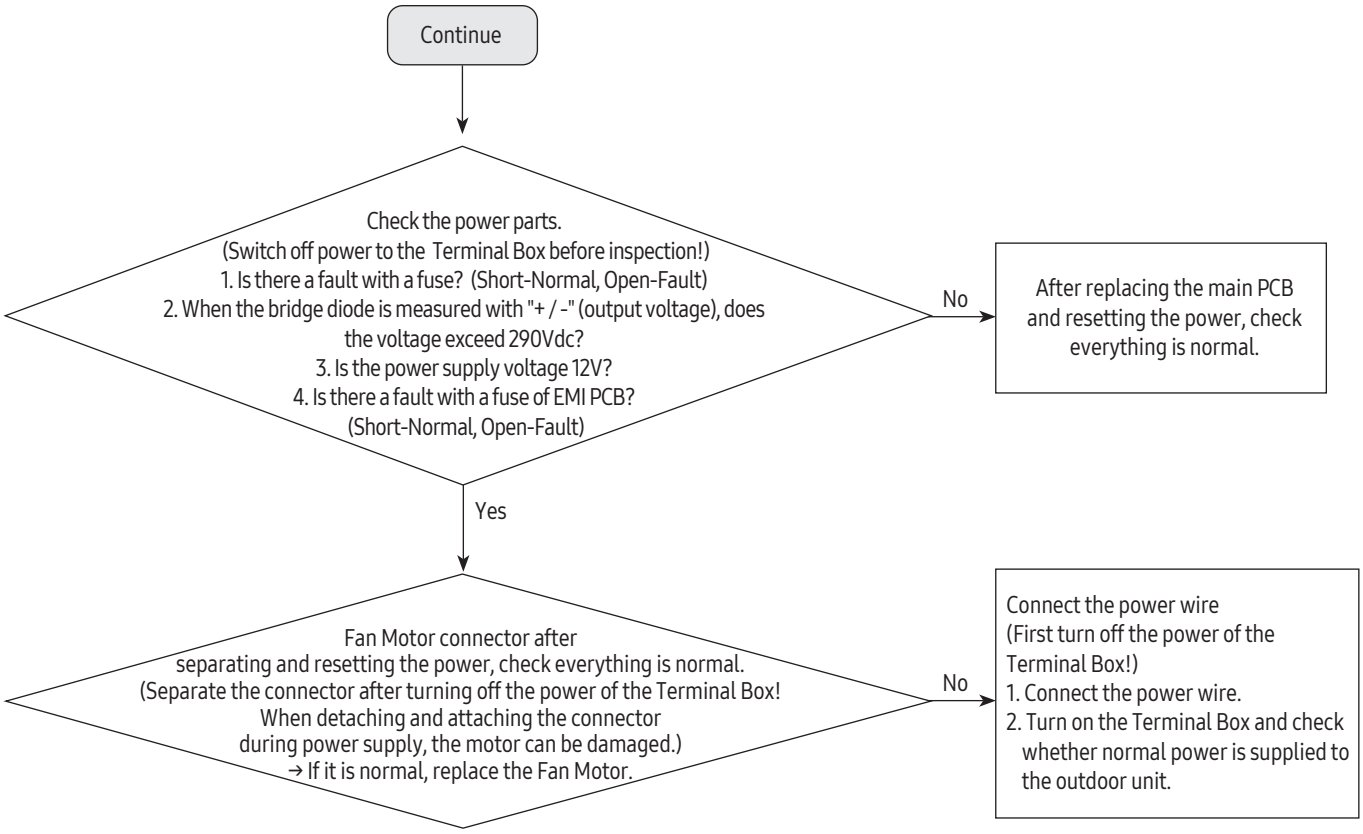
1. Test items
   1) Check the power connection of outdoor unit.
   2) Check the whole connection part of the power wire.
   3) Check the power on the indoor unit.
   4) Check the connection of the power wire of the Terminal Block.
   5) Check the connection of the power wire between the Main ↔ EMI PBA of the outdoor unit.
   6) Connect the power wire. (Never forget to turn off the power of the Terminal Box).
   7) Check the power supply parts. (Check after turning off the power of the Terminal Box!)
   8) Check everything is normal after separating the fan motor connector and resetting the power.
   (Separate the connector after turning off the power of the Terminal Box! When detaching and attaching the connector during power supply, the motor can be damaged.)

· 7-segment off.
· Conduct the following test if the mode is not Eco-mode (power saving mode).

2. Check procedure



When the outdoor unit power is not ON - Initial Diagnosis : 1-phase products (Cont.)



4-4-9. Indoor/outdoor communication error (1min.) (Error Code : E202)

1. Test items
   1) Check the communication wire and power wire connection.
   2) Check the communication connector connection.
   - CN31 of outdoor unit Main PCB
   3) Check the communication circuit on the PCB.

2. Check procedure

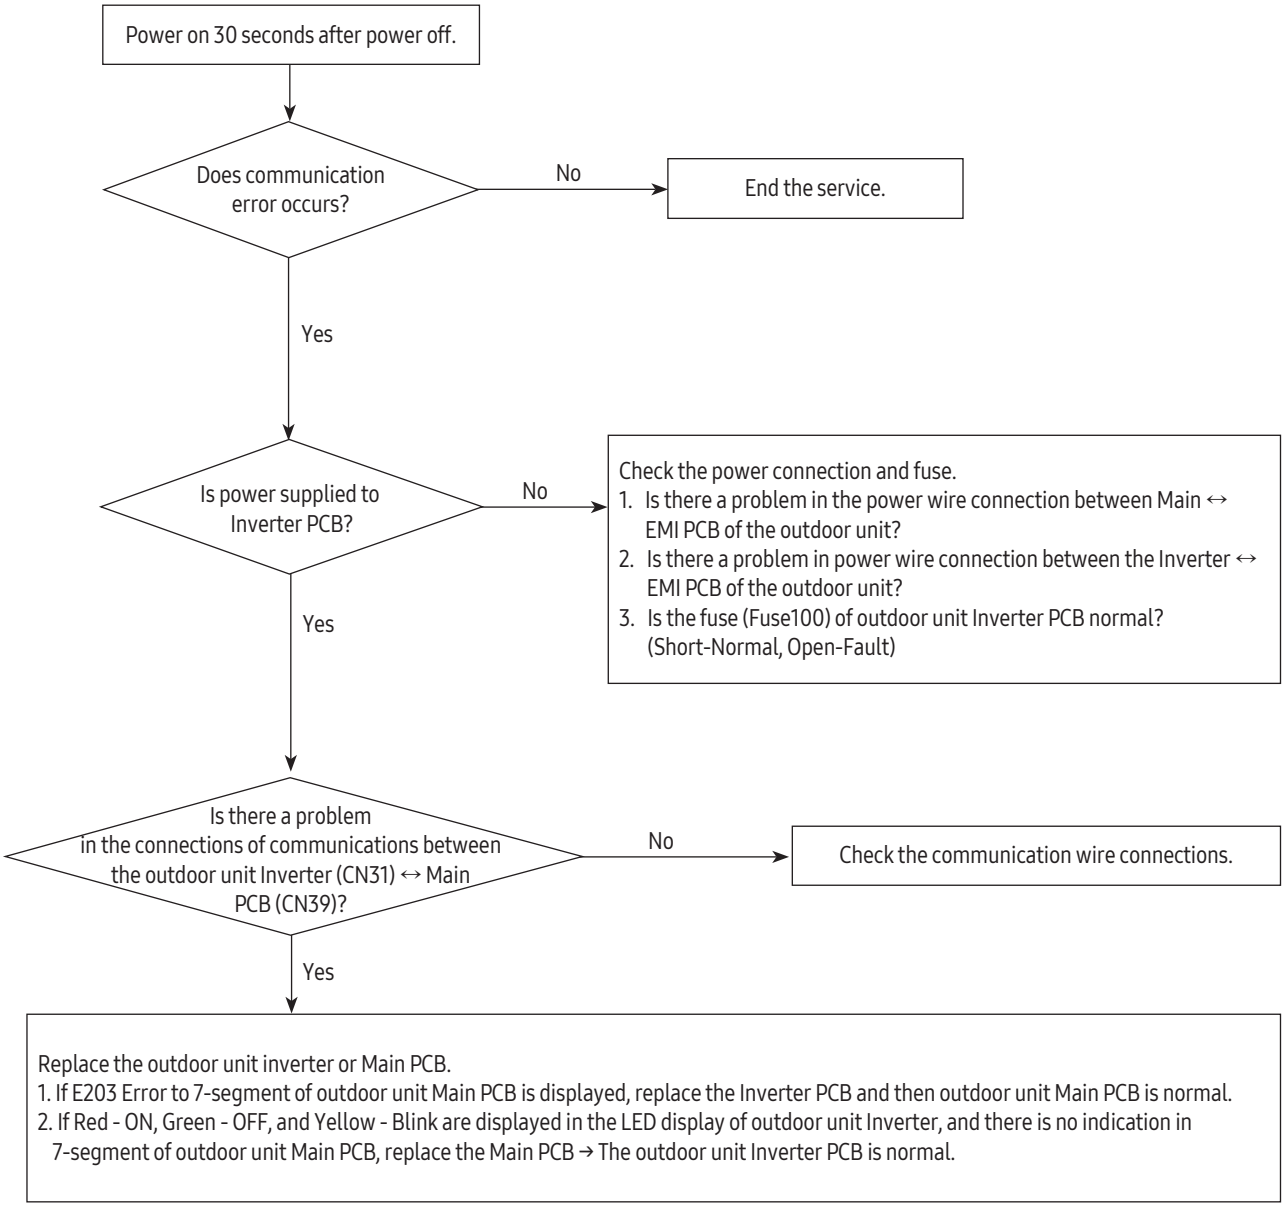
4-4-10. Communication error between outdoor unit INV ↔ MAIN MICOM (1 min.) (Error Code: E203)

1. Test items
   1) Is power supplied to outdoor unit Inverter PCB?
   2) Check the power wire connection and fuse.
   3) Is there a problem in the communication wire connections between the outdoor unit Inverter (CN31) ↔ Main PCB (CN39)?
   4) Check the communication wire connections.

2. Check procedure

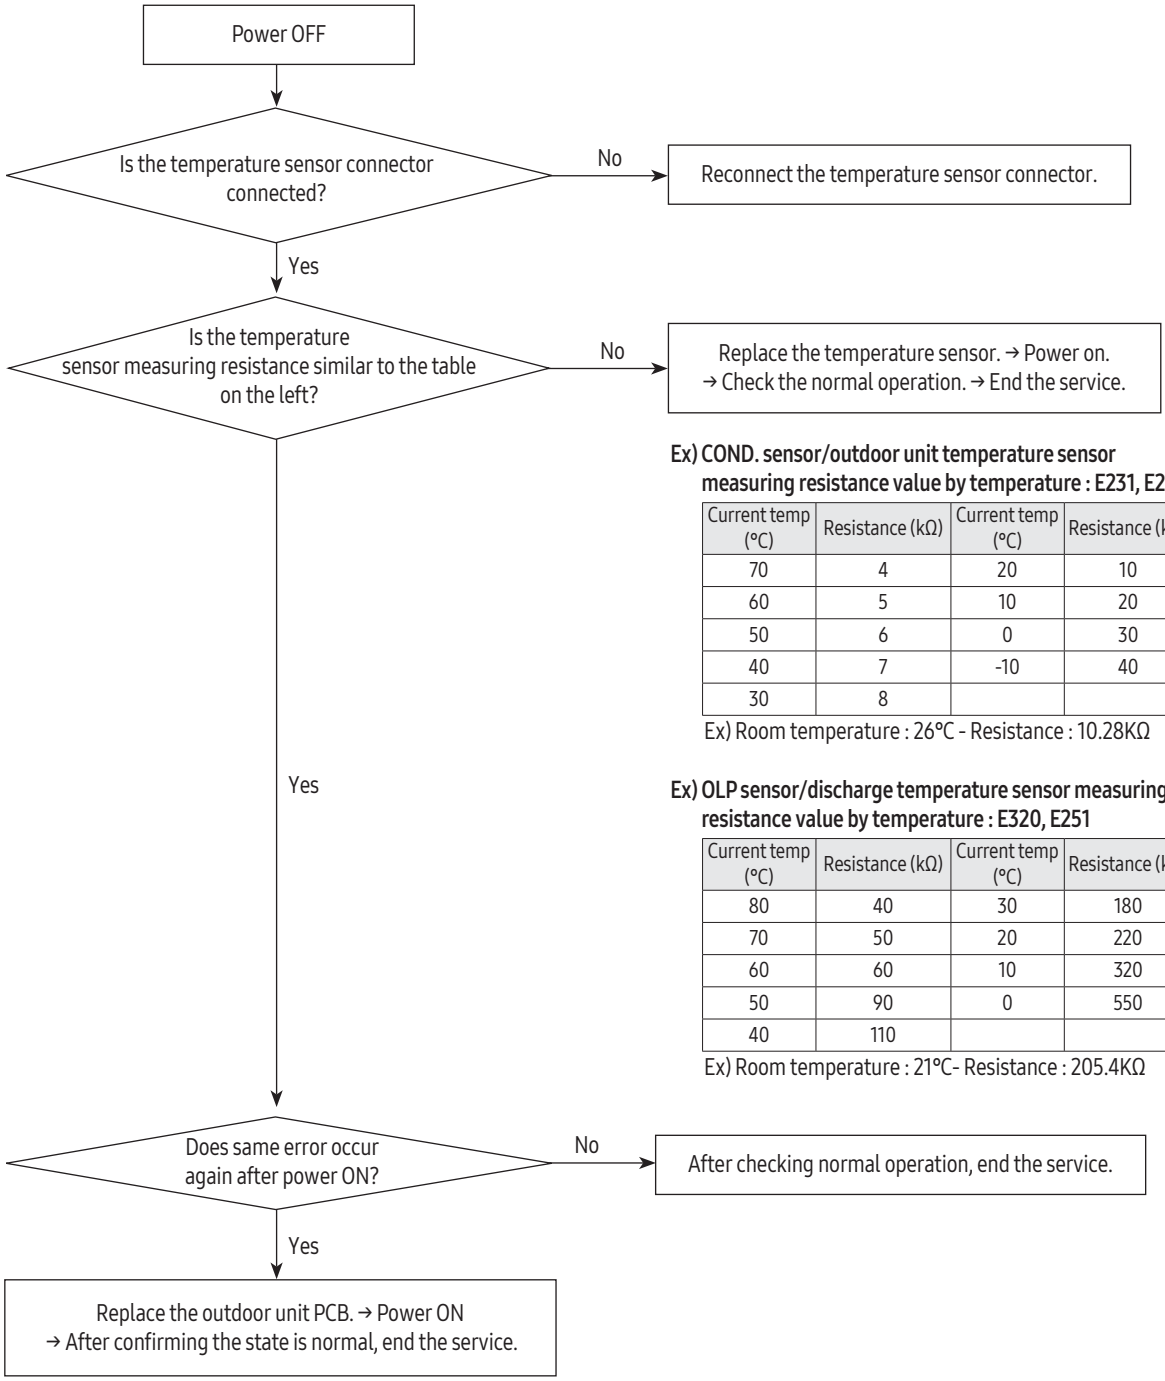


4-4-11. Outdoor sensor error(Error Code : E221, E231, E251, E320)

1. Test items
   1) Check the connection of the temperature sensor connector.
   2) Check the resistance value of the temperature sensor.

Error CODE	Description
E221	Outdoor temperature sensor error
E231	Outdoor temperature sensor error
E251	Outdoor temperature sensor error
E320	Outdoor OLP sensor error

2. Check procedure



Ex) COND. sensor/outdoor unit temperature sensor measuring resistance value by temperature : E231, E221

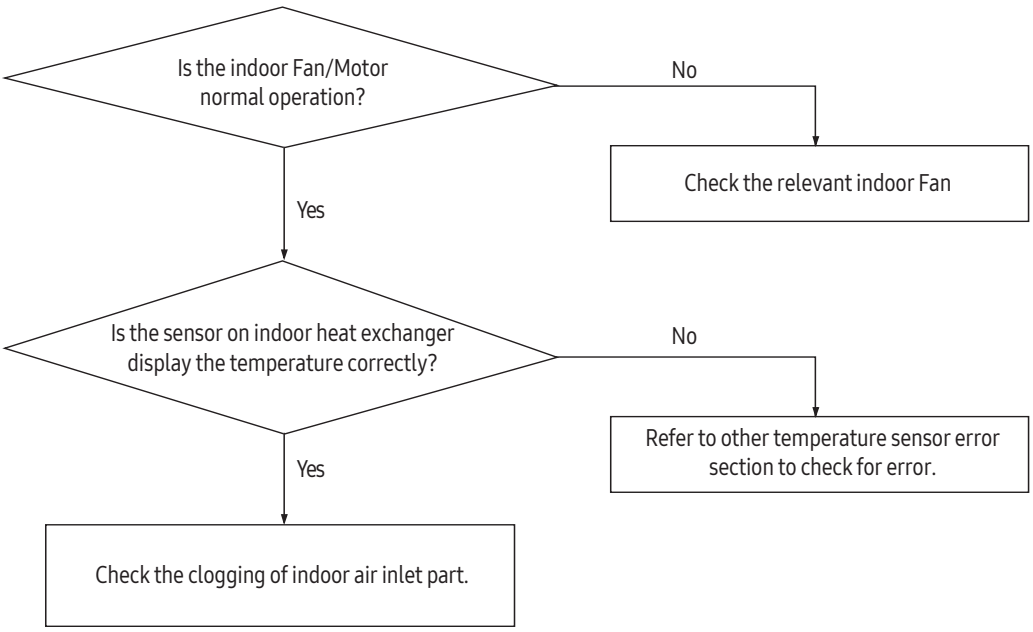
Ex) Room temperature : 21°C- Resistance : 205.4KΩ

4-4-12. Compressor down due to freezing control (Error Code : E403)

1. Test items
   1) Check the normal operation of indoor Fan/Motor.
   2) Check the normal operation of indoor EEV.
   3) Check the IN/OUT sensor of indoor heat exchanger.
   3) Check the clogging of indoor air inlet part.

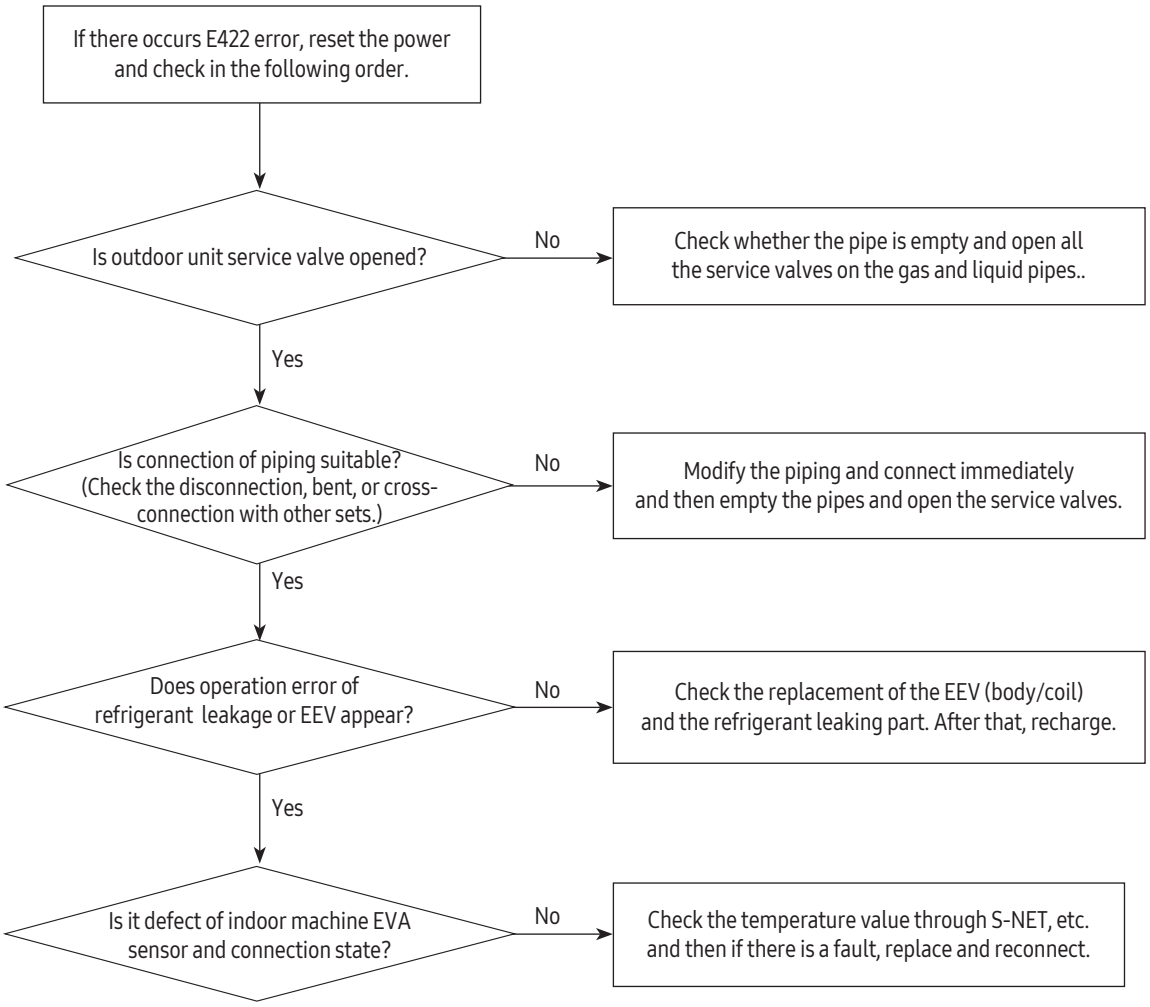
2. Check procedure



4-4-13. Pipe blockage error (Error Code : E422)

1. Test items
   1) Check the open state of the outdoor unit service valve.
   2) Check the connection of the pipe.
   3) Check the operation of the EEV.
   4) Check the refrigerant leakage.
   5) Check the connection of the indoor unit PBA EVA sensor.
   6) Check the fault in the indoor unit EVA sensor.

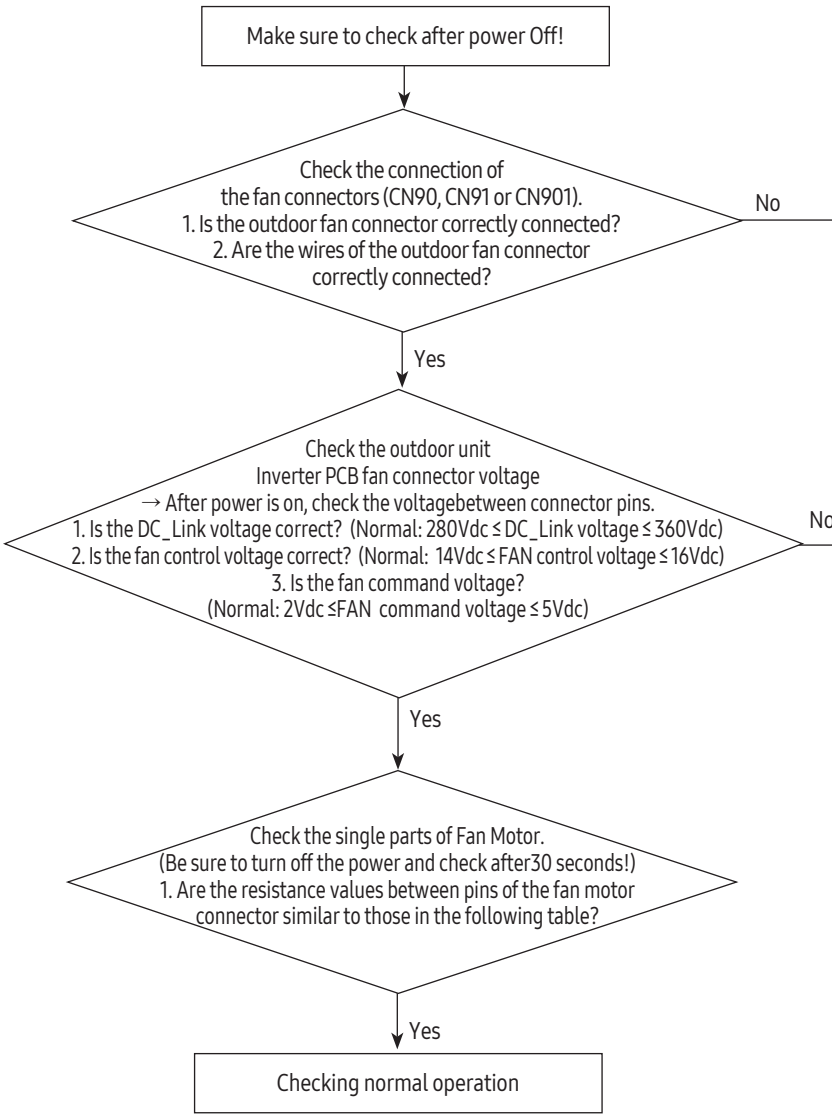
2. Check procedure

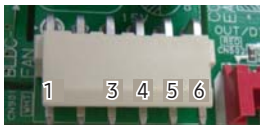


4-4-14. Outdoor unit Fan error (Error Code : E458, E475)

1. Test items
   1) Check the connection of Fan connectors (CN90, CN91)
   2) Check the voltage of the fan motor connector in the inverter PBA of the outdoor unit.
   3) Check the power connection of the outdoor unit Inverter PCB.
   4) Check the Fan Motor single parts. (Be sure to turn off the power and separate the motor connector after 30 seconds!)

2. Check procedure





#1-#3 DC_Link Voltage (between DC_link and GND)	280Vdc ~ 360Vdc
#4-#3 DC_Link voltage (between DC15V and GND)	14Vdc ~ 16Vdc
#5-#3 FAN command voltage (between fan control and GND)	2Vdc ~ 5Vdc

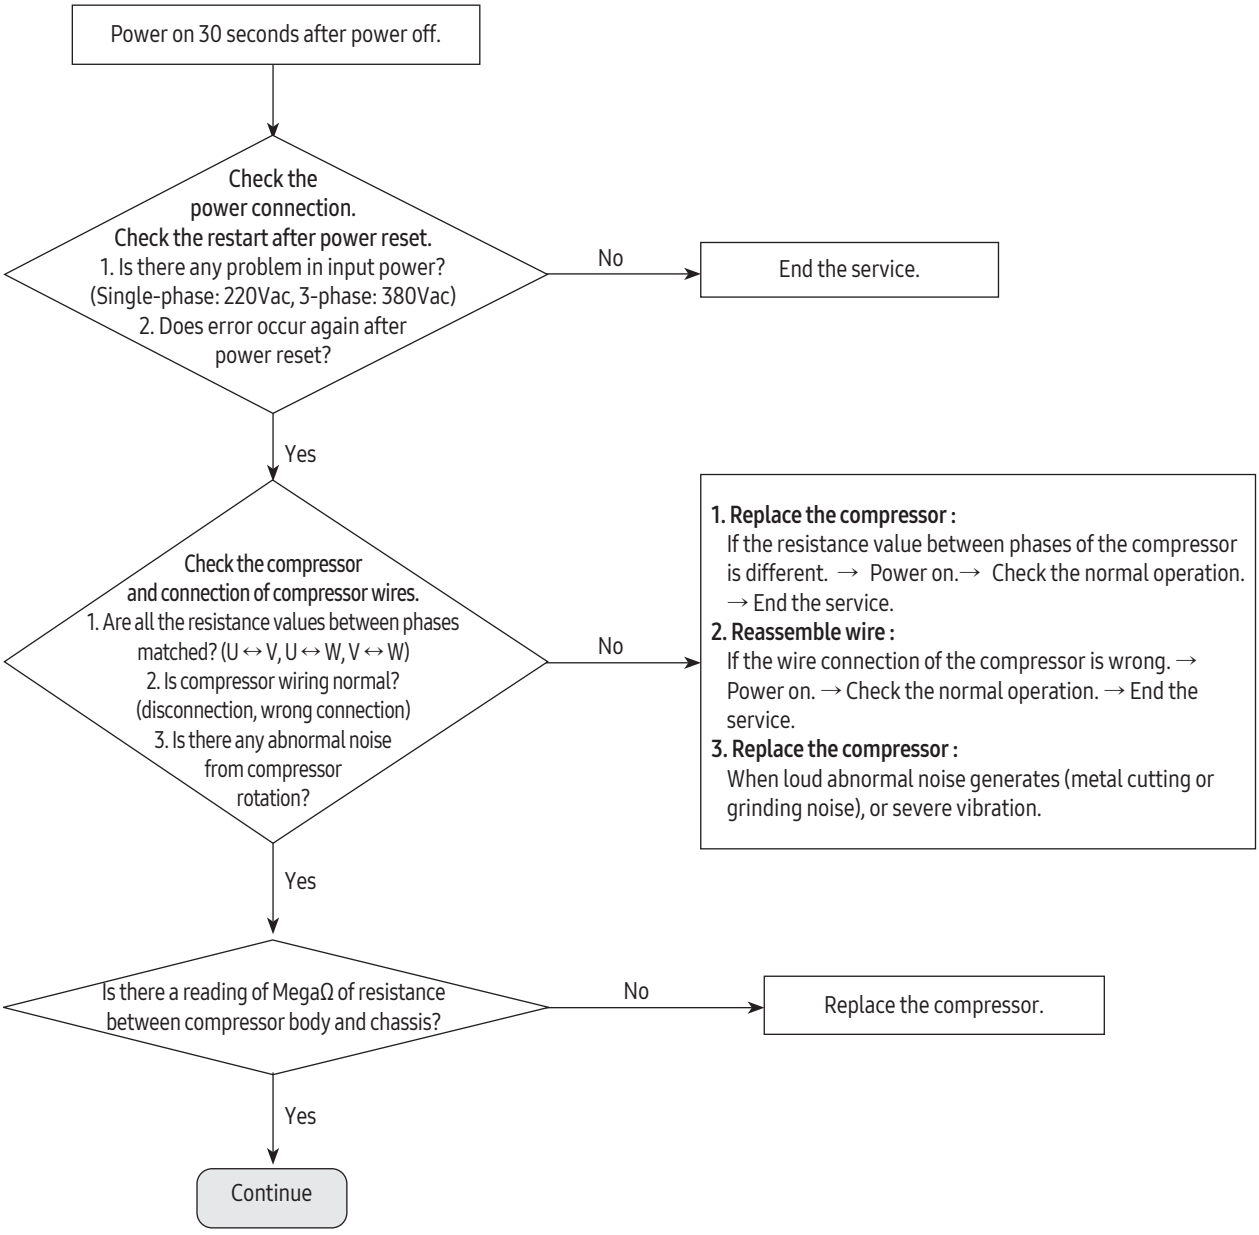
Measuring Part	Diagnosing Part	Value of good product
 Motor Connector	#5(YEL)-#3(BLK) resistance (between fan control and GND)	Open (infinite resistance)
	#4(WHT)-#3(BLK) resistance (between DC15V and GND)	Approx. 1.0kΩ ~ 3kΩ
	#5(YEL)-#3(BLK) resistance (between fan control and GND)	Approx. 230kΩ ~ 280kΩ
	#6(BLU)-#3(BLK) resistance (between feedback and GND)	Some MΩ or more or open (infinite resistance value)

※ At least 30 seconds after power is OFF, attach/detach the fan motor connector!
→ Threatened to cause secondary damage to the motor and the PCB.
※ Check the Inverter PCB or Fan Motor single parts and only if there is a fault, replace!
※ Do not replace the Main PCB of the outdoor unit relating to the fault in the Fan Motor!
→ If the error is indicated on 7-segment of the Main PCB of the outdoor unit, the Main PCB of the outdoor unit has no fault.
→ In case of a control problem, it is possible to solve with S/W update.

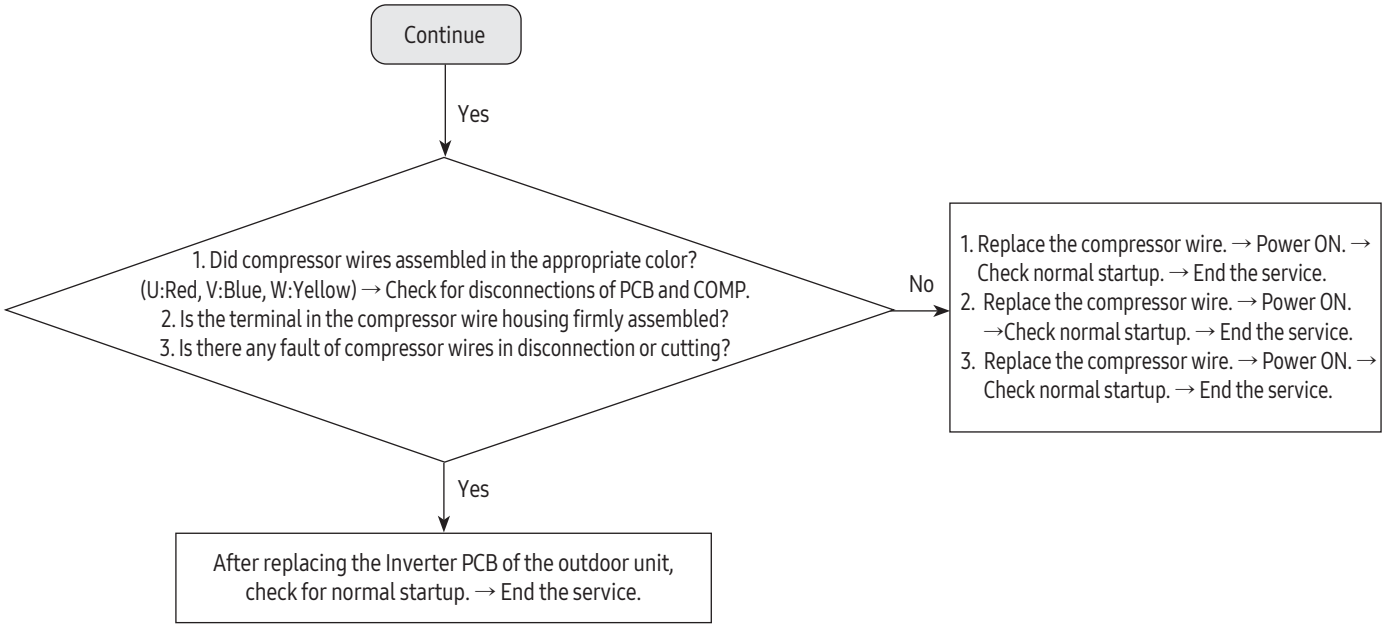
4-4-15. Compressor starting error / rotation error (Error Code : E461, E467)

1. Test items
   1) Check the power connection. / Check the restart after power reset.
   2) Check the compressor and the state of the compressor wire assembling.
   3) Check the defective for compressor wire single parts.

2. Check procedure



Compressor starting error / rotation error (Error Code : E461, E467) (Cont.)

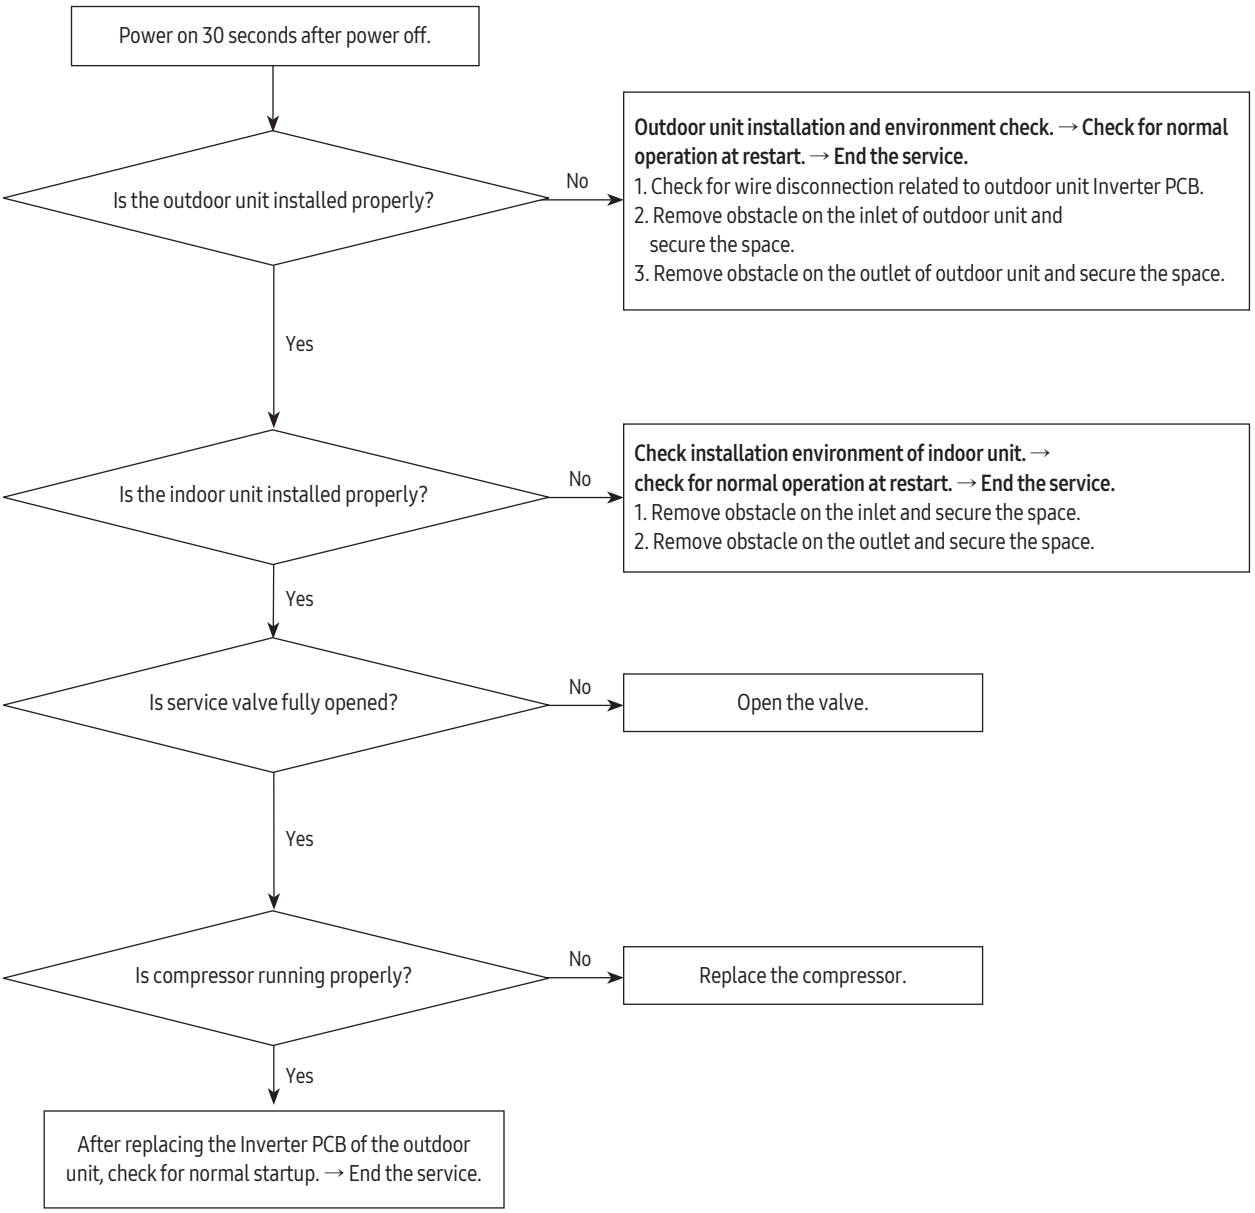


※ E461, E467 Error-related, EMI / outdoor unit Main / Indoor unit Main PCB do not replace!
→ This error is related to the compressor and Inverter PCB. (Not related to the above PCB)
※ Ensure that the service valve is open!
→ When the service valve is closed, the defects may be caused by differential pressure when starting the compressor.

4-4-16. Full current error / PFC over-current error (Error Code : E462, E484)

1. Test items
1) Check the power connection. / Check the restart after power reset.
2) Install outdoor unit and check environment.
→ Check for wire disconnection related to outdoor unit Inverter PCB and check the installation environment.
3) Check the indoor unit installation environment.
4) Check the opening of service valve.

2. Check procedure

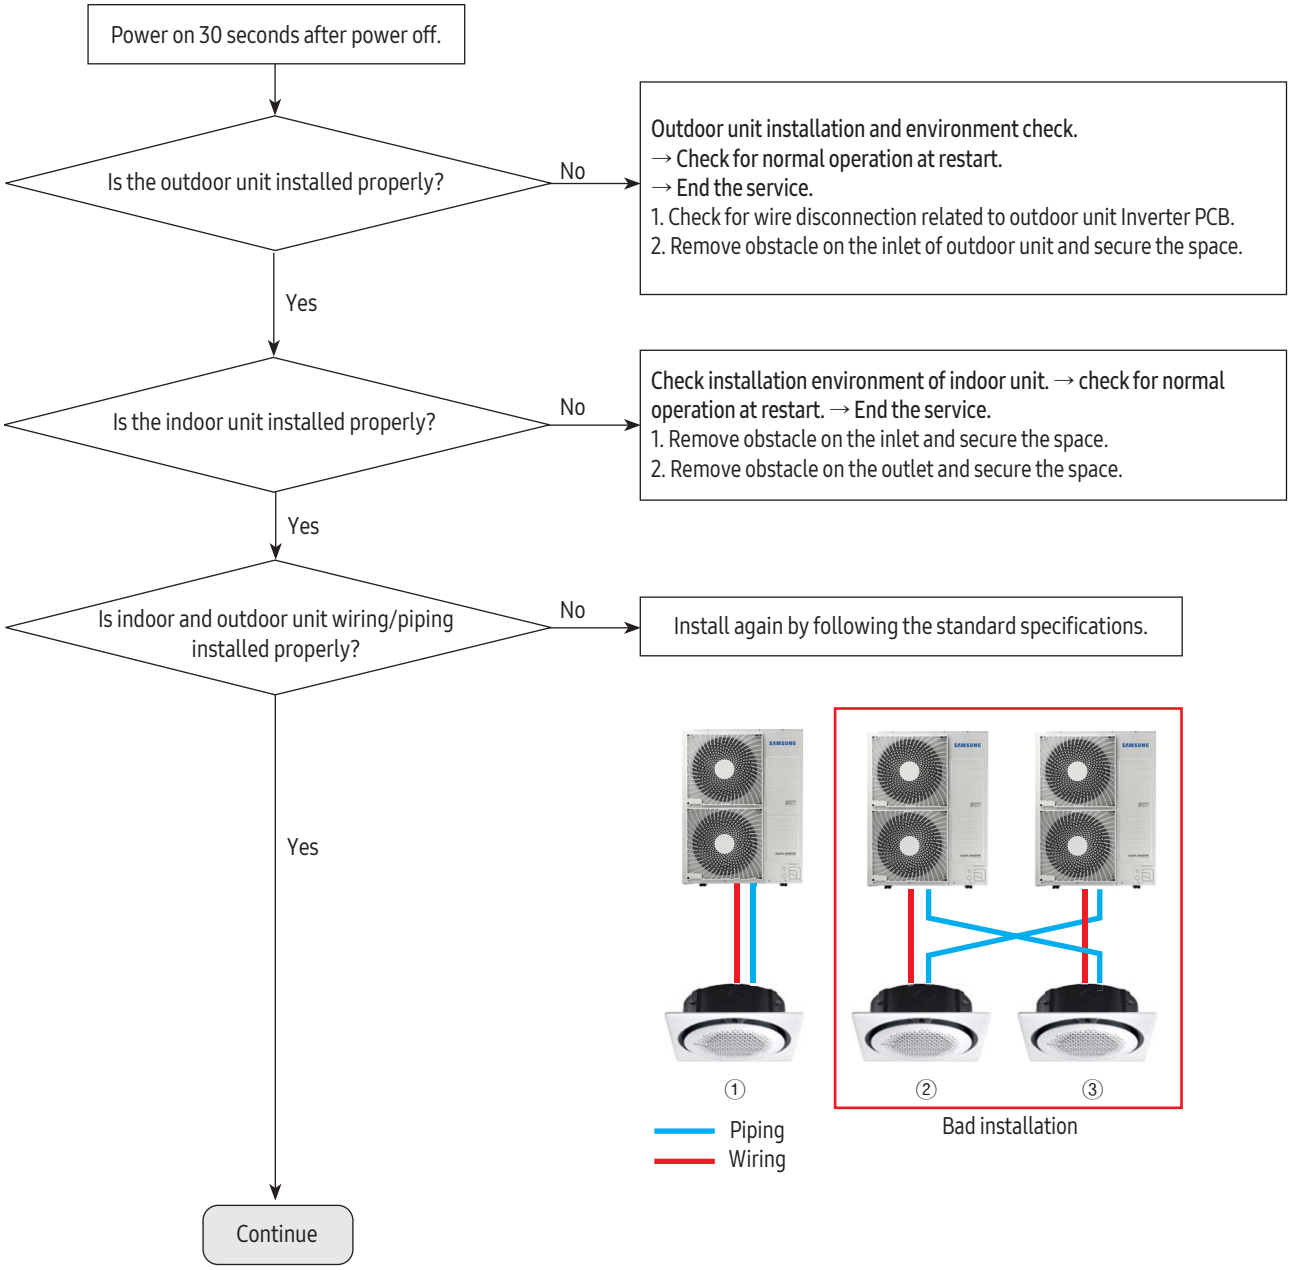


4-4-17. IPM (Over Current) error (Error Code : E464)

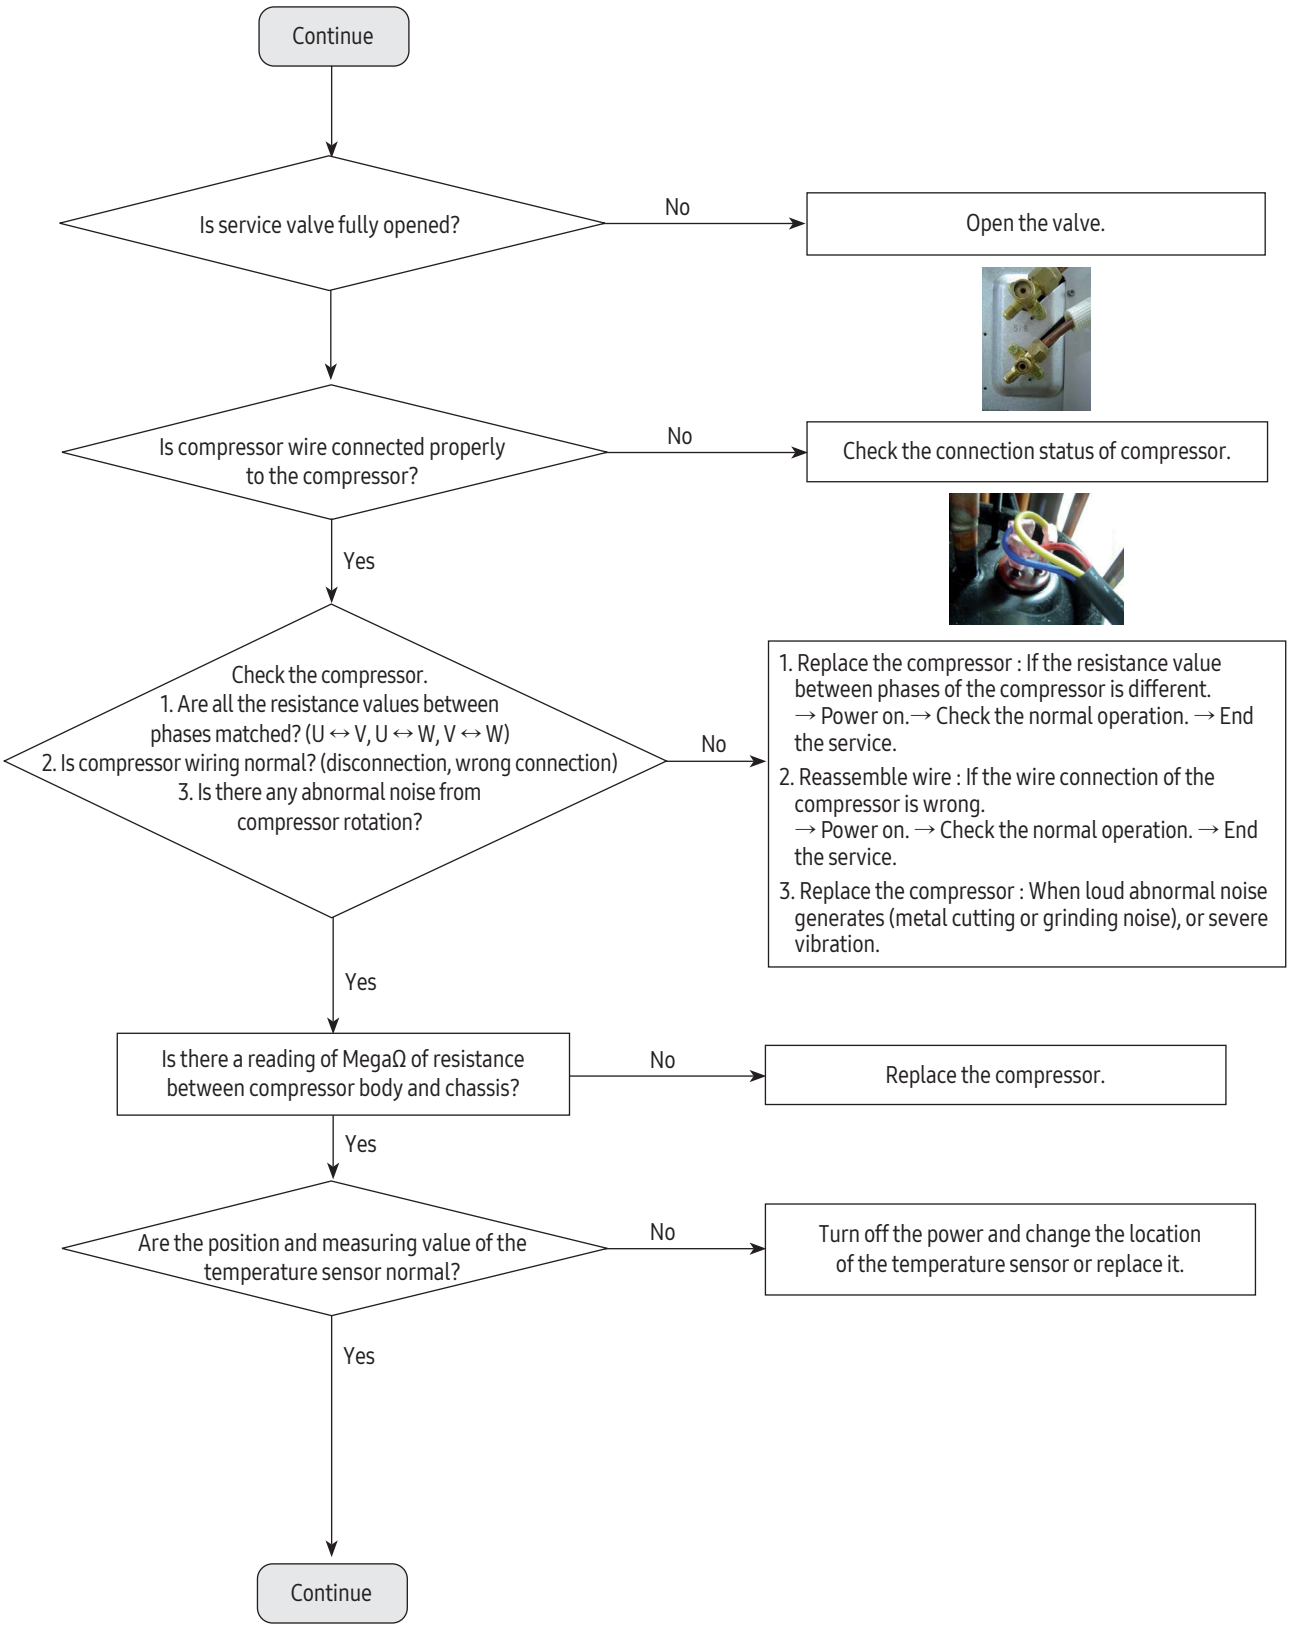
1. Test items

1) Check the power connection. / Check the restart after power reset.
2) Install outdoor unit and check environment.
→ Check for wire disconnection related to outdoor unit Inverter PCB and check the installation environment.
→ After having installed several units, please check that communication wires are not interchanged with piping.
3) Check the indoor unit installation environment.
4) Check the opening of service valve.
5) Check the status of compressor assembly and wiring.
6) Check the defective for compressor wire single parts.

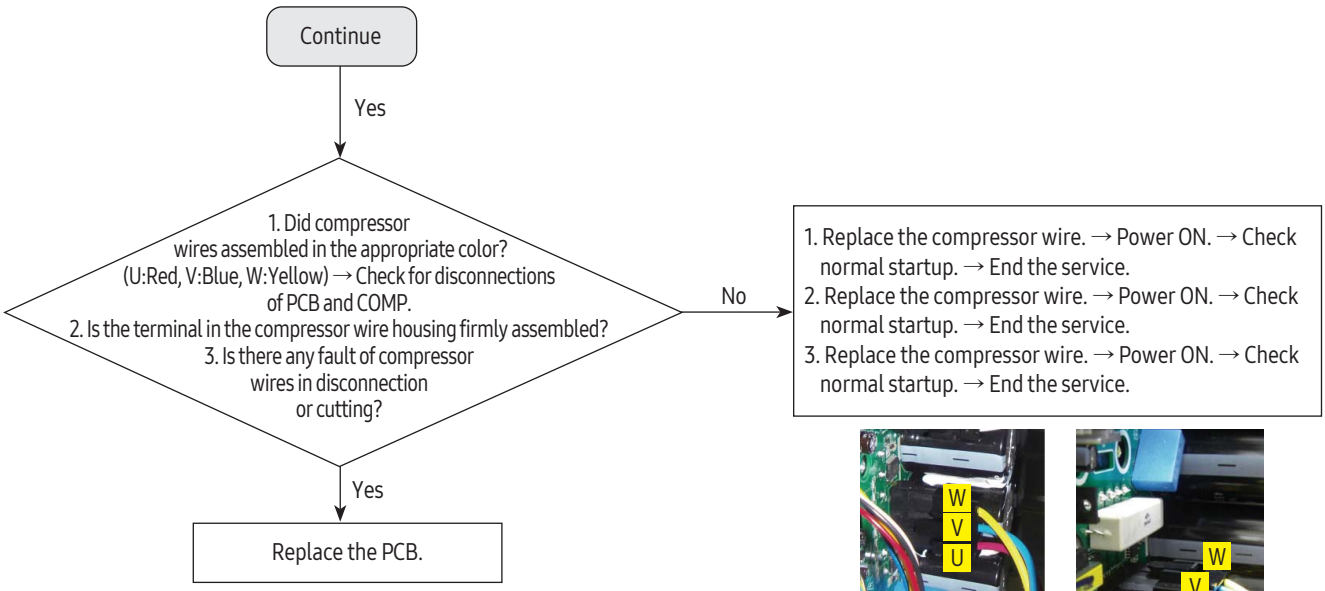
2. Check procedure

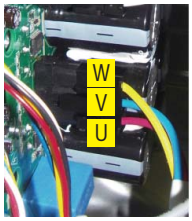


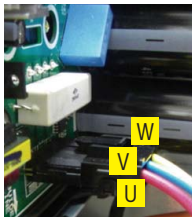
IPM (Over Current) error (Error Code : E464) (Cont.)



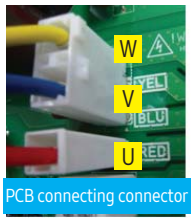
IPM (Over Current) error (Error Code : E464) (Cont.)

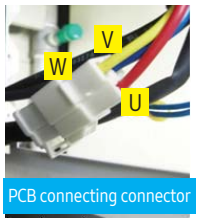






※ E46 Error-related, EMI / outdoor unit Main / Indoor unit Main PCB do not replace!
→ This error is related to the Inverter PCB. (Not related to the above PCB)
※ Ensure that the service valve is open!
→ When the service valve is closed, the defects may be caused by differential pressure when starting the compressor.



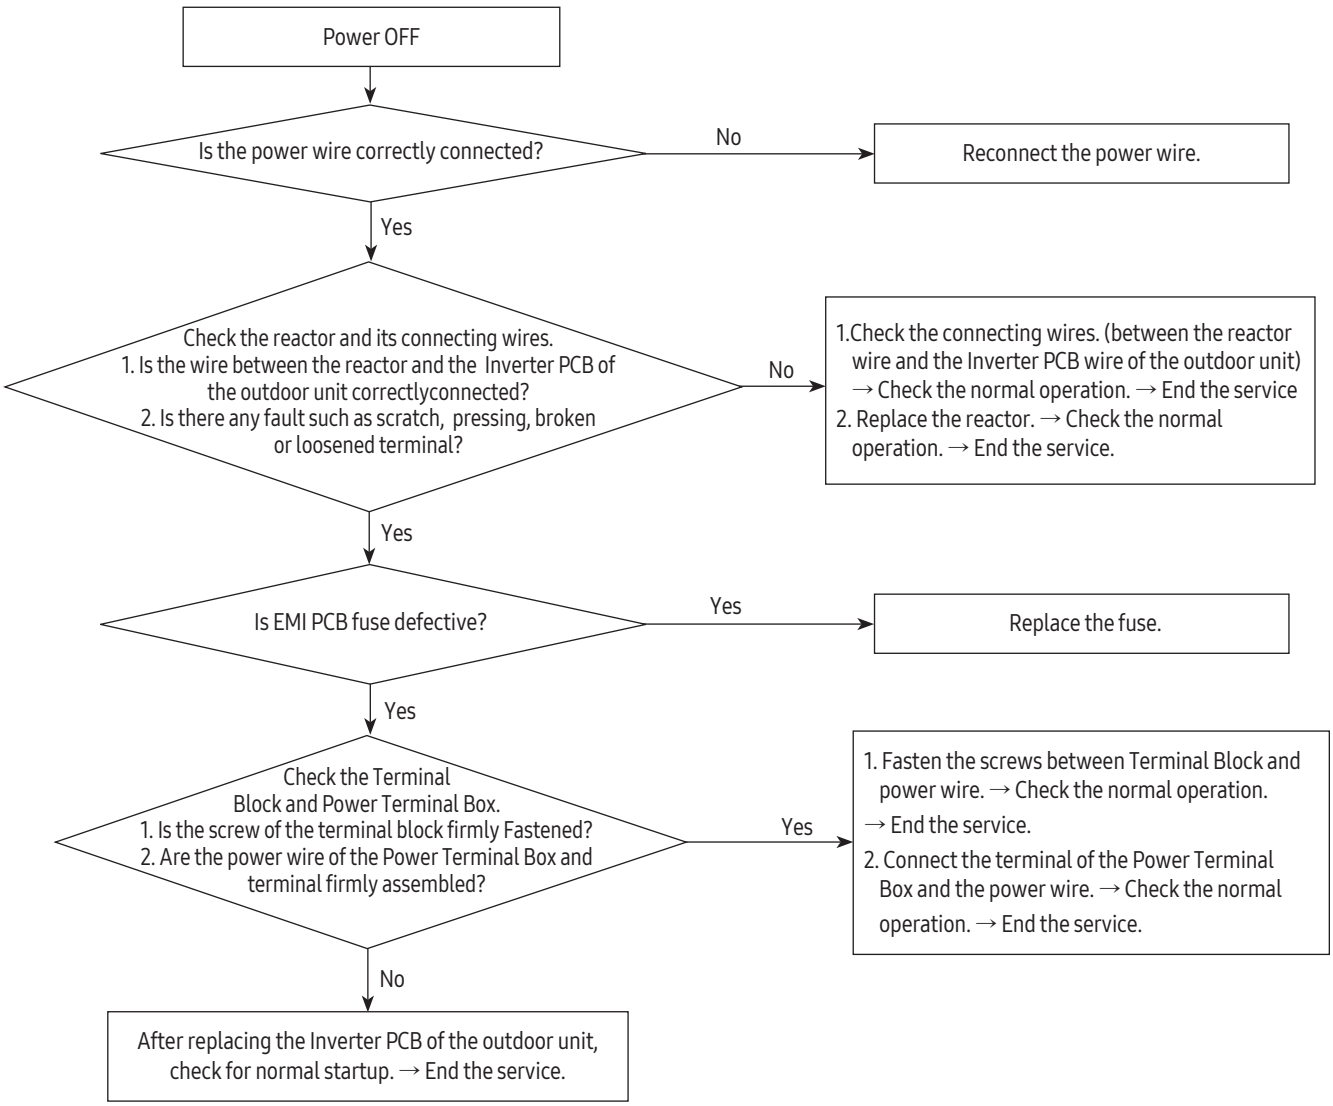


4-4-18. DC LINK over-current / low-voltage error (Error Code : E466)
H/W DC_Link Over Voltage Error (Error Code : E483)
AC Input Voltage Sensor Error (Error Code : E488)

1. Test items

1) Check the power connection. / Check the restart after power reset.
→ Is there a fault in input power? (Single-phase : 220Vac, 3-phase : 380Vac)
→ Does error occur again at operation after power is reset?
2) Check the connection of the power, and check whether the jointed power connection exists.
→ After having installed several units, please check that communication wires are not interchanged with piping.
3) Check the reactor and its connecting wires.
4) Check the fuses of EMI PBA.
5) Check the Terminal Block and Power Terminal Box and the wire assembly.

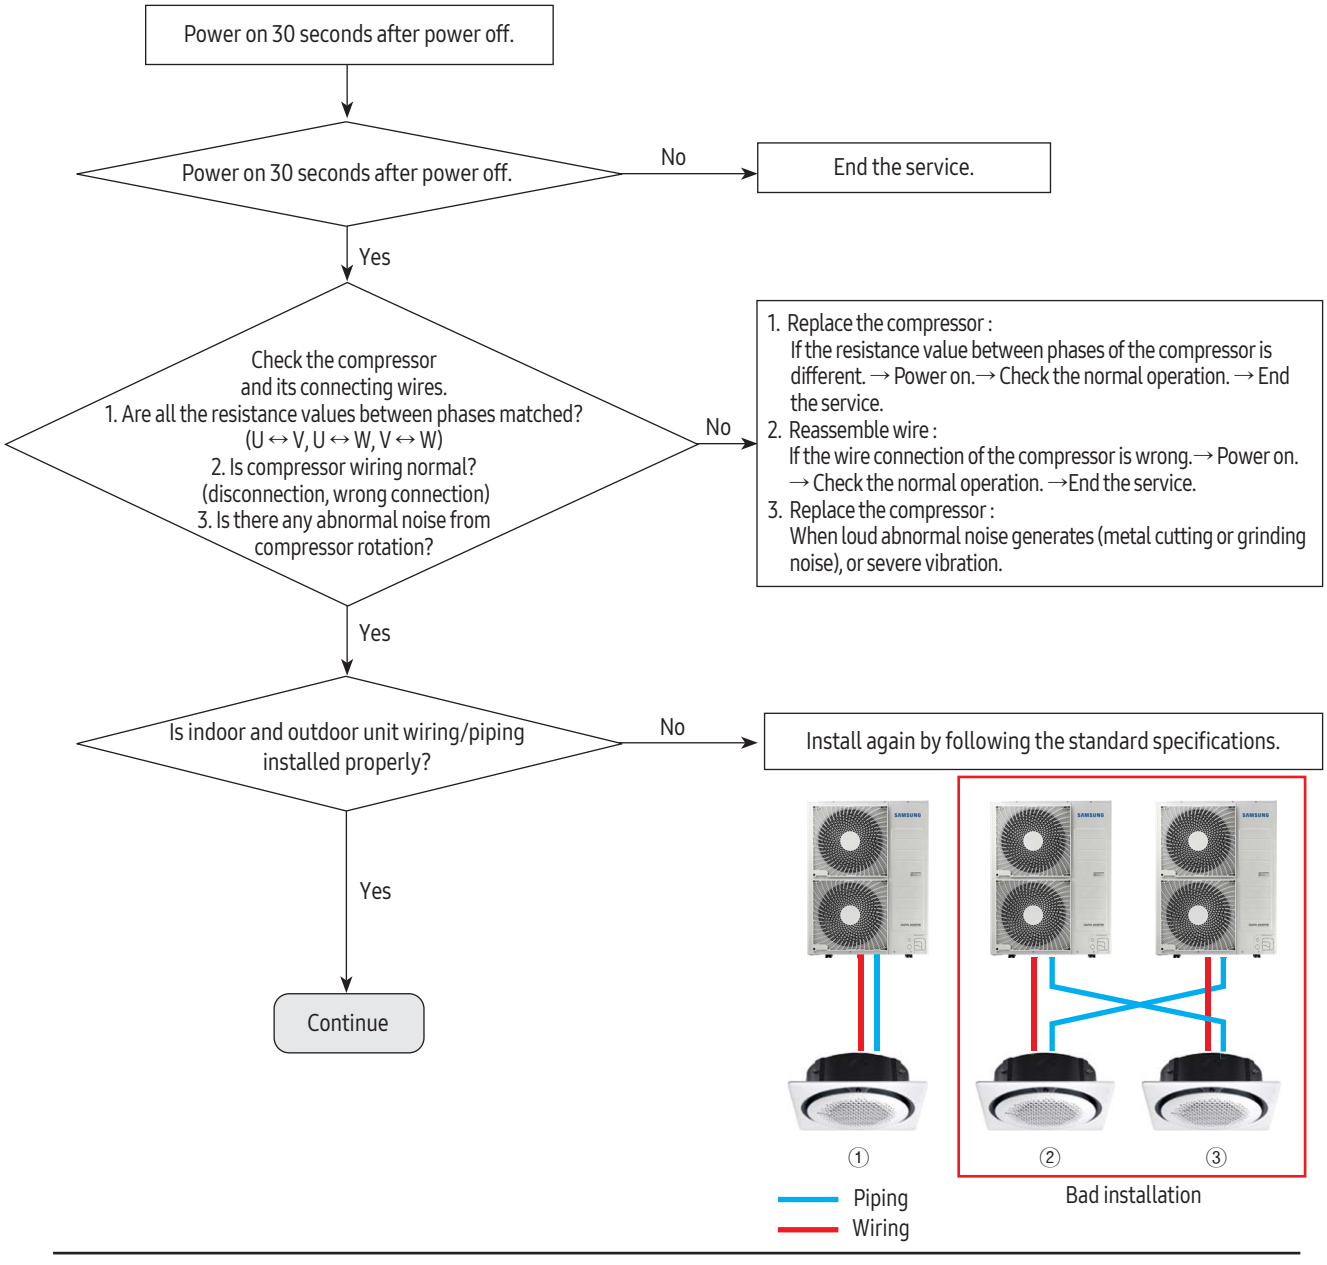
2. Check procedure



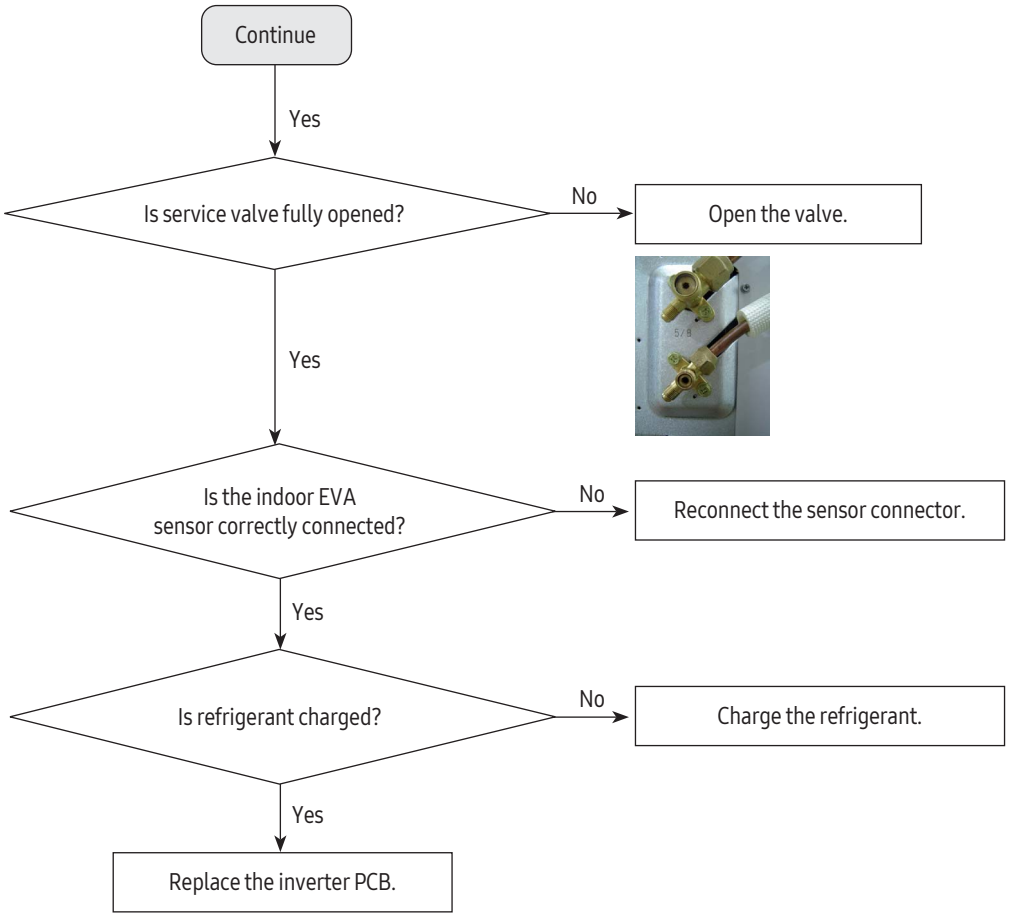
4-4-19. Gas leakage error (Error Code : E554)

1. Test items
   1) Check the power connection. / Check the restart after power reset.
      → Is there a fault in input power? (Single-phase : 220Vac, 3-phase : 380Vac)
      → Does error occur again at operation after power is reset?
   2) Check the compressor and the state of compressor wire assembling.
   3) Check the outdoor unit installation environment.
      → Check for disconnection of the wires regarding the Inverter PCB of the outdoor unit and check the installation environment.
      → At the site where several units were installed at the same time, check whether communication wire and pipes have been wrongly connected!

2. Check procedure



Gas leakage error (Error Code : E554) (Cont.)



4-4-20. Others

1. EEPROM option error (E163) : Reset the options.

2. Temperature fuse error : E198
   - If the Terminal Box temperature rise fuse is disconnected, replace the PCB.
   - Check the wiring connector of temperature fuse.

3. Current sensor error : Upload EEPROM to the Main PCB of the outdoor unit.
   - After checking for normal operation of PCB, replace the inverter PCB.

4. Compressor Vlimit error : E465
   - If the compressor is abnormally run, replace the compressor and then ensure that it works normally.
   → If the compressor is normally run, check the assembling between the heatproof plate and the Inverter PCB and then if there is no abnormality, replace the Inverter PCB.

5. DC link voltage sensor error : E469
   - Error occurs when DC LINK value is not normal (DC LINK VOLTAGE: 280~320V)
   - Check the value of DC link when error occurs and check the reactor disconnection

6. EEPROM read/write error : E470
   - Error occurs when there is no EEPROM data in the set.
   - Check the model name and insert EEPROM for corresponding model or load the EEPROM data.

7. Input current sensor error : E485
   - Detect the input sensor while the set is in stop status to check if there's any problem.
   - When error occurs, turn on/off the power for number of time and if same error occurs while the power is off, replace the Inverter PCB.

8. OTP error : E471
   - Upload EEPROM to the Main PCB of the outdoor unit.

9. Capacity inconsistence error : E556
   - Check the model name between the outdoor and indoor unit and re-enter the option code to the indoor unit.

10. 3-phase power wire disconnection : E424
    - Check for disconnection of the 3-phase (open) power wire, and check the disconnected EMI PBA fuse.

11. Outdoor unit freezing detection (at the stop of the compressor) : E403
    Outdoor overload protection control (at the stop of the compressor) : E404
    - Check whether the fan and the motor operate normally.
    - Check the operation of EEV.
    - Check the temperature sensor of the indoor unit heat exchanger.
    - Check the indoor unit inlet blockage.

12. Outdoor unit compressor discharging temperature protection control : E416
    - Check for lack of refrigerant.
    - Check the blockage of the solenoid valve.
    - Check the malfunction of the exhaust temperature sensor.
    - Check the EEV.

13. Error of impossibility to operate Heating at outdoor temperature exceeding 30°C : E440
    Error of impossibility to operate cooling at outdoor temperature of -5°C or under : E441
    - It is not the error code in the product and it is a specification to protect the product by limiting the temperature scope of use.
    - Use by referring to the temperature scope of use on the product manual, etc.

Others (Cont.)

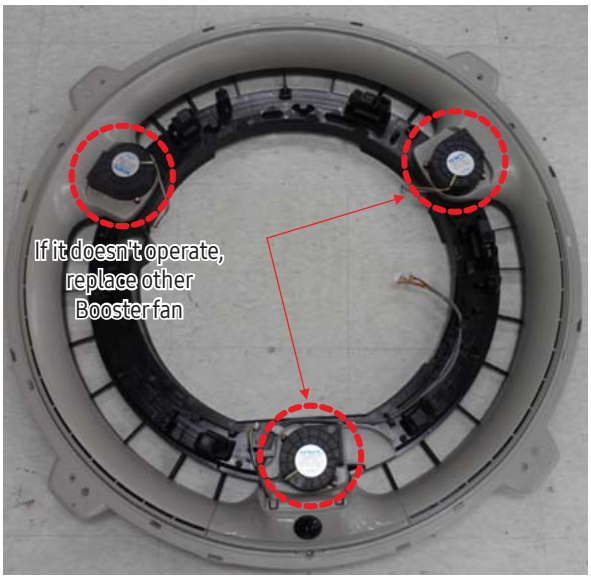
14. OLP overHeating and compressor stop : E463
    - Check the opening of the sub valve.
    - Check the amount of the cooling water.
    - Check the OLP sensor.

15. Current sensor error : E468
    - Check the EEPROM data.
    - Check the PCB operation.

16. IPM (IGBT Module) or PFCM temperature sensor error : E474
    IPM overheat error for outdoor unit inverter compressor : E500
    - Check whether IPM is correctly assembled on the heatproof plate.
    - Check whether the inlet is blockage.
    - If there is a defect, replace the IPM.

17. How to check Booster Fan
    1) In case of do not not operate 1 Booster Fan
       Action method : Remove the Booster Fan connector wire and cross-assembling the another Booster Fan wire and then horizontally or intermediate or swing operate.

Type ① : When the existing Booster Fan does not operate, replace the Booster Fan.



Type ② : If type ① is not defective, Booster Fan Wire 4 (Blue Wire), 3 (Black Wire) pin voltage : When it is more than 2.7V, replace the PCB.

PIN No.1 : VCC (YELLOW/+)
PIN No.2 : SIGNAL (WHITE)
PIN No.3 : GROUND (BLACK/-)
PIN No.4 : PWM (BLUE)

Others (Cont.)

2) In case of do not operate 3 Booster Fan (all Fan)
Action method : horizontally or intermediate or swing set up.

Type ①: Booster Fan Wire 1 (Yellow Wire), 3 (Black Wire) pin voltage :
When it is less than DC12V, replace the PCB.

PIN No.1: VCC (YELLOW/+)
PIN No.2: SIGNAL (WHITE)
PIN No.3: GROUND (BLACK/-)
PIN No.4: PWM (BLUE)

Type ②: If type ① is not defective, Booster Fan Wire 4 (Blue Wire), 3 (Black Wire) pin voltage :
When it is more than 2.7V, replace the PCB.

PIN No.1: VCC (YELLOW/+)
PIN No.2: SIGNAL (WHITE)
PIN No.3: GROUND (BLACK/-)
PIN No.4: PWM (BLUE)

Type ③ : If type ② is not defective, Booster Fan Wire 2 (White Wire), 3 (Black Wire) pin voltage :
When it is approximately 5V, replace the PCB.

PIN No.1: VCC (YELLOW/+)
PIN No.2: SIGNAL (WHITE)
PIN No.3: GROUND (BLACK/-)
PIN No.4: PWM (BLUE)

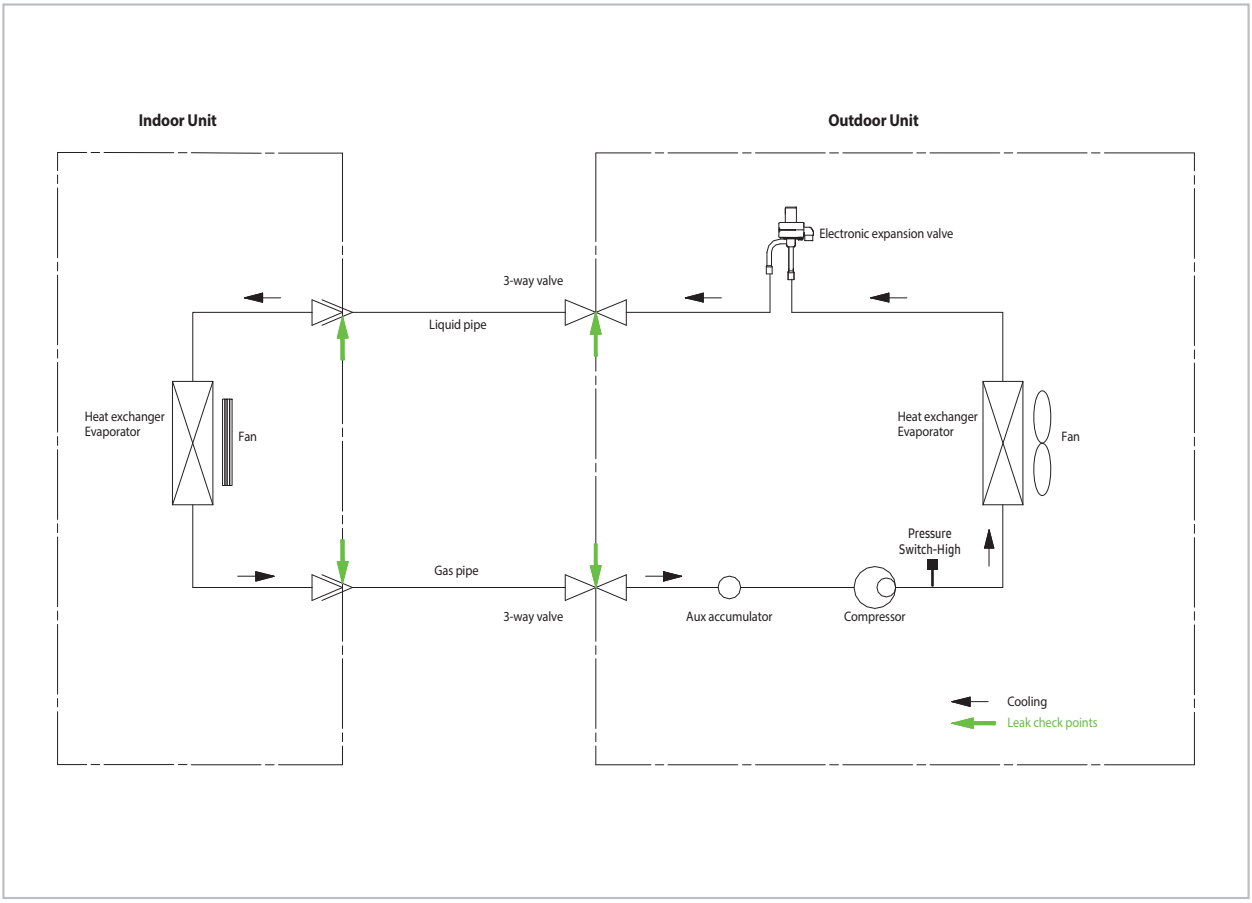
7-2. Refrigerating Cycle Diagram



■ CONDENSER
High temperature and high pressure gas state refrigerant discharged from the compressor is converted to a liquid state as it is cooled down by the heat emission in the outdoor condenser unit, and sent to the evaporator.

■ COMPRESSOR
Low temperature and low pressure refrigerant is compressed and sent to the cycling system.

■ EVAPORATOR
Liquid refrigerant sucked in through the capillary tubes cools down the room by absorbing the surrounding heat as it evaporates (converting from liquid to gas). (Absorbing heat required for evaporation)

■ SERVICE VALVE
You can open the valve by turning the need valve counterclockwise using hex wrench, and it is used for vacuum, gas purging, refrigerant injection, refrigerant purging, and indoor-outdoor unit connection.

■ ACCUMULATOR
Accumulator prevents the flow of liquid-state refrigerant into the compressor. (Liquid-state refrigerant flowing into the compressor will overload the compressor.)
