## CAUTION

TO AVOID DAMAGE TO DOOR AND OPERATOR, MAKE ALL DOOR LOCKS INOPERATIVE. SECURE LOCK(S) IN "OPEN" POSITION.
IF THE DOOR LOCK NEEDS TO REMAIN FUNCTIONAL, INSTALL AN INTERLOCK SWITCH.
DO NOT CONNECT ELECTRIC POWER UNTIL INSTRUCTED TO DO SO.

## WARNING

KEEP DOOR BALANCED. STICKING OR BINDING DOORS MUST BE REPAIRED. DOORS, DOOR SPRINGS, CABLES, PULLEYS, BRACKETS AND THEIR HARDWARE MAY BE UNDER EXTREME TENSION AND CAN CAUSE SERIOUS PERSONAL INJURY. CALL A PROFESSIONAL DOOR SERVICEMAN TO MOVE OR ADJUST DOOR SPRINGS OR HARDWARE.

## SITE PREPARATIONS

It is imperative that the wall or mounting surface provide adequate support for the operator.
This surface must:
a) Be rigid to prevent play between operator and door shaft.
b) Provide a level base.
c) Permit the operator to be fastened securely and with the drive shaft parallel to the door shaft.

The safety and wear of the operator will be adversely affected if any of the above requirements are not met.

For metal buildings, fasten 2 " x 2 " x 3/16" (or larger) angle iron frames to the building purlins. Retain $2-1 / 4$ " between frames. See Figure 1.

## MOUNTING CONVERSIONS

The GJ operator may be mounted on either the right (standard) or left side of door, and in either a vertical (standard) or horizontal mounting position. Refer to the steps below if you require the hand chain and/or disconnect chain to be on the opposite side of the operator; Or if the operator is being mounted in a horizontal position.

## Hand Chain Right/Left Conversion

Remove the two snap rings ( 1 pc . outer, 1 pc inner) on hand chain shaft assembly. Position roll-pin to fit through cutout in frame and slide complete shaft assembly through housing and bevel gear. Insert shaft assembly on opposite side of housing, and replace bevel gear, bearing, hardware, and snap rings on the opposite side of shaft in the same manner.

## Disconnect Lever Right/Left Conversion

Remove cotter pins on the ends of the disconnect shaft (square shaft), move the disconnect lever arm to the opposite side, and replace the cotter pins. Be sure to keep two(2) 12ga. washers on the side without the lever arm.

## Horizontal Mounting Conversion

Remove cotter pins on the ends of the disconnect shaft (square shaft), and remove lever. Replace lever using square hole on opposite end of lever. Reposition sash chain to opposite end of lever also. Replace cotterpins.

FIGURE 2

## OPERATOR MOUNTING

The standard GJ operator is setup for mounting on right side of the door and in vertical position. If necessary, refer to the operator mounting conversions on page 3. Refer to the illustrations and instructions below that suits your application.

## 1a. Wall Mounting

The operator should generally be installed below the door shaft, and as close to the door as possible. The optimum distance between the door shaft and operator drive shaft is between 12" - 15". On concrete buildings, attach a shaft support bracket to the wall of the building. Refer to Figure 3.

IMPORTANT: An additional wall mounting plate ( $\mathrm{P} / \mathrm{N} 10-9098$ ) or equivalent is recommended to provide additional support and to allow for adjustment of the drive chain.

FIGURE 3

1c. Place door sprocket on the door shaft. Do not insert the key at this time.
2. Place drive sprocket on the appropriate side of the operator. Do not insert the key at this time.
3. Wrap drive chain around door sprocket and join roller chain ends together with master link.
4. Raise operator to approximate mounting position and position chain over operator sprocket.
5. Raise or lower operator until the chain is taut (not tight). Make sure the operator output shaft is parallel to door shaft and sprockets are aligned. When in position, secure the operator to wall or mounting bracket.
6. Align sprockets and secure, (see Figure 5).

## 1b. Bracket or Shelf Mounting

The operator may be mounted either above or below the door shaft. The optimum distance between the door shaft and operator drive shaft is between 12" - 15". Refer to Figure 4.

IMPORTANT: The shelf or bracket must provide adequate support, prevent play between operator and door shaft, and permit operator to be fastened securely and with the drive shaft parallel to the door shaft.

FIGURE 4

## 7. Install Hand Chain

Place hand chain around hand chain wheel. Be sure to pass it through both openings in the chain guide. Remove enough links so chain hangs approximately two feet above the floor.

## 8. Mount Chain Keeper

Using suitable hardware mount the chain keeper approximately 4 feet above the floor, near the free hanging chain. Remove disconnect sash chain from bag and place the end through the keyhole in the the chain keeper. Remove excess links if necessary.

## EMERGENCY MANUAL HOIST OPERATION

In case of emergency or power failure, the operator has provision for manually operating the door. An electrical interlock will disable the electrical controls when manual hoist is used. To operate the hoist:
a) Pull the disconnect chain (small chain) to engage the hoist mechanism. The disconnect chain may be locked in position by slipping the end through the keyhole of chain keeper mounted on the wall.
b) Operate the door in the desired direction by pulling on one side or the other of the continuous loop hoist chain (large chain).
c) The disconnect chain must be released from chain keeper before door will operate again electrically.

## ENTRAPMENT PROTECTION ACCESSORIES (OPTIONAL)

## SENSING EDGES

All types of sensing edges with an isolated normally open (N.O.) output are compatible with your operator. This includes pneumatic and electric edges. If your door does not have a bottom sensing edge and you wish to purchase one, contact the supplier of your operator.

If not pre-installed by the door manufacturer, mount the sensing edge on the door according to the instructions provided with the edge. The sensing edge may be electrically connected by either coiled cord or take-up reel. Refer to the steps below

## Important Notes:

a) Proceed with Limit Switch Adjustments before making any sensing edge wiring connections to operator as described on page 8
b) Electrician must hardwire the junction box to the operator electrical box in accordance with local codes.

TAKE-UP REEL: Take-up reel should be installed 12 " above the top of the door.

COIL CORD: Connect operator end of coil cord to junction box (not supplied) fastened to the wall approximately halfway up the door opening.

## IT IS STRONGLY RECOMMENDED THAT A SENSING EDGE OR OTHER ENTRAPMENT PROTECTION DEVICE BE USED IN CONJUNCTION WITH THIS OPERATOR.

## FIGURE 7

Installation of Operator to Sectional Door (Metal Building)

Pneumatic Air Switch: Not required or supplied when electric sensing edge is used

## INSTALL CONTROL STATION

Before installing control station be sure to follow all warnings described below. Failure to so may result in severe injury to persons and/or damage to operator. Do not install any wiring or attempt to run the operator without consulting the wiring diagram. Install the optional Reversing Edge before proceeding with the Control Station installation.

## IMPORTANT SAFETY NOTES

WARNING
INSTALL THE CONTROL STATION WHERE THE DOOR IS VISIBLE, BUT AWAY FROM THE DOOR AND ITS HARDWARE. IF CONTROL STATION CANNOT BE INSTALLED WHERE DOOR IS VISIBLE, OR IF ANY
DEVICE OTHER THAN THE CONTROL STATION IS USED TO ACTIVATE THE DOOR, A REVERSING EDGE MUST BE INSTALLED ON THE BOTTOM OF THE DOOR. FAILURE TO INSTALL A REVERSING EDGE UNDER THESE CIRCUMSTANCES MAY RESULT IN SERIOUS INJURY OR DEATH TO PERSONS TRAPPED BENEATH THE DOOR.

## WARNING

TO AVOID DAMAGE TO DOOR AND OPERATOR, MAKE ALL DOOR LOCKS INOPERATIVE. SECURE LOCK(S) IN "OPEN" POSITION.
IF THE DOOR LOCK NEEDS TO REMAIN FUNCTIONAL, INSTALL AN INTERLOCK SWITCH.

## 4 WARNING

DISCONNECT POWER AT THE FUSE BOX BEFORE PROCEEDING.
OPERATOR MUST BE PROPERLY GROUNDED AND CONNECTED IN ACCORDANCE WITH LOCAL ELECTRICAL CODES. NOTE: THE OPERATOR SHOULD BE ON A SEPARATE FUSED LINE OF ADEQUATE CAPACITY.
ALL ELECTRICAL CONNECTIONS MUST BE MADE BY A QUALIFIED INDIVIDUAL.

## MOUNT WARNING NOTICE

IMPORTANT: Mount WARNING NOTICE beside or below the push button station.

## CONTROL STATION WIRING

Refer to Master Wiring Diagram. Make connection through holes labeled for power and control. Do not run control wires in the same conduit as power wires.

## CABLE CONNECTION NOTE:

Be sure to use the control box opening with the $1-1 / 16$ " hole for the POWER cable. All control wires use the 7/8" hole.

1. Complete electrical connections to the operator and the control station. Fasten the control station to the wall and MOUNT THE WARNING NOTICE BESIDE OR BELOW THE PUSH BUTTON STATION.
2. Apply power to the operator. Press OPEN push button and observe direction of output shaft rotation. See Figure 4, page 4. Press the STOP button.
If shaft does not rotate in the correct direction, check for improper wiring at the control station or between operator and control station.
If the operator is three phase and control station wiring is correct, exchange any two of the three incoming power leads.
If electrical problems persist, call our Toll Free number for assistance (1-800-528-6563).

## ADJUST LIMITS

## WARNING <br> TO AVOID SERIOUS PERSONAL INJURY OR DEATH FROM ELECTROCUTION, DISCONNECT ELECTRIC POWER BEFORE MANUALLY MOVING LIMIT NUTS.

## MAKE SURE THE LIMIT NUTS ARE POSITIONED BETWEEN THE LIMIT SWITCH ACTUATORS BEFORE PROCEEDING WITH ADJUSTMENTS.

1. To increase door travel, spin nut away from actuator. To decrease door travel, spin limit nut toward actuator.
2. Adjust open limit nut so that door will stop in open position with the bottom of the door even with top of door opening.
3. Repeat Steps 1 and 2 for close cycle. Be sure close limit actuator is engaged as door fully seats at the floor.

If other problems persist, call our toll-free number for assistance - 1-800-528-6563.

## 4 WARNING

TO AVOID SERIOUS PERSONAL INJURY OR DEATH FROM ELECTROCUTION, DISCONNECT ELECTRIC POWER TO OPERATOR BEFORE ADJUSTING SLIP CLUTCH.

Remove clutch cover and adjust clutch so that it is tight enough to open and close the door but will slip when the door meets an obstruction. Either loosen or tighten the clutch nut with $1 / 4$ turn increments. After adjustment is completed, tighten locking set screw and re-install clutch cover. Reconnect power to operator and test for proper operation. The clutch will require periodic inspection and adjustment.

CAUTION: The torque limiter clutch is NOT an automatic reversing device. An electric or pneumatic reversing edge can be added to bottom edge of door if desired.

## CONNECT REVERSING EDGE DEVICE (OPTIONAL)

# A. WARNING 

IF CONTROL STATION CANNOT BE INSTALLED WHERE DOOR IS VISIBLE, OR IF ANY DEVICE OTHER THAN THE CONTROL STATION IS USED TO ACTIVATE THE DOOR, A REVERSING EDGE MUST BE INSTALLED ON THE BOTTOM OF THE DOOR. FAILURE TO INSTALL A REVERSING EDGE UNDER THESE CIRCUMSTANCES MAY RESULT IN SERIOUS PERSONAL INJURY OR DEATH TO PERSONS TRAPPED BENEATH THE DOOR.

The operator has been pre-wired to accept connection of a reversing edge device. Connect the normally open contacts to terminals T4 and T8 on the low voltage terminal block. A cut-off switch will deactivate the safety device during the last few inches of the door's downward travel.

## NOTICE:

This equipment has been tested and found to comply with the limits for a Class A digital device, pursuant to Part 15 of the FCC Rules. These limits are designed to provide reasonable protection against harmful interference when the equipment is operated in a commercial environment. This equipment generates, uses, and can radiate radio frequency energy and, if not installed and used in accordance with the instruction manual, may cause harmful interference to radio communications. Operation of this equipment in a residential area is likely to cause harmful interference, in which case the user will be required to correct the interference at his own expense.

WHEN ORDERING REPAIR PARTS PLEASE SUPPLY THE FOLLOWING INFORMATION: PART NUMBER DESCRIPTION MODEL NUMBER

## ADDRESS ORDER TO:

THE CHAMBERLAIN GROUP, INC.
Electronic Parts \& Service Dept. 2301 N. Forbes Blvd., Suite 104 Tucson, AZ 85745

## MAINTENANCE SCHEDULE

Check at the intervals listed in the following chart.

| ITEM | PROCEDURE | EVERY <br> 3 MONTHS | EVERY <br> 6 MONTHS | EVERY <br> 12 MONTHS |
| :--- | :--- | :---: | :---: | :---: |
| Drive Chain | Check for excessive slack. <br> Check \& adjust as required. <br> Lubricate. |  |  |  |
| Sprockets | Check set screw tightness | $\bullet$ | $\bullet$ |  |
| Clutch (Optional) | Check \& adjust as required |  | $\bullet$ | $\checkmark$ |
| Gear Reducer** | Check for leaks and replace <br> seals as needed |  | $\bullet$ | $\checkmark$ |
| Fasteners | Check \& tighten as required |  | $\bullet$ | $\checkmark$ |
| Manual Disconnect | Check \& Operate |  | $\bullet$ | $\checkmark$ |

* Use SAE 30 Oil (Never use grease or silicone spray).
** Use Mobil SHC75W90 all climate synthetic oil.
$\checkmark$ Repeat ALL procedures.
- Do not lubricate motor. Motor bearings are rated for continuous operation

■ Do not lubricate clutch.

- Inspect and service whenever a malfunction is observed or suspected.

■ CAUTION: BEFORE SERVICING, ALWAYS DISCONNECT OPERATOR FROM POWER SUPPLY.

# STANDARD POWER AND <br> CONTROL CONNECTION DIAGRAM 

(Solid State Board CDO-115V, 208-230V, 1Ø)

SOLID STATE THREE PHASE
WIRING DIAGRAM

## STANDARD POWER AND CONTROL CONNECTION DIAGRAM

(Solid State Board CDO-208-230V, 3Ø)

## OPTIONAL SETTINGS

## Set Maximum Run Timer

Begin with door in closed position. Set dip switch to max. run timer mode. Press control station open button to operate door from closed to full open position without stopping. Set dip switch to desired operating mode (B2, C2, D1, E2, T, TS).

## Set Adjustable Mid Stop

Begin with door in closed position. Set dip switch to adj. mid stop mode. Press control station open button to operate door from closed to mid stop position and stop with control station stop button. Set dip switch to desired operating mode (B2, C2, D1, E2, T, TS).

Set Timer to Close (NOTE: Requires P/N 1A4811 CPSII Option Board with Timer to Close Function.)
Set dip switch to timer to close mode. Momentarily press control station open button to set timer duration in 5 second increments. (Red diagnostic L.E.D. will flash to indicate the entry of each 5 second increment into memory). To re-set timer memory to zero, press control station close button. Set dip switch to (T or TS) operating mode after timer is programmed.

## Diagnostic Mode

Set dip switch to diagnostic mode. Flashing red diagnostic L.E.D. indicates proper microprocessor function. If the diagnostic L.E.D. does not light, the control logic board requires replacement.

Set
adj.
mid
stop

Diagnostic mode

## TYPE STATION

## B2 3 Button, 1 Button, 1 \& 3 Button Radio Control

Function: Momentary contact to open, close and stop, plus wiring for sensing device to reverse and auxiliary devices to open and close with open override.

C2
3 Button, 3 Button Radio Control
Function: Momentary contact to open and stop with constant pressure to close, open override plus wiring for sensing device to reverse

D1 2 Button, 3 Button Radio Control
Function: Constant pressure to open and close with wiring for sensing device to stop.

## E2 2 Button, 3 Button Radio Control

Function: Momentary contact to open with override and constant pressure to close. Release of close button will cause door to reverse (roll-back feature) plus wiring for sensing device to reverse.

## T* 3 Button, 1 Button, $1 \& 3$ Button Radio Control

Function: Momentary contact to open, close, and stop, with open override and timer to close. Every device that causes door to open, except a reversing device, activates timer to close. Auxiliary controls can be connected to open input to activate the timer to close. If the timer has been activated, the open button and radio control can recycle the timer. The stop button will deactivate the timer until the close button is used to close the door. (NOTE: Requires P/N 1A4811 CPSII Option Board with Timer to Close Function.)

TS* 3 Button, 1 Button, $1 \& 3$ Button Radio Control
Function: Momentary contact to open, close, and stop with open override and timer to close. Every device that causes door to open, including a reversing device, activates timer to close. Auxiliary controls can be connected to open input to activate the timer to close. If the timer has been activated, the open button and radio control can recycle the timer. The stop button will deactivate the timer until the close button is used to close the door. (NOTE: Requires P/N 1A4811 CPSII Option Board with Timer to Close Function.)

## NOTE:

1. External interlocks may be used with all functional modes.
2. Auxiliary devices are any devices that have only one set of
contacts. Examples are: photocell, loop detector, pneumatic or
3. Auxiliary devices are any devices that have only one set of
contacts. Examples are: photocell, loop detector, pneumatic or electrical treadles, residential radio controls, one button stations, pull cords, etc.
4. Open override means that the door may be reversed while closing by activating an opening device without the need to use the stop button first.
