External storage

PL Memory storage

3.2: Click “Create Folder”

Create Folder

3.3: Click “Paste”

Paste

✧ Share Music

1. Select music and then click icon “Share”

Max quantity for photos sharing will depend on different third-party media music uploaded limitation. (Facebook, Email, Instagram etc.)

✧ **Rename Music**

✧ **Organize Music**

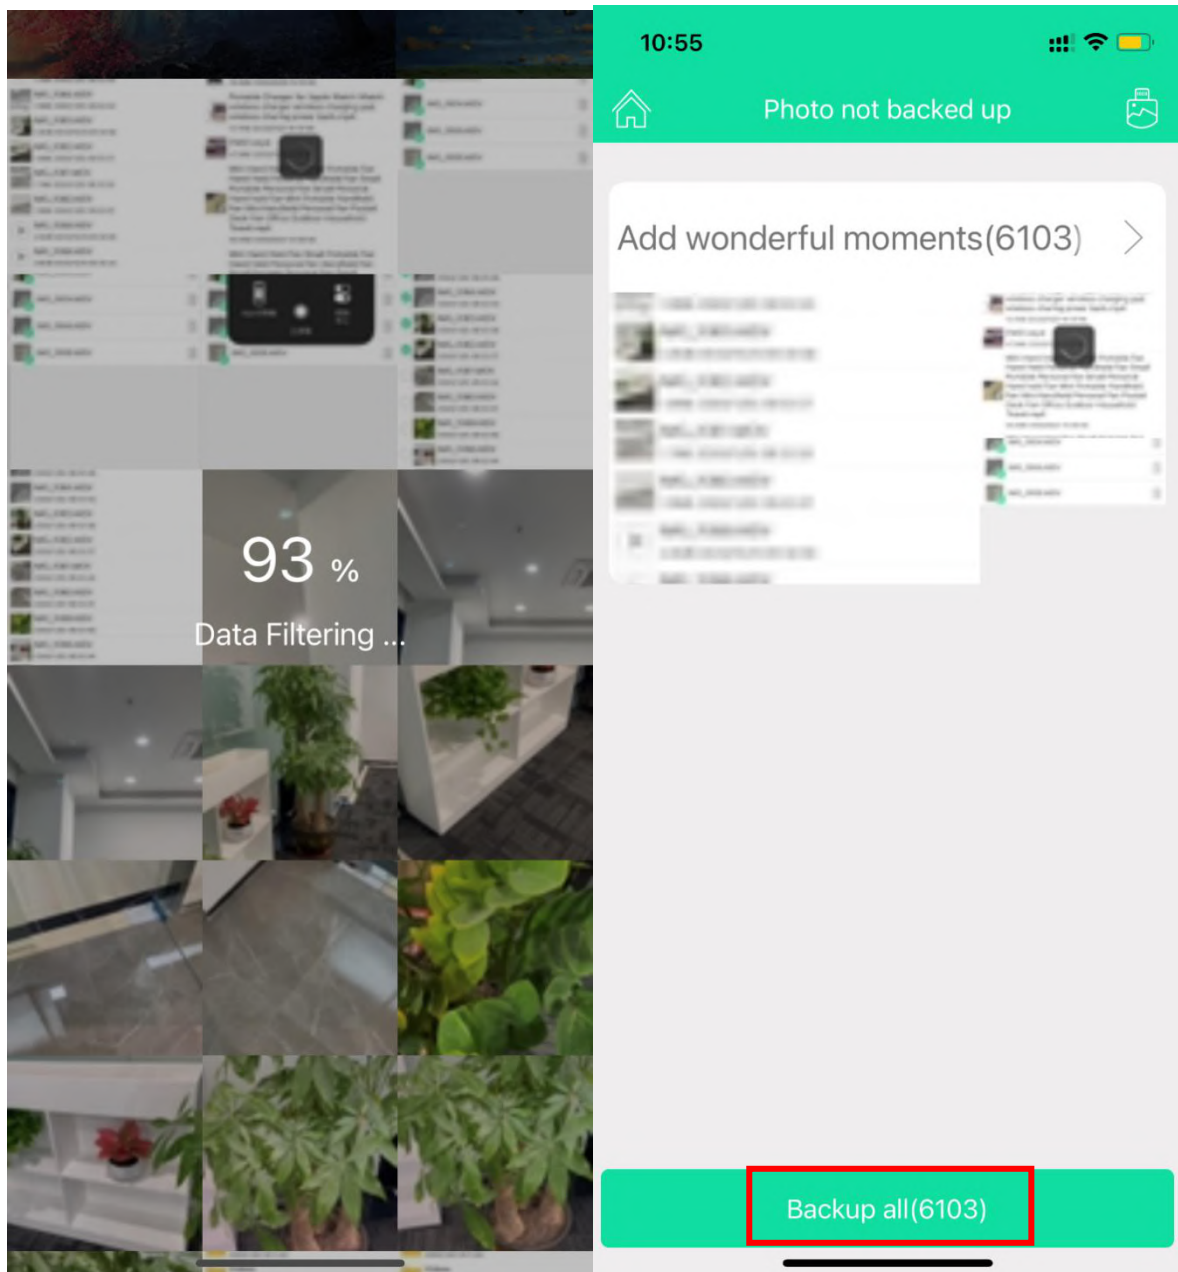

The procedures for renaming and organizing music are the same as those for photos and videos.

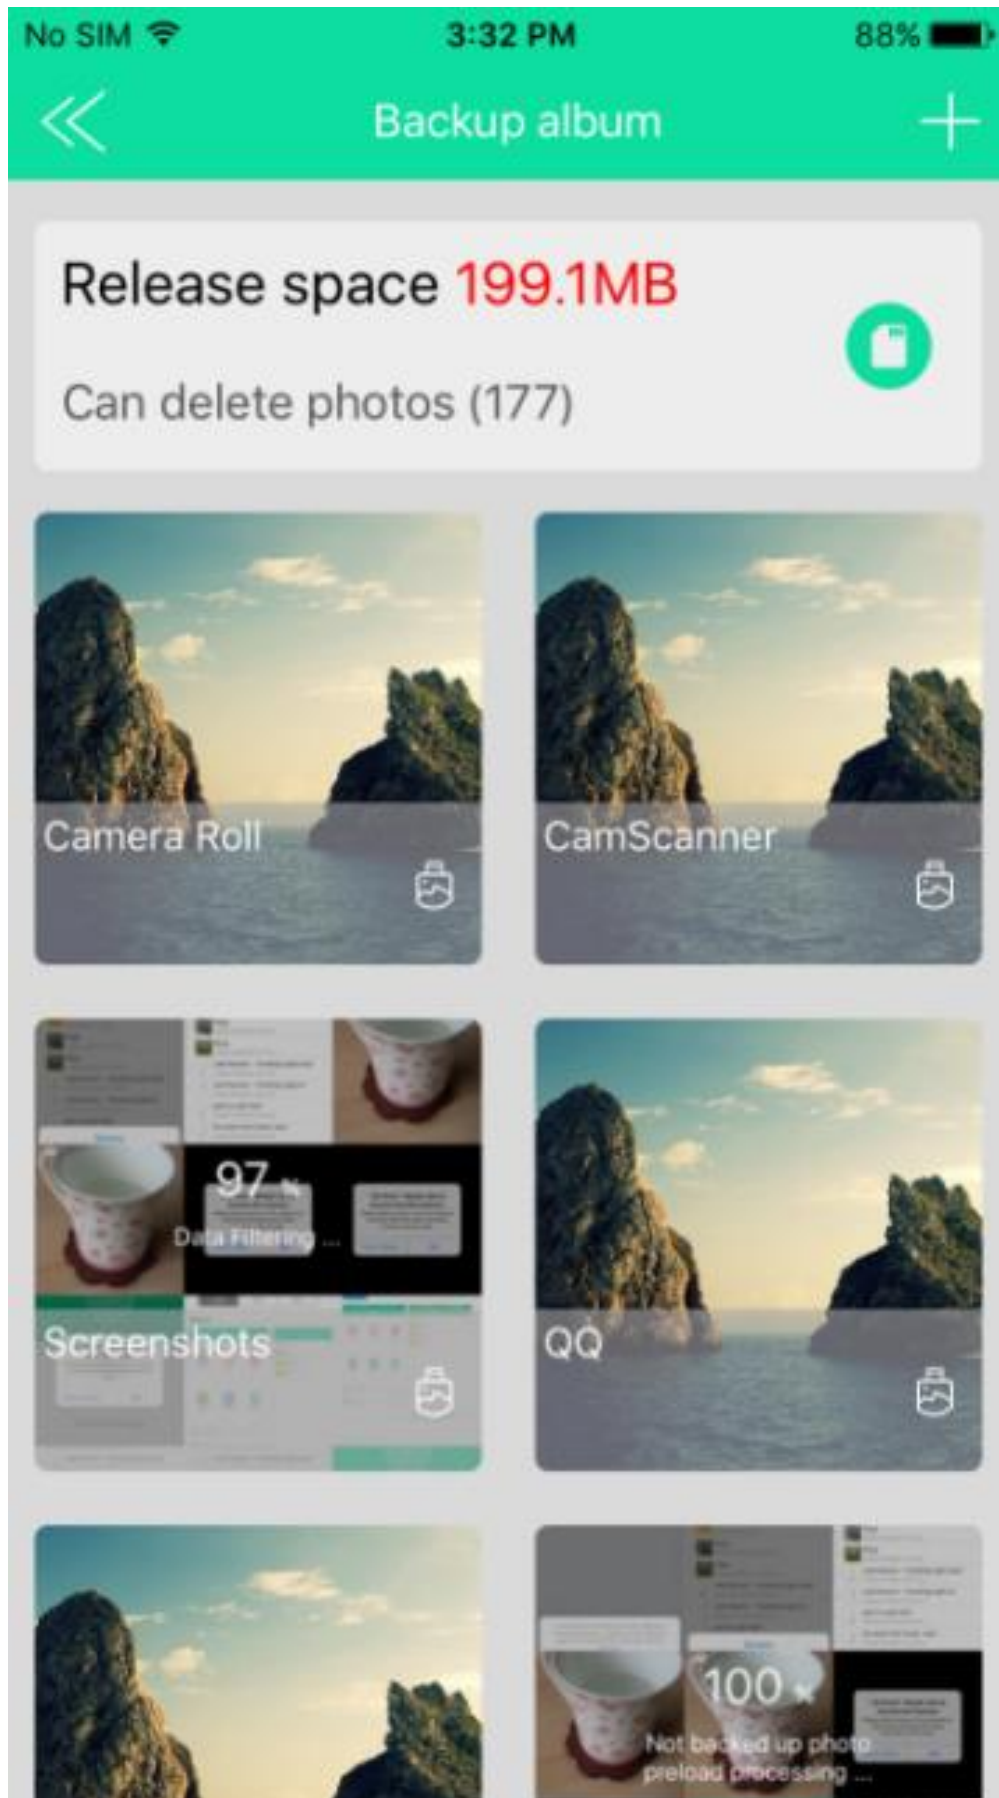

You can refer to the photo Rename Steps on page 17 and the Organize Steps on page 18.

● Backup Section

1. Click to enter the one-click backup function:

● File/Folder Section

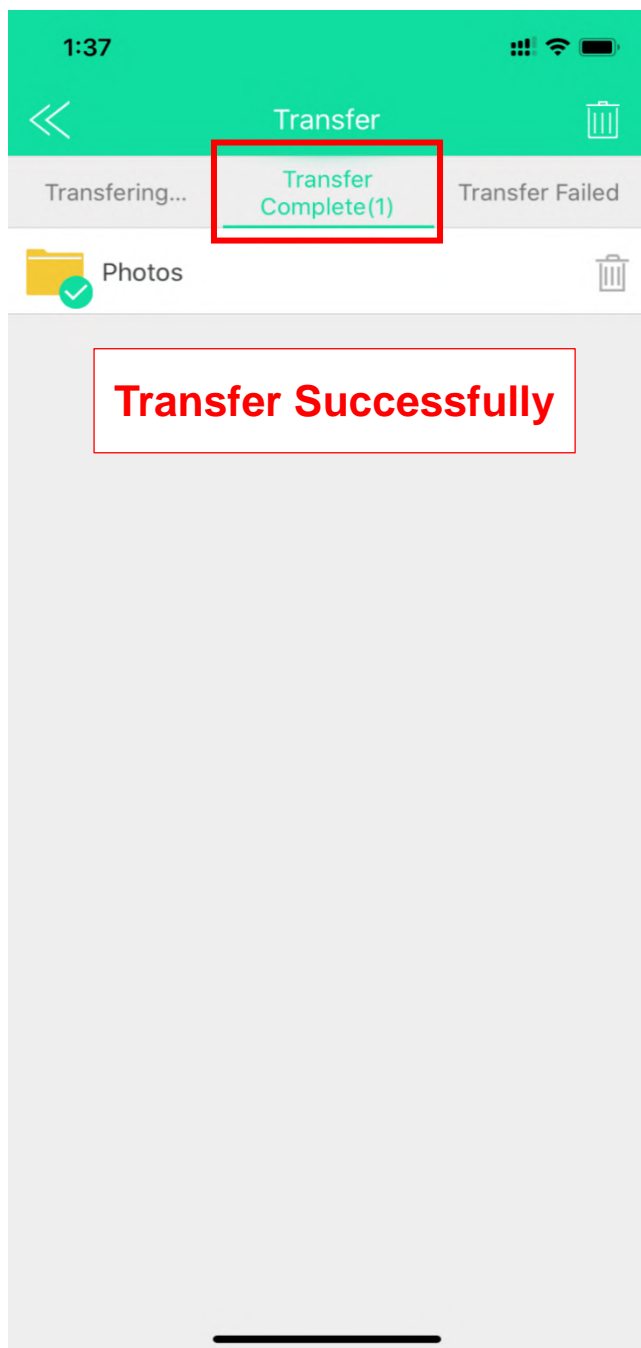

All folders can be managed here

✧ Copy File/Folder

1. Click into File/Folder section:

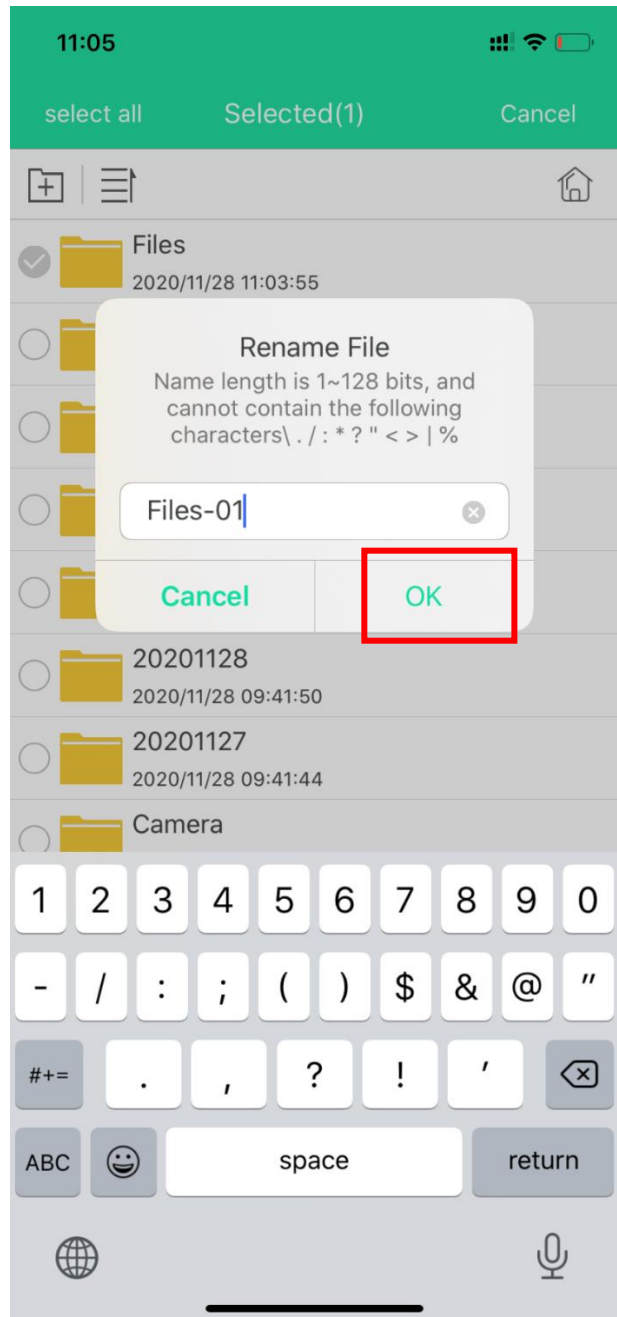

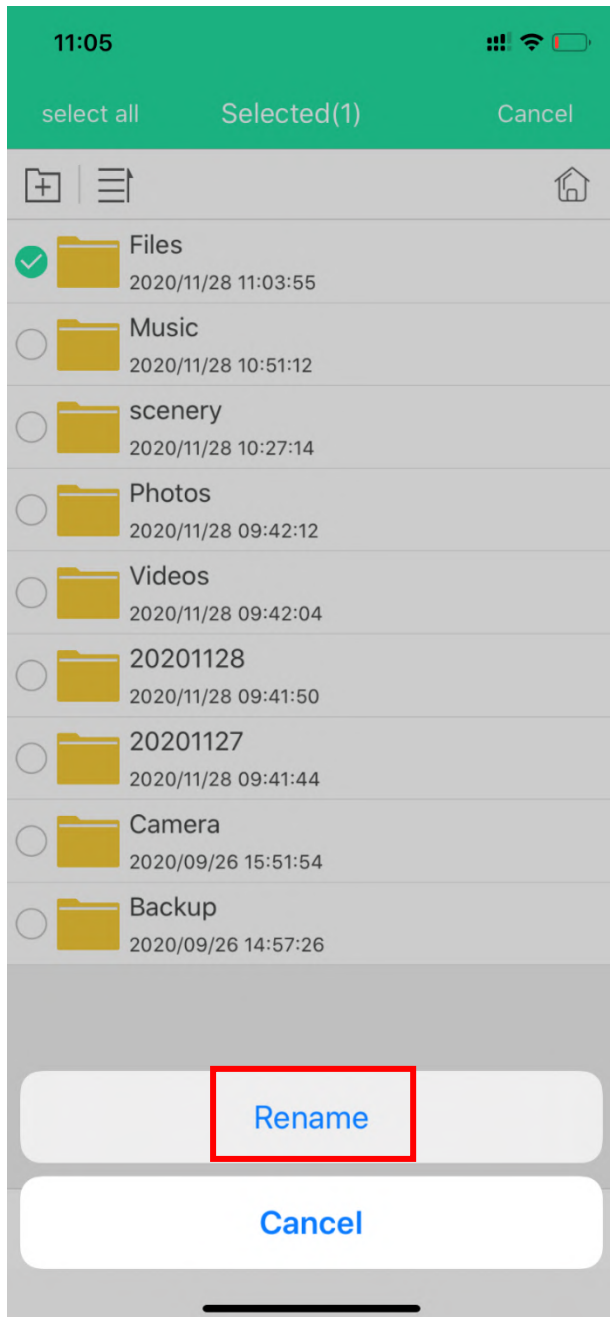

✧ Rename File/Folder

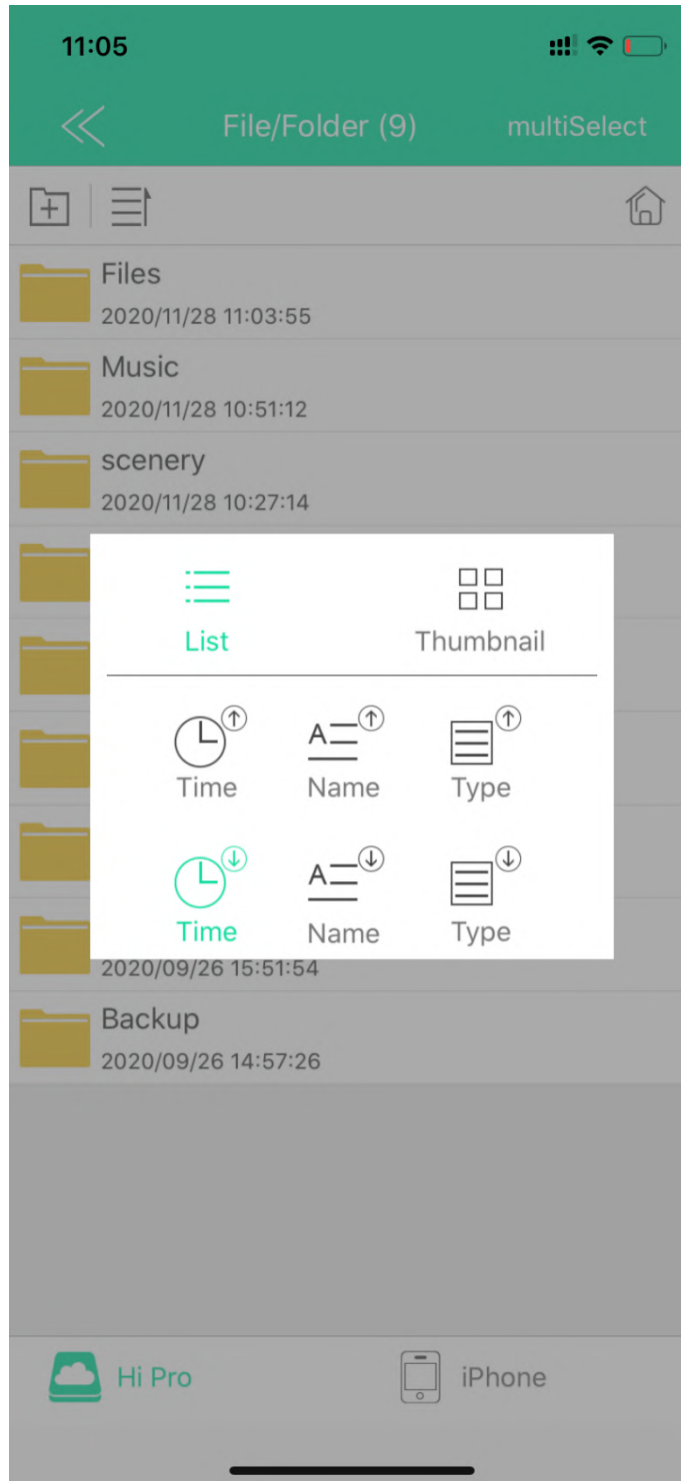

1. Go to “File/Folder” section and click the folder and click

“More” :

✧ Organize File/Folder

You can go back to the folder to browse and organize the file/folder. Click 

● Camera Section

Take photos/videos and automatic backup to the flash drive.

✧ **Take Photos & Take Videos:**

1. Click  into photos section:

Click OK to allow access.

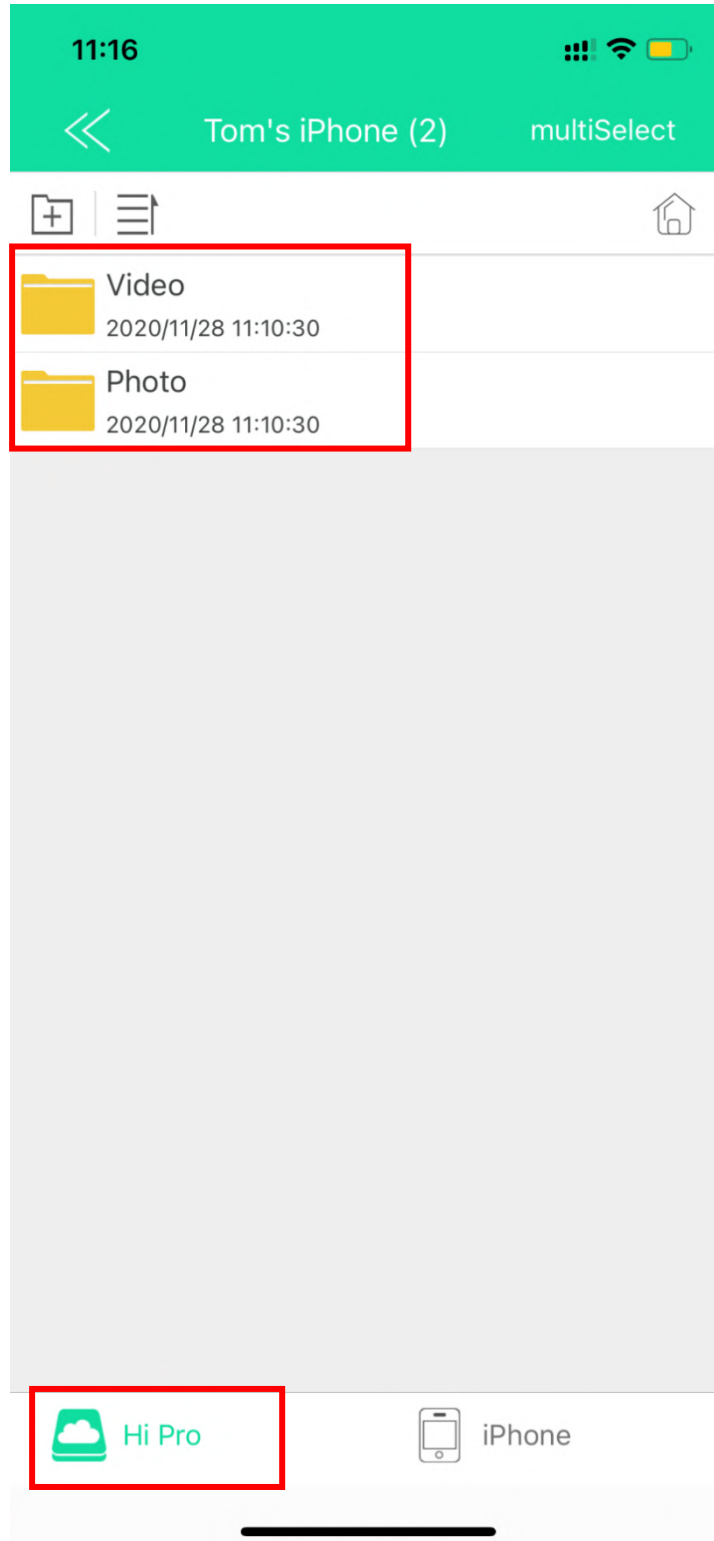

✧ View Photos & Videos

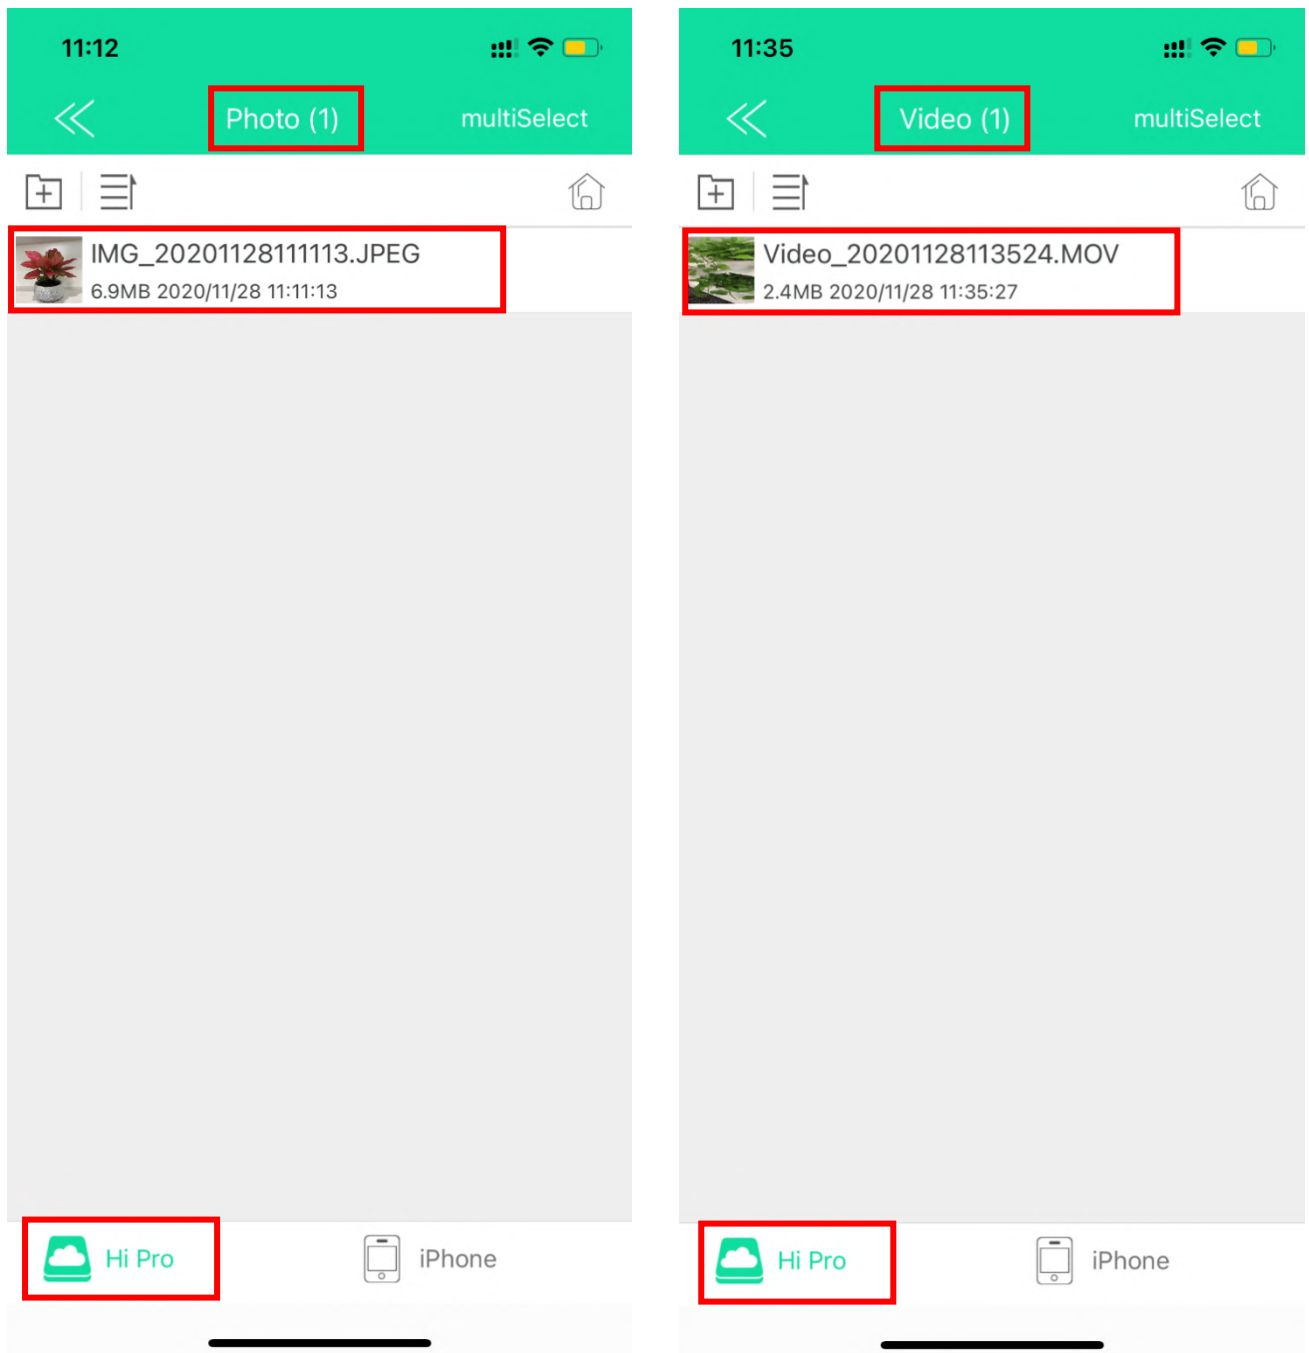

1. Click **File/Folder** into File/Folder section and Click **“Camera”**

2. Click “Tom’s iPhone”. Then you can view the photos and videos.

The photos and videos will be automatically stored to the flash drive (**PL Memory**). You can go to "Photos" or "Videos" section to browse. When you manage them on your **PC**, please find the folder named as "**Camera**".

● Back Up Contacts Section

✦ Back Up Contacts

1. Click **Back Up Contacts** into Back Up Contacts Section

✧ View Backup Contacts

1. Click **File/Folder** into File/Folder section and Click **“Backup”**

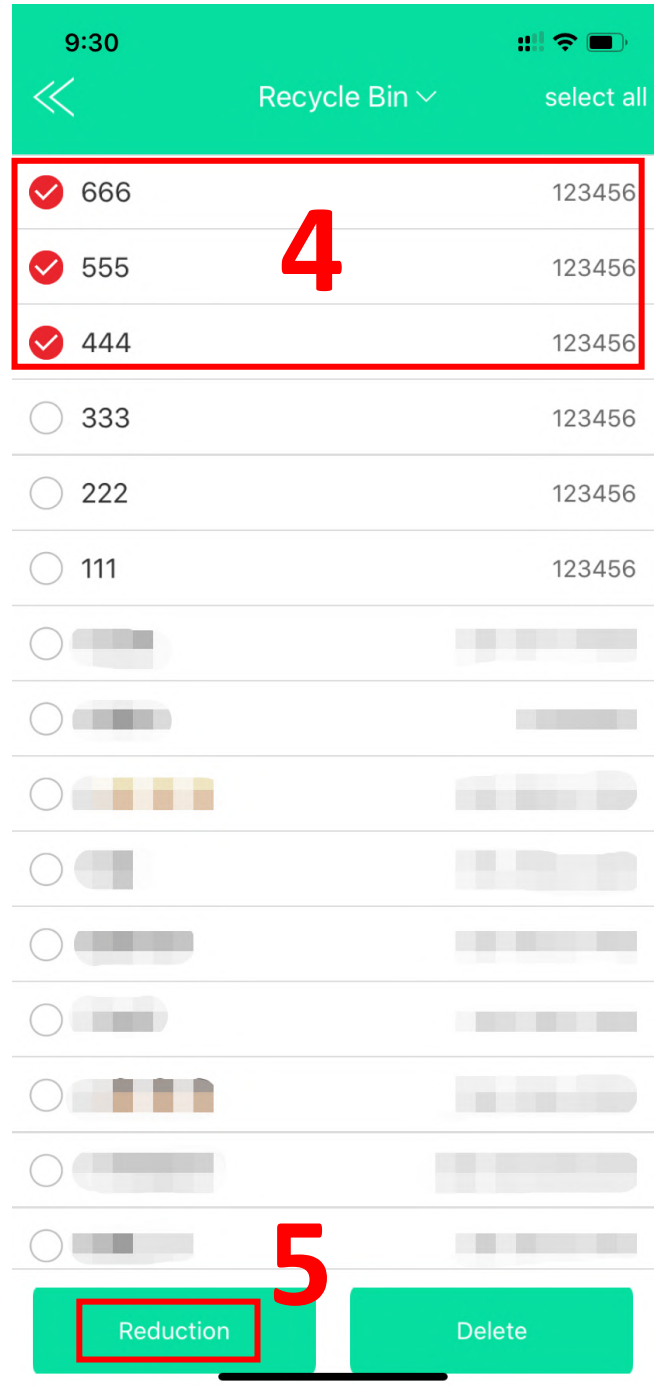

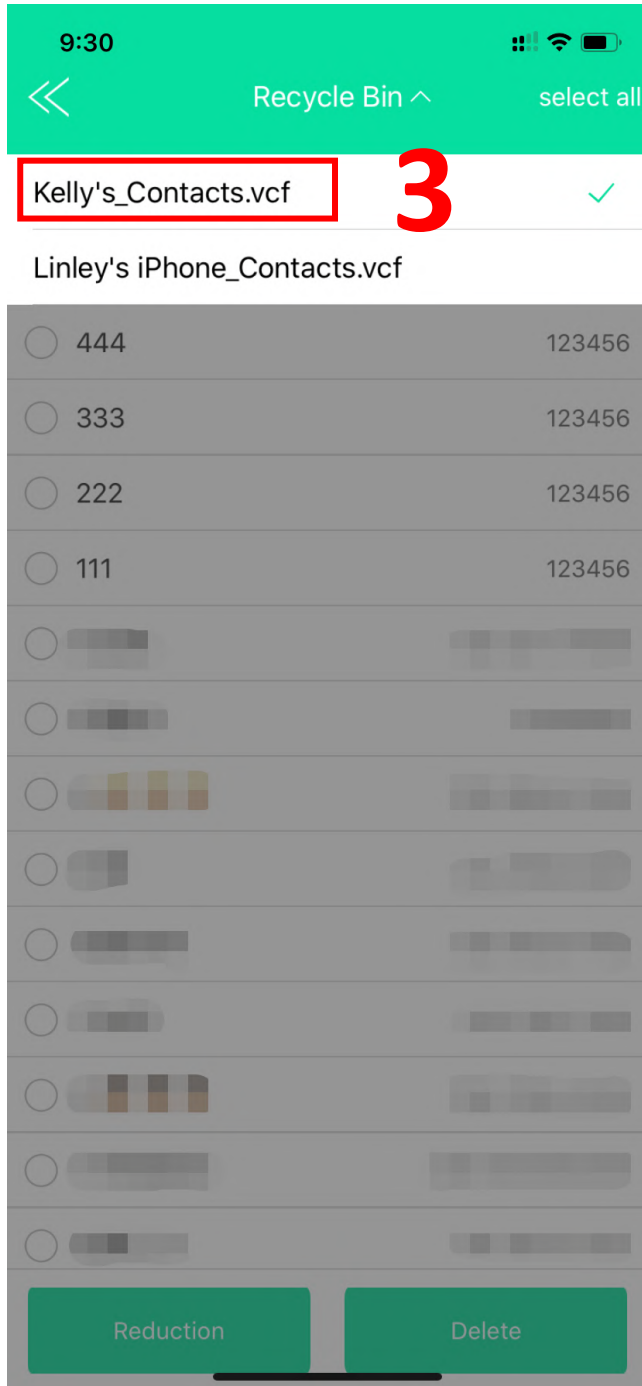

✧ Replace iPhone to Reduce Backup Contacts

You can reduce the backup of contacts from iPhone A to iPhone B

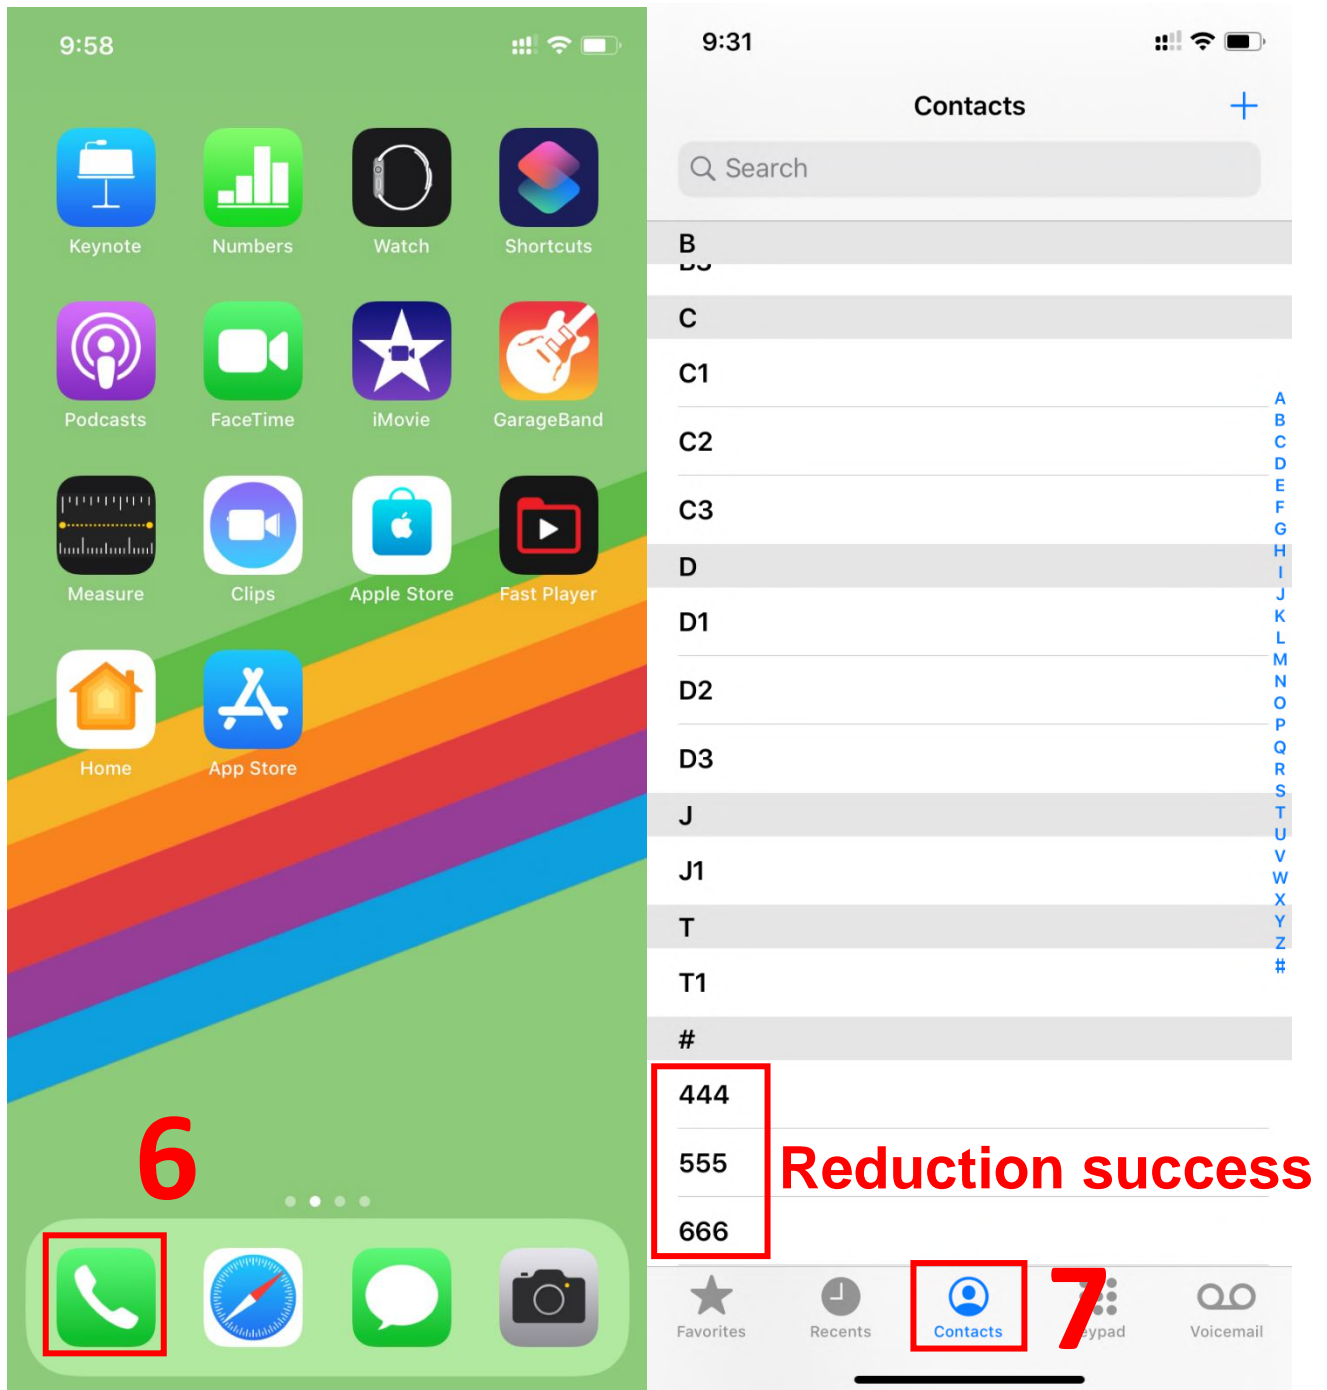

1. The contact of backup phone A is complete, click the icon in the upper right corner.

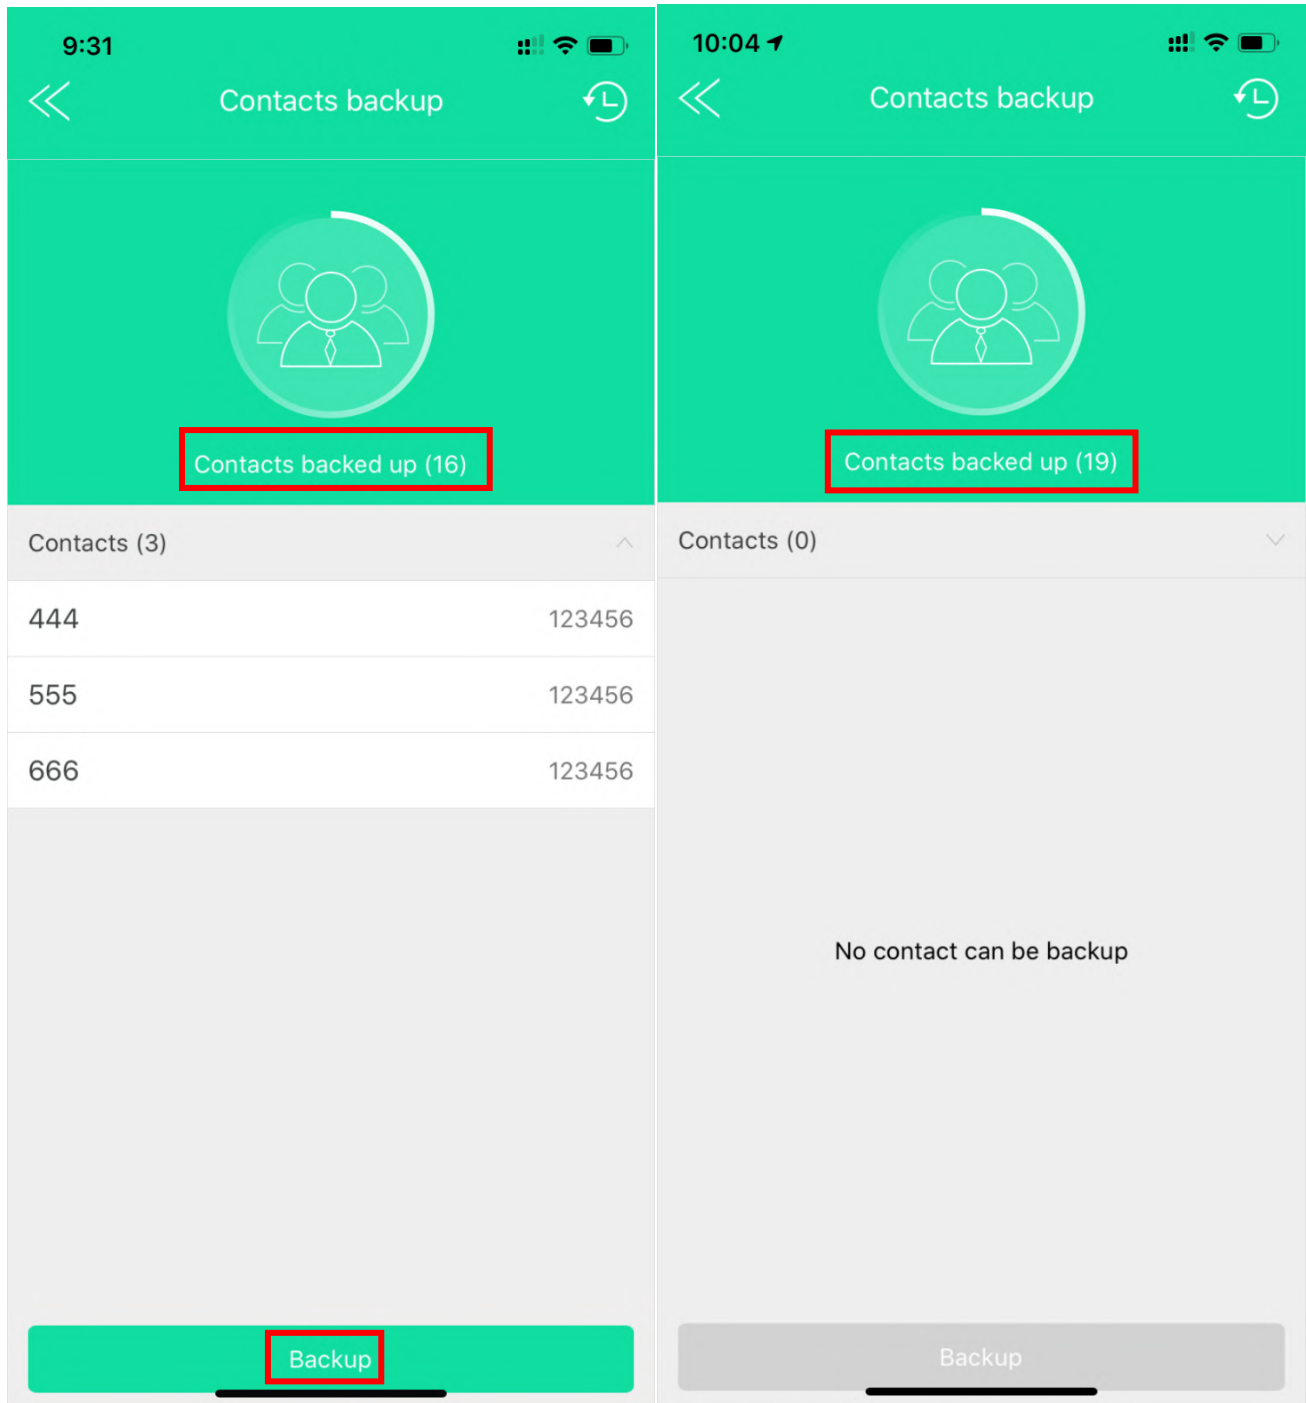

2. Click on phone B and select the contact to be reduced.

3. Click on the phone contact to check the reduction success.

4. You can backup new phone contacts

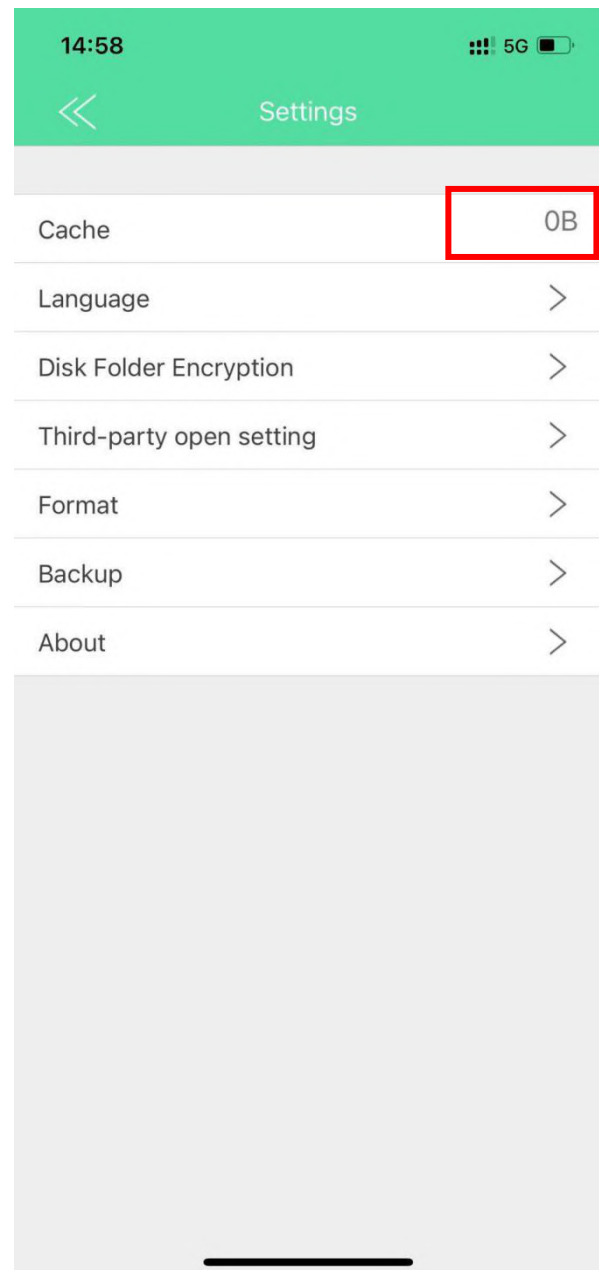

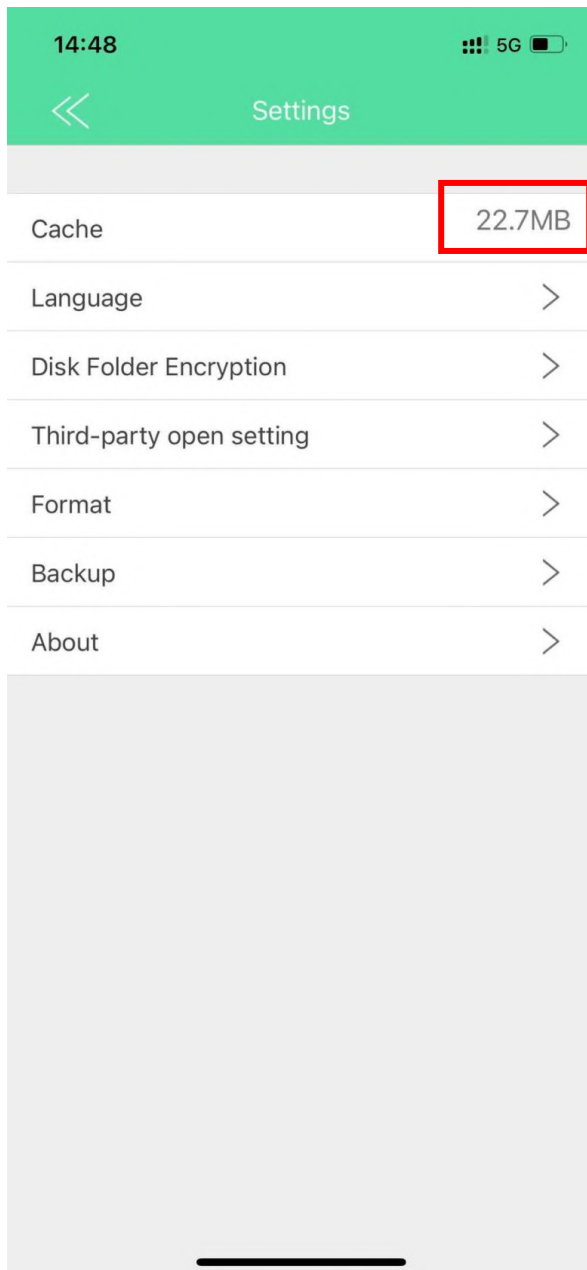

● Setting Section

✧ Overview

✧ Cache

Click “Cache” to clear the cache.

✧ Language

Select the Language you want to use, then back to the last step. The Language would be changed accordingly.

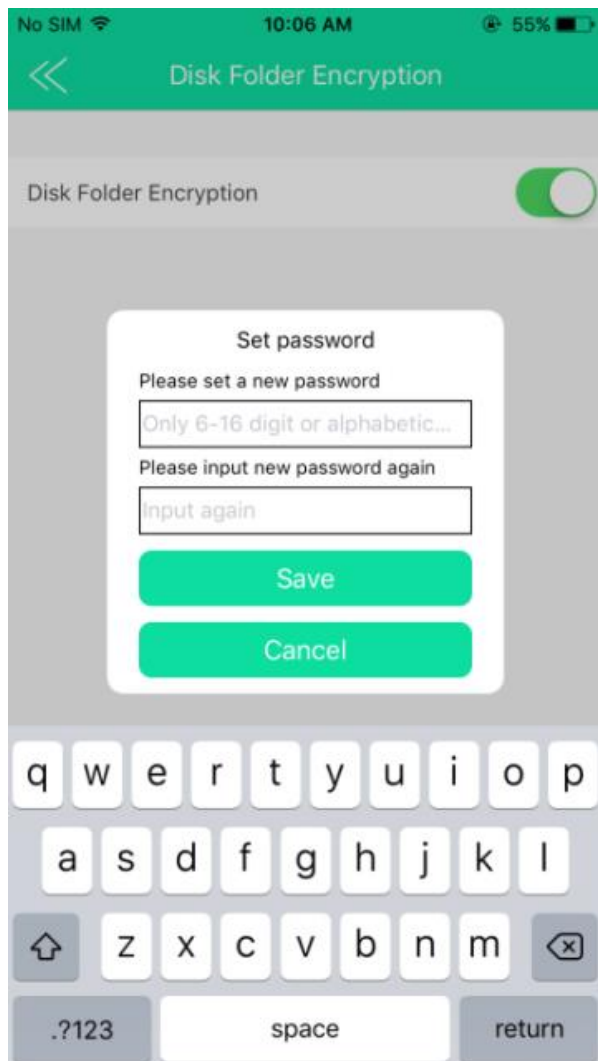

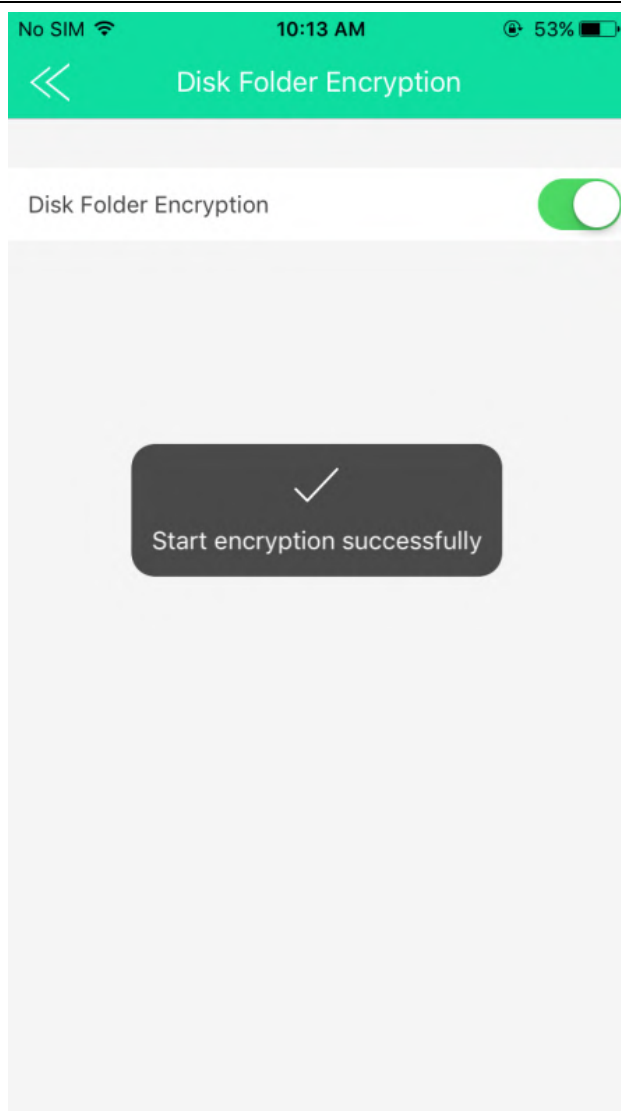

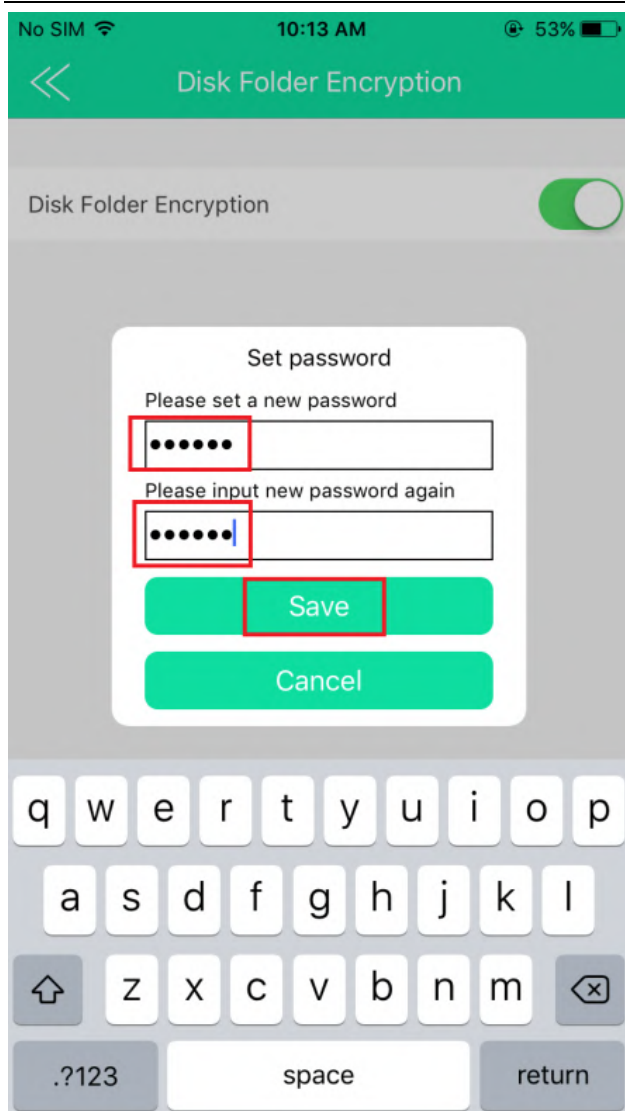

✧ Disk Folder Encryption

1. Set Password (Turn on the Disk Folder Encryption ---> Set Password)

Please do keep the password well. If the password is forgotten, the only solution is formatting the PL Memory. And all your data in the drive will be lost.

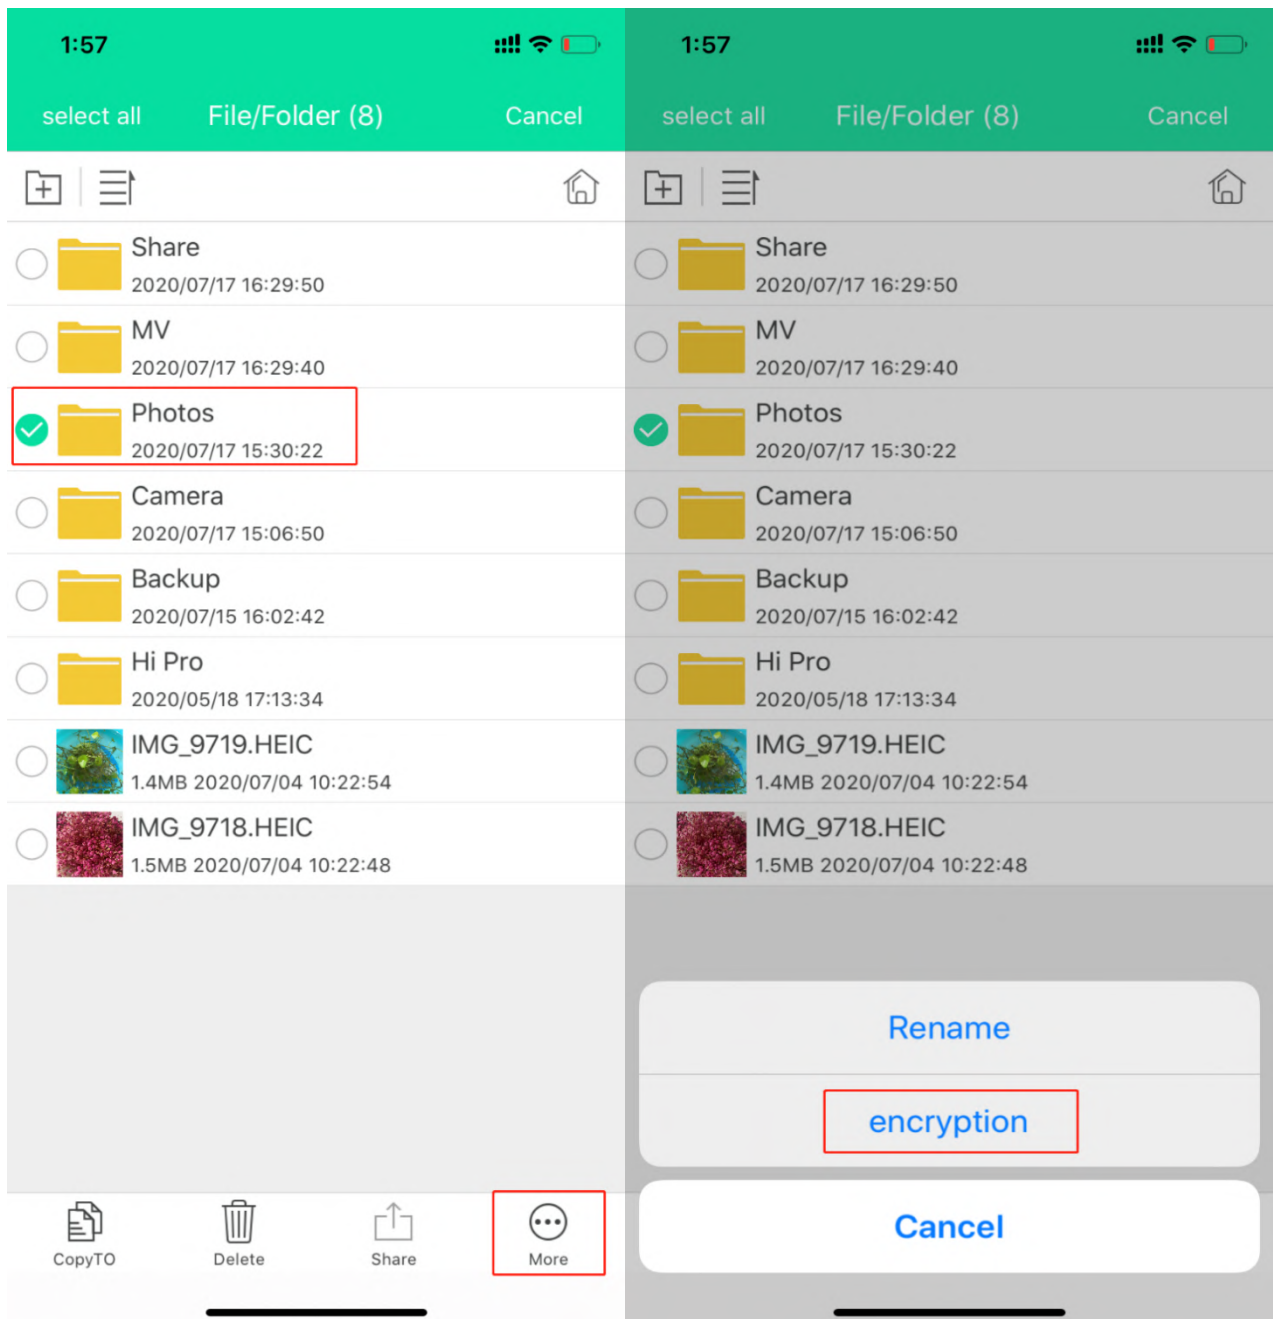

2. Encrypt the File

Click “File/Folder”, Long press the file you want to encrypt.

Click “More” and Click “encryption”

There will be a window pop-up show us **Encryption Success**
---> Click **“OK”** to end the Encryption.

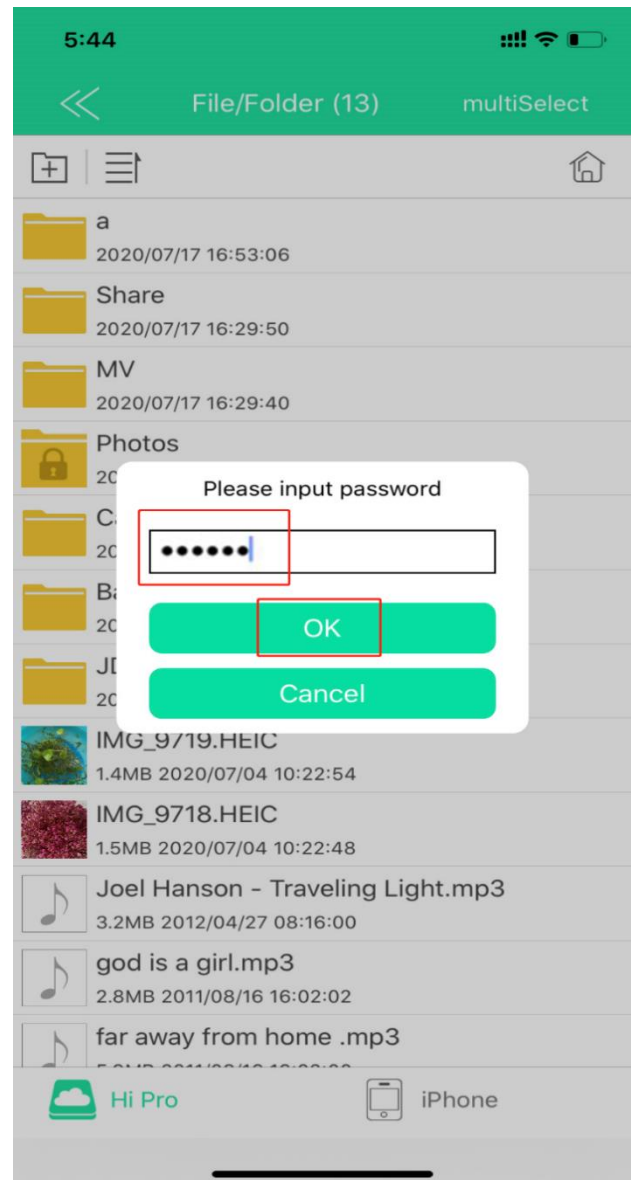

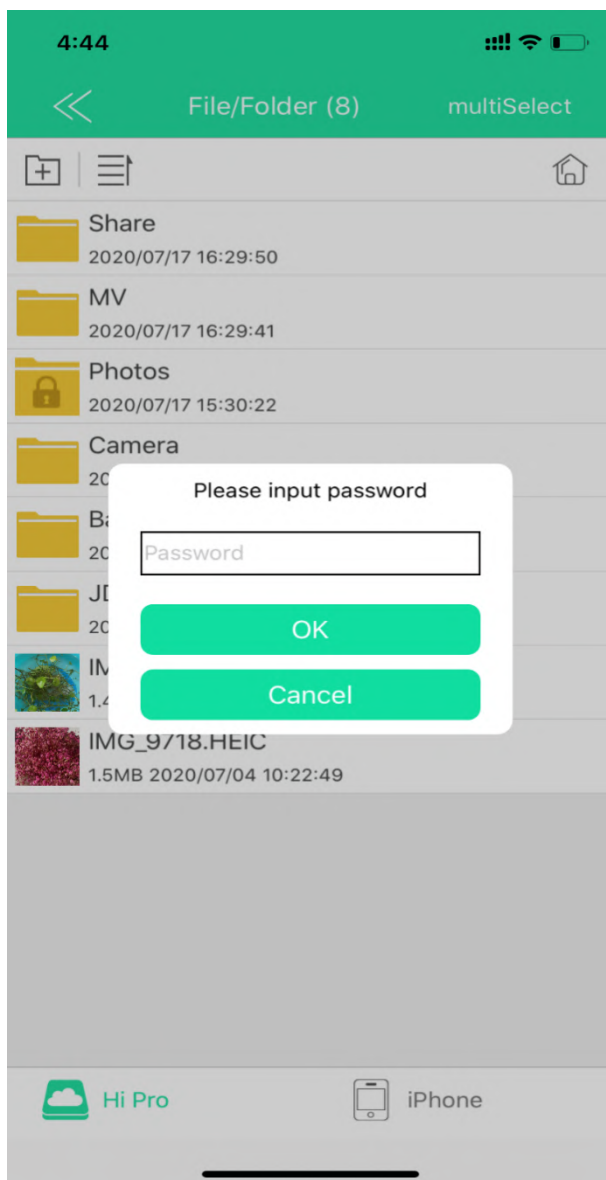

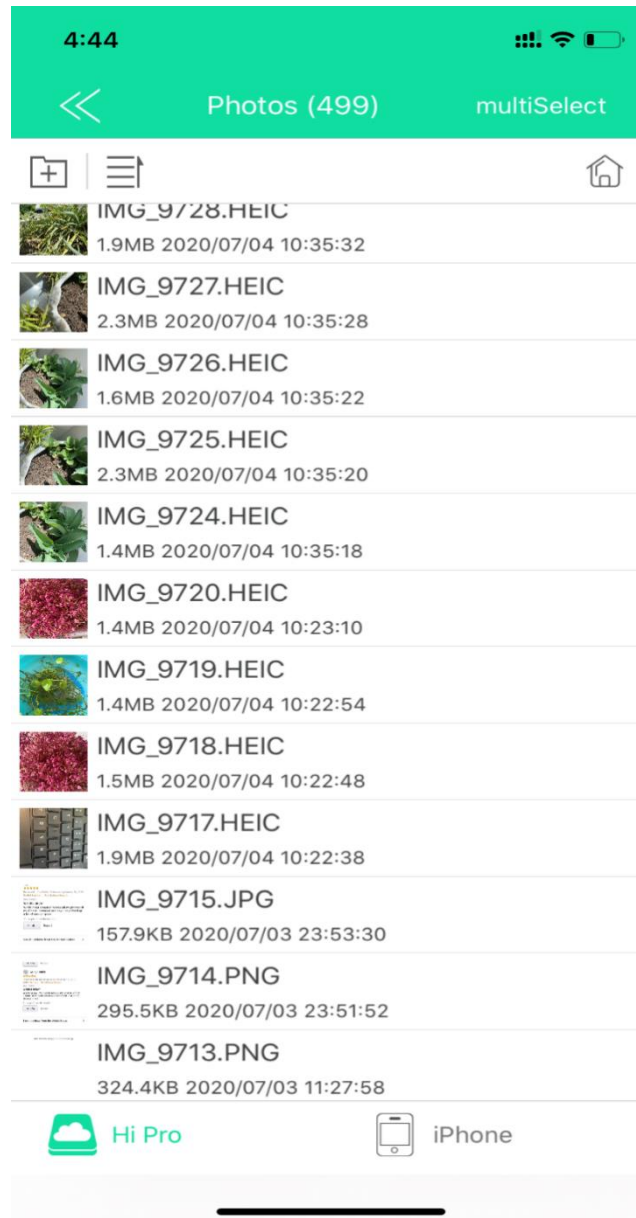

3.View the Encrypted File

From iPhone or iPad: Back to File/Folder, you can see the file with a Lock means it was encrypted. When you open the file, need to input the password, then the Lock is Open.

Once you entered into the Encrypted file, no need the password except you remove the USB Flash Drive from your iPhone/iPad, and plug in again.

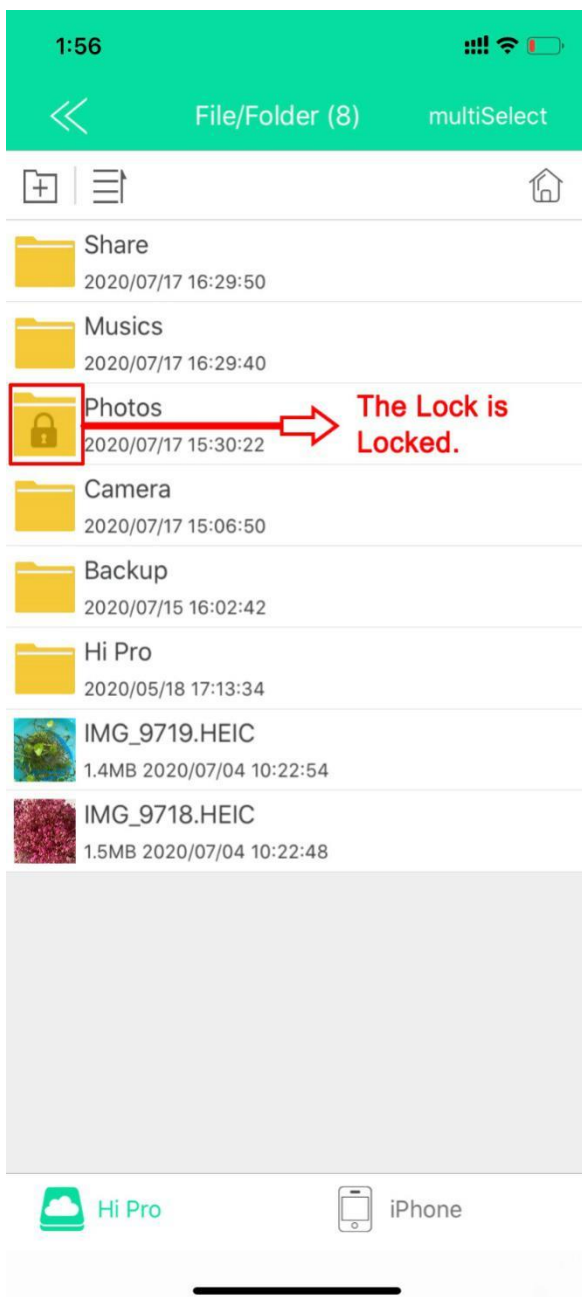

From Computer: Please note that, due to safety consideration, the encrypted file is invisible on computer and you cannot find it. If you want to view the file from computer, need to decrypt it from GoMemory App from iPhone or iPad firstly. (Please see the following point about how to Decrypt the Encrypted File)

4. Decrypt the Encrypted File

- 4.1 Click **"File/Folder"** and **Long press** the Encrypted file,
Click **"More"** ---> Click **"Decrypt"** ---> **input password** --
->Click **"OK"** ---> there will be message pop-up to show
us **Decrypt Success** ---> Click **"OK"**

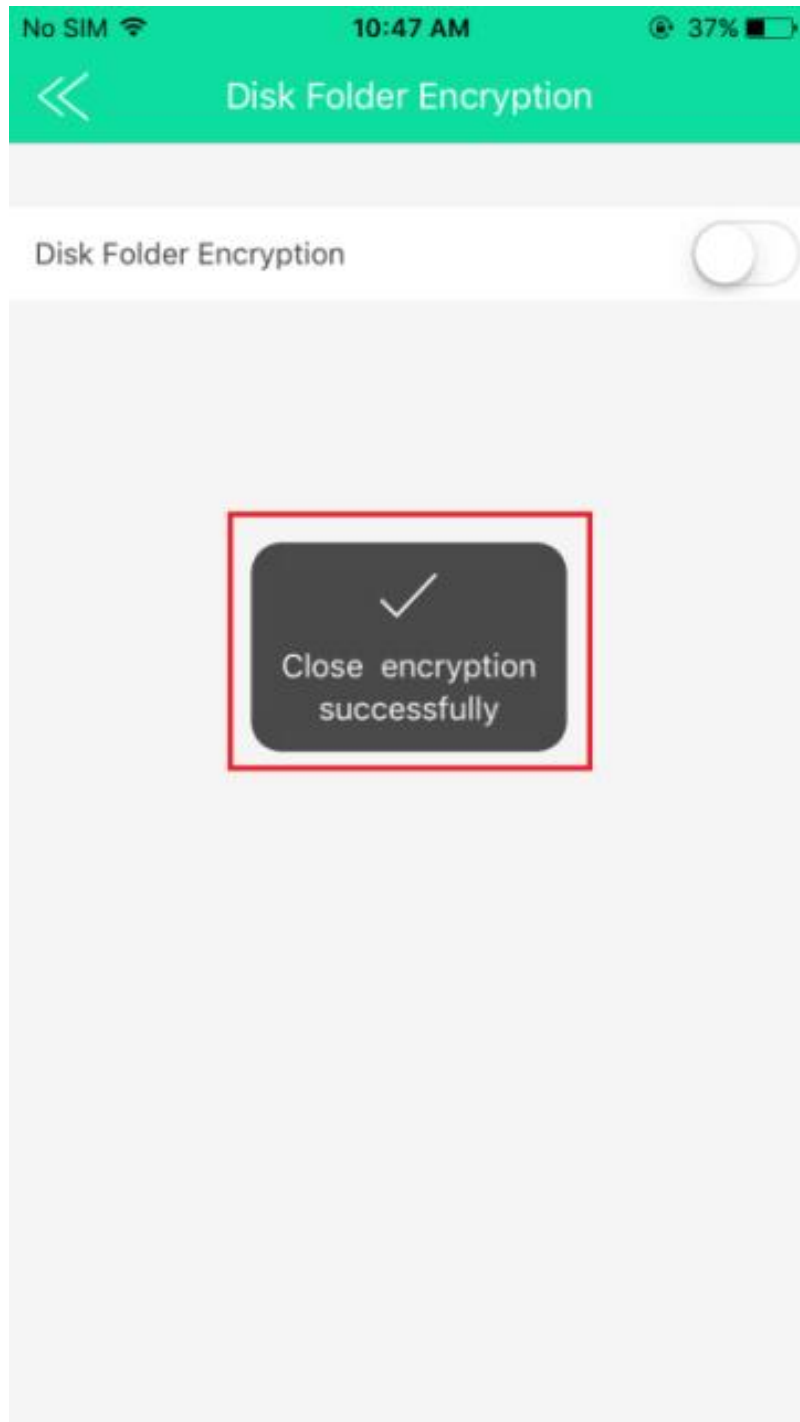

If the **Lock is Open**: Click **"File/Folder"** ---> Long press the Encrypted file ---> Click **"More"** ---> Click **"Decrypt"** ---> no need to input the password again.

5. Close the Encryption Function

Settings ---> Disk Folder Encryption ---> **Turn Off** the Disk Folder Encryption ---> Input the Password ---> Close Encryption Successfully

The Password used in this PL Memory is unified and unique. **So please remember this**

Password, there is no way to reset the Encrypted File if you forgot the password due to safety consideration.

✧ Third-party Open Setting

✧ Format

Click External Storage to format the PL Memory.

Please do not disconnect the PL Memory from the iPhone/iPad during its formatting.

Formatted disk at iPhone only supports UP TO 128G

WARNING: Formatting will erase all data on the device. Back up all your data before proceeding.

✧ Backup

Overview

1. Auto Backup

Exit the App, pop-up Auto backup prompt when enter into the app again, click OK to start auto backup, click Cancel to close.

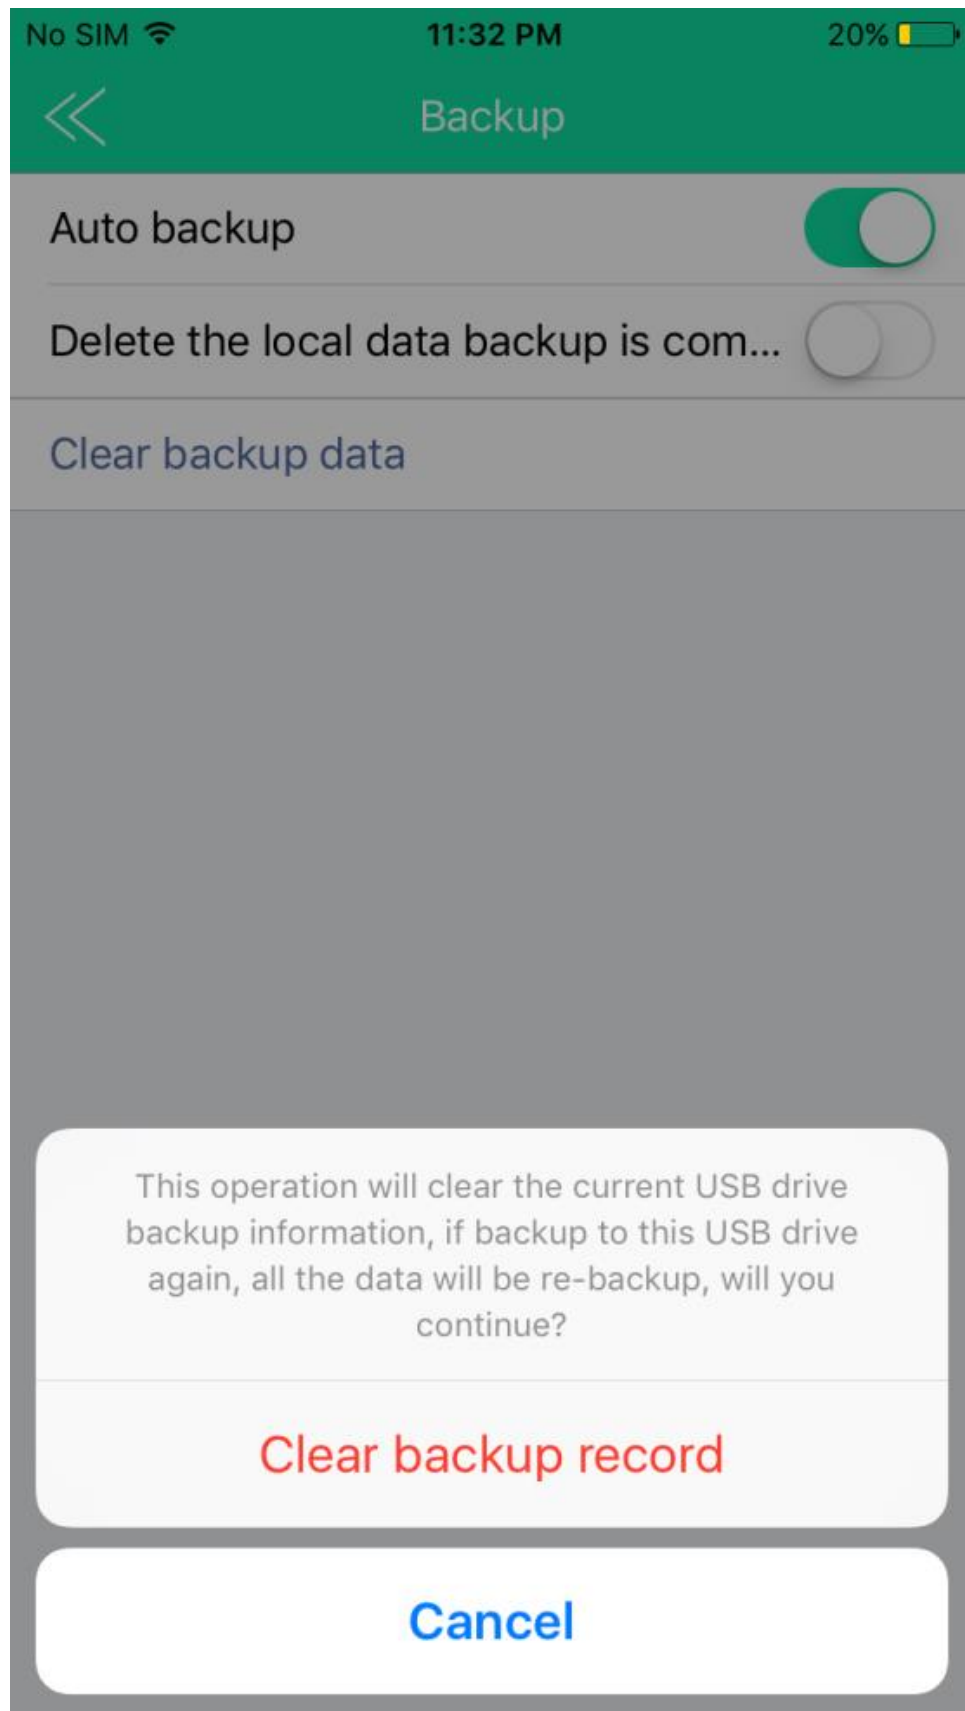

2. Delete the local data backup is completed

All local data will be deleted after finishing backup when set up “Delete the local data backup is completed”. Please be careful before choosing this option.

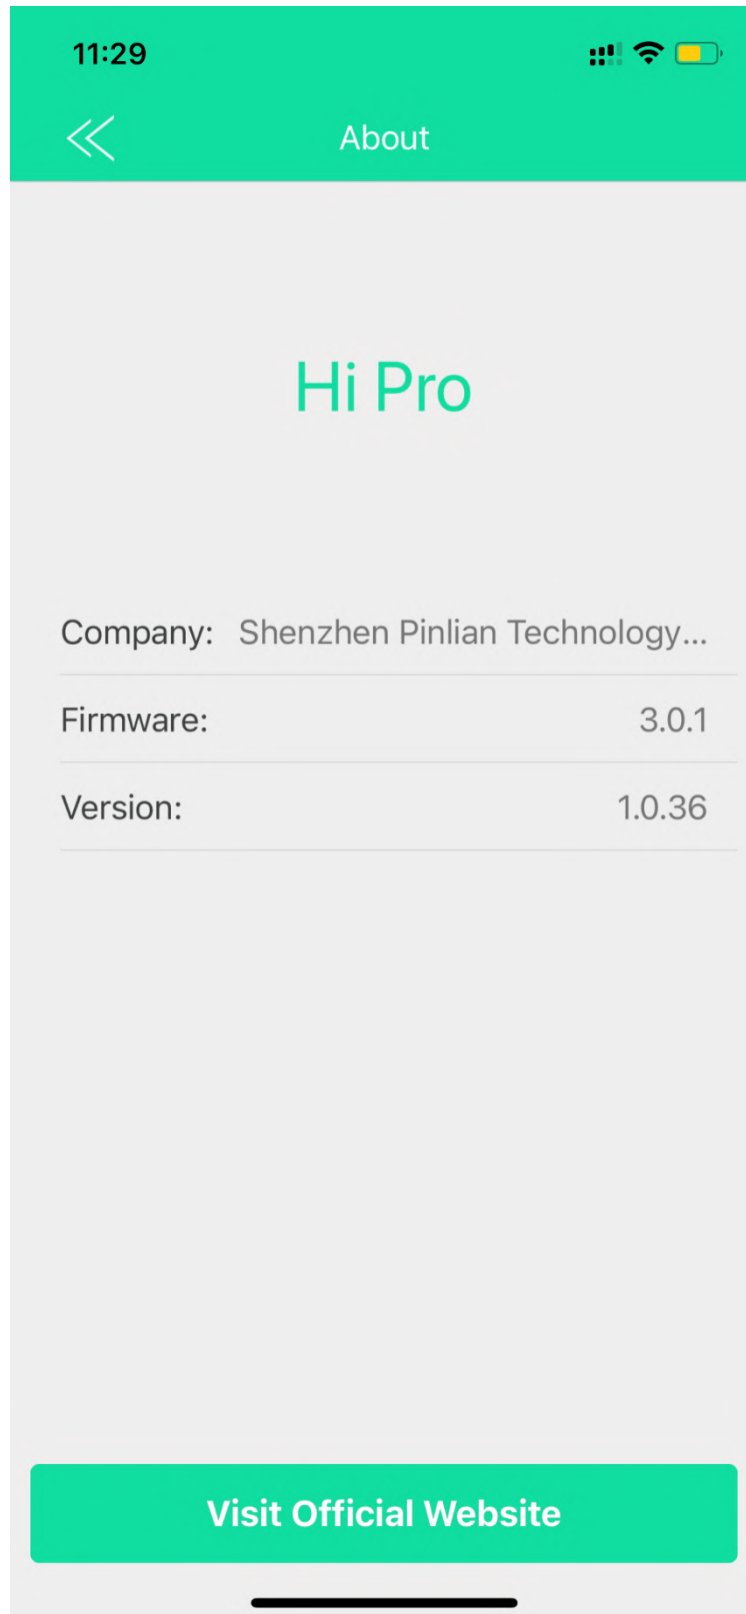

3. Clear backup data

✧ About

The APP version keeps upgrading

● Q & A

Q1. Do I need to take the protective case off when using it?

A: Normally, no need. The lightning connector of this unit has extended 2 mm from the body. So it will be compatible with most of iOS device with case. Sometimes, it's better to take the thick phone case off if necessary, such as Otter box case.

Q2: Does it have transfer limitation every time?

A: No, there is no transfer amounts limitation. It depends on the capacity of your flash drive and the rest available space of apple device. We have tested transfer 10000+ picture and video files from iPhone to flash drive one time. It works without any problem.

Q3: Only few pictures show up on the drive as available from my iPhone?

A: One situation is the iCloud have a new feature called "Optimize iPhone Storage". If you selected it, full-resolution photos and videos are automatically replaced with optimized versions. And all of your photos have been uploaded in iCloud and none of recognizable photo stored in your iPhone storage. So the app "GoMemory" cannot find all photos in your iPhone. You could try to connect our phone to PC, make sure whether there are any photos in our iPhone or not.

And we suggest that select "Download and keep originals". Because "Optimize iPhone Storage" would waste your time to download the full-resolution photos each time when you want to see our photo. After changing the settings from "Optimize iPhone Storage" to 'Download & keep original photo', the photos already saved in iCloud will stay the same. You have to log in at iCloud.com with your apple ID to transfer the photos to our PC, further to your flash drive. But the photos you take after the setting can be moved to the drive directly.

Q4: Why can't my device read the USB drive when it's plugged in?

A: 1) If you are using it on your iPhone/iPad, you need to install the "GoMemory" app on your device before using the USB drive.

2) If you are using it on your computer (Windows/Mac), it does not need app installed. This iPhone USB flash drive works as regular USB flash drive.

Q5: Can I use the PL Memory for installing APPs or save my game data?

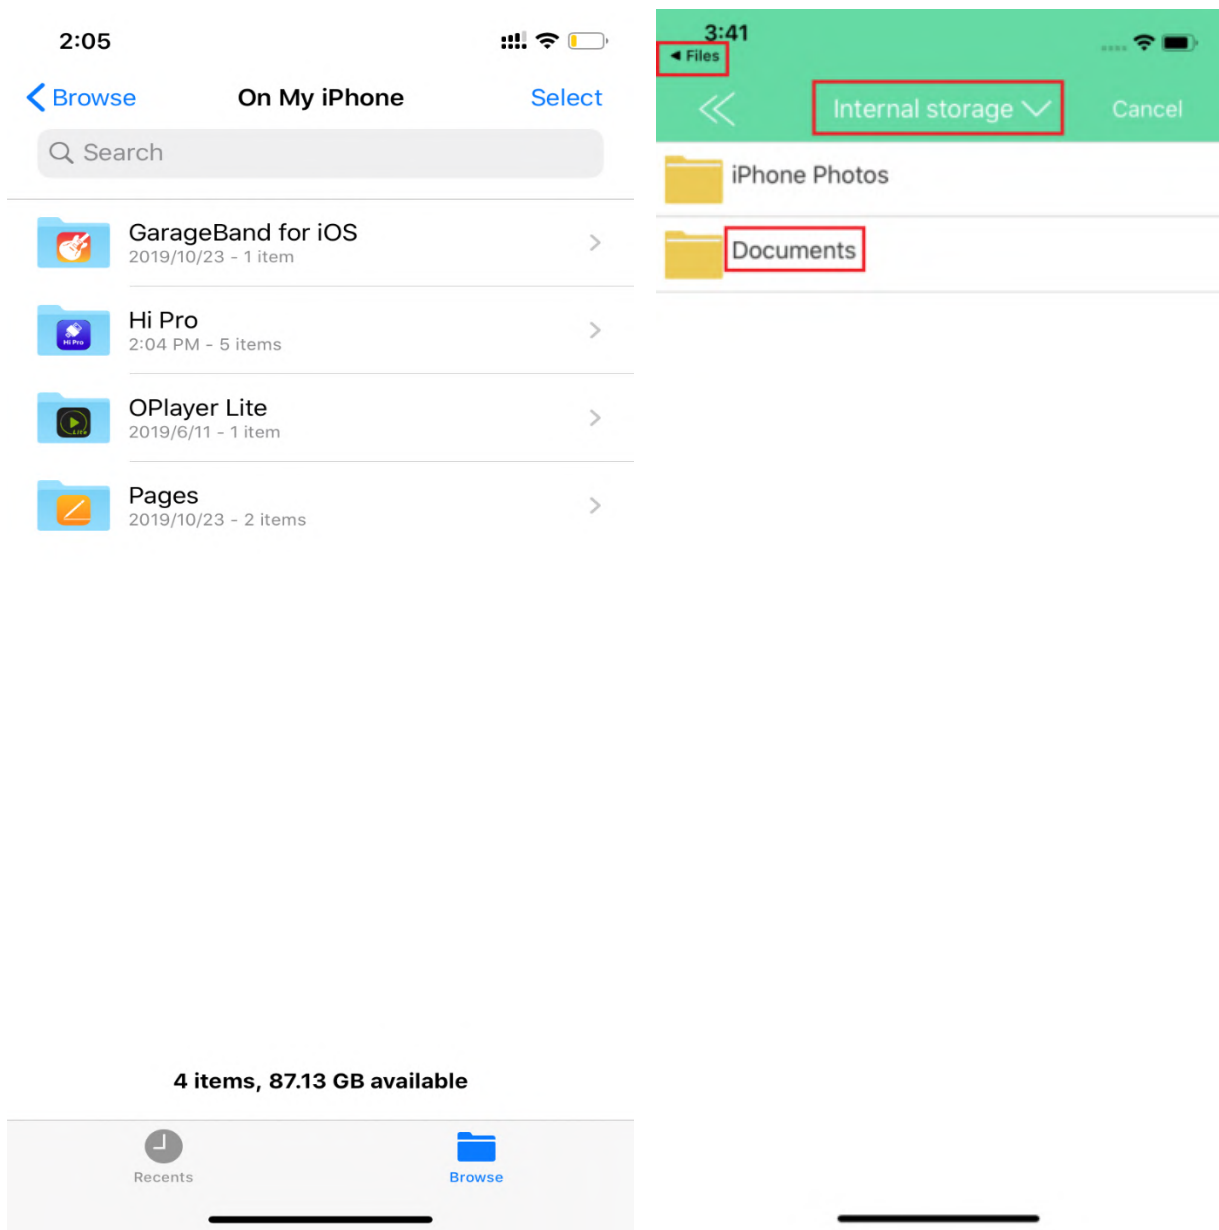

A: No, it does not support. Apple devices do not permit any external drive to install Apps or save data.

Q6: Can I use this PL Memory without GoMemory App on my iOS 13 devices?

A: No, when this PL Memory is connected directly with iOS devices. It need to follow Apple MFi Protocol and Apple certified APP is necessary to visit iOS devices. The program certifications between MFi products and normal OTG are different. Apple doesn't allow the compatibility between them. And the function of App is stronger than the Apple's own file transfer function, we think it is more valuable to users.

Q7: When I insert this PL Memory into an iOS 13 device, can I transfer files between File and this PL Memory?

A: Yes, you can transfer files between File and PL Memory. After installing the GoMemory App into iOS 13 devices, there is PL Memory under File (File --- Browse --- On My iPhone), and in the GoMemory App, there is iPhone Photos and Documents under Internal Storage. File and PL Memory are interlinked. Please contact csplzmpwlq@gmail.com about the detailed operation.

Q8: I have thousands of photos stored in the PL Memory and in my iPhone, but it only shows 499 pcs in the PL Memory and 1000 pcs in the iPhone from the GoMemory App. Why doesn't the APP show the whole result?

A: In order to display better and not take up too much memory, you can set up an internal storage one-time display 1000 pcs, external one-time display 499 pcs, only when you slide to the lowest end, it will be displayed again in multiples.

We suggest to use the One-Click Backup function if there are lots of pictures need to transfer. All the photos would be shown once Backup finished.

Q9: When you transfer photos or videos, you choose MultiSelect ---Select all --- Copy To, but the Selected quantity is 499 for PL Memory and 1000 for iPhone, only partial photos and videos are transferred.

A: In order to display better and not take up too much memory, you can set up an internal storage one-time display 1000 pcs, external one-time display 499 pcs. When you do transfer or deletion, only for the displayed items. The photos or videos not displayed would not be processed. We suggest to use the One-Click Backup function if there are lots of pictures need to transfer. All the photos would be shown once Backup finished.

● NOTE

(1) You are not allowed to transfer downloaded media files(music, movies) from third party in our iPhone/iPad to the flash drive. As they are DRM (Digital Rights Management) protected under iOS. However, you can download music and movies to computer firstly, and transfer them to flash drive, then play on our apple devices when this flash drive connected.

(2) If you find only partial pictures(not all of them) can be transferred, that is because you used 'iCloud' for storing pictures, and this part of pictures cannot be recognized by GoMemory App. In order to successfully back up all the pictures taken by our iPhone/iPad to flash drive. Please refer the 'FAQ' part at the end of this manual.

(3) It's normal that flash drive shows less capacity on PC and our devices than it states. Because flash industry uses different measuring sizes from PC industry. You can know better from Wikipedia by search 'Gigabyte'.

(4) Please understand that this Apple MFi certified iPhone flash drive is mainly designed for iPhone and iPad. You need to install

GoMemory App before using it on iPhone or iPad, and you can backup by one click or automatically. It also has sorting photos, and other strong and convenient functions. But for computers (no matter Windows computer, or Apple computer, since they have USB port, they would be supported), no need to install any app, it doesn't have the one click backup function. It only works as normal USB flash drive, that means if you want to back up or transfer photos from computer, you need to do it manually.

● Warranty

All of our Jiangda Products are covered by an 18 months Limited warranty from the date of its original purchase. If any questions, please contact our after-sales support team, who are 24H online for you.
