## Preface

## Audience

This publication is for network administrators who configure and maintain Cisco Nexus devices.

## Document Conventions

Note As part of our constant endeavor to remodel our documents to meet our customers' requirements, we have modified the manner in which we document configuration tasks. As a result of this, you may find a deviation in the style used to describe these tasks, with the newly included sections of the document following the new format.

Command descriptions use the following conventions:

| Convention | Description |
| :--- | :--- |
| bold | Bold text indicates the commands and keywords that you enter literally as shown. |
| Italic | Italic text indicates arguments for which the user supplies the values. |
| $[\mathrm{x}]$ | Square brackets enclose an optional element (keyword or argument). |
| $[\mathrm{x} \mid \mathrm{y}]$ | Square brackets enclosing keywords or arguments separated by a vertical bar indicate an <br> optional choice. |
| $\{\mathrm{x} \mid \mathrm{y}\}$ | Braces enclosing keywords or arguments separated by a vertical bar indicate a required <br> choice. |
| $[\mathrm{x}\{\mathrm{y} \mid \mathrm{z}\}]$ | Nested set of square brackets or braces indicate optional or required choices within <br> optional or required elements. Braces and a vertical bar within square brackets indicate <br> a required choice within an optional element. |
| variable | Indicates a variable for which you supply values, in context where italics cannot be used. |

| Convention | Description |
| :--- | :--- |
| string | A nonquoted set of characters. Do not use quotation marks around the string or the string <br> will include the quotation marks. |
| Examples use the following conventions: <br> Convention | Description |
| screen font | Terminal sessions and information the switch displays are in screen font. |
| boldface screen font | Information you must enter is in boldface screen font. |
| italic screen font | Arguments for which you supply values are in italic screen font. |
| $<>$ | Nonprinting characters, such as passwords, are in angle brackets. |
| [] | Default responses to system prompts are in square brackets. |
| $!, \#$ | An exclamation point (!) or a pound sign (\#) at the beginning of a line of code indicates <br> a comment line. |

This document uses the following conventions:

Note Means reader take note. Notes contain helpful suggestions or references to material not covered in the manual.

## $\triangle$

Caution Means reader be careful. In this situation, you might do something that could result in equipment damage or loss of data.

## Documentation Feedback

To provide technical feedback on this document, or to report an error or omission, please send your comments to: . We appreciate your feedback.

## Introduction

This document describes the Cisco NX-OS configuration limits for Cisco Nexus 9000 Series switches.
The values provided in this guide should not be interpreted as theoretical system limits for Cisco Nexus 9000 Series hardware or Cisco NX-OS software. These limits refer to values that have been validated by Cisco. They can increase over time as more testing and validation is done.

## Verified Scalability Limits - Unidimensional

The tables in this section list the verified scalability limits for the Cisco Nexus 9000 Series switches for Cisco NX-OS Release 10.2(4)M.

These limits are validated with a unidimensional configuration. The values are provided in these tables focus on the scalability of one particular feature at a time.
Each number is the absolute maximum that is currently supported by this Cisco NX-OS release for the corresponding feature. If the hardware is capable of a higher scale, future software releases could increase this verified maximum limit. Results might differ from the values that are listed in this guide when you try to achieve maximum scalability with multiple features enabled.

1. If only one number is provided, the verified limit applies to all supported platforms and line cards.
2. Verified limits are provided only for supported platforms.
3. If a feature is not supported for a particular platform, the verified limit is not provided.

Note You can deploy upto 500 commands under config-profile.

Table 1: Cisco Nexus 2000 Series Fabric Extenders (FEX) Straight Through Mode Verified Scalability Limits (Unidimensional)

| Feature | Supported Platforms | Verified Limits |
| :--- | :--- | :--- |
| Fabric Extenders <br> server interfaces | Nexus 9300-EX/FX/FX2/FX3 switches | 16 and 768 |
| VLANs across all Fabric Extenders | Nexus 9300-EX/FX/FX2/FX3 switches | 562 |
| VLANs per Fabric Extender server <br> interface | Nexus 9300-EX/FX/FX2/FX3 switches | 75 |
| Port channels | Nexus 9300-EX/FX/FX2/FX3 switches + <br> FEX | 511 |

${ }^{1}$ When FEX configured using "AA" mode, then the maximum number of 6 FEX on the NFE base ToR and 16 FEX for the LSE base ToR are supported.
${ }^{2}$ For FEX HIF port channels, Cisco recommends that you enable STP port type edge using the spanning tree port type edge [trunk] command.

## Table 2: ePBR Verified Scalability Limits (Unidimensional)

| Feature | Supported Platforms | Verified Limits |
| :--- | :--- | :--- |
| Maximum services per switch | Nexus 9300 and 9500 switches | $150^{\underline{3}}$ |
| Endpoints per service | Nexus 9300 and 9500 switches | 32 |
| ePBR policies per switch | Nexus 9300 and 9500 switches | 150 |
| Policies per VRF | Nexus 9300 and 9500 switches | 16 |
| Services per chain | Nexus 9300 and 9500 switches | 6 |
| Match per policy. | Nexus 9300 and 9500 switches | 16 |
| Aces per match | Nexus 9300 and 9500 switches | 256 |

${ }^{3}$ Only 62 unique ACLs can be configured per slice of ASIC. Each ACL takes one label. If the same ACL is configured on multiple interfaces, the same label is shared. If each ACL has unique entries, the ACL labels are not shared, and the label limit is 62 . In order to achieve 150 services per switch with the limitation of 62 ACLs per slice, the ingress interfaces should be spread across multiple slices of ASIC.

Note 1. For a list of platforms on which ePBR is supported, see the Cisco Nexus 9000 Series NX-OS ePBR Configuration Guide.
2. For the ACL limitations, see the Cisco Nexus 9000 Series NX-OS Security Configuration Guide.

Table 3: FC and FCoE Switch Level Configuration Limits (Unidimensional)

| Feature | Supported Platforms | Verified Limits |
| :--- | :--- | :--- |
| FLOGI per port | Nexus 93180YC-FX, 93360YC-FX2, and <br> 9336C-FX2-E switches | 256 |
| FLOGI per switch | Nexus 93180YC-FX, 93360YC-FX2, and <br> 9336 C-FX2-E switches | 1000 |
| Port channels | Nexus 93180YC-FX, 93360YC-FX2, and <br> 9336C-FX2-E switches | $8^{4}$ |
| Maximum number of member ports in a <br> port channel | Nexus 93180YC-FX, 93360YC-FX2, and <br> $9336 \mathrm{C}-$ FX2-E switches | 16 |
| NPV switches per NPIV core switch | Nexus 93180YC-FX, 93360YC-FX2, and <br> 9336C-FX2-E switches | $8^{\underline{5}}$ |

| Feature | Supported Platforms | Verified Limits |
| :--- | :--- | :--- |
| Maximum number of FC ports supported | Nexus 93180YC-FX switches | 48 |
|  | Nexus 93360YC-FX2 switches | 96 |
|  | Nexus 9336C-FX2-E switches | 112 |
| VFCs | Nexus 93180YC-FX, 93360YC-FX2, and <br> 9336C-FX2-E switches | $512^{\underline{6}}$ |
| VSANs | Nexus 93180YC-FX, 93360YC-FX2, and <br> 9336C-FX2-E switches | 32 |

${ }_{5}^{4}$ The number of SAN port channels and virtual FC port channels, together, can be only 8 on the Cisco Nexus 9000 Series switch.
5 Tested with FC NPV.
6 This is applicable only for the NPV mode.
Table 4: FC and FCoE Fabric Level Configuration Limits (Unidimensional)

| Feature | Supported Platforms | Verified Limits |

| Zones | Nexus 93180YC-FX, 93360YC-FX2, and <br> 9336 C-FX2-E switches | 8000 |
| Zone members | Nexus 93180YC-FX, 93360YC-FX2, and <br> $9336 \mathrm{C}-$ FX2-E switches | 16,000 |
| Zone sets | Nexus 93180YC-FX, 93360YC-FX2, and <br> $9336 \mathrm{C}-$ FX2-E switches | 32 |
| Zone database size | Nexus 93180YC-FX, 93360YC-FX2, and <br> $9336 \mathrm{C}-$ FX2-E switches | 2 MB |
| FCNS entries in the fabric | Nexus 93180YC-FX, 93360YC-FX2, and <br> $9336 \mathrm{C}-$ FX2-E switches | 10,000 |
| Device Alias | Nexus 93180YC-FX, 93360YC-FX2, and <br> $9336 \mathrm{C}-$ FX2-E switches | 8000 |
| Switch hops from server to storage | Nexus 93180YC-FX, 93360YC-FX2, and <br> $9336 \mathrm{C}-$ FX2-E switches | 7 |

Table 5: Intelligent Traffic Director Verified Scalability Limits (Unidimensional)

| Feature | Supported Platforms | Verified Limits |

| ITD services per switch | Nexus 9300-FX switches | $150^{7}$ |

| Feature | Supported Platforms | Verified Limits |
| :--- | :--- | :--- |
| Buckets per ITD service | N9K-X96136YC-R, N9K-X9636Q-R, <br> N9K-X9636C-R, and N9K-X9636C-RX <br> line cards | 64 |
|  | Nexus 9300-FX switches | 256 |

${ }^{7}$ Only 62 unique ACLs can be configured per slice of ASIC. Each ACL takes one label. If the same ACL is configured on multiple interfaces, the same label is shared. If each ACL has unique entries, the ACL labels are not shared, and the label limit is 62 . In order to achieve 150 ITD services per switch with the limitation of 62 ACLs per slice, the ingress interfaces should be spread across multiple slices of ASIC.

Note 1. For a list of platforms on which ITD is supported, see the Cisco Nexus 9000 Series NX-OS Intelligent Traffic Director Configuration Guide.
2. For the ACL limitations, see the Cisco Nexus 9000 Series NX-OS Security Configuration Guide.

${ }^{8}$ For Cisco Nexus 9300 and 9500 Series switches, LSPs *ECMP* label stack push cannot exceed 1500.
${ }^{9}$ N9K-X9636C-RX, N9K-X9636C-R, N9K-X9636Q-R, and N9K-96136YC-R

Note

- For network scalability, Cisco recommends using a hierarchical routing design with multi-hop BGP for advertising the attached prefixes from a top-of-rack (ToR) or border leaf switch.

${ }^{10}$ Layer 2 unidimensional scale only. SVI, Layer 3 interface, and VXLAN VLANs are not supported. 200K MAC is enabled only when " system routing template-12-heavy" is configured and the system is reloaded.
11 Layer 2 unidimensional scale only. SVI, Layer 3 interface, and VXLAN VLANs are not supported. 200K MAC is enabled only when " system routing template-12-heavy" is configured and the system is reloaded.
12 On EOR, support is for 12,000 PV count with 3967 vlans and RPVST with default timers. If 22,000 PV count is needed with 3968 vlans and RPVST, recommended hello timer value is 4 or higher. It is also recommended to tune forward delay and max age accordingly.

Note

- The number of supported VLANs per vPC should be within the MST or RPVST virtual port count that is specified in this table, depending on the topology.
- The number of supported STP VLAN port instances, for Fabric Extender host interface ports, should be less than 13000.
- The ports with switch port isolated are only supported on Layer 2 ports. However, on Layer 2 the following port types are not supported:
- FEX host interfaces
- FEX host interface port channels
- PVLAN ports

Note

- The IPv4 multicast routes and the IPv4/IPv6 host routes share the same hardware table. Limits are provided for both the default line card mode and the max host line card mode.
- High availability (graceful restart and stateful switchover) is not supported when unicast or multicast aggressive timers are configured at any scale.

A single forwarding engine instance supports four SPAN or ERSPAN sessions. For Cisco Nexus 9300 Series switches, if the first three sessions have bidirectional sources, the fourth session has hardware resources only for Rx sources. This limitation might also apply to Cisco Nexus 9500 Series switches, depending on the SPAN or ERSPAN source's forwarding engine instance mappings.
If the source interface configured for a monitor session is on the same line card, the maximum supported active SPAN sessions are 4. Based on the number of line cards in the EoR, the total number of active SPAN sessions are $4 \mathrm{x} n$, where n is the number of line cards on EoR, provided the source and destination interface are on the same line module.
16
The number of SPAN or ERSPAN sessions per line card reduces to two if the same interface is configured as the bidirectional source in more than one session.

Note The scale numbers are based on the TCAM space available on the Cisco Nexus 9300-EX and Nexus 9300-FX switches. A IPv4 flow monitor uses 2 and 4 TCAM space for the Cisco Nexus 9300-EX and Nexus 9300-FX switches respectively. Similarly, a IPv6 flow monitor uses 8 and 2 TCAM space for the Cisco Nexus 9300-EX and Cisco Nexus 9300-FX switches respectively.
For port channels, SVIs, and VLANs that have port from both 9300-EX and 9300-FX switches, the lower common denominator limit of the $9300-\mathrm{EX}$ and $9300-\mathrm{FX}$ switches is applied.

24 If the user has Multi-protocol configuration, user should configure appropriate CoPP policies to avoid any control plane traffic drops.

Note With IPv6 scale, traffic loss could be there for a few seconds during switchover.
The maximum number of PBR next-hops based on 4 FM-E supported is 192 per slice of the forwarding engine

- The IPv4/IPv6 host routes and the IPv4 multicast routes share the same hardware table. Limits are provided for both the default line card mode and the max host line card mode.
- The IPv4 and IPv6 unicast routes share the same hardware table. Limits are provided for both the default line card mode and the max host line card mode.
- High availability (graceful restart and stateful switchover) is not supported when unicast or multicast aggressive timers are configured at any scale.

Guidelines and Limitations for OSPF Verified Scalability Limits

- To achieve the highest scale, we recommend that you use a single OSPF instance instead of multiple instances.
- Each OSPFv2 and OSPFv3 scale value might vary when combined with other parameters.
- The graceful restart timeout value might be increased in multidimensional scenarios.

From Cisco NX-OS Release 10.2(3), Multi-Site enabled with TRM supported number of L3VNIs -250 . Maximum supported multicast underlay and overlay route is 32,000 for Nexus $9700-\mathrm{FX} / \mathrm{FX} 3 / \mathrm{GX} / \mathrm{GX} 2$ and 8000 for Nexus 9700-EX/FX2 and N9K-C9508.
30 Total number of Cloudsec Security Associations in hardware $=128\left(M * N^{*} L\right)$ where $(M=$ no. of Cloudsec peers, $N=$ no. of uplinks on each Cloudsec endpoint, L is number of border gateway nodes)
31 Number of vrfs * number of sites $=1000$
32 VXLAN underlay and overlay multicast routes shares the same hardware table. Maximum Multicast routes is 8000 in the default mode. If you want more overlay route scale, reduce the underlay multicast control group. applicable.

Table 22: Tetration Verified Scalability Limits (Unidimensional)

| Feature | Supported Platforms | Verified Limit |
| :---: | :---: | :---: |
| TCAM size | Nexus 92160YC-X, 9300-EX/FX switches | 1024 entries |
|  | Nexus 92160YC-X switches | IPv4-4 entries per rule (TCP, UDP, ICMP, and IP) |
|  | Nexus 9300-EX/FX switches | IPv4-2 entries per rule (ICMP and IP) |
|  | Nexus 92160YC-X switches | IPv6-8 entries per rule (4 entries per ICMP and IPv6 for a total of 8 entries) |
|  | Nexus 9300-EX/FX switches | IPv6-8 entries per rule (4 entries per ICMP and IPv6 for a total of 8 entries) |
|  | Nexus 92160YC-X, 9300-EX/FX switches | 24 entries out of 1000 is consumed for default. |
| TCAM | Nexus 92160YC-X switches | 250 (IPv4) or 62 (IPv6) |
|  | Nexus 9300-EX/FX switches | 500 (IPv4) or 125 (IPv6) |

## Verified Scalability Limits - Multidimensional

The tables in this section list the verified scalability limits for the Cisco Nexus 9508 switch with an X9636C-R, X9636C-RX, or X9636Q-R line card or a C9508-FM-R fabric module and Cisco Nexus 9504 with -R line cards for Cisco NX-OS Release 10.2(4)M. These limits are validated with a multidimensional configuration. The values provided in these tables focus on the scalability of all listed features at the same time.

Each number is the absolute maximum currently supported by this Cisco NX-OS release for the corresponding feature. If the hardware is capable of a higher scale, future software releases might increase this verified maximum limit. Results might differ from the values listed here when trying to achieve maximum scalability with multiple features enabled.

## Attention

These numbers are not the maximum verified values if each feature is viewed in isolation. For these numbers, see the "Verified Scalability Limits" section.
