“TravelSky, the world’s third-largest Global Distributions System (GDS) provider, focuses on providing all stakeholders in aviation industry with first-class service. After two rounds of serious evaluation, we chose Intel® Optane™ DC Persistent Memory to upgrade our Fare system, one of our critical applications. I believe this innovative technology will bring us more memory bandwidth, less latency and higher computing capacity while significantly reducing TCO. “

Mr. Wen Gong

Vice GM, Data Centre Operations, TravelSky

The Intel logo is centered within a large, light gray hexagonal shape. The logo itself consists of the word "intel" in a blue, lowercase, sans-serif font, with a blue swoosh that starts under the 'i', goes under the 'l', and loops back to the top right. A registered trademark symbol (®) is located at the top right of the swoosh. The background of the entire image is a repeating pattern of hexagons that create a 3D effect, with the color transitioning from light gray at the top to dark blue at the bottom.

intel®

NOTICES AND DISCLAIMERS

- Intel technologies' features and benefits depend on system configuration and may require enabled hardware, software or service activation. Performance varies depending on system configuration.
- No product or component can be absolutely secure.
- Tests document performance of components on a particular test, in specific systems. Differences in hardware, software, or configuration will affect actual performance. For more complete information about performance and benchmark results, visit <http://www.intel.com/benchmarks>.
- Software and workloads used in performance tests may have been optimized for performance only on Intel microprocessors. Performance tests, such as SYSmark and MobileMark, are measured using specific computer systems, components, software, operations and functions. Any change to any of those factors may cause the results to vary. You should consult other information and performance tests to assist you in fully evaluating your contemplated purchases, including the performance of that product when combined with other products. For more complete information visit <http://www.intel.com/benchmarks>.
- Intel® Advanced Vector Extensions (Intel® AVX)* provides higher throughput to certain processor operations. Due to varying processor power characteristics, utilizing AVX instructions may cause a) some parts to operate at less than the rated frequency and b) some parts with Intel® Turbo Boost Technology 2.0 to not achieve any or maximum turbo frequencies. Performance varies depending on hardware, software, and system configuration and you can learn more at <http://www.intel.com/go/turbo>.
- Intel's compilers may or may not optimize to the same degree for non-Intel microprocessors for optimizations that are not unique to Intel microprocessors. These optimizations include SSE2, SSE3, and SSSE3 instruction sets and other optimizations. Intel does not guarantee the availability, functionality, or effectiveness of any optimization on microprocessors not manufactured by Intel. Microprocessor-dependent optimizations in this product are intended for use with Intel microprocessors. Certain optimizations not specific to Intel microarchitecture are reserved for Intel microprocessors. Please refer to the applicable product User and Reference Guides for more information regarding the specific instruction sets covered by this notice.
- Cost reduction scenarios described are intended as examples of how a given Intel-based product, in the specified circumstances and configurations, may affect future costs and provide cost savings. Circumstances will vary. Intel does not guarantee any costs or cost reduction.
- Intel does not control or audit third-party benchmark data or the web sites referenced in this document. You should visit the referenced web site and confirm whether referenced data are accurate.
- © Intel Corporation. Intel, the Intel logo, and other Intel marks are trademarks of Intel Corporation or its subsidiaries. Other names and brands may be claimed as the property of others.

PERFORMANCE CONFIGS & DISCLAIMERS

Performance results are based on testing as of dates shown in configuration and may not reflect all publicly available security updates. No product or component can be absolutely secure. Software and workloads used in performance tests may have been optimized for performance only on Intel microprocessors. Performance tests, such as SYSmark and MobileMark, are measured using specific computer systems, components, software, operations and functions. Any change to any of those factors may cause the results to vary. You should consult other information and performance tests to assist you in fully evaluating your contemplated purchases, including the performance of that product when combined with other products. For more complete information visit <http://www.intel.com/benchmarks>.

Intel® Optane™ DC persistent memory pricing & DRAM pricing as of September 17, 2019. Pricing referenced in TCO calculations is provided for guidance and planning purposes only and does not constitute a final offer. Pricing guidance is subject to change and may revise up or down based on market dynamics. Please contact your OEM/distributor for actual pricing.

SAP

2.4x better runtime performance: Performance results are based on testing by Intel® IT as of March 12, 2019. Baseline: three-node (1-master + 2-slave) SAP HANA® 2 scale-out configuration. Per Node: 4 x Intel® Xeon® processor E7-8880 v3 (2.3 GHz, 150 W, 18 cores), CPU sockets: 4; microcode: 0x400001c; RAM capacity: 64 x 32 GB DIMM, RAM model: DDR4 2133 Mbps; storage: GPFS, approximately 21.8 TB of formatted local storage per node, SAN storage for backup space only; network: redundant 10 gigabit Ethernet (GbE) network for storage and access, redundant 10G network for node-to-node; OS: SUSE 12 SP2*, SAP HANA: 2.00.035, GPFS: 4.2.3.10. Average time of 50 individual test queries executed 30–50 times each, for a total of approximately 25,000 steps: 2.81 seconds.

New configuration, one master node SAP HANA 2 scale-up configuration: CPU: 4 x 2nd Generation Intel® Xeon® Platinum 8260 processor (2.2 GHz, 165 W, 24 cores), CPU sockets: 4; microcode: 0x400001c, RAM capacity: 24 x 64 GB DIMM, RAM model: DDR4 2133 Mbps; Intel® Optane™ DC persistent memory: 24 x 126 GB PMM; storage: XFS*, 21 TB; network: redundant 10 GbE network; OS: SUSE 15, SAP HANA: 2.00.035, Intel BKC: WW06. Average time of 50 individual test queries executed 30–50 times each, for a total of approximately 25,000 steps: 1.13 seconds.

Virtualized SQL

Performance results are based on testing as of Feb. 1, 2019 and may not reflect all publicly available security updates.

Baseline configuration (DRAM): 2x 2nd Gen Intel® Xeon® Platinum 8276 @ 28 cores/socket. Memory: 768 GB (24x32 GB DDR4@2666 MHz). Network: Intel® X520 SR2 (10 Gbps).

Storage: 8x Samsung® PM963M.2 960 GB, 4x Intel® SSDs S3600 (1.92 TB). BIOS: WW02'19. OS/VM: Windows Server 2019. WL Version: OLTP Cloud Benchmark (internal private customer confidential workload). Dataset/instance or workload size: 1.1 TB. Security mitigations: variants 1,2,3 enabled. Performance of 22 SQL VM instances.

New config (DCPMM): 2x 2nd Gen Intel® Xeon® Platinum 8276 @ 28 cores/socket. Memory: 1 TB (8x128 GB Intel® Optane™ DC persistent memory in Memory Mode + 12x 16 GB DDR4@2666 MHz). Network: Intel® X520 SR2 (10 Gbps). Storage: 8x Samsung® PM963M.2 960 GB, 4x Intel® SSDs S3600 (1.92 TB). BIOS: WW02'19. OS/VM: Windows Server 2019. WL Version: OLTP Cloud Benchmark (internal private customer confidential workload). Dataset/instance or workload size: 1.5 TB. Security mitigations: variants 1,2,3 enabled. Performance of 30 SQL VM instances.

Spark

Tested by Intel on February 24th 2019. Common testing details: 2x 2nd Gen Intel Xeon Platinum 8280M processor, 8xHDD ST1000NX0313, BIOS: SE5C620.86B.0D.01.0134.100420181737, OS: Fedora release 29, kernel: 4.20.6-200.fc29.x86_64, 1-replica uncompressed & plain encoded data on Hadoop, Spark: 1 * Driver (5GB) + 2 * Executor (62 cores, 74GB), spark.sql.oap.rowgroup.size=1MB, Oracle JDK 1.8.0_161, 3TB data scale, 9 I/O intensive queries, 9 threads. Memory config of baseline: 24x32GB DDR4. Memory config of system with Intel Optane DC persistent memory: 8x128GB DCPMM in App Direct Mode + 12x16GB DDR4.

Baosight

Tested by Intel and Baosight on January 8, 2019. **Shanghai Baosight xInsight*** v2.0 (self-defined workload); OS: CentOS* 7.5 Kernel 3.10.0-957.1.3.el7.x86_64. Testing by Intel and Baosight completed on Jan 8, 2019. Security Mitigations for Variants 1, 2, 3 and L1TF in place. BASELINE: 2nd Gen Intel® Xeon® Platinum processor 8260L, 2.3 GHz, 24 cores, turbo, and HT on, BIOS 1.0180, 768GB total memory, 32 slots / 32GB / 2666 MT/s / DDR4 LRDIMM, 1 x 480GB / Intel® SSD Data Center (Intel® SSD DC) S4500 + 2 x 1TB / Intel® SSD DC P4500. NEW: 2nd Gen Intel® Xeon® Platinum processor 8260L, 2.3 GHz, 24 cores, turbo, and HT on, BIOS 1.0180, 192GB total memory, 12 slots / 16GB / 2666 MT/s / DDR4 LRDIMM and 1024GB DCPMM, 8 slots / 128 GB / 2666 MT/s Intel® Optane™ DC persistent memory, 1 x 480GB / Intel® SSD DC S4500 + 2 x 1TB / Intel® SSD DC P4500.

VMware vSAN:

Intel internal testing as of March 31, 2019. Base configuration: four nodes, 2 x Intel® Xeon® Gold 6230 processor, Intel® Server Board S2600WFT, total memory: 384 GB, 12 slots/32 GB/2,666 megatransfers per second (MT/s) DDR4 RDIMM, Intel® Hyper-Threading Technology (Intel® HT Technology) enabled, Intel® Turbo Boost Technology enabled, Intel® Volume Management Device (Intel® VMD) enabled, storage (boot): 1 x 960 GB Intel® SSD 3520 M.2 SATA, storage (cache): 2 x 375 GB Intel® Optane™ SSD DC P4800X PCIe* with NVM Express* (NVMe*), storage (capacity): 6 x 2 TB Intel SSD DC P4510 PCIe with NVMe; network devices: 1 x 25Gb Intel® Ethernet Converged Network Adapter XX710-DA2, network speed: 10 GbE, OS/software: VMware vSphere 6.7.0*, build 10764712. Benchmark: VMware VMmark* for Incremental Memory, performance of 95 VMs. VMware VMmark® is a product of VMware, Inc.

DCPMM configuration: four nodes, 2 x Intel Xeon Gold 6252 processor, Intel Server Board S2600WFT, total memory: 512 GB Intel® Optane™ DC persistent memory, 4 slots/128 GB/2,666 MT/s and 128 GB 8 slots/16 GB/2,666 MT/s DDR4 RDIMM, Intel HT enabled, Intel Turbo Boost Technology enabled, Intel VMD enabled, storage (boot): 1 x 960 GB Intel SSD 3520 M.2 SATA, storage (cache): 2 x 375 GB Intel Optane SSD DC P4800X PCIe with NVMe, storage (capacity): 6 x 2 TB Intel SSD DC P4510 PCIe with NVMe; network devices: 1 x 25Gb Intel Ethernet Converged Network Adapter XX710-DA2, network speed: 25 GbE, OS/software: vSphere 6.7.0, build 10764712. Benchmark: VMware VMmark* for Incremental Memory, performance of 152 VMs. VMware VMmark® is a product of VMware, Inc.

Azure Stack HCI:

Intel internal testing as of February 15, 2019. Common testing details: Vmfleet Test: Each VM with 1 Core, 8 GB Memory, 40 GB VHDX. Test setup: Threads=2, Buffer Size= 4KiB, Pattern: Random, Duration = 300 Seconds, Queue Depth=16, 30% write.

Baseline configuration: 2 x Intel® Xeon® Gold 5218 processor, Intel® Server Board S2600WFT, 256 GB total memory (8 x 32 GB, 2,666 megatransfers per second [MT/s]), Intel® Hyper-Threading Technology (Intel® HT Technology) enabled, Intel® Turbo Boost Technology enabled, storage (boot): 1 x 480 GB Intel® SSD DC 3520 U.2 SATA, storage tier: 4 x 1.6 TB Intel SSD DC P4610 PCIe* NVM Express* (NVMe*), 1 x 25 gigabits per second (Gbps) Chelsio* network adapter, 10 GbE, Windows Server 2019 Datacenter edition* build 17763. Performance of 41 VMs per node.

DCPMM configuration: 2 x Intel Xeon Gold 6230 processor, Intel Server Board S2600WFT, 512 GB Intel® Optane™ DC persistent memory (4 x 128 GB, 2,666 MT/s), 192 GB DRAM (12 x 16 GB, 2,666 MT/s), Intel HT Technology enabled, Intel Turbo Boost Technology enabled, storage (boot): 1 x 480 GB Intel SSD DC 3520 M.2 SATA, storage (cache): 2 x 375 GB Intel Optane SSD DC P4800X, storage (capacity): 4 x 4 TB Intel SSD DC P4510 PCIe NVMe, 1 x 25 gigabits per second (Gbps) Chelsio network adapter, 25 GbE, Windows Server 2019 Datacenter edition build 17763. Performance of 56 VMs per node.
