

SIEMENS

COMPREHENSIVE BUILDING SOLUTIONS IN YOUR HANDS

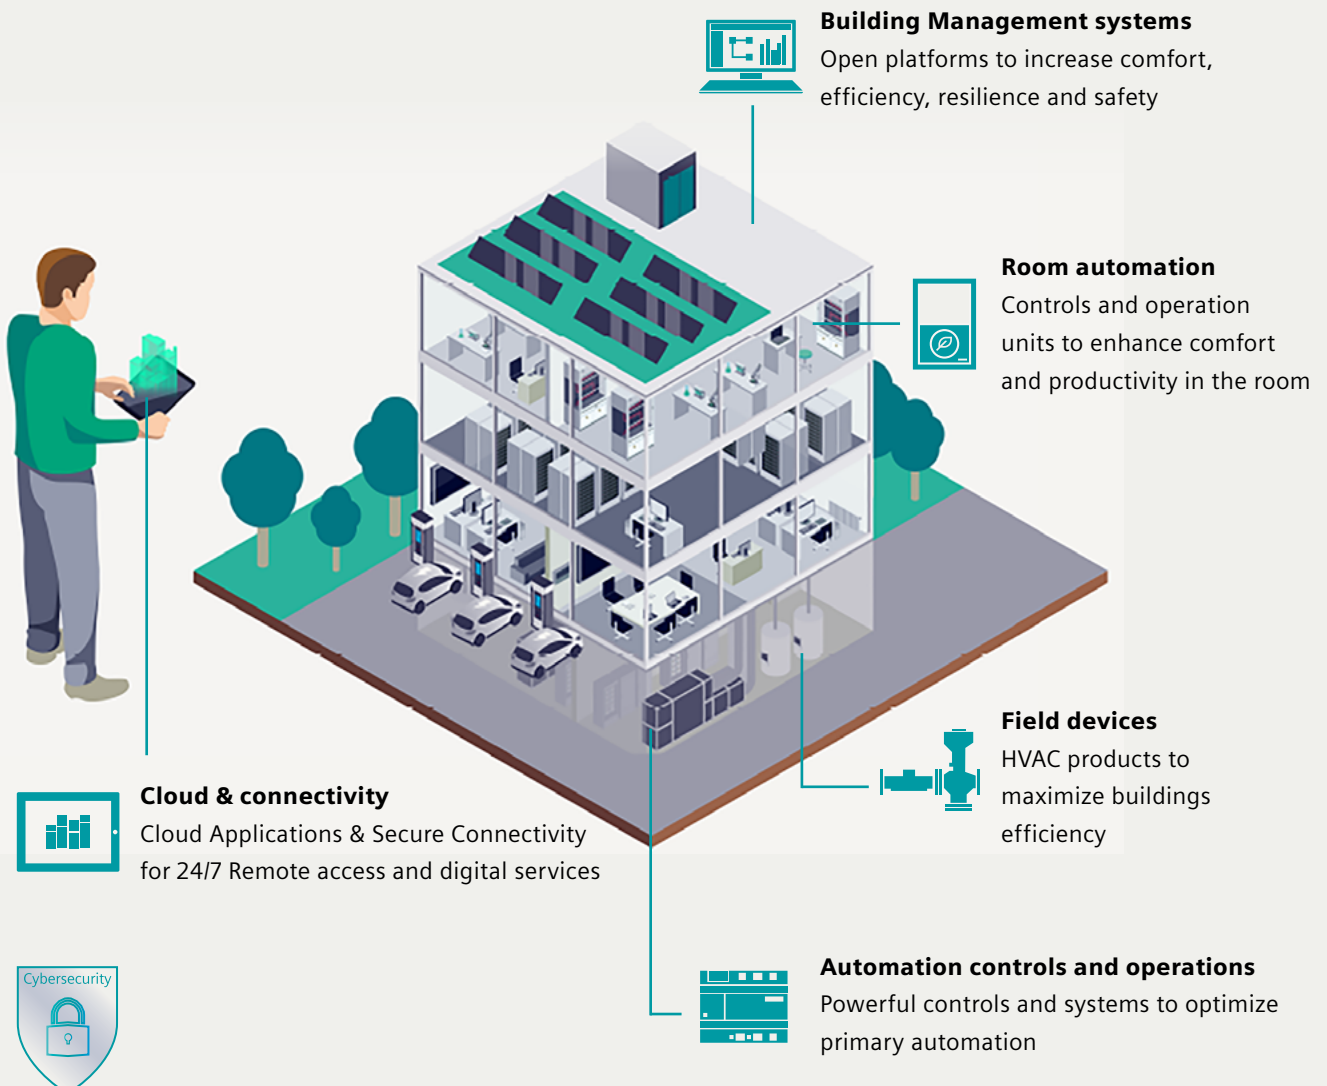

Desigo System

A new era for building automation

Times are changing and stakeholders in the building sector are under pressure to meet the growing demand of creating safe spaces for occupants and reduce the carbon footprint of their infrastructure.

Desigo is the proven building automation system from Siemens that enables professionals to respond to these needs. With its recognized potential, Desigo has been able to reinvent itself by integrating the latest technologies to allow a seamless transition towards smart and resilient buildings. Desigo offers a holistic approach to cybersecurity and provide secured solution at every level of building automation.

Tailored solutions for all your building needs

One system for all requirements of your buildings

The comprehensive Designo system portfolio comprises everything you need to turn your buildings into high-performing ones. Discover a complete suite of cloud applications, building management systems, building automation controls for primary and room and field devices to improve the operations of your building at all levels.

Maximize site energy efficiency

Create ideal spaces for occupants

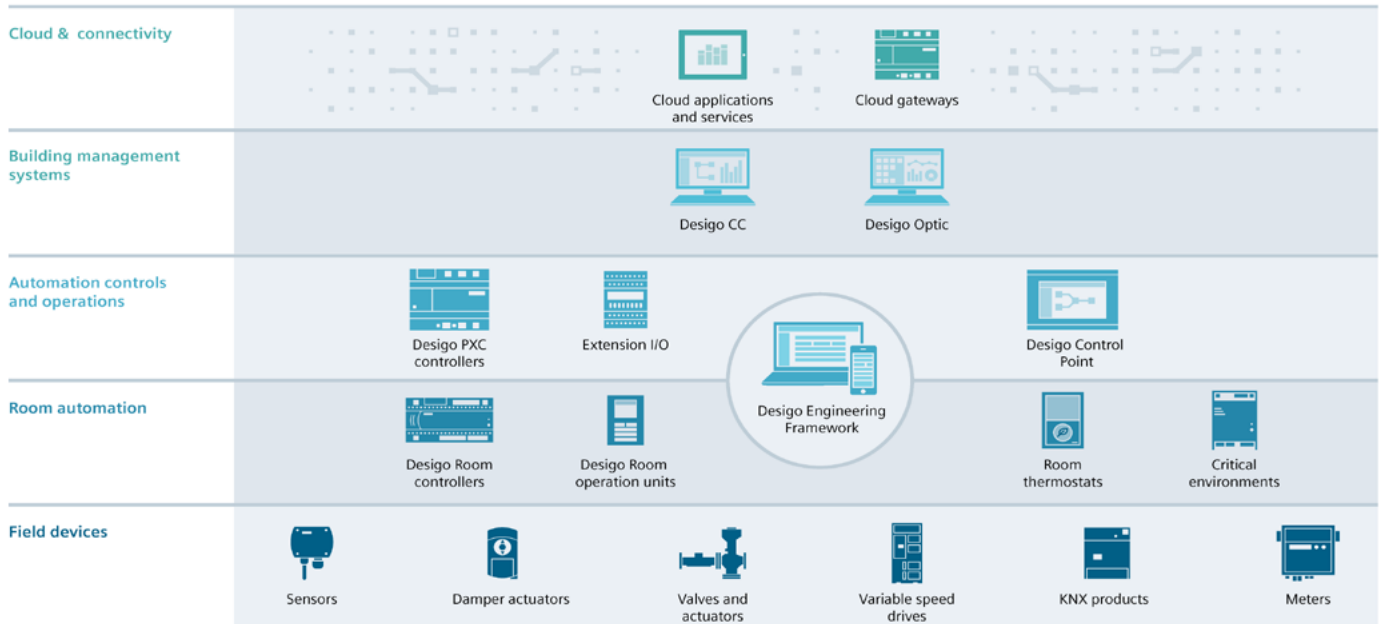

Unlock the power of data

Ensure the highest cybersecurity

Designo building automation system

Thanks to its open standard communication and scalability, Designo is able to fit into multiple applications and thrive the performance continuously over time. You get the right tools to manage and connect all disciplines of HVAC, lighting, shades and security for various type of buildings such as commercial buildings, hospitals, data centers and many more.

Explore 

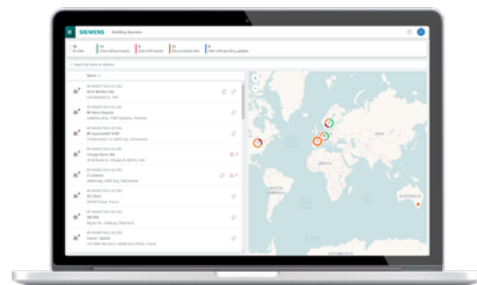

Cloud applications – Connect, monitor and operate 24/7

Our cloud software portfolio acts as a digital business model enabler. It increases your competitiveness by giving you access to enterprise-class technology and to a whole ecosystem of services. It enables you to adapt to fluctuating business demands and gives the agility to easily scale up.

Building Operator

Building Operator cloud-based solution remotely operates and monitors building equipment including heating, ventilation, and air conditioning as well as applications and meters for a fleet of connected sites.

- Reduce operational and travel expenses by gaining transparency from remote monitoring 24/7 and avoiding unnecessary travels to the site
- Faster response time and reduced equipment down time for improved business continuity
- Simplify equipment diagnostic activities by remotely accessing on premise web interfaces such as Desigo CC, Desigo Control Point and other applications

Learn more

Connect Gateways

Connect Gateways ensure cloud connectivity via Ethernet network and allow the smart selection of relevant data points from field devices e.g. building automation controllers, sensors, meter, and fire control panels. Thanks to their edge technology, they pre-process data locally before sending it to the cloud. There the data is utilized by cloud applications such as Building Operator.

Building Management Systems – Manage any size or complexity of facility operation

Whether you wish to enhance occupant comfort and productivity or to improve operational and energy efficiency, building management systems enable you to connect, monitor and operate your facility easily.

Desigo CC

Desigo CC is the integrated building management platform for managing high-performing buildings. With its open design, it has been developed to create comfortable, safe and efficient facilities. It is easily scalable from simple single-discipline systems to fully integrated buildings.

- Integrate multi-discipline systems and devices
- Automate processes and scale your application to meet the requirements of any building or project size
- Operate, monitor and manage HVAC, fire, lighting, power management, security, video and third-party systems through one single interface

Desigo CC compact

The compact building management platform offers the unique breakthrough features of Desigo CC, focusing on functionalities required by small and medium-size buildings. It can be extended when needed, and proves that building management can be simple and powerful at the same time.

Desigo Optic

Desigo Optic is an open, powerful and scalable software solution for managing and controlling building automation systems. Powered by FIN Framework, it redefines openness, and brings the latest IoT technology to your building.

- Make your building data work better using native Haystack and market leading dashboard builder
- Targeted at HVAC, power management and lighting through major protocols such as BACnet, Modbus, KNX and OPC
- Edge2Cloud technology provides secure encrypted remote access without the need for a VPN, at no extra cost
- Deploy two ways - on server or on the embedded controller CFG3.F200

Desigo PXC controllers - Optimize building efficiency with precise control throughout

Having an automated HVAC system is the key to ensure energy savings and reduced operations costs. Thus, making you complaint to standards and bringing your peace of mind. Siemens offers you the latest technology in building automation to combine high performance with ideal comfort.

Desigo PXC controllers – Shape the future of building automation

Explore the latest range of primary controllers to achieve a high-performing automation of your buildings. Designed to reduce the energy consumption of building plants, the Desigo PXC controllers enable you to integrate different protocols with no need of additional hardware or software and comes with a license-free engineering suite.

Desigo Room automation

Experience the ultimate comfort for any room

Room automation is essential for protecting and enhancing the occupants' health as well as increasing productivity at the same time. Instead of separate systems for HVAC, lighting and shade control, each with its own network infrastructure, Siemens provides a system for all three functions in one cost effective solution.

Ensure a comfortable room climate, good air quality and optimal lighting conditions with as little energy as possible. Since Desigo Room Automation supports international communication standards, it can be integrated seamlessly into existing applications.

With Desigo Room Automation achieve:

- Lower investment and installation costs
- Reduced long-term operating costs
- Improved room energy efficiency
- Greater occupant experience and comfort

Room automation stations

Compact room automation stations for HVAC, lighting, and shading

Actuating Room devices

Compact room automation stations in combination with actuator for HVAC (VAV & FPB), lighting and shading

Room units

Elegant room units with integrated temperature sensors

Sensors and presence detectors

One sensor. Highest energy efficiency for perfect places.

Actuators

To control lighting, shading, HVAC in the most efficient way

Desigo Control Point – Building operations at your fingertips

Desigo Control Point helps you to maximize room comfort, monitor and operate your primary plant and display your building data. It facilitates remote building operations by allowing you to access your buildings and plants via touch panels, any PC, or any mobile device. The touch panels are available in different sizes for optimized user experience.

Desigo Control Point is designed to meet the requirements of different users in a building.

- Building operation and monitoring are enabled through intuitive touch panels on the control panel or via computer in the office. Through smart devices, users can also access related information anytime from any location.
- Occupants are able to optimize their rooms. Touch panels can be used as room operator units to control lighting, shading, and indoor climate.
- Building owners can present to tenants their energy savings to encourage them to save even more.
- Building operators and technicians can manage their daily tasks with no need for special training, thanks to straightforward installation and ease of operation.

BACnet touch panels

The BACnet/IP touch panels enable direct connections to any BACnet network

Client touch panels

When your project requires operation of the same system via multiple control panels, the TCP/IP touch panels are the right solution

BACnet Web server

Desigo primary and room automation stations as well as third-party BACnet devices can be operated via BACnet/IP Web servers

Learn more

Field devices – for complete building efficiency and comfort

All field devices fulfill the highest quality standards, meeting most stringent energy efficiency requirements. Easy handling and long lifecycles are among the essential design criteria. Open communication standards incl KNX, Modbus and BACnet allow seamless integration into any building automation and control systems.

Room thermostats

Siemens room thermostats offer high energy efficiency, a healthy indoor climate and remote operation for efficient facility management

Damper actuators

With OpenAir damper actuators you'll benefit from a wide selection of positioning forces, control signals, communication standards and add-on options

Valves and actuators

With Acvatix valves and actuators fulfill any control and hydraulic requirement associated with the generation, distribution and consumption of heating and cooling

Variable speed drives

The variable speed drives provide a number of strategies for controlling fans and pumps that can achieve up to 60% energy savings compared to conventional control methods

Sensors

The Symaro sensors offer precise measurements for room and duct applications throughout the entire lifecycle to ensure a healthy and productive indoor climate

Lighting

Easily manage all aspects of a facility's lighting from a single place

Meters

A precise acquisition and allocation of the energy consumption of heating, cooling and radiators is not a problem in office buildings and residential areas with our meters.

Achieve decarbonization and
cost-efficient modernization
of your sites with **Desigo**

*Due to the new hybrid boiler
plant and the intelligent energy
and load management by
Siemens we save a lot of money
every year – and furthermore our
flexible energy infrastructure
helps to decarbonize our produc-
tion.*

Holger Schygulla
Managing Director
Breitenburger Milchzentrale

Smart Infrastructure intelligently connects energy systems, buildings and industries, enhancing the way we live and work to significantly improve efficiency and sustainability.

We work together with customers and partners to create an ecosystem that both intuitively responds to the needs of people and helps customers achieve their business goals.

It helps our customers to thrive, communities to progress and supports sustainable development to protect our planet for the next generation.

Creating environments that care.
