

Introduction

The WILCS02IC is a single chip 2.4 GHz and IEEE® 802.11 b/g/n-compliant solution with integrated High Power Amplifier (HPA), Low-Noise Amplifier (LNA) and Radio Frequency (RF) switches for TX/RX control. It is a Link Controller IC with a hardware-based security accelerator.

The WILCS02 module is a fully RF and Wi-Fi Alliance™-certified wireless module based on the WILCS02IC. The module provides Secure Digital Input Output (SDIO) or Serial Peripheral Interface (SPI) to interface with the host controller.

The WILCS02 module operates at a single supply voltage V_{DD} (3.3V typical). Specific Input/Output (I/O) pins support a voltage range of 1.8-3.6V by supplying the V_{DDIO} pin separately.

The WILCS02 module is available with either an on-board Printed Circuit Board (PCB) antenna or U.FL connector for an external antenna.

Note: The WILCS02IC must be programmed with the appropriate Link Controller firmware version to meet the specification described in the data sheet.

WILCS02IC and WILCS02 Module Features

- Compliant with IEEE 802.11 b/g/n Single Spatial Stream of 20 MHz Channel Bandwidth
- Protected Management Frame (PMF) Handled in Hardware, WPA3 Support
- Integrated Power Amplifier (PA), TX/RX Switch and Power Management
- Internal Flash Memory (up to 2 MB) to Store Firmware
- Immutable Secure Boot with Hardware Root of Trust
- Supports Host Assisted Firmware Sideload
- Hardware-Based Low-Power Modes with Support for Magic Packet-Based Snooze Mode
 - Low Power modes – Connected Sleep and Extreme Deep Sleep (XDS)
 - Fast host wake-up from Sleep mode by a pin or the host I/O transaction
- Hardware-Based IEEE 802.15.2 Compliant Three-Wire Packet Traffic Arbitration (PTA) Interface for Wi-Fi/Bluetooth® Coexistence
- SDIO/SPI Host Interface on a Supported Linux System
- Secure Device Firmware Upgrade (DFU)

Security

- Hardware Accelerated Security Modes (CryptoMaster) with Built-in DMA Support
 - Encryption engines (AES and TDES with different NIST modes of operation):
 - Modes – Electronic Code Book (ECB), Cypher Block Chaining (CBC), Counter Mode (CTR), Cypher Feedback Mode (CFB) and Output Feedback Mode (OFB)
 - AES key sizes: 128b, 192b and 256b
 - Authentication engines:
 - SHA-1 and SHA-2

- AES GCM (Galois/Counter mode)
- HMAC and AES CMAC
 - On-chip oscillator for NDRNG generation
- Multi-Purpose Public Key Crypto Engine Supporting the Following Algorithms:
 - ECC/ECDH/ECDSA with standard NIST prime curves up to 521-bit, Curve25519 and Ed25519
 - RSA up to 2048-bit keys

Operating Conditions

- **WILCS021C**
Operating Voltage V_{DD} : 3.0-3.6V, V_{DDIO} : 1.8-3.6V (3.3V Typical)
Operating Temperature: -40°C to 105°C
- **WILCS02**
Operating Voltage V_{DD} : 3.0-3.6V, V_{DDIO} : 1.8-3.6V (3.3V Typical)
Operating Temperature: -40°C to 85°C

Module Variants

- PCB Antenna:
 - WILCS02PE
- U.FL Connector for External Antenna:
 - WILCS02UE

Package

- **WILCS021C**
48-Pin QFN
Size: 7 mm x 7 mm x 0.9 mm
- **WILCS02**
28-Pin SMD Package with Shield Can on Top
Size: 21.7 mm x 14.7 mm x 2.1 mm

Applications

- Smart Factories/Control Devices
- Security Systems, CCTV
- Smart Homes/Lighting, Smart Locks
- Computing, Wi-Fi Dongles, Protocol Bridging
- Remote Control
- Wearable Smart Devices
- Industrial Control

Certifications

- WILCS02 Module is Planned to be Certified to FCC, ISED, UKCA and CE Radio Regulations and Wi-Fi Alliance
- RoHS and REACH Compliant

Notes:

1. For more details about the latest supported features, refer to the [WILCS02 Application Developer's Guide](#).

2. Device Overview

The WILCS021C is a single chip 2.4GHz and IEEE 802.11b/g/n-compliant solution with integrated high-power PA, LNA and RF switches for TX/RX control. The WILCS02 is a fully RF and Wi-Fi Alliance-certified module based on WILCS021C available with the following antenna variants:

- PCB antenna (WILCS02PE)
- U.FL connector (WILCS02UE) for external antenna

The following figure illustrates the WILCS021C and WILCS02 module block diagram and various peripherals supported by these devices.

Notes:

1. These pins support lower voltage by supplying the V_{DDIO} pin separately (1.8V – 3.6V).
2. Refer to the reference design package for exact pin mapping and signal connection.
3. The WILCS02 module firmware does not support the GPIO functionality. All the pins are reserved.
4. This is for internal use only. Do not connect any external circuits.

2.2 Pin Details of WILCS02 Module

Notes:

1. These pins support lower voltage by supplying the V_{DDIO} pin separately (1.8V – 3.6V).
2. This is for factory test purposes. Do not connect to any external circuit to source the voltage.

2.3 Basic Connection Requirement

The WILCS02 module requires attention to a minimal set of device pin connections before proceeding with development.

Figure 2-4. WILCS02 Module Basic Connection and Interface Diagram

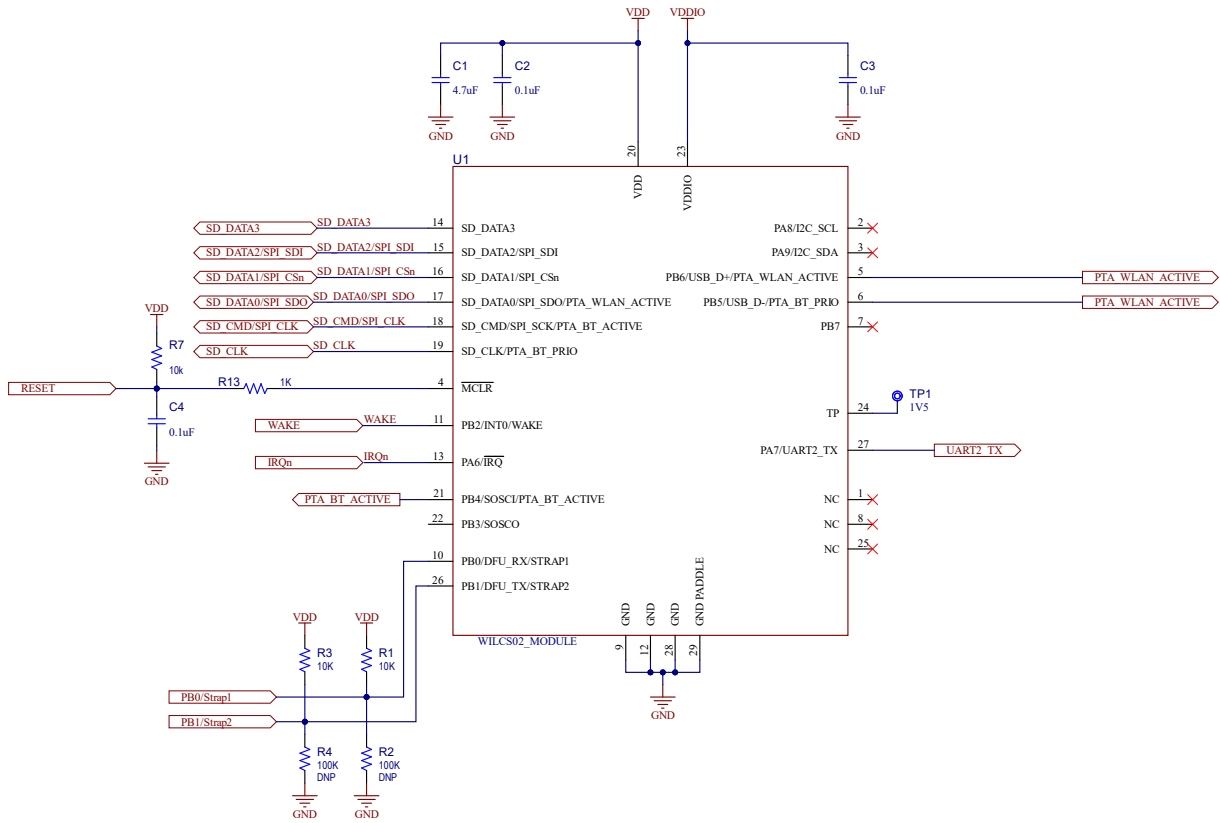

Table 2-3. Configuration Details

Configuration Details			
Module Pin10/Strap1	Module Pin26/Strap2	Host Interface Selection	Description
0	1	SDIO (Default)	WILCS02 module with SDIO
1	1	SPI	WILCS02 module with SPI over SDIO pins

Note: The mentioned resistance values are only guidelines. For details on the application schematics, refer to the *WILCS02 Wi-Fi Link Controller SD Board User Guide (DS50003655)*.

2.3.1 Power Supply Pin

It is recommended to add a bulk and a decoupling capacitor at the input supply Pin 20 (V_{DD}), Pin 23 (V_{DDIO}) and GND of the WILCS02 module.

V_{DD} and V_{DDIO} can be connected to the same supply for the typical 3.3V operation. For I/Os to operate at a lower voltage, typically 1.8V, V_{DDIO} can be connected separately along with a decoupling capacitor.

Figure 2-5. Recommended Module Power Supply Connections

The value of the C1 and C2 capacitors may vary based on the application requirements and source of supply voltage. The C1 and C2 capacitors must be placed close to the pin.

2.3.2 Master Clear ($\overline{\text{MCLR}}$) Pin

The $\overline{\text{MCLR}}$ pin works as a device Reset.

Pulling the $\overline{\text{MCLR}}$ pin low generates a device Reset. The basic connection and interface diagram of the module illustrates a typical $\overline{\text{MCLR}}$ circuit. See the *Module Basic Connection and Interface Diagram* in the *Basic Connection Requirement* from Related Links.

Figure 2-6. Example of $\overline{\text{MCLR}}$ Pin Connections

Notes:

1. $470\Omega \leq R1 \leq 1\text{ k}\Omega$ limits any current flowing into $\overline{\text{MCLR}}$ from the external capacitor C in the event of $\overline{\text{MCLR}}$ pin breakdown due to Electrostatic Discharge (ESD) or Electrical Overstress (EOS). Ensure that the $\overline{\text{MCLR}}$ pin V_{IH} and V_{IL} specifications are met without interfering with the Debug/ Programmer tools.
2. The capacitor can be sized to prevent unintentional Resets from brief glitches or to extend the device Reset period during POR.

2.3.3 Device Firmware Update

The WILCS02 module is available for purchase with pre-programmed firmware. Microchip periodically releases the firmware to fix reported issues or to implement the latest feature support. There are two ways to perform a regular firmware update:

1. Serial DFU command-based update over UART
2. Firmware Sideload

Note: For the serial DFU and Firmware Sideload programming guidance, refer to the [WILCS02 Module Application Developer's Guide](#).

2.3.4 Interface with Host Microcontroller

The WILCS02 module can be interfaced with the host microcontroller through the SDIO/SPI Interface signals along with additional signals.

Figure 2-8. WILCS02 Module Host Interface Diagram

2.4 WILCS02 Module Placement Guidelines

- For any Wi-Fi product, the antenna placement affects the performance of the whole system. The antenna requires free space to radiate RF signals, and it must not be surrounded by the ground plane. Thus, for the best PCB antenna performance, it is recommended that the WILCS02PE module is placed at the edge of the host board.
- The WILCS02PE module ground outline edge must be aligned with the edge of the host board ground plane as shown in the following figure.
- A low-impedance ground plane for the WILCS02 module ensures the best radio performance (best range and lowest noise). The ground plane can be extended beyond the minimum recommendation as required for the host board EMC and noise reduction.
- For the best performance, keep metal structures and components (such as mechanical spacers, bump-on and so on) at least 31.75 mm away from the PCB trace antenna as illustrated in the following figure.
- The antenna on the WILCS02 module must not be placed in direct contact with or in close proximity to plastic casing or objects. Keep a minimum clearance of 10 mm in all directions around the PCB antenna as shown in the following figure. Keeping metallic and plastic objects close to the antenna can detune the antenna and reduce the performance of the device.
- Exposed GND pads on the bottom of the WILCS02 module must be soldered to the host board (see the *Example of Host Board on Top Layer* figure in the *WILCS02 Module Routing Guidelines* from Related Links).

- A PCB cutout or a copper keepout is required under the RF test point (see *WILCS02 Module Packaging Information* from Related Links).
- Copper keepout areas are required on the top layer under voltage test points (see *WILCS02 Module Packaging Information* from Related Links).
- Alternatively, the entire region, except the exposed ground paddle, can be solder-masked.

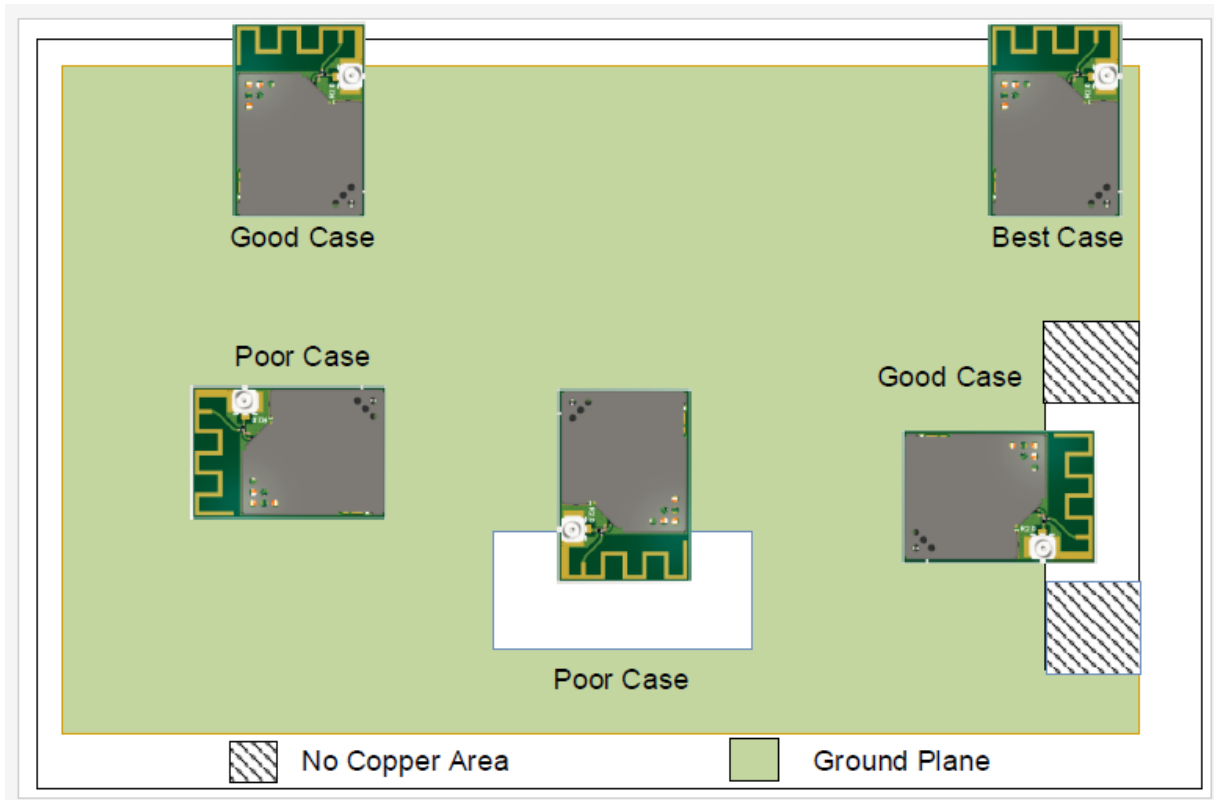

The following figure illustrates the examples of WILCS02 module placement on a host board with a ground plane. Refer to the following figure for placement-specific guidance.

Figure 2-9. Module Placement Guidelines

The following figure illustrates the examples of the WILCS02 module placement on a host board with a ground plane. Refer to [Figure 2-9](#) for placement-specific guidance.

2.5 WILCS02 Module Routing Guidelines

- Use the multi-layer host board for routing signals on the inner layer and the bottom layer.
- The top layer (underneath the module) of the host board must be ground with as many GND vias as possible, shown in the following figure.
- Avoid fan-out of the signals under the module or antenna area. Use a via to fan-out signals to the edge of the WILCS02 module.
- For a better GND connection to the WILCS02 module, solder the exposed GND pads of the WILCS02 module on the host board.
- For the module GND pad, use a GND via of a minimum 10 mil (hole diameter) for good ground to all the layers and thermal conduction path.
- Having a series resistor on the host board for all GPIOs is recommended. These resistors must be placed close to the WILCS02 module. The following figure illustrates the placement of the series resistor.
- The SOSC crystal (32.768 kHz) on the host board must be placed close to the WILCS02 module and follow the shortest trace routing length with no vias (see the following figure).

Figure 2-11. Example of Host Board on Top Layer

2.6 WILCS02 Module RF Considerations

The overall performance of the system is significantly affected by the product design, environment and application. The product designer must ensure system-level shielding (if required) and verify the performance of the product features and applications.

Consider the following guidelines for optimal RF performance:

- The WILCS02 module must be positioned in a noise-free RF environment and must be kept far away from high-frequency clock signals and any other sources of RF energy.
- The antenna must not be shielded by any metal objects.
- The power supply must be clean and noise-free.
- Make sure that the width of the traces routed to GND, VDD rails are sufficiently large for handling peak TX current consumption.

Note: The WILCS02 module includes RF shielding on top of the board as a standard feature.

2.7 WILCS02 Module Antenna Considerations

2.7.1 PCB Antenna

For the WILCS02PE module, the PCB antenna is fabricated on the top copper layer and covered with a solder mask. The layers below the antenna do not have a copper trace. It is recommended that the module be mounted on the edge of the host board and to have no PCB material below the antenna structure of the module and no copper traces or planes on the host board in that area.

The following table lists the technical specification of the PCB antenna when tested with the WILCS02 module mounted on the WILCS02 Wi-Fi Link Controller SD Board.

Table 2-4. PCB Antenna Specification for WILCS02 Module

Parameter	Specification
Operating frequency	2400-2485 MHz
Peak gain	1.18 dBi at 2445 MHz
Efficiency (average)	68.83% ¹
Note:	
1. The size of the WILCS02 Wi-Fi® Link Controller SD Board is 85 mm x 40 mm. The antenna efficiency will improve with larger ground plane baseboards. If the best case routing guidelines are followed on a larger ground plane application board, the efficiency will be better.

2.7.2 External Antenna Placement Recommendations

The user must ensure the following for the placement of the antenna and its cable:

- Do not route the antenna cable over circuits generating electrical noise on the host board or alongside or underneath the module. The recommendation is to route the cable straight out of the module.
- Do not place the antenna in direct contact or in close proximity of the plastic casing/objects.
- Do not enclose the antenna within a metal shield.
- The user must keep any components capable of radiating noise, signals or harmonics in the 2.4-2.5 GHz frequency range away from the antenna and, if feasible, provide shielding for such components. Any noise radiated from the host board in this frequency band degrades the sensitivity of the module.
- Place the antenna at a distance greater than 5 cm away from the module. The following figure illustrates the antenna keepout area (do not place the antenna in this area). This recommendation is based on an open-air measurement and does not take into account any metal shielding of the customer end product. When a metal enclosure is used, the antenna can be located closer to the WILCS02 module.

These recommendations are based on an open-air measurement and do not take into account any metal shielding of the customer end product. When a metal enclosure is used, the antenna can be located closer to the WILCS02 module.

The following figure illustrates how the antenna cable must be routed depending on the location of the antenna with respect to the WILCS02 PCB. There are two possible options for the optimum routing of the cable.

Figure 2-20. WILCS02 Module Antenna Placement Guidelines

Note: These are generic guidelines and the recommendation is that customers can check and fine-tune the antenna positioning in the final host product based on RF performance.

2.7.2.1 External Antennas

The WILCS02UE module has an ultra-small surface mount U.FL connector for an external antenna connection. The choice of antenna is limited to the antenna types that the module is tested and approved for.

The WILCS02UE module is approved to use with the antennas listed in the following table. It is permissible to use a different antenna provided it is the same antenna type, has the same antenna gain (equal or less than) and similar in-band and out-of-band characteristics are present (refer to the antenna specification sheet for cutoff frequencies).

If other antenna types are used, the OEM installer must conduct the necessary assessments and authorize the antenna with the respective regulatory agencies and ensure compliance.

Table 2-5. WILCS02 Module Approved External Antenna List with Antenna Gain

Antenna Number	Part Number	Manufacturer	Antenna Gain (dBi)	Antenna Type	Regulatory Certification		Cable Length
					FCC/ISED ⁽²⁾ ⁽³⁾	CE	
1	WXE2400-SM	TE Connectivity/Laird External Antennas	3	Dipole	x	x	SMA TO U.FL cable length of 100 mm
2	ANT-2.4-CW-RCL-SMA	TE Connectivity/Linx Technologies	2.3	Dipole	x	x	SMA to U.FL cable length of 100 mm
3	RFA-02-C2M2-SMA-D034	Alead/Aristotle	2	Dipole	x	x	SMA to U.FL cable length of 100 mm

Notes:

1. 'x' denotes the antennas covered under the certification.
2. If the end product using the module is designed to have an antenna port that is accessible to the end user, a unique (non-standard) antenna connector (as permissible by FCC) must be used (for example, RP (Reverse Polarity)-SMA socket).
3. If an RF coaxial cable is used between the module RF output and the enclosure, a unique (non-standard) antenna connector must be used in the enclosure wall to interface with the antenna.
4. Contact the antenna vendor for detailed antenna specifications to review the suitability to the end product operating environment and to identify alternatives.
5. If any external antenna is used other than the recommended antennas in the list, it may need an extra step of post-calibration on the customer's application board.

2.8 WILCS02 Module Reflow Profile Information

The WILCS02 module was assembled using the IPC/JEDEC J-STD-020 standard lead-free reflow profile. The WILCS02 module can be soldered to the host board using standard leaded or lead-free solder reflow profiles. To avoid damaging the module, adhere to the following recommendations:

- For solder reflow recommendations, refer to the *AN233 Solder Reflow Recommendation Application Note (DS00233)*.
- Do not exceed a peak temperature (TP) of 250°C.
- For specific reflow profile recommendations from the vendor, refer to the *Solder Paste Data Sheet*.
- Use no-clean flux solder paste.
- Do not wash as moisture can be trapped under the shield.
- Use only one flow. If the PCB requires multiple flows, apply the module on the final flow.

2.8.1 Cleaning

The exposed GND pad helps to self-align the module, avoiding pad misalignment. The recommendation is to use the no clean solder pastes. Ensure full drying of no-clean paste fluxes as a result of the reflow process. As per the recommendation by the solder paste vendor, this requires longer reflow profiles and/or peak temperatures toward the high end of the process window. The uncured flux residues can lead to corrosion and/or shorting in accelerated testing and possibly the field.

2.9 WILCS02 Module Assembly Considerations

The WILCS02 module is assembled with an EMI shield to ensure compliance with EMI emission and immunity rules. The EMI shield is made of a tin-plated steel (SPTE) and is not hermetically sealed. Solutions like IPA and similar solvents can be used to clean the WILCS02 module. However, do not use the cleaning solutions that contain acid on the module.

2.9.1 Conformal Coating

The modules are not intended for use with a conformal coating, and the customer assumes all risks (such as the module reliability, performance degradation and so on) if a conformal coating is applied to the modules.

3. Electrical Specifications

This chapter provides the electrical specifications and the characteristics of the WILCS02IC and the WILCS02 Module across the operating temperature range of the product.

3.1 WILCS02IC Electrical Specifications

This chapter provides the electrical specifications and the characteristics of the WILCS02IC.

3.1.1 WILCS02IC Absolute Maximum Ratings

The following table provides details about the list of absolute maximum ratings for the WILCS02IC device. Exposure to these maximum rating conditions for extended periods can affect device reliability. Functional operation of the device at these or any other conditions above the parameters indicated in the operation listings of this specification is not implied.

Table 3-1. Absolute Maximum Ratings

Parameter	Value
Ambient temperature under bias ^(1,2)	-40°C to +105°C
Storage temperature	-65°C to +150°C
Voltage on V _{DD} with respect to GND	-0.3V to +4.0V

3.2 WILCS02 Module Electrical Specifications

This chapter provides the electrical specifications and the characteristics of the WILCS02 Module across the operating temperature range of the product.

3.2.1 WILCS02 Module Absolute Maximum Ratings

The following table provides details about the list of absolute maximum ratings for the WILCS02 module. Exposure to these maximum rating conditions for extended periods can affect the device's reliability. Functional operation of the device at these or any other conditions above the parameters indicated in the operation listings of this specification is not implied.

Table 3-17. Absolute Maximum Ratings

Parameter	Value
Ambient temperature under bias ⁽¹⁾	-40°C to +85°C
Storage temperature	-65°C to +150°C

Notes:

1. Measured along with the RF matching network (assume 50Ω impedance)
2. The test conditions for I_{DD} current measurements are as follows:
 - CPU, Flash panel and SRAM data memory are operational
 - CPU is operating at 50 MHz
 - CPU is in Wi-Fi® RF Test mode
 - All peripheral modules are disabled (ON bit = 0) but the associated PMD bit is cleared
 - WDT and FSCM are disabled
 - All I/O pins are configured as inputs and pulled to V_{DD}
 - $\overline{MCLR} = V_{DD}$
3. Data in the “Typ.” column is at 3.3V, 25°C unless otherwise stated.
4. This parameter is characterized but not tested in manufacturing.
5. Tested at channel 7 in Fixed mode gain.

Microchip Information

The Microchip Website

Microchip provides online support via our website at www.microchip.com/. This website is used to make files and information easily available to customers. Some of the content available includes:

- **Product Support** – Data sheets and errata, application notes and sample programs, design resources, user’s guides and hardware support documents, latest software releases and archived software
- **General Technical Support** – Frequently Asked Questions (FAQs), technical support requests, online discussion groups, Microchip design partner program member listing
- **Business of Microchip** – Product selector and ordering guides, latest Microchip press releases, listing of seminars and events, listings of Microchip sales offices, distributors and factory representatives

Product Change Notification Service

Microchip’s product change notification service helps keep customers current on Microchip products. Subscribers will receive email notification whenever there are changes, updates, revisions or errata related to a specified product family or development tool of interest.

To register, go to www.microchip.com/pcn and follow the registration instructions.

Customer Support

Users of Microchip products can receive assistance through several channels:

- Distributor or Representative
- Local Sales Office
- Embedded Solutions Engineer (ESE)
- Technical Support

Customers should contact their distributor, representative or ESE for support. Local sales offices are also available to help customers. A listing of sales offices and locations is included in this document.

Technical support is available through the website at: www.microchip.com/support

Microchip Devices Code Protection Feature

Note the following details of the code protection feature on Microchip products:

- Microchip products meet the specifications contained in their particular Microchip Data Sheet.
- Microchip believes that its family of products is secure when used in the intended manner, within operating specifications, and under normal conditions.
- Microchip values and aggressively protects its intellectual property rights. Attempts to breach the code protection features of Microchip product is strictly prohibited and may violate the Digital Millennium Copyright Act.
- Neither Microchip nor any other semiconductor manufacturer can guarantee the security of its code. Code protection does not mean that we are guaranteeing the product is “unbreakable”. Code protection is constantly evolving. Microchip is committed to continuously improving the code protection features of our products.
