Apple Compatibility Guide

Note 1: If you put the iPod/iPhone device in the dock and press Play right away with the remote control, the iPod/iPhone internal speaker will play for a few seconds and then transfer the audio to the docking station's speakers.

Note 2: User must manually start the iPod application on the iPod device.

Note 3: When an iPod/iPhone device is not connected to a computer, the message "Charging is not supported with this accessory" will appear on the iPod/iPhone screen. When you connect the dock to the computer, the iPod/iPhone device will be able to charge.

Note 4: Message on iPhone device says, "This accessory is not made to work with iPhone" or "This accessory is not optimized for this iPhone" and an option to enter Airplane mode may be given. If Airplane mode is selected, phone functions will switch off. If Airplane mode is not selected, all functions will be available but some interference noise may be heard during operation.

Note 5: Message on iPod/iPhone device says, "Charging is not supported with this accessory."

Note 6: Message on iPhone device says, "Device Not Supported" or shows no display of the track playing in iPod mode.

Note 7: Functions on the remote control that work are Mute, Vol Up, Vol Down and Play/Pause. The remote control's Play/Pause button also turns on the Repeat One or Repeat All functions. All other remote-control buttons function as Play/Pause.

Note 8: Due to size differences in certain USB plugs, some cables may not allow for a solid connection.

Note 9: Video or Photo Slideshow functions do not play on TV but on iPod device only.

Note 10: When the docking station is not connected to a power source, the iPod/iPhone video playback will still work. The power controls only the docking station's audio amplifier.

Note 11: The Bridge does not charge newer iPod models.

Note 12: Videos are not accessible through managed mode but only through manual mode. The video playback plays only audio via The Bridge; video images play on the iPod or iPhone device.

Note 13: The iPod nano 6G doesn't support Context Button Status, which means it is possible to go to the home screen but not get back to the Now Playing page, and the only commands supported are Play/Pause, Next and Previous.
