

Simplify your data center and accelerate hybrid cloud benefits with Hitachi Unified Compute Platform HC family of all-NVMe, all-flash and hybrid solutions. Compute, storage, virtualization and high availability are combined into a simple, scalable and reliable enterprise-grade hyperconverged infrastructure.

DATASHEET

Modernize IT With Full-Stack Hyperconverged Infrastructure

Next-Generation Hyperconverged Solutions

Hitachi Unified Compute Platform HC (UCP HC), in collaboration with Intel Select Solutions program, offers a scalable, simple and reliable hyperconverged platform to modernize data center and edge computing. The integrated UCP HC appliance meets collective needs of business applications, databases, analytics, virtual desktops, remote and branch office (ROBO) and cloud hosting solutions. It offers industry-leading policy-based management and data protection solutions to help organizations deliver agile and efficient IT services to meet strategic goals (see Table 1).

Agile

- Accelerate time to production by up to 80% with automated provisioning.
- Experience three times faster apps with all-NVMe flash storage.
- Deliver excellent performance with industry-leading software-defined storage embedded in VMware vSphere hypervisor kernel.
- Automate operations with policies to accelerate service provisioning.
- Accelerate high-performance processing applications with a next-generation graphics processing unit (GPU) enabled UCP HC.

Resilient

- Continuing legendary Hitachi reliability, UCP HC delivers a robust foundation to run your important applications with aggressive recovery point and recovery time objective (RPO and RTO) requirements.
- Protect apps in a remote data center with rapid recoverability. Minimize the impact of site failure with five-minute RPO using vSphere host-based replication.
- [Hitachi Unified Compute Platform Advisor](#) (UCP Advisor) provides deep visibility into your physical and virtual stack and allows firmware upgrades in a nondisruptive manner. UCP Advisor's built-in remote monitoring software proactively monitors for potential issues and resolves them, before they impact operations.
- Hitachi's reliable one-stop support for the entire appliance provides a zero-worry experience to organizations using UCP HC.

Cloud Efficient

- UCP HC leverages Intel Xeon Scalable processor CPU and inexpensive storage, integrated with VMware vSphere and vSAN to reduce the total cost of ownership.
- High VM density supports a mix of applications, eliminating the need for storage sprawl.
- Advanced policy-based management engine ensures provisioning of the right storage services on the fly, with accurate quality of service (QoS) per VM.
- Manage UCP HC and traditional external storage systems with a common management framework, protecting investments in SAN storage.

TABLE 1. IMPORTANT FEATURES

1. Hypervisor-embedded, software-defined storage.	6. Up to seven times storage reduction.
2. High-performance, all-NVMe solutions.	7. Automated over-the-air firmware upgrade.
3. Build hybrid cloud with VMware Cloud Foundation.	8. Enhanced deep learning and AI with Nvidia GPUs.
4. Interoperability with external storage.	9. Single support for entire HCI appliance.
5. Unified management of hyperconverged infrastructure (HCI) and external SAN.	10. Validated reference architecture for key use cases, including configurations verified as Intel Select Solutions.
