

The Archer Field PC® is an ultra-rugged field computer running Windows Mobile® and mobile GIS

The Allegro Field PC® has a full field-ergonomic keyboard with large keys for gloved hands.

HarvestMaster™ brand data acquisition systems provide on-combine seed research.

Juniper Systems – Company Profile

Juniper Systems provides intuitive field computing solutions for rugged applications. We focus on solutions in natural resources, the environment, agriculture, land survey, utilities, and industry. Our products result in superior worldwide customer satisfaction while providing growth and prosperity for employees, investors, and our community.

Company Focus

We provide products that serve our targeted customer groups, focusing our resources on key, prioritized product objectives. An environment of learning and growth is fostered within the company to cultivate a clear understanding of the market needs, technology requirements to meet those needs, and a product vision for fulfilling the requirements of customers.

We work with and seek excellent business partners and OEMs that add value to our products and help us expand our market expertise.

Product Benefits to Our Customers

The products we design and build satisfy our customer needs to:

1. Collect data in rugged environments with conditions including hot or cold temperatures, driving rain, submersion in water, humidity, shock, mud and sand.
2. Integrate a GPS, bar code scanner, RFID, or other devices with the field computer.
3. Communicate wirelessly via Bluetooth® technology, Wi-Fi, or cellular modems.
4. Know that their data are safe.
