

THE WATERFURNACE DIFFERENCE

Headquartered in Fort Wayne, Indiana, WaterFurnace has been producing geothermal and water source heat pump technology since we were founded in 1983. This means that like other renewable energy sources such as solar or wind, our unique green solutions have been around for a long time—nearly 40 years to be exact! As our company has grown, we've developed a reputation for innovation, sustainability, energy efficiency and a customer-first mindset. Whether for a commercial or residential project, WaterFurnace serves as a trusted partner and will provide you with the support you need to succeed.

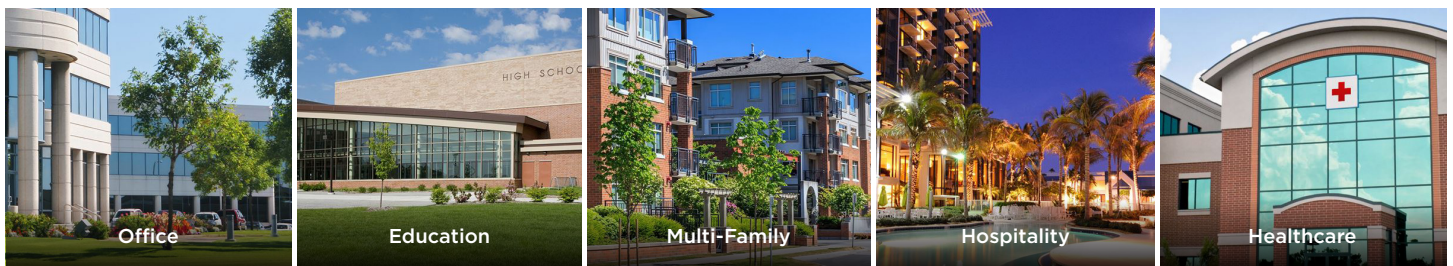

Leader of the Pack

WaterFurnace's line of water source heat pumps is redefining expectations in the commercial markets. Variable capacity, active humidity control, multi-zone capabilities, communicating control systems, and outdoor air management are just a few of the innovations that we're developing in one of the industry's broadest product lines. We also offer an entire range of chiller products that extend the system into central station plant designs. With our proven patented technology, we're leading the way for the rest of the industry.

Made Here, Sold Everywhere

Our wide range of commercial water source and geothermal systems provide owners, architects and contractors with the solutions they need for any building, in any market, anywhere. In fact, our systems have been installed across the United States and around the world. We manufacture everything in the Midwest and ship globally.

A GREENER FUTURE

Our controls engineers work to ensure the best in controls technology is incorporated into every single system we build, providing vital information and data when you need it the most. We'll even help customize supervisory controls to meet your application requirements. Some state and local regulations are moving toward using more renewable energy sources and reducing on-site combustion. Our products can help you comply with these rules and save the earth. By integrating our energy-efficient technology into your building, you'll better serve the market and the environment.

Reliable Expertise

Our team is made up of experts in commercial buildings. We understand your needs because many of us have been in your shoes. This level of understanding yields a stronger level of care. Each WaterFurnace employee cares about our customers and is passionate about supporting your success.

Save on Spending While Saving the Earth

What if you could update your existing HVAC equipment with energy-efficient systems for a fraction of the cost? WaterFurnace products could help you do just that!

The Inflation Reduction Act of 2022 makes installing energy-efficient systems more appealing than ever before. As a result of this bill, Americans can potentially receive government incentives to help cover a significant portion of the cost of decarbonizing their buildings. The best part is that WaterFurnace products enable you to qualify your building for these beneficial savings. We can help you make your building greener—for less.

The bill is to remain in place for 10 years, so take advantage of this valuable opportunity. When you're ready to go green, we're here to help. The icing on the environment-friendly cake? You'll qualify for an extra 10% off the total discounted price for using equipment made in the United States upon installing our Midwest-made systems.
