RE: Application for Modular Approval Certification for the OW1 register module

Dear Sir or Madam:

The following information addresses the requirements to support a modular approval as required by FCC Part 15.212, Modular Transmitters.

Date: August 23, 2016

- 1. The transmitter section is shielded. Testing has been performed to assure compliance.
- 2. The OW1 does not have external modulation or data inputs. The RF section is driven by an on-board MCU which controls RF data lines and does not allow excessive modulation.
- 3. The modular transmitter has its own power regulation.
- 4. The modular transmitter uses an antenna that is connected via a unique connector. The antenna cable and module use a QMA connector. .
- 5. The OW1 module was tested in a standalone configuration.
- 6. The OW1 register module will be labeled as required. The host equipment will also have the required labeling.
- 7. Operating requirements are included in the host technical manual.
- 8. MPE measurements are provided to demonstrate RF compliance. There is a cautionary statement that is included in the technical manual stipulating the 20 cm separation distance.

Sincerely,

Name: Lee Littlejohn
