Forward Clutch Assembly

CONTINUOUSLY VARIABLE TRANSMISSION

21) Remove the thrust bearing.

22) Remove the planetary carrier.

Forward Clutch Assembly

CONTINUOUSLY VARIABLE TRANSMISSION

23) Remove the thrust bearing and sun gear.

24) Remove the forward clutch assembly.

Forward Clutch Assembly

CONTINUOUSLY VARIABLE TRANSMISSION

25) Remove the thrust bearing and seal ring.

(A) Thrust bearing

B: INSTALLATION

1) Install the thrust bearing to the converter case.

NOTE:

Face the temper color surface to the converter case side.

Forward Clutch Assembly

CONTINUOUSLY VARIABLE TRANSMISSION

2) Install the seal ring to the input shaft.

NOTE:

- Use new seal rings.
- When installing the seal rings, do not expand the seal rings too much.
- Apply CVTF to the seal rings.

3) Install the forward clutch assembly to the converter case.

Forward Clutch Assembly

CONTINUOUSLY VARIABLE TRANSMISSION

4) Install the sun gear.

NOTE:

Face the end face of the sun gear to the reverse brake side as shown in the figure.

5) Install the thrust bearing to the sun gear.

NOTE:

Face the temper color surface to the reverse brake side.

Forward Clutch Assembly

CONTINUOUSLY VARIABLE TRANSMISSION

6) Install the planetary carrier.

7) Install the thrust bearing.

NOTE:

Face the temper color surface to the reverse brake side.

Forward Clutch Assembly

CONTINUOUSLY VARIABLE TRANSMISSION

8) Install the internal gear.

9) Install the thrust bearing to the internal gear.

NOTE:

Face the temper color surface to the reverse brake side.

- 10) Select a washer. <Ref. to CVT(TR580)-285, ADJUSTMENT, Forward Clutch Assembly.>
- 11) Install the reverse brake assembly. <Ref. to CVT(TR580)-255, INSTALLATION, Reverse Brake Assembly.>
- 12) Install the primary pulley, secondary pulley and variator chain. <Ref. to CVT(TR580)-238, INSTALLATION, Primary Pulley and Secondary Pulley.>
- 13) Install the reduction drive gear. <Ref. to CVT(TR580)-227, INSTALLATION, Reduction Drive Gear.>
- 14) Install the transmission case. <Ref. to CVT(TR580)-211, INSTALLATION, Transmission Case.>
- 15) Install the transmission control device. <Ref. to CVT(TR580)-205, INSTALLATION, Transmission Control Device.>
- 16) Install the oil strainer and oil pan. <Ref. to CVT(TR580)-116, INSTALLATION, Oil Pan and Strainer.>
- 17) Install the reduction driven gear assembly. <Ref. to CVT(TR580)-194, INSTALLATION, Reduction Driven Gear.>
- 18) Install the transfer driven gear assembly. <Ref. to CVT(TR580)-190, INSTALLATION, Transfer Driven Gear.>

Forward Clutch Assembly

CONTINUOUSLY VARIABLE TRANSMISSION

- 19) Install the transfer clutch assembly. <Ref. to CVT(TR580)-176, INSTALLATION, Transfer Clutch.>
- 20) Install the parking pawl. <Ref. to CVT(TR580)-193, INSTALLATION, Parking Pawl.>
- 21) Install the extension case. <Ref. to CVT(TR580)-171, INSTALLATION, Extension Case.>
- 22) Install the inhibitor switch. <Ref. to CVT(TR580)-103, INSTALLATION, Inhibitor Switch.>
- 23) Install the secondary speed sensor. <Ref. to CVT(TR580)-108, INSTALLATION, Secondary Speed Sensor.>
- 24) Install the primary speed sensor. <Ref. to CVT(TR580)-111, INSTALLATION, Primary Speed Sensor.>
- 25) Install the turbine speed sensor. <Ref. to CVT(TR580)-106, INSTALLATION, Turbine Speed Sensor.>
- 26) Install the transmission harness. <Ref. to CVT(TR580)-141, INSTALLATION, Transmission Harness.>
- 27) Install the control valve body. <Ref. to CVT(TR580)-126, INSTALLATION, Control Valve Body.>
- 28) Install the air breather hose. <Ref. to CVT(TR580)-162, INSTALLATION, Air Breather Hose.>
- 29) Install the transmission assembly to the vehicle. <Ref. to CVT(TR580)-71, INSTALLATION, Automatic Transmission Assembly.>

C: DISASSEMBLY

1. FORWARD CLUTCH ASSEMBLY

- 1) Remove the snap ring.
- 2) Remove the retaining plate, drive plate, driven plate and dish plate.

AT-06484

Forward Clutch Assembly

CONTINUOUSLY VARIABLE TRANSMISSION

3) Compress the return spring using the ST to remove the snap ring.

ST1 18762AA010 COMPRESSOR SPECIAL TOOL

ST2 398673600 COMPRESSOR

4) Remove the chamber COMPL and snap ring.

Forward Clutch Assembly

CONTINUOUSLY VARIABLE TRANSMISSION

5) Remove the return spring.

AT-06487

6) Remove the forward clutch piston by blowing compressed air intermittently from the forward clutch carrier hole.

AT-06488

Forward Clutch Assembly

CONTINUOUSLY VARIABLE TRANSMISSION

2. PLANETARY CARRIER ASSY

NOTE:

Disassemble the balance oil guide only.

- 1) Remove the snap ring.

AT-07026

- 2) Remove the balance oil guide.

3. INTERNAL GEAR

- 1) Remove the snap ring.

AT-06757

Forward Clutch Assembly

CONTINUOUSLY VARIABLE TRANSMISSION

2) Remove the thrust gear plate.

AT-06759

D: ASSEMBLY

1. FORWARD CLUTCH ASSEMBLY

1) Install the forward clutch piston to forward clutch drum.

NOTE:

- Apply CVTF to the seal of forward clutch piston.
- Insert it all the way to the end.

AT-06489

Forward Clutch Assembly

CONTINUOUSLY VARIABLE TRANSMISSION

2) Install the return spring.

3) Install the chamber COMPL.

NOTE:

Apply CVTF to the sealing area of chamber COMPL.

Forward Clutch Assembly

CONTINUOUSLY VARIABLE TRANSMISSION

4) Compress the return spring using the ST to install the snap ring.

ST1 18762AA010 COMPRESSOR SPECIAL TOOL

ST2 398673600 COMPRESSOR

5) Check the operation of forward clutch piston by blowing compressed air intermittently from forward clutch carrier hole.

6) Place the driven plate, drive plate and retaining plate neatly in this order on surface table.

7) Set the dial gauge to retaining plate, and read its scale.

NOTE:

The value, which is read in the gauge at this time, is zero point.

8) Scale and record the weight "Z" of a flat board which will be put on retaining plate.

NOTE:

- Use a stiff board which does not bend against load as a flat board to be put on retaining plate.
- Use a flat board weighing less than 52 N (5.3 kgf, 11.7 lb).

Forward Clutch Assembly

CONTINUOUSLY VARIABLE TRANSMISSION

9) Put the flat board on retaining plate.

10) Using the following formula, read the push/pull gauge and calculate “N”.

$$N = 52 \text{ N (5.3 kgf, 11.7 lb)} - Z$$

52 N (5.3 kgf, 11.7 lb) : Load applied to clutch plate

Z: Flat board weight

11) Press the center of retaining plate by applying a force of “N” using push/pull gauge, and then measure and record the compression amount “A”.

NOTE:

Measure at four points with a 90° interval and calculate the average.

- (A) Driven plate
- (B) Drive plate
- (C) Retaining plate

Forward Clutch Assembly

CONTINUOUSLY VARIABLE TRANSMISSION

12) Install the dish plate, drive plate, driven plate, retaining plate and snap ring to the forward clutch carrier.

NOTE:

Install the dish plate in the correct direction.

13) Measure and record the clearance "B" between the retaining plate and snap ring.

Forward Clutch Assembly

CONTINUOUSLY VARIABLE TRANSMISSION

14) Piston stroke calculation

Calculate with A and B dimensions recorded before.

If it exceeds the limit, replace with a new drive plate and adjust within the initial standard value.

$S \text{ mm (in)} = A + B$

S: Piston stroke

A: Compression amount of drive plate and dish plate

B: Clearance between retaining plate and snap ring

Initial standard:

1.0 — 1.4 mm (0.040 — 0.055 in)

Limit thickness:

1.6 mm (0.063 in)

Retaining plate	
Part No.	Thickness mm (in)
31567AB760	4.2 (0.165)
31567AB770	4.4 (0.173)
31567AB780	4.6 (0.181)
31567AB790	4.8 (0.189)
31567AB830	5.0 (0.197)

2. PLANETARY CARRIER ASSY

NOTE:

Assemble in the reverse order of disassembly.

3. INTERNAL GEAR

NOTE:

Assemble in the reverse order of disassembly.

E: INSPECTION

- Check the forward clutch drum, internal gear, sun gear and forward clutch piston lip for wear or damage.
- Inspect the drive plate facing for wear and damage.
- Check the driven plate for discoloration (burnt color).
- Check for worn snap ring, fatigue or damaged return spring or deformed spring retainer.
- Make sure the clearance between retaining plate and internal gear of forward clutch is within the limit. If it exceeds the standard, replace the forward clutch. <Ref. to CVT(TR580)-279, ASSEMBLY, Forward Clutch Assembly.>

Forward Clutch Assembly

CONTINUOUSLY VARIABLE TRANSMISSION

F: ADJUSTMENT

1) Install the thrust bearing to the internal gear.

NOTE:

Face the temper color surface to the reverse brake side.

2) Measure depth "A" from the ST upper face to the washer mounting surface.
ST 499575600 GAUGE

Forward Clutch Assembly

CONTINUOUSLY VARIABLE TRANSMISSION

3) Measure the height "B" from the ST upper face to the mating surface of the drive pinion retainer.
ST 499575600 GAUGE

AT-06805

4) Obtain the thickness of washer using the following formula to select the washer.

$$T \text{ (mm)} = A - B - (0.35 - 0.70)$$

$$[T \text{ (in)} = A - B - (0.014 - 0.028)]$$

T: Shim thickness

A: Depth from the ST upper face to the washer mounting surface

B: Height from ST upper face to the drive pinion retainer mating surface

0.35 — 0.70 mm (0.014 — 0.028 in): Clearance

Washer	
Part No.	Thickness mm (in)
803064020	1.3 (0.051)
803064021	1.55 (0.061)
803064022	1.8 (0.071)
803064023	2.05 (0.081)
803064024	2.3 (0.091)
803064025	2.55 (0.100)

41. Drive Pinion Shaft Assembly

A: REMOVAL

- 1) Remove the transmission assembly from the vehicle. <Ref. to CVT(TR580)-59, REMOVAL, Automatic Transmission Assembly.>
- 2) Remove the air breather hose. <Ref. to CVT(TR580)-160, REMOVAL, Air Breather Hose.>
- 3) Remove the control valve body. <Ref. to CVT(TR580)-119, REMOVAL, Control Valve Body.>

ST2 499787700 WRENCH

Starting torque:

5.1 — 17.1 N (0.5 — 1.7 kgf, 1.1 — 3.8 lbf)

Drive Pinion Shaft Assembly

CONTINUOUSLY VARIABLE TRANSMISSION

F: ADJUSTMENT

- 1) Remove the liquid gasket from the mating surface completely.
- 2) Using the ST, install the drive pinion retainer to converter case.
ST 18270KA020 SOCKET (E20)

NOTE:

Do not confuse the three different-length bolts when installing.

Tightening torque:

43 N·m (4.4 kgf·m, 31.7 ft·lb)

- 3) Rotate the drive pinion several times using ST1 and ST2.

ST1 498937110 HOLDER

ST2 499787700 WRENCH

Drive Pinion Shaft Assembly

CONTINUOUSLY VARIABLE TRANSMISSION

4) Adjust the drive pinion and hypoid driven gear backlash. <Ref. to CVT(TR580)-331, ADJUSTMENT, Front Differential Assembly.>

5) Using the ST, remove the drive pinion retainer from converter case.

ST 18270KA020 SOCKET (E20)

6) Apply lead-free red dye evenly on the both sides of three to four teeth of the hypoid driven gear. Then install the drive pinion retainer and rotate the drive pinion in both directions several times. Remove the drive pinion retainer and check the tooth contact pattern.

If the teeth contact is inappropriate, adjust the backlash or thickness of the shim. <Ref. to CVT(TR580)-331, ADJUSTMENT, Front Differential Assembly.>

NOTE:

After correction, wipe off the lead-free red dye.

Drive pinion shim	
Part No.	Thickness mm (in)
31451AA320	0.150 (0.0059)
31451AA330	0.175 (0.0069)
31451AA340	0.200 (0.0079)
31451AA350	0.225 (0.0089)
31451AA360	0.250 (0.0098)
31451AA370	0.275 (0.0108)

- Correct tooth contact

Check item: Tooth contact surface is slightly shifted toward the toe side under a no-load condition. (When driving, it moves towards the heel side.)

- (A) Toe side
(B) Heel side

Drive Pinion Shaft Assembly

CONTINUOUSLY VARIABLE TRANSMISSION

- Face contact

Check item: Backlash is too large.

Contact pattern

Corrective action: Increase thickness of drive pinion shim according to the procedures for moving the drive pinion close to hypoid driven gear.

Drive Pinion Shaft Assembly

CONTINUOUSLY VARIABLE TRANSMISSION

- Flank contact

Check item: Backlash is too small.

Contact pattern

Corrective action: Reduce the thickness of the drive pinion shim according to the procedures for moving the drive pinion away from the hypoid driven gear.

Drive Pinion Shaft Assembly

CONTINUOUSLY VARIABLE TRANSMISSION

- Toe contact (inside contact)

Check item: Teeth contact area is too small.

Contact pattern

Corrective action: Reduce the thickness of the drive pinion shim according to the procedures for moving the drive pinion away from the hypoid driven gear side.

Drive Pinion Shaft Assembly

CONTINUOUSLY VARIABLE TRANSMISSION

- Heel contact (outside end contact)

Check item: Teeth contact area is too small.

Contact pattern

AT-05373

Corrective action: Increase the thickness of the drive pinion shim according to the procedures for moving the drive pinion closer to the hypoid driven gear.

AT-05369

Drive Pinion Shaft Assembly

CONTINUOUSLY VARIABLE TRANSMISSION

7) Using the ST, loosen the differential side retainer until the mounting groove of the O-ring appears, and then install the O-ring.

NOTE:

- When loosening the differential side retainer, record the number of the turns made.
- Perform this for both left and right differential side retainers.
- Use new O-rings.
- Apply the differential gear oil to O-ring.

ST 18658AA020 WRENCH COMPL RETAINER

8) Using the ST, tighten the retainer to the position before it is loosened.

ST 18658AA020 WRENCH COMPL RETAINER

9) Replace the differential side retainer oil seal with a new part. <Ref. to CVT(TR580)-91, Differential Side Retainer Oil Seal.>

10) Install the lock plate.

Tightening torque:

25 N·m (2.5 kgf·m, 18.4 ft·lb)

(A) Lock plate

Front Differential Assembly

CONTINUOUSLY VARIABLE TRANSMISSION

42. Front Differential Assembly

A: REMOVAL

- 1) Remove the transmission assembly from the vehicle. <Ref. to CVT(TR580)-59, REMOVAL, Automatic Transmission Assembly.>
- 2) Remove the air breather hose. <Ref. to CVT(TR580)-160, REMOVAL, Air Breather Hose.>
- 3) Remove the control valve body. <Ref. to CVT(TR580)-119, REMOVAL, Control Valve Body.>
- 4) Remove the transmission harness. <Ref. to CVT(TR580)-134, REMOVAL, Transmission Harness.>
- 5) Remove the turbine speed sensor. <Ref. to CVT(TR580)-106, REMOVAL, Turbine Speed Sensor.>
- 6) Remove the secondary speed sensor. <Ref. to CVT(TR580)-108, REMOVAL, Secondary Speed Sensor.>
- 7) Remove the primary speed sensor. <Ref. to CVT(TR580)-110, REMOVAL, Primary Speed Sensor.>
- 8) Remove the inhibitor switch. <Ref. to CVT(TR580)-101, REMOVAL, Inhibitor Switch.>
- 9) Remove the extension case. <Ref. to CVT(TR580)-170, REMOVAL, Extension Case.>
- 10) Remove the transfer clutch assembly. <Ref. to CVT(TR580)-174, REMOVAL, Transfer Clutch.>
- 11) Remove the transfer driven gear assembly. <Ref. to CVT(TR580)-189, REMOVAL, Transfer Driven Gear.>
- 12) Remove the parking pawl. <Ref. to CVT(TR580)-192, REMOVAL, Parking Pawl.>
- 13) Remove the reduction driven gear assembly. <Ref. to CVT(TR580)-194, REMOVAL, Reduction Driven Gear.>
- 14) Remove the oil pan and oil strainer. <Ref. to CVT(TR580)-115, REMOVAL, Oil Pan and Strainer.>
- 15) Remove the transmission control device. <Ref. to CVT(TR580)-202, REMOVAL, Transmission Control Device.>
- 16) Remove the transmission case. <Ref. to CVT(TR580)-208, REMOVAL, Transmission Case.>
- 17) Remove the reduction drive gear. <Ref. to CVT(TR580)-226, REMOVAL, Reduction Drive Gear.>
- 18) Remove the primary pulley, secondary pulley and variator chain. <Ref. to CVT(TR580)-231, REMOVAL, Primary Pulley and Secondary Pulley.>
- 19) Remove the reverse brake assembly. <Ref. to CVT(TR580)-252, REMOVAL, Reverse Brake Assembly.>
- 20) Remove the forward clutch assembly. <Ref. to CVT(TR580)-267, REMOVAL, Forward Clutch Assembly.>
- 21) Remove the drive pinion shaft assembly. <Ref. to CVT(TR580)-287, REMOVAL, Drive Pinion Shaft Assembly.>
- 22) Remove the oil baffle.

CVT00831

Front Differential Assembly

CONTINUOUSLY VARIABLE TRANSMISSION

23) Remove the lock plates on both sides.

(A) Lock plate

24) Remove the differential side retainers using ST.

NOTE:

- When the wrench COMPL retainer interferes with the converter case, align the cutout portion with the interference part.
- Support the differential case assembly by hand to avoid damaging the retainer mounting hole of the converter case.
- Keep the left and right differential side retainers and left and right bearing outer races by attaching tags or in similar ways to make it possible to identify RH and LH sides.

ST 18658AA020 WRENCH COMPL RETAINER

AT-06499

Front Differential Assembly

CONTINUOUSLY VARIABLE TRANSMISSION

25) Remove the front differential assembly while being careful not to damage the attachment part of the retainer.

CVT00832

26) Remove the oil seals and O-rings from both differential side retainers. <Ref. to CVT(TR580)-324, SIDE RETAINER, DISASSEMBLY, Front Differential Assembly.>

B: INSTALLATION

1) Install the front differential assembly to the converter case.

NOTE:

Be careful not to damage the inside of the case (especially the mounting surface of the differential side retainers).

CVT00832

2) Install the bearing outer race.

Front Differential Assembly

CONTINUOUSLY VARIABLE TRANSMISSION

- 3) Temporarily install the differential side retainers using ST.
ST 18658AA020 WRENCH COMPL RETAINER

- 4) Adjust the backlash of the front differential. <Ref. to CVT(TR580)-331, ADJUSTMENT, Front Differential Assembly.>
5) Inspect and adjust the tooth contact. <Ref. to CVT(TR580)-309, ADJUSTMENT, Drive Pinion Shaft Assembly.>
6) Using the ST, loosen the differential side retainer until the mounting groove of the O-ring appears, and then install the O-ring.

NOTE:

- When loosening the differential side retainer, record the number of the turns made.
- Perform this for both left and right differential side retainers.
- Use new O-rings.
- Apply the differential gear oil to O-ring.

ST 18658AA020 WRENCH COMPL RETAINER

- 7) Using the ST, tighten the retainer to the position before it is loosened.

ST 18658AA020 WRENCH COMPL RETAINER

- 8) Install the oil seal to the differential side retainer. <Ref. to CVT(TR580)-91, Differential Side Retainer Oil Seal.>

Front Differential Assembly

CONTINUOUSLY VARIABLE TRANSMISSION

9) Install the lock plate.

Tightening torque:

25 N·m (2.5 kgf·m, 18.4 ft·lb)

(A) Lock plate

10) Install the oil baffle.

11) Install the drive pinion shaft assembly. <Ref. to CVT(TR580)-288, INSTALLATION, Drive Pinion Shaft Assembly.>

12) Install the forward clutch assembly. <Ref. to CVT(TR580)-270, INSTALLATION, Forward Clutch Assembly.>

13) Install the reverse brake assembly. <Ref. to CVT(TR580)-255, INSTALLATION, Reverse Brake Assembly.>

14) Install the primary pulley, secondary pulley and variator chain. <Ref. to CVT(TR580)-238, INSTALLATION, Primary Pulley and Secondary Pulley.>

15) Install the reduction drive gear. <Ref. to CVT(TR580)-227, INSTALLATION, Reduction Drive Gear.>

16) Install the transmission case. <Ref. to CVT(TR580)-211, INSTALLATION, Transmission Case.>

17) Install the oil strainer and oil pan. <Ref. to CVT(TR580)-116, INSTALLATION, Oil Pan and Strainer.>

Front Differential Assembly

CONTINUOUSLY VARIABLE TRANSMISSION

- 18) Install the transmission control device. <Ref. to CVT(TR580)-205, INSTALLATION, Transmission Control Device.>
- 19) Install the reduction driven gear assembly. <Ref. to CVT(TR580)-194, INSTALLATION, Reduction Driven Gear.>
- 20) Install the transfer driven gear assembly. <Ref. to CVT(TR580)-190, INSTALLATION, Transfer Driven Gear.>
- 21) Install the transfer clutch assembly. <Ref. to CVT(TR580)-176, INSTALLATION, Transfer Clutch.>
- 22) Install the parking pawl. <Ref. to CVT(TR580)-193, INSTALLATION, Parking Pawl.>
- 23) Install the extension case. <Ref. to CVT(TR580)-171, INSTALLATION, Extension Case.>
- 24) Install the inhibitor switch. <Ref. to CVT(TR580)-103, INSTALLATION, Inhibitor Switch.>
- 25) Install the secondary speed sensor. <Ref. to CVT(TR580)-108, INSTALLATION, Secondary Speed Sensor.>
- 26) Install the primary speed sensor. <Ref. to CVT(TR580)-111, INSTALLATION, Primary Speed Sensor.>
- 27) Install the turbine speed sensor. <Ref. to CVT(TR580)-106, INSTALLATION, Turbine Speed Sensor.>
- 28) Install the transmission harness. <Ref. to CVT(TR580)-141, INSTALLATION, Transmission Harness.>
- 29) Install the control valve body. <Ref. to CVT(TR580)-126, INSTALLATION, Control Valve Body.>
- 30) Install the air breather hose. <Ref. to CVT(TR580)-162, INSTALLATION, Air Breather Hose.>
- 31) Install the transmission assembly to the vehicle. <Ref. to CVT(TR580)-71, INSTALLATION, Automatic Transmission Assembly.>

C: DISASSEMBLY

1. DIFFERENTIAL CASE ASSEMBLY

1) Remove the taper roller bearing using the ST.

ST1 498077000 REMOVER
ST2 899864100 REMOVER
ST3 398497701 SEAT

Front Differential Assembly

CONTINUOUSLY VARIABLE TRANSMISSION

- 2) Remove the hypoid driven gear mounting bolt using the ST.
ST 18270KA020 SOCKET (E20)

- 3) Remove the differential case (LH).

Front Differential Assembly

CONTINUOUSLY VARIABLE TRANSMISSION

- 4) Remove the differential bevel gear and washer from differential case.

- 5) Remove the straight pin.

Front Differential Assembly

CONTINUOUSLY VARIABLE TRANSMISSION

6) Remove the pinion shaft, then remove the differential bevel gear, washer and differential bevel pinion.

CVT00289

- (A) Pinion shaft
- (B) Differential bevel gear
- (C) Differential bevel pinion

2. SIDE RETAINER

NOTE:

After adjusting the drive pinion backlash and tooth contact, replace the oil seal and O-ring with new parts.

1) Remove the O-ring.

AT-06684

Front Differential Assembly

CONTINUOUSLY VARIABLE TRANSMISSION

2) Remove the oil seal.

AT-06685

D: ASSEMBLY

1. DIFFERENTIAL CASE ASSEMBLY

1) Install the washer and differential bevel gear into the differential case (RH).

CVT00290

Front Differential Assembly

CONTINUOUSLY VARIABLE TRANSMISSION

2) Install the differential bevel pinions into differential case (RH) and install the pinion shaft.

- (A) Pinion shaft
- (B) Differential bevel gear
- (C) Differential bevel pinion

3) Install the straight pin.

Front Differential Assembly

CONTINUOUSLY VARIABLE TRANSMISSION

- 4) Install the washer and differential bevel gear to the differential case (LH).

- 5) Install the differential case (RH) to the hypoid driven gear.

- 6) Install the differential case (LH) to the differential case (RH).

Front Differential Assembly

CONTINUOUSLY VARIABLE TRANSMISSION

7) Using the ST, install the hypoid driven gear by tightening the installation bolt.
ST 18270KA020 SOCKET (E20)

Tightening torque:
64 N·m (6.5 kgf·m, 47.2 ft·lb)

8) Measure the backlash, and select the washer.

(1) Install the SUBARU genuine axle shaft to differential case.

Part No. 38415AA070 Axle shaft

(2) Using ST1 and ST2, insert the ST2 through the window of differential case. Measure the backlash of the gear.

NOTE:

- Measure the backlash by applying a differential bevel pinion tooth between two differential bevel gear teeth.
- When measuring, fix the differential bevel pinion in place with a screwdriver covered with cloth, or a similar tool.

ST1 498247001 MAGNET BASE

ST2 498247100 DIAL GAUGE

Specification:

0.13 — 0.18 mm (0.0051 — 0.0071 in)

Front Differential Assembly

CONTINUOUSLY VARIABLE TRANSMISSION

(3) If the backlash is not within specification, select a washer from the table below and replace.

Washer	
Part No.	Thickness mm (in)
803038021	0.95 (0.037)
803038022	1.00 (0.039)
803038023	1.05 (0.041)

9) Using the ST, install the left and right taper roller bearings.

ST1 499277100 BUSHING 1-2 INSTALLER

ST2 398497701 SEAT

CVT00295

Front Differential Assembly

CONTINUOUSLY VARIABLE TRANSMISSION

2. SIDE RETAINER

NOTE:

After adjusting the backlash and tooth contact, replace the oil seal and O-ring of side retainer with new parts.

1) Using the ST, install the oil seal.

NOTE:

- Use a new oil seal.
- Apply differential gear oil to the oil seal lip and press-fitting surface.
- Oil seal has an identification mark (R, L). When installing oil seals, do not confuse the left and right.

ST 18675AA000 DIFFERENTIAL SIDE OIL SEAL INSTALLER

AT-06692

2) Install the O-rings.

NOTE:

- Use new O-rings.
- Apply the differential gear oil to O-ring.

AT-06684

Front Differential Assembly

CONTINUOUSLY VARIABLE TRANSMISSION

E: INSPECTION

- Check each component for scratches, damage or other faults.
- Using the ST, check the backlash of pinion gear.

ST1 498247001 MAGNET BASE

ST2 498247100 DIAL GAUGE

Specification:

0.13 — 0.18 mm (0.0051 — 0.0071 in)

CVT00294

- Measure the hypoid gear backlash, and then adjust it to be within specification. <Ref. to CVT(TR580)-331, ADJUSTMENT, Front Differential Assembly.>

F: ADJUSTMENT

- 1) Using the ST, screw-in the retainer until resistance is felt.

NOTE:

RH side should be screwed-in more than LH side.

ST 18658AA020 WRENCH COMPL RETAINER

AT-06499

- 2) Remove the remaining liquid gasket from the mating surface completely.

Front Differential Assembly

CONTINUOUSLY VARIABLE TRANSMISSION

3) Using the ST, install the drive pinion assembly to converter case.
ST 18270KA020 SOCKET (E20)

NOTE:

Do not confuse the three different-length bolts when installing.

Tightening torque:

43 N·m (4.4 kgf·m, 31.7 ft·lb)

4) Rotate the drive pinion shaft ten times or more using ST1 and ST2.

ST1 18667AA010 HOLDER

ST2 499787700 WRENCH

5) While rotating the pinion shaft, tighten the retainer LH and loosen the retainer RH until the shaft can't be turned anymore. The backlash is "zero" when the pinion shaft comes to the point where it doesn't rotate.

Front Differential Assembly

CONTINUOUSLY VARIABLE TRANSMISSION

6) After the “zero” state is established, loosen the retainer LH by 3 notches and secure it with the lock plate. Retighten the retainer RH until it stops. Rotate the drive pinion 2 or 3 times. Tighten the retainer RH further 1-3/4 notches. This sets the preload. Finally, secure the retainer with its lock plate.

(A) Lock plate

NOTE:

Turning the retainer by every one tooth changes the backlash approx. 0.05 mm (0.0020 in).

(A) 1 tooth

7) Insert the two SUBARU genuine axle shafts into differential case.
Part No. 38415AA070 Axle shaft

Front Differential Assembly

CONTINUOUSLY VARIABLE TRANSMISSION

8) Install the ST to the drive pinion retainer, and wrap the drive pinion shaft with cloth and pinch with vise pliers. Using a tie-wrap or a wire, fix the vise pliers to the ST.

Make sure the drive pinion shaft does not move.

ST 18763AA000 COMPRESSOR SHAFT

9) Check the backlash is within specification using ST1, ST2 and ST3.

ST1 498255400 PLATE

ST2 498247100 DIAL GAUGE

ST3 498247001 MAGNET BASE

Backlash:

0.13 — 0.18 mm (0.005 — 0.007 in)

10) Adjust the teeth contact of the front differential and drive shaft. <Ref. to CVT(TR580)-309, ADJUSTMENT, Drive Pinion Shaft Assembly.>

43.Oil Pump Chain

A: REMOVAL

- 1) Remove the transmission assembly from the vehicle. <Ref. to CVT(TR580)-59, REMOVAL, Automatic Transmission Assembly.>
- 2) Remove the torque converter assembly. <Ref. to CVT(TR580)-166, REMOVAL, Torque Converter Assembly.>
- 3) Remove the oil pump chain, oil pump sprocket, driven sprocket and oil pump chain cover.

NOTE:

Oil pump chain cover may be hard to remove because the driven sprocket is installed to the shaft side of the oil pump. Do not remove it forcibly. Remove it while holding the driven sprocket by hand.

Oil Pump Chain

CONTINUOUSLY VARIABLE TRANSMISSION

4) Remove the seal rings.

5) Remove the driven sprocket from oil pump chain cover to remove the oil pump chain.

NOTE:

- The driven sprocket is replaced as an assembly only, because it is a non-disassembly part.
- If the ball bearing is removed from the driven sprocket, replace with a new part.

Oil Pump Chain

CONTINUOUSLY VARIABLE TRANSMISSION

6) Remove the snap ring.

7) Remove the drive sprocket.

Oil Pump Chain

CONTINUOUSLY VARIABLE TRANSMISSION

8) Remove the oil seal from the oil pump chain cover.

B: INSTALLATION

- 1) Clean the mating surface of oil pump chain cover and converter case.
- 2) Using the ST, install the oil seal.

NOTE:

- Use a new oil seal.
- Apply CVTF to the oil seal lip and press-fitting surface.

ST 499755602 PRESS SNAP RING

Oil Pump Chain

CONTINUOUSLY VARIABLE TRANSMISSION

3) Install the drive sprocket.

4) Install the snap ring so that its cutout portion is securely fitted into the snap ring groove of the oil pump chain cover.

(A) Installation range of cutout portion for snap ring

5) Place the oil pump chain on drive sprocket.

Oil Pump Chain

CONTINUOUSLY VARIABLE TRANSMISSION

6) Place the oil pump chain on driven sprocket and install the driven sprocket to oil pump chain cover.

AT-06704

7) Install the seal ring.

NOTE:

- Use a new seal ring.
- Apply CVTF to the seal rings.
- When installing the seal ring, do not expand the seal ring too much.

CVT00825

Oil Pump Chain

CONTINUOUSLY VARIABLE TRANSMISSION

8) Apply liquid gasket seamlessly to the mating surface of oil pump chain cover.

CAUTION:

Do not apply liquid gasket at the arrowed hole.

Liquid gasket:

THREE BOND 1215B or equivalent

AT-06705

9) Install the oil pump chain cover.

Tightening torque:

21 N·m (2.1 kgf-m, 15.5 ft-lb)

CVT00870

10) Install the torque converter assembly. <Ref. to CVT(TR580)-167, INSTALLATION, Torque Converter Assembly.>

11) Install the transmission assembly to the vehicle. <Ref. to CVT(TR580)-71, INSTALLATION, Automatic Transmission Assembly.>

Oil Pump Chain

CONTINUOUSLY VARIABLE TRANSMISSION

C: DISASSEMBLY

1. DRIVE SPROCKET

1) Remove the snap ring.

AT-06706

2) Remove the ball bearing using ST.

ST2 399513600 INSTALLER

AT-05411

D: ASSEMBLY

1. DRIVE SPROCKET

1) Using the ST, install the ball bearing.

NOTE:

Use a new ball bearing.

ST 499755502 PRESS SNAP RING

AT-05412

2) Install the snap ring.

AT-06706

E: INSPECTION

- Check the oil pump chain for damage.
- Replace if gear teeth are broken, damaged, sharpen or excessively worn.
- Check the bearing for seizure or wear.
- Apply CVTF to bearing and rotate the bearing to check for noise or dragging etc.
- Check the oil pump chain cover for damage.
- Check for leakage of CVTF from the mating surface of oil pump chain cover.
- Check the oil seal for damage.

Oil Pump

CONTINUOUSLY VARIABLE TRANSMISSION

44.Oil Pump

A: REMOVAL

- 1) Remove the transmission assembly from the vehicle. <Ref. to CVT(TR580)-59, REMOVAL, Automatic Transmission Assembly.>
- 2) Remove the torque converter assembly. <Ref. to CVT(TR580)-166, REMOVAL, Torque Converter Assembly.>
- 3) Remove the oil pump chain cover. <Ref. to CVT(TR580)-335, REMOVAL, Oil Pump Chain.>
- 4) Remove the oil pump and the plate.

- 5) Remove the O-ring.

B: INSTALLATION

1) Install the O-ring.

NOTE:

- Use new O-rings.
- Apply CVTF to the O-ring.

2) Install the plate and the oil pump.

NOTE:

Apply CVTF to the bolt.

Tightening torque:

8.5 N·m (0.9 kgf-m, 6.3 ft-lb)

3) Install the oil pump chain cover. <Ref. to CVT(TR580)-338, INSTALLATION, Oil Pump Chain.>

4) Install the torque converter assembly. <Ref. to CVT(TR580)-167, INSTALLATION, Torque Converter Assembly.>

5) Install the transmission assembly to the vehicle. <Ref. to CVT(TR580)-71, INSTALLATION, Automatic Transmission Assembly.>

Oil Pump

CONTINUOUSLY VARIABLE TRANSMISSION

C: INSPECTION

Check the following items.

- Check the oil pump for damage and wear.
 - Rotate the oil pump by hand, and check that it rotates smoothly.
- 1) Measure the secondary pressure. <Ref. to CVT(TR580)-49, INSPECTION, Secondary Pressure (Line Pressure) Test.>
 - 2) Remove the oil pan and oil strainer. <Ref. to CVT(TR580)-115, REMOVAL, Oil Pan and Strainer.>
 - 3) Check oil strainer for clogging.
- When oil strainer has no clogging, replace the oil pump.

45. Converter Case

A: REMOVAL

- 1) Remove the transmission assembly from the vehicle. <Ref. to CVT(TR580)-59, REMOVAL, Automatic Transmission Assembly.>
- 2) Remove the air breather hose. <Ref. to CVT(TR580)-160, REMOVAL, Air Breather Hose.>
- 3) Remove the control valve body. <Ref. to CVT(TR580)-119, REMOVAL, Control Valve Body.>
- 4) Remove the transmission harness. <Ref. to CVT(TR580)-134, REMOVAL, Transmission Harness.>
- 5) Remove the turbine speed sensor. <Ref. to CVT(TR580)-106, REMOVAL, Turbine Speed Sensor.>

- 7) Install the primary pulley, secondary pulley and variator chain. <Ref. to CVT(TR580)-238, INSTALLATION, Primary Pulley and Secondary Pulley.>
- 8) Install the reduction drive gear. <Ref. to CVT(TR580)-227, INSTALLATION, Reduction Drive Gear.>
- 9) Install the transmission case. <Ref. to CVT(TR580)-211, INSTALLATION, Transmission Case.>
- 10) Install the transmission control device. <Ref. to CVT(TR580)-205, INSTALLATION, Transmission Control Device.>
- 11) Install the oil strainer and oil pan. <Ref. to CVT(TR580)-116, INSTALLATION, Oil Pan and Strainer.>

Converter Case

CONTINUOUSLY VARIABLE TRANSMISSION

- 12) Install the reduction driven gear assembly. <Ref. to CVT(TR580)-194, INSTALLATION, Reduction Driven Gear.>
- 13) Install the transfer driven gear assembly. <Ref. to CVT(TR580)-190, INSTALLATION, Transfer Driven Gear.>
- 14) Install the transfer clutch assembly. <Ref. to CVT(TR580)-176, INSTALLATION, Transfer Clutch.>
- 15) Install the parking pawl. <Ref. to CVT(TR580)-193, INSTALLATION, Parking Pawl.>
- 16) Install the extension case. <Ref. to CVT(TR580)-171, INSTALLATION, Extension Case.>
- 17) Install the inhibitor switch. <Ref. to CVT(TR580)-103, INSTALLATION, Inhibitor Switch.>
- 18) Install the secondary speed sensor. <Ref. to CVT(TR580)-108, INSTALLATION, Secondary Speed Sensor.>
- 19) Install the primary speed sensor. <Ref. to CVT(TR580)-111, INSTALLATION, Primary Speed Sensor.>
- 20) Install the turbine speed sensor. <Ref. to CVT(TR580)-106, INSTALLATION, Turbine Speed Sensor.>
- 21) Install the transmission harness. <Ref. to CVT(TR580)-141, INSTALLATION, Transmission Harness.>
- 22) Install the control valve body. <Ref. to CVT(TR580)-126, INSTALLATION, Control Valve Body.>
- 23) Install the air breather hose. <Ref. to CVT(TR580)-162, INSTALLATION, Air Breather Hose.>
- 24) Install the transmission assembly to the vehicle. <Ref. to CVT(TR580)-71, INSTALLATION, Automatic Transmission Assembly.>

C: DISASSEMBLY

- 1) Remove the pitching stopper bracket and transmission radio ground cord, if mounted.
- 2) Remove the filler plug, oil drain plug and overflow drain plug. <Ref. to CVT(TR580)-43, REPLACEMENT, Differential Gear Oil.>
- 3) Remove all plugs.

D: ASSEMBLY

1) Install the oil drain plug.

Tightening torque:

70 N·m (7.1 kgf-m, 51.6 ft-lb)

2) Install the overflow drain plug.

NOTE:

Overflow plug of differential gear oil is temporarily attached.

3) Install all plugs.

NOTE:

Use new O-rings.

Tightening torque:

T1: 22 N·m (2.2 kgf-m, 16.2 ft-lb)

T2: 22.5 N·m (2.3 kgf-m, 16.6 ft-lb)

AT-06710

4) Install the pitching stopper bracket and transmission radio ground cord.

CAUTION:

Be careful not to deform or damage the terminal of transmission radio ground cord.

Tightening torque:

41 N·m (4.2 kgf-m, 30.2 ft-lb)

E: INSPECTION

- Check for leakage of CVTF from the connection between converter case and transmission case.
- Check there is no damage or cracks on the converter case.

Diagnostics with Phenomenon

CONTINUOUSLY VARIABLE TRANSMISSION

46. Diagnostics with Phenomenon

A: INSPECTION

Symptoms	Faulty parts
Stall speed is low after warming-up, with select lever in "D" or "R" range.	Engine control system
Vehicle does not move despite engine speed rising up, with select lever in "D" or "R" range.	<ul style="list-style-type: none"> • Engine control system • Select cable • CVTF • Secondary pressure circuit • Pulley, gear and variator chain • Forward/reverse changeover section • TCM • Control valve body • Inhibitor switch
Vehicle does not move by engine stall, with select lever in "D" or "R" range.	<ul style="list-style-type: none"> • Parking mechanism • Select cable • Bearing • Forward/reverse changeover section
Excessive shock occurs at starting, with select lever in "D" or "R" range.	<ul style="list-style-type: none"> • Secondary pressure circuit • Pulley, gear and variator chain
Acceleration speed from standstill is insufficient, with select lever in "D" or "R" range.	<ul style="list-style-type: none"> • Control valve body • Forward/reverse changeover section
Engine speed suddenly rises up during driving, with select lever in "D" or "R" range.	<ul style="list-style-type: none"> • Control valve body • Secondary pressure circuit • Primary pressure circuit
Vibration occurs during driving, with select lever in "D" or "R" range.	<ul style="list-style-type: none"> • Secondary pressure circuit • Primary pressure circuit • Forward/reverse changeover section • Pulley and variator chain • Torque converter assembly • Hydraulic pressure circuit to torque converter • Control valve body
Sudden braking occurs during driving, with select lever in "D" or "R" range.	<ul style="list-style-type: none"> • Secondary pressure circuit • Primary pressure circuit • Control valve body
During deceleration, lockup clutch does not disengage until just before halting, with select lever in "D" or "R" range.	<ul style="list-style-type: none"> • Control valve body • Torque converter assembly
Engine stalls with vehicle at a standstill, with select lever in "D" or "R" range.	<ul style="list-style-type: none"> • Engine control system • Control valve body
Excessive lockup shock occurs during driving, with select lever in "D" range.	Control valve body
Slipping occurs at lockup, or lockup does not occur during driving, with select lever in "D" range.	<ul style="list-style-type: none"> • Control valve body • Lockup hydraulic line • Torque converter assembly
Excessive shift shock occurs when shifting the select lever from "N" range to "D" range, or from "N" range to "R" range.	<ul style="list-style-type: none"> • Inhibitor switch • Control valve body • Forward/reverse changeover section
Vehicle does not keep at standstill with select lever in "P" range, or parking cannot be released when shifting from "P" range to another range.	<ul style="list-style-type: none"> • Select cable • Parking mechanism
Select lever does not shift smoothly.	<ul style="list-style-type: none"> • Select cable • Inhibitor switch • Detent spring • Manual plate

Basic Diagnostic Procedure

CONTINUOUSLY VARIABLE TRANSMISSION (DIAGNOSTICS)

1. Basic Diagnostic Procedure

A: PROCEDURE

Step	Check	Yes	No
1 CHECK PRE-INSPECTION. 1) Ask the customer when and how the trouble occurred using the interview check list. <Ref. to CVT(diag)-4, Check List for Interview.> 2) Before performing diagnostics, check the following items which might affect CVT problems. <ul style="list-style-type: none"> • General inspection <Ref. to CVT(diag)-5, INSPECTION, General Description.> • Disconnection of harness connector • Visual check for harness damage • Oil leakage • Stall speed test <Ref. to CVT(TR580)-47, Stall Test.> • Secondary pressure test <Ref. to CVT(TR580)-49, Secondary Pressure (Line Pressure) Test.> • Transfer clutch pressure test <Ref. to CVT(TR580)-52, Transfer Clutch Pressure Test.> • Time lag test <Ref. to CVT(TR580)-48, Time Lag Test.> • Road test <Ref. to CVT(TR580)-46, Road Test.> • Inhibitor switch <Ref. to CVT(TR580)-97, Inhibitor Switch.> 	Is the check result OK?	Go to step 2.	Repair the items which may be affecting the CVT trouble.
2 CHECK AT OIL TEMP LIGHT. Turn the ignition switch to ON and wait for at least 2 seconds.	Does the AT OIL TEMP light illuminate?	Go to step 3.	Check the AT OIL TEMP light.
3 CHECK AT OIL TEMP LIGHT. Start the engine and wait for 2 seconds or more.	Does the AT OIL TEMP light blink?	Go to step 4.	Go to step 5.
4 CHECK DTC DISPLAY. Read the DTC. NOTE: If the communication function of Subaru Select Monitor cannot be executed normally, check the communication circuit. <Ref. to CVT(diag)-34, COMMUNICATION FOR INITIALIZING IMPOSSIBLE, Diagnostic Procedure for Subaru Select Monitor Communication.>	Is DTC displayed on Subaru Select Monitor?	Record the DTC, time stamp and freeze frame data. Go to step 6. NOTE: • For the time stamp, refer to LAN section. <Ref. to LAN(diag)-6, TIME STAMP, CAUTION, General Description.> • Depending on DTCs, time stamp may not be stored.	Go to step 5.

Basic Diagnostic Procedure

Step	Check	Yes	No
<p>5</p> <p>PERFORM GENERAL DIAGNOSTICS.</p> <p>1) Inspect using "Diagnostic Procedure without Diagnostic Trouble Code (DTC)". <Ref. to CVT(diag)-160, Diagnostic Procedure without Diagnostic Trouble Code (DTC).></p> <p>2) Inspect using "Diagnostics with Phenomenon". <Ref. to CVT(diag)-161, Diagnostics with Phenomenon.></p> <p>3) Perform the Inspection Mode. <Ref. to CVT(diag)-21, Inspection Mode.></p> <p>4) Read the DTC.</p>	<p>Is DTC displayed on Subaru Select Monitor?</p>	<p>Go to step 6.</p>	<p>Finish the diagnosis.</p>
<p>6</p> <p>PERFORM DIAGNOSIS.</p> <p>1) Inspect by referring to "Diagnostic Procedure with Diagnostic Trouble Code (DTC)". <Ref. to CVT(diag)-41, Diagnostic Procedure with Diagnostic Trouble Code (DTC).></p> <p>NOTE: For the DTC table, refer to "List of Diagnostic Trouble Code (DTC)". <Ref. to CVT(diag)-36, List of Diagnostic Trouble Code (DTC).></p> <p>2) Repair the trouble cause.</p> <p>3) Perform the Clear Memory Mode.</p> <p>4) Perform the Inspection Mode. <Ref. to CVT(diag)-21, Inspection Mode.></p> <p>5) Read the DTC.</p>	<p>Is DTC displayed on Subaru Select Monitor?</p>	<p>Inspect by referring to "Diagnostic Procedure with Diagnostic Trouble Code (DTC)". <Ref. to CVT(diag)-41, Diagnostic Procedure with Diagnostic Trouble Code (DTC).></p>	<p>Finish the diagnosis.</p>

Check List for Interview

CONTINUOUSLY VARIABLE TRANSMISSION (DIAGNOSTICS)

2. Check List for Interview

A: CHECK

Check the following items when a problem has occurred.

NOTE:

Use copies of this page for interviewing customers.

Customer's name			
Date of purchase			
Date of repair			
Transmission model	Transmission	V.I.N.	
Odometer reading	km (miles)		
Frequency	<input type="checkbox"/> Continuous <input type="checkbox"/> Intermittent (times/day)		
Weather	<input type="checkbox"/> Fine <input type="checkbox"/> Cloudy <input type="checkbox"/> Rainy <input type="checkbox"/> Snowy <input type="checkbox"/> Other ()		
Place	<input type="checkbox"/> Highland <input type="checkbox"/> Suburbs <input type="checkbox"/> Inner city <input type="checkbox"/> Uphill <input type="checkbox"/> Downhill <input type="checkbox"/> Rough road <input type="checkbox"/> Other ()		
Ambient air temperature	<input type="checkbox"/> Hot <input type="checkbox"/> Warm <input type="checkbox"/> Cool <input type="checkbox"/> Cold		
Vehicle speed	km/h (MPH)		
AT OIL TEMP light	<input type="checkbox"/> Blinks continuously		<input type="checkbox"/> Does not blink
Select lever position	<input type="checkbox"/> P <input type="checkbox"/> R <input type="checkbox"/> N <input type="checkbox"/> D <input type="checkbox"/> Manual mode <input type="checkbox"/> L range		
Driving condition	<input type="checkbox"/> Not affected <input type="checkbox"/> At racing <input type="checkbox"/> While decelerating	<input type="checkbox"/> At starting <input type="checkbox"/> While accelerating <input type="checkbox"/> While turning (<input type="checkbox"/> RH/ <input type="checkbox"/> LH)	<input type="checkbox"/> While idling <input type="checkbox"/> When cruising (Vehicle speed km/h) <input type="checkbox"/> Immediately after starting the engine
Manual mode	<input type="checkbox"/> ON <input type="checkbox"/> OFF		
Symptoms	<input type="checkbox"/> Vehicle does not move (<input type="checkbox"/> Any position <input type="checkbox"/> Particular position)		
	<input type="checkbox"/> Vehicle does not move (no load racing condition as in N range)		
	<input type="checkbox"/> Vehicle does not move (engine speed does not increase, felt as stall condition)		
	<input type="checkbox"/> Noise or vibration (Describe concretely:)		
	<input type="checkbox"/> Shock felt at N → D selection (seconds after shifting, when engine cold or after warm-up)		
	<input type="checkbox"/> Shock felt at N → R selection (seconds after shifting, when engine cold or after warm-up)		
	<input type="checkbox"/> Shifting is wrong (Describe concretely:)		
	<input type="checkbox"/> Shock or judder during driving		
	<input type="checkbox"/> Fails to accelerate.		
	<input type="checkbox"/> Engine speed increases abruptly during driving		
	<input type="checkbox"/> Shock or judder during standing start		
	<input type="checkbox"/> Select lever does not move		
	<input type="checkbox"/> Other ()		

General Description

CONTINUOUSLY VARIABLE TRANSMISSION (DIAGNOSTICS)

3. General Description

A: CAUTION

1) The airbag system wiring harness is routed near the TCM.

CAUTION:

- All the airbag system wiring harnesses and connectors are colored yellow. Do not use an electric test equipment to check these circuits.
- Be careful not to damage the airbag system wiring harness when performing diagnostics or servicing the TCM.

2) When measuring the voltage or resistance of individual sensor or all electrical control modules, use a tapered pin with a diameter of 0.6 mm (0.024 in) or less and touch it to the tip of terminal. Never insert the tapered pin into the terminal because it deforms inside which may lead to malfunction.

CAUTION:

If a taper pin or the like has been inserted into the connector terminal, replace the connector.

3) The TCM connector is waterproof. When measuring the TCM connector terminal voltage, or the resistance between the terminals, use the ST.

ST 18460AA040 CHECK BOARD

B: INSPECTION

1. BATTERY

Check the battery. <Ref. to SC(H4DO)-52, INSPECTION, Battery.>

2. TRANSMISSION GROUND

Make sure that the ground terminal bolt is tightened securely.

Tightening torque:

14 N·m (1.4 kgf·m, 10.3 ft·lb)

3. OPERATION OF SHIFT SELECT LEVER

Make sure there is no noise, dragging or contact pattern in each select lever range.

WARNING:

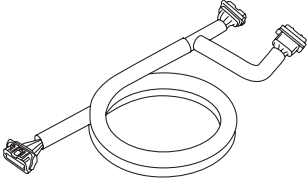

Stop the engine while checking operation of the select lever.

A: OPERATION

1. HOW TO USE SUBARU SELECT MONITOR

For detailed operation procedures, refer to “Application help”.

2. READ CURRENT DATA

- 1) On «Start» display, select «Diagnosis».
- 2) On «Vehicle selection» display, input the vehicle information and select «Confirmed».
- 3) On «Main Menu» display, select «Each System».
- 4) On «Select System» display, select «Transmission Control System».
- 5) On «Select Function» display, select «Data Monitor».

Display	Contents	Unit of measure
Engine Speed	Engine speed signal transmitted from the ECM. Calculated from crankshaft position sensor signal. TCM input value.	rpm
Turbine Revolution Speed	Turbine rotation speed calculated by the TCM using signals from the turbine speed sensor.	rpm
Accel opening angle	Accelerator pedal opening angle transmitted from the ECM. Value calculated from the accelerator pedal position sensor output. TCM input value.	%
Front Wheel Speed	Front wheel speed calculated from the secondary axis rotation speed.	km/h or MPH
ATF Temperature	Value calculated from the ATF temperature sensor output value. ATF temperature of the control valve section.	°C or °F
Lock Up Duty Ratio	Lock-up duty solenoid control duty ratio. TCM output value.	%
Transfer Duty Ratio	Transfer duty solenoid control duty ratio. TCM output value.	%
Actual Gear Ratio	Current gear ratio (rotation ratio of the pulley) calculated from the primary pulley axis rotation speed and the secondary pulley axis rotation speed.	—
Primary Rev Speed	Primary pulley rotation speed calculated by the TCM using signals from the primary speed sensor.	rpm
Secondary Rev Speed	Secondary pulley rotation speed calculated by the TCM using signals from the secondary speed sensor.	rpm
Stop Light Switch	Stop light SW signal. Set to ON when the brake pedal is depressed. TCM input value.	ON or OFF
Secondary Set Current	Value of the indicator current for controlling the secondary solenoid calculated by the TCM.	mA
Secondary Actual Current	Actual current value of the secondary solenoid. TCM output value.	mA
F&R Linear Solenoid Set Current	Value of the indicator current for controlling the F&R linear solenoid calculated by the TCM.	mA
F&R Linear Solenoid Actual Current	Actual current value of the F&R linear solenoid. TCM output value.	mA
ECU ACC	Battery voltage. TCM input value.	V
Primary UP Duty	Primary UP solenoid control duty ratio. TCM output value.	%
Primary DOWN Duty	Primary DOWN solenoid control duty ratio. TCM output value.	%
P Range	Inhibitor SW signal. Set to ON when the select lever is in P range. TCM input value.	ON or OFF
R Range	Inhibitor SW signal. Set to ON when the select lever is in R range. TCM input value.	ON or OFF
N Range	Inhibitor SW signal. Set to ON when the select lever is in N range. TCM input value.	ON or OFF
D Range	Inhibitor SW signal. Set to ON when the select lever is in D range. TCM input value.	ON or OFF
L Range	L range signal. Set to ON when the select lever is in the L range gate. TCM input value.	ON or OFF

Subaru Select Monitor

CONTINUOUSLY VARIABLE TRANSMISSION (DIAGNOSTICS)

Display	Contents	Unit of measure
Shift Step in Manual Mode	Gear shift position in manual mode or in multi-stage shifting mode. TCM output value.	—
Tiptronic Mode Switch	Manual mode SW signal. Set to ON when the select lever is in the manual shift gate. TCM input value.	ON or OFF
Up Switch	Status of the paddle shift up SW. Set to ON when the plus (+) side of the steering wheel paddle shift is pulled. TCM input value.	ON or OFF
Down Switch	Status of the paddle shift down SW. Set to ON when the minus (-) side of the steering wheel paddle shift is pulled. TCM input value.	ON or OFF
secondary pressure sensor voltage.	Voltage value after an analog/digital conversion is done inside the TCM using the signal input from the secondary pressure sensor. TCM input value.	V
ATF Temp sensor voltage.	Sensor voltage value input from the ATF temperature sensor to the TCM. TCM input value.	V
Diagnosis Lamp	Transmission failure detection status. Set to ON when a failure is detected. AT oil temperature warning light blinks at 2 Hz. TCM output value.	ON or OFF
ATF Temperature Lamp	ATF high temperature detection status. Set to ON when high temperature is detected. AT oil temperature warning light illuminates. TCM output value.	ON or OFF
AT learning	AT initial learning completion status. AT oil temperature warning light blinks at 4 Hz when the learning is not completed. TCM output value.	Complete or Not Completed
Ignition SW ON Count	Number of times the ignition switch is turned ON since the vehicle was manufactured.	times
Count	Shows whether the elapsed time counter after turning ON the ignition switch is synchronized with the integrated unit (master unit) or an original counter. "Common" means the integrated unit, and "Originally" means that the original counter is used.	—
Time Count	Shows the elapsed time after turning ON the ignition switch.	ms
Actual Secondary Pressure	Pressure value applied to the secondary pulley cylinder (line pressure) detected by the secondary pressure sensor.	MPa
System Voltage	Power supply voltage supplied to the backup power supply (\approx battery voltage).	V

NOTE:

For detailed operation procedures, refer to "Application help".

secondary pressure sensor voltage.	Voltage value after an analog/digital conversion is done inside the TCM using the signal input from the secondary pressure sensor. TCM input value.	V
ATF Temp sensor voltage.	Sensor voltage value input from the ATF temperature sensor to the TCM. TCM input value.	V
Diagnosis Lamp	Transmission failure detection status. Set to ON when a failure is detected. AT oil temperature warning light blinks at 2 Hz. TCM output value.	ON or OFF
ATF Temperature Lamp	ATF high temperature detection status. Set to ON when high temperature is detected. AT oil temperature warning light illuminates. TCM output value.	ON or OFF
Ignition SW ON Count	Number of times the ignition switch is turned ON since the vehicle was manufactured.	times
Count	Shows whether the elapsed time counter after turning ON the ignition switch is synchronized with the integrated unit (master unit) or an original counter. "Common" means the integrated unit, and "Originally" means that the original counter is used.	—
Time Count	Shows the elapsed time after turning ON the ignition switch.	ms
Actual Secondary Pressure	Pressure value applied to the secondary pulley cylinder (line pressure) detected by the secondary pressure sensor.	MPa
System Voltage	Power supply voltage supplied to the backup power supply (\approx battery voltage).	V

NOTE:

For detailed operation procedures, refer to "Application help".

Read Diagnostic Trouble Code (DTC)

CONTINUOUSLY VARIABLE TRANSMISSION (DIAGNOSTICS)

7. Read Diagnostic Trouble Code (DTC)

A: OPERATION

- 1) On «Start» display, select «Diagnosis».
- 2) On «Vehicle selection» display, input the vehicle information and select «Confirmed».
- 3) On «Main Menu» display, select «Each System».
- 4) On «Select System» display, select «Transmission Control System».
- 5) On «Select Function» display, select «DTC».

NOTE:

- For details concerning the DTC, refer to “List of Diagnostic Trouble Code (DTC)”. <Ref. to CVT(diag)-36, List of Diagnostic Trouble Code (DTC).>
- For detailed operation procedures, refer to “Application help”.

Clear Memory Mode

CONTINUOUSLY VARIABLE TRANSMISSION (DIAGNOSTICS)

8. Clear Memory Mode

A: OPERATION

- 1) On «Start» display, select «Diagnosis».
- 2) On «Vehicle selection» display, input the vehicle information and select «Confirmed».
- 3) On «Main Menu» display, select «Each System».
- 4) On «Select System» display, select «Transmission Control System».
- 5) On «Select Function» display, select «DTC».
- 6) On «DTC» display, select «Clear Memory».

NOTE:

For detailed operation procedures, refer to “Application help”.

9. Inspection Mode

A: PROCEDURE

<Ref. to CVT(TR580)-46, Road Test.>

Drive Cycle

CONTINUOUSLY VARIABLE TRANSMISSION (DIAGNOSTICS)

10. Drive Cycle

A: PROCEDURE

It is possible to complete diagnosis of the DTC by performing the indicated drive cycle. After the repair for the DTC, perform a necessary drive cycle and make sure the function recovers and the DTC is recorded.

1. PREPARATION FOR DRIVE CYCLE

- 1) Check that the battery voltage is 12 V or more and fuel remains approx. half [20 — 40 L (5.3 — 10.6 US gal, 4.4 — 8.8 Imp gal)].
- 2) After performing the diagnostics and Clear Memory Mode, check that no DTC remains. <Ref. to CVT(diag)-20, Clear Memory Mode.>

NOTE:

Perform the drive cycle after warming up the engine except when the ATF temperature at engine start is specified.

2. DRIVE CYCLE A

DTC	Item	Condition
P0601	INTERNAL CONTROL MODULE MEMORY CHECKSUM ERROR	Perform the drive cycle A twice.
P0604	INTERNAL CONTROL MODULE RANDOM ACCESS MEMORY (RAM) ERROR	Perform the drive cycle A twice.
P062F	INTERNAL CONTROL MODULE EEPROM ERROR	Perform the drive cycle A twice.
P0712	TRANSMISSION FLUID TEMPERATURE SENSOR "A" CIRCUIT LOW	—
P0776	PRESSURE CONTROL SOLENOID "B" PERFORMANCE/STUCK OFF	Perform the drive cycle D, then the drive cycle A, and perform the drive cycle D again.
P0842	TRANSMISSION FLUID PRESSURE SENSOR/SWITCH "A" CIRCUIT LOW	—
P0843	TRANSMISSION FLUID PRESSURE SENSOR/SWITCH "A" CIRCUIT HIGH	—
P0890	TCM POWER RELAY SENSE CIRCUIT LOW	—
P0962	PRESSURE CONTROL SOLENOID "A" CONTROL CIRCUIT LOW	—
P0963	PRESSURE CONTROL SOLENOID "A" CONTROL CIRCUIT HIGH	—
P0966	PRESSURE CONTROL SOLENOID "B" CONTROL CIRCUIT LOW	—
P0967	PRESSURE CONTROL SOLENOID "B" CONTROL CIRCUIT HIGH	—
P160A	RANDOM ACCESS MEMORY (RAM) ERROR	Perform the drive cycle A twice.
P2530	IGNITION SWITCH RUN POSITION CIRCUIT	—
P2763	TORQUE CONVERTER CLUTCH PRESSURE CONTROL SOLENOID CONTROL CIRCUIT HIGH	Perform the drive cycle A, then perform the drive cycle C.

Diagnostic procedure:

- 1) Start the engine.
- 2) Depress the brake pedal and move the select lever to each range at an interval of five seconds.

NOTE:

Move the select lever in the following order: "P" → "R" → "N" → "D" → "N" → "R" → "P".

3. DRIVE CYCLE B

DTC	Item	Condition
P0711	TRANSMISSION FLUID TEMPERATURE SENSOR "A" CIRCUIT RANGE/ PERFORMANCE	Perform the drive cycle B twice.

Diagnostic procedure:

- 1) Start the engine under condition that ATF temperature is at 20°C (68°F) or below.
- 2) Drive in any driving pattern for 20 minutes. (Include driving at a constant legal speed (for 20 seconds) at least once.)

Drive Cycle

CONTINUOUSLY VARIABLE TRANSMISSION (DIAGNOSTICS)

4. DRIVE CYCLE C

DTC	Item	Condition
P0500	VEHICLE SPEED SENSOR "A" CIRCUIT	—
P0716	INPUT/TURBINE SHAFT SPEED SENSOR "A" CIRCUIT RANGE/PERFORMANCE	—
P0717	INPUT/TURBINE SHAFT SPEED SENSOR "A" CIRCUIT NO SIGNAL	—
P0970	PRESSURE CONTROL SOLENOID "C" CONTROL CIRCUIT LOW	—
P0971	PRESSURE CONTROL SOLENOID "C" CONTROL CIRCUIT HIGH	—
P0973	SHIFT SOLENOID "A" CONTROL CIRCUIT LOW	—
P0974	SHIFT SOLENOID "A" CONTROL CIRCUIT HIGH	—
P0976	SHIFT SOLENOID "B" CONTROL CIRCUIT LOW	—
P0977	SHIFT SOLENOID "B" CONTROL CIRCUIT HIGH	—
P2746	INTERMEDIATE SHAFT SPEED SENSOR "B" CIRCUIT RANGE/PERFORMANCE	—
P2747	INTERMEDIATE SHAFT SPEED SENSOR "B" CIRCUIT NO SIGNAL	—
P2750	INTERMEDIATE SHAFT SPEED SENSOR "C" CIRCUIT RANGE/PERFORMANCE	—
P2751	INTERMEDIATE SHAFT SPEED SENSOR "C" CIRCUIT NO SIGNAL	—
P2763	TORQUE CONVERTER CLUTCH PRESSURE CONTROL SOLENOID CONTROL CIRCUIT HIGH	Perform the drive cycle A, then perform the drive cycle C.
P2764	TORQUE CONVERTER CLUTCH PRESSURE CONTROL SOLENOID CONTROL CIRCUIT LOW	—

Diagnostic procedure:

- 1) Start the engine.
- 2) Accelerate slowly to a legal speed, and then decelerate slowly to a stop.

5. DRIVE CYCLE D

DTC	Item	Condition
P0713	TRANSMISSION FLUID TEMPERATURE SENSOR "A" CIRCUIT HIGH	—
P0730	INCORRECT GEAR RATIO	—
P0746	PRESSURE CONTROL SOLENOID "A" PERFORMANCE/STUCK OFF	Perform the drive cycle D twice.
P0747	PRESSURE CONTROL SOLENOID "A" STUCK ON	Perform the drive cycle D twice.
P0751	SHIFT SOLENOID "A" PERFORMANCE/STUCK OFF	Perform the drive cycle D twice.
P0752	SHIFT SOLENOID "A" STUCK ON	Perform the drive cycle D twice.
P0756	SHIFT SOLENOID "B" PERFORMANCE/STUCK OFF	Perform the drive cycle D twice.
P0757	SHIFT SOLENOID "B" STUCK ON	Perform the drive cycle D twice.
P0776	PRESSURE CONTROL SOLENOID "B" PERFORMANCE/STUCK OFF	Perform the drive cycle D, then the drive cycle A, and perform the drive cycle D again.
P0841	TRANSMISSION FLUID PRESSURE SENSOR/SWITCH "A" CIRCUIT RANGE/PERFORMANCE	—
P0961	PRESSURE CONTROL SOLENOID "A" CONTROL CIRCUIT RANGE/PERFORMANCE	—
P0965	PRESSURE CONTROL SOLENOID "B" CONTROL CIRCUIT RANGE/PERFORMANCE	—
P2757	TORQUE CONVERTER CLUTCH PRESSURE CONTROL SOLENOID CONTROL CIRCUIT PERFORMANCE/STUCK OFF	Perform the drive cycle D twice.
P2758	TORQUE CONVERTER CLUTCH PRESSURE CONTROL SOLENOID CONTROL CIRCUIT STUCK ON	Perform the drive cycle D twice.

Diagnostic procedure:

- 1) Start the engine.
- 2) Drive in any driving pattern for 20 minutes. (Include driving at a constant legal speed (for 20 seconds) at least once.)

Drive Cycle

CONTINUOUSLY VARIABLE TRANSMISSION (DIAGNOSTICS)

6. DRIVE CYCLE E

DTC	Item	Condition
P0801	REVERSE INHIBIT CONTROL CIRCUIT/OPEN	—
U0073	CONTROL MODULE COMMUNICATION BUS OFF	—
U0100	LOST COMMUNICATION WITH ECM/PCM "A"	—
U0122	LOST COMMUNICATION WITH VEHICLE DYNAMICS CONTROL MODULE	—
U0140	LOST COMMUNICATION WITH BODY CONTROL MODULE	—
U0155	LOST COMMUNICATION WITH INSTRUMENT PANEL CLUSTER (IPC) CONTROL MODULE	—
U0164	LOST COMMUNICATION WITH HVAC CONTROL MODULE	—
U0401	INVALID DATA RECEIVED FROM ECM/PCM "A"	—
U0416	INVALID DATA RECEIVED FROM VEHICLE DYNAMICS CONTROL MODULE	—
U0422	INVALID DATA RECEIVED FROM BODY CONTROL MODULE	—
U0423	INVALID DATA RECEIVED FROM INSTRUMENT PANEL CLUSTER CONTROL MODULE	—
U0424	INVALID DATA RECEIVED FROM HVAC CONTROL MODULE	—
U1235	LOST COMMUNICATION WITH EyeSight	—
U1433	INVALID DATA RECEIVED FROM EyeSight	—

Diagnostic procedure:

- 1) Start the engine.

7. DRIVE CYCLE F

DTC	Item	Condition
P0705	TRANSMISSION RANGE SENSOR "A" CIRCUIT (PRNDL INPUT)	—

Diagnostic procedure:

- 1) Start the engine.
- 2) Depress the brake pedal and move the select lever to each range at an interval of five seconds.

NOTE:

Move the select lever in the following order: "P" → "R" → "N" → "D".

- 3) Maintain the engine speed to 2,000 rpm for five seconds or more.

8. DRIVE CYCLE G

DTC	Item	Condition
P0708	TRANSMISSION RANGE SENSOR "A" CIRCUIT HIGH	—

Diagnostic procedure:

- 1) Start the engine.
- 2) Drive for three seconds at 16 km/h (10 MPH).

NOTE:

Drive in "D" range and "R" range.

Drive Cycle

CONTINUOUSLY VARIABLE TRANSMISSION (DIAGNOSTICS)

9. DRIVE CYCLE H

DTC	Item	Condition
P0719	BRAKE SWITCH "B" CIRCUIT LOW	—
P0724	BRAKE SWITCH "B" CIRCUIT HIGH	—
P0951	AUTO SHIFT MANUAL CONTROL CIRCUIT RANGE/PERFORMANCE	—
P170A	L-RANGE SWITCH	—

Diagnostic procedure:

- 1) Start the engine.
- 2) Operate the stop light switch or the manual mode switch.

NOTE:

Drive in "D" range and "R" range.

- 3) Read the data of the stop light switch or the manual mode switch using the Subaru Select Monitor. Or measure the terminal voltage.

Active Test

CONTINUOUSLY VARIABLE TRANSMISSION (DIAGNOSTICS)

11.Active Test

A: OPERATION

CAUTION:

- Be sure to perform the active test while the engine is not running.
- After executing the active test, execute the Clear Memory Mode.

- 1) On «Start» display, select «Diagnosis».
- 2) On «Vehicle selection» display, input the vehicle information and select «Confirmed».
- 3) On «Main Menu» display, select «Each System».
- 4) On «Select System» display, select «Transmission Control System».
- 5) On «Select Function» display, select «Active Test».

Item	SSM display	Execution condition
Activating the actuator ON/OFF	F&R Clutch Solenoid	When all of the following conditions are met: <ul style="list-style-type: none">• P range• Ignition switch is ON (engine stops)• Battery voltage is 10.9 V or more
	Secondary Solenoid	
	Primary Down Solenoid	
	Primary Up Solenoid	
	AWD Solenoid	
	Lock-Up Duty Solenoid	

NOTE:

For detailed operation procedures, refer to “Application help”.

12. Learning Control

A: GENERAL DESCRIPTION

- Follow the messages displayed on the Subaru Select Monitor when working.
- When the following work is performed, perform learning work for the transmission.

Replacement of TCM/Replacement or disassembly of transmission assembly/Replacement of control valve body/Clearing AT leaning value is executed.

B: PROCEDURE

1. PREPARATION FOR LEARNING

- 1) Warm up or cool down until the ATF temperature displayed on the Subaru Select Monitor is 40 — 65°C (104 — 149°F).
- 2) After stopping the vehicle, shift the select lever to “P” range.
- 3) Fully apply the parking brake.
- 4) Lift up the vehicle.

CAUTION:

While working, be sure to keep the lower edge of the tires 30 cm or more above the ground as vehicle will vibrate.

- 5) Connect the Subaru Select Monitor to data link connector.
- 6) Turn the ignition switch to ON.
- 7) Turn off all switches causing an electrical load, such as headlights, A/C, seat heater and rear defogger, etc.

2. SIMPLE LEARNING

NOTE:

Simple learning is performed with the vehicle lifted, without actually running the vehicle.

CAUTION:

Do not turn the power of the Subaru Select Monitor OFF during work, and do not disconnect the data link connector.

- 1) On «Start» display, select «Diagnosis».
- 2) On «Vehicle selection» display, input the vehicle information and select «Confirmed».
- 3) On «Main Menu» display, select «Each System».
- 4) On «Select System» display, select «Transmission Control System».
- 5) On «Select Function» display, select «Work Support».
- 6) On «Work Support» display, select «AT learning mode».
- 7) Follow the messages displayed on the screen when working.

NOTE:

During AT learning in progress, AT OIL TEMP light in the combination meter starts flashing at 2 Hz and the learning operation starts. The following message is displayed on the screen when the AT OIL TEMP light which was flashing at 2 Hz turns off.

Learning Control

CONTINUOUSLY VARIABLE TRANSMISSION (DIAGNOSTICS)

8) When «AT learning normally ended.» is displayed, simple AT learning is completed.

NOTE:

- If communication error occurs during learning, retry the “AT learning mode” from the beginning.
- If the message «Execute AT learning again after fixing troubles of the vehicle» appears during learning, select [OK] and display the DTC list. After repairing the locations indicated by the DTC, start the “AT learning mode” over from the beginning.
- When communication error occurs during learning, select lever does not shift occasionally. If select lever does not shift, turn the ignition switch to OFF before operating the select lever.
- If the message «AT learning ended abnormally. Try again from the beginning.» is displayed, start the “AT learning mode” over from the beginning.

Display	Main causes for abnormal termination
AT learning ended abnormally. Try again from the beginning.	<ul style="list-style-type: none">• Fault is detected during AT learning.• The accelerator pedal is depressed during AT learning.• An unspecified operation was performed during AT learning• ATF temperature becomes out of specification during AT learning.• Battery voltage is low.• Malfunction indicator light illuminates.• Parking brake not applied strongly enough.• Brake pedal is not fully depressed.• Abnormal idle speed increase, etc.

- For detailed operation procedures, refer to “Application help”.

AT OIL TEMP Warning Light Display

CONTINUOUSLY VARIABLE TRANSMISSION (DIAGNOSTICS)

13. AT OIL TEMP Warning Light Display

A: OPERATION

The AT OIL TEMP light illuminates or blinks, when the ATF temperature is high and malfunction occurs in CVT.

- At normal condition

After turning the ignition switch to ON, illuminates for 2 seconds then goes off.

- When ATF temperature is high

AT OIL TEMP light illuminates when the ATF temperature is abnormally high with the ignition switch ON.

- When malfunction is detected

AT OIL TEMP light blinks at 2 Hz when the TCM detects the malfunction of CVT with the ignition switch ON. In this case, inspect using “Diagnostic Procedure with Diagnostic Trouble Code (DTC)”. <Ref. to CVT(diag)-41, Diagnostic Procedure with Diagnostic Trouble Code (DTC).>

- When AT learning is not finished

AT OIL TEMP light repeats “Blinking at 4 Hz → Turning OFF” every two seconds, when the AT learning is not completed with the ignition switch ON. In this case, perform the “Learning”. (During AT learning, the light blinks at 2 Hz or illuminates.) <Ref. to CVT(diag)-27, Learning Control.>

CVT00516

(A) Ignition switch condition

(1) At normal condition

(3) When malfunction is detected

(4) When AT learning is not finished

(2) When ATF temperature is high

If the AT OIL TEMP light does not illuminate, or illumination patterns are not as above, check the AT OIL TEMP light circuit. <Ref. to CVT(diag)-30, INSPECTION, AT OIL TEMP Warning Light Display.>

AT OIL TEMP Warning Light Display

CONTINUOUSLY VARIABLE TRANSMISSION (DIAGNOSTICS)

B: INSPECTION

DIAGNOSIS:

- CAN communication is lost with the combination meter.
- Combination meter malfunction
- TCM is in special control mode.
- AT learning is not finished.

TROUBLE SYMPTOM:

- When the ignition switch is turned to ON, the AT OIL TEMP light does not illuminate.
- AT OIL TEMP light remains lit after engine start.

	Step	Check	Yes	No
1	CHECK DTC. Read the DTC relating the TCM using the Subaru Select Monitor.	Is DTC U0155 or U0423 displayed?	Perform the self-diagnosis of combination meter.	Go to step 2.
2	CHECK DTC. Read the DTC relating the TCM using the Subaru Select Monitor.	Are DTCs other than U0155 and U0423 displayed?	Perform the diagnosis according to DTC.	Go to step 3.
3	CHECK COMBINATION METER. Read DTC of combination meter.	Is DTC displayed?	Perform the diagnosis according to DTC.	Go to step 4.
4	CHECK AT OIL TEMP LIGHT. Turn the ignition switch to ON.	Does AT OIL TEMP light illuminate and then go off in 2 seconds?	Go to step 5.	Perform the self-diagnosis of combination meter. <Ref. to IDI-7, SELF-DIAGNOSIS DISPLAY MODE, OPERATION, Combination Meter System.>
5	CHECK AT OIL TEMP LIGHT. Start the engine.	Does the AT OIL TEMP light go off?	Current condition is normal. Go back to Basic Diagnostic Procedure. <Ref. to CVT(diag)-2, Basic Diagnostic Procedure.>	Go to step 6.
6	CHECK DTC. Read the DTC relating the TCM using the Subaru Select Monitor.	Is DTC displayed?	Perform the diagnosis according to DTC.	Go to step 7.
7	CHECK TCM. Read the data of «ATF Temperature Lamp» using the Subaru Select Monitor.	Is «ON» displayed?	Go to step 8.	Perform the self-diagnosis of combination meter. <Ref. to IDI-7, SELF-DIAGNOSIS DISPLAY MODE, OPERATION, Combination Meter System.>
8	CHECK TCM. Read the data of «ATF Temp.» using the Subaru Select Monitor.	Is the display 125°C or more?	Go to step 9.	Replace the TCM. <Ref. to CVT(TR580)-148, Transmission Control Module (TCM).>

AT OIL TEMP Warning Light Display

CONTINUOUSLY VARIABLE TRANSMISSION (DIAGNOSTICS)

Step	Check	Yes	No
9 CHECK ATF TEMPERATURE. Check the real fluid temperature from the transmission case surface temperature.	Does it clearly differ from the «ATF Temp.» displayed on Subaru Select Monitor?	Perform the diagnosis according to DTC P0712. If there is no problem, perform the diagnosis according to DTC P0713.	When ATF temperature can be judged as actually high, perform the diagnosis again after the ATF temperature lowers.

AWD Warning Light Display

CONTINUOUSLY VARIABLE TRANSMISSION (DIAGNOSTICS)

14.AWD Warning Light Display

A: OPERATION

AWD light illuminates or blinks, when the AWD is in special control condition and AWD has malfunction.

- At normal condition

After turning the ignition switch to ON, illuminates for 2 seconds then goes off.

- When FF mode is selected

AWD light illuminates when the AWD ON/OFF switching function is set to “FF mode” with the ignition switch ON.

- When malfunction is detected

AWD light blinks at 2 Hz when any of the following malfunctions are detected with the ignition switch ON.

1. When tire with different diameter is installed, or air pressure of any of four wheels is excessively low.
2. When “Rear differential inspection mode” is judged as NG <Ref. to DI-64, Rear Differential Inspection Mode.>

(A) Ignition switch condition

(1) At normal condition

(2) When FF mode is selected

(3) When malfunction is detected

If the AWD light does not illuminate, or illumination patterns are not as above, check the AWD light circuit. <Ref. to CVT(diag)-32, INSPECTION, AWD Warning Light Display.>

B: INSPECTION

DIAGNOSIS:

- CAN communication is lost with the combination meter.
- Combination meter malfunction
- TCM is in AWD special control mode.

TROUBLE SYMPTOM:

- When the ignition switch is turned to ON, the AWD light does not illuminate.
- AWD light remains lit after engine start.

AWD Warning Light Display

CONTINUOUSLY VARIABLE TRANSMISSION (DIAGNOSTICS)

- AWD light is blinking immediately after engine start.

	Step	Check	Yes	No
1	CHECK TCM. Check the DTC relating the TCM using the Subaru Select Monitor.	Is DTC U0155 or U0423 displayed?	Perform the self-diagnosis of combination meter.	Go to step 2.
2	CHECK TCM. Check the DTC relating the TCM using the Subaru Select Monitor.	Are DTCs other than U0155 and U0423 displayed?	Perform the diagnosis according to DTC.	Go to step 3.
3	CHECK COMBINATION METER. Check the DTC of combination meter.	Is DTC displayed?	Perform the diagnosis according to DTC.	Go to step 4.
4	CHECK AWD LIGHT. Turn the ignition switch to ON.	Does AWD light illuminate and then go off in 2 seconds?	Go to step 5.	Perform the self-diagnosis of combination meter. <Ref. to IDI-7, SELF-DIAGNOSIS DISPLAY MODE, OPERATION, Combination Meter System.>
5	CHECK AWD LIGHT. Start the engine.	Does the AWD light go off?	Current condition is normal. Go back to Basic Diagnostic Procedure. <Ref. to CVT(diag)-2, Basic Diagnostic Procedure.>	Go to step 6.
6	CHECK DTC. Read the DTC relating the TCM using the Subaru Select Monitor.	Is DTC displayed?	Perform the diagnosis according to DTC.	Go to step 7.
7	CHECK AWD LIGHT. Check the display of AWD light after engine start.	Is AWD light illuminating?	Go to step 9.	Go to step 8.
8	CHECK AWD LIGHT. Check the display of AWD light after engine start.	Is AWD light blinking at 2 Hz?	Go to step 10.	Go to step 11.
9	CHECK AWD ON/OFF SWITCHING FUNCTION. Using the Subaru Select Monitor, select the «AWD ON/OFF switching mode» in «Work Support» display, and check the current mode. <Ref. to CVT(TR580)-45, AWD ON/OFF Switching Mode.>	Is the message «At present, the vehicle is in AWD. Switch to FF?» displayed?	Go to step 11.	If the message «At present, the vehicle is in FF. Switch to AWD?» is displayed, select «OK», and switch to AWD mode.
10	CHECK REAR DIFFERENTIAL. Using the Subaru Select Monitor, select and check «Rear differential inspection mode» in «Work Support» display. <Ref. to DI-64, Rear Differential Inspection Mode.>	Does AWD light go off after inspection is finished normally?	Current condition is normal. Go back to Basic Diagnostic Procedure. <Ref. to CVT(diag)-2, Basic Diagnostic Procedure.>	Go to step 11.
11	CHECK COMBINATION METER. Perform the self-diagnosis of combination meter. <Ref. to IDI-7, SELF-DIAGNOSIS DISPLAY MODE, OPERATION, Combination Meter System.>	Is there any trouble with the combination meter?	Repair the combination meter.	Replace the TCM. <Ref. to CVT(TR580)-148, Transmission Control Module (TCM).>

Diagnostic Procedure for Subaru Select Monitor Communication

CONTINUOUSLY VARIABLE TRANSMISSION (DIAGNOSTICS)

15. Diagnostic Procedure for Subaru Select Monitor Communication

A: COMMUNICATION FOR INITIALIZING IMPOSSIBLE

Diagnosis:

Defective harness connector

Trouble symptom:

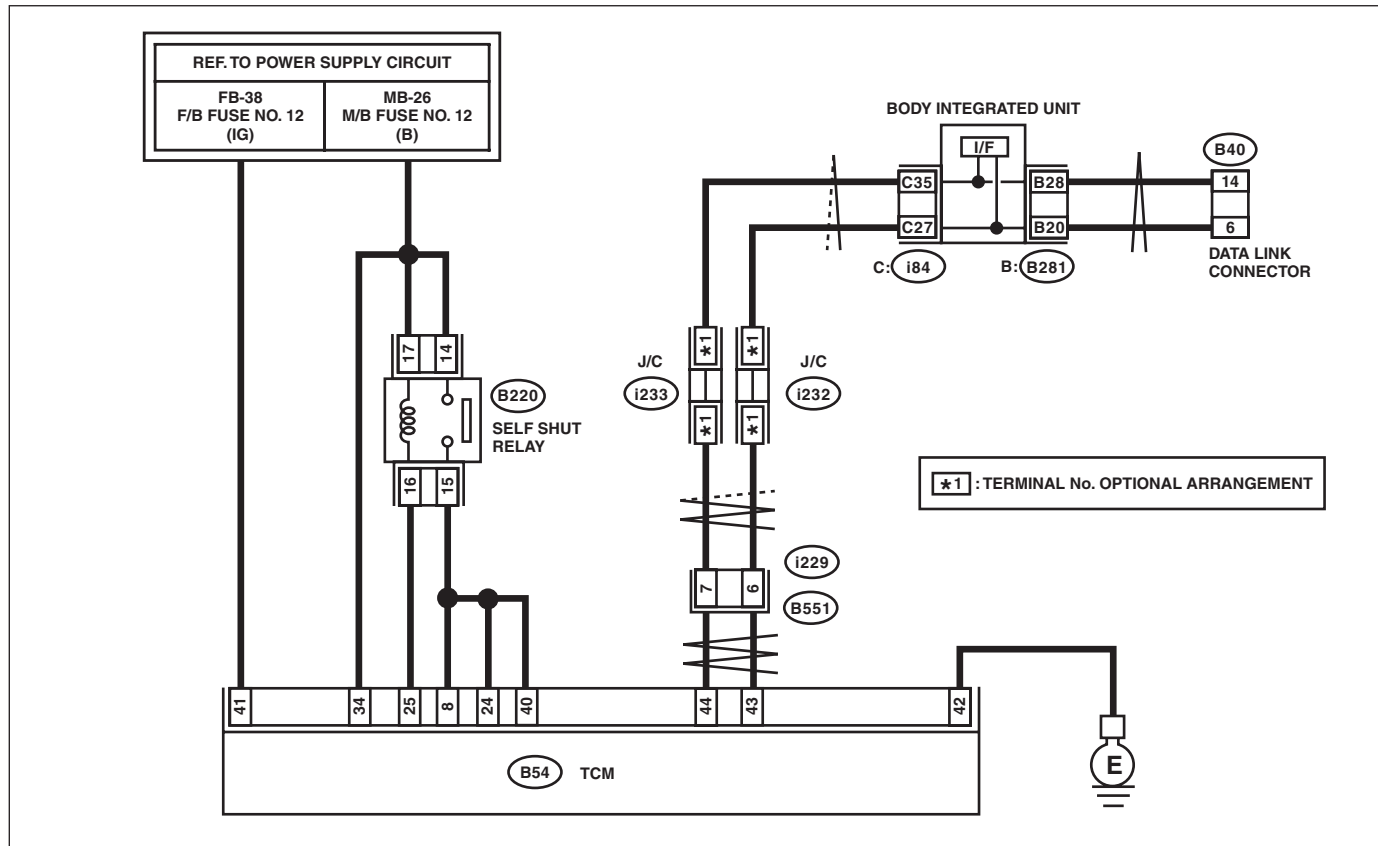

Subaru Select Monitor communication failure

CAUTION:

Use the check board when measuring the TCM terminal voltage and resistance.

Wiring diagram:

CVT control system <Ref. to WI-94, CVT Control System.>

*1 : TERMINAL No. OPTIONAL ARRANGEMENT

CVT01138

Step	Check	Yes	No	
1	CHECK IGNITION SWITCH.	Is the ignition switch ON?	Go to step 2.	Turn the ignition switch to ON, and select the transmission using the Subaru Select Monitor.

Diagnostic Procedure for Subaru Select Monitor Communication

CONTINUOUSLY VARIABLE TRANSMISSION (DIAGNOSTICS)

Step	Check	Yes	No	
2	CHECK BATTERY. 1) Turn the ignition switch to OFF. 2) Measure the battery voltage.	Is the voltage 11 V or more?	Go to step 3.	Charge or replace the battery.
3	CHECK BATTERY TERMINAL.	Is there poor contact at battery terminal?	Replace or tighten the battery terminal.	Go to step 4.
4	CHECK INSTALLATION OF TCM CONNECTOR. Turn the ignition switch to OFF.	Is the TCM connector inserted into the TCM until the clamp locks?	Go to step 5.	Insert the TCM connector to TCM.
5	CHECK LAN SYSTEM. Perform the diagnosis for LAN system. <Ref. to LAN(diag)-2, Basic Diagnostic Procedure.>	Is there any fault in LAN system?	Perform the diagnosis according to DTC for LAN system. <Ref. to LAN(diag)-92, List of Diagnostic Trouble Code (DTC).>	Go to step 6.
6	CHECK SUBARU SELECT MONITOR COMMUNICATION. 1) Turn the ignition switch to ON. 2) Check whether communication to transmission system can be executed normally.	Is «Select Function» displayed?	Check DTC of TCM. <Ref. to CVT(diag)-19, Read Diagnostic Trouble Code (DTC).>	Go to step 7.
7	CHECK POWER SUPPLY CIRCUIT. 1) Turn the ignition switch to OFF. 2) Disconnect the TCM connector. 3) Turn the ignition switch to ON. (Engine OFF) 4) Measure the ignition power supply voltage between TCM connector and chassis ground. Connector & terminal (B54) No. 8 (+) — Chassis ground (-): (B54) No. 24 (+) — Chassis ground (-): (B54) No. 34 (+) — Chassis ground (-): (B54) No. 40 (+) — Chassis ground (-): (B54) No. 41 (+) — Chassis ground (-):	Is the voltage 10 — 13 V?	Go to step 8.	Repair the open circuit of harness between TCM and battery.
8	CHECK HARNESS CONNECTOR BETWEEN TCM AND CHASSIS GROUND. 1) Turn the ignition switch to OFF. 2) Measure the resistance of harness between TCM connector and chassis ground. Connector & terminal (B54) No. 42 — Chassis ground:	Is the resistance less than 10 Ω?	Go to step 9.	Repair the open circuit of the TCM ground circuit and poor contact of connector.
9	CHECK POOR CONTACT OF CONNECTOR.	Is there poor contact of control module power supply, ground circuit and data link connector?	Repair the connector.	Replace the TCM. <Ref. to CVT(TR580)-148, Transmission Control Module (TCM).>

List of Diagnostic Trouble Code (DTC)

CONTINUOUSLY VARIABLE TRANSMISSION (DIAGNOSTICS)

16. List of Diagnostic Trouble Code (DTC)

A: LIST

DTC	Item	Content of diagnosis	Reference

U0164	LOST COMMUNICATION WITH HVAC CONTROL MODULE	Detected that the air conditioner data has not yet arrived.	<Ref. to CVT(diag)-155, DTC U0164 LOST COMMUNICATION WITH HVAC CONTROL MODULE, Diagnostic Procedure with Diagnostic Trouble Code (DTC).>
U0401	INVALID DATA RECEIVED FROM ECM/PCM "A"	Detected abnormality of the engine data.	<Ref. to CVT(diag)-156, DTC U0401 INVALID DATA RECEIVED FROM ECM/PCM "A", Diagnostic Procedure with Diagnostic Trouble Code (DTC).>
U0416	INVALID DATA RECEIVED FROM VEHICLE DYNAMICS CONTROL MODULE	Detected abnormality of the VDC data.	<Ref. to CVT(diag)-156, DTC U0416 INVALID DATA RECEIVED FROM VEHICLE DYNAMICS CONTROL MODULE, Diagnostic Procedure with Diagnostic Trouble Code (DTC).>
U0422	INVALID DATA RECEIVED FROM BODY CONTROL MODULE	Detected abnormality of the body integrated unit data.	<Ref. to CVT(diag)-157, DTC U0422 INVALID DATA RECEIVED FROM BODY CONTROL MODULE, Diagnostic Procedure with Diagnostic Trouble Code (DTC).>
U0423	INVALID DATA RECEIVED FROM INSTRUMENT PANEL CLUSTER CONTROL MODULE	Detected abnormality of the meter data.	<Ref. to CVT(diag)-157, DTC U0423 INVALID DATA RECEIVED FROM INSTRUMENT PANEL CLUSTER CONTROL MODULE, Diagnostic Procedure with Diagnostic Trouble Code (DTC).>
U0424	INVALID DATA RECEIVED FROM HVAC CONTROL MODULE	Detected abnormality of the air conditioner data.	<Ref. to CVT(diag)-158, DTC U0424 INVALID DATA RECEIVED FROM HVAC CONTROL MODULE, Diagnostic Procedure with Diagnostic Trouble Code (DTC).>
U1235	LOST COMMUNICATION WITH EyeSight	Detected that the EyeSight data has not yet arrived.	<Ref. to CVT(diag)-158, DTC U1235 LOST COMMUNICATION WITH EyeSight, Diagnostic Procedure with Diagnostic Trouble Code (DTC).>
U1433	INVALID DATA RECEIVED FROM EyeSight	Detected abnormality of the EyeSight data.	<Ref. to CVT(diag)-159, DTC U1433 INVALID DATA RECEIVED FROM EyeSight, Diagnostic Procedure with Diagnostic Trouble Code (DTC).>

Diagnostic Procedure with Diagnostic Trouble Code (DTC)

CONTINUOUSLY VARIABLE TRANSMISSION (DIAGNOSTICS)

17. Diagnostic Procedure with Diagnostic Trouble Code (DTC)

A: DTC P0500 VEHICLE SPEED SENSOR "A" CIRCUIT

DTC DETECTING CONDITION:

Immediately at fault recognition

TROUBLE SYMPTOM:

VDC does not operate.

Step	Check	Yes	No
1 CHECK DTC. Read the DTC of VDC system using the Subaru Select Monitor.	Is DTC displayed?	Perform the diagnosis according to DTC. <Ref. to VDC(diag)-39, List of Diagnostic Trouble Code (DTC).>	Repair the poor contact of connector and harness between VDCCM&H/U and wheel speed sensor.

1. OUTLINE OF DIAGNOSIS

- Detect the malfunction of VDC wheel speed sensor.
- Judge as NG when the wheel speed sensor normal status signal from VDC is cleared.

2. EXECUTION CONDITION

Secondary Parameters	Execution condition
12 V battery system voltage	≥ 10.9 V

3. DIAGNOSTIC METHOD

If the duration of time while the following conditions are met is longer than the time indicated, judge as NG.

Judgment Value

Malfunction Criteria	Threshold Value
Signal of malfunction from Vehicle Dynamics Control Module NOTE: The VDC controller detects malfunction if one of the speed sensors does not output a signal and the other vehicle speed sensor output signal is above 7.46 MPH.	ON

Time Needed for Diagnosis: 2.5 seconds

Malfunction Indicator Light Illumination: Illuminates as soon as a malfunction occurs.

Diagnostic Procedure with Diagnostic Trouble Code (DTC)

CONTINUOUSLY VARIABLE TRANSMISSION (DIAGNOSTICS)

B: DTC P0601 INTERNAL CONTROL MODULE MEMORY CHECKSUM ERROR

DTC DETECTING CONDITION:

Detected when two consecutive driving cycles with fault occur.

TROUBLE SYMPTOM:

TCM ROM malfunction

Step	Check	Yes	No
1 CHECK DTC. 1) Perform the Clear Memory Mode using the Subaru Select Monitor. <Ref. to CVT(diag)-20, Clear Memory Mode.> 2) Read the DTC.	Is DTC P0601 displayed?	Replace the TCM. <Ref. to CVT(TR580)-148, Transmission Control Module (TCM).>	Current condition is normal. Check for interference from noise, etc.

1. OUTLINE OF DIAGNOSIS

- Detect the malfunction in ROM area of the TCM.
- Judge as NG when the consistency in the ROM area is lost.

2. EXECUTION CONDITION

Secondary Parameters	Execution condition
12 V battery system voltage	≥ 9 V

3. DIAGNOSTIC METHOD

If the duration of time while the following conditions are met is longer than the time indicated, judge as NG.

Judgment Value

Malfunction Criteria	Threshold Value
Checksum (ROM)	Error

Time Needed for Diagnosis: Immediately

Malfunction Indicator Light Illumination: Illuminates when malfunction occurs in 2 continuous driving cycles.

Diagnostic Procedure with Diagnostic Trouble Code (DTC)

CONTINUOUSLY VARIABLE TRANSMISSION (DIAGNOSTICS)

C: DTC P0604 INTERNAL CONTROL MODULE RANDOM ACCESS MEMORY (RAM) ERROR

DTC DETECTING CONDITION:

Detected when two consecutive driving cycles with fault occur.

TROUBLE SYMPTOM:

TCM RAM malfunction

	Step	Check	Yes	No
1	CHECK DTC. 1) Perform the Clear Memory Mode using the Subaru Select Monitor. <Ref. to CVT(diag)-20, Clear Memory Mode.> 2) Read the DTC.	Is DTC P0604 displayed?	Replace the TCM. <Ref. to CVT(TR580)-148, Transmission Control Module (TCM).>	Current condition is normal. Check for interference from noise, etc.

1. OUTLINE OF DIAGNOSIS

- Detect the malfunction in RAM area of the TCM.
- Judge as NG if an attempt to write to RAM area failed.

2. EXECUTION CONDITION

Secondary Parameters	Execution condition
12 V battery system voltage	≥ 10 V

3. DIAGNOSTIC METHOD

If the duration of time while the following conditions are met is longer than the time indicated, judge as NG.

Judgment Value

Malfunction Criteria	Threshold Value
Writing-check (RAM) NOTE: This check is carried out about the RAM only used for CAN communication.	Error

Time Needed for Diagnosis: Immediately

Malfunction Indicator Light Illumination: Illuminates when malfunction occurs in 2 continuous driving cycles.

Diagnostic Procedure with Diagnostic Trouble Code (DTC)

CONTINUOUSLY VARIABLE TRANSMISSION (DIAGNOSTICS)

D: DTC P062F INTERNAL CONTROL MODULE EEPROM ERROR

DTC DETECTING CONDITION:

Detected when two consecutive driving cycles with fault occur.

TROUBLE SYMPTOM:

TCM EEPROM malfunction

Step	Check	Yes	No
1 CHECK DTC. 1) Perform the Clear Memory Mode using the Subaru Select Monitor. <Ref. to CVT(diag)-20, Clear Memory Mode.> 2) Read the DTC.	Is DTC P062F displayed?	Replace the TCM. <Ref. to CVT(TR580)-148, Transmission Control Module (TCM).>	Current condition is normal. Check for interference from noise, etc.

1. OUTLINE OF DIAGNOSIS

Diagnosis 1

- Detect the malfunction in EEPROM area of the TCM.
- Judge as NG if an attempt to write to EEPROM area failed.

Diagnosis 2

- Detect the malfunction in EEPROM area of the TCM.
- Judge as malfunction when the consistency in the EEPROM area is lost.

2. EXECUTION CONDITION

Secondary Parameters	Execution condition
Diagnosis 1 12 V battery system voltage	≥ 9 V
Diagnosis 2 12 V battery system voltage	≥ 9 V

3. DIAGNOSTIC METHOD

If the duration of time while the following conditions are met is longer than the time indicated, judge as NG.

Judgment Value

Malfunction Criteria	Threshold Value
Diagnosis 1 Writing-check (EEPROM)	Error
Diagnosis 2 Checksum (EEPROM)	Error

Time Needed for Diagnosis: Immediately

Malfunction Indicator Light Illumination: Illuminates when malfunction occurs in 2 continuous driving cycles.

Diagnostic Procedure with Diagnostic Trouble Code (DTC)

CONTINUOUSLY VARIABLE TRANSMISSION (DIAGNOSTICS)

E: DTC P0705 TRANSMISSION RANGE SENSOR "A" CIRCUIT (PRNDL INPUT)

DTC detecting condition:

Immediately at fault recognition

Trouble symptom:

- Shift characteristics are erroneous.
- The range position of the select lever and the position of shift indicator display do not match.

CAUTION:

Use the check board when measuring the TCM terminal voltage and resistance.

Wiring diagram:

CVT control system <Ref. to WI-94, CVT Control System.>

CVT01139

Step	Check	Yes	No
1 CHECK INPUT SIGNAL FOR TCM. 1) Turn the ignition switch to ON. 2) Move the select lever to each range, and read the data of «P Range», «R Range Signal», «N Range» and «D Range Signal» using the Subaru Select Monitor.	Is display "OFF" for the range other than corresponding range?	Go to step 5.	Go to step 2.
2 CHECK HARNESS. 1) Turn the ignition switch to OFF. 2) Disconnect the TCM connector. 3) Disconnect the transmission connector. 4) Measure the resistance between TCM connector and chassis ground. Connector & terminal (B54) No. 38 — Chassis ground: (B54) No. 37 — Chassis ground: (B54) No. 36 — Chassis ground: (B54) No. 35 — Chassis ground:	Is each resistance 1 MΩ or more?	Go to step 3.	Repair the short circuit of body harness.
3 CHECK HARNESS. 1) Disconnect the inhibitor switch connector. 2) Measure the resistance between transmission connector and chassis ground. Connector & terminal (T3) No. 1 — Chassis ground: (T3) No. 2 — Chassis ground: (T3) No. 3 — Chassis ground: (T3) No. 4 — Chassis ground:	Is each resistance 1 MΩ or more?	Go to step 4.	Repair the short circuit of transmission harness.

Diagnostic Procedure with Diagnostic Trouble Code (DTC)

CONTINUOUSLY VARIABLE TRANSMISSION (DIAGNOSTICS)

Step	Check	Yes	No
4 CHECK INHIBITOR SWITCH. Move the select lever to each range, and measure the resistance between inhibitor switch terminals. Terminals No. 2 — No. 1: No. 5 — No. 1: No. 3 — No. 1: No. 4 — No. 1:	Is the resistance other than corresponding range 1 MΩ or more?	Go to step 5.	Replace the inhibitor switch. <Ref. to CVT(TR580)-97, Inhibitor Switch.>
5 CHECK FOR POOR CONTACT.	Is there poor contact between TCM, inhibitor switch, transmission ground?	Repair the poor contact.	Replace the TCM. <Ref. to CVT(TR580)-148, Transmission Control Module (TCM).>

1. OUTLINE OF DIAGNOSIS

- Detect the malfunction of Range Switch.
- Judge as NG if more than one input of Range Switch are detected.

2. EXECUTION CONDITION

Secondary parameters	Execution condition
12 V battery system voltage	≥ 10 V
Engine speed	≥ 400 rpm

3. DIAGNOSTIC METHOD

If the duration of time while the following conditions are met is longer than the time indicated, judge as NG.

Judgment Value

Malfunction Criteria	Threshold Value
Two or more transmission range switches ON NOTE: "Transmission range switch ON" is defined as transmission range switch input voltage < 1.7 V.	True

Time Needed for Diagnosis: 3 seconds

Malfunction Indicator Light Illumination: Illuminates as soon as a malfunction occurs.

Diagnostic Procedure with Diagnostic Trouble Code (DTC)

CONTINUOUSLY VARIABLE TRANSMISSION (DIAGNOSTICS)

F: DTC P0708 TRANSMISSION RANGE SENSOR "A" CIRCUIT HIGH

DTC detecting condition:

Immediately at fault recognition

Trouble symptom:

- Shift characteristics are erroneous.
- The range position of the select lever and the position of shift indicator display do not match.

CAUTION:

Use the check board when measuring the TCM terminal voltage and resistance.

Wiring diagram:

CVT control system <Ref. to WI-94, CVT Control System.>

Step	Check	Yes	No
1 CHECK INPUT SIGNAL FOR TCM. 1) Turn the ignition switch to ON. 2) Move the select lever to each range, and read the data of «P Range», «R Range Signal», «N Range» and «D Range Signal» using the Subaru Select Monitor.	Is the display of the corresponding range «ON»?	Go to step 7.	Go to step 2.
2 CHECK HARNESS. 1) Turn the ignition switch to OFF. 2) Disconnect the TCM connector. 3) Disconnect the transmission connector. 4) Measure the resistance of harness between TCM connector and transmission connector. Connector & terminal (B54) No. 38 — (B12) No. 1: (B54) No. 37 — (B12) No. 2: (B54) No. 36 — (B12) No. 3: (B54) No. 35 — (B12) No. 4:	Is each resistance less than 1 Ω?	Go to step 3.	Repair the open circuit of body harness.
3 CHECK HARNESS. Measure the resistance of harness between inhibitor switch connector and transmission ground. Connector & terminal (T7) No. 1 — Transmission ground:	Is the resistance less than 1 Ω?	Go to step 4.	Repair the open circuit of harness.

Diagnostic Procedure with Diagnostic Trouble Code (DTC)

CONTINUOUSLY VARIABLE TRANSMISSION (DIAGNOSTICS)

Step	Check	Yes	No
4 CHECK HARNESS. 1) Disconnect the inhibitor switch connector. 2) Measure the resistance between transmission connector and inhibitor switch connector. Connector & terminal <i>(T3) No. 1 — (T7) No. 2:</i> <i>(T3) No. 2 — (T7) No. 5:</i> <i>(T3) No. 3 — (T7) No. 3:</i> <i>(T3) No. 4 — (T7) No. 4:</i>	Is each resistance less than 1 Ω ?	Go to step 5.	Repair the open circuit of transmission harness.
5 CHECK INHIBITOR SWITCH. Move the select lever to each range, and measure the resistance between inhibitor switch terminals. Terminals <i>No. 2 — No. 1:</i> <i>No. 5 — No. 1:</i> <i>No. 3 — No. 1:</i> <i>No. 4 — No. 1:</i>	Is the resistance of the corresponding range less than 1 M Ω ?	Go to step 6.	Replace the inhibitor switch. <Ref. to CVT(TR580)-97, Inhibitor Switch.>
6 CHECK HARNESS. 1) Turn the ignition switch to ON. 2) Measure the voltage between each connector and chassis ground. Connector & terminal Transmission connector (B12 side) <i>(B12) No. 1 (+) — Chassis ground (-):</i> <i>(B12) No. 2 (+) — Chassis ground (-):</i> <i>(B12) No. 3 (+) — Chassis ground (-):</i> <i>(B12) No. 4 (+) — Chassis ground (-):</i> Transmission connector (T7 side) <i>(T7) No. 2 (+) — Chassis ground (-):</i> <i>(T7) No. 5 (+) — Chassis ground (-):</i> <i>(T7) No. 3 (+) — Chassis ground (-):</i> <i>(T7) No. 4 (+) — Chassis ground (-):</i>	Is each voltage less than 1 V?	Go to step 7.	Repair the harness which outputs 1 V or more.
7 CHECK FOR POOR CONTACT.	Is there poor contact between TCM, inhibitor switch, transmission ground?	Repair the poor contact.	Replace the TCM. <Ref. to CVT(TR580)-148, Transmission Control Module (TCM).>

Diagnostic Procedure with Diagnostic Trouble Code (DTC)

CONTINUOUSLY VARIABLE TRANSMISSION (DIAGNOSTICS)

1. OUTLINE OF DIAGNOSIS

- Detect the malfunction of Range Switch.
- Judge as NG if there is no input from all Range Switches.

2. EXECUTION CONDITION

Secondary Parameters	Execution condition
12 V battery system voltage	≥ 10 V
Vehicle speed (calculated from secondary pulley shaft speed)	≥ 6 MPH

3. DIAGNOSTIC METHOD

If the duration of time while the following conditions are met is longer than the time indicated, judge as NG.

Judgment Value

Malfunction Criteria	Threshold Value
All transmission range switches OFF NOTE: "Transmission range switch OFF" is defined as transmission range switch input voltage ≥ 3.4 V.	True

Time Needed for Diagnosis: 3 seconds

Malfunction Indicator Light Illumination: Illuminates as soon as a malfunction occurs.

Diagnostic Procedure with Diagnostic Trouble Code (DTC)

CONTINUOUSLY VARIABLE TRANSMISSION (DIAGNOSTICS)

G: DTC P0711 TRANSMISSION FLUID TEMPERATURE SENSOR "A" CIRCUIT RANGE/PERFORMANCE

DTC DETECTING CONDITION:

Detected when two consecutive driving cycles with fault occur.

TROUBLE SYMPTOM:

- Excessive shift shock
- Shift characteristics malfunction

NOTE:

For the diagnostic procedure, perform the diagnosis according to DTC P0712 and P0713. <Ref. to CVT(diag)-51, DTC P0712 TRANSMISSION FLUID TEMPERATURE SENSOR "A" CIRCUIT LOW, Diagnostic Procedure with Diagnostic Trouble Code (DTC).> <Ref. to CVT(diag)-53, DTC P0713 TRANSMISSION FLUID TEMPERATURE SENSOR "A" CIRCUIT HIGH, Diagnostic Procedure with Diagnostic Trouble Code (DTC).>

1. OUTLINE OF DIAGNOSIS

Diagnosis 1

- Detect the malfunction of the transmission oil temperature sensor characteristics (stuck to low temperature side).
- Judge as NG if the amount of oil temperature change since ignition ON is equal to or below the predetermined value.

Diagnosis 2

- Detect the malfunction of the transmission oil temperature sensor characteristics (stuck to high temperature side).
- Judge as NG when the difference between engine coolant temperature and CVT oil temperature is equal to or more than specified value at starting.

2. EXECUTION CONDITION

Secondary Parameters	Execution condition
Diagnosis 1 12 V battery system voltage Engine speed (The timer is held when the following conditions are not satisfied.) Transmission range Vehicle speed (calculated from secondary pulley shaft speed)	≥ 10 V > 600 rpm Drive ≥ 21.9 MPH
Diagnosis 2 12 V battery system voltage Engine coolant temperature at the end of the previous drive cycle – Engine coolant temperature at engine start	≥ 10 V ≥ 40 degC

3. DIAGNOSTIC METHOD

If the duration of time while the following conditions are met is longer than the time indicated, judge as NG.

Judgment Value

Malfunction Criteria	Threshold Value
Diagnosis 1 Absolute change of measured Transmission fluid temperature sensor input voltage Transmission fluid temperature	≤ 0.049 V < 20 degC
Diagnosis 2 Transmission fluid temperature – Engine coolant temperature at engine start	> 46 degC

Time Needed for Diagnosis:

- **Diagnosis 1:** 600 s
- **Diagnosis 2:** 300 s

Malfunction Indicator Light Illumination: Illuminates when malfunction occurs in 2 continuous driving cycles.

Diagnostic Procedure with Diagnostic Trouble Code (DTC)

CONTINUOUSLY VARIABLE TRANSMISSION (DIAGNOSTICS)

H: DTC P0712 TRANSMISSION FLUID TEMPERATURE SENSOR "A" CIRCUIT LOW

DTC detecting condition:

Immediately at fault recognition

Trouble symptom:

- Excessive shift shock
- Shift characteristics malfunction

CAUTION:

Use the check board when measuring the TCM terminal voltage and resistance.

Wiring diagram:

CVT control system <Ref. to WI-94, CVT Control System.>

Step	Check	Yes	No
1 CHECK HARNESS. 1) Turn the ignition switch to OFF. 2) Disconnect the TCM connector. 3) Measure the resistance of harness between TCM connector and chassis ground. Connector & terminal (B54) No. 1 — Chassis ground: (B54) No. 6 — Chassis ground:	Is the resistance 1 MΩ or more?	Go to step 4.	Go to step 2.
2 CHECK HARNESS. 1) Disconnect the transmission connector. 2) Measure the resistance between transmission connector and transmission body. Connector & terminal (T4) No. 5 — Transmission body: (T4) No. 9 — Transmission body:	Is the resistance 1 MΩ or more?	Repair the short circuit of body harness.	Go to step 3.
3 CHECK HARNESS INSIDE TRANSMISSION. CAUTION: Start work after ATF cools down. 1) Remove the transmission valve cover. 2) Check for the harness pinch, damage.	Is there any fault in the harness?	Replace the transmission harness.	Go to step 4.

Diagnostic Procedure with Diagnostic Trouble Code (DTC)

CONTINUOUSLY VARIABLE TRANSMISSION (DIAGNOSTICS)

Step	Check	Yes	No
4 CHECK ATF TEMPERATURE SENSOR. Measure the resistance between transmission connector terminals. Connector & terminal (T11) No. 1 — No. 6: NOTE: Perform the measurements using multiple oil temperatures.	Is resistance as follows? Fluid temperature 0°C → Approx. 6.0 kΩ Fluid temperature 20°C → Approx. 2.5 kΩ Fluid temperature 80°C → Approx. 330 Ω	Replace the TCM. <Ref. to CVT(TR580)-148, Transmission Control Module (TCM).>	Replace the control valve body. <Ref. to CVT(TR580)-119, Control Valve Body.>

1. OUTLINE OF DIAGNOSIS

- Detect the ground short circuit of transmission oil temperature sensor.
- Judge as NG if the voltage detected by the transmission oil temperature sensor is lower than the predetermined value.

2. EXECUTION CONDITION

Secondary Parameters	Execution condition
12 V battery system voltage	≥ 9 V

3. DIAGNOSTIC METHOD

If the duration of time while the following conditions are met is longer than the time indicated, judge as NG.

Judgment Value

Malfunction Criteria	Threshold Value
Measured Transmission fluid temperature sensor input voltage (Transmission fluid temperature)	< 0.117 V (> 146 degC)

Time Needed for Diagnosis: 1 second

Malfunction Indicator Light Illumination: Illuminates as soon as a malfunction occurs.

Diagnostic Procedure with Diagnostic Trouble Code (DTC)

CONTINUOUSLY VARIABLE TRANSMISSION (DIAGNOSTICS)

I: DTC P0713 TRANSMISSION FLUID TEMPERATURE SENSOR "A" CIRCUIT HIGH

DTC detecting condition:

Immediately at fault recognition

Trouble symptom:

- Excessive shift shock
- Shift characteristics malfunction

CAUTION:

Use the check board when measuring the TCM terminal voltage and resistance.

Wiring diagram:

CVT control system <Ref. to WI-94, CVT Control System.>

CVT01140

Step	Check	Yes	No
1 CHECK HARNESS. 1) Turn the ignition switch to OFF. 2) Disconnect the TCM connector. 3) Turn the ignition switch to ON. 4) Measure the voltage between TCM connectors. <i>Connector & terminal</i> <i>(B54) No. 6 (+) — (B54) No. 1 (-):</i>	Is the voltage 5 V or more?	Repair the short circuit of harness.	Go to step 2.
2 CHECK HARNESS. 1) Turn the ignition switch to OFF. 2) Disconnect the transmission connector. 3) Measure the resistance between TCM connector and transmission connectors. <i>Connector & terminal</i> <i>(B54) No. 6 — (B11) No. 5:</i> <i>(B54) No. 1 — (B11) No. 9:</i>	Is the resistance less than 1 Ω?	Go to step 3.	Repair the open circuit of body harness.
3 CHECK ATF TEMPERATURE SENSOR. Measure the resistance between transmission connector terminals. <i>Connector & terminal</i> <i>(T4) No. 5 — No. 9:</i>	Is the resistance 1 MΩ or more?	Go to step 4.	Go to step 5.

Diagnostic Procedure with Diagnostic Trouble Code (DTC)

CONTINUOUSLY VARIABLE TRANSMISSION (DIAGNOSTICS)

Step	Check	Yes	No
4 CHECK HARNESS. CAUTION: Start work after ATF cools down. 1) Remove the transmission valve cover. 2) Measure the resistance between transmission connector and control valve body connector. Connector & terminal (T4) No. 5 — (T11) No. 1: (T4) No. 9 — (T11) No. 6:	Is the resistance less than 1 Ω?	Repair the open circuit of transmission harness on the control valve side.	Repair the open circuit of transmission harness on the outside of the transmission.
5 CHECK ATF TEMPERATURE SENSOR. 1) Connect all connectors. 2) Start the engine. 3) Warm up until the ATF temperature exceeds 50°C (122°F). 4) Turn the ignition switch to OFF. 5) Disconnect the transmission connector. 6) Measure the resistance between transmission connector terminals. Connector & terminal (T4) No. 5 — No. 9:	Is the resistance 650 — 990 Ω?	Go to step 6.	Go to step 8.
6 CHECK ATF TEMPERATURE SENSOR. Measure the resistance between transmission connector terminals. Connector & terminal (T4) No. 5 — No. 9:	Does the resistance value increase gradually while the ATF temperature decreases?	Go to step 7.	Replace the control valve body. <Ref. to CVT(TR580)-119, Control Valve Body.>
7 CHECK INPUT SIGNAL FOR TCM. 1) Connect the connector to transmission. 2) Turn the ignition switch to ON. (Do not start engine.) 3) Read the data of «ATF Temp.» using the Subaru Select Monitor.	Does the ATF temperature gradually decrease?	Check for poor contact of the ATF temperature sensor and transmission connector harness, and repair the defective part.	Go to step 8.
8 CHECK FOR POOR CONTACT.	Is there poor contact of ATF temperature sensor circuit?	Repair the poor contact.	Replace the TCM. <Ref. to CVT(TR580)-148, Transmission Control Module (TCM).>

Diagnostic Procedure with Diagnostic Trouble Code (DTC)

CONTINUOUSLY VARIABLE TRANSMISSION (DIAGNOSTICS)

1. OUTLINE OF DIAGNOSIS

- Detect short circuit to power supply or open circuit of the transmission oil temperature sensor 5 V system.
- Judge as NG if the voltage detected by the transmission oil temperature sensor is higher than the pre-determined value.

2. EXECUTION CONDITION

Secondary Parameters	Execution condition
12 V battery system voltage	$\geq 9 \text{ V}$
Vehicle speed (calculated from secondary pulley speed)	$\geq 6.3 \text{ MPH}$
Above condition satisfied for	$\geq 50 \text{ s}$

3. DIAGNOSTIC METHOD

If the duration of time while the following conditions are met is longer than the time indicated, judge as NG.

Judgment Value

Malfunction Criteria	Threshold Value
Measured Transmission fluid temperature sensor input voltage (Transmission fluid temperature)	$> 4.507 \text{ V}$ ($< -52 \text{ degC}$)

Time Needed for Diagnosis: 1 second

Malfunction Indicator Light Illumination: Illuminates as soon as a malfunction occurs.

Diagnostic Procedure with Diagnostic Trouble Code (DTC)

CONTINUOUSLY VARIABLE TRANSMISSION (DIAGNOSTICS)

J: DTC P0716 INPUT/TURBINE SHAFT SPEED SENSOR "A" CIRCUIT RANGE/ PERFORMANCE

DTC detecting condition:

Immediately at fault recognition

Trouble symptom:

- No lock-up occurs.
- Shock occurs when selecting shift position.
- Shift control malfunction

Step	Check	Yes	No
1 CHECK DTC. Read the DTC using Subaru Select Monitor.	Besides DTC P0716, is DTC U0122 or U0416 displayed?	Perform the diagnosis according to DTCs other than P0716.	Perform the diagnosis according to DTC P0717. <Ref. to CVT(diag)-57, DTC P0717 INPUT/TURBINE SHAFT SPEED SENSOR "A" CIRCUIT NO SIGNAL, Diagnostic Procedure with Diagnostic Trouble Code (DTC).>

1. OUTLINE OF DIAGNOSIS

- Detect the malfunction of turbine speed sensor signal characteristics.
- Judge as NG if the turbine speed against the engine speed is outside the possible range considering the hardware capabilities.

2. EXECUTION CONDITION

Secondary parameters	Execution condition
12 V battery system voltage	≥ 10 V
Engine speed	≥ 400 rpm

3. DIAGNOSTIC METHOD

If the duration of time while the following conditions are met is longer than the time indicated, judge as NG.

Judgment Value

Malfunction Criteria	Threshold Value
Measured turbine shaft speed	< Table 1 rpm

Table 1

Engine speed (rpm)	3700	3727	3755	3782	3856	4019	4213	4456
Measured turbine shaft speed (rpm)	0	500	1000	1500	2000	2500	3000	3500

Engine speed (rpm)	4786	5213	5651	6101	6569	7044	7520
Measured turbine shaft speed (rpm)	4000	4500	5000	5500	6000	6500	7000

Time Needed for Diagnosis: 10 seconds

Malfunction Indicator Light Illumination: Illuminates as soon as a malfunction occurs.

Diagnostic Procedure with Diagnostic Trouble Code (DTC)

CONTINUOUSLY VARIABLE TRANSMISSION (DIAGNOSTICS)

K: DTC P0717 INPUT/TURBINE SHAFT SPEED SENSOR "A" CIRCUIT NO SIGNAL

DTC detecting condition:

Immediately at fault recognition

Trouble symptom:

- Standing start problems
- Shock occurs when engaging the lockup clutch.
- Shock occurs when selecting shift position.

CAUTION:

Use the check board when measuring the TCM terminal voltage and resistance.

Wiring diagram:

CVT control system <Ref. to WI-94, CVT Control System.>

Step	Check	Yes	No
1 CHECK FUSE. 1) Turn the ignition switch to OFF. 2) Remove the fuse (7.5 A) from the fuse holder. 3) Check the fuse.	Is the check result OK?	Go to step 2.	Replace the fuse. If the fuse blows out easily, repair the short circuit of harness.
2 CHECK HARNESS. 1) Disconnect the TCM connector. 2) Remove the self shut relay. 3) Measure the resistance between TCM connector and relay holder. Connector & terminal (B54) No. 25 — (B220) No. 16: (B54) No. 8 — (B220) No. 15: (B54) No. 24 — (B220) No. 15: (B54) No. 40 — (B220) No. 15:	Is the resistance less than 1 Ω?	Go to step 3.	Repair the open circuit of harness.

Diagnostic Procedure with Diagnostic Trouble Code (DTC)

CONTINUOUSLY VARIABLE TRANSMISSION (DIAGNOSTICS)

Step	Check	Yes	No
3 CHECK HARNESS. Measure the resistance between TCM connector and chassis ground. <i>Connector & terminal</i> (B54) No. 25 — Chassis ground: (B54) No. 8 — Chassis ground: (B54) No. 24 — Chassis ground: (B54) No. 40 — Chassis ground:	Is the resistance 1 M Ω or more?	Go to step 4.	Repair the short circuit of harness.
4 CHECK RELAY POWER SUPPLY. Measure the voltage between relay holder and chassis ground. <i>Connector & terminal</i> (B220) No. 14 (+) — Chassis ground (-): (B220) No. 17 (+) — Chassis ground (-):	Is the voltage 10 V or more?	Go to step 5.	Repair the open or short circuit of harness.
5 CHECK SELF SHUT RELAY. Measure the resistance between self shut relay terminals. <i>Terminals</i> No. 16 — No. 17:	Is the resistance 110 — 140 Ω ?	Go to step 6.	Replace the self shut relay.
6 CHECK SELF SHUT RELAY. Measure the resistance between self shut relay terminals. <i>Terminals</i> No. 14 — No. 15:	Is the resistance 1 M Ω or more?	Go to step 7.	Replace the self shut relay.
7 CHECK INPUT SIGNAL FOR TCM. 1) Connect the TCM connector. 2) Install the self shut relay. 3) Read the data of «Control module voltage» using Subaru Select Monitor.	Is the «Control module voltage» 10 V or more?	Current condition is normal. Check for poor contact in connectors or harnesses, and repair the defective part.	Go to step 8.
8 CHECK HARNESS. 1) Turn the ignition switch to OFF. 2) Disconnect the TCM connector. 3) Disconnect the transmission connector. 4) Measure the resistance between TCM connector and transmission connectors. <i>Connector & terminal</i> (B54) No. 12 — (B12) No. 9: (B54) No. 42 — (B12) No. 7: (B550) No. 17 — (B12) No. 6:	Is the resistance less than 1 Ω ?	Go to step 9.	Repair the open circuit of harness.
9 CHECK HARNESS. Measure the resistance between TCM connector and chassis ground. <i>Connector & terminal</i> (B54) No. 12 — Chassis ground:	Is the resistance 1 M Ω or more?	Go to step 10.	Repair the short circuit of harness.
10 CHECK HARNESS. Measure the resistance between relay holder and fuse holder. <i>Connector & terminal</i> (B220) No. 15 — (B550) No. 6:	Is the resistance less than 1 Ω ?	Go to step 11.	Repair the open circuit of harness.
11 CHECK TRANSMISSION HARNESS. 1) Install the fuse. 2) Connect the TCM connector. 3) Turn the ignition switch to ON. 4) Measure the voltage between transmission connector terminals. <i>Connector & terminal</i> (B12) No. 6 (+) — Chassis ground (-):	Is the voltage 10 — 13 V?	Go to step 12.	Repair the open circuit of harness or poor contact of connector.

Diagnostic Procedure with Diagnostic Trouble Code (DTC)

CONTINUOUSLY VARIABLE TRANSMISSION (DIAGNOSTICS)

Step	Check	Yes	No
12 CHECK INPUT SIGNAL FOR TCM. 1) Turn the ignition switch to OFF. 2) Connect the transmission connector. 3) Lift up the vehicle. 4) Start the engine. 5) Read the data of «Turbine Revolution Speed» using the Subaru Select Monitor.	Does the value of «Turbine Revolution Speed» change according to the engine speed?	Current condition is normal. Repair the poor contacts of harnesses of turbine speed sensor and transmission connector.	Go to step 13.
13 CHECK TRANSMISSION HARNESS. 1) Turn the ignition switch to OFF. 2) Disconnect the transmission connector. 3) Disconnect the turbine speed sensor connector. 4) Measure the resistance between transmission connector and turbine speed sensor connector. Connector & terminal (T3) No. 6 — (AT5) No. 1: (T3) No. 7 — (AT5) No. 3: (T3) No. 9 — (AT5) No. 2:	Is the resistance less than 1 Ω?	Go to step 14.	Replace the transmission harness.
14 CHECK TURBINE SPEED SENSOR HARNESS. Measure the resistance between transmission connector and chassis ground. Connector & terminal (T3) No. 6 — Chassis ground: (T3) No. 9 — Chassis ground:	Is the resistance 1 MΩ or more?	Go to step 15.	Repair the short circuit of harness.
15 CHECK TURBINE SPEED SENSOR. 1) Turn the ignition switch to OFF. 2) Replace the turbine speed sensor. <Ref. to CVT(TR580)-106, Turbine Speed Sensor.> 3) Perform the Clear Memory Mode. <Ref. to CVT(diag)-20, Clear Memory Mode.> 4) Read the DTC.	Is DTC P0717 displayed?	Go to step 16.	The original turbine speed sensor is defective.
16 CHECK SELF SHUT RELAY. 1) Turn the ignition switch to OFF. 2) Replace the self shut relay. 3) Perform the Clear Memory Mode. <Ref. to CVT(diag)-20, Clear Memory Mode.> 4) Read the DTC.	Is DTC P0717 displayed?	Replace the TCM. <Ref. to CVT(TR580)-148, Transmission Control Module (TCM).>	The original self shut relay is defective.

Diagnostic Procedure with Diagnostic Trouble Code (DTC)

CONTINUOUSLY VARIABLE TRANSMISSION (DIAGNOSTICS)

1. OUTLINE OF DIAGNOSIS

- Detect the no input signal from the turbine speed sensor.
- Judge as NG if there is no input signal from the turbine speed sensor, while the primary speed sensor on the same shaft has the input signal with the forward/reverse clutch engaged.

2. EXECUTION CONDITION

Secondary parameters	Execution condition
12 V battery system voltage	≥ 10 V
Engine speed	≥ 400 rpm
Transmission range	Drive or Reverse
Measured primary pulley shaft speed	≥ 500 rpm

3. DIAGNOSTIC METHOD

If the duration of time while the following conditions are met is longer than the time indicated, judge as NG.

Judgment Value

Malfunction Criteria	Threshold Value
Measured turbine shaft speed	0 rpm

Time Needed for Diagnosis: 0.6 seconds

Malfunction Indicator Light Illumination: Illuminates as soon as a malfunction occurs.

Diagnostic Procedure with Diagnostic Trouble Code (DTC)

CONTINUOUSLY VARIABLE TRANSMISSION (DIAGNOSTICS)

L: DTC P0719 BRAKE SWITCH "B" CIRCUIT LOW

DTC detecting condition:

Immediately at fault recognition

Trouble symptom:

Gear is not shifted down when climbing a hill or driving down a hill.

CAUTION:

Use the check board when measuring the TCM terminal voltage and resistance.

Wiring diagram:

- Without EyeSight

Stop light system <Ref. to WI-217, WITHOUT EyeSight, WIRING DIAGRAM, Stop Light System.>

CVT01142

Diagnostic Procedure with Diagnostic Trouble Code (DTC)

CONTINUOUSLY VARIABLE TRANSMISSION (DIAGNOSTICS)

- With EyeSight

Stop light system <Ref. to WI-218, WITH EyeSight, WIRING DIAGRAM, Stop Light System.>

CVT10111

Step	Check	Yes	No
1 CHECK FUSE (NO. 8). 1) Turn the ignition switch to OFF. 2) Remove the fuse (No. 8). 3) Check the fuse.	Is the check result OK?	Go to step 2.	Replace the fuse (No. 8). If the new fuse (No. 8) has blown out easily, repair the short circuit of harness between fuse (No. 8) and stop light switch.
2 CHECK HARNESS. 1) Turn the ignition switch to OFF. 2) Disconnect the TCM connector. 3) Disconnect the stop light switch connector. 4) Measure the resistance between TCM connector and stop light switch connector. Connector & terminal (B54) No. 29 — (B65) No. 4:	Is the resistance less than 1 Ω?	Go to step 3.	Repair the open circuit of harness.
3 CHECK HARNESS. Measure the resistance between the stop light switch connector and fuse (No. 8). Connector & terminal (B65) No. 3 — fuse (No. 8):	Is the resistance less than 1 Ω?	Go to step 4.	Repair the open circuit of harness.

Diagnostic Procedure with Diagnostic Trouble Code (DTC)

CONTINUOUSLY VARIABLE TRANSMISSION (DIAGNOSTICS)

Step	Check	Yes	No
4 CHECK INPUT SIGNAL FOR TCM. 1) Install the fuse (No. 8). 2) Connect the stop light switch connector. 3) Depress the brake pedal. 4) Measure the voltage between TCM connector and chassis ground. Connector & terminal (B54) No. 29 (+) — Chassis ground (-):	Is the voltage 10 V or more?	Go to step 5.	Replace the stop light switch. <Ref. to BR-72, Stop Light Switch.>
5 CHECK INPUT SIGNAL FOR TCM. 1) Connect the TCM connector. 2) With brake pedal depressed, read the data of «Stop Light Switch» using Subaru Select Monitor.	Is «ON» displayed?	Current condition is normal. Check for poor contact in connectors or harnesses, and repair the defective part.	Go to step 6.
6 CHECK FOR POOR CONTACT.	Is there poor contact in the stop light switch input signal circuit?	Repair the poor contact.	Replace the TCM. <Ref. to CVT(TR580)-148, Transmission Control Module (TCM).>

1. OUTLINE OF DIAGNOSIS

- Detect no input from the brake signal.
- Judge as NG if a predetermined number of deceleration occurs while the cruise control is set to OFF and the brake is OFF.

2. EXECUTION CONDITION

Secondary parameters	Execution condition
Cruise control	OFF

3. DIAGNOSTIC METHOD

If the duration of time while the following conditions are met is longer than the time indicated, judge as NG.

Judgment Value

Malfunction Criteria	Threshold Value
Number of times that vehicle speed changes from 30 km/h to 1 km/h while the brake SW is OFF	> 10 count

Malfunction Indicator Light Illumination: Does not illuminate.

Diagnostic Procedure with Diagnostic Trouble Code (DTC)

CONTINUOUSLY VARIABLE TRANSMISSION (DIAGNOSTICS)

M: DTC P0724 BRAKE SWITCH "B" CIRCUIT HIGH

DTC detecting condition:

Immediately at fault recognition

Trouble symptom:

Gear is not shifted down when climbing a hill or driving down a hill.

CAUTION:

Use the check board when measuring the TCM terminal voltage and resistance.

Wiring diagram:

- Without EyeSight

Stop light system <Ref. to WI-217, WITHOUT EyeSight, WIRING DIAGRAM, Stop Light System.>

CVT01142

Diagnostic Procedure with Diagnostic Trouble Code (DTC)

CONTINUOUSLY VARIABLE TRANSMISSION (DIAGNOSTICS)

• With EyeSight

Stop light system <Ref. to WI-218, WITH EyeSight, WIRING DIAGRAM, Stop Light System.>

CVT10111

Step	Check	Yes	No
1 CHECK STOP LIGHT SWITCH. 1) Turn the ignition switch to OFF. 2) Disconnect the stop light switch connector. 3) Measure the resistance between stop light switch. Terminals No. 3 — No. 4:	Is the resistance 1 MΩ or more?	Go to step 2.	Replace the stop light switch. <Ref. to BR-72, Stop Light Switch.>
2 CHECK HARNESS. 1) Disconnect the TCM connector. 2) Turn the ignition switch to ON. 3) Measure the voltage between TCM connector and chassis ground. Connector & terminal (B54) No. 29 (+) — Chassis ground (-):	Is the voltage 10 V or more?	Repair the short circuit of harness.	Go to step 3.
3 CHECK INPUT SIGNAL FOR TCM. 1) Connect all connectors. 2) Turn the ignition switch to ON. 3) Read the data of «Stop Light Switch» using Subaru Select Monitor.	Is «OFF» displayed?	Current condition is normal. Check for poor contact in connectors or harnesses, and repair the defective part.	Go to step 4.
4 CHECK FOR POOR CONTACT.	Is there poor contact in the stop light switch input signal circuit?	Repair the poor contact.	Replace the TCM. <Ref. to CVT(TR580)-148, Transmission Control Module (TCM).>

Diagnostic Procedure with Diagnostic Trouble Code (DTC)

CONTINUOUSLY VARIABLE TRANSMISSION (DIAGNOSTICS)

1. OUTLINE OF DIAGNOSIS

- Detect the brake signal stuck to ON.
- Judge as NG if a predetermined number of acceleration occurs while the cruise control is set to OFF and the brake is ON.

2. EXECUTION CONDITION

Secondary parameters	Execution condition
Cruise control	OFF

3. DIAGNOSTIC METHOD

If the duration of time while the following conditions are met is longer than the time indicated, judge as NG.

Judgment Value

Malfunction Criteria	Threshold Value
Number of times that vehicle speed changes from 1 km/h to 30 km/h while the brake SW is ON	> 10 count

Malfunction Indicator Light Illumination: Does not illuminate.

Diagnostic Procedure with Diagnostic Trouble Code (DTC)

CONTINUOUSLY VARIABLE TRANSMISSION (DIAGNOSTICS)

N: DTC P0730 INCORRECT GEAR RATIO

DTC detecting condition:

Immediately at fault recognition

Trouble symptom:

- Acceleration is poor during standing start.
- Shift control malfunction
- Engine speed increases abruptly.

Step	Check	Yes	No
1 CHECK TRANSMISSION FLUID. Check the amount of ATF. <Ref. to CVT(TR580)-37, ADJUSTMENT, CVTF.>	Is the check result OK?	Go to step 2.	Adjust the amount of ATF. <Ref. to CVT(TR580)-37, ADJUSTMENT, CVTF.>
2 CHECK TRANSMISSION FLUID. Check the condition of ATF. <Ref. to CVT(TR580)-40, CONDITION CHECK, CVTF.>	Is the check result OK?	Go to step 3.	Check according to the "Corrective action" of ATF (CVTF) "CONDITION CHECK". <Ref. to CVT(TR580)-40, CONDITION CHECK, CVTF.>
3 CHECK INPUT SIGNAL FOR TCM. 1) Lift up the vehicle. 2) Start the engine. 3) Warm up until the ATF temperature reaches to 40 — 70°C (104 — 158°F). 4) Depress the brake pedal, and shift the select lever to "D" range. 5) Shift the select lever to "P" range. 6) Stabilize the engine speed at idle. 7) Read the data of «Actual Secondary Pressure» using Subaru Select Monitor.	Is the «Actual Secondary Pressure» 0.5 — 1.5 MPa?	Go to step 4.	Perform the diagnosis according to DTC P0841. <Ref. to CVT(diag)-91, DTC P0841 TRANSMISSION FLUID PRESSURE SENSOR/SWITCH "A" CIRCUIT RANGE/PERFORMANCE, Diagnostic Procedure with Diagnostic Trouble Code (DTC).>
4 CHECK INPUT SIGNAL FOR TCM. 1) Set the select lever to "D" range. 2) Release the brake pedal to stabilize the engine speed and front wheel speed. 3) Read the data of «Actual Gear Ratio» using Subaru Select Monitor.	Is the «Actual Gear Ratio» 1.5 — 2.6?	Go to step 5.	Go to step 6.
5 CHECK INPUT SIGNAL FOR TCM. 1) Set the select lever to "D" range. 2) Slowly increase the speed to 40 km/h (25 MPH) and keep the constant speed. 3) Read the data of «Actual Gear Ratio» using Subaru Select Monitor.	Is the «Actual Gear Ratio» 0.5 — 0.9?	Go to step 6.	Replace the transmission assembly. <Ref. to CVT(TR580)-59, Automatic Transmission Assembly.>
6 DRIVING CHECK BY INSPECTION MODE. 1) Turn the ignition switch to OFF. 2) Perform a drive check based on the "Inspection Mode". <Ref. to CVT(diag)-21, Inspection Mode.>	Does the AT OIL TEMP light blink and is DTC P0730 displayed?	Replace the transmission assembly. <Ref. to CVT(TR580)-59, Automatic Transmission Assembly.>	Current condition is normal. It is possible that temporary poor contact occurs.

Diagnostic Procedure with Diagnostic Trouble Code (DTC)

CONTINUOUSLY VARIABLE TRANSMISSION (DIAGNOSTICS)

1. OUTLINE OF DIAGNOSIS

- Detect the abnormality in transmission gear ratio control function.
- Judge as NG if a discrepancy between the transmission target gear ratio (as internal data) and the actual gear ratio becomes the specified value or more. (Compare the value of “Gear Ratio Target × Secondary pulley speed ≈ Target primary speed equivalent value” with the value of primary pulley speed sensor.)

2. EXECUTION CONDITION

Secondary parameters	Execution condition
12 V battery system voltage	≥ 10 V
Engine speed	≥ 400 rpm
Transmission range	Drive

3. DIAGNOSTIC METHOD

If the duration of time while the following conditions are met is longer than the time indicated, judge as NG.

Judgment Value

Malfunction Criteria	Threshold Value
Target primary pulley shaft speed – Measured primary pulley shaft speed	≥ 600 rpm
(Commanded duty of shift up pressure control solenoid valve	≥ 90%
or	
Commanded duty of shift down pressure control solenoid valve)	≥ 90%

Time Needed for Diagnosis: 5 seconds

Malfunction Indicator Light Illumination: Illuminates as soon as a malfunction occurs.

Diagnostic Procedure with Diagnostic Trouble Code (DTC)

CONTINUOUSLY VARIABLE TRANSMISSION (DIAGNOSTICS)

O: DTC P0746 PRESSURE CONTROL SOLENOID "A" PERFORMANCE/STUCK OFF

DTC detecting condition:

Detected when two consecutive driving cycles with fault occur.

Trouble symptom:

- Shift control malfunction
- CVT chain slippage

Wiring diagram:

CVT control system <Ref. to WI-94, CVT Control System.>

CVT01143

Step	Check	Yes	No	
1	CHECK DTC. Read the DTC using Subaru Select Monitor.	Besides DTC P0746, is any of the DTCs P0842, P0843, P0962 and P0963 displayed?	Perform the diagnosis according to DTCs other than P0746.	Go to step 2.
2	CHECK SECONDARY SOLENOID (ACTIVE TEST). 1) Turn the ignition switch to ON. 2) Using the Subaru Select Monitor, perform forced operation of the secondary solenoid. <Ref. to CVT(diag)-26, Active Test.>	Does the indication of 0 → 500 mA appear repeatedly during forced operation, and does operating sound emit during indicating 500 mA?	Go to step 5.	Go to step 3.
3	CHECK SECONDARY SOLENOID. 1) Turn the ignition switch to OFF. 2) Disconnect the transmission connector. 3) Measure the resistance between transmission connector and transmission body. Connector & terminal (T4) No. 6 — Transmission body:	Is the resistance approx. 5 — 7 Ω? (when cold)	Go to step 7.	Go to step 4.
4	CHECK HARNESS. Check the transmission harness. (Open circuit, short circuit to power supply, short circuit to ground, and poor contact)	Is the check result OK?	Go to step 7.	Repair the harness.
5	CHECK TRANSMISSION FLUID. 1) Connect the transmission connector. 2) Check the amount of ATF. <Ref. to CVT(TR580)-37, ADJUSTMENT, CVTF.>	Is the check result OK?	Go to step 6.	Adjust the amount of ATF. <Ref. to CVT(TR580)-37, ADJUSTMENT, CVTF.>

Diagnostic Procedure with Diagnostic Trouble Code (DTC)

CONTINUOUSLY VARIABLE TRANSMISSION (DIAGNOSTICS)

	Step	Check	Yes	No
6	CHECK TRANSMISSION FLUID. Check the condition of ATF. <Ref. to CVT(TR580)-40, CONDITION CHECK, CVTF.>	Is the check result OK?	Go to step 7.	Check according to the “Corrective action” of ATF (CVTF) “CONDITION CHECK”. <Ref. to CVT(TR580)-40, CONDITION CHECK, CVTF.>
7	CHECK INPUT SIGNAL FOR TCM. 1) Lift up the vehicle. 2) Start the engine. 3) Warm up until the ATF temperature reaches to 40 — 70°C (104 — 158°F). 4) Depress the brake pedal, and shift the select lever to “D” range. 5) Shift the select lever to “P” range. 6) Stabilize the engine speed at idle. 7) Read the data of «Actual Secondary Pressure» using Subaru Select Monitor.	Is the «Actual Secondary Pressure» 0.5 — 1.5 MPa?	Go to step 8.	Replace the control valve body. <Ref. to CVT(TR580)-119, Control Valve Body.>
8	CHECK INPUT SIGNAL FOR TCM. 1) Keep the engine speed at 3,000 rpm. 2) Read the data of «Actual Secondary Pressure» using Subaru Select Monitor.	Is the «Actual Secondary Pressure» higher than step 7 value? Does the value change according to the engine speed, within the range of 1.5 — 2.5 MPa?	Go to step 9.	Replace the control valve body. <Ref. to CVT(TR580)-119, Control Valve Body.>
9	CHECK TCM INPUT SIGNAL (STALL TEST). 1) Apply the parking brake. 2) Set the select lever to “D” range. 3) Depress the brake pedal firmly. 4) Slowly open the accelerator fully, and stabilize the engine speed. 5) Read the data of «Actual Secondary Pressure» using Subaru Select Monitor. CAUTION: Do not perform a stall test for over 5 seconds at a time.	Is the «Actual Secondary Pressure» higher than step 8 value? Does the value change according to the engine speed, within the range of 4.5 — 6.0 MPa?	Go to step 10.	Replace the control valve body. <Ref. to CVT(TR580)-119, Control Valve Body.>
10	DRIVING CHECK BY INSPECTION MODE. 1) Turn the ignition switch to OFF. 2) Perform a drive check based on the “Inspection Mode”. <Ref. to CVT(diag)-21, Inspection Mode.>	Does the AT OIL TEMP light blink and is DTC P0746 displayed?	Perform the secondary pressure test. <Ref. to CVT(TR580)-49, Secondary Pressure (Line Pressure) Test.>	Current condition is normal. It is possible that temporary poor contact occurs.

Diagnostic Procedure with Diagnostic Trouble Code (DTC)

CONTINUOUSLY VARIABLE TRANSMISSION (DIAGNOSTICS)

1. OUTLINE OF DIAGNOSIS

- Detect the malfunction of transmission line pressure solenoid and hydraulic circuit (stuck to low pressure side).
- Judge as NG if “Target line pressure – Actual line pressure” becomes the predetermined value or more, while the actual line pressure is equal to or more than the predetermined value.

2. EXECUTION CONDITION

Secondary Parameters	Execution condition
12 V battery system voltage	≥ 10 V
Engine speed	≥ 1000 rpm
Measured line pressure control solenoid valve current	≤ 0.78 A

3. DIAGNOSTIC METHOD

If the duration of time while the following conditions are met is longer than the time indicated, judge as NG.

Judgment Value

Malfunction Criteria	Threshold Value
Measured line pressure	< Map1 kPa

Malfunction Indicator Light Illumination: Illuminates when malfunction occurs in 2 continuous driving cycles.

Diagnostic Procedure with Diagnostic Trouble Code (DTC)

CONTINUOUSLY VARIABLE TRANSMISSION (DIAGNOSTICS)

P: DTC P0747 PRESSURE CONTROL SOLENOID "A" STUCK ON

DTC detecting condition:

Detected when two consecutive driving cycles with fault occur.

Trouble symptom:

- Acceleration is poor during standing start.
- Shift control malfunction

Wiring diagram:

CVT control system <Ref. to WI-94, CVT Control System.>

CVT01143

Step	Check	Yes	No	
1	CHECK DTC. Read the DTC using Subaru Select Monitor.	Besides DTC P0747, is any of the DTCs P0842, P0843, P0962 and P0963 displayed?	Perform the diagnosis according to DTCs other than P0747.	Go to step 2.
2	CHECK SECONDARY SOLENOID (ACTIVE TEST). 1) Turn the ignition switch to ON. 2) Using the Subaru Select Monitor, perform forced operation of the secondary solenoid. <Ref. to CVT(diag)-26, Active Test.>	Does the indication of 0 → 500 mA appear repeatedly during forced operation, and does operating sound emit during indicating 500 mA?	Go to step 5.	Go to step 3.
3	CHECK SECONDARY SOLENOID. 1) Turn the ignition switch to OFF. 2) Disconnect the transmission connector. 3) Measure the resistance between transmission connector and transmission body. Connector & terminal (T4) No. 6 — Transmission body:	Is the resistance approx. 5 — 7 Ω? (when cold)	Go to step 7.	Go to step 4.
4	CHECK HARNESS. Check the transmission harness. (Open circuit, short circuit to power supply, short circuit to ground, and poor contact)	Is the check result OK?	Go to step 7.	Repair the harness.
5	CHECK TRANSMISSION FLUID. 1) Connect the transmission connector. 2) Check the amount of ATF. <Ref. to CVT(TR580)-37, ADJUSTMENT, CVTF.>	Is the check result OK?	Go to step 6.	Adjust the amount of ATF. <Ref. to CVT(TR580)-37, ADJUSTMENT, CVTF.>

Diagnostic Procedure with Diagnostic Trouble Code (DTC)

CONTINUOUSLY VARIABLE TRANSMISSION (DIAGNOSTICS)

Step	Check	Yes	No
6 CHECK TRANSMISSION FLUID. Check the condition of ATF. <Ref. to CVT(TR580)-40, CONDITION CHECK, CVTF.>	Is the check result OK?	Go to step 7.	Check according to the "Corrective action" of ATF (CVTF) "CONDITION CHECK". <Ref. to CVT(TR580)-40, CONDITION CHECK, CVTF.>
7 CHECK INPUT SIGNAL FOR TCM. 1) Lift up the vehicle. 2) Start the engine. 3) Warm up until the ATF temperature reaches to 40 — 70°C (104 — 158°F). 4) Depress the brake pedal, and shift the select lever to "D" range. 5) Shift the select lever to "P" range. 6) Stabilize the engine speed at idle. 7) Read the data of «Actual Secondary Pressure» using Subaru Select Monitor.	Is the «Actual Secondary Pressure» 0.5 — 1.5 MPa?	Go to step 8.	Replace the control valve body. <Ref. to CVT(TR580)-119, Control Valve Body.>
8 CHECK INPUT SIGNAL FOR TCM. 1) Keep the engine speed at 3,000 rpm. 2) Read the data of «Actual Secondary Pressure» using Subaru Select Monitor.	Is the «Actual Secondary Pressure» higher than step 7 value? Does the value change according to the engine speed, within the range of 1.5 — 2.5 MPa?	Go to step 9.	Replace the control valve body. <Ref. to CVT(TR580)-119, Control Valve Body.>
9 CHECK TCM INPUT SIGNAL (STALL TEST). 1) Apply the parking brake. 2) Set the select lever to "D" range. 3) Depress the brake pedal firmly. 4) Slowly open the accelerator fully, and stabilize the engine speed. 5) Read the data of «Actual Secondary Pressure» using Subaru Select Monitor. CAUTION: Do not perform a stall test for over 5 seconds at a time.	Is the «Actual Secondary Pressure» higher than step 8 value? Does the value change according to the engine speed, within the range of 4.5 — 6.0 MPa?	Go to step 10.	Replace the control valve body. <Ref. to CVT(TR580)-119, Control Valve Body.>
10 DRIVING CHECK BY INSPECTION MODE. 1) Turn the ignition switch to OFF. 2) Perform a drive check based on the "Inspection Mode". <Ref. to CVT(diag)-21, Inspection Mode.>	Does the AT OIL TEMP light blink and is DTC P0747 displayed?	Perform the secondary pressure test. <Ref. to CVT(TR580)-49, Secondary Pressure (Line Pressure) Test.>	Current condition is normal. It is possible that temporary poor contact occurs.

Diagnostic Procedure with Diagnostic Trouble Code (DTC)

CONTINUOUSLY VARIABLE TRANSMISSION (DIAGNOSTICS)

1. OUTLINE OF DIAGNOSIS

- Detect the malfunction of transmission line pressure solenoid and hydraulic circuit (stuck to high pressure side).
- Judge as NG if “Target line pressure – Actual line pressure” becomes the predetermined value or less, while the actual line pressure is equal to or more than the predetermined value.

2. EXECUTION CONDITION

Secondary Parameters	Execution condition
12 V battery system voltage	≥ 10 V
Engine speed	≥ 1000 rpm
Measured line pressure control solenoid valve current	≥ 0.5 A

3. DIAGNOSTIC METHOD

If the duration of time while the following conditions are met is longer than the time indicated, judge as NG.

Judgment Value

Malfunction Criteria	Threshold Value

Diagnostic Procedure with Diagnostic Trouble Code (DTC)

CONTINUOUSLY VARIABLE TRANSMISSION (DIAGNOSTICS)

Q: DTC P0751 SHIFT SOLENOID "A" PERFORMANCE/STUCK OFF

DTC detecting condition:

Detected when two consecutive driving cycles with fault occur.

Trouble symptom:

- Shift control malfunction
- Engine speed increases abruptly.

Wiring diagram:

CVT control system <Ref. to WI-94, CVT Control System.>

CVT01144

Step	Check	Yes	No	
1	CHECK DTC. Read the DTC using Subaru Select Monitor.	Besides DTC P0751, is any of the DTCs P0973, P0974, P0976, P0977, P2747 and P2751 displayed?	Perform the diagnosis according to DTCs other than P0751.	Go to step 2.
2	CHECK PRIMARY UP SOLENOID (ACTIVE TEST). 1) Turn the ignition switch to ON. 2) Using the Subaru Select Monitor, perform forced operation of the primary UP solenoid. <Ref. to CVT(diag)-26, Active Test.>	Does the indication of 0 → 50% appear repeatedly during forced operation, and does operating sound emit during indicating 50%?	Go to step 5.	Go to step 3.
3	CHECK PRIMARY UP SOLENOID. 1) Turn the ignition switch to OFF. 2) Disconnect the transmission connector. 3) Measure the resistance between transmission connector and transmission body. Connector & terminal (T4) No. 2 — Transmission body:	Is the resistance approx. 10 — 13.5 Ω? (when cold)	Go to step 7.	Go to step 4.
4	CHECK HARNESS. Check the transmission harness. (Open circuit, short circuit to power supply, short circuit to ground, and poor contact)	Is the check result OK?	Go to step 7.	Repair the harness.
5	CHECK TRANSMISSION FLUID. 1) Connect the transmission connector. 2) Check the amount of ATF. <Ref. to CVT(TR580)-37, ADJUSTMENT, CVTF.>	Is the check result OK?	Go to step 6.	Adjust the amount of ATF. <Ref. to CVT(TR580)-37, ADJUSTMENT, CVTF.>

Diagnostic Procedure with Diagnostic Trouble Code (DTC)

CONTINUOUSLY VARIABLE TRANSMISSION (DIAGNOSTICS)

Step	Check	Yes	No
6 CHECK TRANSMISSION FLUID. Check the condition of ATF. <Ref. to CVT(TR580)-40, CONDITION CHECK, CVTF.>	Is the check result OK?	Go to step 7.	Check according to the "Corrective action" of ATF (CVTF) "CONDITION CHECK". <Ref. to CVT(TR580)-40, CONDITION CHECK, CVTF.>
7 CHECK INPUT SIGNAL FOR TCM. 1) Lift up the vehicle. 2) Start the engine. 3) Warm up until the ATF temperature reaches to 40 — 70°C (104 — 158°F). 4) Depress the brake pedal, and shift the select lever to "D" range. 5) Shift the select lever to "P" range. 6) Stabilize the engine speed at idle. 7) Read the data of «Actual Secondary Pressure» using Subaru Select Monitor.	Is the «Actual Secondary Pressure» 0.5 — 1.5 MPa?	Go to step 8.	Replace the transmission assembly. <Ref. to CVT(TR580)-59, Automatic Transmission Assembly.>
8 CHECK INPUT SIGNAL FOR TCM. 1) Set the select lever to "D" range. 2) Release the brake pedal to stabilize the engine speed and front wheel speed. 3) Read the data of «Actual Gear Ratio» using Subaru Select Monitor.	Is the «Actual Gear Ratio» 1.5 — 2.6?	Go to step 9.	Replace the transmission assembly. <Ref. to CVT(TR580)-59, Automatic Transmission Assembly.>
9 CHECK INPUT SIGNAL FOR TCM. 1) Set the select lever to "D" range. 2) Slowly increase the speed to 40 km/h (25 MPH) and keep the constant speed. 3) Read the data of «Actual Gear Ratio» using Subaru Select Monitor.	Is the «Actual Gear Ratio» 0.5 — 0.9?	Go to step 10.	Replace the transmission assembly. <Ref. to CVT(TR580)-59, Automatic Transmission Assembly.>
10 DRIVING CHECK BY INSPECTION MODE. 1) Turn the ignition switch to OFF. 2) Perform a drive check based on the "Inspection Mode". <Ref. to CVT(diag)-21, Inspection Mode.>	Does the AT OIL TEMP light blink and is DTC P0751 displayed?	Replace the transmission assembly. <Ref. to CVT(TR580)-59, Automatic Transmission Assembly.>	Current condition is normal. It is possible that temporary poor contact occurs.

Diagnostic Procedure with Diagnostic Trouble Code (DTC)

CONTINUOUSLY VARIABLE TRANSMISSION (DIAGNOSTICS)

1. OUTLINE OF DIAGNOSIS

- Detect the malfunction of shift-up fluid pressure control solenoid characteristics and hydraulic circuit characteristics (stuck to low pressure side).
- Judge as NG if the amount of gear rate change per second is equal to or larger than the predetermined value, even though the up-shift command is issued.

2. EXECUTION CONDITION

Secondary Parameters	Execution condition
12 V battery system voltage	≥ 10 V
Engine speed	≥ 1000 rpm
Commanded duty of shift down pressure control solenoid	0%
Actual pulley ratio*	> 1.5 and < 2.549

* Actual pulley ratio: Measured primary pulley shaft speed / Measured secondary pulley shaft speed

3. DIAGNOSTIC METHOD

If the duration of time while the following conditions are met is longer than the time indicated, judge as NG.

Judgment Value

Malfunction Criteria	Threshold Value
Actual pulley ratio change for 1 second	> - 0.08
Commanded duty of shift up pressure control solenoid	≥ 90%

Time Needed for Diagnosis: 1 second

Malfunction Indicator Light Illumination: Illuminates when malfunction occurs in 2 continuous driving cycles.

Diagnostic Procedure with Diagnostic Trouble Code (DTC)

CONTINUOUSLY VARIABLE TRANSMISSION (DIAGNOSTICS)

R: DTC P0752 SHIFT SOLENOID "A" STUCK ON

DTC detecting condition:

Detected when two consecutive driving cycles with fault occur.

Trouble symptom:

- Acceleration is poor during standing start.
- Shift control malfunction

Wiring diagram:

CVT control system <Ref. to WI-94, CVT Control System.>

CVT01144

Step	Check	Yes	No	
1	CHECK DTC. Read the DTC using Subaru Select Monitor.	Besides DTC P0752, is any of the DTCs P0973, P0974, P0976, P0977, P2747 and P2751 displayed?	Perform the diagnosis according to DTCs other than P0752.	Go to step 2.
2	CHECK PRIMARY UP SOLENOID (ACTIVE TEST). 1) Turn the ignition switch to ON. 2) Using the Subaru Select Monitor, perform forced operation of the primary UP solenoid. <Ref. to CVT(diag)-26, Active Test.>	Does the indication of 0 → 50% appear repeatedly during forced operation, and does operating sound emit during indicating 50%?	Go to step 5.	Go to step 3.
3	CHECK PRIMARY UP SOLENOID. 1) Turn the ignition switch to OFF. 2) Disconnect the transmission connector. 3) Measure the resistance between transmission connector and transmission body. Connector & terminal (T4) No. 2 — Transmission body:	Is the resistance approx. 10 — 13.5 Ω? (when cold)	Go to step 7.	Go to step 4.
4	CHECK HARNESS. Check the transmission harness. (Open circuit, short circuit to power supply, short circuit to ground, and poor contact)	Is the check result OK?	Go to step 7.	Repair the harness.

CVT01145

Step	Check	Yes	No	
1	CHECK DTC. Read the DTC using Subaru Select Monitor.	Besides DTC P0757, is any of the DTCs P0973, P0974, P0976, P0977, P2747 and P2751 displayed?	Perform the diagnosis according to DTCs other than P0757.	Go to step 2.
2	CHECK PRIMARY DOWN SOLENOID (ACTIVE TEST). 1) Turn the ignition switch to ON. 2) Using the Subaru Select Monitor, perform forced operation of the primary DOWN solenoid. <Ref. to CVT(diag)-26, Active Test.>	Does the indication of 0 → 50% appear repeatedly during forced operation, and does operating sound emit during indicating 50%?	Go to step 5.	Go to step 3.
3	CHECK PRIMARY DOWN SOLENOID. 1) Turn the ignition switch to OFF. 2) Disconnect the transmission connector. 3) Measure the resistance between transmission connector and transmission body. Connector & terminal (T4) No. 3 — Transmission body:	Is the resistance approx. 10 — 13.5 Ω? (when cold)	Go to step 7.	Go to step 4.
4	CHECK HARNESS. Check the transmission harness. (Open circuit, short circuit to power supply, short circuit to ground, and poor contact)	Is the check result OK?	Go to step 7.	Repair the harness.
5	CHECK TRANSMISSION FLUID. 1) Connect the transmission connector. 2) Check the amount of ATF. <Ref. to CVT(TR580)-37, ADJUSTMENT, CVTF.>	Is the check result OK?	Go to step 6.	Adjust the amount of ATF. <Ref. to CVT(TR580)-37, ADJUSTMENT, CVTF.>

Diagnostic Procedure with Diagnostic Trouble Code (DTC)

CONTINUOUSLY VARIABLE TRANSMISSION (DIAGNOSTICS)

Step	Check	Yes	No
6 CHECK TRANSMISSION FLUID. Check the condition of ATF. <Ref. to CVT(TR580)-40, CONDITION CHECK, CVTF.>	Is the check result OK?	Go to step 7.	Check according to the "Corrective action" of ATF (CVTF) "CONDITION CHECK". <Ref. to CVT(TR580)-40, CONDITION CHECK, CVTF.>
7 CHECK INPUT SIGNAL FOR TCM. 1) Lift up the vehicle. 2) Start the engine. 3) Warm up until the ATF temperature reaches to 40 — 70°C (104 — 158°F). 4) Depress the brake pedal, and shift the select lever to "D" range. 5) Shift the select lever to "P" range. 6) Stabilize the engine speed at idle. 7) Read the data of «Actual Secondary Pressure» using Subaru Select Monitor.	Is the «Actual Secondary Pressure» 0.5 — 1.5 MPa?	Go to step 8.	Replace the transmission assembly. <Ref. to CVT(TR580)-59, Automatic Transmission Assembly.>
8 CHECK INPUT SIGNAL FOR TCM. 1) Set the select lever to "D" range. 2) Release the brake pedal to stabilize the engine speed and front wheel speed. 3) Read the data of «Actual Gear Ratio» using Subaru Select Monitor.	Is the «Actual Gear Ratio» 1.5 — 2.6?	Go to step 9.	Replace the transmission assembly. <Ref. to CVT(TR580)-59, Automatic Transmission Assembly.>
9 CHECK INPUT SIGNAL FOR TCM. 1) Set the select lever to "D" range. 2) Slowly increase the speed to 40 km/h (25 MPH) and keep the constant speed. 3) Read the data of «Actual Gear Ratio» using Subaru Select Monitor.	Is the «Actual Gear Ratio» 0.5 — 0.9?	Go to step 10.	Replace the transmission assembly. <Ref. to CVT(TR580)-59, Automatic Transmission Assembly.>
10 DRIVING CHECK BY INSPECTION MODE. 1) Turn the ignition switch to OFF. 2) Perform a drive check based on the "Inspection Mode". <Ref. to CVT(diag)-21, Inspection Mode.>	Does the AT OIL TEMP light blink and is DTC P0757 displayed?	Replace the transmission assembly. <Ref. to CVT(TR580)-59, Automatic Transmission Assembly.>	Current condition is normal. It is possible that temporary poor contact occurs.

Diagnostic Procedure with Diagnostic Trouble Code (DTC)

CONTINUOUSLY VARIABLE TRANSMISSION (DIAGNOSTICS)

1. OUTLINE OF DIAGNOSIS

- Detect the malfunction of shift-down fluid pressure control solenoid characteristics and hydraulic circuit characteristics (stuck to high pressure side).
- Judge as NG if the amount of gear rate change per second is equal to or larger than the predetermined value, even though the up-shift command is issued.

2. EXECUTION CONDITION

Secondary Parameters	Execution condition
12 V battery system voltage	≥ 10 V
Engine speed	≥ 1000 rpm
Commanded duty of shift down pressure control solenoid	0%
Actual pulley ratio*	≥ 0.406 and ≤ 2.549

* Actual pulley ratio: Measured primary pulley shaft speed / Measured secondary pulley shaft speed

3. DIAGNOSTIC METHOD

If the duration of time while the following conditions are met is longer than the time indicated, judge as NG.

Judgment Value

Malfunction Criteria	Threshold Value
Actual pulley ratio change for 1 second	> 0.04
Commanded duty of shift up pressure control solenoid	> 50%

Time Needed for Diagnosis: 1 s × 10 times

Malfunction Indicator Light Illumination: Illuminates when malfunction occurs in 2 continuous driving cycles.

Diagnostic Procedure with Diagnostic Trouble Code (DTC)

CONTINUOUSLY VARIABLE TRANSMISSION (DIAGNOSTICS)

U: DTC P0776 PRESSURE CONTROL SOLENOID "B" PERFORMANCE/STUCK OFF

DTC detecting condition:

Detected when two consecutive driving cycles with fault occur.

Trouble symptom:

- Engine speed increases abruptly, and can not accelerate.
- Excessive slippage is felt.

Wiring diagram:

CVT control system <Ref. to WI-94, CVT Control System.>

Step	Check	Yes	No	
1	CHECK DTC. Read the DTC using Subaru Select Monitor.	Besides DTC P0776, is any of the DTC P0717, P0966, P0967 or P2747 displayed?	Perform the diagnosis according to DTCs other than P0776.	Go to step 2.
2	CHECK F&R SOLENOID (ACTIVE TEST). 1) Turn the ignition switch to ON. 2) Using the Subaru Select Monitor, perform forced operation of the F&R solenoid. <Ref. to CVT(diag)-26, Active Test.>	Does the indication of 0 → 500 mA appear repeatedly during forced operation, and does operating sound emit during indicating 500 mA?	Go to step 5.	Go to step 3.
3	CHECK F&R SOLENOID. 1) Turn the ignition switch to OFF. 2) Disconnect the transmission connector. 3) Measure the resistance between transmission connector and transmission body. Connector & terminal (T4) No. 7 — Transmission body:	Is the resistance approx. 4 — 6 Ω? (when cold)	Go to step 7.	Go to step 4.
4	CHECK HARNESS. Check the transmission harness. (Open circuit, short circuit to power supply, short circuit to ground, and poor contact)	Is the check result OK?	Go to step 7.	Repair the harness.
5	CHECK TRANSMISSION FLUID. 1) Connect the transmission connector. 2) Check the amount of ATF. <Ref. to CVT(TR580)-37, ADJUSTMENT, CVTF.>	Is the check result OK?	Go to step 6.	Adjust the amount of ATF. <Ref. to CVT(TR580)-37, ADJUSTMENT, CVTF.>

Diagnostic Procedure with Diagnostic Trouble Code (DTC)

CONTINUOUSLY VARIABLE TRANSMISSION (DIAGNOSTICS)

Step	Check	Yes	No
6 CHECK TRANSMISSION FLUID. Check the condition of ATF. <Ref. to CVT(TR580)-40, CONDITION CHECK, CVTF.>	Is the check result OK?	Go to step 7.	Check according to the "Corrective action" of ATF (CVTF) "CONDITION CHECK". <Ref. to CVT(TR580)-40, CONDITION CHECK, CVTF.>
7 CHECK INPUT SIGNAL FOR TCM. 1) Start the engine. 2) Warm up until the ATF temperature reaches to 40 — 70°C (104 — 158°F). 3) Depress the brake pedal, and shift the select lever to "D" range. 4) Shift the select lever to "P" range. 5) Stabilize the engine speed at idle. 6) Read the data of «Actual Secondary Pressure» using Subaru Select Monitor.	Is the «Actual Secondary Pressure» 0.5 — 1.5 MPa?	Go to step 8.	Perform the diagnosis according to DTC P0841. <Ref. to CVT(diag)-91, DTC P0841 TRANSMISSION FLUID PRESSURE SENSOR/SWITCH "A" CIRCUIT RANGE/PERFORMANCE, Diagnostic Procedure with Diagnostic Trouble Code (DTC).>
8 STALL TEST. Perform the stall test. <Ref. to CVT(TR580)-47, Stall Test.>	Is the result of the stall test OK?	Go to step 9.	Replace the transmission assembly if the stall speed is higher than the standard value of the stall test. <Ref. to CVT(TR580)-59, Automatic Transmission Assembly.>
9 DRIVING CHECK BY INSPECTION MODE. 1) Turn the ignition switch to OFF. 2) Perform a drive check based on the "Inspection Mode". <Ref. to CVT(diag)-21, Inspection Mode.>	Does the AT OIL TEMP light blink and is DTC P0776 displayed?	Replace the transmission assembly. <Ref. to CVT(TR580)-59, Automatic Transmission Assembly.>	Current condition is normal. It is possible that temporary poor contact occurs.

Diagnostic Procedure with Diagnostic Trouble Code (DTC)

CONTINUOUSLY VARIABLE TRANSMISSION (DIAGNOSTICS)

1. OUTLINE OF DIAGNOSIS

- Detect the malfunction of transmission forward/reverse clutch pressure solenoid and hydraulic circuit characteristics (stuck to low pressure side).
- Judge as NG if the value calculated by “turbine speed – primary pulley speed” becomes the predetermined value or more, even though the forward/reverse clutch is engaged.

2. EXECUTION CONDITION

Secondary parameters	Execution condition
Diagnosis 1 12 V battery system voltage Transmission range Measured turbine shaft speed Measured primary pulley shaft speed Commanded forward & reverse clutch pressure control solenoid current Engine speed	≥ 10 V Drive ≥ 100 rpm ≥ 100 rpm < 0.9 A ≥ 400 rpm
Diagnosis 2 12 V battery system voltage Transmission range Commanded forward & reverse clutch pressure control solenoid current Accelerator pedal position (from ECM) Engine speed	≥ 10 V Drive < 0.9 A > 6% ≥ 400 rpm

3. DIAGNOSTIC METHOD

If the duration of time while the following conditions are met is longer than the time indicated, judge as NG.

Judgment Value

Malfunction Criteria	Threshold Value
Diagnosis 1 ABS (Measured turbine shaft speed – Measured primary pulley shaft speed)	> Table 1 rpm
Diagnosis 2 Measured turbine shaft speed	> 2000 rpm

Table 1

Vehicle speed (MPH)	0	13	25	38	50	63	75
ABS (Measured turbine shaft speed – Measured primary pulley shaft speed) (rpm)	150	100	100	100	100	100	100

Vehicle speed (MPH)	88	100	113	125	138	150	159
ABS (Measured turbine shaft speed – Measured primary pulley shaft speed) (rpm)	100	100	100	100	100	100	100

Time Needed for Diagnosis: 5 seconds

Malfunction Indicator Light Illumination: Illuminates when malfunction occurs in 2 continuous driving cycles.

Diagnostic Procedure with Diagnostic Trouble Code (DTC)

CONTINUOUSLY VARIABLE TRANSMISSION (DIAGNOSTICS)

V: DTC P0801 REVERSE INHIBIT CONTROL CIRCUIT/OPEN

DTC DETECTING CONDITION:

Immediately at fault recognition

NOTE:

For diagnostic procedures, refer to "BODY CONTROL SYSTEM (DIAGNOSTICS)". <Ref. to BC(diag)-38, DTC B1016 SHIFT LOCK CIRCUIT, Diagnostic Procedure with Diagnostic Trouble Code (DTC).>

1. OUTLINE OF DIAGNOSIS

- Detect the malfunction of shift lock solenoid or circuit.
- Judge as NG if abnormal signal from the integrated unit is received, when bus off is not detected and there is no trouble in CAN between the integrated unit.

2. EXECUTION CONDITION

Secondary parameters	Execution condition
None	

3. DIAGNOSTIC METHOD

If the duration of time while the following conditions are met is longer than the time indicated, judge as NG.

Judgment Value

Malfunction Criteria	Threshold Value
Shift lock solenoid system circuit abnormal (received from BIU)	ON

Time Needed for Diagnosis: 1 second

Malfunction Indicator Light Illumination: Does not illuminate.

Diagnostic Procedure with Diagnostic Trouble Code (DTC)

CONTINUOUSLY VARIABLE TRANSMISSION (DIAGNOSTICS)

W: DTC P0841 TRANSMISSION FLUID PRESSURE SENSOR/SWITCH "A" CIRCUIT RANGE/PERFORMANCE

DTC detecting condition:

Immediately at fault recognition

Trouble symptom:

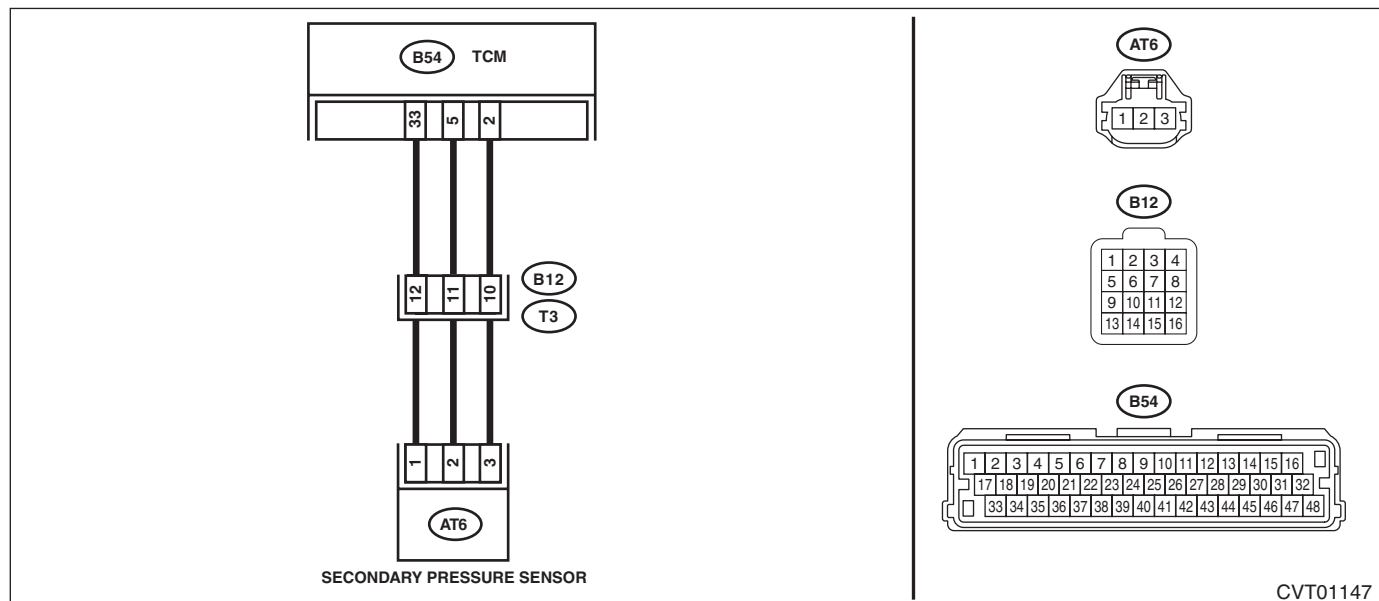

- Acceleration is poor during standing start.
- Shift control malfunction
- Engine speed increases abruptly.

CAUTION:

- Before performing diagnosis, record the freeze frame data.
- Use the check board when measuring the TCM terminal voltage and resistance.

Wiring diagram:

CVT control system <Ref. to WI-94, CVT Control System.>

Step	Check	Yes	No	
1	CHECK DTC. Read the DTC using Subaru Select Monitor.	Are DTCs other than P0841 displayed?	Perform the diagnosis according to DTC. After the diagnosis, start the engine, and drive for 20 minutes in any driving pattern. (Include driving at a constant legal speed (for 20 seconds) at least once.) Read the DTC, and if P0841 alone is detected, Go to step 2.	Go to step 2.
2	CHECK INPUT SIGNAL FOR TCM. 1) Turn the ignition switch to ON. 2) Read the data of «secondary pressure sensor voltage.» using Subaru Select Monitor. (While shaking the secondary pressure sensor harness)	Is the value of «secondary pressure sensor voltage» 0.39 — 0.61 V?	Go to step 10.	Go to step 3.

Diagnostic Procedure with Diagnostic Trouble Code (DTC)

CONTINUOUSLY VARIABLE TRANSMISSION (DIAGNOSTICS)

Step	Check	Yes	No
3 CHECK HARNESS. 1) Turn the ignition switch to OFF. 2) Disconnect the connector of TCM and secondary pressure sensor. 3) Measure the resistance between TCM connector and secondary pressure sensor connector. <i>Connector & terminal</i> (B54) No. 2 — (AT6) No. 3: (B54) No. 5 — (AT6) No. 2: (B54) No. 33 — (AT6) No. 1:	Is the resistance less than 1 Ω?	Go to step 4.	Repair the open circuit of harness.
4 CHECK HARNESS. Measure the resistance between TCM connectors. <i>Connector & terminal</i> (B54) No. 2 — (B54) No. 33: (B54) No. 5 — (B54) No. 2: (B54) No. 33 — (B54) No. 5:	Is the resistance 1 MΩ or more?	Go to step 5.	Repair the short circuit of harness.
5 CHECK HARNESS. Measure the resistance between TCM connector and transmission body. <i>Connector & terminal</i> (B54) No. 2 — Transmission body: (B54) No. 5 — Transmission body: (B54) No. 33 — Transmission body:	Is the resistance 1 MΩ or more?	Go to step 6.	Repair the short circuit of harness.
6 CHECK POWER SUPPLY FOR SECONDARY PRESSURE SENSOR. 1) Turn the ignition switch to ON. 2) Measure the voltage between TCM connectors. <i>Connector & terminal</i> (B54) No. 33 (+) — (B54) No. 2 (-):	Is the voltage 4.6 — 5.4 V?	Go to step 7.	Check for poor contact of connector, and if no fault is found, replace the TCM. <Ref. to CVT(TR580)-148, Transmission Control Module (TCM).>
7 CHECK POWER SUPPLY FOR SECONDARY PRESSURE SENSOR. 1) Turn the ignition switch to OFF. 2) Connect the secondary pressure sensor connector. 3) Turn the ignition switch to ON. 4) Measure the voltage between TCM connectors. <i>Connector & terminal</i> (B54) No. 33 (+) — (B54) No. 2 (-):	Is the voltage 4.6 — 5.4 V?	Go to step 8.	Replace the secondary pressure sensor. <Ref. to CVT(TR580)-113, Secondary Pressure Sensor.>
8 CHECK SECONDARY PRESSURE SENSOR OUTPUT. Measure the voltage between TCM connectors. <i>Connector & terminal</i> (B54) No. 5 (+) — (B54) No. 2 (-):	Is the voltage 0.39 — 0.61 V?	Check for poor contact of connector, and if no fault is found, replace the TCM. <Ref. to CVT(TR580)-148, Transmission Control Module (TCM).>	Go to step 9.
9 CHECK CONNECTOR. 1) Turn the ignition switch to OFF. 2) Disconnect the connector of TCM and secondary pressure sensor. 3) Check the TCM connector (B54) and the secondary pressure sensor connector (AT6).	Is there any fault in the TCM connector or the secondary pressure connector?	Repair the connector, or replace harness.	Go to step 10.

Diagnostic Procedure with Diagnostic Trouble Code (DTC)

CONTINUOUSLY VARIABLE TRANSMISSION (DIAGNOSTICS)

Step	Check	Yes	No
10 CHECK TRANSMISSION FLUID. 1) Connect all connectors. 2) Check the amount of ATF. <Ref. to CVT(TR580)-37, ADJUSTMENT, CVTF.>	Is the check result OK?	Go to step 11.	Adjust the amount of ATF. <Ref. to CVT(TR580)-37, ADJUSTMENT, CVTF.> Go to step 11.
11 CHECK INPUT SIGNAL FOR TCM. 1) Perform the Clear Memory Mode. 2) Start the engine. 3) Warm up until the ATF temperature reaches to 40 — 70°C (104 — 158°F). 4) Depress the brake pedal and move the select lever to each range at an interval of five seconds. NOTE: Move the select lever in the following order: “P” → “R” → “N” → “D” → “N” → “R” → “P”. 5) Stabilize the engine speed at idle. 6) Read the data of «Actual Secondary Pressure» using Subaru Select Monitor.	Is the «Actual Secondary Pressure» 0.5 — 1.5 MPa?	Go to step 12.	Replace the secondary pressure sensor. <Ref. to CVT(TR580)-113, Secondary Pressure Sensor.>
12 CHECK INPUT SIGNAL FOR TCM. 1) Shift the select lever to “P” range. 2) Keep the engine speed at 3,000 rpm. 3) Read the data of «Actual Secondary Pressure» using Subaru Select Monitor.	Is the «Actual Secondary Pressure» 1.5 — 2.5 MPa? And is the difference of the actual oil pressure 0.2 MPa or more compared with the value measured in step 11?	Go to step 13.	Replace the secondary pressure sensor. <Ref. to CVT(TR580)-113, Secondary Pressure Sensor.>
13 CHECK FREEZE FRAME DATA. 1) Turn the ignition switch to OFF. 2) Check the recorded freeze frame data.	Was the detected symptom low-voltage malfunction? <Ref. to CVT(diag)-94, CLASSIFICATION OF SYMPTOM USING FREEZE FRAME DATA, DTC P0841 TRANSMISSION FLUID PRESSURE SENSOR/SWITCH "A" CIRCUIT RANGE/PERFORMANCE, Diagnostic Procedure with Diagnostic Trouble Code (DTC).>	Replace the transmission assembly. <Ref. to CVT(TR580)-59, Automatic Transmission Assembly.>	Go to step 14.
14 CHECK TCM INPUT SIGNAL (STALL TEST). 1) Lift up the vehicle. 2) Start the engine. 3) Apply the parking brake. 4) Set the select lever to “D” range. 5) Depress the brake pedal firmly. 6) Slowly open the accelerator fully, and stabilize the engine speed. 7) Read the data of «Actual Secondary Pressure» using Subaru Select Monitor.	Is the «Actual Secondary Pressure» 4.5 — 6.0 MPa?	Replace the transmission assembly. <Ref. to CVT(TR580)-59, Automatic Transmission Assembly.>	Go to step 15.
15 CHECK TCM INPUT SIGNAL (STALL TEST). Check the «Actual Secondary Pressure» in step 14.	Is the «Actual Secondary Pressure» 4.5 MPa or less?	Replace the transmission assembly. <Ref. to CVT(TR580)-59, Automatic Transmission Assembly.>	Replace the control valve body. <Ref. to CVT(TR580)-119, Control Valve Body.>

Diagnostic Procedure with Diagnostic Trouble Code (DTC)

CONTINUOUSLY VARIABLE TRANSMISSION (DIAGNOSTICS)

1. CLASSIFICATION OF SYMPTOM USING FREEZE FRAME DATA

Apply the values of «Actual Secondary Pressure» and «Secondary Actual Current» recorded in the freeze frame data onto the graph shown in the following figure, and judge if either low-voltage malfunction or high-voltage malfunction occurs.

CVT10201

- (A) Actual secondary pressure (MPa) (B) Secondary actual current (mA) (C) Low-voltage malfunction (D) High-voltage malfunction

NOTE:

Symptom that the DTC P0841 illuminates can be classified into 2 patterns.

- Low-voltage malfunction: detected due to insufficient oil pressure
- High-voltage malfunction: detected due to excessive oil pressure

2. OUTLINE OF DIAGNOSIS

- Detect the malfunction of transmission fluid pressure control function.
- Judge as NG if a discrepancy between the target secondary oil pressure (as internal data) and the detected value of the secondary oil pressure sensor becomes the specified value or more.

3. EXECUTION CONDITION

Secondary parameters	Execution condition
12 V battery system voltage	≥ 10 V
Engine speed	≥ Table 1 rpm

Table 1

Target line pressure (kPa)	0	500	1000	1500	2000	3000	4000	5000	6000
Engine speed (rpm)	300	660	900	1080	1170	1400	1680	1900	2100

4. DIAGNOSTIC METHOD

If the duration of time while the following conditions are met is longer than the time indicated, judge as NG.

Judgment Value

Malfunction Criteria	Threshold Value
Target line pressure – Measured line pressure	≥ 500 kPa

Time Needed for Diagnosis: 5 seconds

Malfunction Indicator Light Illumination: Illuminates as soon as a malfunction occurs.

Diagnostic Procedure with Diagnostic Trouble Code (DTC)

CONTINUOUSLY VARIABLE TRANSMISSION (DIAGNOSTICS)

X: DTC P0842 TRANSMISSION FLUID PRESSURE SENSOR/SWITCH "A" CIRCUIT LOW

DTC detecting condition:

Immediately at fault recognition

Trouble symptom:

Shift characteristics malfunction

CAUTION:

Use the check board when measuring the TCM terminal voltage and resistance.

Wiring diagram:

CVT control system <Ref. to WI-94, CVT Control System.>

Step	Check	Yes	No
1 CHECK INPUT SIGNAL FOR TCM. 1) Start the engine. 2) Warm up until the ATF temperature reaches to 40 — 70°C (104 — 158°F). 3) Depress the brake pedal, and shift the select lever to "D" range. 4) Shift the select lever to "P" range. 5) Stabilize the engine speed at idle. 6) Read the data of «Actual Secondary Pressure» using Subaru Select Monitor.	Is the «Actual Secondary Pressure» 0.5 — 1.5 MPa?	Check for poor contact of connector.	Go to step 2.
2 CHECK HARNESS. 1) Turn the ignition switch to OFF. 2) Disconnect the TCM connector. 3) Disconnect the transmission connector. 4) Measure the resistance between TCM connector and transmission connectors. Connector & terminal (B54) No. 2 — (B12) No. 10: (B54) No. 5 — (B12) No. 11: (B54) No. 33 — (B12) No. 12:	Is the resistance less than 1 Ω?	Go to step 3.	Repair the open circuit of harness.
3 CHECK HARNESS. Measure the resistance between TCM connector and chassis ground. Connector & terminal (B54) No. 5 — Chassis ground: (B54) No. 33 — Chassis ground:	Is the resistance 1 MΩ or more?	Go to step 4.	Repair the short circuit of harness.

Diagnostic Procedure with Diagnostic Trouble Code (DTC)

CONTINUOUSLY VARIABLE TRANSMISSION (DIAGNOSTICS)

Step	Check	Yes	No
4 CHECK TRANSMISSION HARNESS. 1) Disconnect the secondary pressure sensor connector. 2) Measure the resistance between transmission connector and secondary pressure sensor connector. <i>Connector & terminal</i> (T3) No. 10 — (AT6) No. 3: (T3) No. 11 — (AT6) No. 2: (T3) No. 12 — (AT6) No. 1:	Is the resistance less than 1 Ω?	Go to step 5.	Repair the open circuit of harness.
5 CHECK TRANSMISSION HARNESS. Measure the resistance between transmission connector and chassis ground. <i>Connector & terminal</i> (T3) No. 11 — Chassis ground: (T3) No. 12 — Chassis ground:	Is the resistance 1 MΩ or more?	Go to step 6.	Repair the short circuit of harness.
6 CHECK POWER SUPPLY FOR SECONDARY PRESSURE SENSOR. 1) Connect the TCM connector. 2) Connect the transmission connector. 3) Turn the ignition switch to ON. 4) Measure the voltage between secondary pressure sensor connector terminals. <i>Connector & terminal</i> (AT6) No. 1 (+) — (AT6) No. 3 (-):	Is the voltage 4.5 V or more?	Replace the secondary pressure sensor. <Ref. to CVT(TR580)-113, Secondary Pressure Sensor.> If the replacement of the sensor do not eliminate the malfunction, replace the TCM. <Ref. to CVT(TR580)-148, Transmission Control Module (TCM).>	Check for poor contact of connector, and if no fault is found, replace the TCM. <Ref. to CVT(TR580)-148, Transmission Control Module (TCM).>

1. OUTLINE OF DIAGNOSIS

- Detect the ground short circuit of the transmission line pressure sensor.
- Judge as NG if the voltage detected by the transmission line pressure sensor is lower than the predetermined value.

2. EXECUTION CONDITION

Secondary Parameters	Execution condition
12 V battery system voltage	≥ 9 V

3. DIAGNOSTIC METHOD

If the duration of time while the following conditions are met is longer than the time indicated, judge as NG.

Judgment Value

Malfunction Criteria	Threshold Value
Measured line pressure sensor input voltage (Line pressure)	< 0.195 V (< - 574 kPa)

Time Needed for Diagnosis: 0.5 seconds

Malfunction Indicator Light Illumination: Illuminates as soon as a malfunction occurs.

Diagnostic Procedure with Diagnostic Trouble Code (DTC)

CONTINUOUSLY VARIABLE TRANSMISSION (DIAGNOSTICS)

Y: DTC P0843 TRANSMISSION FLUID PRESSURE SENSOR/SWITCH "A" CIRCUIT HIGH

DTC detecting condition:

Immediately at fault recognition

Trouble symptom:

Shift characteristics malfunction

CAUTION:

Use the check board when measuring the TCM terminal voltage and resistance.

Wiring diagram:

CVT control system <Ref. to WI-94, CVT Control System.>

Step	Check	Yes	No
1 CHECK INPUT SIGNAL FOR TCM. 1) Start the engine. 2) Warm up until the ATF temperature reaches to 40 — 70°C (104 — 158°F). 3) Depress the brake pedal, and shift the select lever to "D" range. 4) Shift the select lever to "P" range. 5) Stabilize the engine speed at idle. 6) Read the data of «Actual Secondary Pressure» using Subaru Select Monitor.	Is the «Actual Secondary Pressure» 0.5 — 1.5 MPa?	Check for poor contact of connector.	Go to step 2.
2 CHECK HARNESS. 1) Turn the ignition switch to OFF. 2) Disconnect the TCM connector. 3) Disconnect the transmission connector. 4) Turn the ignition switch to ON. 5) Measure the voltage between TCM connector and chassis ground. Connector & terminal (B54) No. 5 (+) — Chassis ground (-): (B54) No. 33 (+) — Chassis ground (-):	Is the voltage approx. 0 V?	Go to step 3.	Repair the short circuit of harness.
3 CHECK HARNESS. 1) Turn the ignition switch to OFF. 2) Measure the resistance between TCM connector terminals. Connector & terminal (B54) No. 5 — (B54) No. 33:	Is the resistance less than 1 Ω?	Repair the short circuit of harness.	Go to step 4.

Diagnostic Procedure with Diagnostic Trouble Code (DTC)

CONTINUOUSLY VARIABLE TRANSMISSION (DIAGNOSTICS)

Step	Check	Yes	No
4 CHECK TRANSMISSION HARNESS. 1) Disconnect the secondary pressure sensor connector. 2) Turn the ignition switch to ON. 3) Measure the voltage between transmission connector and chassis ground. Connector & terminal (T3) No. 11 (+) — Chassis ground (-): (T3) No. 12 (+) — Chassis ground (-):	Is the voltage approx. 0 V?	Go to step 5.	Repair the short circuit of harness.
5 CHECK TRANSMISSION HARNESS. 1) Turn the ignition switch to OFF. 2) Measure the resistance between transmission connector terminals. Connector & terminal (T3) No. 11 — (T3) No. 12:	Is the resistance less than 1 Ω?	Repair the short circuit of harness.	Go to step 6.
6 CHECK POWER SUPPLY FOR SECONDARY PRESSURE SENSOR. 1) Connect the TCM connector. 2) Connect the transmission connector. 3) Turn the ignition switch to ON. 4) Measure the voltage between secondary pressure sensor connector terminals. Connector & terminal (AT6) No. 1 (+) — (AT6) No. 3 (-):	Is the voltage 4.5 V or more?	Replace the secondary pressure sensor. <Ref. to CVT(TR580)-113, Secondary Pressure Sensor.> If the replacement of the sensor do not eliminate the malfunction, replace the TCM. <Ref. to CVT(TR580)-148, Transmission Control Module (TCM).>	Check for poor contact of connector, and if no fault is found, replace the TCM. <Ref. to CVT(TR580)-148, Transmission Control Module (TCM).>

1. OUTLINE OF DIAGNOSIS

- Detect short circuit to power supply or open circuit of the transmission line pressure sensor 5 V system.
- Judge as NG if the voltage detected by the transmission line pressure sensor is higher than the predetermined value.

2. EXECUTION CONDITION

Secondary Parameters	Execution condition
12 V battery system voltage	≥ 9 V

3. DIAGNOSTIC METHOD

If the duration of time while the following conditions are met is longer than the time indicated, judge as NG.

Judgment Value

Malfunction Criteria	Threshold Value
Measured line pressure sensor input voltage (Line pressure)	> 4.883 V (> 8200 kPa)

Time Needed for Diagnosis: 1.5 seconds

Malfunction Indicator Light Illumination: Illuminates as soon as a malfunction occurs.

Diagnostic Procedure with Diagnostic Trouble Code (DTC)

CONTINUOUSLY VARIABLE TRANSMISSION (DIAGNOSTICS)

Z: DTC P0890 TCM POWER RELAY SENSE CIRCUIT LOW

DTC detecting condition:

Immediately at fault recognition

Trouble symptom:

Gear is not changed.

CAUTION:

- After diagnosis, perform Clear Memory Mode for ECM. <Ref. to EN(H4DO)(diag)-66, Clear Memory Mode.>
- Use the check board when measuring the TCM terminal voltage and resistance.

Wiring diagram:

CVT control system <Ref. to WI-94, CVT Control System.>

CVT01148

Step	Check	Yes	No
1 CHECK HARNESS. 1) Disconnect the TCM connector. 2) Remove the self shut relay. 3) Measure the resistance between TCM connector and relay holder. <i>Connector & terminal</i> (B54) No. 25 — (B220) No. 16: (B54) No. 8 — (B220) No. 15: (B54) No. 24 — (B220) No. 15: (B54) No. 40 — (B220) No. 15:	Is the resistance less than 1 Ω ?	Go to step 2.	Repair the open circuit of harness.
2 CHECK HARNESS. Measure the resistance between TCM connector and chassis ground. <i>Connector & terminal</i> (B54) No. 25 — Chassis ground: (B54) No. 8 — Chassis ground: (B54) No. 24 — Chassis ground: (B54) No. 40 — Chassis ground:	Is the resistance 1 M Ω or more?	Go to step 3.	Repair the short circuit of harness.

Diagnostic Procedure with Diagnostic Trouble Code (DTC)

CONTINUOUSLY VARIABLE TRANSMISSION (DIAGNOSTICS)

Step	Check	Yes	No
3 CHECK RELAY POWER SUPPLY. Measure the voltage between relay holder and chassis ground. <i>Connector & terminal</i> (B220) No. 14 (+) — Chassis ground (-): (B220) No. 17 (+) — Chassis ground (-):	Is the voltage 11 — 13 V or more?	Go to step 4.	Repair the open or short circuit of harness.
4 CHECK SELF SHUT RELAY. Measure the resistance between self shut relay terminals. <i>Terminals</i> No. 16 — No. 17:	Is the resistance 110 — 140 Ω?	Go to step 5.	Replace the self shut relay.
5 CHECK SELF SHUT RELAY. Measure the resistance between self shut relay terminals. <i>Terminals</i> No. 14 — No. 15:	Is the resistance 1 MΩ or more?	Go to step 6.	Replace the self shut relay.
6 CHECK INPUT SIGNAL FOR TCM. 1) Connect the TCM connector. 2) Install the self shut relay. 3) Read the data of «Control module voltage» using Subaru Select Monitor.	Is the «Control module voltage» 10 V or more?	Current condition is normal. Check for poor contact in connectors or harnesses, and repair the defective part.	Go to step 7.
7 CHECK SELF SHUT RELAY. 1) Turn the ignition switch to OFF. 2) Replace the self shut relay. 3) Perform the Clear Memory Mode. <Ref. to CVT(diag)-20, Clear Memory Mode.> 4) Read the DTC.	Is DTC P0890 displayed?	Replace the TCM. <Ref. to CVT(TR580)-148, Transmission Control Module (TCM).>	The original self shut relay is defective.

1. OUTLINE OF DIAGNOSIS

- Detect the malfunction of transmission fluid pressure solenoid drive power supply relay circuit.
- Judge as NG if the transmission fluid pressure solenoid drive power supply voltage is lower than the pre-determined value.

2. EXECUTION CONDITION

Secondary Parameters	Execution condition
12 V battery system voltage	≥ 9 V
Ignition state	Run or Crank

3. DIAGNOSTIC METHOD

If the duration of time while the following conditions are met is longer than the time indicated, judge as NG.

Judgment Value

Malfunction Criteria	Threshold Value
Measured TCM input voltage which is supplied from 12 V battery system through the TCM Power Relay	< 2 V

Time Needed for Diagnosis: 0.5 seconds

Malfunction Indicator Light Illumination: Illuminates as soon as a malfunction occurs.

Diagnostic Procedure with Diagnostic Trouble Code (DTC)

CONTINUOUSLY VARIABLE TRANSMISSION (DIAGNOSTICS)

AA:DTC P0951 AUTO SHIFT MANUAL CONTROL CIRCUIT RANGE/PERFORMANCE

DTC detecting condition:

Immediately at fault recognition

Trouble symptom:

Manual mode can not be set.

CAUTION:

Use the check board when measuring the TCM terminal voltage and resistance.

Wiring diagram:

CVT control system <Ref. to WI-94, CVT Control System.>

CVT01149

Step	Check	Yes	No
1 CHECK HARNESS. 1) Turn the ignition switch to OFF. 2) Disconnect the manual mode switch connector. 3) Measure the resistance between manual mode switch connector and chassis ground. Connector & terminal (B116) No. 8 — Chassis ground:	Is the resistance less than 1 Ω?	Go to step 2.	Repair the open circuit of harness.
2 CHECK MANUAL MODE SWITCH. Measure the resistance between manual mode switch terminals. Terminals No. 7 — No. 8:	Is the resistance 1 MΩ or more?	Go to step 3.	Replace the select lever assembly. <Ref. to CS-23, Select Lever.>
3 CHECK MANUAL MODE SWITCH. 1) Shift the select lever to manual mode. 2) Measure the resistance between manual mode switch terminals. Terminals No. 7 — No. 8:	Is the resistance less than 1 Ω?	Go to step 4.	Replace the select lever assembly. <Ref. to CS-23, Select Lever.>
4 CHECK HARNESS. 1) Disconnect the TCM connector. 2) Measure the resistance between TCM connector and manual mode switch connector. Connector & terminal (B54) No. 20 — (B116) No. 7:	Is the resistance less than 1 Ω?	Go to step 5.	Repair the open circuit of harness or poor contact of connector.

Diagnostic Procedure with Diagnostic Trouble Code (DTC)

CONTINUOUSLY VARIABLE TRANSMISSION (DIAGNOSTICS)

Step	Check	Yes	No
5 CHECK HARNESS. Measure the resistance between manual mode switch connector and chassis ground. Connector & terminal (B116) No. 7 — Chassis ground:	Is the resistance 1 MΩ or more?	Go to step 6.	Repair the short circuit of harness.
6 CHECK INPUT SIGNAL FOR TCM. 1) Connect all connectors. 2) Turn the ignition switch to ON. 3) Set the select lever to "D" range. 4) Read the data of «Tiptronic Mode Switch» using Subaru Select Monitor.	Does the value of «Tiptronic Mode Switch» change to "ON" with select lever in manual mode, and "OFF" with select lever in other than manual mode?	Current condition is normal.	Go to step 7.
7 CHECK FOR POOR CONTACT.	Is there poor contact of the manual mode switch circuit?	Repair the poor contact.	Replace the TCM. <Ref. to CVT(TR580)-148, Transmission Control Module (TCM).>

1. OUTLINE OF DIAGNOSIS

- Detect the GND-output short (ground-fault) in manual SW circuit.
- Judge as NG if the manual SW is ON in P, R or N range.

2. EXECUTION CONDITION

Secondary parameters	Execution condition
None	

3. DIAGNOSTIC METHOD

If the duration of time while the following conditions are met is longer than the time indicated, judge as NG.

Judgment Value

Malfunction Criteria	Threshold Value
Manual SW status in other than D range	ON

Time Needed for Diagnosis: 5 s

Malfunction Indicator Light Illumination: Does not illuminate.

Diagnostic Procedure with Diagnostic Trouble Code (DTC)

CONTINUOUSLY VARIABLE TRANSMISSION (DIAGNOSTICS)

AB:DTC P0961 PRESSURE CONTROL SOLENOID "A" CONTROL CIRCUIT RANGE/PERFORMANCE

DTC DETECTING CONDITION:

Immediately at fault recognition

TROUBLE SYMPTOM:

- Acceleration is poor during standing start.
- Shift control malfunction
- Engine speed increases abruptly.

WIRING DIAGRAM:

CVT control system <Ref. to WI-94, CVT Control System.>

CVT01143

Step	Check	Yes	No	
1	CHECK DTC. Read the DTC using Subaru Select Monitor.	Besides DTC P0961, is DTC P0962 or P0963 displayed?	Perform the diagnosis according to DTCs other than P0961.	Go to step 2.
2	CHECK SECONDARY SOLENOID (ACTIVE TEST). 1) Turn the ignition switch to ON. 2) Using the Subaru Select Monitor, perform forced operation of the secondary solenoid. <Ref. to CVT(diag)-26, Active Test.>	Does the indication change as 300 → 500 → 700 mA during forced operation, and does «Sec. Sol. Actual Current» synchronize with «Sec. Sol. Set Current»?	Go to step 3.	Go to step 4.
3	CHECK FOR POOR CONTACT. Check for poor contact of harness and connector between TCM and secondary solenoid.	Is there poor contact?	Repair the poor contact of harness and connector.	Recheck the poor contact of harness and connector. Replace the TCM if no fault is found. <Ref. to CVT(TR580)-148, Transmission Control Module (TCM).>
4	CHECK SECONDARY SOLENOID. 1) Turn the ignition switch to OFF. 2) Disconnect the transmission connector. 3) Measure the resistance between transmission connector and transmission body. Connector & terminal (T4) No. 6 — Transmission body:	Is the resistance approx. 5 — 7 Ω? (when cold)	Replace the control valve body. <Ref. to CVT(TR580)-119, Control Valve Body.>	Repair or replace the harness.

Diagnostic Procedure with Diagnostic Trouble Code (DTC)

CONTINUOUSLY VARIABLE TRANSMISSION (DIAGNOSTICS)

1. OUTLINE OF DIAGNOSIS

- Detect the malfunction of transmission line pressure solenoid drive circuit.
- Judge as NG when the deviation between target current and actual current of the transmission line pressure solenoid becomes equal to or larger than the predetermined value.

2. EXECUTION CONDITION

Secondary Parameters	Execution condition
12 V battery system voltage	$\geq 9 \text{ V}$

3. DIAGNOSTIC METHOD

If the duration of time while the following conditions are met is longer than the time indicated, judge as NG.

Judgment Value

Malfunction Criteria	Threshold Value
ABS (Target line pressure control solenoid valve current – Measured line pressure control solenoid valve current)	$> 0.2 \text{ A}$

Time Needed for Diagnosis: 5 seconds

Malfunction Indicator Light Illumination: Illuminates as soon as a malfunction occurs.

Diagnostic Procedure with Diagnostic Trouble Code (DTC)

CONTINUOUSLY VARIABLE TRANSMISSION (DIAGNOSTICS)

AC:DTC P0962 PRESSURE CONTROL SOLENOID "A" CONTROL CIRCUIT LOW

DTC detecting condition:

Immediately at fault recognition

Trouble symptom:

- Engine speed increases abruptly, and can not start.
- Engine speed increases abruptly during driving.

CAUTION:

Use the check board when measuring the TCM terminal voltage and resistance.

Wiring diagram:

CVT control system <Ref. to WI-94, CVT Control System.>

CVT01143

Step	Check	Yes	No
1 CHECK INPUT SIGNAL FOR TCM. 1) After driving with warm up condition, park the vehicle while depressing the brake pedal at "N" range. 2) Read the data of «Secondary Set Current» and «Secondary Actual Current» using Subaru Select Monitor.	Does the value of «Secondary Set Current» and «Secondary Actual Current» almost correspond?	Check for poor contact of connector.	Go to step 2.
2 CHECK HARNESS. 1) Turn the ignition switch to OFF. 2) Disconnect the TCM connector. 3) Disconnect the transmission connector. 4) Measure the resistance between TCM connector and chassis ground. Connector & terminal (B54) No. 32 — Chassis ground:	Is the resistance 1 MΩ or more?	Go to step 3.	Repair the short circuit of harness.
3 CHECK SECONDARY SOLENOID. Measure the resistance between transmission connector and transmission body. Connector & terminal (T4) No. 6 — Transmission body:	Is the resistance approx. 5 — 7 Ω? (when cold)	Check for poor contact of connector, and if no fault is found, replace the TCM. <Ref. to CVT(TR580)-148, Transmission Control Module (TCM).>	Go to step 4.

Diagnostic Procedure with Diagnostic Trouble Code (DTC)

CONTINUOUSLY VARIABLE TRANSMISSION (DIAGNOSTICS)

Step	Check	Yes	No
4 CHECK HARNESS INSIDE TRANSMISSION. CAUTION: Start work after ATF cools down. 1) Remove the transmission valve cover. 2) Check for the harness pinch, damage.	Is there any fault in the harness?	Replace the transmission harness.	Go to step 5.
5 CHECK HARNESS INSIDE TRANSMISSION. 1) Disconnect the control valve body connector. 2) Measure the resistance between transmission connector and transmission body. Connector & terminal (T4) No. 6 — Transmission body:	Is the resistance 1 MΩ or more?	Replace the control valve body. <Ref. to CVT(TR580)-119, Control Valve Body.>	Replace the transmission harness.

1. OUTLINE OF DIAGNOSIS

Diagnosis 1

- Detect the ground short of the transmission line pressure solenoid drive circuit.
- Judge as NG if the transmission line pressure solenoid drive current is higher than the predetermined value.

Diagnosis 2

- Detect the ground short of the transmission line pressure solenoid drive circuit.
- Judge as NG when an abnormal signal is received from the solenoid driver IC of the transmission line pressure solenoid drive circuit.

2. EXECUTION CONDITION

Secondary Parameters	Execution condition
Diagnosis 1 12 V battery system voltage Commanded line pressure control solenoid valve current	≥ 9 V ≥ 0.1 A
Diagnosis 2 12 V battery system voltage	≥ 9 V

3. DIAGNOSTIC METHOD

If the duration of time while the following conditions are met is longer than the time indicated, judge as NG.

Judgment Value

Malfunction Criteria	Threshold Value
Diagnosis 1 Measured line pressure control solenoid valve current	≥ 1.1 A
Diagnosis 2 Signal of malfunction from solenoid driver IC As defined by: Measured line pressure control solenoid valve current ≥ 1.2 A	ON

Time Needed for Diagnosis: 0.5 seconds

Malfunction Indicator Light Illumination: Illuminates as soon as a malfunction occurs.

Diagnostic Procedure with Diagnostic Trouble Code (DTC)

CONTINUOUSLY VARIABLE TRANSMISSION (DIAGNOSTICS)

AD:DTC P0963 PRESSURE CONTROL SOLENOID "A" CONTROL CIRCUIT HIGH

DTC detecting condition:

Immediately at fault recognition

Trouble symptom:

- Engine speed increases abruptly, and can not start.
- Engine speed increases abruptly during driving.

CAUTION:

Use the check board when measuring the TCM terminal voltage and resistance.

Wiring diagram:

CVT control system <Ref. to WI-94, CVT Control System.>

CVT01143

Step	Check	Yes	No
1 CHECK INPUT SIGNAL FOR TCM. 1) After driving with warm up condition, park the vehicle while depressing the brake pedal at "N" range. 2) Read the data of «Secondary Set Current» and «Secondary Actual Current» using Subaru Select Monitor.	Does the value of «Secondary Set Current» and «Secondary Actual Current» almost correspond?	Check for poor contact of connector.	Go to step 2.
2 CHECK HARNESS. 1) Turn the ignition switch to OFF. 2) Disconnect the TCM connector. 3) Disconnect the transmission connector. 4) Measure the resistance between TCM connector and transmission connectors. <i>Connector & terminal</i> <i>(B54) No. 32 — (B11) No. 6:</i>	Is the resistance less than 1 Ω?	Go to step 3.	Repair the open circuit of harness.
3 CHECK HARNESS. 1) Turn the ignition switch to ON. 2) Measure the voltage between TCM connector and chassis ground. <i>Connector & terminal</i> <i>(B54) No. 32 (+) — Chassis ground (-):</i>	Is the voltage approx. 0 V?	Go to step 4.	Repair the short circuit of harness.

Diagnostic Procedure with Diagnostic Trouble Code (DTC)

CONTINUOUSLY VARIABLE TRANSMISSION (DIAGNOSTICS)

Step	Check	Yes	No
4 CHECK SECONDARY SOLENOID. Measure the resistance between transmission connector and transmission body. Connector & terminal (T4) No. 6 — Transmission body:	Is the resistance approx. 5 — 7 Ω? (when cold)	Check for poor contact of connector, and if no fault is found, replace the TCM. <Ref. to CVT(TR580)-148, Transmission Control Module (TCM).>	Go to step 5.
5 CHECK HARNESS INSIDE TRANSMISSION. CAUTION: Start work after ATF cools down. 1) Remove the transmission valve cover. 2) Check for the harness pinch, damage.	Is there any fault in the harness?	Replace the transmission harness.	Go to step 6.
6 CHECK HARNESS INSIDE TRANSMISSION. 1) Disconnect the control valve body connector. 2) Turn the ignition switch to ON. 3) Measure the voltage between transmission connector and transmission body. Connector & terminal (T4) No. 6 (+) — Transmission body (-):	Is the voltage approx. 0 V?	Replace the control valve body. <Ref. to CVT(TR580)-119, Control Valve Body.>	Replace the transmission harness.

1. OUTLINE OF DIAGNOSIS

- Detect short circuit to power supply or open circuit of the transmission line pressure solenoid drive circuit.
- Judge as NG if the transmission line pressure solenoid drive current is lower than the predetermined value.

2. EXECUTION CONDITION

Secondary Parameters	Execution condition
12 V battery system voltage	≥ 9 V
Commanded line pressure control solenoid valve current	≥ 0.2 A

3. DIAGNOSTIC METHOD

If the duration of time while the following conditions are met is longer than the time indicated, judge as NG.

Judgment Value

Malfunction Criteria	Threshold Value
Measured line pressure control solenoid valve current	< 0.1 A

Time Needed for Diagnosis: 0.5 seconds

Malfunction Indicator Light Illumination: Illuminates as soon as a malfunction occurs.

Diagnostic Procedure with Diagnostic Trouble Code (DTC)

CONTINUOUSLY VARIABLE TRANSMISSION (DIAGNOSTICS)

AE:DTC P0965 PRESSURE CONTROL SOLENOID "B" CONTROL CIRCUIT RANGE/PERFORMANCE

DTC DETECTING CONDITION:

Immediately at fault recognition

TROUBLE SYMPTOM:

- Engine speed increases abruptly, and can not accelerate.
- Excessive slippage is felt.

WIRING DIAGRAM:

CVT control system <Ref. to WI-94, CVT Control System.>

Step	Check	Yes	No	
1	CHECK DTC. Read the DTC using Subaru Select Monitor.	Besides DTC P0965, is any of the DTC P0717, P0966, P0967 or P2747 displayed?	Perform the diagnosis according to DTCs other than P0965.	Go to step 2.
2	CHECK F&R SOLENOID (ACTIVE TEST). 1) Turn the ignition switch to ON. 2) Using the Subaru Select Monitor, perform forced operation of the F&R solenoid. <Ref. to CVT(diag)-26, Active Test.>	Does the indication change as 300 → 500 → 700 mA during forced operation, and does «F&R Linear Solenoid Actual Current» synchronize with «F&R Linear Solenoid Set Current»?	Go to step 3.	Go to step 4.
3	CHECK FOR POOR CONTACT. Check for poor contact of harness and connector between TCM and F&R solenoid.	Is there poor contact?	Repair the poor contact of harness and connector.	Recheck the poor contact of harness and connector. Replace the TCM if no fault is found. <Ref. to CVT(TR580)-148, Transmission Control Module (TCM).>
4	CHECK F&R SOLENOID. 1) Turn the ignition switch to OFF. 2) Disconnect the transmission connector. 3) Measure the resistance between transmission connector and transmission body. Connector & terminal (T4) No. 7 — Transmission body:	Is the resistance approx. 4 — 6 Ω? (when cold)	Replace the control valve body. <Ref. to CVT(TR580)-119, Control Valve Body.>	Repair or replace the harness.

Diagnostic Procedure with Diagnostic Trouble Code (DTC)

CONTINUOUSLY VARIABLE TRANSMISSION (DIAGNOSTICS)

1. OUTLINE OF DIAGNOSIS

Diagnosis 1

- Detect the malfunction of transmission forward/reverse clutch pressure solenoid drive circuit characteristics.
- Judge as NG when the deviation between set current and actual current of the transmission forward/reverse clutch pressure solenoid drive circuit becomes equal to or larger than the predetermined value.

Diagnosis 2

- Detect the malfunction of transmission forward/reverse clutch pressure solenoid drive circuit characteristics.
- Judge as NG when the transmission forward/reverse clutch pressure solenoid drive current is within the predetermined value.

2. EXECUTION CONDITION

Secondary Parameters	Execution condition
Diagnosis 1 12 V battery system voltage	$\geq 9 \text{ V}$
Diagnosis 2 12 V battery system voltage	$\geq 9 \text{ V}$

3. DIAGNOSTIC METHOD

If the duration of time while the following conditions are met is longer than the time indicated, judge as NG.

Judgment Value

Malfunction Criteria	Threshold Value
Diagnosis 1 ABS (Target forward & reverse clutch pressure control solenoid current – Measured forward & reverse clutch pressure control solenoid current)	$> 0.2 \text{ A}$
Diagnosis 2 Measured forward & reverse clutch pressure control solenoid current	$> 1.08 \text{ A}$ and $\leq 1.6 \text{ A}$

Time Needed for Diagnosis: 5 seconds

Malfunction Indicator Light Illumination: Illuminates as soon as a malfunction occurs.

Diagnostic Procedure with Diagnostic Trouble Code (DTC)

CONTINUOUSLY VARIABLE TRANSMISSION (DIAGNOSTICS)

AF:DTC P0966 PRESSURE CONTROL SOLENOID "B" CONTROL CIRCUIT LOW

DTC detecting condition:

Immediately at fault recognition

Trouble symptom:

Excessive shift shock

CAUTION:

Use the check board when measuring the TCM terminal voltage and resistance.

Wiring diagram:

CVT control system <Ref. to WI-94, CVT Control System.>

CVT01146

Step	Check	Yes	No
1 CHECK INPUT SIGNAL FOR TCM. 1) After driving with warm up condition, park the vehicle while depressing the brake pedal at "D" range. 2) Read the data of «Commanded Forward & Reverse Linear Solenoid Current» and «Actual Forward & Reverse Linear Solenoid Current» almost correspond? using Subaru Select Monitor.	Does the value of «Com- manded Forward & Reverse Linear Solenoid Current» and «Actual Forward & Reverse Lin- ear Solenoid Current» almost correspond?	Check for poor contact of connec- tor.	Go to step 2.
2 CHECK HARNESS. 1) Turn the ignition switch to OFF. 2) Disconnect the TCM connector. 3) Disconnect the transmission connector. 4) Measure the resistance between TCM con- nector and chassis ground. Connector & terminal (B54) No. 16 — Chassis ground:	Is the resistance 1 MΩ or more?	Go to step 3.	Repair the short circuit of harness.
3 CHECK F&R SOLENOID. Measure the resistance between transmission connector and transmission body. Connector & terminal (T4) No. 7 — Transmission body:	Is the resistance approx. 4 — 6 Ω? (when cold)	Check for poor contact of connec- tor, and if no fault is found, replace the TCM. <Ref. to CVT(TR580)-148, Transmission Con- trol Module (TCM).>	Go to step 4.

Diagnostic Procedure with Diagnostic Trouble Code (DTC)

CONTINUOUSLY VARIABLE TRANSMISSION (DIAGNOSTICS)

Step	Check	Yes	No
4 CHECK HARNESS INSIDE TRANSMISSION. CAUTION: Start work after ATF cools down. 1) Remove the transmission valve cover. 2) Check for the harness pinch, damage.	Is there any fault in the harness?	Replace the transmission harness.	Go to step 5.
5 CHECK HARNESS INSIDE TRANSMISSION. 1) Disconnect the control valve body connector. 2) Measure the resistance between transmission connector and transmission body. Connector & terminal (T4) No. 7 — Transmission body:	Is the resistance 1 MΩ or more?	Replace the control valve body. <Ref. to CVT(TR580)-119, Control Valve Body.>	Replace the transmission harness.

1. OUTLINE OF DIAGNOSIS

- Detect the short circuit to ground in transmission forward/reverse clutch pressure solenoid circuit.
- Judge as NG when an abnormal signal is received from the solenoid driver IC of the transmission forward/reverse clutch pressure solenoid drive circuit.

2. EXECUTION CONDITION

Secondary Parameters	Execution condition
12 V battery system voltage	≥ 9 V

3. DIAGNOSTIC METHOD

If the duration of time while the following conditions are met is longer than the time indicated, judge as NG.

Judgment Value

Malfunction Criteria	Threshold Value
Signal of malfunction from solenoid driver IC As defined by: Measured forward & reverse clutch pressure control solenoid current > 1.6 A	ON

Time Needed for Diagnosis: 0.02 seconds

Malfunction Indicator Light Illumination: Illuminates as soon as a malfunction occurs.

Diagnostic Procedure with Diagnostic Trouble Code (DTC)

CONTINUOUSLY VARIABLE TRANSMISSION (DIAGNOSTICS)

AG:DTC P0967 PRESSURE CONTROL SOLENOID "B" CONTROL CIRCUIT HIGH

DTC detecting condition:

Immediately at fault recognition

Trouble symptom:

Engine speed increases abruptly, and can not start.

CAUTION:

Use the check board when measuring the TCM terminal voltage and resistance.

Wiring diagram:

CVT control system <Ref. to WI-94, CVT Control System.>

Step	Check	Yes	No
1 CHECK INPUT SIGNAL FOR TCM. 1) After driving with warm up condition, park the vehicle while depressing the brake pedal at "D" range. 2) Read the data of «Commanded Forward & Reverse Linear Solenoid Current» and «Actual Forward & Reverse Linear Solenoid Current» almost correspond? using Subaru Select Monitor.	Does the value of «Com- manded Forward & Reverse Linear Solenoid Current» and «Actual Forward & Reverse Lin- ear Solenoid Current» almost correspond?	Check for poor contact of connec- tor.	Go to step 2.
2 CHECK HARNESS. 1) Turn the ignition switch to OFF. 2) Disconnect the TCM connector. 3) Disconnect the transmission connector. 4) Measure the resistance between TCM con- nector and transmission connectors. Connector & terminal (B54) No. 16 — (B11) No. 7:	Is the resistance less than 1 Ω?	Go to step 3.	Repair the open circuit of harness.
3 CHECK HARNESS. 1) Turn the ignition switch to ON. 2) Measure the voltage between TCM connec- tor and chassis ground. Connector & terminal (B54) No. 16 (+) — Chassis ground (-):	Is the voltage approx. 0 V?	Go to step 4.	Repair the short circuit of harness.

Diagnostic Procedure with Diagnostic Trouble Code (DTC)

CONTINUOUSLY VARIABLE TRANSMISSION (DIAGNOSTICS)

Step	Check	Yes	No
4 CHECK F&R SOLENOID. Measure the resistance between transmission connector and transmission body. Connector & terminal (T4) No. 7 — Transmission body:	Is the resistance approx. 4 — 6 Ω? (when cold)	Check for poor contact of connector, and if no fault is found, replace the TCM. <Ref. to CVT(TR580)-148, Transmission Control Module (TCM).>	Go to step 5.
5 CHECK HARNESS INSIDE TRANSMISSION. CAUTION: Start work after ATF cools down. 1) Remove the transmission valve cover. 2) Check for the harness pinch, damage.	Is there any fault in the harness?	Replace the transmission harness.	Go to step 6.
6 CHECK HARNESS INSIDE TRANSMISSION. 1) Disconnect the control valve body connector. 2) Turn the ignition switch to ON. 3) Measure the voltage between transmission connector and transmission body. Connector & terminal (T4) No. 7 (+) — Transmission body (-):	Is the voltage approx. 0 V?	Replace the control valve body. <Ref. to CVT(TR580)-119, Control Valve Body.>	Replace the transmission harness.

1. OUTLINE OF DIAGNOSIS

- Detect open circuit or power supply-output short circuit in the transmission forward/reverse clutch pressure solenoid circuit.
- Judge as NG if the transmission forward/reverse clutch pressure solenoid drive current is lower than the predetermined value.

2. EXECUTION CONDITION

Secondary Parameters	Execution condition
12 V battery system voltage	≥ 9 V
Target forward & reverse clutch pressure control solenoid current	≥ 0.3 A

3. DIAGNOSTIC METHOD

If the duration of time while the following conditions are met is longer than the time indicated, judge as NG.

Judgment Value

Malfunction Criteria	Threshold Value
Signal of malfunction from solenoid driver IC As defined by: Measured forward & reverse clutch pressure control solenoid current < 5.9 mA	ON

Time Needed for Diagnosis: 1 second

Malfunction Indicator Light Illumination: Illuminates as soon as a malfunction occurs.

Diagnostic Procedure with Diagnostic Trouble Code (DTC)

CONTINUOUSLY VARIABLE TRANSMISSION (DIAGNOSTICS)

AH:DTC P0970 PRESSURE CONTROL SOLENOID "C" CONTROL CIRCUIT LOW

DTC detecting condition:

Immediately at fault recognition

Trouble symptom:

Drivability getting worse.

CAUTION:

Use the check board when measuring the TCM terminal voltage and resistance.

Wiring diagram:

CVT control system <Ref. to WI-94, CVT Control System.>

CVT01150

Step	Check	Yes	No
1 CHECK HARNESS. 1) Turn the ignition switch to OFF. 2) Disconnect the TCM connector. 3) Disconnect the transmission connector. 4) Measure the resistance between TCM connector and chassis ground. Connector & terminal (B54) No. 48 — Chassis ground:	Is the resistance 1 MΩ or more?	Go to step 2.	Repair the short circuit of harness.
2 CHECK AWD SOLENOID. Measure the resistance between transmission connector and transmission body. Connector & terminal (T4) No. 8 — Transmission body:	Is the resistance approx. 2 — 4.5 Ω? (when cold)	Check for poor contact of connector, and if no fault is found, replace the TCM. <Ref. to CVT(TR580)-148, Transmission Control Module (TCM).>	Go to step 3.
3 CHECK HARNESS INSIDE TRANSMISSION. CAUTION: Start work after ATF cools down. 1) Remove the transmission valve cover. 2) Check for the harness pinch, damage.	Is there any fault in the harness?	Replace the transmission harness.	Go to step 4.

Diagnostic Procedure with Diagnostic Trouble Code (DTC)

CONTINUOUSLY VARIABLE TRANSMISSION (DIAGNOSTICS)

Step	Check	Yes	No
4 CHECK HARNESS INSIDE TRANSMISSION. 1) Disconnect the control valve body connector. 2) Measure the resistance between transmission connector and transmission body. Connector & terminal (T4) No. 8 — Transmission body:	Is the resistance 1 MΩ or more?	Replace the control valve body. <Ref. to CVT(TR580)-119, Control Valve Body.>	Replace the transmission harness.

1. OUTLINE OF DIAGNOSIS

- Detect the GND-output short in transfer solenoid circuit.
- Judge as NG if a ground short circuit is detected more than 10 times via the detection circuit for the transfer solenoid drive circuit.

2. EXECUTION CONDITION

Secondary Parameters	Execution condition
Target duty cycle	0%

3. DIAGNOSTIC METHOD

If the duration of time while the following conditions are met is longer than the time indicated, judge as NG.

Judgment Value

Malfunction Criteria	Threshold Value
Malfunction signal from solenoid driver IC	≥ 10 count

Time Needed for Diagnosis: Immediately

Malfunction Indicator Light Illumination: Does not illuminate.

Diagnostic Procedure with Diagnostic Trouble Code (DTC)

CONTINUOUSLY VARIABLE TRANSMISSION (DIAGNOSTICS)

AI: DTC P0971 PRESSURE CONTROL SOLENOID "C" CONTROL CIRCUIT HIGH

DTC detecting condition:

Immediately at fault recognition

Trouble symptom:

- Tight corner braking phenomenon occurs.
- Drivability getting worse.

CAUTION:

Use the check board when measuring the TCM terminal voltage and resistance.

Wiring diagram:

CVT control system <Ref. to WI-94, CVT Control System.>

CVT01150

Step	Check	Yes	No
1 CHECK HARNESS. 1) Turn the ignition switch to OFF. 2) Disconnect the TCM connector. 3) Disconnect the transmission connector. 4) Measure the resistance between TCM connector and transmission connectors. Connector & terminal (B54) No. 48 — (B11) No. 8:	Is the resistance less than 1 Ω ?	Go to step 2.	Repair the open circuit of harness.
2 CHECK HARNESS. 1) Turn the ignition switch to ON. 2) Measure the voltage between TCM connector and chassis ground. Connector & terminal (B54) No. 48 (+) — Chassis ground (-):	Is the voltage approx. 0 V?	Go to step 3.	Repair the short circuit of harness.
3 CHECK AWD SOLENOID. Measure the resistance between transmission connector and transmission body. Connector & terminal (T4) No. 8 — Transmission body:	Is the resistance approx. 2 — 4.5 Ω ? (when cold)	Check for poor contact of connector, and if no fault is found, replace the TCM. <Ref. to CVT(TR580)-148, Transmission Control Module (TCM).>	Go to step 4.

Diagnostic Procedure with Diagnostic Trouble Code (DTC)

CONTINUOUSLY VARIABLE TRANSMISSION (DIAGNOSTICS)

Step	Check	Yes	No
4 CHECK HARNESS INSIDE TRANSMISSION. CAUTION: Start work after ATF cools down. 1) Remove the transmission valve cover. 2) Check for the harness pinch, damage.	Is there any fault in the harness?	Replace the transmission harness.	Go to step 5.
5 CHECK HARNESS INSIDE TRANSMISSION. 1) Disconnect the control valve body connector. 2) Turn the ignition switch to ON. 3) Measure the voltage between transmission connector and transmission body. Connector & terminal (T4) No. 8 (+) — Transmission body (-):	Is the voltage approx. 0 V?	Replace the control valve body. <Ref. to CVT(TR580)-119, Control Valve Body.>	Replace the transmission harness.

1. OUTLINE OF DIAGNOSIS

- Detect open circuit or power supply-output short circuit in the transfer solenoid circuit.
- Judge as NG if an open circuit or a short circuit to ground is detected more than 10 times via the detection circuit in the transfer solenoid drive circuit.

2. EXECUTION CONDITION

Secondary Parameters	Execution condition
Target duty cycle	100%

3. DIAGNOSTIC METHOD

If the duration of time while the following conditions are met is longer than the time indicated, judge as NG.

Judgment Value

Malfunction Criteria	Threshold Value
Malfunction signal from solenoid driver IC	≥ 10 count

Time Needed for Diagnosis: Immediately

Malfunction Indicator Light Illumination: Does not illuminate.

Diagnostic Procedure with Diagnostic Trouble Code (DTC)

CONTINUOUSLY VARIABLE TRANSMISSION (DIAGNOSTICS)

AJ:DTC P0973 SHIFT SOLENOID "A" CONTROL CIRCUIT LOW

DTC detecting condition:

Immediately at fault recognition

Trouble symptom:

Gear is not changed. (No up-shift)

CAUTION:

Use the check board when measuring the TCM terminal voltage and resistance.

Wiring diagram:

CVT control system <Ref. to WI-94, CVT Control System.>

CVT01144

Step	Check	Yes	No
1 CHECK HARNESS. 1) Turn the ignition switch to OFF. 2) Disconnect the TCM connector. 3) Disconnect the transmission connector. 4) Measure the resistance between TCM connector and chassis ground. Connector & terminal (B54) No. 47 — Chassis ground:	Is the resistance 1 MΩ or more?	Go to step 2.	Repair the short circuit of harness.
2 CHECK PRIMARY UP SOLENOID. Measure the resistance between transmission connector and transmission body. Connector & terminal (T4) No. 2 — Transmission body:	Is the resistance approx. 10 — 13.5 Ω? (when cold)	Check for poor contact of connector, and if no fault is found, replace the TCM. <Ref. to CVT(TR580)-148, Transmission Control Module (TCM).>	Go to step 3.
3 CHECK HARNESS INSIDE TRANSMISSION. CAUTION: Start work after ATF cools down. 1) Remove the transmission valve cover. 2) Check for the harness pinch, damage.	Is there any fault in the harness?	Replace the transmission harness.	Go to step 4.

Diagnostic Procedure with Diagnostic Trouble Code (DTC)

CONTINUOUSLY VARIABLE TRANSMISSION (DIAGNOSTICS)

Step	Check	Yes	No
4 CHECK HARNESS INSIDE TRANSMISSION. 1) Disconnect the control valve body connector. 2) Measure the resistance between transmission connector and transmission body. Connector & terminal (T4) No. 2 — Transmission body:	Is the resistance 1 M Ω or more?	Replace the control valve body. <Ref. to CVT(TR580)-119, Control Valve Body.>	Replace the transmission harness.

1. OUTLINE OF DIAGNOSIS

- Detect the ground short of the shift-up fluid pressure control solenoid drive circuit.
- Judge as NG when an abnormal signal is received from the solenoid driver IC of the shift-up fluid pressure control solenoid drive circuit.

2. EXECUTION CONDITION

Secondary Parameters	Execution condition
12 V battery system voltage	≥ 9 V
Commanded duty of shift up pressure control solenoid	100%

3. DIAGNOSTIC METHOD

If the duration of time while the following conditions are met is longer than the time indicated, judge as NG.

Judgment Value

Malfunction Criteria	Threshold Value
Signal of malfunction from solenoid driver IC As defined by: Measured shift up pressure control solenoid voltage ≤ 0.8 V	ON

Time Needed for Diagnosis: 0.2 seconds

Malfunction Indicator Light Illumination: Illuminates as soon as a malfunction occurs.

Diagnostic Procedure with Diagnostic Trouble Code (DTC)

CONTINUOUSLY VARIABLE TRANSMISSION (DIAGNOSTICS)

AK:DTC P0974 SHIFT SOLENOID "A" CONTROL CIRCUIT HIGH

DTC detecting condition:

Immediately at fault recognition

Trouble symptom:

Gear is not changed. (No up-shift)

CAUTION:

Use the check board when measuring the TCM terminal voltage and resistance.

Wiring diagram:

CVT control system <Ref. to WI-94, CVT Control System.>

CVT01144

Step	Check	Yes	No
1 CHECK HARNESS. 1) Turn the ignition switch to OFF. 2) Disconnect the TCM connector. 3) Disconnect the transmission connector. 4) Measure the resistance between TCM connector and transmission connectors. Connector & terminal (B54) No. 47 — (B11) No. 2:	Is the resistance less than 1 Ω ?	Go to step 2.	Repair the open circuit of harness.
2 CHECK HARNESS. 1) Turn the ignition switch to ON. 2) Measure the voltage between TCM connector and chassis ground. Connector & terminal (B54) No. 47 (+) — Chassis ground (-):	Is the voltage approx. 0 V?	Go to step 3.	Repair the short circuit of harness.
3 CHECK PRIMARY UP SOLENOID. Measure the resistance between transmission connector and transmission body. Connector & terminal (T4) No. 2 — Transmission body:	Is the resistance approx. 10 — 13.5 Ω ? (when cold)	Check for poor contact of connector, and if no fault is found, replace the TCM. <Ref. to CVT(TR580)-148, Transmission Control Module (TCM).>	Go to step 4.
4 CHECK HARNESS INSIDE TRANSMISSION. CAUTION: Start work after ATF cools down. 1) Remove the transmission valve cover. 2) Check for the harness pinch, damage.	Is there any fault in the harness?	Replace the transmission harness.	Go to step 5.

Diagnostic Procedure with Diagnostic Trouble Code (DTC)

CONTINUOUSLY VARIABLE TRANSMISSION (DIAGNOSTICS)

Step	Check	Yes	No
5 CHECK HARNESS INSIDE TRANSMISSION. 1) Disconnect the control valve body connector. 2) Turn the ignition switch to ON. 3) Measure the voltage between transmission connector and transmission body. Connector & terminal (T4) No. 2 (+) — Transmission body (-):	Is the voltage approx. 0 V?	Replace the control valve body. <Ref. to CVT(TR580)-119, Control Valve Body.>	Replace the transmission harness.

1. OUTLINE OF DIAGNOSIS

- Detect short circuit to power supply or open circuit of the shift-up fluid pressure control solenoid drive circuit.
- Judge as NG when an abnormal signal is received from the solenoid driver IC of the shift-up fluid pressure control solenoid drive circuit.

2. EXECUTION CONDITION

Secondary Parameters	Execution condition
12 V battery system voltage	≥ 9 V
Commanded duty of shift up pressure control solenoid	0%

3. DIAGNOSTIC METHOD

If the duration of time while the following conditions are met is longer than the time indicated, judge as NG.

Judgment Value

Malfunction Criteria	Threshold Value
Signal of malfunction from solenoid driver IC As defined by: Measured shift up pressure control solenoid voltage ≥ 2.5 V	ON

Time Needed for Diagnosis: 0.2 seconds

Malfunction Indicator Light Illumination: Illuminates as soon as a malfunction occurs.

Diagnostic Procedure with Diagnostic Trouble Code (DTC)

CONTINUOUSLY VARIABLE TRANSMISSION (DIAGNOSTICS)

AL:DTC P0976 SHIFT SOLENOID "B" CONTROL CIRCUIT LOW

DTC detecting condition:

Immediately at fault recognition

Trouble symptom:

Gear is not changed. (No down-shift)

CAUTION:

Use the check board when measuring the TCM terminal voltage and resistance.

Wiring diagram:

CVT control system <Ref. to WI-94, CVT Control System.>

CVT01145

Step	Check	Yes	No
1 CHECK HARNESS. 1) Turn the ignition switch to OFF. 2) Disconnect the TCM connector. 3) Disconnect the transmission connector. 4) Measure the resistance between TCM connector and chassis ground. Connector & terminal (B54) No. 30 — Chassis ground:	Is the resistance 1 MΩ or more?	Go to step 2.	Repair the short circuit of harness.
2 CHECK PRIMARY DOWN SOLENOID. Measure the resistance between transmission connector and transmission body. Connector & terminal (T4) No. 3 — Transmission body:	Is the resistance approx. 10 — 13.5 Ω? (when cold)	Check for poor contact of connector, and if no fault is found, replace the TCM. <Ref. to CVT(TR580)-148, Transmission Control Module (TCM).>	Go to step 3.
3 CHECK HARNESS INSIDE TRANSMISSION. CAUTION: Start work after ATF cools down. 1) Remove the transmission valve cover. 2) Check for the harness pinch, damage.	Is there any fault in the harness?	Replace the transmission harness.	Go to step 4.

Diagnostic Procedure with Diagnostic Trouble Code (DTC)

CONTINUOUSLY VARIABLE TRANSMISSION (DIAGNOSTICS)

Step	Check	Yes	No
4 CHECK HARNESS INSIDE TRANSMISSION. 1) Disconnect the control valve body connector. 2) Measure the resistance between transmission connector and transmission body. Connector & terminal (T4) No. 3 — Transmission body:	Is the resistance 1 MΩ or more?	Replace the control valve body. <Ref. to CVT(TR580)-119, Control Valve Body.>	Replace the transmission harness.

1. OUTLINE OF DIAGNOSIS

- Detect the ground short of the shift-down fluid pressure control solenoid drive circuit.
- Judge as NG when an abnormal signal is received from the solenoid driver IC of the shift-down fluid pressure control solenoid drive circuit.

2. EXECUTION CONDITION

Secondary Parameters	Execution condition
12 V battery system voltage	≥ 9 V
Commanded duty of shift down pressure control solenoid	100%

3. DIAGNOSTIC METHOD

If the duration of time while the following conditions are met is longer than the time indicated, judge as NG.

Judgment Value

Malfunction Criteria	Threshold Value
Signal of malfunction from solenoid driver IC As defined by: Measured shift down pressure control solenoid voltage ≤ 0.8 V	ON

Time Needed for Diagnosis: 0.2 seconds

Malfunction Indicator Light Illumination: Illuminates as soon as a malfunction occurs.

Diagnostic Procedure with Diagnostic Trouble Code (DTC)

CONTINUOUSLY VARIABLE TRANSMISSION (DIAGNOSTICS)

AM:DTC P0977 SHIFT SOLENOID "B" CONTROL CIRCUIT HIGH

DTC detecting condition:

Immediately at fault recognition

Trouble symptom:

Gear is not changed. (No down-shift)

CAUTION:

Use the check board when measuring the TCM terminal voltage and resistance.

Wiring diagram:

CVT control system <Ref. to WI-94, CVT Control System.>

CVT01145

Step	Check	Yes	No
1 CHECK HARNESS. 1) Turn the ignition switch to OFF. 2) Disconnect the TCM connector. 3) Disconnect the transmission connector. 4) Measure the resistance between TCM connector and transmission connectors. Connector & terminal (B54) No. 30 — (B11) No. 3:	Is the resistance less than 1 Ω ?	Go to step 2.	Repair the open circuit of harness.
2 CHECK HARNESS. 1) Turn the ignition switch to ON. 2) Measure the voltage between TCM connector and chassis ground. Connector & terminal (B54) No. 30 (+) — Chassis ground (-):	Is the voltage approx. 0 V?	Go to step 3.	Repair the short circuit of harness.
3 CHECK PRIMARY DOWN SOLENOID. Measure the resistance between transmission connector and transmission body. Connector & terminal (T4) No. 3 — Transmission body:	Is the resistance approx. 10 — 13.5 Ω ? (when cold)	Check for poor contact of connector, and if no fault is found, replace the TCM. <Ref. to CVT(TR580)-148, Transmission Control Module (TCM).>	Go to step 4.
4 CHECK HARNESS INSIDE TRANSMISSION. CAUTION: Start work after ATF cools down. 1) Remove the transmission valve cover. 2) Check for the harness pinch, damage.	Is there any fault in the harness?	Replace the transmission harness.	Go to step 5.

Diagnostic Procedure with Diagnostic Trouble Code (DTC)

CONTINUOUSLY VARIABLE TRANSMISSION (DIAGNOSTICS)

Step	Check	Yes	No
5 CHECK HARNESS INSIDE TRANSMISSION. 1) Disconnect the control valve body connector. 2) Turn the ignition switch to ON. 3) Measure the voltage between transmission connector and transmission body. Connector & terminal (T4) No. 3 (+) — Transmission body (-):	Is the voltage approx. 0 V?	Replace the control valve body. <Ref. to CVT(TR580)-119, Control Valve Body.>	Replace the transmission harness.

1. OUTLINE OF DIAGNOSIS

- Detect short circuit to power supply or open circuit of the shift-down fluid pressure control solenoid drive circuit.
- Judge as NG when an abnormal signal is received from the solenoid driver IC of the shift-down fluid pressure control solenoid drive circuit.

2. EXECUTION CONDITION

Secondary Parameters	Execution condition
12 V battery system voltage	≥ 9 V
Commanded duty of shift down pressure control solenoid	0%

3. DIAGNOSTIC METHOD

If the duration of time while the following conditions are met is longer than the time indicated, judge as NG.

Judgment Value

Malfunction Criteria	Threshold Value
Signal of malfunction from solenoid driver IC As defined by: Measured shift down pressure control solenoid voltage ≥ 2.5 V	ON

Time Needed for Diagnosis: 0.2 seconds

Malfunction Indicator Light Illumination: Illuminates as soon as a malfunction occurs.

Diagnostic Procedure with Diagnostic Trouble Code (DTC)

CONTINUOUSLY VARIABLE TRANSMISSION (DIAGNOSTICS)

AN:DTC P160A RANDOM ACCESS MEMORY (RAM) ERROR

DTC DETECTING CONDITION:

Detected when two consecutive driving cycles with fault occur.

TROUBLE SYMPTOM:

TCM RAM malfunction

Step	Check	Yes	No
1 CHECK DTC. 1) Perform the Clear Memory Mode using the Subaru Select Monitor. <Ref. to CVT(diag)-20, Clear Memory Mode.> 2) Read the DTC.	Is DTC P160A displayed?	Replace the TCM. <Ref. to CVT(TR580)-148, Transmission Control Module (TCM).>	Current condition is normal. Check for interference from noise, etc.

1. OUTLINE OF DIAGNOSIS

- Detect the malfunction in RAM area of the TCM.
- Judge as NG if an attempt to write to RAM area failed.

2. EXECUTION CONDITION

Secondary Parameters	Execution condition
12 V battery system voltage	≥ 9 V

3. DIAGNOSTIC METHOD

If the duration of time while the following conditions are met is longer than the time indicated, judge as NG.

Judgment Value

Malfunction Criteria	Threshold Value
Writing-check (RAM) NOTE: This check is carried out about the RAM used except for CAN communication.	Error

Time Needed for Diagnosis: Immediately

Malfunction Indicator Light Illumination: Illuminates when malfunction occurs in 2 continuous driving cycles.

Diagnostic Procedure with Diagnostic Trouble Code (DTC)

CONTINUOUSLY VARIABLE TRANSMISSION (DIAGNOSTICS)

AO:DTC P170A L-RANGE SWITCH

DTC DETECTING CONDITION:

Immediately at fault recognition

NOTE:

Refer to "DTC P0951 AUTO SHIFT MANUAL CONTROL CIRCUIT RANGE/PERFORMANCE" for diagnostic procedure. <Ref. to CVT(diag)-101, DTC P0951 AUTO SHIFT MANUAL CONTROL CIRCUIT RANGE/PERFORMANCE, Diagnostic Procedure with Diagnostic Trouble Code (DTC).>

1. OUTLINE OF DIAGNOSIS

- Detect the GND-output short (ground-fault) in L range SW circuit.
- Judge as NG if the L range SW is ON in P, R or N range.

2. EXECUTION CONDITION

Secondary parameters	Execution condition
None	

3. DIAGNOSTIC METHOD

If the duration of time while the following conditions are met is longer than the time indicated, judge as NG.

Judgment Value

Malfunction Criteria	Threshold Value
L range SW status in other than D range	ON

Time Needed for Diagnosis: 5 s

Malfunction Indicator Light Illumination: Does not illuminate.

Diagnostic Procedure with Diagnostic Trouble Code (DTC)

CONTINUOUSLY VARIABLE TRANSMISSION (DIAGNOSTICS)

AP:DTC P2530 IGNITION SWITCH RUN POSITION CIRCUIT

DTC detecting condition:

Immediately at fault recognition

Trouble symptom:

Faulty TCM operation

CAUTION:

Use the check board when measuring the TCM terminal voltage and resistance.

Wiring diagram:

CVT control system <Ref. to WI-94, CVT Control System.>

CVT01151

Step	Check	Yes	No	
1	CHECK CONNECTOR. Check the installing condition of TCM connector.	Is the TCM connector installed properly?	Go to step 2.	Install the TCM connector.

Diagnostic Procedure with Diagnostic Trouble Code (DTC)

CONTINUOUSLY VARIABLE TRANSMISSION (DIAGNOSTICS)

Step	Check	Yes	No
2 CHECK INPUT VOLTAGE OF TCM. 1) Turn the ignition switch to OFF. 2) Disconnect the TCM connector. 3) Turn the ignition switch to ON. 4) Measure the voltage between TCM connector and chassis ground. (While wiggling the harness) Connector & terminal (B54) No. 41 (+) — Chassis ground (-):	Is the voltage 8 V or more?	Even if DTC is detected, the circuit has returned to a normal condition at this time. Reproduce the failure, and then perform the diagnosis again. NOTE: In this case, the following items may be the cause of fault. • Open circuit or short circuit to ground of harness between TCM connector and ignition switch connector (IG relay 1 connector for model with push button start) • Poor contact of ignition switch (IG relay 1 for model with push button start)	Repair the harness and connector. NOTE: In this case, repair the following item: • Open circuit or short circuit to ground of harness between TCM connector and ignition switch connector (IG relay 1 connector for model with push button start) • Poor contact of ignition switch connector (IG relay 1 connector for model with push button start) • Poor contact of ignition switch (IG relay 1 for model with push button start)

1. OUTLINE OF DIAGNOSIS

- Detect the malfunction of ignition SW circuit.
- Judge as NG if the ignition SW signals are lost 5 times or more even though the engine is ON.

2. EXECUTION CONDITION

Secondary parameters	Execution condition
12 V battery system voltage	≥ 10.9 V
Engine speed	≥ 400 rpm

3. DIAGNOSTIC METHOD

If the duration of time while the following conditions are met is longer than the time indicated, judge as NG.

Judgment Value

Malfunction Criteria	Threshold Value
Count of temporarily discontinuous input of ignition switch	≥ 5 count

Time Needed for Diagnosis: 5 seconds

Malfunction Indicator Light Illumination: Illuminates as soon as a malfunction occurs.

Diagnostic Procedure with Diagnostic Trouble Code (DTC)

CONTINUOUSLY VARIABLE TRANSMISSION (DIAGNOSTICS)

AQ:DTC P2746 INTERMEDIATE SHAFT SPEED SENSOR "B" CIRCUIT RANGE/ PERFORMANCE

DTC detecting condition:

Immediately at fault recognition

Trouble symptom:

- Standing start problems
- Shock occurs when engaging the lockup clutch.
- Shock occurs when selecting shift position.

	Step	Check	Yes	No
1	CHECK DTC. Read the DTC using Subaru Select Monitor.	Besides DTC P2746, is DTC P2747 or P2751 displayed?	Perform the diagnosis according to DTCs other than P2746.	Perform the diagnosis according to DTC P2747. <Ref. to CVT(diag)-133, DTC P2747 INTERMEDIATE SHAFT SPEED SENSOR "B" CIRCUIT NO SIGNAL, Diagnostic Procedure with Diagnostic Trouble Code (DTC).>

Diagnostic Procedure with Diagnostic Trouble Code (DTC)

CONTINUOUSLY VARIABLE TRANSMISSION (DIAGNOSTICS)

1. OUTLINE OF DIAGNOSIS

Diagnosis 1

- Detect the malfunction of primary speed sensor signal characteristics.
- Judge as NG if the primary speed, compared with the speeds of other parts, is outside the possible range considering the hardware capabilities.

Diagnosis 2

- Detect the malfunction of primary speed sensor signal characteristics.
- Judge as NG if the primary speed exceeds the predetermined value.

2. EXECUTION CONDITION

Secondary Parameters	Execution condition
Diagnosis 1 12 V battery system voltage Transmission range (Measured turbine shaft speed / Measured secondary pulley shaft speed)	$\geq 9 \text{ V}$ Drive or Reverse ≥ 0.4 and ≤ 2.55
Diagnosis 2 12 V battery system voltage Transmission range (Measured turbine shaft speed / Measured secondary pulley shaft speed)	$\geq 9 \text{ V}$ Drive or Reverse ≥ 0.4 and ≤ 2.55

3. DIAGNOSTIC METHOD

If the duration of time while the following conditions are met is longer than the time indicated, judge as NG.

Judgment Value

Malfunction Criteria	Threshold Value
Diagnosis 1 (Measured primary pulley shaft speed / Measured secondary pulley shaft speed)	< 0.36 or > 2.80
Diagnosis 2 Measured primary pulley shaft speed	$> 7140 \text{ rpm}$

Time Needed for Diagnosis: 5 seconds

Malfunction Indicator Light Illumination: Illuminates as soon as a malfunction occurs.

Diagnostic Procedure with Diagnostic Trouble Code (DTC)

CONTINUOUSLY VARIABLE TRANSMISSION (DIAGNOSTICS)

AR:DTC P2747 INTERMEDIATE SHAFT SPEED SENSOR "B" CIRCUIT NO SIGNAL

DTC detecting condition:

Immediately at fault recognition

Trouble symptom:

- Standing start problems
- Shock occurs when engaging the lockup clutch.
- Shock occurs when selecting shift position.

CAUTION:

Use the check board when measuring the TCM terminal voltage and resistance.

Wiring diagram:

CVT control system <Ref. to WI-94, CVT Control System.>

CVT10090

Step	Check	Yes	No
1 CHECK FUSE. 1) Turn the ignition switch to OFF. 2) Remove the fuse (7.5 A) from the fuse holder. 3) Check the fuse.	Is the check result OK?	Go to step 2.	Replace the fuse. If the fuse blows out easily, repair the short circuit of harness.
2 CHECK HARNESS. 1) Disconnect the TCM connector. 2) Remove the self shut relay. 3) Measure the resistance between TCM connector and relay holder. Connector & terminal (B54) No. 25 — (B220) No. 16: (B54) No. 8 — (B220) No. 15: (B54) No. 24 — (B220) No. 15: (B54) No. 40 — (B220) No. 15:	Is the resistance less than 1 Ω?	Go to step 3.	Repair the open circuit of harness.

Diagnostic Procedure with Diagnostic Trouble Code (DTC)

CONTINUOUSLY VARIABLE TRANSMISSION (DIAGNOSTICS)

Step	Check	Yes	No
3 CHECK HARNESS. Measure the resistance between TCM connector and chassis ground. <i>Connector & terminal</i> (B54) No. 25 — Chassis ground: (B54) No. 8 — Chassis ground: (B54) No. 24 — Chassis ground: (B54) No. 40 — Chassis ground:	Is the resistance 1 M Ω or more?	Go to step 4.	Repair the short circuit of harness.
4 CHECK RELAY POWER SUPPLY. Measure the voltage between relay holder and chassis ground. <i>Connector & terminal</i> (B220) No. 14 (+) — Chassis ground (-): (B220) No. 17 (+) — Chassis ground (-):	Is the voltage 10 V or more?	Go to step 5.	Repair the open or short circuit of harness.
5 CHECK SELF SHUT RELAY. Measure the resistance between self shut relay terminals. <i>Terminals</i> No. 16 — No. 17:	Is the resistance 110 — 140 Ω ?	Go to step 6.	Replace the self shut relay.
6 CHECK SELF SHUT RELAY. Measure the resistance between self shut relay terminals. <i>Terminals</i> No. 14 — No. 15:	Is the resistance 1 M Ω or more?	Go to step 7.	Replace the self shut relay.
7 CHECK INPUT SIGNAL FOR TCM. 1) Connect the TCM connector. 2) Install the self shut relay. 3) Read the data of «Control module voltage» using Subaru Select Monitor.	Is the «Control module voltage» 10 V or more?	Current condition is normal. Check for poor contact in connectors or harnesses, and repair the defective part.	Go to step 8.
8 CHECK HARNESS. 1) Turn the ignition switch to OFF. 2) Disconnect the TCM connector. 3) Disconnect the transmission connector. 4) Measure the resistance between TCM connector and transmission connectors. <i>Connector & terminal</i> (B54) No. 14 — (B12) No. 8: (B54) No. 42 — (B12) No. 7: (B550) No. 17 — (B12) No. 6:	Is the resistance less than 1 Ω ?	Go to step 9.	Repair the open circuit of harness.
9 CHECK HARNESS. Measure the resistance between TCM connector and chassis ground. <i>Connector & terminal</i> (B54) No. 14 — Chassis ground:	Is the resistance 1 M Ω or more?	Go to step 10.	Repair the short circuit of harness.
10 CHECK HARNESS. Measure the resistance between relay holder and fuse holder. <i>Connector & terminal</i> (B220) No. 15 — (B550) No. 6:	Is the resistance less than 1 Ω ?	Go to step 11.	Repair the open circuit of harness.
11 CHECK TRANSMISSION HARNESS. 1) Install the fuse. 2) Connect the TCM connector. 3) Turn the ignition switch to ON. 4) Measure the voltage between transmission connector terminals. <i>Connector & terminal</i> (B12) No. 6 (+) — Chassis ground (-):	Is the voltage 10 — 13 V?	Go to step 12.	Repair the open circuit of harness or poor contact of connector.

Diagnostic Procedure with Diagnostic Trouble Code (DTC)

CONTINUOUSLY VARIABLE TRANSMISSION (DIAGNOSTICS)

Step	Check	Yes	No
12 CHECK INPUT SIGNAL FOR TCM. 1) Turn the ignition switch to OFF. 2) Connect the transmission connector. 3) Lift up the vehicle. 4) Start the engine. 5) Set the select lever to "D" range. 6) Read the data of «Primary Rev Speed» using Subaru Select Monitor.	Does the value of «Primary Rev Speed» change according to those of «Turbine Revolution Speed»?	Current condition is normal. Repair the poor contacts of harnesses of primary speed sensor and transmission connector.	Go to step 13.
13 CHECK TRANSMISSION HARNESS. 1) Turn the ignition switch to OFF. 2) Disconnect the transmission connector. 3) Disconnect the primary speed sensor connector. 4) Measure the resistance between transmission connector and primary speed sensor connector. <i>Connector & terminal</i> <i>(T3) No. 6 — (AT1) No. 3:</i> <i>(T3) No. 7 — (AT1) No. 1:</i> <i>(T3) No. 8 — (AT1) No. 2:</i>	Is the resistance less than 1 Ω?	Go to step 14.	Replace the transmission harness.
14 CHECK PRIMARY SPEED SENSOR HARNESS. Measure the resistance between transmission connector and chassis ground. <i>Connector & terminal</i> <i>(T3) No. 6 — Chassis ground:</i> <i>(T3) No. 8 — Chassis ground:</i>	Is the resistance 1 MΩ or more?	Go to step 15.	Repair the short circuit of harness.
15 CHECK PRIMARY SPEED SENSOR. 1) Turn the ignition switch to OFF. 2) Replace the primary speed sensor. <Ref. to CVT(TR580)-110, Primary Speed Sensor.> 3) Perform the Clear Memory Mode. <Ref. to CVT(diag)-20, Clear Memory Mode.> 4) Read the DTC.	Is DTC P2747 displayed?	Go to step 16.	The original primary speed sensor is defective.
16 CHECK SELF SHUT RELAY. 1) Turn the ignition switch to OFF. 2) Replace the self shut relay. 3) Perform the Clear Memory Mode. <Ref. to CVT(diag)-20, Clear Memory Mode.> 4) Read the DTC.	Is DTC P2747 displayed?	Replace the TCM. <Ref. to CVT(TR580)-148, Transmission Control Module (TCM).>	The original self shut relay is defective.

Diagnostic Procedure with Diagnostic Trouble Code (DTC)

CONTINUOUSLY VARIABLE TRANSMISSION (DIAGNOSTICS)

1. OUTLINE OF DIAGNOSIS

- Detect no input signal from the primary speed sensor.
- Judge as NG if there is no input signal from the primary pulley speed sensor, while the secondary pulley speed sensor has the input signal although the primary and secondary pulleys are interlocked via the chain.

2. EXECUTION CONDITION

Secondary Parameters	Execution condition
12 V battery system voltage	≥ 9 V
Measured secondary pulley shaft speed	≥ 500 rpm

3. DIAGNOSTIC METHOD

If the duration of time while the following conditions are met is longer than the time indicated, judge as NG.

Judgment Value

Malfunction Criteria	Threshold Value
Measured primary pulley shaft speed	0 rpm

Time Needed for Diagnosis: 0.5 seconds

Malfunction Indicator Light Illumination: Illuminates as soon as a malfunction occurs.

Diagnostic Procedure with Diagnostic Trouble Code (DTC)

CONTINUOUSLY VARIABLE TRANSMISSION (DIAGNOSTICS)

AS:DTC P2750 INTERMEDIATE SHAFT SPEED SENSOR "C" CIRCUIT RANGE/ PERFORMANCE

DTC detecting condition:

Immediately at fault recognition

Trouble symptom:

- Shifting shock is felt.
- Acceleration is poor during standing start.
- Shift control malfunction

Step	Check	Yes	No
1 CHECK DTC. Read the DTC using Subaru Select Monitor.	Besides DTC P2750, is any of the DTC P2751, U0122 or U0416 displayed?	Perform the diagnosis according to DTCs other than P2750.	Perform the diagnosis according to DTC P2751. <Ref. to CVT(diag)-138, DTC P2751 INTERMEDIATE SHAFT SPEED SENSOR "C" CIRCUIT NO SIGNAL, Diagnostic Procedure with Diagnostic Trouble Code (DTC).>

1. OUTLINE OF DIAGNOSIS

- Detect the malfunction of the secondary speed sensor characteristics.
- Judge as NG if the deviation of vehicle speed between VDC and the secondary speed sensor becomes the predetermined value or more.

2. EXECUTION CONDITION

Secondary Parameters	Execution condition
12 V battery system voltage	≥ 10 V
Vehicle speed (calculated from wheel speed sensor)	≥ 5 MPH

3. DIAGNOSTIC METHOD

If the duration of time while the following conditions are met is longer than the time indicated, judge as NG.

Judgment Value

Malfunction Criteria	Threshold Value
ABS (Vehicle speed (calculated from secondary pulley shaft speed) – Vehicle speed (calculated from wheel speed sensor))	> 10 MPH

Time Needed for Diagnosis: 5 seconds

Malfunction Indicator Light Illumination: Illuminates as soon as a malfunction occurs.

Diagnostic Procedure with Diagnostic Trouble Code (DTC)

CONTINUOUSLY VARIABLE TRANSMISSION (DIAGNOSTICS)

AT:DTC P2751 INTERMEDIATE SHAFT SPEED SENSOR "C" CIRCUIT NO SIGNAL

DTC detecting condition:

Immediately at fault recognition

Trouble symptom:

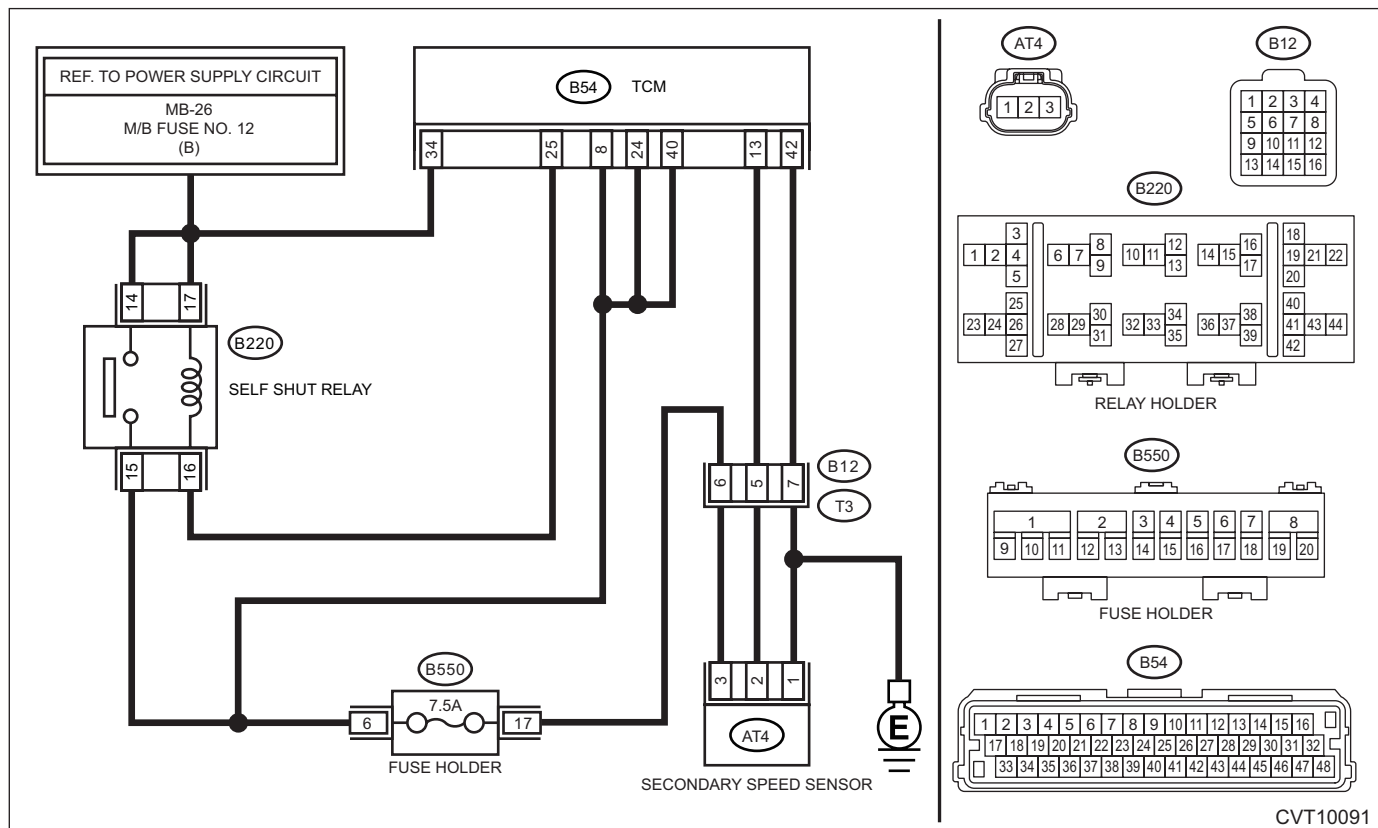

- Shifting shock is felt.
- Acceleration is poor during standing start.
- Shift control malfunction

CAUTION:

Use the check board when measuring the TCM terminal voltage and resistance.

Wiring diagram:

CVT control system <Ref. to WI-94, CVT Control System.>

CVT10091

Step	Check	Yes	No
1 CHECK FUSE. 1) Turn the ignition switch to OFF. 2) Remove the fuse (7.5 A) from the fuse holder. 3) Check the fuse.	Is the check result OK?	Go to step 2.	Replace the fuse. If the fuse blows out easily, repair the short circuit of harness.
2 CHECK HARNESS. 1) Disconnect the TCM connector. 2) Remove the self shut relay. 3) Measure the resistance between TCM connector and relay holder. Connector & terminal (B54) No. 25 — (B220) No. 16: (B54) No. 8 — (B220) No. 15: (B54) No. 24 — (B220) No. 15: (B54) No. 40 — (B220) No. 15:	Is the resistance less than 1 Ω?	Go to step 3.	Repair the open circuit of harness.

Diagnostic Procedure with Diagnostic Trouble Code (DTC)

CONTINUOUSLY VARIABLE TRANSMISSION (DIAGNOSTICS)

Step	Check	Yes	No
3 CHECK HARNESS. Measure the resistance between TCM connector and chassis ground. <i>Connector & terminal</i> (B54) No. 25 — Chassis ground: (B54) No. 8 — Chassis ground: (B54) No. 24 — Chassis ground: (B54) No. 40 — Chassis ground:	Is the resistance 1 M Ω or more?	Go to step 4.	Repair the short circuit of harness.
4 CHECK RELAY POWER SUPPLY. Measure the voltage between relay holder and chassis ground. <i>Connector & terminal</i> (B220) No. 14 (+) — Chassis ground (-): (B220) No. 17 (+) — Chassis ground (-):	Is the voltage 10 V or more?	Go to step 5.	Repair the open or short circuit of harness.
5 CHECK SELF SHUT RELAY. Measure the resistance between self shut relay terminals. <i>Terminals</i> No. 16 — No. 17:	Is the resistance 110 — 140 Ω ?	Go to step 6.	Replace the self shut relay.
6 CHECK SELF SHUT RELAY. Measure the resistance between self shut relay terminals. <i>Terminals</i> No. 14 — No. 15:	Is the resistance 1 M Ω or more?	Go to step 7.	Replace the self shut relay.
7 CHECK INPUT SIGNAL FOR TCM. 1) Connect the TCM connector. 2) Install the self shut relay. 3) Read the data of «Control module voltage» using Subaru Select Monitor.	Is the «Control module voltage» 10 V or more?	Current condition is normal. Check for poor contact in connectors or harnesses, and repair the defective part.	Go to step 8.
8 CHECK HARNESS. 1) Turn the ignition switch to OFF. 2) Disconnect the TCM connector. 3) Disconnect the transmission connector. 4) Measure the resistance between TCM connector and transmission connectors. <i>Connector & terminal</i> (B54) No. 13 — (B12) No. 5: (B54) No. 42 — (B12) No. 7: (B550) No. 17 — (B12) No. 6:	Is the resistance less than 1 Ω ?	Go to step 9.	Repair the open circuit of harness.
9 CHECK HARNESS. Measure the resistance between TCM connector and chassis ground. <i>Connector & terminal</i> (B54) No. 13 — Chassis ground:	Is the resistance 1 M Ω or more?	Go to step 10.	Repair the short circuit of harness.
10 CHECK HARNESS. Measure the resistance between relay holder and fuse holder. <i>Connector & terminal</i> (B220) No. 15 — (B550) No. 6:	Is the resistance less than 1 Ω ?	Go to step 11.	Repair the open circuit of harness.
11 CHECK TRANSMISSION HARNESS. 1) Install the fuse. 2) Connect the TCM connector. 3) Turn the ignition switch to ON. 4) Measure the voltage between transmission connector terminals. <i>Connector & terminal</i> (B12) No. 6 (+) — Chassis ground (-):	Is the voltage 10 — 13 V?	Go to step 12.	Repair the open circuit of harness or poor contact of connector.

Diagnostic Procedure with Diagnostic Trouble Code (DTC)

CONTINUOUSLY VARIABLE TRANSMISSION (DIAGNOSTICS)

Step	Check	Yes	No
12 CHECK INPUT SIGNAL FOR TCM. 1) Turn the ignition switch to OFF. 2) Connect the transmission connector. 3) Lift up the vehicle. 4) Start the engine. 5) Set the select lever to "D" range. 6) Read the data of «Secondary Rev Speed» using Subaru Select Monitor.	Does the value of «Secondary Rev Speed» change according to those of «Front Wheel Speed»?	Current condition is normal. Repair the poor contacts of harnesses of secondary speed sensor and transmission connector.	Go to step 13.
13 CHECK TRANSMISSION HARNESS. 1) Turn the ignition switch to OFF. 2) Disconnect the transmission connector. 3) Disconnect the secondary speed sensor connector. 4) Measure the resistance between transmission connector and secondary speed sensor connector. <i>Connector & terminal</i> <i>(T3) No. 5 — (AT4) No. 2:</i> <i>(T3) No. 6 — (AT4) No. 3:</i> <i>(T3) No. 7 — (AT4) No. 1:</i>	Is the resistance less than 1 Ω?	Go to step 14.	Replace the transmission harness.
14 CHECK SECONDARY SPEED SENSOR HARNESS. Measure the resistance between transmission connector and chassis ground. <i>Connector & terminal</i> <i>(T3) No. 5 — Chassis ground:</i> <i>(T3) No. 6 — Chassis ground:</i>	Is the resistance 1 MΩ or more?	Go to step 15.	Repair the short circuit of harness.
15 CHECK SECONDARY SPEED SENSOR. 1) Turn the ignition switch to OFF. 2) Replace the secondary speed sensor. <Ref. to CVT(TR580)-108, Secondary Speed Sensor.> 3) Perform the Clear Memory Mode. <Ref. to CVT(diag)-20, Clear Memory Mode.> 4) Read the DTC.	Is DTC P2751 displayed?	Go to step 16.	The original secondary speed sensor is defective.
16 CHECK SELF SHUT RELAY. 1) Turn the ignition switch to OFF. 2) Replace the self shut relay. 3) Perform the Clear Memory Mode. <Ref. to CVT(diag)-20, Clear Memory Mode.> 4) Read the DTC.	Is DTC P2751 displayed?	Replace the TCM. <Ref. to CVT(TR580)-148, Transmission Control Module (TCM).>	The original self shut relay is defective.

Diagnostic Procedure with Diagnostic Trouble Code (DTC)

CONTINUOUSLY VARIABLE TRANSMISSION (DIAGNOSTICS)

1. OUTLINE OF DIAGNOSIS

- Detect the no input signal from the secondary speed sensor.
- Judge as NG if there is no input signal from the secondary pulley speed sensor, while the primary pulley speed sensor has the input signal although the primary and secondary pulleys are interlocked via the chain.

2. EXECUTION CONDITION

Secondary Parameters	Execution condition
12 V battery system voltage	≥ 9 V
Transmission range	Drive or Reverse
Measured primary pulley shaft speed	≥ 1000 rpm

3. DIAGNOSTIC METHOD

If the duration of time while the following conditions are met is longer than the time indicated, judge as NG.

Judgment Value

Malfunction Criteria	Threshold Value
Measured secondary pulley shaft speed	0 rpm

Time Needed for Diagnosis: 0.5 seconds

Malfunction Indicator Light Illumination: Illuminates as soon as a malfunction occurs.

Diagnostic Procedure with Diagnostic Trouble Code (DTC)

CONTINUOUSLY VARIABLE TRANSMISSION (DIAGNOSTICS)

AU:DTC P2757 TORQUE CONVERTER CLUTCH PRESSURE CONTROL SOLENOID CONTROL CIRCUIT PERFORMANCE/STUCK OFF

DTC detecting condition:

Detected when two consecutive driving cycles with fault occur.

Trouble symptom:

No lock-up occurs.

CAUTION:

Use the check board when measuring the TCM terminal voltage and resistance.

Wiring diagram:

CVT control system <Ref. to WI-94, CVT Control System.>

Step	Check	Yes	No	
1	CHECK DTC. Read the DTC using Subaru Select Monitor.	Is a DTC other than DTC P2757 displayed?	Perform the diagnosis according to DTCs other than P2757.	Go to step 2.
2	CHECK LOCK-UP DUTY SOLENOID (ACTIVE TEST). 1) Turn the ignition switch to ON. 2) Using the Subaru Select Monitor, perform forced operation of the lock-up duty solenoid. <Ref. to CVT(diag)-26, Active Test.>	Does the indication of 0 → 50% appear repeatedly during forced operation, and does operating sound emit during indicating 50%?	Go to step 8.	Go to step 3.
3	CHECK LOCK-UP DUTY SOLENOID. 1) Turn the ignition switch to OFF. 2) Disconnect the transmission connector. 3) Measure the resistance between transmission connector and transmission body. Connector & terminal (T4) No. 11 — Transmission body:	Is the resistance approx. 10 — 13.5 Ω? (when cold)	Replace the control valve body. <Ref. to CVT(TR580)-119, Control Valve Body.>	Go to step 4.
4	CHECK HARNESS. 1) Disconnect the TCM connector. 2) Measure the resistance between TCM connector and transmission connectors. Connector & terminal (B54) No. 15 — (B11) No. 11:	Is the resistance less than 1 Ω?	Go to step 5.	Repair the open circuit of harness.

Diagnostic Procedure with Diagnostic Trouble Code (DTC)

CONTINUOUSLY VARIABLE TRANSMISSION (DIAGNOSTICS)

Step	Check	Yes	No
5 CHECK HARNESS. Measure the resistance between TCM connector and transmission body. <i>Connector & terminal</i> <i>(B54) No. 15 — Transmission body:</i>	Is the resistance 1 M Ω or more?	Go to step 6.	Repair the short circuit of harness.
6 CHECK HARNESS. CAUTION: Start work after ATF cools down. 1) Remove the transmission valve cover. 2) Disconnect the control valve body connector. 3) Measure the resistance between transmission connector and control valve body connector. <i>Connector & terminal</i> <i>(T4) No. 11 — (T11) No. 9:</i>	Is the resistance less than 1 Ω ?	Go to step 7.	Repair the open circuit of harness.
7 CHECK HARNESS. Measure the resistance between transmission connector and control valve body. <i>Connector & terminal</i> <i>(T11) No. 9 — Control valve body:</i>	Is the resistance 1 M Ω or more?	Replace the control valve body. <Ref. to CVT(TR580)-119, Control Valve Body.>	Repair the short circuit of harness.
8 CHECK TRANSMISSION FLUID. 1) Connect all connectors. 2) Check the amount of ATF. <Ref. to CVT(TR580)-37, ADJUSTMENT, CVTF.>	Is the check result OK?	Go to step 9.	Adjust the amount of ATF. <Ref. to CVT(TR580)-37, ADJUSTMENT, CVTF.>
9 CHECK TRANSMISSION FLUID. Check the condition of ATF. <Ref. to CVT(TR580)-40, CONDITION CHECK, CVTF.>	Is the check result OK?	Go to step 10.	Check according to the "Corrective action" of ATF (CVTF) "CONDITION CHECK". <Ref. to CVT(TR580)-40, CONDITION CHECK, CVTF.>
10 CHECK INPUT SIGNAL FOR TCM. 1) Lift up the vehicle. 2) Start the engine. 3) Warm up until the ATF temperature reaches to 40 — 70°C (104 — 158°F). 4) Depress the brake pedal, and shift the select lever to "D" range. 5) Shift the select lever to "P" range. 6) Stabilize the engine speed at idle. 7) Read the data of «Actual Secondary Pressure» using Subaru Select Monitor.	Is the «Actual Secondary Pressure» 0.5 — 1.5 MPa?	Replace the control valve body. <Ref. to CVT(TR580)-119, Control Valve Body.> Go to step 11.	Perform the diagnosis according to DTC P0841. <Ref. to CVT(diag)-91, DTC P0841 TRANSMISSION FLUID PRESSURE SENSOR/SWITCH "A" CIRCUIT RANGE/PERFORMANCE, Diagnostic Procedure with Diagnostic Trouble Code (DTC).>

Diagnostic Procedure with Diagnostic Trouble Code (DTC)

CONTINUOUSLY VARIABLE TRANSMISSION (DIAGNOSTICS)

Step	Check	Yes	No
11 DRIVING CHECK FOR LOCK-UP CONDI- TION. 1) Perform the Clear Memory Mode. <Ref. to CVT(diag)-20, Clear Memory Mode.> 2) Turn the ignition switch to OFF. 3) Start the engine. 4) Warm up until the ATF temperature exceeds 50°C. 5) Drive the vehicle for one minute or more while keeping such constant speed that «Lock Up Duty Ratio» is 70% or more, and «Front Wheel Speed» is 40 km/h (25 MPH) or more, which are displayed on the Subaru Select Monitor. 6) Turn the ignition switch to OFF. 7) Start the engine. 8) Perform the procedure in step 5) again. 9) Read the DTC using Subaru Select Monitor.	Does the AT OIL TEMP light blink and is DTC P2757 displayed?	Replace the torque converter assembly. <Ref. to CVT(TR580)-166, Torque Converter Assembly.>	Current condition is normal. It is possible that temporary poor contact occurs.

Diagnostic Procedure with Diagnostic Trouble Code (DTC)

CONTINUOUSLY VARIABLE TRANSMISSION (DIAGNOSTICS)

1. OUTLINE OF DIAGNOSIS

- Detect the malfunction of lock-up fluid pressure control solenoid, and hydraulic circuit, or drive circuit characteristics (stuck to low pressure side).
- Judge as NG if the deviation between engine speed and turbine speed is the predetermined value or more, even though the lock-up request has been issued.

2. EXECUTION CONDITION

Secondary Parameters	Execution condition
12 V battery system voltage	≥ 10 V
Engine speed	≥ 1000 rpm
Transmission range	Drive
Commanded duty of torque converter clutch pressure control solenoid	≥ 95%
Measured turbine shaft speed	> Table1 rpm

Table 1

Engine speed (rpm)	3700	3727	3755	3782	3856	4019	4213	4456
Measured turbine shaft speed (rpm)	0	500	1000	1500	2000	2500	3000	3500

Engine speed (rpm)	4786	5213	5651	6101	6569	7044	7520
Measured turbine shaft speed (rpm)	4000	4500	5000	5500	6000	6500	7000

3. DIAGNOSTIC METHOD

If the duration of time while the following conditions are met is longer than the time indicated, judge as NG.

Judgment Value

Malfunction Criteria	Threshold Value
ABS (Engine speed – Measured turbine shaft speed)	> Table2 rpm

Table 2

Engine speed (rpm)	0	500	1000	1500	2000	2500	3000	3500
ABS (Engine speed – Measured turbine shaft speed) (rpm)	200	200	200	200	200	200	200	200

Engine speed (rpm)	4000	4500	5000	5500	6000	6500	7000
ABS (Engine speed – Measured turbine shaft speed) (rpm)	200	200	200	200	200	200	200

Time Needed for Diagnosis: 10 seconds

Malfunction Indicator Light Illumination: Illuminates when malfunction occurs in 2 continuous driving cycles.

Diagnostic Procedure with Diagnostic Trouble Code (DTC)

CONTINUOUSLY VARIABLE TRANSMISSION (DIAGNOSTICS)

AV:DTC P2758 TORQUE CONVERTER CLUTCH PRESSURE CONTROL SOLENOID CONTROL CIRCUIT STUCK ON

DTC detecting condition:

Detected when two consecutive driving cycles with fault occur.

Trouble symptom:

The engine stalls when the vehicle is stopped.

CAUTION:

Use the check board when measuring the TCM terminal voltage and resistance.

Wiring diagram:

CVT control system <Ref. to WI-94, CVT Control System.>

CVT01154

Step	Check	Yes	No	
1	CHECK DTC. Read the DTC using Subaru Select Monitor.	Is a DTC other than DTC P2758 displayed?	Perform the diagnosis according to DTCs other than P2758.	Go to step 2.
2	CHECK LOCK-UP DUTY SOLENOID (ACTIVE TEST). 1) Turn the ignition switch to ON. 2) Using the Subaru Select Monitor, perform forced operation of the lock-up duty solenoid. <Ref. to CVT(diag)-26, Active Test.>	Does the indication of 0 → 50% appear repeatedly during forced operation, and does operating sound emit during indicating 50%?	Go to step 8.	Go to step 3.
3	CHECK LOCK-UP DUTY SOLENOID. 1) Turn the ignition switch to OFF. 2) Disconnect the transmission connector. 3) Measure the resistance between transmission connector and transmission body. Connector & terminal (T4) No. 11 — Transmission body:	Is the resistance approx. 10 — 13.5 Ω? (when cold)	Replace the control valve body. <Ref. to CVT(TR580)-119, Control Valve Body.>	Go to step 4.
4	CHECK HARNESS. 1) Disconnect the TCM connector. 2) Measure the resistance between TCM connector and transmission connectors. Connector & terminal (B54) No. 15 — (B11) No. 11:	Is the resistance less than 1 Ω?	Go to step 5.	Repair the open circuit of harness.

Diagnostic Procedure with Diagnostic Trouble Code (DTC)

CONTINUOUSLY VARIABLE TRANSMISSION (DIAGNOSTICS)

Step	Check	Yes	No
5 CHECK HARNESS. Measure the resistance between TCM connector and transmission body. Connector & terminal (B54) No. 15 — Transmission body:	Is the resistance 1 M Ω or more?	Go to step 6.	Repair the short circuit of harness.
6 CHECK HARNESS. CAUTION: Start work after ATF cools down. 1) Remove the transmission valve cover. 2) Disconnect the control valve body connector. 3) Measure the resistance between transmission connector and control valve body connector. Connector & terminal (T4) No. 11 — (T11) No. 9:	Is the resistance less than 1 Ω ?	Go to step 7.	Repair the open circuit of harness.
7 CHECK HARNESS. Measure the resistance between transmission connector and control valve body. Connector & terminal (T11) No. 9 — Control valve body:	Is the resistance 1 M Ω or more?	Replace the control valve body. <Ref. to CVT(TR580)-119, Control Valve Body.>	Repair the short circuit of harness.
8 CHECK TRANSMISSION FLUID. 1) Connect all connectors. 2) Check the amount of ATF. <Ref. to CVT(TR580)-37, ADJUSTMENT, CVTF.>	Is the check result OK?	Go to step 9.	Adjust the amount of ATF. <Ref. to CVT(TR580)-37, ADJUSTMENT, CVTF.>
9 CHECK TRANSMISSION FLUID. Check the condition of ATF. <Ref. to CVT(TR580)-40, CONDITION CHECK, CVTF.>	Is the check result OK?	Go to step 10.	Check according to the "Corrective action" of ATF (CVTF) "CONDITION CHECK". <Ref. to CVT(TR580)-40, CONDITION CHECK, CVTF.>
10 CHECK INPUT SIGNAL FOR TCM. 1) Lift up the vehicle. 2) Start the engine. 3) Warm up until the ATF temperature reaches to 40 — 70°C (104 — 158°F). 4) Depress the brake pedal, and shift the select lever to "D" range. 5) Shift the select lever to "P" range. 6) Stabilize the engine speed at idle. 7) Read the data of «Actual Secondary Pressure» using Subaru Select Monitor.	Is the «Actual Secondary Pressure» 0.5 — 1.5 MPa?	Replace the control valve body. <Ref. to CVT(TR580)-119, Control Valve Body.> Go to step 11.	Perform the diagnosis according to DTC P0841. <Ref. to CVT(diag)-91, DTC P0841 TRANSMISSION FLUID PRESSURE SENSOR/SWITCH "A" CIRCUIT RANGE/PERFORMANCE, Diagnostic Procedure with Diagnostic Trouble Code (DTC).>

Diagnostic Procedure with Diagnostic Trouble Code (DTC)

CONTINUOUSLY VARIABLE TRANSMISSION (DIAGNOSTICS)

Step	Check	Yes	No
11 DRIVING CHECK FOR LOCK-UP CONDITION. 1) Perform the Clear Memory Mode. <Ref. to CVT(diag)-20, Clear Memory Mode.> 2) Turn the ignition switch to OFF. 3) Start the engine. 4) Warm up until the ATF temperature exceeds 50°C. 5) Drive the vehicle for one minute or more while keeping such constant speed that «Lock Up Duty Ratio» is 0%, and «Front Wheel Speed» is 5 km/h (3 MPH) or less, which are displayed on the Subaru Select Monitor. 6) Turn the ignition switch to OFF. 7) Start the engine. 8) Perform the procedure in step 5) again. 9) Read the DTC using Subaru Select Monitor.	Does the AT OIL TEMP light blink and is DTC P2758 displayed? Or does the engine stall?	Replace the torque converter assembly. <Ref. to CVT(TR580)-166, Torque Converter Assembly.>	Current condition is normal. It is possible that temporary poor contact occurs.

1. OUTLINE OF DIAGNOSIS

- Detect the malfunction of lock-up fluid pressure control solenoid, and hydraulic circuit, or drive circuit characteristics (stuck to high pressure side).
- Judge as NG if the deviation between engine speed and turbine speed is the predetermined value or less, even though the lock-up open request has been issued.

2. EXECUTION CONDITION

Secondary Parameters	Execution condition
12 V battery system voltage	≥ 10 V
Engine speed	≥ 1000 rpm
Transmission range	Drive
Engine torque	> Table 1 N·m
Commanded duty of torque converter clutch pressure control solenoid	≤ 0%

Table 1

Engine coolant temperature (degC)	- 40	- 20	0	20	40	60	80	100
Engine torque (N·m)	80	80	80	80	80	50	50	50

3. DIAGNOSTIC METHOD

If the duration of time while the following conditions are met is longer than the time indicated, judge as NG.

Judgment Value

Malfunction Criteria	Threshold Value
ABS (Engine speed – Measured turbine shaft speed)	< Table 2 rpm

Table 2

Engine speed (rpm)	0	500	1000	1500	2000	2500	3000	3500
ABS (Engine speed – Measured turbine shaft speed) (rpm)	0	0	50	50	50	50	50	50

Engine speed (rpm)	4000	4500	5000	5500	6000	6500	7000
ABS (Engine speed – Measured turbine shaft speed) (rpm)	50	50	50	50	50	50	50

Time Needed for Diagnosis: 10 seconds

Malfunction Indicator Light Illumination: Illuminates when malfunction occurs in 2 continuous driving cycles.

Diagnostic Procedure with Diagnostic Trouble Code (DTC)

CONTINUOUSLY VARIABLE TRANSMISSION (DIAGNOSTICS)

AW:DTC P2763 TORQUE CONVERTER CLUTCH PRESSURE CONTROL SOLENOID CONTROL CIRCUIT HIGH

DTC detecting condition:

Immediately at fault recognition

Trouble symptom:

- No lock-up occurs.
- Engine stalls.

CAUTION:

Use the check board when measuring the TCM terminal voltage and resistance.

Wiring diagram:

CVT control system <Ref. to WI-94, CVT Control System.>

Step	Check	Yes	No
1 CHECK HARNESS. 1) Turn the ignition switch to OFF. 2) Disconnect the TCM connector. 3) Disconnect the transmission connector. 4) Measure the resistance between TCM connector and transmission connectors. Connector & terminal (B54) No. 15 — (B11) No. 11:	Is the resistance less than 1 Ω ?	Go to step 2.	Repair the open circuit of harness.
2 CHECK HARNESS. 1) Turn the ignition switch to ON. 2) Measure the voltage between TCM connector and chassis ground. Connector & terminal (B54) No. 15 (+) — Chassis ground (-):	Is the voltage approx. 0 V?	Go to step 3.	Repair the short circuit of harness.
3 CHECK LOCK-UP DUTY SOLENOID. Measure the resistance between transmission connector and transmission body. Connector & terminal (T4) No. 11 — Transmission body:	Is the resistance approx. 10 — 13.5 Ω ? (when cold)	Check for poor contact of connector, and if no fault is found, replace the TCM. <Ref. to CVT(TR580)-148, Transmission Control Module (TCM).>	Go to step 4.

Diagnostic Procedure with Diagnostic Trouble Code (DTC)

CONTINUOUSLY VARIABLE TRANSMISSION (DIAGNOSTICS)

Step	Check	Yes	No
4 CHECK HARNESS INSIDE TRANSMISSION. CAUTION: Start work after ATF cools down. 1) Remove the transmission valve cover. 2) Check for the harness pinch, damage.	Is there any fault in the harness?	Replace the transmission harness.	Go to step 5.
5 CHECK HARNESS INSIDE TRANSMISSION. 1) Disconnect the control valve body connector. 2) Turn the ignition switch to ON. 3) Measure the voltage between transmission connector and transmission body. Connector & terminal (T4) No. 11 (+) — Transmission body (-):	Is the voltage approx. 0 V?	Replace the control valve body. <Ref. to CVT(TR580)-119, Control Valve Body.>	Replace the transmission harness.

1. OUTLINE OF DIAGNOSIS

- Detect short circuit to power supply or open circuit of the lock-up clutch pressure control solenoid drive circuit.
- Judge as NG when an abnormal signal is received from the solenoid driver IC of the lock-up clutch pressure control solenoid drive circuit.

2. EXECUTION CONDITION

Secondary Parameters	Execution condition
12 V battery system voltage	≥ 9 V
Commanded duty of torque converter clutch pressure control solenoid	0%

3. DIAGNOSTIC METHOD

If the duration of time while the following conditions are met is longer than the time indicated, judge as NG.

Judgment Value

Malfunction Criteria	Threshold Value
Signal of malfunction from solenoid driver IC As defined by: Measured torque converter clutch pressure control solenoid voltage ≥ 2.5 V	ON

Time Needed for Diagnosis: 0.2 seconds

Malfunction Indicator Light Illumination: Illuminates as soon as a malfunction occurs.

Diagnostic Procedure with Diagnostic Trouble Code (DTC)

CONTINUOUSLY VARIABLE TRANSMISSION (DIAGNOSTICS)

AX:DTC P2764 TORQUE CONVERTER CLUTCH PRESSURE CONTROL SOLENOID CONTROL CIRCUIT LOW

DTC detecting condition:

Immediately at fault recognition

Trouble symptom:

No lock-up occurs.

CAUTION:

Use the check board when measuring the TCM terminal voltage and resistance.

Wiring diagram:

CVT control system <Ref. to WI-94, CVT Control System.>

CVT01154

Step	Check	Yes	No
1 CHECK HARNESS. 1) Turn the ignition switch to OFF. 2) Disconnect the TCM connector. 3) Disconnect the transmission connector. 4) Measure the resistance between TCM connector and chassis ground. Connector & terminal (B54) No. 15 — Chassis ground:	Is the resistance 1 MΩ or more?	Go to step 2.	Repair the short circuit of harness.
2 CHECK LOCK-UP DUTY SOLENOID. Measure the resistance between transmission connector and transmission body. Connector & terminal (T4) No. 11 — Transmission body:	Is the resistance approx. 10 — 13.5 Ω? (when cold)	Check for poor contact of connector, and if no fault is found, replace the TCM. <Ref. to CVT(TR580)-148, Transmission Control Module (TCM).>	Go to step 3.
3 CHECK HARNESS INSIDE TRANSMISSION. CAUTION: Start work after ATF cools down. 1) Remove the transmission valve cover. 2) Check for the harness pinch, damage.	Is there any fault in the harness?	Replace the transmission harness.	Go to step 4.

Diagnostic Procedure with Diagnostic Trouble Code (DTC)

CONTINUOUSLY VARIABLE TRANSMISSION (DIAGNOSTICS)

Step	Check	Yes	No
4 CHECK HARNESS INSIDE TRANSMISSION. 1) Disconnect the control valve body connector. 2) Measure the resistance between transmission connector and transmission body. Connector & terminal (T4) No. 11 — Transmission body:	Is the resistance 1 M Ω or more?	Replace the control valve body. <Ref. to CVT(TR580)-119, Control Valve Body.>	Replace the transmission harness.

1. OUTLINE OF DIAGNOSIS

- Detect the ground short of the lock-up clutch pressure control solenoid drive circuit.
- Judge as NG when an abnormal signal is received from the solenoid driver IC of the lock-up clutch pressure control solenoid drive circuit.

2. EXECUTION CONDITION

Secondary Parameters	Execution condition
12 V battery system voltage	≥ 9 V
Commanded duty of torque converter clutch pressure control solenoid	100%

3. DIAGNOSTIC METHOD

If the duration of time while the following conditions are met is longer than the time indicated, judge as NG.

Judgment Value

Malfunction Criteria	Threshold Value
Signal of malfunction from solenoid driver IC As defined by: Measured torque converter clutch pressure control solenoid voltage ≤ 0.8 V	ON

Time Needed for Diagnosis: 0.2 seconds

Malfunction Indicator Light Illumination: Illuminates as soon as a malfunction occurs.

Diagnostic Procedure with Diagnostic Trouble Code (DTC)

CONTINUOUSLY VARIABLE TRANSMISSION (DIAGNOSTICS)

AY:DTC U0073 CONTROL MODULE COMMUNICATION BUS OFF

NOTE:

Refer to “LAN SYSTEM (DIAGNOSTICS)” for diagnostic procedure. <Ref. to LAN(diag)-2, Basic Diagnostic Procedure.>

1. OUTLINE OF DIAGNOSIS

- Detect malfunction of CAN communication.
- Judge as NG when CAN communication failure has occurred.

2. EXECUTION CONDITION

Secondary Parameters	Execution condition
12 V battery system voltage	≥ 10 V
Measured turbine shaft speed	> 0 rpm
or	
Transmission range	Drive or Reverse

3. DIAGNOSTIC METHOD

If the duration of time while the following conditions are met is longer than the time indicated, judge as NG.

Judgment Value

Malfunction Criteria	Threshold Value
CAN bus condition	Bus off

Time Needed for Diagnosis: 2 seconds

Malfunction Indicator Light Illumination: Illuminates as soon as a malfunction occurs.

AZ:DTC U0100 LOST COMMUNICATION WITH ECM/PCM “A”

NOTE:

Refer to “LAN SYSTEM (DIAGNOSTICS)” for diagnostic procedures. <Ref. to LAN(diag)-2, Basic Diagnostic Procedure.>

1. OUTLINE OF DIAGNOSIS

- Detect malfunction of CAN communication.
- Judge as NG when CAN communication failure occurs with the ECM.

2. EXECUTION CONDITION

Secondary Parameters	Execution condition
12 V battery system voltage	≥ 10 V
Measured turbine shaft speed	> 0 rpm
or	
Transmission range	Drive or Reverse

3. DIAGNOSTIC METHOD

If the duration of time while the following conditions are met is longer than the time indicated, judge as NG.

Judgment Value

Malfunction Criteria	Threshold Value
CAN data from ECM	Lost

Time Needed for Diagnosis: 0.5 seconds

Malfunction Indicator Light Illumination: Illuminates as soon as a malfunction occurs.

Diagnostic Procedure with Diagnostic Trouble Code (DTC)

CONTINUOUSLY VARIABLE TRANSMISSION (DIAGNOSTICS)

BA:DTC U0122 LOST COMMUNICATION WITH VEHICLE DYNAMICS CONTROL MODULE

NOTE:

Refer to "LAN SYSTEM (DIAGNOSTICS)" for diagnostic procedures. <Ref. to LAN(diag)-2, Basic Diagnostic Procedure.>

1. OUTLINE OF DIAGNOSIS

- Detect malfunction of CAN communication.
- Judge as NG when CAN communication with VDCCM is not possible.

2. EXECUTION CONDITION

Secondary Parameters	Execution condition
12 V battery system voltage	≥ 10 V
Measured turbine shaft speed	> 0 rpm
or	
Transmission range	Drive or Reverse

3. DIAGNOSTIC METHOD

If the duration of time while the following conditions are met is longer than the time indicated, judge as NG.

Judgment Value

Malfunction Criteria	Threshold Value
CAN data from Vehicle Dynamics Control Module	Lost

Time Needed for Diagnosis: 0.5 seconds

Malfunction Indicator Light Illumination: Illuminates as soon as a malfunction occurs.

BB:DTC U0140 LOST COMMUNICATION WITH BODY CONTROL MODULE

NOTE:

Refer to "LAN SYSTEM (DIAGNOSTICS)" for diagnostic procedures. <Ref. to LAN(diag)-2, Basic Diagnostic Procedure.>

1. OUTLINE OF DIAGNOSIS

- Detect malfunction of CAN communication.
- Judge as NG when CAN communication failure occurs with the body integrated unit.

2. EXECUTION CONDITION

Secondary parameters	Execution condition
12 V battery system voltage	≥ 10 V
Measured turbine shaft speed	> 0 rpm
or	
Transmission range	Drive or Reverse

3. DIAGNOSTIC METHOD

If the duration of time while the following conditions are met is longer than the time indicated, judge as NG.

Judgment Value

Malfunction Criteria	Threshold Value
CAN data from BIU	Lost

Time Needed for Diagnosis: 2 seconds

Malfunction Indicator Light Illumination: Does not illuminate.

Diagnostic Procedure with Diagnostic Trouble Code (DTC)

CONTINUOUSLY VARIABLE TRANSMISSION (DIAGNOSTICS)

BC:DTC U0155 LOST COMMUNICATION WITH INSTRUMENT PANEL CLUSTER (IPC) CONTROL MODULE

NOTE:

Refer to "LAN SYSTEM (DIAGNOSTICS)" for diagnostic procedures. <Ref. to LAN(diag)-2, Basic Diagnostic Procedure.>

1. OUTLINE OF DIAGNOSIS

- Detect malfunction of CAN communication.
- Judge as NG when CAN communication failure occurs with the combination meter.

2. EXECUTION CONDITION

Secondary parameters	Execution condition
12 V battery system voltage	≥ 10 V
Measured turbine shaft speed	> 0 rpm
or	
Transmission range	Drive or Reverse

3. DIAGNOSTIC METHOD

If the duration of time while the following conditions are met is longer than the time indicated, judge as NG.

Judgment Value

Malfunction Criteria	Threshold Value
CAN data from combination meter	Lost

Time Needed for Diagnosis: 2 seconds

Malfunction Indicator Light Illumination: Does not illuminate.

BD:DTC U0164 LOST COMMUNICATION WITH HVAC CONTROL MODULE

NOTE:

Refer to "LAN SYSTEM (DIAGNOSTICS)" for diagnostic procedure. <Ref. to LAN(diag)-2, Basic Diagnostic Procedure.>

1. OUTLINE OF DIAGNOSIS

- Detect malfunction of CAN communication.
- Judge as NG when CAN communication failure occurs with the A/C control panel.

2. EXECUTION CONDITION

Secondary parameters	Execution condition
12 V battery system voltage	≥ 10 V
Measured turbine shaft speed	> 0 rpm
or	
Transmission range	Drive or Reverse

3. DIAGNOSTIC METHOD

If the duration of time while the following conditions are met is longer than the time indicated, judge as NG.

Judgment Value

Malfunction Criteria	Threshold Value
CAN data from A/C control panel	Lost

Time Needed for Diagnosis: 2 seconds

Malfunction Indicator Light Illumination: Does not illuminate.

Diagnostic Procedure with Diagnostic Trouble Code (DTC)

CONTINUOUSLY VARIABLE TRANSMISSION (DIAGNOSTICS)

BE:DTC U0401 INVALID DATA RECEIVED FROM ECM/PCM “A”

NOTE:

Refer to “LAN SYSTEM (DIAGNOSTICS)” for diagnostic procedures. <Ref. to LAN(diag)-2, Basic Diagnostic Procedure.>

1. OUTLINE OF DIAGNOSIS

- Detect malfunction of CAN communication.
- Judge as NG when data received from ECM is not normal.

2. EXECUTION CONDITION

Secondary Parameters	Execution condition
12 V battery system voltage	≥ 10 V
Measured turbine shaft speed	> 0 rpm
or	
Transmission range	Drive or Reverse

3. DIAGNOSTIC METHOD

If the duration of time while the following conditions are met is longer than the time indicated, judge as NG.

Judgment Value

Malfunction Criteria	Threshold Value
CAN data from ECM	Did not change

Time Needed for Diagnosis: 2 seconds

Malfunction Indicator Light Illumination: Illuminates as soon as a malfunction occurs.

BF:DTC U0416 INVALID DATA RECEIVED FROM VEHICLE DYNAMICS CONTROL MODULE

NOTE:

Refer to “LAN SYSTEM (DIAGNOSTICS)” for diagnostic procedures. <Ref. to LAN(diag)-2, Basic Diagnostic Procedure.>

1. OUTLINE OF DIAGNOSIS

- Detect malfunction of CAN communication.
- Judge as NG when data received from the VDCCM is not normal.

2. EXECUTION CONDITION

Secondary Parameters	Execution condition
12 V battery system voltage	≥ 10 V
Measured turbine shaft speed	> 0 rpm
or	
Transmission range	Drive or Reverse

3. DIAGNOSTIC METHOD

If the duration of time while the following conditions are met is longer than the time indicated, judge as NG.

Judgment Value

Malfunction Criteria	Threshold Value
CAN data from Vehicle Dynamics Control Module	Did not change

Time Needed for Diagnosis: 2 seconds

Malfunction Indicator Light Illumination: Illuminates as soon as a malfunction occurs.

Diagnostic Procedure with Diagnostic Trouble Code (DTC)

CONTINUOUSLY VARIABLE TRANSMISSION (DIAGNOSTICS)

BG:DTC U0422 INVALID DATA RECEIVED FROM BODY CONTROL MODULE

NOTE:

Refer to “LAN SYSTEM (DIAGNOSTICS)” for diagnostic procedures. <Ref. to LAN(diag)-2, Basic Diagnostic Procedure.>

1. OUTLINE OF DIAGNOSIS

- Detect malfunction of CAN communication.
- Judge as NG when data received from the body integrated unit is not normal.

2. EXECUTION CONDITION

Secondary parameters	Execution condition
12 V battery system voltage	≥ 10 V
Measured turbine shaft speed	> 0 rpm
or	
Transmission range	Drive or Reverse

3. DIAGNOSTIC METHOD

If the duration of time while the following conditions are met is longer than the time indicated, judge as NG.

Judgment Value

Malfunction Criteria	Threshold Value
CAN data from BIU	Freeze

Time Needed for Diagnosis: 2 seconds

Malfunction Indicator Light Illumination: Does not illuminate.

BH:DTC U0423 INVALID DATA RECEIVED FROM INSTRUMENT PANEL CLUSTER CONTROL MODULE

NOTE:

Refer to “LAN SYSTEM (DIAGNOSTICS)” for diagnostic procedures. <Ref. to LAN(diag)-2, Basic Diagnostic Procedure.>

1. OUTLINE OF DIAGNOSIS

- Detect malfunction of CAN communication.
- Judge as NG when data received from the combination meter is not normal.

2. EXECUTION CONDITION

Secondary parameters	Execution condition
12 V battery system voltage	≥ 10 V
Measured turbine shaft speed	> 0 rpm
or	
Transmission range	Drive or Reverse

3. DIAGNOSTIC METHOD

If the duration of time while the following conditions are met is longer than the time indicated, judge as NG.

Judgment Value

Malfunction Criteria	Threshold Value
CAN data from combination meter	Freeze

Time Needed for Diagnosis: 2 seconds

Malfunction Indicator Light Illumination: Does not illuminate.

Diagnostic Procedure with Diagnostic Trouble Code (DTC)

CONTINUOUSLY VARIABLE TRANSMISSION (DIAGNOSTICS)

BI: DTC U0424 INVALID DATA RECEIVED FROM HVAC CONTROL MODULE

NOTE:

Refer to “LAN SYSTEM (DIAGNOSTICS)” for diagnostic procedure. <Ref. to LAN(diag)-2, Basic Diagnostic Procedure.>

1. OUTLINE OF DIAGNOSIS

- Detect malfunction of CAN communication.
- Judge as NG when data received from the A/C control panel is not normal.

2. EXECUTION CONDITION

Secondary parameters	Execution condition
12 V battery system voltage	≥ 10 V
Measured turbine shaft speed	> 0 rpm
or	
Transmission range	Drive or Reverse

3. DIAGNOSTIC METHOD

If the duration of time while the following conditions are met is longer than the time indicated, judge as NG.

Judgment Value

Malfunction Criteria	Threshold Value
CAN data from A/C control panel	Freeze

Time Needed for Diagnosis: 2 seconds

Malfunction Indicator Light Illumination: Does not illuminate.

BJ:DTC U1235 LOST COMMUNICATION WITH EyeSight

NOTE:

Refer to “LAN SYSTEM (DIAGNOSTICS)” for diagnostic procedure. <Ref. to LAN(diag)-2, Basic Diagnostic Procedure.>

1. OUTLINE OF DIAGNOSIS

- Detect malfunction of CAN communication.
- Judge as NG when CAN communication failure occurs with the stereo camera.

2. EXECUTION CONDITION

Secondary parameters	Execution condition
12 V battery system voltage	≥ 10 V
Measured turbine shaft speed	> 0 rpm
or	
Transmission range	Drive or Reverse

3. DIAGNOSTIC METHOD

If the duration of time while the following conditions are met is longer than the time indicated, judge as NG.

Judgment Value

Malfunction Criteria	Threshold Value
CAN data from stereo camera	Lost

Time Needed for Diagnosis: 2 seconds

Malfunction Indicator Light Illumination: Does not illuminate.

Diagnostic Procedure with Diagnostic Trouble Code (DTC)

CONTINUOUSLY VARIABLE TRANSMISSION (DIAGNOSTICS)

BK:DTC U1433 INVALID DATA RECEIVED FROM EyeSight

NOTE:

Refer to “LAN SYSTEM (DIAGNOSTICS)” for diagnostic procedure. <Ref. to LAN(diag)-2, Basic Diagnostic Procedure.>

1. OUTLINE OF DIAGNOSIS

- Detect malfunction of CAN communication.
- Judge as NG when data received from the stereo camera is not normal.

2. EXECUTION CONDITION

Secondary parameters	Execution condition
12 V battery system voltage	≥ 10 V
Measured turbine shaft speed	> 0 rpm
or	
Transmission range	Drive or Reverse

3. DIAGNOSTIC METHOD

If the duration of time while the following conditions are met is longer than the time indicated, judge as NG.

Judgment Value

Malfunction Criteria	Threshold Value
CAN data from stereo camera	Freeze

Time Needed for Diagnosis: 2 seconds

Malfunction Indicator Light Illumination: Does not illuminate.

Diagnostic Procedure without Diagnostic Trouble Code (DTC)

CONTINUOUSLY VARIABLE TRANSMISSION (DIAGNOSTICS)

18. Diagnostic Procedure without Diagnostic Trouble Code (DTC)

A: CHECK SHIFT INDICATOR

Diagnosis:

- CAN communication is abnormal with the combination meter.
- Combination meter malfunction

Trouble symptom:

- Shift indicator does not display or remains displayed.
- Shift indicator display does not change.

Step	Check	Yes	No
1	CHECK DTC. Read the DTC relating the TCM using the Subaru Select Monitor.	Is DTC U0155 or U0423 displayed?	Perform the self-diagnosis of combination meter. Go to step 2.
2	CHECK DTC. Read the DTC relating the TCM using the Subaru Select Monitor.	Are DTCs other than U0155 and U0423 displayed?	Perform the diagnosis according to DTC. Go to step 3.
3	CHECK COMBINATION METER. Read DTC of combination meter.	Are any DTCs displayed?	Perform the diagnosis according to DTC. Go to step 4.
4	CHECK TCM. 1) Operate the + side of the paddle shift switch. 2) Read the data of «Up Switch» using the Subaru Select Monitor.	Does it change between ON and OFF according to the operation?	Go to step 5. Check for poor contact between TCM and paddle shift UP switch, and repair the defective part.
5	CHECK TCM. 1) Operate the – side of the paddle shift switch. 2) Read the data of «Down Switch» using the Subaru Select Monitor.	Does it change between ON and OFF according to the operation?	Go to step 6. Check for poor contact between TCM and paddle shift down switch, and repair the defective part.
6	CHECK TCM. 1) Turn the ignition switch OFF, then turn it ON again. 2) Shift the select lever to manual mode. 3) Read the data of «Shift step in Manu. mode» using the Subaru Select Monitor.	Is “1” displayed?	Go to step 7. Perform the diagnosis according to DTC P0951. <Ref. to CVT(diag)-101, DTC P0951 AUTO SHIFT MANUAL CONTROL CIRCUIT RANGE/ PERFORMANCE, Diagnostic Procedure with Diagnostic Trouble Code (DTC).>
7	CHECK TCM. 1) Shift up the select lever. 2) Read the data of «Shift step in Manu. mode» using the Subaru Select Monitor.	Is “2” displayed?	Current condition is normal. Replace the TCM. <Ref. to CVT(TR580)-148, Transmission Control Module (TCM).>

Diagnostics with Phenomenon

CONTINUOUSLY VARIABLE TRANSMISSION (DIAGNOSTICS)

19. Diagnostics with Phenomenon

A: INSPECTION

Symptoms	Faulty parts
Engine stalls when driving in "D" or "R" range, or selecting "N" → "D", "N" → "R".	<ul style="list-style-type: none"> • Control valve • Engine control system
While driving in "D" range, vibration occurs immediately before the stop or engine stalls.	<ul style="list-style-type: none"> • Control valve • Torque converter
Vehicle cannot shift while driving in "D" range.	<ul style="list-style-type: none"> • Control valve • TCM • Shift mechanism • Power supply system
Excessive shock when selecting "N" → "D", and "N" → "R".	<ul style="list-style-type: none"> • Control valve • TCM • F&R clutch pack • ATF deterioration or lack
Excessive shock at standing start in "D" range.	<ul style="list-style-type: none"> • Control valve • TCM • F&R clutch pack • ATF deterioration or lack
Engine speed increases abruptly during driving in "D" or "R" range.	<ul style="list-style-type: none"> • Control valve • Secondary pressure sensor • F&R clutch pack • ATF deterioration or lack
Vehicle can not start when depressing the accelerator pedal in "D" or "R" range, or acceleration is very poor. (without abrupt engine increase)	<ul style="list-style-type: none"> • Control valve • F&R clutch pack • Shift mechanism • Parking mechanism • Engine control system • Power supply system
Shift indicator in combination meter displays the position which differs from select lever position.	<ul style="list-style-type: none"> • Inhibitor switch • Select cable related • Combination meter
Manual mode enters even though the select lever and paddle shift switch is not operated.	<ul style="list-style-type: none"> • Manual mode switch • Paddle shift switch • Select lever • TCM
Engine speed increases abruptly in "D" or "R" range, vehicle can not start.	<ul style="list-style-type: none"> • F&R clutch pack • Select cable related
Manual mode can not be set	<ul style="list-style-type: none"> • Select lever • TCM

General Description

MANUAL TRANSMISSION AND DIFFERENTIAL

1. General Description

A: SPECIFICATION

1. MANUAL TRANSMISSION AND DIFFERENTIAL

Model		Crosstrek model	
Type		5-forward speeds and 1-reverse (all stage with synchromesh)	
Transmission gear ratio		1st	3.545
		2nd	1.888
		3rd	1.296
		4th	0.972
		5th	0.780
		Rev.	3.333
Front reduction gear	Final	Type of gear	Hypoid
		Gear ratio	4.444
Rear reduction gear	Transfer	Type of gear	Helical
		Gear ratio	1.000
Front differential	Type and number of gear		Straight bevel gear (bevel pinion: 2, bevel gear: 2)
Center differential	Type and number of gear		Straight bevel gear (bevel pinion: 2, bevel gear: 2 and viscous coupling)
Transmission gear oil		SUBARU GEAR OIL EXTRA MT or equivalent	
Transmission gear oil capacity		3.5 L (3.7 US qt, 3.1 Imp qt)	

2. TRANSMISSION GEAR OIL

CAUTION:

If an alternative gear oil is used, you may not have expected functionality and performance.

Recommended oil:

SUBARU GEAR OIL EXTRA MT

Alternative:

GL-5 (75W-90)

General Description

MANUAL TRANSMISSION AND DIFFERENTIAL

T4: 70 (7.1, 51.6)

T5: 140 (14.3, 103.3)

General Description

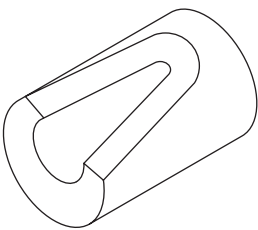

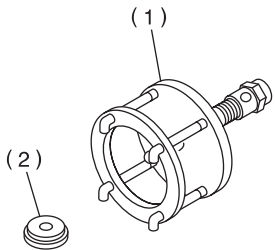

MANUAL TRANSMISSION AND DIFFERENTIAL

C: CAUTION

- Remove contamination including dirt and corrosion before removal, installation or disassembly.
- Keep the disassembled parts in order and protect them from dust and dirt.
- Before removal, installation or disassembly, be sure to clarify the failure. Avoid unnecessary removal, installation, disassembly and replacement.
- When disassembling the case and other light alloy parts, disassemble by using a plastic hammer. Do not pry apart with screwdrivers or other tools.
- Vehicle components are extremely hot after driving. Be wary of receiving burns from heated parts.
- Use SUBARU genuine gear oil, grease or equivalent. Do not mix gear oil, grease, etc. of different grades or manufacturers.
- Be sure to tighten fasteners including bolts and nuts to the specified torque.
- Place shop jacks or rigid racks at the specified points.
- Apply gear oil onto sliding or revolving surfaces before installation.
- Replace deformed or damaged snap rings with new parts.
- Before installing O-rings or oil seals, apply sufficient amount of gear oil to avoid damage and deformation.
- Be careful not to incorrectly install or fail to install O-rings, snap rings and other such parts.
- Before securing a part on a vise, place cushioning material such as wood blocks, aluminum plate, or cloth between the part and the vise.
- Avoid damaging the mating surface of the case.
- Before applying liquid gasket, completely remove and clean the old liquid gasket.
- Be careful of handling the oil seal, O-ring and gasket. If the contact surface of them is damaged, oil leakage may occur.
- When pressing-in the oil seal, make sure that the oil seal lip portion and outer surface are not damaged or tilted.
- When replacing the taper roller bearing, replace the outer race and inner race as a set.
- When replacing the hypoid gear, replace the hypoid driven gear and drive pinion shaft as a set.
- Replace the bolts if the seating surface or the thread surface is excessively rusted.

2. GENERAL TOOL

TOOL NAME	REMARKS
Circuit tester	Used for measuring resistance, voltage and current.
TORX® bit T70	Used for removing and installing the drain plug.

Transmission Gear Oil

MANUAL TRANSMISSION AND DIFFERENTIAL

2. Transmission Gear Oil

A: INSPECTION

- 1) Park the vehicle on a level surface.
- 2) Turn the ignition switch to OFF, and wait until the engine cools.
- 3) Remove the oil level gauge and wipe it clean.
- 4) Reinsert the oil level gauge all the way. Be sure that the oil level gauge is correctly inserted in the proper direction.
- 5) Pull out the oil level gauge again, and check the oil level. If it is below the lower level, check for oil leakage and add oil through the oil level gauge hole to bring the level up to the upper level.

CAUTION:

The length of the oil level gauge varies depending on models and destinations. Make sure to use the appropriate oil level gauge.

- (A) Oil level gauge
- (B) Upper level
- (C) Lower level

- (1) Gray
- (2) 195.9 mm (7.71 in)

B: REPLACEMENT

- 1) Pull out the oil level gauge.
- 2) Lift up the vehicle.
- 3) Using the TORX® bit T70, remove the drain plug, and drain the gear oil completely.

CAUTION:

- Immediately after the vehicle has been running or after idling for a long time, the gear oil will be hot. Be careful not to receive burns.
- Be careful not to spill the gear oil on the exhaust pipe, to prevent emission of smoke or causing a fire. If gear oil is spilled, wipe it off completely.

- 4) Attach the drain plug using TORX® bit T70.

NOTE:

- Install the drain plug after draining gear oil.
- Use a new gasket.

Tightening torque:

44 N·m (4.5 kgf-m, 32.5 ft-lb) (aluminum gasket, silver)

70 N·m (7.1 kgf-m, 51.6 ft-lb) (copper gasket, brown)

70 N·m (7.1 kgf-m, 51.6 ft-lb) (metal gasket, black)

- 5) Lower the vehicle.
- 6) Pour gear oil through the oil level gauge hole.

CAUTION:

If an alternative gear oil is used, you may not have expected functionality and performance.

Recommended gear oil:

SUBARU GEAR OIL EXTRA MT

Alternative:

GL-5 (75W-90)

Gear oil capacity:

3.5 L (3.7 US qt, 3.1 Imp qt)

- 7) Check the gear oil amount, and confirm that it is within the specification.

Manual Transmission Assembly

MANUAL TRANSMISSION AND DIFFERENTIAL

3. Manual Transmission Assembly

A: REMOVAL

- 1) Disconnect the ground cable from battery.
- 2) Remove the clip (A) from the air intake boot.
- 3) Loosen the clamp (B) connecting the air intake boot and air cleaner case (rear).
- 4) Loosen the clamp (C) which connects the air intake boot and throttle body.

- 5) Remove the air intake boot from the throttle body, and move it to the left side wheel apron.

- 6) Disconnect the following connectors and remove the clip.

- (A) Neutral position switch connector (brown)
- (B) Back-up light switch connector (gray)
- (C) Clip

- 7) Disconnect the transmission radio ground cord terminal.

- 8) Remove the harness bracket, disconnect the engine harness connectors, remove the air breather hose, and then remove the engine hanger rear.

- (A) Engine harness connectors
- (B) Engine hanger rear
- (C) Harness bracket
- (D) Air breather hose

- 9) Remove the starter. <Ref. to SC(H4DO)-8, REMOVAL, Starter.>
- 10) Remove the operating cylinder and suspend on a wire.

Manual Transmission Assembly

MANUAL TRANSMISSION AND DIFFERENTIAL

11) Remove the pitching stopper.

12) Disconnect two ground cables from rear end of the engine.

13) Set the ST.

ST1 41099AA012 ENGINE SUPPORT BRACKET

ST2 41099AA020 ENGINE SUPPORT

14) Remove the bolts which hold upper side of transmission to engine.

15) Remove the front tires.

16) Lift up the vehicle.

17) Remove the front under cover. <Ref. to EI-22, REMOVAL, Front Under Cover.>

18) Remove the center exhaust pipe. <Ref. to EX(H4DO)-13, REMOVAL, Center Exhaust Pipe.>

19) Drain transmission gear oil completely. <Ref. to 5MT-21, REPLACEMENT, Transmission Gear Oil.>

20) Remove the center exhaust cover.

21) Remove the hanger bracket.

22) Remove the propeller shaft. <Ref. to DS-11, REMOVAL, Propeller Shaft.>

23) Remove the gear shift rod and stay.

(1) Remove the stay.

(A) Stay

(B) Shift bracket

Manual Transmission Assembly

MANUAL TRANSMISSION AND DIFFERENTIAL

(2) Remove the gear shift rod.

(A) Gear shift rod

24) Disconnect the stabilizer link.

25) Remove the bolt securing the ball joint of the front arm to the housing, then separate the front arms and the housing.

(A) Front arm
(B) Ball joint

26) Using a crowbar, separate the left and right front drive shafts.

27) Remove the bolts and nuts which hold lower side of transmission to engine.

28) Place the transmission jack under the transmission.

CAUTION:

Always support the transmission case with a transmission jack.

29) Remove the front crossmember and the rear crossmember.

30) While lowering the transmission jack, tighten the turnbuckle of the ST, and incline the engine unit rearward.

31) Remove the transmission assembly.

NOTE:

Move the transmission jack towards the rear until the main shaft is withdrawn from the clutch cover.

32) Remove the transmission cushion rubber.

Manual Transmission Assembly

MANUAL TRANSMISSION AND DIFFERENTIAL

B: INSTALLATION

1) Replace the differential side retainer oil seal.
<Ref. to 5MT-33, REPLACEMENT, Differential Side Retainer Oil Seal.>

NOTE:

- Be sure to replace the oil seal after removing the front drive shaft.
- When a new oil seal has been installed, replacement is not required.

ST 18675AA000 DIFFERENTIAL SIDE OIL SEAL INSTALLER

2) Strike and bend the transmission hanger of transmission rear with a rubber hammer etc. so that it gets in contact with the transmission case.

CAUTION:

Do not apply excessive load or impact to the transmission case.

3) Install the transmission cushion rubber to the transmission, and tighten the bolt (A).

4) Install the transmission cushion rubber to the center crossmember, and temporarily tighten the nut (B).

Tightening torque:

Bolt (A)

35 N·m (3.6 kgf-m, 25.8 ft-lb)

5) Install the transmission assembly onto the engine.

(1) Lift up the transmission gradually using a transmission jack.

(2) Engage at the spline section.

NOTE:

Be careful not to hit the main shaft against the clutch cover.

6) While raising the transmission jack, loosen the turnbuckle of the ST, and set the engine unit to the original position.

7) Install the front crossmember and rear crossmember.

8) Tighten the transmission cushion rubber mounting nut.

Tightening torque:

T1: 70 N·m (7.1 kgf-m, 51.6 ft-lb)

T2: 140 N·m (14.3 kgf-m, 103.3 ft-lb)

T3: 35 N·m (3.6 kgf-m, 25.8 ft-lb)

Manual Transmission Assembly

MANUAL TRANSMISSION AND DIFFERENTIAL

- 9) Take out the transmission jack.
- 10) Tighten the bolts and nuts which hold the lower side of transmission to the engine.

Tightening torque:

50 N·m (5.1 kgf-m, 36.9 ft-lb)

- 11) Lower the vehicle.
- 12) Install the starter. <Ref. to SC(H4DO)-10, INSTALLATION, Starter.>
- 13) Tighten the bolts which hold the upper side of the transmission to the engine.

Tightening torque:

50 N·m (5.1 kgf-m, 36.9 ft-lb)

- 14) Remove the ST.

- 15) Install the ground cable.

Tightening torque:

19 N·m (1.9 kgf-m, 14.0 ft-lb)

- 16) Install the pitching stopper.

Tightening torque:

T1: 50 N·m (5.1 kgf-m, 36.9 ft-lb)

T2: 58 N·m (5.9 kgf-m, 42.8 ft-lb)

- 17) Lift up the vehicle.
- 18) Set the ST to differential side retainer.
- ST 28399SA010 OIL SEAL PROTECTOR
- 19) Replace the circlip of the drive shaft with a new part.
- 20) Install the front drive shaft and remove ST.
- ST 28399SA010 OIL SEAL PROTECTOR

Manual Transmission Assembly

MANUAL TRANSMISSION AND DIFFERENTIAL

21) Insert the front arm ball joint and tighten the mounting bolt.

Tightening torque:

50 N-m (5.1 kgf-m, 36.9 ft-lb)

- (A) Front arm
- (B) Ball joint

22) Install the stabilizer link.

Tightening torque:

60 N-m (6.1 kgf-m, 44.3 ft-lb)

23) Attach the gear shift rod and stay.

(1) Install the gear shift rod.

NOTE:

Use a new self-locking nut.

Tightening torque:

12 N-m (1.2 kgf-m, 8.9 ft-lb)

- (A) Gear shift rod

(2) Install the stay.

NOTE:

Use a new self-locking nut.

Tightening torque:

18 N-m (1.8 kgf-m, 13.3 ft-lb)

- (A) Stay
- (B) Shift bracket

24) Install the propeller shaft. <Ref. to DS-13, INSTALLATION, Propeller Shaft.>

25) Install the hanger bracket.

Tightening torque:

23 N-m (2.3 kgf-m, 17.0 ft-lb)

26) Install the center exhaust cover.

Tightening torque:

18 N-m (1.8 kgf-m, 13.3 ft-lb)

27) Install the center exhaust pipe. <Ref. to EX(H4DO)-14, INSTALLATION, Center Exhaust Pipe.>

28) Install the front under cover. <Ref. to EI-22, INSTALLATION, Front Under Cover.>

Manual Transmission Assembly

MANUAL TRANSMISSION AND DIFFERENTIAL

- 29) Lower the vehicle.
- 30) Install the operating cylinder.

Tightening torque:

37 N·m (3.8 kgf·m, 27.3 ft·lb)

- 31) Install the transmission radio ground cord terminal.

Tightening torque:

13 N·m (1.3 kgf·m, 9.6 ft·lb)

- 32) Install the engine hanger rear.

Tightening torque:

21 N·m (2.1 kgf·m, 15.5 ft·lb)

- 33) Install the air breather hose.
- 34) Connect the engine harness connector, then attach the harness bracket.

Tightening torque:

7.5 N·m (0.8 kgf·m, 5.5 ft·lb)

- (A) Engine harness connectors
- (B) Engine hanger rear
- (C) Harness bracket
- (D) Air breather hose

- 35) Connect the following connectors and secure the clip.

- (A) Neutral position switch connector (brown)
- (B) Back-up light switch connector (gray)
- (C) Clip

- 36) Pour in transmission gear oil and check the oil level. <Ref. to 5MT-21, Transmission Gear Oil.>
- 37) Install the air intake boot. <Ref. to IN(H4DO)-12, INSTALLATION, Air Intake Boot.>
- 38) Install the front tires.
- 39) Connect the battery ground terminal.

Transmission Mounting System

MANUAL TRANSMISSION AND DIFFERENTIAL

4. Transmission Mounting System

A: REMOVAL

1. PITCHING STOPPER

- 1) Disconnect the ground cable from battery.
- 2) Remove the clip (A) from the air intake boot.
- 3) Loosen the clamp (B) connecting the air intake boot and air cleaner case (rear).
- 4) Loosen the clamp (C) which connects the air intake boot and throttle body.

- 5) Remove the air intake boot from the throttle body, and move it to the left side wheel apron.

- 6) Remove the pitching stopper.

2. CROSSMEMBER AND CUSHION RUBBER

- 1) Disconnect the ground cable from battery.
- 2) Lift up the vehicle.
- 3) Remove the center exhaust pipe. <Ref. to EX(H4DO)-13, REMOVAL, Center Exhaust Pipe.>
- 4) Remove the center exhaust cover.

- 5) Set the transmission jack.

CAUTION:

Always support the transmission case with a transmission jack.

- 6) Remove the front crossmember and the rear crossmember.

- 7) Remove the transmission cushion rubber.

Transmission Mounting System

MANUAL TRANSMISSION AND DIFFERENTIAL

B: INSTALLATION

1. PITCHING STOPPER

1) Install the pitching stopper.

Tightening torque:

T1: 50 N·m (5.1 kgf-m, 36.9 ft-lb)

T2: 58 N·m (5.9 kgf-m, 42.8 ft-lb)

2) Install the air intake boot. <Ref. to IN(H4DO)-12, INSTALLATION, Air Intake Boot.>

3) Connect the battery ground terminal.

2. CROSSMEMBER AND CUSHION RUBBER

1) Install the transmission cushion rubber to the transmission, and tighten the bolt (A).

2) Install the transmission cushion rubber to the center crossmember, and temporarily tighten the nut (B).

Tightening torque:

Bolt (A)

35 N·m (3.6 kgf-m, 25.8 ft-lb)

3) Install the front crossmember and rear crossmember.

4) Tighten the transmission cushion rubber mounting nut.

Tightening torque:

T1: 70 N·m (7.1 kgf-m, 51.6 ft-lb)

T2: 140 N·m (14.3 kgf-m, 103.3 ft-lb)

T3: 35 N·m (3.6 kgf-m, 25.8 ft-lb)

5) Remove the transmission jack.

6) Install the center exhaust cover.

Tightening torque:

18 N·m (1.8 kgf-m, 13.3 ft-lb)

7) Install the center exhaust pipe. <Ref. to EX(H4DO)-14, INSTALLATION, Center Exhaust Pipe.>

8) Lower the vehicle.

9) Connect the battery ground terminal.

C: INSPECTION

Check the following; repair or replace the faulty parts.

1. PITCHING STOPPER

Check the pitching stopper for bends or damage. Check that the rubber is not stiff, cracked or otherwise damaged.

2. CROSSMEMBER AND CUSHION RUBBER

Check the crossmember for bending or damage. Check that the cushion rubber does not have hardening, cracks or other damages.

5. Oil Seal

A: INSPECTION

Check for leakage of transmission gear oil from the oil seal. If there is oil leakage, replace the oil seal with the new part and check the propeller shaft.

B: REPLACEMENT

- 1) Disconnect the ground cable from battery.
- 2) Lift up the vehicle.
- 3) Clean the transmission exterior.
- 4) Using the TORX® bit T70, remove the drain plug, and drain the transmission gear oil completely.

CAUTION:

- Immediately after the vehicle has been running or after idling for a long time, the gear oil will be hot. Be careful not to receive burns.
- Be careful not to spill the gear oil on the exhaust pipe, to prevent emission of smoke or causing a fire. If gear oil is spilled, wipe it off completely.

- 5) Attach the drain plug using TORX® bit T70.

NOTE:

Use a new gasket.

Tightening torque:

44 N·m (4.5 kgf·m, 32.5 ft·lb) (aluminum gasket, silver)

70 N·m (7.1 kgf·m, 51.6 ft·lb) (copper gasket, brown)

70 N·m (7.1 kgf·m, 51.6 ft·lb) (metal gasket, black)

- 6) Remove the rear exhaust pipe. <Ref. to EX(H4DO)-17, REMOVAL, Rear Exhaust Pipe.>

- 7) Remove the center exhaust cover.

- 8) Remove the propeller shaft. <Ref. to DS-11, REMOVAL, Propeller Shaft.>

- 9) Using the ST, remove the oil seal.
- ST 398527700 PULLER ASSY

(A) Oil seal

- 10) Using the ST, install the oil seal.

NOTE:

- When grease is not applied to the oil seal lips, apply the transmission gear oil to the oil seal lips.
- Use a new oil seal.

- ST 498057300 INSTALLER

- 11) Install the propeller shaft. <Ref. to DS-13, INSTALLATION, Propeller Shaft.>

Oil Seal

MANUAL TRANSMISSION AND DIFFERENTIAL

12) Install the center exhaust cover.

Tightening torque:

18 N·m (1.8 kgf-m, 13.3 ft-lb)

13) Install the rear exhaust pipe. <Ref. to EX(H4DO)-18, INSTALLATION, Rear Exhaust Pipe.>

14) Lower the vehicle.

15) Pour in transmission gear oil and check the oil level. <Ref. to 5MT-21, Transmission Gear Oil.>

16) Connect the battery ground terminal.

6. Differential Side Retainer Oil Seal

A: INSPECTION

Check for transmission gear oil leaks at differential side retainer oil seal area. If there is oil leakage, replace the oil seal with the new part and check the drive shaft.

B: REPLACEMENT

- 1) Disconnect the ground cable from battery.
- 2) Remove the front tires.
- 3) Lift up the vehicle.
- 4) Using the TORX® bit T70, remove the drain plug, and drain the transmission gear oil completely.

CAUTION:

- Immediately after the vehicle has been running or after idling for a long time, the gear oil will be hot. Be careful not to receive burns.
- Be careful not to spill the gear oil on the exhaust pipe, to prevent emission of smoke or causing a fire. If gear oil is spilled, wipe it off completely.

- 5) Attach the drain plug using TORX® bit T70.

NOTE:

Use a new gasket.

Tightening torque:

44 N·m (4.5 kgf·m, 32.5 ft·lb) (aluminum gasket, silver)

70 N·m (7.1 kgf·m, 51.6 ft·lb) (copper gasket, brown)

70 N·m (7.1 kgf·m, 51.6 ft·lb) (metal gasket, black)

- 6) Remove the center exhaust pipe. <Ref. to EX(H4DO)-13, REMOVAL, Center Exhaust Pipe.>

- 7) Disconnect the stabilizer link.

- 8) Remove the bolt securing the ball joint of the front arm to the housing, then separate the front arms and the housing.

(A) Front arm

(B) Ball joint

- 9) Using a crowbar, separate the left and right front drive shafts.

- 10) Remove the differential side retainer oil seal.

NOTE:

- Be sure to replace the oil seal after removing the front drive shaft from the transmission.
- Use the ST 398527700 PULLER ASSY to remove the oil seal. If removing the oil seal with a flat tip screwdriver, be careful not to scratch the differential side retainer.

Differential Side Retainer Oil Seal

MANUAL TRANSMISSION AND DIFFERENTIAL

11) Using the ST, install the differential side retainer oil seal by lightly tapping with a plastic hammer.

CAUTION:

- Apply transmission gear oil to the oil seal lips, and install the oil seal while being careful not to deform the lip.
- Check the identification marks (R, L) during the installation so as not to mix up the oil seal RH and LH.

NOTE:

Use a new oil seal.

ST 18675AA000 DIFFERENTIAL SIDE OIL SEAL INSTALLER

12) Set the ST to differential side retainer.

ST 28399SA010 OIL SEAL PROTECTOR

13) Replace the circlip of the drive shaft with a new part.

14) Install the front drive shaft and remove ST.

ST 28399SA010 OIL SEAL PROTECTOR

15) Insert the front arm ball joint and tighten the mounting bolt.

Tightening torque:

50 N·m (5.1 kgf-m, 36.9 ft-lb)

(A) Front arm

(B) Ball joint

16) Install the stabilizer link.

Tightening torque:

60 N·m (6.1 kgf-m, 44.3 ft-lb)

17) Install the center exhaust pipe. <Ref. to EX(H4DO)-14, INSTALLATION, Center Exhaust Pipe.>

18) Lower the vehicle.

19) Pour in transmission gear oil and check the oil level. <Ref. to 5MT-21, REPLACEMENT, Transmission Gear Oil.>

20) Install the front tires.

21) Connect the battery ground terminal.

7. Switches and Harness

A: REMOVAL

1. BACK-UP LIGHT AND NEUTRAL POSITION SWITCH

- 1) Disconnect the ground cable from battery.
- 2) Remove the clip (A) from the air intake boot.
- 3) Loosen the clamp (B) connecting the air intake boot and air cleaner case (rear).
- 4) Loosen the clamp (C) which connects the air intake boot and throttle body.

- 5) Remove the air intake boot from the throttle body, and move it to the left side wheel apron.

- 6) Disconnect the connector back-up light switch & neutral position switch.

- (A) Neutral position switch connector (brown)
- (B) Back-up light switch connector (gray)

- 7) Remove the harness connector from bracket.
- 8) Lift up the vehicle.
- 9) Remove the harness from each clip.

- 10) Remove the back-up light switch & neutral position switch with the harness.

- (A) Neutral position switch
- (B) Back-up light switch

B: INSTALLATION

1. BACK-UP LIGHT AND NEUTRAL POSITION SWITCH

- 1) Install the back-up light switch & neutral position switch with the harness.

NOTE:

Use a new gasket.

Tightening torque:

32.3 N·m (3.3 kgf·m, 23.8 ft·lb)

- (A) Neutral position switch
- (B) Back-up light switch

- 2) Secure the harness on each clip.
- 3) Lower the vehicle.
- 4) Connect the connectors for back-up light switch and neutral position switch, and secure the connector to the bracket.
- 5) Install the air intake boot. <Ref. to IN(H4DO)-12, INSTALLATION, Air Intake Boot.>
- 6) Connect the battery ground terminal.

Switches and Harness

MANUAL TRANSMISSION AND DIFFERENTIAL

C: INSPECTION

1. BACK-UP LIGHT SWITCH

- 1) Turn the ignition switch to OFF.
- 2) Disconnect the back light switch connector.
- 3) Measure the resistance between the back-up light switch terminals.

Gear shift position	Terminal No.	Specified resistance
Reverse position	1 and 2	Less than 1 Ω
Other positions		1 M Ω or more

- 4) Replace faulty parts.

2. NEUTRAL POSITION SWITCH

- 1) Turn the ignition switch to OFF.
- 2) Disconnect the connector of neutral position switch.
- 3) Measure the resistance between neutral position switch terminals.

Gear shift position	Terminal No.	Specified resistance
Neutral position	1 and 2	Less than 1 Ω
Other positions		1 M Ω or more

- 4) Replace faulty parts.

8. Air Breather Hose

A: REMOVAL

- 1) Disconnect the ground cable from battery.
- 2) Remove the clip (A) from the air intake boot.
- 3) Loosen the clamp (B) connecting the air intake boot and air cleaner case (rear).
- 4) Loosen the clamp (C) which connects the air intake boot and throttle body.

- 5) Remove the air intake boot from the throttle body, and move it to the left side wheel apron.

- 6) Remove the air breather hose.

B: INSTALLATION

Install in the reverse order of removal.

Tightening torque:

Air intake boot

3 N·m (0.3 kgf-m, 2.2 ft-lb)

C: INSPECTION

Check the hose for peeling, crack or clogging.

Preparation for Overhaul

MANUAL TRANSMISSION AND DIFFERENTIAL

9. Preparation for Overhaul

A: PROCEDURE

- 1) Clean oil, grease, dirt and dust from the transmission.
- 2) When transmission gear oil remains in the transmission, using the TORX[®] bit T70, remove the drain plug, and drain the gear oil completely.
- 3) Attach the drain plug using TORX[®] bit T70.

NOTE:

Use a new gasket.

Tightening torque:

44 N·m (4.5 kgf·m, 32.5 ft·lb) (aluminum gasket, silver)

70 N·m (7.1 kgf·m, 51.6 ft·lb) (copper gasket, brown)

70 N·m (7.1 kgf·m, 51.6 ft·lb) (metal gasket, black)

- 4) Attach the transmission to the ST.
ST 499937100 TRANSMISSION STAND

- 5) Apply transmission gear oil to rotating parts before assembly.
- 6) All disassembled parts, if to be reused, should be reinstalled in the original positions.
- 7) Gaskets, lock washers and lock nuts must be replaced with new ones.
- 8) Apply liquid gasket to the specified areas to prevent leakage.

Transfer Case and Extension Case Assembly

MANUAL TRANSMISSION AND DIFFERENTIAL

10. Transfer Case and Extension Case Assembly

A: REMOVAL

- 1) Remove the manual transmission assembly from the vehicle. <Ref. to 5MT-22, REMOVAL, Manual Transmission Assembly.>
- 2) Remove the back-up light switch and the neutral position switch. <Ref. to 5MT-35, REMOVAL, Switches and Harness.>
- 3) Remove the transfer case together with the extension case assembly.

- 4) Remove the gasket.
- 5) Remove the shifter arm.
- 6) Remove the extension case assembly.

- 7) Remove the transfer driven gear.

- 8) Remove the taper roller bearing (extension case side) outer race, dish plate and adjusting washer.

- (A) Taper roller bearing (extension case side) outer race
 - (B) Dish plate
 - (C) Adjusting washer
 - (D) Extension case
- (1) Paint side

B: INSTALLATION

- 1) Clean the mating surfaces of the transmission case, transfer case and extension case.
- 2) Apply a coat of grease to the taper roller bearing (transfer case side) of transfer driven gear and the roller rolling surface of the taper roller bearing (extension case side).

Grease:

NICHIMOLY N-130 or equivalent

- 3) Install the center differential and the transfer driven gear.

- 4) Install the taper roller bearing (extension case side) outer race to the transfer driven gear.
- 5) While pressing the taper roller bearing (extension case side) outer race horizontally, rotate the transfer driven gear for ten turns.

Transfer Case and Extension Case Assembly

MANUAL TRANSMISSION AND DIFFERENTIAL

6) Measure the height “W” between transfer case and taper roller bearing (transfer case side) on the transfer driven gear.

7) Measure the depth “X” of taper roller bearing insertion part of the extension case.

NOTE:

Measure while the taper roller bearing (extension case side) outer race, dish plate and adjusting washer are removed.

8) Calculate the adjusting washer thickness “t” using the following calculation.

$$t = X - W - (1.715 - 1.765 \text{ mm (0.686 - 0.706 in)})$$

X: Depth of taper roller bearing insertion part of extension case

W: Height between transfer case and taper roller bearing (transfer case side) on transfer driven gear

9) Select the adjusting washer with the nearest value in the following table.

Adjusting washer (61 × 50 × t)	
Part No.	Thickness mm (in)
803050060	0.50 (0.0197)
803050061	0.55 (0.0217)
803050062	0.60 (0.0236)
803050063	0.65 (0.0256)
803050064	0.70 (0.0276)
803050065	0.75 (0.0295)
803050066	0.80 (0.0315)
803050067	0.85 (0.0335)
803050068	0.90 (0.0354)
803050069	0.95 (0.0374)
803050070	1.00 (0.0394)
803050071	1.05 (0.0413)
803050072	1.10 (0.0433)
803050073	1.15 (0.0453)
803050074	1.20 (0.0472)
803050075	1.25 (0.0492)
803050076	1.30 (0.0512)
803050077	1.35 (0.0531)
803050078	1.40 (0.0551)
803050079	1.45 (0.0571)

10) Install the selected adjusting washer, dish plate and taper roller bearing (extension case side) outer race.

NOTE:

Make sure the dish plate is installed in the proper direction.

- (A) Taper roller bearing (extension case side) outer race
- (B) Dish plate
- (C) Adjusting washer
- (D) Extension case

- (1) Paint side

Transfer Case and Extension Case Assembly

MANUAL TRANSMISSION AND DIFFERENTIAL

11) Measure the depth "S" between the transfer case + ST and the center differential.

ST 398643600 GAUGE

12) Measure the height "T" between the extension case + ST and the transfer drive gear.

ST 398643600 GAUGE

13) Calculate the adjusting washer thickness "U" using the following calculation.

$$U = S + T - 30 \text{ mm (1.18 in)} - (0.15 - 0.35 \text{ mm (0.0059 - 0.0138 in)})$$

S: Depth between the transfer case + ST and the center differential

T: Height between the extension case + ST and the transfer drive gear

30 mm (1.18 in): Thickness of ST (× 2 pieces)

0.15 — 0.35 mm (0.0059 — 0.0138 in): Clearance

14) Select a suitable adjusting washer in the following table.

Clearance:

0.15 — 0.35 mm (0.0059 — 0.0138 in)

Adjusting washer	
Part No.	Thickness mm (in)
803036050	0.9 (0.035)
803036054	1.0 (0.039)
803036051	1.1 (0.043)
803036055	1.2 (0.047)
803036052	1.3 (0.051)
803036056	1.4 (0.055)
803036053	1.5 (0.059)
803036057	1.6 (0.063)
803036058	1.7 (0.067)
803036080	1.8 (0.071)
803036081	1.9 (0.075)

15) Install the adjusting washer to center differential.

16) Apply an appropriate amount of liquid gasket.

Liquid gasket:

THREE BOND 1215B or equivalent

17) Install the extension case assembly.

Tightening torque:

40 N·m (4.1 kgf·m, 29.5 ft·lb)

Transfer Case and Extension Case Assembly

MANUAL TRANSMISSION AND DIFFERENTIAL

18) Install the shifter arm.

NOTE:

Apply transmission gear oil to the oil seal lips.

19) Attach the gasket.

NOTE:

Use a new gasket.

20) Hang the shifter arm on 3rd-4th fork rod.

- (A) Shifter arm
- (B) 3rd-4th fork rod

21) Install the transfer case together with the extension case assembly.

Tightening torque:

24.5 N·m (2.5 kgf·m, 18.1 ft·lb)

22) Install the back-up light switch and the neutral position switch. <Ref. to 5MT-35, INSTALLATION, Switches and Harness.>

23) Install the manual transmission assembly to the vehicle. <Ref. to 5MT-25, INSTALLATION, Manual Transmission Assembly.>

C: DISASSEMBLY

1. TRANSFER CASE

1) Remove the reverse check sleeve assembly. <Ref. to 5MT-51, REMOVAL, Reverse Check Sleeve.>

2) Remove the oil guide.

3) Remove the oil seal.

4) Set ST1, ST2 and transfer case to a press.

NOTE:

- Set the ST2 under ST1.
- Set the transfer case so that the hole for shifter arm is positioned vertically.

ST1 498267300 CYLINDER HEAD TABLE
ST2 498267200 CYLINDER HEAD TABLE

Transfer Case and Extension Case Assembly

MANUAL TRANSMISSION AND DIFFERENTIAL

5) Using the round bar with diameter of 22 mm (0.87 in) or 23 mm (0.91 in), remove the roller bearing.

2. EXTENSION CASE

- 1) Remove the transfer drive gear assembly. <Ref. to 5MT-46, REMOVAL, Transfer Drive Gear.>
- 2) Remove the shift bracket.

- 3) Remove the oil seal from the extension case. <Ref. to 5MT-31, Oil Seal.>
- 4) Remove the dust cover.

D: ASSEMBLY

1. EXTENSION CASE

- 1) Using the ST, install the oil seal to the extension case. <Ref. to 5MT-31, Oil Seal.>

NOTE:

Use a new oil seal.

- 2) Install the dust cover.
- 3) Install the shift bracket.

Tightening torque:

24.5 N·m (2.5 kgf·m, 18.1 ft·lb)

- 4) Install the transfer drive gear to the extension case. <Ref. to 5MT-46, INSTALLATION, Transfer Drive Gear.>

2. TRANSFER CASE

- 1) Set the ST1, ST2, iron plate and the transfer case to the press.

NOTE:

- Set the ST2 under ST1.
- Set the transfer case so that the hole for shifter arm is positioned vertically.
- Insert the iron plate which is thicker than the exposed length of the transfer case knock pin between the ST and transfer case.
- Set the iron plate so that the transfer case knock pin does not ride on the iron plate.

ST1 498267300 CYLINDER HEAD TABLE
ST2 498267200 CYLINDER HEAD TABLE

(A) Iron plate

Transfer Case and Extension Case Assembly

MANUAL TRANSMISSION AND DIFFERENTIAL

2) Press-fit the roller bearing using the ST.

Press-fit depth of roller bearing:

A: 0 ± 0.2 mm (0 ± 0.01 in) from the end of transfer case

ST 899864100 REMOVER

3) Remove the iron plate, and turn over the transfer case.

NOTE:

Set the transfer case so that the hole for shifter arm is positioned vertically.

4) Press-fit the roller bearing using the ST.

Press-fit depth of roller bearing:

A: 0 ± 0.2 mm (0 ± 0.01 in) from the end of transfer case

ST 899864100 REMOVER

5) Install the shifter arm to the transfer case, and make sure that the shift arm moves smoothly.

6) Install the oil guide.

NOTE:

Use a new installing bolt.

Tightening torque:

6.4 N·m (0.7 kgf·m, 4.7 ft·lb)

Transfer Case and Extension Case Assembly

MANUAL TRANSMISSION AND DIFFERENTIAL

- 7) Install the reverse check sleeve assembly to the transfer case. <Ref. to 5MT-51, INSTALLATION, Reverse Check Sleeve.>
- 8) Install the oil seal.

NOTE:

Use a new oil seal.

Press-fit depth of oil seal:

A: 1 ± 0.2 mm (0.04 ± 0.01 in) from the end of transfer case

Transfer Drive Gear

MANUAL TRANSMISSION AND DIFFERENTIAL

11. Transfer Drive Gear

A: REMOVAL

- 1) Remove the manual transmission assembly from the vehicle. <Ref. to 5MT-22, REMOVAL, Manual Transmission Assembly.>
- 2) Remove the back-up light switch and the neutral position switch. <Ref. to 5MT-35, REMOVAL, Switches and Harness.>
- 3) Remove the transfer case together with the extension case assembly. <Ref. to 5MT-39, REMOVAL, Transfer Case and Extension Case Assembly.>
- 4) Remove the extension case assembly.
- 5) Remove the transfer driven gear.
- 6) Remove the transfer drive gear.

B: INSTALLATION

- 1) Install the transfer drive gear.

Tightening torque:

26 N·m (2.7 kgf·m, 19.2 ft·lb)

- 2) Select the adjusting washer. <Ref. to 5MT-39, INSTALLATION, Transfer Case and Extension Case Assembly.>
- 3) Install the transfer driven gear.
- 4) Install the transfer case and the extension case assembly. <Ref. to 5MT-39, INSTALLATION, Transfer Case and Extension Case Assembly.>
- 5) Install the back-up light switch and the neutral position switch. <Ref. to 5MT-35, INSTALLATION, Switches and Harness.>
- 6) Install the manual transmission assembly to the vehicle. <Ref. to 5MT-25, INSTALLATION, Manual Transmission Assembly.>

C: DISASSEMBLY

- 1) Remove the snap ring.

- 2) Remove the ball bearing.

D: ASSEMBLY

- 1) Set the ST against the inner race of the ball bearing, and install the transfer drive gear.

CAUTION:

Do not apply a load in excess of 10 kN (1 ton, 1.1 US ton, 1.0 Imp ton).

NOTE:

Use a new ball bearing.

ST 398177700 INSTALLER

- 2) Install the snap ring on the transfer drive gear.
- 3) Inspect the clearance between the snap ring and the ball bearing. <Ref. to 5MT-47, INSPECTION, Transfer Drive Gear.>

E: INSPECTION

1) Ball bearing

Replace the bearings in the following cases.

- In case of broken or rusty bearings
- In case of worn or damaged bearings
- When the bearings fail to turn smoothly or emit noise in rotation after transmission gear oil lubrication.

2) Transfer drive gear

If the drive gear tooth surface and shaft are excessively broken or damaged, replace the drive gear.

3) Measure the clearance between snap ring and inner race of ball bearing with a thickness gauge.

Clearance:

0.01 — 0.15 mm (0.0004 — 0.0059 in)

If the measurement is not within specification, select a suitable snap ring and replace it.

Snap ring (outer-30)	
Part No.	Thickness mm (in)
805030041	1.53 (0.0602)
805030042	1.65 (0.0650)
805030043	1.77 (0.0697)

Transfer Driven Gear

MANUAL TRANSMISSION AND DIFFERENTIAL

12. Transfer Driven Gear

A: REMOVAL

- 1) Remove the manual transmission assembly from the vehicle. <Ref. to 5MT-22, REMOVAL, Manual Transmission Assembly.>
- 2) Remove the back-up light switch and the neutral position switch. <Ref. to 5MT-35, REMOVAL, Switches and Harness.>
- 3) Remove the transfer case together with the extension case assembly. <Ref. to 5MT-39, REMOVAL, Transfer Case and Extension Case Assembly.>
- 4) Remove the extension case assembly.
- 5) Remove the transfer driven gear.

- 6) Remove the taper roller bearing outer race.

- (A) Taper roller bearing (transfer case side) outer race
(B) Taper roller bearing (extension case side) outer race

B: INSTALLATION

- 1) Install the taper roller bearing (transfer case side) outer race.

- (A) Taper roller bearing (transfer case side) outer race
(B) Transfer case

- 2) Apply a coat of grease to the taper roller bearing (transfer case side) of transfer driven gear and the roller rolling surface of the taper roller bearing (extension case side).

Grease:

NICHIMOLY N-130 or equivalent

- 3) Install the transfer driven gear.

- 4) Select the adjusting washer. <Ref. to 5MT-39, INSTALLATION, Transfer Case and Extension Case Assembly.>
- 5) Install the transfer case and the extension case assembly. <Ref. to 5MT-39, INSTALLATION, Transfer Case and Extension Case Assembly.>
- 6) Install the back-up light switch and the neutral position switch. <Ref. to 5MT-35, INSTALLATION, Switches and Harness.>
- 7) Install the manual transmission assembly to the vehicle. <Ref. to 5MT-25, INSTALLATION, Manual Transmission Assembly.>

Transfer Driven Gear

MANUAL TRANSMISSION AND DIFFERENTIAL

C: DISASSEMBLY

1) Using the ST, remove the taper roller bearing (extension case side).

ST 498077000 REMOVER

(A) Taper roller bearing (extension case side)

2) Using ST1 and ST2, remove the taper roller bearing (transfer case side).

ST1 498077000 REMOVER

ST2 899864100 REMOVER

(A) Taper roller bearing (transfer case side)

D: ASSEMBLY

1) Using the ST, install the taper roller bearing (transfer case side).

CAUTION:

Do not apply a load in excess of 10 kN (1 ton, 1.1 US ton, 1.0 Imp ton).

NOTE:

Be careful when handling, because the outer race and inner race of the taper roller bearing are used as a set.

ST 927640000 INSTALLER

(A) Taper roller bearing (transfer case side)

2) Using the ST, install the taper roller bearing (extension case side).

CAUTION:

Do not apply a load in excess of 10 kN (1 ton, 1.1 US ton, 1.0 Imp ton).

NOTE:

Be careful when handling, because the outer race and inner race of the taper roller bearing are used as a set.

ST1 498175500 INSTALLER

ST2 899864100 REMOVER

(A) Taper roller bearing (extension case side)

E: INSPECTION

1) Taper roller bearing

Replace the bearings in the following cases.

- In case of broken or rusty bearings
- In case of worn or damaged bearings
- When the bearings fail to turn smoothly or emit noise in rotation after transmission gear oil lubrication.

2) Transfer driven gear

If the tooth face of driven gear and the shaft are excessively broken or damaged, replace the driven gear.

Center Differential

MANUAL TRANSMISSION AND DIFFERENTIAL

13.Center Differential

A: REMOVAL

- 1) Remove the manual transmission assembly from the vehicle. <Ref. to 5MT-22, REMOVAL, Manual Transmission Assembly.>
- 2) Remove the back-up light switch and the neutral position switch. <Ref. to 5MT-35, REMOVAL, Switches and Harness.>
- 3) Remove the transfer case together with the extension case assembly. <Ref. to 5MT-39, REMOVAL, Transfer Case and Extension Case Assembly.>
- 4) Remove the extension case assembly.
- 5) Remove the transfer driven gear. <Ref. to 5MT-48, REMOVAL, Transfer Driven Gear.>
- 6) Remove the center differential.

B: INSTALLATION

- 1) Attach the center differential to transfer case.
- 2) Install the transfer driven gear. <Ref. to 5MT-48, INSTALLATION, Transfer Driven Gear.>
- 3) Install the transfer case together with the extension case assembly. <Ref. to 5MT-39, INSTALLATION, Transfer Case and Extension Case Assembly.>
- 4) Install the back-up light switch and the neutral position switch. <Ref. to 5MT-35, INSTALLATION, Switches and Harness.>
- 5) Install the manual transmission assembly to the vehicle. <Ref. to 5MT-25, INSTALLATION, Manual Transmission Assembly.>

C: DISASSEMBLY

Remove the ball bearing using ST.

NOTE:

Center differential is a non-disassembled part which should not be disassembled.

ST 498077300 CENTER DIFFERENTIAL BEARING REMOVER

D: ASSEMBLY

Install the ball bearings.

CAUTION:

Do not apply a load in excess of 10 kN (1 ton, 1.1 US ton, 1.0 Imp ton).

NOTE:

Use a new ball bearing.

(A) Ball bearing

E: INSPECTION

1) Ball bearing

Replace the bearings in the following cases.

- In case of broken or rusty bearings
- In case of worn or damaged bearings
- When the bearings fail to turn smoothly or emit noise in rotation after transmission gear oil has been applied.
- When bearing has other defects.

2) Center differential

If there is wear or damage, replace the center differential assembly.

Reverse Check Sleeve

MANUAL TRANSMISSION AND DIFFERENTIAL

14. Reverse Check Sleeve

A: REMOVAL

- 1) Remove the manual transmission assembly from the vehicle. <Ref. to 5MT-22, REMOVAL, Manual Transmission Assembly.>
- 2) Remove the transfer case together with the extension case assembly. <Ref. to 5MT-39, REMOVAL, Transfer Case and Extension Case Assembly.>
- 3) Remove the shifter arm.
- 4) Remove the plug, gasket, reverse accent spring, and reverse check ball.

- 5) Remove the reverse check sleeve.

B: INSTALLATION

- 1) Install the reverse check sleeve.

Tightening torque:

6.4 N·m (0.7 kgf-m, 4.7 ft-lb)

- 2) Install the reverse check ball, reverse accent spring, gasket and plug.

NOTE:

Use a new gasket.

Tightening torque:

9.75 N·m (1.0 kgf-m, 7.2 ft-lb)

- 3) Install the transfer case together with the extension case assembly. <Ref. to 5MT-39, INSTALLATION, Transfer Case and Extension Case Assembly.>

- 4) Install the manual transmission assembly to the vehicle. <Ref. to 5MT-25, INSTALLATION, Manual Transmission Assembly.>

Reverse Check Sleeve

MANUAL TRANSMISSION AND DIFFERENTIAL

C: DISASSEMBLY

1) Cover the reverse check sleeve with cloth, and remove the snap ring by using screwdriver.

NOTE:

If the snap ring is deformed or the spring repulsive force is not enough, replace with a new snap ring.

(A) Snap ring

2) Remove the reverse check plate, reverse check spring, reverse check cam, return spring (5th-Reverse), reverse accent shaft, return spring cap, and return spring (1st-2nd).

- (A) Reverse check plate
- (B) Reverse check spring
- (C) Return spring (5th-Reverse)
- (D) Reverse check cam
- (E) Reverse accent shaft
- (F) Return spring cap
- (G) Return spring (1st-2nd)

3) Remove the O-ring.

NOTE:

Be careful not to damage the adjusting shim between reverse check sleeve assembly and case.

D: ASSEMBLY

1) Install the return spring (1st-2nd), return spring cap, reverse accent shaft, reverse check cam, return spring (5th-Reverse) and reverse check spring.

NOTE:

Be sure to insert the curved part of reverse check spring into the check cam groove.

- (A) Reverse check plate
- (B) Reverse check spring
- (C) Return spring (5th-Reverse)
- (D) Reverse check cam
- (E) Reverse accent shaft
- (F) Return spring cap
- (G) Return spring (1st-2nd)

2) Hook the curved part of reverse check spring onto the reverse check plate.

3) Rotate the cam so that the protrusion on the reverse check cam is located at the plate opening.

4) While fixing the cam to that position, attach the reverse check plate to the reverse check sleeve, and secure with snap ring.

5) Insert the O-ring into the sleeve groove.

NOTE:

Use new O-rings.

Reverse Check Sleeve

MANUAL TRANSMISSION AND DIFFERENTIAL

E: INSPECTION

- Make sure the cutout of the reverse accent shaft is aligned with the opening in the reverse check sleeve.
- Turn the cam by hand to check for smooth rotation.
- Move the cam and shaft all the way toward the plate, and make sure it releases.

If the cam does not return properly, replace the reverse check spring. If the shaft does not return, check for scratches on the inner surface of sleeve. If the sleeve is in good order, replace the spring.

- (A) Snap ring
- (B) Reverse check plate
- (C) Reverse check spring
- (D) Reverse check cam

- Select a suitable reverse accent shaft and reverse check plate. <Ref. to 5MT-53, ADJUSTMENT, Reverse Check Sleeve.>

F: ADJUSTMENT

1. NEUTRAL POSITION ADJUSTMENT

- 1) Shift the gear into 3rd gear position.
- 2) Because of the return spring, until the arm contacts the stopper the shifter arm will feel lighter moving towards 1st/2nd gear and heavier towards the reverse gear.
- 3) Make adjustment so that the heavy stroke (reverse side) is a little heavier than the lighter stroke (1st/2nd side).
- 4) To adjust, remove the bolts holding the reverse check sleeve assembly to the case, and move the sleeve assembly outward, then place an adjustment shim between the sleeve assembly and the case to adjust the clearance.

CAUTION:

Be careful not to damage the O-ring when placing shims.

NOTE:

- When the shim is removed, the neutral position will move closer to reverse; when the shim is added, the neutral position will move closer to 1st gear.
- If it is not possible to adjust the clearance with only shims, replace the reverse accent shaft and re-adjust.

Adjusting shim	
Part No.	Thickness mm (in)
32190AA000	0.15 (0.0059)
32190AA010	0.30 (0.0118)

Reverse accent shaft		
Part No.	Mark	Remarks
32188AA130	S	Neutral position is closer to 1st gear.
32188AA140	T	Standard
32188AA150	U	Neutral position is closer to reverse gear.

2. REVERSE CHECK PLATE ADJUSTMENT

- 1) Shift the shifter arm to "5th" and then to reverse to see if the reverse check mechanism operates properly.
- 2) Also check to see if the arm returns to neutral when released from the reverse position. If the arm does not return properly, replace the reverse check plate.

Reverse check plate			
Part No.	(A): No.	Angle θ	Content
32189AA001	0	28°	Arm stops closer to 5th gear.
32189AA011	1	31°	Arm stops closer to 5th gear.
32189AA021	2	34°	Arm stops in the center.
32189AA031	3	37°	Arm stops closer to reverse gear.
32189AA041	4	40°	Arm stops closer to reverse gear.

Transmission Case

MANUAL TRANSMISSION AND DIFFERENTIAL

15. Transmission Case

A: REMOVAL

- 1) Remove the manual transmission assembly from the vehicle. <Ref. to 5MT-22, REMOVAL, Manual Transmission Assembly.>
- 2) Remove the clutch release lever and the release bearing. <Ref. to CL-15, REMOVAL, Release Bearing and Lever.>
- 3) Remove the transfer case together with the extension case assembly. <Ref. to 5MT-39, REMOVAL, Transfer Case and Extension Case Assembly.>
- 4) Remove the bearing mounting bolt.

- 5) Remove the main shaft rear plate.

(A) Main shaft rear plate

- 6) Remove the bolts and nuts, and separate the transmission case into the right and left cases.

- 7) Remove the drive pinion shaft assembly.

NOTE:

Use a hammer handle, etc. to remove if too tight.

(A) Main shaft ASSY

(B) Drive pinion shaft assembly

- 8) Remove the main shaft assembly.
- 9) Remove the front differential assembly.

- 10) Remove the differential side retainers and taper roller bearing outer races on the left and right sides. <Ref. to 5MT-73, REMOVAL, Front Differential Assembly.>

NOTE:

Do not confuse the right and left taper roller bearing outer races.

- 11) Remove the reverse idler gear. <Ref. to 5MT-81, REMOVAL, Reverse Idler Gear.>
- 12) Remove the shifter fork and rod. <Ref. to 5MT-83, REMOVAL, Shifter Fork and Rod.>

Transmission Case

MANUAL TRANSMISSION AND DIFFERENTIAL

B: INSTALLATION

- 1) Wipe off grease, oil and dust on the mating surfaces of transmission cases with cleaning solvent.
- 2) Install the reverse idler gear. <Ref. to 5MT-81, INSTALLATION, Reverse Idler Gear.>
- 3) Install the shifter fork and rod. <Ref. to 5MT-84, INSTALLATION, Shifter Fork and Rod.>
- 4) Select the drive pinion shim. <Ref. to 5MT-63, INSTALLATION, Drive Pinion Shaft Assembly.>
- 5) Install the taper roller bearing outer race to the transmission case LH side, and install the differential side retainer with the O-ring removed.
- 6) Install the front differential assembly.
- 7) Install the main shaft assembly.

NOTE:

Align the needle bearing knock pin hole to the transmission case knock pin.

8) Install the selected drive pinion shims and drive pinion shaft assembly.

NOTE:

Align the roller bearing knock pin hole to the transmission case knock pin.

9) Tighten the left and right side of the transmission case with the 17 mounting bolts.

NOTE:

- Insert bolts (11) and (16) from the LH side of the transmission case.
- Match the cases together so that the drive pinion shims are not caught between the cases.

Tightening torque:

8 mm bolt

25 N·m (2.5 kgf-m, 18.4 ft-lb)

★ **10 mm bolt**

39 N·m (4.0 kgf-m, 28.8 ft-lb)

10) Install the taper roller bearing outer race to the RH side of the transmission case.

11) Tighten the bearing mounting bolts.

Tightening torque:

30 N·m (3.1 kgf-m, 22.1 ft-lb)

12) Adjust the backlash of the hypoid driven gear and the preload of the taper roller bearing.

(1) Attach the ST on drive pinion shaft assembly.

ST 498427100 STOPPER

Transmission Case

MANUAL TRANSMISSION AND DIFFERENTIAL

(2) Place the transmission case with the LH side facing downward, and put ST1 on the taper roller bearing outer race.

(3) Screw in the differential side retainer from the bottom into LH side case using ST2. Fit the ST3 on the main shaft. Shift the gear into 4th or 5th, and turn the shaft several times. Screw in the side retainer while rotating the ST3 until a slight resistance is felt on ST2.

This is the contact point of the hypoid driven gear and the drive pinion shaft. Repeat the above sequence several times to ensure the contact point.

ER

ST3 499927100 HANDLE

(4) Remove the WEIGHT, and screw in the differential side retainer without the O-ring into the RH side of the transmission case, and stop at the point where a slight resistance is felt.

NOTE:

In this condition, the backlash between hypoid driven gear and drive pinion shaft is zero.

ST 18630AA010 WRENCH COMPL RETAIN-
ER

(5) Loosen the differential side retainer on the LH side of the transmission case by 3 notches, and turn the side retainer on the RH side of the transmission case by 3 notches in order to apply backlash.

(6) Screw in the differential side retainer of the RH side of the transmission case additionally by 1 notch in order to apply preload on taper roller bearing.

(7) Tighten temporarily both the retainer lock plates LH and RH, and put marks on both the differential side retainer and lock plate for later readjustment.

NOTE:

If it is hard to install the lock plates, reverse the sides and install them.

(8) Turn the main shaft several times while tapping around the differential side retainer lightly with a plastic hammer.

13) Inspect and adjust backlash and tooth contact of the hypoid driven gear. <Ref. to 5MT-77, INSPECTION, Front Differential Assembly.>

14) Separate the transmission case into left and right parts. <Ref. to 5MT-54, REMOVAL, Transmission Case.>

15) Check each shifter fork. <Ref. to 5MT-85, INSPECTION, Shifter Fork and Rod.>

16) Select a main shaft rear plate. <Ref. to 5MT-62, ADJUSTMENT, Main Shaft Assembly.>

17) Apply liquid gasket, then join the right side and left side of the case together.

Liquid gasket:

THREE BOND 1215B or equivalent

Transmission Case

MANUAL TRANSMISSION AND DIFFERENTIAL

18) Tighten 17 bolts with brackets and clips as shown in the figure.

NOTE:

- Insert bolts (11) and (16) from the LH side of the transmission case.
- Match the cases together so that the drive pinion shims are not caught between the cases.

Tightening torque:

8 mm bolt

25 N·m (2.5 kgf-m, 18.4 ft-lb)

★ **10 mm bolt**

39 N·m (4.0 kgf-m, 28.8 ft-lb)

19) Tighten the bearing mounting bolts.

Tightening torque:

30 N·m (3.1 kgf-m, 22.1 ft-lb)

20) Remove the retainer lock plate, and loosen the differential side retainer until the groove of the O-ring appears. Fit the O-ring into the groove and tighten the side retainer into the position where it was not loosened.

NOTE:

- When loosening the side retainer, record the number of the turns made.
- Perform this for both left and right side retainers.
- Use new O-rings.
- Apply transmission gear oil to O-ring.

21) Install the retainer lock plate.

Tightening torque:

T: 25 N·m (2.5 kgf-m, 18.4 ft-lb)

22) Install the transfer case together with the extension case assembly. <Ref. to 5MT-39, INSTALLATION, Transfer Case and Extension Case Assembly.>

23) Install the clutch release lever and release bearing. <Ref. to CL-15, INSTALLATION, Release Bearing and Lever.>

24) Install the manual transmission assembly to the vehicle. <Ref. to 5MT-25, INSTALLATION, Manual Transmission Assembly.>

C: INSPECTION

Check the transmission case for cracks, damage, or oil leaks.

Main Shaft Assembly

MANUAL TRANSMISSION AND DIFFERENTIAL

16. Main Shaft Assembly

A: REMOVAL

- 1) Remove the manual transmission assembly from the vehicle. <Ref. to 5MT-22, REMOVAL, Manual Transmission Assembly.>
- 2) Remove the transfer case together with the extension case assembly. <Ref. to 5MT-39, REMOVAL, Transfer Case and Extension Case Assembly.>
- 3) Remove the transmission case. <Ref. to 5MT-54, REMOVAL, Transmission Case.>
- 4) Remove the drive pinion shaft assembly. <Ref. to 5MT-63, REMOVAL, Drive Pinion Shaft Assembly.>
- 5) Remove the main shaft assembly.

B: INSTALLATION

- 1) Attach the needle bearing and oil seal to the front of the main shaft assembly.

NOTE:

- Wrap the clutch splined section with vinyl tape to prevent damage to the oil seal.
- Apply NICHIMOLY N-130 or the equivalent to the sealing lip of the oil seal.
- Use a new oil seal.

- 2) Fit the knock pin hole of the needle bearing outer race to the transmission case knock pin, and install the main shaft assembly.

NOTE:

- Align the end face of the seal with surface (A) when installing the oil seal.

- Face the cutout portion of the snap ring for the ball bearing to the drive pinion shaft assembly.

- 3) Install the drive pinion shaft assembly. <Ref. to 5MT-63, INSTALLATION, Drive Pinion Shaft Assembly.>
- 4) Check each shifter fork. <Ref. to 5MT-85, INSPECTION, Shifter Fork and Rod.>
- 5) Select a main shaft rear plate. <Ref. to 5MT-62, ADJUSTMENT, Main Shaft Assembly.>
- 6) Install the transmission case. <Ref. to 5MT-55, INSTALLATION, Transmission Case.>
- 7) Install the transfer case together with the extension case assembly. <Ref. to 5MT-39, INSTALLATION, Transfer Case and Extension Case Assembly.>
- 8) Install the manual transmission assembly to the vehicle. <Ref. to 5MT-25, INSTALLATION, Manual Transmission Assembly.>

C: DISASSEMBLY

- 1) Put vinyl tape around main shaft spline to protect the oil seal from damage. Then pull out the oil seal and needle bearing by hand.
- 2) Remove the lock nut and lock washer.

NOTE:

Flatten the lock nut tab before removing the lock nut.

- (F) Lock nut
- (G) Baulk lever
- (H) Nut side

9) Crimp lock nuts in two locations after tightening.

CAUTION:

When crimping the lock nut, be careful not to crack it.

E: INSPECTION

Disassembled parts should be washed with cleaning solvent first, then inspected carefully.

1) Bearing

Replace the bearings in the following cases.

- When the bearing balls, outer races and inner races are broken or rusty.
- When the bearing is worn.
- When the bearings fail to turn smoothly or emit noise in rotation after transmission gear oil has been applied.
- When bearing has other defects.

2) Bushing (each gear)

Replace the bushing in following cases.

- When the sliding surface is damaged or abnormally worn.
- When the inner wall is abnormally worn.

Main Shaft Assembly

MANUAL TRANSMISSION AND DIFFERENTIAL

3) Gear

Replace gears in the following cases.

- Replace the gear with new part if its tooth surfaces are broken, damaged or excessively worn.
- Correct or replace if the cone that contacts the baulk ring is rough or damaged.
- Correct or replace if the inner surface or end face is damaged.

4) Baulk ring, synchro cone

Replace the baulk ring and synchro cone in the following cases.

- When the inner surface and end face are damaged.
- When the baulk ring inner surface is abnormally or partially worn down.
- When the contact surface of the baulk ring insert section is cracked or abnormally worn.
- If the gap between the end faces of the baulk ring and the gear splined part is excessively small, check the clearance (A) while pressing the ring against the cone.

Clearance (A):

0.5 mm (0.020 in) or more

Single cone

Double cone

- Apply transmission gear oil to the cone of the gear and while press-fitting the baulk ring, check there is no rotation in the circumferential direction.

5) Shifting insert

Replace the shifting insert if deformed, excessively worn or defective in any way.

6) Coupling sleeve and synchronizer hub

- Check the slipping condition of the coupling sleeve.
- Check the splines on the coupling sleeve and synchronizer hub for wear.

7) Oil seal

Replace the oil seal if the lip is deformed, hardened, worn or defective in any way.

8) Gearshift mechanism

Repair or replace the gearshift mechanism if excessively worn, bent or defective in any way.

F: ADJUSTMENT

Selection of main shaft rear plate:

Measure the protrusion amount (A) of ball bearing from transmission main case surface, and select a suitable plate in the following table.

NOTE:

Before measuring, tap the end of main shaft with a plastic hammer lightly in order to make the clearance zero between the main case surface and moving flange of bearing.

Dimension (A) mm (in)	Part No.	Mark
4.00 — 4.13 (0.1575 — 0.1626)	32294AA041	1
3.87 — 4.00 (0.1524 — 0.1575)	32294AA051	2

Drive Pinion Shaft Assembly

MANUAL TRANSMISSION AND DIFFERENTIAL

17. Drive Pinion Shaft Assembly

A: REMOVAL

- 1) Remove the manual transmission assembly from the vehicle. <Ref. to 5MT-22, REMOVAL, Manual Transmission Assembly.>
- 2) Remove the transfer case together with the extension case assembly. <Ref. to 5MT-39, REMOVAL, Transfer Case and Extension Case Assembly.>
- 3) Remove the transmission case. <Ref. to 5MT-54, REMOVAL, Transmission Case.>
- 4) Remove the drive pinion shaft assembly.

NOTE:

Use a hammer handle, etc. to remove if too tight.

- (A) Main shaft ASSY
- (B) Drive pinion shaft assembly

- 5) Remove the main shaft assembly. <Ref. to 5MT-58, REMOVAL, Main Shaft Assembly.>

B: INSTALLATION

- 1) Remove the front differential assembly.
- 2) Hypoid gear set match mark/No.: The number (A) on top of the drive pinion, and the number on the hypoid driven gear are set numbers for the two gears. Use a pair having the same numbers. The figure (B) below shows a number for shim adjustment. If no number is shown, the value is zero.

- (A) Set number
- (B) Number for shim adjustment

- 3) Place the drive pinion shaft assembly on transmission main case RH without shim and tighten the bearing mounting bolts.

- 4) Perform the adjustment of ST.

- (1) Loosen the two bolts and adjust so that the scale indicates 0.5 correctly when the plate end and the scale end are on the same level.

ST 499917500 DRIVE PINION GAUGE ASSY

- (A) Plate
- (B) Scale

- (2) Tighten the two bolts.

- 5) Position the ST by inserting the knock pin of ST into the knock hole of transmission case.

ST 499917500 DRIVE PINION GAUGE ASSY

- 6) Slide the drive pinion gauge scale with finger tip and read the value at the point where it matches with the end face of drive pinion.

ST 499917500 DRIVE PINION GAUGE ASSY

- (A) Adjust the clearance to zero without drive pinion shims.

- 7) The thickness of drive pinion shims shall be determined by adding the value indicated on drive pinion to the value indicated on the ST. (Add if the number on drive pinion is prefixed by +, and subtract if the number is prefixed by -.)

ST 499917500 DRIVE PINION GAUGE ASSY

Drive Pinion Shaft Assembly

MANUAL TRANSMISSION AND DIFFERENTIAL

8) Select one to three drive pinion shim(s) from the following table for the value determined as described above, and take the shim(s) whose thickness is closest to the said value.

Drive pinion shim	
Part No.	Thickness mm (in)
32295AA031	0.150 (0.0059)
32295AA041	0.175 (0.0069)
32295AA051	0.200 (0.0079)
32295AA061	0.225 (0.0089)

- (H) Differential bevel gear sleeve

Drive Pinion Shaft Assembly

MANUAL TRANSMISSION AND DIFFERENTIAL

15) Adjust the thrust bearing preload. <Ref. to 5MT-71, THRUST BEARING PRELOAD, ADJUSTMENT, Drive Pinion Shaft Assembly.>

E: INSPECTION

Disassembled parts should be washed with cleaning solvent first, then inspected carefully.

1) Bearing

Replace the bearings in the following cases.

- When the bearing balls, outer races and inner races are broken or rusty.
- When the bearing is worn.
- When the bearings fail to turn smoothly or emit noise in rotation after transmission gear oil has been applied.
- The double taper roller bearing on the rear side of the drive pinion shaft should be checked for smooth rotation before the drive pinion shaft assembly is disassembled. In this case, because a preload is working on the bearing, its rotation feels like it is slightly dragging unlike other bearings.

- (A) Drive pinion shaft
- (B) Double taper roller bearing

- When bearing has other defects.

2) Bushing (each gear)

Replace the bushing in following cases.

- When the sliding surface is damaged or abnormally worn.
- When the inner wall is abnormally worn.

3) Gear

Replace gears in the following cases.

- Replace the gear with new part if its tooth surfaces are broken, damaged or excessively worn.
- Correct or replace if the cone that contacts the baulk ring is rough or damaged.
- Correct or replace if the inner surface or end face is damaged.

4) Baulk ring, synchro cone

Replace the baulk ring and synchro cone in the following cases.

- When the inner surface and end face are damaged.
- When the baulk ring inner surface is abnormally or partially worn down.
- When the contact surface of the baulk ring insert section is cracked or abnormally worn.
- If the gap between the end faces of the baulk ring and the gear splined part is excessively small, check the clearance (A) while pressing the ring against the cone.

Clearance (A):

0.5 mm (0.020 in) or more

- Apply transmission gear oil to the cone of the gear and while press-fitting the baulk ring, check there is no rotation in the circumferential direction.

5) Coupling sleeve and synchronizer hub

Check the slipping condition of the coupling sleeve.

- Check the splines on the coupling sleeve and synchronizer hub for wear.

6) Shifting insert

Replace the shifting insert if deformed, excessively worn or defective in any way.

Drive Pinion Shaft Assembly

MANUAL TRANSMISSION AND DIFFERENTIAL

F: ADJUSTMENT

1. THRUST BEARING PRELOAD

1) Select a suitable adjusting washer No. 1 so that dimension (H) will be zero in a visual check. Position the washer (18.3 × 30 × t) and lock washer (18 × 30 × 2) and attach the lock nut.

2) Using the ST1, ST2 and ST3, tighten the lock nut to the specified torque.

NOTE:

- Use new lock nuts and lock washers.
- Make sure the lock washer is installed in the proper direction.

Tightening torque:

120 N·m (12.2 kgf·m, 88.5 ft·lb)

803025052	3.950 (0.1555)
803025053	3.975 (0.1565)
803025054	4.000 (0.1575)
803025055	4.025 (0.1585)
803025056	4.050 (0.1594)
803025057	4.075 (0.1604)

5) If the specified starting torque cannot be obtained by the selection of adjusting washer No. 1, select adjusting washer No. 2 from the list below. Repeat steps 1) through 4) to adjust starting torque.

(A) Adjusting washer No. 1

(B) Adjusting washer No. 2

Starting torque	Dimension H	Adjusting washer No. 2
Low	Small	Select thicker one.
High	Large	Select thinner one.

Adjusting washer No. 2	
Part No.	Thickness mm (in)
803025059	3.850 (0.1516)
803025054	4.000 (0.1575)
803025058	4.150 (0.1634)

6) Recheck that the starting torque is within the specified range, then crimp the lock nut at four positions.

CAUTION:

When crimping the lock nut, be careful not to crack it.

Front Differential Assembly

MANUAL TRANSMISSION AND DIFFERENTIAL

18. Front Differential Assembly

A: REMOVAL

- 1) Remove the manual transmission assembly from the vehicle. <Ref. to 5MT-22, REMOVAL, Manual Transmission Assembly.>
- 2) Remove the transfer case together with the extension case assembly. <Ref. to 5MT-39, REMOVAL, Transfer Case and Extension Case Assembly.>
- 3) Remove the transmission case. <Ref. to 5MT-54, REMOVAL, Transmission Case.>
- 4) Remove the drive pinion shaft assembly. <Ref. to 5MT-63, REMOVAL, Drive Pinion Shaft Assembly.>
- 5) Remove the main shaft assembly. <Ref. to 5MT-58, REMOVAL, Main Shaft Assembly.>
- 6) Remove the front differential assembly.

NOTE:

- Do not confuse the right and left taper roller bearing outer races.
- Be careful not to damage the oil seal of differential side retainer.

- 7) Remove the differential side retainers using ST. ST 18630AA010 WRENCH COMPL RETAINER

- 8) Remove the taper roller bearing outer race from the transmission case. ST 398527700 PULLER ASSY

B: INSTALLATION

- 1) Install the differential side retainers using ST. ST 18630AA010 WRENCH COMPL RETAINER
- 2) Install the taper roller bearing outer race to the transmission case.
- 3) Install the front differential assembly.

NOTE:

Be careful not to bend the seal lips of oil seal.

- 4) Install the main shaft assembly. <Ref. to 5MT-58, INSTALLATION, Main Shaft Assembly.>
- 5) Install the drive pinion shaft assembly. <Ref. to 5MT-63, INSTALLATION, Drive Pinion Shaft Assembly.>
- 6) Install the transmission case. <Ref. to 5MT-55, INSTALLATION, Transmission Case.>
- 7) Install the transfer case together with the extension case assembly. <Ref. to 5MT-39, INSTALLATION, Transfer Case and Extension Case Assembly.>
- 8) Install the manual transmission assembly to the vehicle. <Ref. to 5MT-25, INSTALLATION, Manual Transmission Assembly.>

Front Differential Assembly

MANUAL TRANSMISSION AND DIFFERENTIAL

C: DISASSEMBLY

1. DIFFERENTIAL CASE ASSEMBLY

1) Remove the twelve bolts and remove hypoid driven gear.

(A) Hypoid driven gear

2) Drive out the straight pin from differential assembly toward hypoid driven gear side.

ST 899904100 STRAIGHT PIN REMOVER

3) Pull out the pinion shaft, and remove the differential bevel pinion, differential bevel gear and adjusting washer.

- (A) Pinion shaft
- (B) Differential bevel pinion
- (C) Differential bevel gear
- (D) Adjusting washer

4) Using the ST, remove the taper roller bearing.
ST 899524100 PULLER SET

2. DIFFERENTIAL SIDE RETAINER

1) Remove the O-ring.

2) Remove the oil seal.

NOTE:

Remove it using a flat tip screwdriver wrapped with cloth or tape, etc.

Front Differential Assembly

MANUAL TRANSMISSION AND DIFFERENTIAL

D: ASSEMBLY

1. DIFFERENTIAL CASE ASSEMBLY

1) Install the differential bevel gear and differential bevel pinion together with adjusting washer, and insert the pinion shaft.

NOTE:

Face the chamfered side of adjusting washer toward bevel gear.

- (A) Pinion shaft
- (B) Differential bevel pinion
- (C) Differential bevel gear
- (D) Adjusting washer

2) Measure the backlash between the differential bevel gear and differential bevel pinion. Adjust the backlash if not within specified limit. <Ref. to 5MT-78, DIFFERENTIAL BEVEL PINION GEAR BACKLASH, ADJUSTMENT, Front Differential Assembly.>

NOTE:

Be sure the bevel pinion gear teeth contact adjacent gear teeth during measurement.

Standard backlash

0.13 — 0.18 mm (0.0051 — 0.0071 in)

ST1 498247001 MAGNET BASE

ST2 498247100 DIAL GAUGE

3) Align the pinion shaft and differential case with each hole, and drive the straight pin into the holes from the hypoid driven gear side using the ST.

NOTE:

Use a new straight pin. After driving, crimp the area around the hole, and make sure that the straight pin will not come out.

ST 899904100 STRAIGHT PIN REMOVER

4) Install the taper roller bearing.

CAUTION:

Do not apply a load in excess of 10 kN (1 ton, 1.1 US ton, 1.0 Imp ton).

NOTE:

Be careful when handling because the taper roller bearing and the outer race are used as a set.

ST1 499277100 BUSHING 1-2 INSTALLER

ST2 398497701 SEAT

Front Differential Assembly

MANUAL TRANSMISSION AND DIFFERENTIAL

5) Install the hypoid driven gear using twelve bolts.

Tightening torque:

T: 62 N·m (6.3 kgf-m, 45.7 ft-lb)

(A) Hypoid driven gear

(B) Differential case

2. DIFFERENTIAL SIDE RETAINER

1) Using the ST, install the oil seal by lightly tapping with a plastic hammer.

NOTE:

- Use a new oil seal.
- Apply transmission gear oil to the oil seal lips, and install the oil seal while being careful not to deform the lip.
- Check the identification marks (R, L), and attach the oil seal RH and LH.

ST 18675AA000 DIFFERENTIAL SIDE OIL SEAL INSTALLER

2) Install the O-ring.

NOTE:

- Use new O-rings.
- Apply transmission gear oil to O-ring.
- Do not stretch or damage the O-ring.
- Install the O-ring after adjusting the backlash of the hypoid driven gear and the preload of the taper roller bearing.

Front Differential Assembly

MANUAL TRANSMISSION AND DIFFERENTIAL

E: INSPECTION

Repair or replace the differential gear in the following cases:

- When the hypoid driven gear and drive pinion shaft tooth surfaces are damaged, excessively worn, or seized.
- When the roller bearing on the drive pinion shaft has a worn or damaged roller path.
- When there is damage, wear or seizure of the differential bevel pinion, differential bevel gear, adjusting washer, pinion shaft or straight pin.
- When the differential case sliding surfaces are worn or damaged.

MT-01074

- (A) Drive pinion shaft
- (B) Hypoid driven gear
- (C) Pinion shaft
- (D) Straight pin
- (E) Adjusting washer
- (F) Differential bevel gear
- (G) Differential bevel pinion
- (H) Taper roller bearing
- (I) Differential case

1. DIFFERENTIAL BEVEL PINION GEAR BACKLASH

Measure the backlash between the differential bevel gear and differential bevel pinion. Adjust the backlash if not within specified limit. <Ref. to 5MT-78, ADJUSTMENT, Front Differential Assembly.>

NOTE:

Be sure the bevel pinion gear teeth contact adjacent gear teeth during measurement.

Standard backlash

0.13 — 0.18 mm (0.0051 — 0.0071 in)

ST1 498247001 MAGNET BASE

ST2 498247100 DIAL GAUGE

2. HYPOID DRIVEN GEAR BACKLASH

1) Set the ST1, ST2 and ST3. Insert the needle through drain plug hole so that the needle comes in contact with the tooth surface on the right corner, and check the backlash.

ST1 498247001 MAGNET BASE

ST2 498247100 DIAL GAUGE

ST3 498255400 PLATE

2) Install SUBARU genuine axle shafts to both sides, rotate in the inversion direction so that the gauge contacts the tooth surface, and read the dial gauge.

NOTE:

If the backlash is outside the specified range, adjust it by turning the differential side retainer in the right side case.

Backlash

0.13 — 0.18 mm (0.0051 — 0.0071 in)

Part No. 38415AA100 Axle shaft

Front Differential Assembly

MANUAL TRANSMISSION AND DIFFERENTIAL

3. TOOTH CONTACT OF HYPOID DRIVEN GEAR

Check tooth contact of hypoid driven gear as follows: Apply a thin uniform coat of red lead on both teeth surfaces of three to four teeth of the driven gear. Move the driven gear back and forth by turning the main shaft until a definite contact pattern is developed on the driven gear, and judge whether face contact is correct. When the contact pattern is not correct, adjust. <Ref. to 5MT-78, ADJUSTMENT, Front Differential Assembly.>

- Tooth contact is correct.

- (A) Toe
- (B) Coast side
- (C) Heel
- (D) Drive side

F: ADJUSTMENT

1. DIFFERENTIAL BEVEL PINION GEAR BACKLASH

- 1) Disassemble the front differential assembly. <Ref. to 5MT-74, DISASSEMBLY, Front Differential Assembly.>
- 2) Select the adjusting washer from the table and install.

Adjusting washer	
Part No.	Thickness mm (in)
803038021	0.925 — 0.950 (0.0364 — 0.0374)
803038022	0.975 — 1.000 (0.0384 — 0.0394)
803038023	1.025 — 1.050 (0.0404 — 0.0413)

- 3) Adjust until the standard value is obtained.

Backlash:

Standard

0.13 — 0.18 mm (0.0051 — 0.0071 in)

2. HYPOID DRIVEN GEAR BACKLASH

Adjust the backlash by rotating the differential side retainer in the RH side case.

ST 18630AA010 WRENCH COMPL RETAINER

NOTE:

Each time the side retainer rotates by one notch (A), the backlash changes by 0.05 mm (0.020 in).

3. TOOTH CONTACT OF HYPOID DRIVEN GEAR

- 1) Adjust until correct teeth contact is obtained.
- 2) Check tooth contact, and perform the adjustment as follows.

- Correct tooth contact

Check item: Tooth contact surface is slightly shifted toward the toe side under a no-load condition. (When driving, it moves towards the heel side.)

- (A) Toe side
- (B) Heel side

Front Differential Assembly

- Face contact

Check item: Backlash is too large.

Contact pattern

Corrective action: Tighten the differential side retainer to move the driven gear closer to the drive pinion shaft.

- Flank contact

Check item: Backlash is too small.

Contact pattern

Corrective action: Loosen the differential side retainer to move the driven gear away from the drive pinion shaft.

- Toe contact (inside contact)

Check item: Teeth contact area is too small.

Contact pattern

Corrective action: Increase the thickness of drive pinion shim and tighten the differential side retainer to move the driven gear closer to the drive pinion shaft according to the procedure for bringing drive pinion shaft away from driven gear.

Front Differential Assembly

MANUAL TRANSMISSION AND DIFFERENTIAL

- Heel contact (outside end contact)

Check item: Teeth contact area is too small.

Contact pattern

Corrective action: Reduce thickness of the drive pinion shim according to the procedures for moving the drive pinion shaft closer to driven gear. Also loosen the differential side retainer to move the driven gear away from the drive pinion shaft.

19. Reverse Idler Gear

A: REMOVAL

- 1) Remove the manual transmission assembly from the vehicle. <Ref. to 5MT-22, REMOVAL, Manual Transmission Assembly.>
- 2) Remove the back-up light switch and the neutral position switch. <Ref. to 5MT-35, REMOVAL, Switches and Harness.>
- 3) Remove the transfer case together with the extension case assembly. <Ref. to 5MT-39, REMOVAL, Transfer Case and Extension Case Assembly.>
- 4) Remove the transmission case. <Ref. to 5MT-54, REMOVAL, Transmission Case.>
- 5) Remove the drive pinion shaft assembly. <Ref. to 5MT-63, REMOVAL, Drive Pinion Shaft Assembly.>
- 6) Remove the main shaft assembly. <Ref. to 5MT-58, REMOVAL, Main Shaft Assembly.>
- 7) Remove the front differential assembly. <Ref. to 5MT-73, REMOVAL, Front Differential Assembly.>
- 8) Remove the shifter forks and rods. <Ref. to 5MT-83, REMOVAL, Shifter Fork and Rod.>
- 9) Pull out the straight pin, and remove the reverse idler gear shaft, adjusting washer, reverse idler gear and washer.

- (A) Straight pin
- (B) Reverse idler gear shaft
- (C) Reverse idler gear
- (D) Adjusting washer
- (E) Reverse idler gear washer
- (F) Reverse shifter lever

- 10) Remove the reverse shifter lever.

B: INSTALLATION

- 1) Install the reverse shifter lever, adjusting washer, reverse idler gear, reverse idler gear shaft and washer, and secure them with the straight pin.

NOTE:

- Be sure to install the reverse idler gear shaft from rear side.
- Use a new straight pin.

- (A) Straight pin
- (B) Reverse idler gear shaft
- (C) Reverse idler gear
- (D) Adjusting washer
- (E) Reverse idler gear washer
- (F) Reverse shifter lever

- 2) Check and adjust clearance between the reverse idler gear and the timing case wall surface. <Ref. to 5MT-81, INSTALLATION, Reverse Idler Gear.> <Ref. to 5MT-82, ADJUSTMENT, Reverse Idler Gear.>
- 3) Install the shifter forks and rods. <Ref. to 5MT-84, INSTALLATION, Shifter Fork and Rod.>
- 4) Install the front differential assembly. <Ref. to 5MT-73, INSTALLATION, Front Differential Assembly.>
- 5) Install the main shaft assembly. <Ref. to 5MT-58, INSTALLATION, Main Shaft Assembly.>
- 6) Install the drive pinion shaft assembly. <Ref. to 5MT-63, INSTALLATION, Drive Pinion Shaft Assembly.>
- 7) Install the transmission case. <Ref. to 5MT-55, INSTALLATION, Transmission Case.>
- 8) Install the transfer case together with the extension case assembly. <Ref. to 5MT-39, INSTALLATION, Transfer Case and Extension Case Assembly.>
- 9) Install the back-up light switch and the neutral position switch. <Ref. to 5MT-35, INSTALLATION, Switches and Harness.>
- 10) Install the manual transmission assembly to the vehicle. <Ref. to 5MT-25, INSTALLATION, Manual Transmission Assembly.>

Reverse Idler Gear

MANUAL TRANSMISSION AND DIFFERENTIAL

C: INSPECTION

1) Move the reverse shifter rod toward the reverse side. Check the clearance between the reverse idler gear and the transmission case wall surface. If the value is out of specification, select the appropriate reverse shifter lever and adjust. <Ref. to 5MT-82, ADJUSTMENT, Reverse Idler Gear.>

Clearance A:

6.0 — 7.5 mm (0.236 — 0.295 in)

2) After installing a suitable reverse shifter lever, shift into neutral. Check the clearance between the reverse idler gear and the transmission case wall surfaces.

If the value is out of specification, select the appropriate adjusting washer and adjust. <Ref. to 5MT-82, ADJUSTMENT, Reverse Idler Gear.>

Clearance:

0 — 0.5 mm (0 — 0.020 in)

3) Check the reverse idler gear and shaft for damage. Replace if it is damaged.

D: ADJUSTMENT

1) Select the appropriate reverse shifter lever from the table below, and adjust until the clearance between the reverse idler gear and transmission case wall is within specification.

Clearance A:

6.0 — 7.5 mm (0.236 — 0.295 in)

Reverse shifter lever		
Part No.	Mark	Contents
32820AA070	7	Far from case wall
32820AA080	8	Standard
32820AA090	9	Closer to case wall

2) Select the appropriate adjusting washer from the table below, and adjust until the clearance between the reverse idler gear and transmission case wall is within specification.

Clearance:

0 — 0.5 mm (0 — 0.020 in)

Adjusting washer	
Part No.	Thickness mm (in)
803020151	0.4 (0.016)
803020152	1.1 (0.043)
803020153	1.5 (0.059)
803020154	1.9 (0.075)
803020155	2.3 (0.091)

Shifter Fork and Rod

MANUAL TRANSMISSION AND DIFFERENTIAL

20. Shifter Fork and Rod

A: REMOVAL

1) Remove the manual transmission assembly from the vehicle. <Ref. to 5MT-22, REMOVAL, Manual Transmission Assembly.>

2) Remove the back-up light switch and the neutral position switch. <Ref. to 5MT-35, REMOVAL, Switches and Harness.>

3) Remove the transfer case together with the extension case assembly. <Ref. to 5MT-39, REMOVAL, Transfer Case and Extension Case Assembly.>

4) Remove the transmission case. <Ref. to 5MT-54, REMOVAL, Transmission Case.>

5) Remove the drive pinion shaft assembly. <Ref. to 5MT-63, REMOVAL, Drive Pinion Shaft Assembly.>

6) Remove the main shaft assembly. <Ref. to 5MT-58, REMOVAL, Main Shaft Assembly.>

7) Remove the front differential assembly. <Ref. to 5MT-73, REMOVAL, Front Differential Assembly.>

8) Drive out the straight pin by tapping it with the ST, and remove the 5th shifter fork.

ST 398791700 REMOVER

- (A) Straight pin
- (B) 5th shifter fork

9) Remove the check ball plugs, check ball springs and check balls.

10) Drive out the straight pin by tapping with the ST, and remove the 3rd-4th fork rod and 3rd-4th shifter fork.

NOTE:

When removing the 3rd-4th fork rod, keep other fork rods in neutral. When driving out the straight pin, remove it toward the inside of case so that it does not hit against the case.

ST 398791700 REMOVER

- (A) Straight pin
- (B) 3rd-4th fork rod
- (C) 3rd-4th shifter fork

11) Drive out the straight pin by tapping with the ST, and pull out the 1st-2nd fork rod and 1st-2nd shifter fork.

ST 398791700 REMOVER

12) Remove the snap ring (outer), and pull out the reverse fork rod from the reverse fork rod arm. Then take out the check ball, check ball spring, and interlock plunger from the reverse fork rod arm. And then remove the reverse fork rod.

NOTE:

When pulling out the reverse fork rod arm, be careful not to let the ball pop out of arm.

13) Remove the reverse shifter lever.

Shifter Fork and Rod

MANUAL TRANSMISSION AND DIFFERENTIAL

B: INSTALLATION

1) Install the check ball spring and check ball to the reverse fork rod arm, and press in the ST.

ST 399411700 ACCENT BALL INSTALLER

2) Install the reverse fork rod through the hole on the rear of the transmission case. Press out the ST using the reverse fork rod, and fix with outer snap ring.

3) Install the interlock plunger to reverse fork rod arm.

NOTE:

Apply grease to plunger to prevent it from falling.

4) Position the check ball, check ball spring and gasket in the reverse fork rod hole on the left side of transmission case, and tighten the check ball plug.

NOTE:

Use a new gasket.

Tightening torque:

20 N·m (2.0 kgf·m, 14.8 ft·lb)

5) Install the 1st-2nd fork rod to the 1st-2nd shifter fork through the hole on the rear of the transmission case.

NOTE:

- Set the reverse fork rod to neutral.
- Check that the positions of interlock plunger is correct.

6) Align the holes in the 1st-2nd fork rod and the 1st-2nd shifter fork, and drive a new straight pin into these holes using the ST.

ST 398791700 REMOVER

7) Install the interlock plunger (thin) onto the 3rd-4th fork rod.

NOTE:

Apply grease to plunger to prevent it from falling.

8) Install the 3rd-4th fork rod to the 3rd-4th shifter fork and reverse fork rod arm through the hole on the rear of the transmission case.

9) Align the holes in the 3rd-4th fork rod and the 3rd-4th shifter fork, and drive a new straight pin into these holes.

NOTE:

- Set the reverse fork rod and the 1st-2nd fork rod to neutral.
- Check that the positions of interlock plunger is correct.

ST 398791700 REMOVER

10) Install the 5th shifter fork onto the rear of reverse fork rod. Align the holes in the two parts and drive new straight pin into the specified place.

ST 398791700 REMOVER

(A) 5th shifter fork

(B) Reverse fork rod

(C) Straight pin

11) Position the check balls, check ball springs and gaskets to the 3rd-4th fork rod and 1st-2nd fork rod holes, and install the check ball plugs.

NOTE:

Use a new gasket.

Tightening torque:

20 N·m (2.0 kgf·m, 14.8 ft·lb)

12) Install the front differential assembly. <Ref. to 5MT-73, INSTALLATION, Front Differential Assembly.>

13) Install the main shaft assembly. <Ref. to 5MT-58, INSTALLATION, Main Shaft Assembly.>

14) Install the drive pinion shaft assembly. <Ref. to 5MT-63, INSTALLATION, Drive Pinion Shaft Assembly.>

15) Install the transmission case. <Ref. to 5MT-55, INSTALLATION, Transmission Case.>

16) Install the transfer case together with the extension case assembly. <Ref. to 5MT-39, INSTALLATION, Transfer Case and Extension Case Assembly.>

17) Install the back-up light switch and the neutral position switch. <Ref. to 5MT-35, INSTALLATION, Switches and Harness.>

Shifter Fork and Rod

18) Install the manual transmission assembly to the vehicle. <Ref. to 5MT-25, INSTALLATION, Manual Transmission Assembly.>

C: INSPECTION

1) Check the shifter fork and fork rod for damage. Replace if it is damaged.

2) Gearshift mechanism

Repair or replace the gearshift mechanism if excessively worn, bent or defective in any way.

3) Inspect the clearance between 1st, 2nd driven gear and reverse driven gear. If any clearance is not within specifications, replace the shifter fork as required.

Clearance (a) and (b):
9.5 mm (0.374 in)

- (A) 1st driven gear
- (B) Reverse driven gear
- (C) 2nd driven gear

1st-2nd shifter fork		
Part No.	Mark	Remarks
32804AA060	1	Approaches 1st gear by 0.2 mm (0.008 in).
32804AA070	No mark	Standard
32804AA080	3	Approaches 2nd gear by 0.2 mm (0.008 in).

4) Inspect the clearance between the 3rd, 4th drive gear and the coupling sleeve. If any clearance is not within specifications, replace the shifter fork as required.

Clearance (a) and (b):
9.3 mm (0.366 in)

- (A) 3rd drive gear
- (B) Coupling sleeve
- (C) 4th drive gear

3rd-4th shifter fork		
Part No.	Mark	Remarks
32810AA061	1	Approaches 4th gear by 0.2 mm (0.008 in).
32810AA071	No mark	Standard
32810AA101	3	Approaches 3rd gear by 0.2 mm (0.008 in).

Shifter Fork and Rod

MANUAL TRANSMISSION AND DIFFERENTIAL

5) Inspect the clearance between 5th drive gear and coupling sleeve. If any clearance is not within specifications, replace the shifter fork as required.

Clearance (a):

9.3 mm (0.366 in)

- (A) 5th drive gear
- (B) Coupling sleeve

5th shifter fork		
Part No.	Mark	Remarks
32812AA201	7	Approaches 5th gear by 0.2 mm (0.008 in).
32812AA211	No mark	Standard
32812AA221	9	Moves away from 5th gear by 0.2 mm (0.008 in).

6) Inspect the rod end clearances (A) and (B). If any clearance is not within specifications, replace the fork rod or shifter fork as required.

Clearance (A):

3rd-4th — 5th

0.5 — 1.3 mm (0.020 — 0.051 in)

Clearance (B):

1st-2nd — 3rd-4th

0.4 — 1.4 mm (0.016 — 0.055 in)

General Diagnostic Table

MANUAL TRANSMISSION AND DIFFERENTIAL

21. General Diagnostic Table

A: INSPECTION

1. MANUAL TRANSMISSION

Symptoms	Possible cause	Corrective action
1. Gears are difficult to intermesh. NOTE: The cause for difficulty in shifting gears can be classified into two types: One is a defective gear shift system and the other is defective transmission. However, if the operation is heavy and engagement of the gears is difficult, a defective clutch disengagement may also be responsible. Check whether the clutch is correctly functioning, before checking the gear shift system and transmission.	(a) Worn, damaged or burred chamfer at internal spline of the sleeve and reverse driven gear	Replace.
	(b) Worn, damaged or burred chamfer of gear spline	Replace.
	(c) Worn or scratched bushings	Replace.
	(d) Incorrect contact or wear between baulk ring and gear cone	Repair or replace.
2. Gear slip-out • Gear slips out when coasting on rough road. • Gear slips out during acceleration.	(a) Defective pitching stopper adjustment	Replace.
	(b) Loose engine mounting bolts	Tighten.
	(c) Worn shifter fork or broken shifter check ball spring	Replace.
	(d) Worn or damaged ball bearing	Replace.
	(e) Excessive clearance between splines of synchronizer hub and synchronizer sleeve	Replace.
	(f) Synchronizer hub tooth step wear	Replace.
	(g) Worn 1st driven gear and driven shaft	Replace.
	(h) Worn 2nd driven gear and bushing	Replace.
	(i) Worn 3rd drive gear and needle bearing	Replace.
	(j) Worn 4th drive gear and needle bearing	Replace.
	(k) Worn 5th drive gear and needle bearing	Replace.
(l) Worn reverse idler gear and bushing	Replace.	
3. Noise emitted from transmission NOTE: If a noise is heard when the vehicle is parked with its engine idling and if a noise ceases when the clutch is disengaged, it may be considered that the noise is coming from the transmission.	(a) Insufficient or improper lubrication	Lubricate with specified oil or replace.
	(b) Worn or damaged gears and bearings NOTE: If the trouble is only wear of the gear teeth surfaces, only a high whirring noise will occur at high speeds, but if any part is broken, rhythmical clicking sounds will be heard even at low speeds.	Replace.

General Diagnostic Table

MANUAL TRANSMISSION AND DIFFERENTIAL

2. DIFFERENTIAL

Symptoms	Possible cause	Corrective action
<p>1. Broken differential (case, gear, bearing, etc.)</p> <p>NOTE: Noise will occur, and eventually the differential will not be able to operate due to broken pieces obstructing the gear revolution.</p>	(a) Insufficient or improper oil	Disassemble the differential and replace broken components. At the same time check other components for any trouble, and replace if necessary.
	(b) Use of vehicle under severe conditions such as excessive load and improper use of the clutch	Readjust the preload and backlash of the bearing, and the contact surface of gear.
	(c) Improper adjustment of taper roller bearing	Adjust.
	(d) Improper adjustment of the drive pinion and the hypoid driven gear	Adjust.
	(e) Excessive backlash of a vehicle under severe operating conditions due to worn differential side gear, adjusting washer or differential pinion	Add recommended oil to the specified level. Do not use vehicle under severe operating conditions.
	(f) Loose hypoid driven gear clamping bolts	Tighten.
<p>2. Differential and hypoid gear noises</p> <p>Troubles of the differential and hypoid gear always appear as noise problems. Therefore noise is the first indication of trouble. However, noises from the engine, muffler, tire, exhaust gas, bearing, body, etc. are easily mistaken for the differential noise. Pay special attention to the hypoid gear noise because it is easily confused with other gear noises. There are the following four kinds of noises.</p> <ul style="list-style-type: none"> • Gear noise when driving: If noise increases as the vehicle speed increases, it may be due to insufficient gear oil, incorrect gear engagement, damaged gears, etc. • Gear noise when coasting: Damaged gears due to misadjusted bearings and incorrect shim adjustment • Bearing noise when driving or coasting: Cracked, broken or damaged bearings • Noise mainly when turning: Noise from differential side gear, differential pinion or differential pinion shaft, etc. 	(a) Insufficient oil	Replenish or replace with the specified amount of recommended oil.
	(b) Improper adjustment of hypoid driven gear and drive pinion	Check the tooth contact.
	(c) Worn teeth of hypoid driven gear and drive pinion	Replace as a set. Readjust the bearing preload.
	(d) Loose roller bearing	Readjust the backlash of the hypoid driven gear to drive pinion, and check the tooth contact.
	(e) Distorted hypoid driven gear or differential case	Replace.
	(f) Worn adjusting washer and differential pinion shaft	Replace.

CLUTCH SYSTEM

1. General Description

A: SPECIFICATION

Model		2.0 L	
Transmission type		5MT	
Clutch cover	Type	Push type	
	Diaphragm set load	N (kgf, lbf)	5,688 (580, 1,279)
Clutch disc	Facing material		Woven (non-asbestos)
	O.D. × I.D. × Thickness mm (in)	Flywheel side	225 × 150 × 3.2 (8.86 × 5.9 × 0.126)
		Clutch cover side	225 × 150 × 3.5 (8.86 × 5.9 × 0.138)
	Spline outer diameter mm (in)		25.2 (0.992), (number of teeth: 24)
	Depth of rivet head mm (in)	Flywheel side	1.35 — 1.95 (0.053 — 0.077)
		Clutch cover side	1.65 — 2.25 (0.065 — 0.089)
Limit of sinking		0.8 (0.031)	
Deflection limit mm (in)		0.7 (0.028) at R = 110 (4.33)	
Clutch release lever ratio		1.6	
Release bearing		Grease-packed self-aligning	
Clutch pedal	Full stroke	mm (in)	130 — 135 (5.12 — 5.31)
	Free play	mm (in)	4 — 11 (0.16 — 0.43)
Flywheel	Type	Flexible

T2: 18 (1.8, 13.3)

General Description

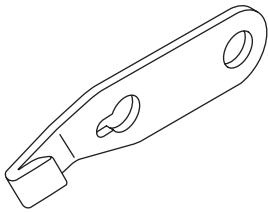

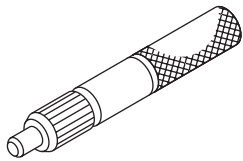

CLUTCH SYSTEM

C: CAUTION

- Remove contamination including dirt and corrosion before removal, installation or disassembly.
- Keep the disassembled parts in order and protect them from dust and dirt.
- Before removal, installation or disassembly, be sure to clarify the failure. Avoid unnecessary removal, installation, disassembly and replacement.
- Vehicle components are extremely hot after driving. Be wary of receiving burns from heated parts.
- Use SUBARU genuine fluid, grease etc. or equivalent. Do not mix fluid, grease, etc. of different grades or manufacturers.
- Be sure to tighten fasteners including bolts and nuts to the specified torque.
- Apply grease onto sliding or revolving surfaces before installation.
- Before installing O-rings or snap rings, apply sufficient amount of fluid to avoid damage and deformation.
- Before securing a part in a vise, place cushioning material such as wood blocks, aluminum plate or cloth between the part and the vise.
- Keep fluid away from the vehicle body. If any fluid contacts the vehicle body, immediately flush the area with water.

D: PREPARATION TOOL

1. SPECIAL TOOL

ILLUSTRATION	TOOL NUMBER	DESCRIPTION	REMARKS
 ST-498497100	498497100	CRANKSHAFT STOPPER	Used for stopping rotation of the flywheel.
 ST-499747100	499747100	CLUTCH DISC GUIDE	Used for installing the clutch disc to the flywheel.
 STSSM4	—	SUBARU SELECT MONITOR 4	Used for setting of each function and troubleshooting for electrical system. NOTE: For detailed operation procedures of Subaru Select Monitor 4, refer to “Application help”.

General Description

CLUTCH SYSTEM

2. GENERAL TOOL

TOOL NAME	REMARKS
Circuit tester	Used for measuring resistance, voltage and current.
Dial gauge	Used for measuring clutch disc run-out.
Depth gauge	Used for measuring clutch disc wear.
Angle gauge	Used for tightening the flywheel.
DST-i	Used together with Subaru Select Monitor 4.

Clutch Disc and Cover

CLUTCH SYSTEM

2. Clutch Disc and Cover

A: REMOVAL

1) Remove the transmission assembly from the vehicle.

<Ref. to 5MT-22, REMOVAL, Manual Transmission Assembly.>

2) Attach the ST on the flywheel.

ST 499747100 CLUTCH DISC GUIDE

3) Remove the clutch cover and clutch disc.

NOTE:

- Take care not to allow oil to touch the clutch disc face.
- Do not disassemble the clutch cover or clutch disc.

B: INSTALLATION

1) Insert the ST into the clutch disc and the ST end into pilot bearing to install the clutch disc.

NOTE:

When installing the clutch disc, be careful to attach in the correct direction.

ST 499747100 CLUTCH DISC GUIDE

(A) Flywheel side

2) Install the clutch cover and tighten the bolts to the specified torque.

NOTE:

- When installing the clutch cover, position the clutch cover so that the spacing between the unbalance marks (paint mark) on the flywheel and clutch cover is 120° or more apart. (The unbalance mark indicates the direction of residual unbalance.)
- Temporarily tighten the bolts by hand. Each bolt should be tightened to the specified torque in a crisscross order.

Tightening torque:

16 N·m (1.6 kgf·m, 11.8 ft·lb)

(A) Unbalance mark (paint)

3) Remove the ST.

ST 499747100 CLUTCH DISC GUIDE

4) Install the transmission assembly. <Ref. to 5MT-25, INSTALLATION, Manual Transmission Assembly.>

C: INSPECTION

1. CLUTCH DISC

1) Facing wear

Measure the depth from the facing surface to the rivet head. Replace if the face is worn locally or worn down to less than the specified value.

Depth to rivet head:

Limit of sinking

0.8 mm (0.031 in)

NOTE:

Do not wash the clutch disc with any type of cleaning fluid.

2) Hardened facing

Replace the clutch disc.

3) Oil soakage on facing

Replace the clutch disc and inspect the transmission front oil seal, transmission case mating surface, engine rear oil seal and other locations for oil leakage.

(A) Clutch facing

4) Deflection on facing

If deflection exceeds the specified value at the outer circumference of the facing, replace the clutch disc.

ST 499747100 CLUTCH DISC GUIDE

Limit for deflection:

0.7 mm (0.028 in) at R = 110 mm (4.33 in)

5) If there is spline wear, loose rivets, failed damper springs, etc., replace the clutch disc.

(A) Spline

(B) Rivet

(C) Damper spring

Clutch Disc and Cover

CLUTCH SYSTEM

2. CLUTCH COVER

NOTE:

Visually check the following items without disassembling, and replace or repair if defective.

- 1) Loose thrust rivet
- 2) Damaged or worn bearing contact area at the center of diaphragm spring

- (A) Thrust rivet
(B) Diaphragm spring

- 3) Damaged or worn disc contact surface of the pressure plate
- 4) Loose strap plate installation area
- 5) Worn diaphragm sliding area

- (A) Pressure plate
(B) Strap plate

3. Flywheel

A: REMOVAL

1) Remove the transmission assembly. <Ref. to 5MT-22, REMOVAL, Manual Transmission Assembly.>

2) Remove the clutch cover and clutch disc. <Ref. to CL-10, REMOVAL, Clutch Disc and Cover.>

3) Attach the ST.

ST 498497100 CRANKSHAFT STOPPER

(A) Flywheel

4) Remove the flywheel and crankshaft position sensor plate.

5) Drive out the pilot bearing from flywheel.

B: INSTALLATION

1) Press in a new pilot bearing to the position where it is flush with the flywheel surface or up to 0.4 mm (0.016 in) deeper than that.

CAUTION:

Do not press the bearing inner ring.

(A) Pilot bearing

2) Temporarily tighten the crankshaft position sensor plate and flywheel.

NOTE:

Align the knock pin hole of the crankshaft position sensor plate to the knock pin of the crankshaft to secure the knock pin.

3) Attach the ST.

ST 498497100

CRANKSHAFT STOPPER

4) Tighten the flywheel mounting bolts in two stages.

(1) Tighten the flywheel attachment bolts.

Tightening torque:

30 N·m (3.1 kgf-m, 22.1 ft-lb)

(2) While checking the tightening angle with the angle gauge, further tighten the flywheel mounting bolts.

Tightening angle:

30° — 35°

5) Install the clutch disc and clutch cover. <Ref. to CL-10, INSTALLATION, Clutch Disc and Cover.>

6) Install the transmission assembly. <Ref. to 5MT-25, INSTALLATION, Manual Transmission Assembly.>

C: INSPECTION

CAUTION:

Because the center pilot bearing is grease-sealed and is a non-lubrication type, do not wash with gasoline or solvents.

1) If there is damage or defectiveness in the facing sliding surface or ring gear, replace the flywheel.

(A) Flywheel

(B) Ring gear

2) Smoothness of rotation

Rotate the ball bearing while applying pressure in the thrust direction.

3) If noise or excessive play is noted, replace the pilot bearing.

4. Release Bearing and Lever

A: REMOVAL

1) Remove the transmission assembly from the vehicle.

<Ref. to 5MT-22, REMOVAL, Manual Transmission Assembly.>

2) Remove the two clips from the release lever and remove the release bearing.

CAUTION:

Be careful not to deform the clips.

3) Remove the dust cover.

(A) Release lever
(B) Dust cover

4) Remove the attachment point of lever spring by inserting a screwdriver through the clutch housing release lever hole. Then remove the release lever.

(A) Release lever
(B) Screwdriver

B: INSTALLATION

NOTE:

Apply the specified grease to lubricate to the following points before installation.

- Contact surface of lever and pivot
- Contact surface of lever and bearing
- Transmission main shaft spline
- Contact surface of release bearing and transmission case

Grease

NICHIMOLY N-130 or equivalent

1) While pushing the release lever to the pivot and twisting it to both sides, fit the lever spring onto the raised portion of the pivot.

NOTE:

Observing from the main case hole, check that the lever spring is installed securely.

(A) Release lever

2) Install the release bearing and fasten it with two clips.

3) Install the dust cover.

(A) Release lever
(B) Dust cover

4) Operate the release lever and check if the release bearing moves smoothly.

5) Apply grease to the contact point of the release lever and operating cylinder.

Grease

NICHIMOLY N-130 or equivalent

6) Install the transmission assembly. <Ref. to 5MT-25, INSTALLATION, Manual Transmission Assembly.>

Release Bearing and Lever

CLUTCH SYSTEM

C: INSPECTION

1. RELEASE BEARING

CAUTION:

Since this bearing is grease-sealed and is a non-lubrication type, do not wash with gasoline or any other solvent when servicing the clutch.

1) Check the bearing for smooth movement by applying force to the bearing in the radial direction.

Radial direction stroke:

1.4 mm (0.055 in) or more

(A) Bearing case

2) While applying force to the bearing in the rotational direction, check the bearing for smooth rotation.

(A) Bearing case

3) Check for wear and damage at the bearing case surface in contact with the lever.

2. RELEASE LEVER

Check the pivot portion of the lever and the contact area with the release bearing case for wear.

- (A) Release lever
- (B) Pivot
- (C) Release bearing

5. Operating Cylinder

A: REMOVAL

CAUTION:

Brake fluid spilled on the vehicle body will harm the paint surface; therefore, wash it off with water and wipe clean quickly if spilled.

- 1) Disconnect the ground cable from battery.
- 2) Remove the clip (A) from the air intake boot.
- 3) Loosen the clamp (B) connecting the air intake boot and air cleaner case (rear).
- 4) Loosen the clamp (C) which connects the air intake boot and throttle body.

- 5) Remove the air intake boot from the throttle body, and move it to the left side wheel apron.

- 6) Disconnect the clutch hose.

CAUTION:

Cover the hose joint to prevent the brake fluid from flowing out.

- (A) Clutch hose
- (B) Operating cylinder

- 7) Remove the operating cylinder.

B: INSTALLATION

- 1) Install in the reverse order of removal.

NOTE:

- Before installing the operating cylinder, apply grease to the contact point of the release lever and operating cylinder.

Grease:

NICHIMOLY N-130 or equivalent

- Be sure to install the clutch hose with the mark side facing upward.
- Be careful not to twist the clutch hose during installation.
- Use a new gasket.

Tightening torque:

T1: 18 N·m (1.8 kgf-m, 13.3 ft-lb)

T2: 37 N·m (3.8 kgf-m, 27.3 ft-lb)

- (A) Mark
- (B) Clutch hose
- (C) Operating cylinder

Operating Cylinder

CLUTCH SYSTEM

Tightening torque:

Air intake boot

3 N-m (0.3 kgf-m, 2.2 ft-lb)

2) After bleeding air from the operating cylinder, ensure that the clutch operates properly. <Ref. to CL-25, Clutch Fluid Air Bleeding.>

C: DISASSEMBLY

1) Remove the boot and push rod.

2) Apply compressed air through clutch hose attachment hole.

NOTE:

Face the piston hole down and place a piece of wood underneath to prevent the piston from popping out.

3) Separate the piston and piston spring.

D: ASSEMBLY

NOTE:

During assembly, apply hydraulic oil to all parts.

Recommended brake fluid:

New FMVSS No. 116 DOT3 or DOT4

1) Install the piston spring.

2) Insert piston into the operating cylinder.

3) Install push rod to the boot.

4) Install the boot and push rod.

E: INSPECTION

1) Check that the operating cylinder is not damaged. Replace the operating cylinder if it is damaged.

2) Check the brake fluid leakage on the operating cylinder or the boot for damage. Replace the operating cylinder if brake fluid leaks or boot damages are noted.

6. Master Cylinder

A: REMOVAL

CAUTION:

- Be careful not to spill the brake fluid. Brake fluid spilled on the vehicle body will harm the paint surface; wash it off with water and wipe clean quickly if spilled.
- Before handling the airbag system components, refer to "CAUTION" of "General Description" in "AIRBAG SYSTEM". <Ref. to AB-9, CAUTION, General Description.>

- 1) Turn the ignition switch to OFF.
- 2) Disconnect the ground cable from battery and wait for at least 60 seconds before starting work. <Ref. to NT-6, BATTERY, NOTE, Note.>
- 3) Drain the brake fluid. <Ref. to CL-24, Clutch Fluid.>
- 4) Remove the cover assembly - instrument panel LWR driver. <Ref. to EI-54, REMOVAL, Instrument Panel Lower Cover.>
- 5) Remove the knee airbag module. <Ref. to AB-34, REMOVAL, Knee Airbag Module.>
- 6) Remove the snap pin and clevis pin, and then separate the push rod of the master cylinder.

- (A) Clevis pin
- (B) Snap pin
- (C) Push rod
- (D) Lock nut

- 7) Remove the clip (A) from the air intake boot.
- 8) Loosen the clamp (B) connecting the air intake boot and air cleaner case (rear).
- 9) Loosen the clamp (C) which connects the air intake boot and throttle body.

- 10) Remove the air intake boot from the throttle body, and move it to the left side wheel apron.

- 11) Disconnect the clutch pipe and tank hose from the master cylinder.
- 12) Remove the master cylinder.

- (A) Master cylinder
- (B) Clutch pipe
- (C) Tank hose

Master Cylinder

CLUTCH SYSTEM

B: INSTALLATION

1) Install the master cylinder to the body, and connect the clutch pipe and the tank hose.

Tightening torque:

T1: 15 N·m (1.5 kgf-m, 11.1 ft-lb)

T2: 18 N·m (1.8 kgf-m, 13.3 ft-lb)

2) Connect the push rod of the master cylinder, and install the clevis pin and snap pin.

CAUTION:

Always use a new clevis pin.

NOTE:

Apply grease to the clevis pin.

- (A) Clevis pin
- (B) Snap pin
- (C) Push rod

3) Install the knee airbag module. <Ref. to AB-34, INSTALLATION, Knee Airbag Module.>

4) Fill the recommended brake fluid. <Ref. to CL-24, Clutch Fluid.>

5) After bleeding air from the clutch system, ensure that the clutch operates properly. <Ref. to CL-25, Clutch Fluid Air Bleeding.>

6) Install the cover assembly - instrument panel LWR driver. <Ref. to EI-55, INSTALLATION, Instrument Panel Lower Cover.>

7) Install the air intake boot. <Ref. to IN(H4DO)-12, INSTALLATION, Air Intake Boot.>

8) Connect the battery ground terminal.

C: DISASSEMBLY

1) Remove the straight pin and nipple.

- (A) Nipple
- (B) Straight pin

2) Remove the oil seal.

- (A) Oil seal

3) Move the seat towards the rear.

- (A) Seat
- (B) Master cylinder

4) Remove the piston stop ring.

CAUTION:

When removing the piston stop ring, be careful to prevent the rod, washer, piston and return spring from popping out.

D: ASSEMBLY

1) Apply a coat of grease to the contact surfaces of the push rod and piston before installation.

Grease:

SILICONE GREASE G-40M or equivalent

2) Assemble in the reverse order of disassembly.

Tightening torque:

10 N·m (1.0 kgf·m, 7.4 ft·lb)

E: INSPECTION

If any damage, deformation, wear, swelling, rust or other faults are found on the cylinder, piston, push rod, nipple, return spring, bleeder screw, seat or hose, replace the faulty part.

- (A) Master cylinder body
- (B) Seat
- (C) Return spring
- (D) Piston
- (E) Piston stop ring
- (F) Push rod ASSY

Clutch Pipe and Hose

CLUTCH SYSTEM

7. Clutch Pipe and Hose

A: REMOVAL

- 1) Disconnect the ground cable from battery.
- 2) Remove the clip (A) from the air intake boot.
- 3) Loosen the clamp (B) connecting the air intake boot and air cleaner case (rear).
- 4) Loosen the clamp (C) which connects the air intake boot and throttle body.

- 5) Remove the air intake boot from the throttle body, and move it to the left side wheel apron.

- 6) Drain the brake fluid. <Ref. to CL-24, Clutch Fluid.>
- 7) Disconnect the clutch pipe from the clutch hose and master cylinder.
- 8) Remove the clamp, and then remove the clutch hose.

- (A) Clamp
- (B) Clutch hose

- 9) Disconnect the clutch hose from operating cylinder.
- 10) Remove the harness clip.

- (A) Harness clip
- (B) Clutch hose bracket

- 11) Remove the clutch hose bracket.

B: INSTALLATION

Install in the reverse order of removal.

NOTE:

Bleed air from brake fluid. <Ref. to CL-25, Clutch Fluid Air Bleeding.>

Tightening torque:

T1: 15 N·m (1.5 kgf-m, 11.1 ft-lb)

T2: 18 N·m (1.8 kgf-m, 13.3 ft-lb)

T3: 25 N·m (2.5 kgf-m, 18.4 ft-lb)

- (A) Clutch pipe
- (B) Clamp
- (C) Clutch hose
- (D) Tank hose

Tightening torque:

Air intake boot

3 N·m (0.3 kgf-m, 2.2 ft-lb)

C: INSPECTION

Check the pipes and hoses for breaks and damage. Check the joint for brake fluid leakage. If crack, breakage or damage is found, repair or replace the faulty pipe or hose.

8. Clutch Fluid

A: INSPECTION

CAUTION:

Be careful not to spill the brake fluid. Brake fluid spilled on the vehicle body will harm the paint surface; wash it off with water and wipe clean quickly if spilled.

- 1) Park the vehicle on a level surface.
- 2) Check the brake fluid level using the scale on the outside of the reservoir tank. If the level is below "MIN", add fluid to bring it up to "MAX", and also inspect for leakage.

CAUTION:

This reservoir tank has the brake fluid chamber and the clutch fluid chamber. When checking the fluid level, always check the fluid from the clutch fluid chamber side where the tank hose is connected.

Recommended brake fluid:

New FMVSS No. 116 DOT3 or DOT4

- (A) Reservoir tank
- (B) Clutch fluid chamber
- (C) MAX. level
- (D) MIN. level
- (E) Tank hose

B: REPLACEMENT

CAUTION:

- Be careful not to spill the brake fluid. Brake fluid spilled on the vehicle body will harm the paint surface; wash it off with water and wipe clean quickly if spilled.
- Use new FMVSS No. 116 DOT3 or DOT4.
- Cover the air bleeder with cloth to prevent brake fluid from being splashed on surrounding parts when loosening the bleeder.
- Avoid mixing brake fluid of different brands to prevent fluid performance from degrading.
- Be careful not to allow dirt or dust to enter the reservoir tank.

NOTE:

- During the bleeding operation, keep the reservoir tank filled with brake fluid to prevent entry of air.
 - Clutch pedal must be operated very slowly.
 - Bleed air from the oil line with help of a co-worker.
 - The required amount of brake fluid is approximately 150 mL (5.1 US fl oz, 5.3 Imp fl oz) for total clutch system.
- 1) Remove the clip (A) from the air intake boot.
 - 2) Loosen the clamp (B) connecting the air intake boot and air cleaner case (rear).
 - 3) Loosen the clamp (C) which connects the air intake boot and throttle body.

- 4) Remove the air intake boot from the throttle body, and move it to the left side wheel apron.

- 5) Drain the brake fluid from the air bleeder of the operating cylinder.
- 6) Refill the reservoir tank with recommended brake fluid.

Recommended brake fluid:

New FMVSS No. 116 DOT3 or DOT4

- 7) Bleed air from brake fluid. <Ref. to CL-25, Clutch Fluid Air Bleeding.>
- 8) Install the air intake boot. <Ref. to IN(H4DO)-12, INSTALLATION, Air Intake Boot.>

9. Clutch Fluid Air Bleeding

A: PROCEDURE

CAUTION:

Be careful not to spill the brake fluid. Brake fluid spilled on the vehicle body will harm the paint surface; wash it off with water and wipe clean quickly if spilled.

NOTE:

Bleed air from the oil line with help of a co-worker.

- 1) Remove the clip (A) from the air intake boot.
- 2) Loosen the clamp (B) connecting the air intake boot and air cleaner case (rear).
- 3) Loosen the clamp (C) which connects the air intake boot and throttle body.

- 4) Remove the air intake boot from the throttle body, and move it to the left side wheel apron.

- 5) Fit one end of a vinyl tube into the air bleeder of the operating cylinder, and put the other end into a container.

- (A) Clutch hose
- (B) Air bleeder

- 6) Slowly depress the clutch pedal and keep it depressed. Then open the air bleeder to discharge air together with the brake fluid.

Release the air bleeder for 1 or 2 seconds. Next, close the air bleeder, and slowly release the clutch pedal.

CAUTION:

Cover the air bleeder with cloth to prevent brake fluid from being splashed on surrounding parts when loosening the bleeder.

- (A) Operating cylinder
- (B) Vinyl tube

- 7) Repeat procedure 6), until there are no more air bubbles appearing from the air bleeder.

- 8) Tighten the air bleeder.

Tightening torque:

T: 7.8 N·m (0.8 kgf·m, 5.8 ft·lb)

- 9) After stepping on the clutch pedal, make sure that there are no leaks evident in the entire clutch system.

- 10) After bleeding the air from clutch system, ensure that the clutch operates properly.

- 11) Install the air intake boot. <Ref. to IN(H4DO)-12, INSTALLATION, Air Intake Boot.>

10.Clutch Pedal

A: REMOVAL

CAUTION:

Before handling the airbag system components, refer to “CAUTION” of “General Description” in “AIRBAG SYSTEM”. <Ref. to AB-9, CAUTION, General Description.>

- 1) Turn the ignition switch to OFF.
- 2) Disconnect the ground cable from battery and wait for at least 60 seconds before starting work. <Ref. to NT-6, BATTERY, NOTE, Note.>
- 3) Remove the steering column. <Ref. to PS-18, REMOVAL, Steering Column.>
- 4) Disconnect the connector from the stop light switch and clutch switch.
- 5) Remove the snap pins from clevis pins which secure the lever to the push rod and operating rod.
- 6) Pull out the clevis pins which secures the lever to the push rod and operating rod.

- (A) Operating rod
- (B) Push rod
- (C) Snap pin
- (D) Clevis pin

- 7) Remove the clip (A) from the air intake boot.
- 8) Loosen the clamp (B) connecting the air intake boot and air cleaner case (rear).
- 9) Loosen the clamp (C) which connects the air intake boot and throttle body.

- 10) Remove the air intake boot from the throttle body, and move it to the left side wheel apron.

- 11) Remove the nut which secures the clutch master cylinder.

NOTE:

- Remove the master cylinder from the stud bolt.
- Hold the clutch pipe with a wire or a string to avoid the pipe from bending.

- 12) Remove the bolts and nuts which secure the brake pedal and clutch pedal, and remove the pedal assembly.

B: INSTALLATION

- 1) Install in the reverse order of removal.

CAUTION:

Always use a new clevis pin.

Tightening torque:

Clutch pedal

18 N·m (1.8 kgf-m, 13.3 ft-lb)

Knee airbag module

7.5 N·m (0.76 kgf-m, 5.5 ft-lb)

Air intake boot

3 N·m (0.3 kgf-m, 2.2 ft-lb)

- 2) Adjust the clutch pedal after installation. <Ref. to CL-28, ADJUSTMENT, Clutch Pedal.>
- 3) Check the clutch start system.

C: DISASSEMBLY

- 1) Remove the clutch switches.
- 2) Remove the clip, assist spring, rod and bushing.

- (A) Clip
- (B) Assist spring
- (C) Assist rod
- (D) Bushing
- (E) Clevis pin

- 3) Remove the spring pin and lever.

- (A) Spring pin
- (B) Lever

- 4) Remove the clutch pedal and pedal bushings.

- (A) Clutch pedal
- (B) Pedal bushing

- 5) Remove the stopper.

- (A) Stopper

- 6) Remove the clutch pedal pad.

D: ASSEMBLY

- 1) Install the stopper and pedal pad to the clutch pedal.
- 2) Install the clutch switch to the pedal bracket.
- 3) Clean the pedal bushing holes of the clutch pedal and the brake pedal, apply grease, and install the pedal bushings.
- 4) Install the clutch pedal, brake pedal and lever to the pedal bracket, and fix with a spring pin.
- 5) Install the assist rod A, assist rod B, assist bushing and assist spring to the clutch pedal and pedal bracket.

E: INSPECTION

Move the clutch pedal pads in the lateral direction with a force of approximately 10 N (1 kgf, 2 lbf) to check that the clutch pedal deflection is within the service limit. If it exceeds the service limit, replace with new bushings.

Deflection of the clutch pedal:

Service limit

4.0 mm (0.157 in) or less

- (A) Clutch pedal
- (B) Brake pedal

Clutch Pedal

CLUTCH SYSTEM

F: ADJUSTMENT

1) Turn the lock nut until the full stroke of clutch pedal becomes within the specification.

CAUTION:

When adjusting the full stroke of clutch pedal, do not turn the clutch switch.

NOTE:

If the lock nut cannot adjust the full stroke of clutch pedal to the specified value, adjust it by turning the master cylinder push rod.

Clutch pedal full stroke A:

130 — 135 mm (5.12 — 5.31 in)

Tightening torque (clutch switch lock nut):

T: 8 N·m (0.8 kgf·m, 5.9 ft·lb)

2) If the full stroke is not within the specified value, loosen the clutch switch lock nut to adjust.

Tightening torque:

8 N·m (0.8 kgf·m, 5.9 ft·lb)

3) Loosen the push rod lock nuts.

(A) Push rod lock nut

4) Make sure that the clutch pedal contacts the clutch pedal bracket stopper when the clutch pedal is at the maximum stroke position.

(A) In the longer direction

(B) In the shorter direction

5) Make sure that the clutch pedal contacts the clutch switch side when the pedal is released.

6) Turn the push rod to shorten until a clearance is gained on the clutch switch side.

(A) Clutch switch

(B) Stopper

7) Turn the push rod to lengthen until clutch pedal contacts the clutch switch.

8) Turn further in the direction that will shorten the push rod by 270°.

(A) In the longer direction

(B) In the shorter direction

9) Check that the clevis pin moves smoothly by moving it in the left and right directions.

10) Tighten the push rod lock nut.

Tightening torque (push rod lock nut):

T: 10 N·m (1.0 kgf-m, 7.4 ft-lb)

11) Depress and release the clutch pedal two or three times to ensure that the clutch pedal and release lever operate smoothly. If the clutch pedal and release lever do not operate smoothly, bleed air from the clutch hydraulic system. <Ref. to CL-25, Clutch Fluid Air Bleeding.>

12) Measure the clutch pedal full stroke length again to ensure that it is within specifications. If it is not within specifications, repeat adjustment procedures again from the beginning.

Clutch pedal full stroke:

130 — 135 mm (5.12 — 5.31 in)

13) Push the release lever until the operating cylinder push rod retracts. Check that the brake fluid level in the reservoir tank increases.

- (1) Push rod
- (2) Release lever
- (3) Operating cylinder

14) If the brake fluid level increases, hydraulic clutch play is correct.

15) If the brake fluid level does not increase or push rod does not retract, readjust the clutch pedal.

16) Check the brake fluid level using the scale on the reservoir tank. <Ref. to CL-24, INSPECTION, Clutch Fluid.>

11. Clutch Switch

A: REMOVAL

CAUTION:

Before handling the airbag system components, refer to “CAUTION” of “General Description” in “AIRBAG SYSTEM”. <Ref. to AB-9, CAUTION, General Description.>

- 1) Turn the ignition switch to OFF.
- 2) Disconnect the ground cable from battery and wait for at least 60 seconds before starting work. <Ref. to NT-6, BATTERY, NOTE, Note.>
- 3) Remove the cover assembly - instrument panel LWR driver. <Ref. to EI-54, REMOVAL, Instrument Panel Lower Cover.>
- 4) Remove the knee airbag module. <Ref. to AB-34, REMOVAL, Knee Airbag Module.>
- 5) Disconnect the connectors of the clutch switch and clutch start switch.
- 6) Remove the clutch switch and clutch start switch.

B: INSTALLATION

1. CLUTCH SWITCH

- 1) Install the clutch switch.
- 2) Move the clevis pin of push rod to left and right, retain it at the position where it moves smoothly, and measure the clutch pedal stroke.

Clutch pedal full stroke A:

130 — 135 mm (5.12 — 5.31 in)

Tightening torque:

T: 8 N·m (0.8 kgf·m, 5.9 ft·lb)

3) If the clutch pedal stroke is out of specification, adjust the stroke. <Ref. to CL-28, ADJUSTMENT, Clutch Pedal.>

- 4) Connect the clutch switch connector.
- 5) Thereafter, install in the reverse order of removal.

Tightening torque:

Knee airbag module

7.5 N·m (0.76 kgf·m, 5.5 ft·lb)

2. CLUTCH START SWITCH

- 1) Remove the snap pin and clevis pin connecting the clutch pedal and operating rod.

- (A) Clevis pin
- (B) Snap pin
- (C) Push rod
- (D) Lock nut

- 2) Install the clutch start switch so that the clutch switch turns on when the clearance between clutch pedal stopper and clutch pedal is within the specification described below.

Clearance A:

6.3 — 8.6 mm (0.25 — 0.34 in)

Tightening torque:

8 N·m (0.8 kgf·m, 5.9 ft·lb)

NOTE:

- Using a plate of the same thickness for the clearance facilitates the adjustment operation.
 - Using the Subaru Select Monitor or a tester, check the position where the switch turns on.
- Check the following figure for the terminal layout of the harness connector.

- When performing adjustment by the clearance between clutch start switch and clutch pedal plate, perform installation according to the following gap.

Clearance B:

8.6 — 9.0 mm (0.34 — 0.35 in)

- 3) Connect the clutch start switch connector.
- 4) Make sure that engine does not start with clutch pedal not depressed.
- 5) Make sure that engine starts with clutch pedal depressed.
- 6) Thereafter, install in the reverse order of removal.

Tightening torque:

Knee airbag module

7.5 N·m (0.76 kgf·m, 5.5 ft·lb)

C: INSPECTION

1. CLUTCH START SWITCH

1) Perform the following inspections. If the clutch start switch does not operate normally, adjust the switch, and check it again. <Ref. to CL-32, ADJUSTMENT, Clutch Switch.>

- Make sure that engine does not start with clutch pedal not depressed.
- Make sure that engine starts with clutch pedal fully depressed.

2) When the clutch start switch does not operate normally even if it is adjusted, check the clutch start switch for continuity.

(1) Remove the clutch start switch. <Ref. to CL-30, REMOVAL, Clutch Switch.>

(2) Measure the resistance between terminal 1 and 2 of the switch. If the resistance is not at the standard value, replace the switch.

Condition	Terminal No.	Specified resistance
ON	No. 1 — No. 2	Less than 1 Ω
OFF	No. 1 — No. 2	1 MΩ or more

(3) Check that the switch is turned on and off in dimension L.

Dimension L:

9 — 10 mm (0.35 — 0.39 in)

(A) ON

(B) OFF

(4) Install the clutch start switch. <Ref. to CL-30, CLUTCH START SWITCH, INSTALLATION, Clutch Switch.>

Clutch Switch

CLUTCH SYSTEM

2. CLUTCH SWITCH

- 1) Check the clutch switch for continuity.
 - (1) Disconnect the connector of clutch switch.
 - (2) Measure the resistance between terminal 1 and 2 of the switch. If the resistance is not within the specification, check the clutch stroke and installation condition, and check the clutch switch again.

Condition	Terminal No.	Specified resistance
When clutch pedal is depressed	No. 1 — No. 2	1 MΩ or more
When the clutch pedal is not depressed	No. 1 — No. 2	Less than 1 Ω

- 2) When the clutch switch does not operate normally even if the clutch stroke and installation condition are normal, check the clutch switch for continuity.

- (1) Remove the clutch switches. <Ref. to CL-30, REMOVAL, Clutch Switch.>
- (2) Measure the resistance between terminal 1 and 2 of the switch. If the resistance is not at the standard value, replace the switch.

Condition	Terminal No.	Specified resistance
ON	No. 1 — No. 2	Less than 1 Ω
OFF	No. 1 — No. 2	1 MΩ or more

- (3) Check that the switch is turned on and off in dimension L.

Dimension L:
5 — 6.5 mm (0.2 — 0.26 in)

- (A) ON
- (B) OFF

- (4) Install the clutch switch. <Ref. to CL-30, CLUTCH SWITCH, INSTALLATION, Clutch Switch.>

D: ADJUSTMENT

- 1) Loosen the lock nut of the clutch start switch.

- (A) Lock nut
- (B) Clutch start switch

- 2) Disconnect the harness connector of the clutch start switch.

3) Remove the snap pin and clevis pin connecting the clutch pedal and operating rod.

- (A) Clevis pin
- (B) Snap pin
- (C) Push rod
- (D) Lock nut

4) Adjust the clutch start switch so that the switch turns on when the clearance between clutch pedal stopper and clutch pedal is within the specification described below, and then tighten the lock nut.

Clearance A:
6.3 — 8.6 mm (0.25 — 0.34 in)

Tightening torque:
8 N·m (0.8 kgf·m, 5.9 ft·lb)

NOTE:

- Using a plate of the same thickness for the clearance facilitates the adjustment operation.
- Using the Subaru Select Monitor or a tester, check the position where the switch turns on. Check the following figure for the terminal layout of the harness connector.

- When performing adjustment by the clearance between clutch start switch and clutch pedal plate, perform installation according to the following gap.

Clearance B:
8.6 — 9.0 mm (0.34 — 0.35 in)

5) Connect the clutch start switch connector.

General Diagnostic Table

CLUTCH SYSTEM

12. General Diagnostic Table

A: INSPECTION

1. CLUTCH

Symptoms	Possible cause	Corrective action
<p>1. Clutch slippage</p> <p>It is hard to perceive clutch slippage in the early stage, but pay attention to the following symptoms.</p> <ul style="list-style-type: none"> • Engine temporarily speeds up when the accelerator ON immediately after shifting. • High-speed driving is not possible; especially rapid acceleration is not possible and vehicle speed does not increase in proportion to the increase in engine speed. • Power drops particularly when ascending a slope, and there is a burning smell of the clutch plate. • Method of testing: Park the vehicle and fully apply the parking brake. Disengage the clutch and shift the transmission gear into the 1st. Gradually increase the engine speed while gradually allowing the clutch to engage. The clutch function is satisfactory if the engine stalls. However, the clutch is slipping if the vehicle does not move forward and the engine does not stall. 	(a) Oil on the clutch face	Replace.
	(b) Worn clutch face	Replace.
	(c) Deteriorated diaphragm spring	Replace.
	(d) Warped pressure plate or flywheel	Repair or replace.
	(e) Defective release bearing holder	Repair or replace.
<p>2. Clutch drags.</p> <p>As a symptom of this trouble, a harsh scratching noise occurs and control becomes difficult when shifting gears. The symptom becomes more apparent when shifting into the 1st gear. However, because most trouble of this sort is due to a defective synchronization mechanism, perform the following tests.</p> <ul style="list-style-type: none"> • Method of testing: <Ref. to CL-35, DIAGNOSTIC DIAGRAM OF CLUTCH DRAG, INSPECTION, General Diagnostic Table.> <p>The problem is caused by insufficient disengagement of the clutch if an abnormal noise occurs during this test.</p>	(a) Worn or rusty clutch disc hub spline	Replace the clutch disc.
	(b) Excessive deflection of clutch disc face	Repair or replace.
	(c) Crankshaft pilot needle bearing sticking	Replace.
	(d) Cracked clutch disc face	Replace.
	(e) Stuck clutch disc (smeared by oil or water)	Replace.
<p>3. Clutch chatters.</p> <p>Clutch chattering is an unpleasant vibration to the whole vehicle when the vehicle is just started with clutch partially engaged.</p>	(a) Adhesion of oil on the clutch face	Replace the clutch disc.
	(b) Weak or broken damper spring	Replace the clutch disc.
	(c) Poor contact of the disc surface or excessively worn disc	Replace the faulty clutch disc.
	(d) Warped pressure plate or flywheel	Repair or replace.
	(e) Loose disc rivets	Replace the clutch disc.
	(f) Loose engine mounting	Retighten or replace mounting.
	(g) Loose pitching stopper	Retighten the pitching stopper. Or replace it.

General Diagnostic Table

CLUTCH SYSTEM

Symptoms	Possible cause	Corrective action
4. Noisy clutch Noise occurs when the clutch is disengaged, engaged, or partially engaged.	(a) Broken, worn or insufficiently lubricated release bearing	Replace the release bearing.
	(b) Insufficient lubrication of the pilot bearing	Replace the pilot bearing.
	(c) Loose clutch disc hub	Replace the clutch disc.
	(d) Loose damper spring retainer	Replace the clutch disc.
	(e) Deteriorated or broken damper spring	Replace the clutch disc.
5. Clutch grabs suddenly. When starting the vehicle with the clutch partially engaged, the clutch engages suddenly and the vehicle jumps instead of making a smooth start.	(a) Grease or oil on facing	Replace the clutch disc.
	(b) Deteriorated cushioning spring	Replace the clutch disc.
	(c) Worn or rusted spline of clutch disc or main shaft	Take off rust, apply grease or replace clutch disc or main shaft.
	(d) Deteriorated or broken damper spring	Replace the clutch disc.
	(e) Loose engine mounting	Retighten or replace mounting.
	(f) Deteriorated diaphragm spring	Replace.

2. CLUTCH PEDAL

Symptoms	Corrective action
Insufficient clutch pedal free play	Adjust the free play of the pedal.
Excessively worn and damaged pedal shaft and/or bushing	Replace the bushing or shaft with a new part.

3. DIAGNOSTIC DIAGRAM OF CLUTCH DRAG

Step	Check	Yes	No
1 CHECK GEAR NOISE. 1) Start the engine. 2) While idling the engine, step on the clutch pedal and quickly shift from neutral to reverse.	Is there any abnormal noise from the transmission gear?	Go to step 2.	Clutch is normal.
2 CHECK GEAR NOISE. Depress the clutch pedal at idle and shift from neutral to reverse within 0.5 — 1.0 second.	Is there any abnormal noise from the transmission gear?	Go to step 3.	Inspect defective transmission or excessive clutch drag torque, pilot bearing, clutch disc, transmission and clutch disc hub spline.
3 CHECK GEAR NOISE. 1) Depress the clutch pedal at idle and shift from neutral to reverse within 0.5 — 1.0 second. 2) While stepping on the clutch pedal, shift from neutral to reverse, reverse to neutral several times.	Is there any abnormal noise from the transmission gear?	Inadequate clutch disengage. Inspect the clutch disc, clutch cover, clutch release, and clutch pedal free play.	Clutch and fly-wheel seizure. Inspect the clutch disc and the spline of the clutch disc hub.

CHASSIS SECTION

This service manual has been prepared to provide SUBARU service personnel with the necessary information and data for the correct maintenance and repair of SUBARU vehicles.

This manual includes the procedures for maintenance, disassembling, reassembling, inspection and adjustment of components and diagnostics for guidance of experienced mechanics.

Please peruse and utilize this manual fully to ensure complete repair work for satisfying our customers by keeping their vehicle in optimum condition. When replacement of parts during repair work is needed, be sure to use SUBARU genuine parts.

All information, illustration and specifications contained in this manual are based on the latest product information available at the time of publication approval.

General Description

FRONT SUSPENSION

1. General Description

A: SPECIFICATION

Tire size		P225/55R17 225/55R17	
Front	Wheel arch height (Tolerance: +12 mm -24 mm (+0.47 in -0.94 in))	452 (17.8)	
	Camber (tolerance: $\pm 0^{\circ}45'$ Differences between RH and LH: 45' or less)	0°10'	
	Caster (referential value)	5°60'	
	Steering angle (tolerance: $\pm 1.5^{\circ}$)	Inner wheel	38.5°
		Outer wheel	34.0°
	Toe-in	mm (in)	0±3 (0±0.12) Toe angle (sum of both wheels): 0°±0°10'
	Kingpin angle (referential value)		13°05'
Rear	Wheel arch height (Tolerance: +12 mm -24 mm (+0.47 in -0.94 in))	450 (17.72)	
	Camber (tolerance: +0°45', -0°52' (Differences between RH and LH: 45' or less))	-0°25'	
	Toe-in	mm (in)	0±3 (0±0.12) Toe angle (sum of both wheels): 0°00'±10'
	Thrust angle (tolerance: 0°00'±30')		0°00'

NOTE:

- Adjust with the value less than the inspection value, taking aging variation into consideration.
- Front toe-in, rear toe-in and front camber can be adjusted. Adjust if the value of toe-in or camber exceeds the tolerance range of the specification chart.
- Other items except for front toe-in, rear toe-in and front camber that are described in the specification chart cannot be adjusted. If other items exceed the tolerance range of the specification chart, check the suspension parts and connections for deformation. If defective, replace with new parts.

C: CAUTION

- Wear appropriate work clothing, including a helmet, protective goggles and protective shoes when performing any work.
- Before removal, installation or disassembly, be sure to clarify the failure. Avoid unnecessary removal, installation, disassembly and replacement.
- Use SUBARU genuine grease etc. or equivalent. Do not mix grease etc. of different grades or manufacturers.
- Before securing a part on a vise, place cushioning material such as wood blocks, aluminum plate, or cloth between the part and the vise.
- Be sure to tighten fasteners including bolts and nuts to the specified torque.
- Place shop jacks or rigid racks at the specified points.
- When the suspension-related components have been replaced, perform the following VDC setting mode.
 - Model without EyeSight: VDC sensor midpoint setting mode <Ref. to VDC-23, VDC SENSOR MID-POINT SETTING MODE (MODELS WITHOUT EyeSight), ADJUSTMENT, VDC Control Module and Hydraulic Control Unit (VDCCM&H/U).>

General Description

FRONT SUSPENSION

ILLUSTRATION	TOOL NUMBER	DESCRIPTION	REMARKS
 ST20399AG000	20399AG000	STRUT MOUNT SOCKET	Used for disassembling and assembling strut mount.
 STSSM4	—	SUBARU SELECT MONITOR 4	Used for setting of each function and troubleshooting for electrical system. NOTE: For detailed operation procedures of Subaru Select Monitor 4, refer to "Application help".

2. GENERAL TOOL

TOOL NAME	REMARKS
DST-i	Used together with Subaru Select Monitor 4.
Alignment gauge adapter	Used for measuring wheel alignment.
Turning radius gauge	Used for measuring wheel alignment.
Toe-in gauge	Used for toe-in measurement.
Tie-rod end puller	Used for disconnecting tie-rod end.
Dial gauge	Used for damper strut measurement.
Coil spring compressor	Used for strut assembly/disassembly.

2. Wheel Alignment

A: INSPECTION

Check the following items before performing the wheel alignment measurement.

- Tire inflation pressure
- Uneven wear of RH and LH tires, or difference of sizes
- Tire runout
- Excessive play and wear of ball joint
- Excessive play and wear of tie-rod end
- Excessive play of wheel bearing
- Right and left wheel base imbalance
- Deformation and excessive play of steering link
- Deformation and excessive play of suspension parts

Check, adjust and measure the wheel alignment in accordance with the following procedures.

1	Wheel arch height (front and rear wheels)	Inspection: <Ref. to FS-10, REAR WHEEL TOE-IN, INSPECTION, Wheel Alignment.>
↓		
2	Camber (front and rear wheels)	Inspection: <Ref. to FS-9, CAMBER, INSPECTION, Wheel Alignment.> Adjustment: <Ref. to FS-11, FRONT CAMBER, ADJUSTMENT, Wheel Alignment.>
↓		
3	Caster (front wheel)	Inspection: <Ref. to FS-9, CASTER, INSPECTION, Wheel Alignment.>
↓		
4	Adjustment of difference between right and left steering angles	Inspection: <Ref. to FS-10, FRONT WHEEL TOE-IN, INSPECTION, Wheel Alignment.> Adjustment: <Ref. to FS-13, ADJUSTMENT OF DIFFERENCE BETWEEN RIGHT AND LEFT STEERING ANGLES, ADJUSTMENT, Wheel Alignment.>
↓		
5	Front wheel toe-in	Inspection: <Ref. to FS-10, STEERING ANGLE, INSPECTION, Wheel Alignment.> Adjustment: <Ref. to FS-13, FRONT WHEEL TOE-IN, ADJUSTMENT, Wheel Alignment.>
↓		
6	Rear wheel toe-in	Inspection: <Ref. to FS-8, WHEEL ARCH HEIGHT, INSPECTION, Wheel Alignment.> Adjustment: <Ref. to FS-14, REAR WHEEL TOE-IN, ADJUSTMENT, Wheel Alignment.>
↓		
7	Thrust angle	Inspection: <Ref. to FS-11, THRUST ANGLE, INSPECTION, Wheel Alignment.> Adjustment: <Ref. to FS-16, THRUST ANGLE, ADJUSTMENT, Wheel Alignment.>

Wheel Alignment

FRONT SUSPENSION

1. WHEEL ARCH HEIGHT

- 1) Park the vehicle on a level surface.
- 2) Empty the vehicle so that it is at "curb weight". (Empty the luggage compartment, load the spare tire, jack and service tools, and fill up the fuel tank.)
- 3) Set the steering wheel in a straight-ahead position, and stabilize the suspension by moving the vehicle in a straight line for 5 m (16 ft) or more.
- 4) Suspend a thread from the wheel arch (point "A" in the figure below) and affix at a position directly above the center of wheel.
- 5) Measure the distance between the point "A" and the center of wheel.

- | | | |
|-----------------------------|----------------------------|--------------------------------|
| (1) Wheel arch height | (5) Rear wheel arch height | (9) Garnish fender |
| (2) Front fender | (6) Flange bend line | (10) Garnish ASSY rear quarter |
| (3) Rear quarter | (7) Point of measurement | |
| (4) Front wheel arch height | (8) End of spindle | |

Wheel arch height specification mm (in) (tolerance: $+12\text{ mm}$ -24 mm ($+0.47\text{ in}$ -0.94 in))	
Tire size	P225/55R17 225/55R17
Front	452 (17.8)
Rear	450 (17.72)

2. CAMBER

1) Place the front wheel on the turning radius gauge.

NOTE:

Make sure the ground contact surfaces of the front and rear wheels are at the same height.

2) Set the adapter into the center of wheel, and then set the wheel alignment gauge.

- (1) Alignment gauge
- (2) Turning radius gauge
- (3) Adapter

3) Measure the camber angle in accordance with the operation manual for wheel alignment gauge.

Tire size	Camber (difference between RH and LH 45' or less)
P225/55R17 225/55R17	0°10'±0°45'

3. CASTER

1) Place the front wheel on the turning radius gauge. Make sure the ground contact surfaces of the front and rear wheels are at the same height.

2) Set the adapter into the center of wheel, and then set the wheel alignment gauge.

- (1) Alignment gauge
- (2) Turning radius gauge
- (3) Adapter

3) Measure the caster angle in accordance with the operation manual for wheel alignment gauge.

Tire size	Caster
P225/55R17 225/55R17	5°60'

Wheel Alignment

FRONT SUSPENSION

4. STEERING ANGLE

- 1) Place the vehicle on turning radius gauge.
- 2) While depressing the brake pedal, turn the steering wheel fully to the left and right.
- 3) With the steering wheel held at each fully turned position, measure both the inner and outer wheel steering angles.

Tire size	Inner wheel	Outer wheel
P225/55R17 225/55R17	38.5°±1.5°	34.0°±1.5°

5. FRONT WHEEL TOE-IN

Toe-in: Inspection value

0±3 mm (0±0.12 in)

- 1) Set the toe-in gauge in the position at wheel axis center height behind the right and left front tires.
- 2) Place a mark at the center of both left and right tires, and measure distance "A" between the marks.
- 3) Move the vehicle forward to rotate the tires 180°.

NOTE:

Be sure to rotate the tires in the forward direction.

- 4) Measure the distance "B" between the left and right marks.

Find toe-in using the following calculation:

$$A - B = \text{Toe-in}$$

6. REAR WHEEL TOE-IN

Refer to the FRONT WHEEL TOE-IN for rear toe-in inspection procedures. <Ref. to FS-10, FRONT WHEEL TOE-IN, INSPECTION, Wheel Alignment.>

Toe-in: Inspection value

0±3 mm (0±0.12 in)

7. THRUST ANGLE

- 1) Park the vehicle on a level surface.
- 2) Move the vehicle 3 — 4 meters (10 — 13 feet) straight forward.
- 3) Draw the center of loci for both the front and rear axles.
- 4) Measure distance “L” between the center lines of the axle loci.

Thrust angle: Inspection value

$0^{\circ} \pm 30'$

Less than 30' when “L” is 23 mm (0.9 in) or less

(a) Center line of loci (front axle)

(b) Center line of loci (rear axle)

B: ADJUSTMENT

CAUTION:

When the wheel alignment has been adjusted, perform the adjustment of the VDC. <Ref. to VDC-23, ADJUSTMENT, VDC Control Module and Hydraulic Control Unit (VDCCM&H/U).>

1. FRONT CAMBER

- 1) Adjust the camber angle to the following value.

Tire size	Camber (difference between RH and LH 45' or less)
P225/55R17 225/55R17	$0^{\circ}10' \pm 0^{\circ}30'$

- 2) Loosen the two flange nuts located at the front lower section of the strut.

NOTE:

When the adjusting bolt needs to be loosened or tightened, hold its head with a wrench and turn the flange nut.

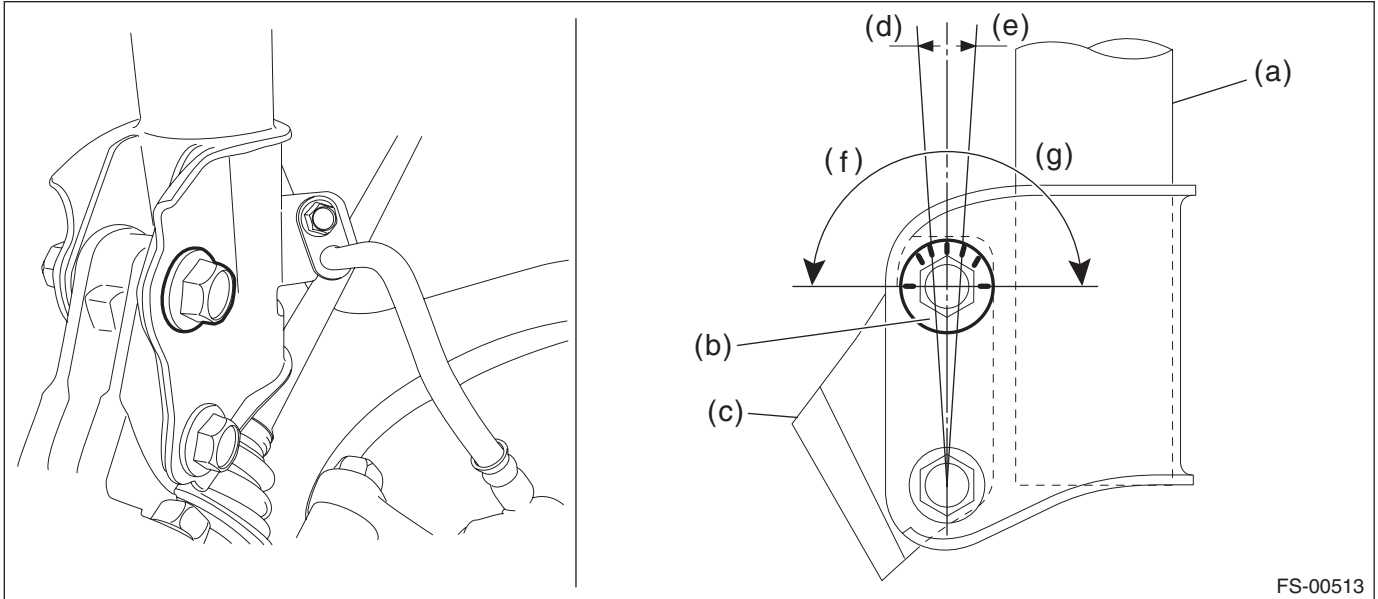

Wheel Alignment

FRONT SUSPENSION

3) Turn the camber adjusting bolt so that the camber is set at specification.

NOTE:

Moving the adjusting bolt by one scale changes the camber by approximately $0^{\circ}15'$.

FS-00513

- | | | |
|-------------------------------|--------------------------|--------------------------|
| (a) Strut ASSY | (d) Outer direction | (g) Camber is decreased. |
| (b) Adjusting bolt | (e) Inner direction | |
| (c) Housing ASSY - front axle | (f) Camber is increased. | |

To increase camber.	
Rotate the left side counterclockwise.	Rotate the right side clockwise.
FS-00352	FS-00353

To decrease camber.	
Rotate the left side clockwise.	Rotate the right side counterclockwise.
FS-00353	FS-00352

4) Tighten two new flange nuts.

Tightening torque:

155 N·m (15.81 kgf·m, 114.3 ft·lb)

2. ADJUSTMENT OF DIFFERENCE BETWEEN RIGHT AND LEFT STEERING ANGLES

1) Operate the steering system from lock to lock and stop operating it at the center position from lock to lock, and then install the steering wheel in the straight-ahead position.

NOTE:

Using of the steering wheel angle sensor output values shown on Subaru Select Monitor will facilitate your work.

2) Before adjusting toe-in, be sure to adjust the steering wheel in the straight-ahead position (steering angle sensor output: 0 deg).

3. FRONT WHEEL TOE-IN

When adjusting the toe-in, adjust it to the following value. <Ref. to FS-13, ADJUSTMENT OF DIFFERENCE BETWEEN RIGHT AND LEFT STEERING ANGLES, ADJUSTMENT, Wheel Alignment.>

Toe-in: Adjustment value

0±2 mm (0±0.08 in)

1) Check that the left and right wheel steering angles are within specification.

2) Loosen the left and right side steering tie-rod lock nuts (a).

3) Turn the left and right tie-rods by equal amounts until the toe-in is at the specification.

NOTE:

Both the left and right tie-rods are right-hand threaded. To increase toe-in, turn both tie-rods clockwise by equal amount (viewing from the inside of vehicle).

4) Tighten the tie-rod lock nut (a).

Tightening torque:

85 N·m (8.67 kgf·m, 62.7 ft·lb)

5) Check and correct the tie-rod boot if twisted.

Wheel Alignment

FRONT SUSPENSION

4. REAR WHEEL TOE-IN

When adjusting, adjust it to the following value.

Toe-in: Adjustment value

$0 \pm 2 \text{ mm}$ ($0 \pm 0.08 \text{ in}$)

1) Loosen the self-locking nut for the lateral link assembly - front.

NOTE:

When loosening or tightening the adjusting bolt, hold the bolt head and turn the self-locking nut.

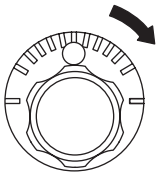

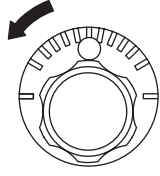

Wheel Alignment

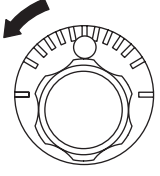

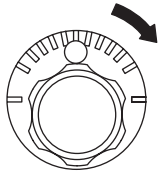

FRONT SUSPENSION

2) Turn the adjusting bolt until toe-in is within the specification.

NOTE:

When the left and right wheels are adjusted for toe-in at the same time, the movement of one scale graduation changes toe-in by approx. 1.3 mm (0.05 in).

To increase toe-in.	
Rotate the left side clockwise.	Rotate the right side counterclockwise.
	
FS-00018	FS-00019

To decrease toe-in.	
Rotate the left side counterclockwise.	Rotate the right side clockwise.
	
FS-00019	FS-00018

3) Attach and tighten a new self-locking nut.

Tightening torque:

100 N·m (10.20 kgf·m, 73.8 ft·lb)

Wheel Alignment

FRONT SUSPENSION

5. THRUST ANGLE

When adjusting, adjust it to the following value.

Thrust angle: Adjustment value

$0^{\circ} \pm 20'$

Less than 20' when "L" is 15 mm (0.6 in) or less

(a) Center line of loci (front axle)

(b) Center line of loci (rear axle)

- 1) Make thrust angle adjustments by turning the toe-in adjusting bolts of the rear suspension equally in the same direction.
- 2) When one rear wheel is adjusted in a toe-in direction, adjust the other rear wheel equally in toe-out direction, in order to make the thrust angle adjustment.

Wheel Alignment

3) When the left and right adjusting bolts are turned by one graduation, the thrust angle will change approx. 15'. ("L" is approx. 11 mm (0.43 in).)

NOTE:

Thrust angle is a mean value of left and right wheel toe angles in relation to the vehicle body center line. Vehicle is driven straight in the thrust angle direction while slanting in the oblique direction depending on the degree of the mean thrust angle.

(a) Thrust angle

(b) Body center line

Thrust angle:

$$\gamma = (\alpha - \beta)/2$$

α : Rear RH wheel toe-in angle

β : Rear LH wheel toe-in angle

Substitute only the positive toe-in values from each wheel into α and β in the calculation.

(1) Front

(2) Body center line

Front Crossmember

FRONT SUSPENSION

3. Front Crossmember

A: REMOVAL

CAUTION:

- The power steering control module continues to operate after the engine stops and calculate the temperature in the control module. Therefore, before starting service of the power steering system which requires disconnection of the connector, stop the engine and allow approx. 30 minutes until the control module becomes cold.

- Before removal or installation, be sure to remove any foreign matter (dust, moisture, oil, etc.) from the power steering control module connector.

- 1) Disconnect the ground cable from battery. <Ref. to NT-6, BATTERY, NOTE, Note.>
- 2) Adjust the tilt position of the steering column to the lowest position and lock the tilt lever.
- 3) Lift up the vehicle, and then remove the front wheels.
- 4) Remove the under cover - front. <Ref. to EI-22, REMOVAL, Front Under Cover.>
- 5) Remove the universal joint assembly - steering. <Ref. to PS-13, REMOVAL, Universal Joint.>
- 6) Change the front hood stay position from (A) to (B), and completely open the front hood.

7) Remove the V-belt covers.

8) Disconnect the connector and harness clamp from power steering control module.

9) Support the engine with a lifting device and wire ropes.

(1) Support the engine with a lifting device and wire ropes.

(2) While lifting up the vehicle, also raise up the lifting device.

CAUTION:

When lifting up the vehicle, raise up wire ropes at the same time.

Front Crossmember

FRONT SUSPENSION

- 10) Remove the nuts which secure the engine mounting.
 - (1) Raise up the lifting device, and lift the engine by approx. 10 mm (0.39 in).
 - (2) Remove the nuts which secure the engine mounting to the front crossmember assembly.

FS-00498

- 11) Remove the front exhaust pipe. <Ref. to EX(H4DO)-5, REMOVAL, Front Exhaust Pipe.>
- 12) Remove the front crossmember support. <Ref. to FS-24, REMOVAL, Front Crossmember Support Plate.>
- 13) Remove the front stabilizer. <Ref. to FS-25, REMOVAL, Front Stabilizer.>
- 14) Disconnect the tie-rod end.
 - (1) Pull out the cotter pin (a).
 - (2) Remove the castle nut (b).
 - (3) Using a tie-rod end puller, remove the tie-rod end (c).

Preparation tool:
Tie-rod end puller

FS-10029

15) Remove the support plate - front crossmember (a).

16) Remove the front arm assembly. <Ref. to FS-31, REMOVAL, Front Arm.>

17) Support the front crossmember assembly using a jack, and remove the bolts which hold the crossmember on the body.

18) Slowly lower the front crossmember assembly with the steering gearbox assembly as a single unit.

CAUTION:

When removing the crossmember, make sure that the tie-rod end does not interfere with the drive shaft boot.

19) Remove the steering gearbox assembly from the front crossmember assembly.

Front Crossmember

FRONT SUSPENSION

B: INSTALLATION

- 1) Check the crossmember for damage or cracks, and correct or replace if defective.
- 2) Install the universal joint assembly - steering. <Ref. to PS-14, INSTALLATION, Universal Joint.>
- 3) Install each part in the reverse order of removal.

CAUTION:

- Use a new bolt and self-locking nut. For parts which are not reusable, refer to “COMPONENT”.
- <Ref. to FS-3, COMPONENT, General Description.>
- Always tighten the bushing in the state where the vehicle is at curb weight and the wheels are in full contact with the ground.
- Install the clamp - stabilizer bushing with the arrow mark facing the front of the vehicle.

- Install so that the front end of the under cover (b) comes inside the bumper face - front (a), and the front end of the mud guard (c) comes outside the bumper face - front (a).

COM00138

Tightening torque:

Engine mounting to Front crossmember assembly: <Ref. to ME(H4DO)-16, ENGINE MOUNTING, COMPONENT, General Description.>

Universal joint assembly - steering: 24 N·m (2.45 kgf-m, 17.7 ft-lb)

V-belt cover: 7.5 N·m (0.76 kgf-m, 5.5 ft-lb)

Under cover - front: 18 N·m (1.84 kgf-m, 13.3 ft-lb)

Front suspension parts: <Ref. to FS-3, FRONT SUSPENSION, COMPONENT, General Description.>

When tightening the castle nut, tighten the castle nut to the specified torque first, then tighten it further but within 60° until the hole in the ball stud is aligned with a slot in castle nut.

4) Install the front wheels.

Tightening torque:

Except for C4 model: 120 N·m (12.24 kgf-m, 88.5 ft-lb)

C4 model: 100 N·m (10.20 kgf-m, 73.8 ft-lb)

5) Inspect the wheel alignment and adjust if necessary.

- Inspection: <Ref. to FS-7, INSPECTION, Wheel Alignment.>
- Adjustment: <Ref. to FS-11, ADJUSTMENT, Wheel Alignment.>

CAUTION:

If the steering wheel and steering angle sensor are removed, perform the following VDC setting mode.

– Model without EyeSight: VDC sensor midpoint setting mode <Ref. to VDC-23, VDC SENSOR MIDPOINT SETTING MODE (MODELS WITHOUT EyeSight), ADJUSTMENT, VDC Control Module and Hydraulic Control Unit (VDCCM&H/U).>

– Model with EyeSight: Neutral of Steering Angle Sensor & Lateral G Sensor 0 point setting <Ref. to VDC-23, NEUTRAL OF STEERING ANGLE SENSOR & LATERAL G SENSOR 0 POINT SETTING (MODEL WITH EyeSight), ADJUSTMENT, VDC Control Module and Hydraulic Control Unit (VDC-CM&H/U).>

– Model with EyeSight: Longitudinal G sensor & lateral G sensor 0 point setting <Ref. to VDC-24, LONGITUDINAL G SENSOR & LATERAL G SENSOR 0 POINT SETTING MODE (MODEL WITH EyeSight), ADJUSTMENT, VDC Control Module and Hydraulic Control Unit (VDCCM&H/U).>

6) Perform reinitialization of the auto headlight beam leveler system. (Model with auto headlight beam leveler) <Ref. to LI-18, PROCEDURE, Auto Headlight Beam Leveler System.>

Front Crossmember Support Plate

FRONT SUSPENSION

4. Front Crossmember Support Plate

A: REMOVAL

- 1) Lift up the vehicle.
- 2) Remove the under cover - front. <Ref. to EI-22, REMOVAL, Front Under Cover.>
- 3) Remove the bolt, and remove the front crossmember support.

B: INSTALLATION

CAUTION:

Install so that the front end of the under cover (b) comes inside the bumper face - front (a), and the front end of the mud guard (c) comes outside the bumper face - front (a).

Install each part in the reverse order of removal.

Tightening torque:

Front crossmember support: 60 N·m (6.12 kgf·m, 44.3 ft·lb)

Under cover - front: 18 N·m (1.84 kgf·m, 13.3 ft·lb)

5. Front Stabilizer

A: REMOVAL

- 1) Lift up the vehicle, and then remove the left and right front wheels.
- 2) Remove the under cover - front. <Ref. to EI-22, REMOVAL, Front Under Cover.>
- 3) Remove the front crossmember support. <Ref. to FS-24, REMOVAL, Front Crossmember Support Plate.>
- 4) Remove the front stabilizer.
 - (1) Remove the left and right stabilizer links.
 - (2) Remove the clamp - stabilizer bushing on the left and right sides.

FS-10030

B: INSTALLATION

- 1) Before installation, inspect the following items and replace any faulty part with a new one.
 - Check the bushing - stabilizer for abnormal cracks, fatigue or damage.
 - Check the stabilizer link for damage.
- 2) Install each part in the reverse order of removal.

CAUTION:

- Install the clamp - stabilizer bushing with the arrow mark facing the front of the vehicle.

FS-00509

Front Stabilizer

FRONT SUSPENSION

- Install so that the front end of the under cover (b) comes inside the bumper face - front (a), and the front end of the mud guard (c) comes outside the bumper face - front (a).

Tightening torque:

Clamp - stabilizer: 25 N·m (2.55 kgf-m, 18.4 ft-lb)

Stabilizer link: 60 N·m (6.12 kgf-m, 44.3 ft-lb)

Support plate - crossmember: 60 N·m (6.12 kgf-m, 44.3 ft-lb)

Under cover - front: 18 N·m (1.84 kgf-m, 13.3 ft-lb)

3) Install the front wheels.

Tightening torque:

Except for C4 model: 120 N·m (12.24 kgf-m, 88.5 ft-lb)

C4 model: 100 N·m (10.20 kgf-m, 73.8 ft-lb)

6. Front Ball Joint

A: REMOVAL

- 1) Lift up the vehicle, and then remove the front wheels.
- 2) Remove the under cover - front. <Ref. to EI-22, REMOVAL, Front Under Cover.>
- 3) Remove the clamp - stabilizer bushing on the left and right sides.

- 4) Remove the ball joint assembly.
 - (1) Pull out the cotter pin (a), and remove the castle nut (b).
 - (2) Lower the front arm assembly, and remove the ball stud.
 - (3) Remove the bolt from the housing assembly - front axle.

- (4) Extract the ball joint assembly from the housing assembly - front axle.

Front Ball Joint

FRONT SUSPENSION

B: INSTALLATION

1) Install the ball joint assembly to the housing assembly - front axle.

CAUTION:

- Do not apply grease to the tapered portion of ball stud.
- Before tightening, make sure the bottom surface of the housing assembly - front axle and the stepped section of ball joint are in contact.

FS-00508

- (a) Bottom surface of housing ASSY - front axle (c) Housing ASSY - front axle (d) Ball joint ASSY
(b) Raised section of ball joint

Tightening torque:

50 N·m (5.10 kgf-m, 36.9 ft-lb)

2) Install the ball joint assembly to the front arm assembly.

- (1) Connect the ball joint assembly to the front arm assembly.

Tightening torque:

39 N·m (3.98 kgf-m, 28.8 ft-lb)

- (2) Retighten the castle nut further up to 60° until the hole in the ball stud is aligned with a slot in castle nut.
(3) Insert a new cotter pin and bend it around the castle nut.

3) Install the clamp - stabilizer bushing.

CAUTION:

Install the clamp - stabilizer bushing with the arrow mark facing the front of the vehicle.

Tightening torque:

25 N·m (2.55 kgf·m, 18.4 ft·lb)

4) Install the under cover - front.

CAUTION:

Install so that the front end of the under cover (b) comes inside the bumper face - front (a), and the front end of the mud guard (c) comes outside the bumper face - front (a).

Tightening torque:

18 N·m (1.84 kgf·m, 13.3 ft·lb)

5) Install the front wheels.

Tightening torque:

Except for C4 model: 120 N·m (12.24 kgf·m, 88.5 ft·lb)

C4 model: 100 N·m (10.20 kgf·m, 73.8 ft·lb)

Front Ball Joint

FRONT SUSPENSION

C: INSPECTION

1) Check that there is no looseness by moving the upper and lower portions of front tire in an axial direction with the brake pedal depressed.

- **Looseness exists** → Replace the ball joint assembly. <Ref. to FS-27, REMOVAL, Front Ball Joint.>
- 2) Check that there is no looseness by moving the upper and lower portions of front tire in an axial direction with the brake pedal released.
- **Looseness exists** → Check the hub unit COMPL - front axle. <Ref. to DS-31, INSPECTION, Front Hub Unit Bearing.>
- 3) Replace the ball joint assembly if the dust cover is damaged when visually inspecting the dust cover.

7. Front Arm

A: REMOVAL

- 1) Lift up the vehicle, and then remove the front wheels.
- 2) Remove the under cover - front. <Ref. to EI-22, REMOVAL, Front Under Cover.>
- 3) Remove the front arm assembly.
 - (1) Remove the bolt, and then detach the front support. (Electric power steering model only)
 - (2) Remove the bolts and nuts, and then remove the front arm rear plate.
 - (3) Remove the nut and disconnect the stabilizer link.
 - (4) Pull out the cotter pin (a), remove the castle nut (b), and remove the ball joint assembly from front arm assembly.
 - (5) Remove the nuts, pull out the flange bolt, and remove the front arm assembly.

FS-00511

Front Arm

FRONT SUSPENSION

B: INSTALLATION

- 1) Before installation, inspect the following items and replace any faulty part with a new one.
 - Check the front arm assembly for damage or cracks, and replace if defective.
 - Visually check the bushing for abnormal cracks, fatigue or damage.
 - Visually check the dust cover on the ball joint assembly for damage.
- 2) Using new self-locking nuts and flange bolts, temporarily tighten the front arm assembly to the front cross-member assembly.
- 3) Install the ball joint assembly to the housing assembly - front axle.

CAUTION:

Before tightening, make sure the bottom surface of the housing assembly - front axle and the stepped section of ball joint are in contact.

- (a) Bottom surface of housing ASSY - front axle (c) Housing ASSY - front axle (d) Ball joint ASSY
(b) Raised section of ball joint

Tightening torque:

50 N·m (5.10 kgf·m, 36.9 ft·lb)

- 4) Install the stabilizer link.

Tightening torque:

60 N·m (6.12 kgf·m, 44.3 ft·lb)

5) Install the under cover - front.

CAUTION:

Install so that the front end of the under cover (b) comes inside the bumper face - front (a), and the front end of the mud guard (c) comes outside the bumper face - front (a).

COM00138

Tightening torque:

18 N·m (1.84 kgf·m, 13.3 ft·lb)

6) Install the front wheels.

Tightening torque:

Except for C4 model: 120 N·m (12.24 kgf·m, 88.5 ft·lb)

C4 model: 100 N·m (10.20 kgf·m, 73.8 ft·lb)

7) Unload the vehicle from the lift, and tighten the bolt which secures the front arm assembly to the front crossmember assembly while the wheels are in full contact with the ground and the vehicle is at curb weight.

Tightening torque:

Busing front - front arm: 95 N·m (9.7 kgf·m, 70.1 ft·lb)

Busing rear - front arm: 110 N·m (11.22 kgf·m, 81.1 ft·lb)

8) Inspect the wheel alignment and adjust if necessary.

- Inspection: <Ref. to FS-7, INSPECTION, Wheel Alignment.>
- Adjustment: <Ref. to FS-11, ADJUSTMENT, Wheel Alignment.>

CAUTION:

When the wheel alignment has been adjusted, perform the following VDC setting mode.

- Model without EyeSight: VDC sensor midpoint setting mode <Ref. to VDC-23, VDC SENSOR MID-POINT SETTING MODE (MODELS WITHOUT EyeSight), ADJUSTMENT, VDC Control Module and Hydraulic Control Unit (VDCCM&H/U).>
- Model with EyeSight: Neutral of Steering Angle Sensor & Lateral G Sensor 0 point setting <Ref. to VDC-23, NEUTRAL OF STEERING ANGLE SENSOR & LATERAL G SENSOR 0 POINT SETTING (MODEL WITH EyeSight), ADJUSTMENT, VDC Control Module and Hydraulic Control Unit (VDC-CM&H/U).>
- Model with EyeSight: Longitudinal G sensor & lateral G sensor 0 point setting <Ref. to VDC-24, LONGITUDINAL G SENSOR & LATERAL G SENSOR 0 POINT SETTING MODE (MODEL WITH EyeSight), ADJUSTMENT, VDC Control Module and Hydraulic Control Unit (VDCCM&H/U).>

9) Perform reinitialization of the auto headlight beam leveler system. (Model with auto headlight beam leveler) <Ref. to LI-18, PROCEDURE, Auto Headlight Beam Leveler System.>

Front Arm

FRONT SUSPENSION

C: DISASSEMBLY

1. BUSHING FRONT - FRONT ARM

1) Put an alignment mark on the front arm assembly based on the split portion of the bushing intermediate plate of the busing front - front arm.

CAUTION:

Always put an alignment mark for aligning the position on bushing installation.

- (a) Put an alignment mark. (b) Split portion of bushing intermediate plate (c) Bushing intermediate plate

2) Using the ST and a press, remove the busing front - front arm.

PREPARATION TOOL:

ST: INSTALLER & REMOVER SET (927680000)

2. BUSHING REAR - FRONT ARM

1) Put an alignment mark on the front arm assembly based on the center of recess portion of the busing rear - front arm.

2) Using the ST and a press, remove the busing rear - front arm.

PREPARATION TOOL:

ST1: REMOVER (20299AG000)

ST2: BASE (20299AG010)

(a) Press

(b) Front arm ASSY

(c) Bushing rear - front arm

D: ASSEMBLY

1. BUSHING FRONT - FRONT ARM

1) Before assembly, inspect the following items and replace any faulty part with a new one.

- Check the front arm assembly for damage or cracks, and replace if defective.
- Visually check the bushing for abnormal cracks, fatigue or damage.
- Visually check the dust cover on the ball joint assembly for damage.

2) Align the alignment mark on the front arm assembly to the split portion of the bushing intermediate plate of the busing front - front arm.

3) Using the ST and a press, assemble the busing front - front arm.

PREPARATION TOOL:

ST: INSTALLER & REMOVER SET (927680000)

Front Arm

FRONT SUSPENSION

2. BUSHING REAR - FRONT ARM

- 1) Before installation, inspect the following items and replace any faulty part with a new one.
 - Check the front arm assembly for damage or cracks, and replace if defective.
 - Visually check the bushing for abnormal cracks, fatigue or damage.
 - Visually check the dust cover on the ball joint assembly for damage.
- 2) Align a line extending from the center of recess portion with the ball joint after placing the protrusion (A) of recess portion to the ball joint side of the front arm assembly.

(a) Recess section

(b) Center line of recess section

3) Using the ST and a press, install the bushing rear - front arm.

CAUTION:

Align the upper face of front arm assembly and the end of bushing during installation.

- (1) Aligned
- (2) Not aligned

PREPARATION TOOL:

ST1: REMOVER (20299AG000)

ST2: BASE (20299AG010)

(a) Press

(b) Front arm ASSY

(c) Bushing rear - front arm

Front Strut

FRONT SUSPENSION

8. Front Strut

A: REMOVAL

- 1) Lift up the vehicle, and then remove the front wheels.
- 2) Remove the front strut assembly.
 - (1) Place an alignment mark (a) on the adjusting bolt and the strut.
 - (2) Remove the brake hose bracket.
 - (3) Remove the clamp of ABS wheel speed sensor harness.
 - (4) Remove the adjusting bolts and flange bolts for the strut assembly.

CAUTION:

While holding the head of the adjusting bolt, loosen the flange nut.

- (5) Remove the three nuts securing strut mount to body.

B: INSTALLATION

1) Install the strut mount - front at the upper side of the strut to the body, and tighten it with new flange nuts.

Tightening torque:

20 N·m (2.04 kgf-m, 14.8 ft-lb)

2) Align alignment marks on the camber adjusting bolt and strut.

Using new self-locking nuts, install the strut to the housing assembly - front axle.

NOTE:

While holding the head of adjusting bolt, tighten the nut.

Tightening torque:

155 N·m (15.81 kgf-m, 114.3 ft-lb)

3) Secure the ABS wheel speed sensor harness bracket to the strut.

CAUTION:

During the installation, make sure that the marking of ABS wheel speed sensor harness does not twist.

4) Install the brake hose bracket.

Tightening torque:

33 N·m (3.36 kgf-m, 24.3 ft-lb)

5) Install the front wheels.

Tightening torque:

Except for C4 model: 120 N·m (12.24 kgf-m, 88.5 ft-lb)

C4 model: 100 N·m (10.20 kgf-m, 73.8 ft-lb)

6) Inspect the wheel alignment and adjust if necessary.

- Inspection: <Ref. to FS-7, INSPECTION, Wheel Alignment.>
- Adjustment: <Ref. to FS-11, ADJUSTMENT, Wheel Alignment.>

CAUTION:

When the wheel alignment has been adjusted, perform the following VDC setting mode.

- **Model without EyeSight: VDC sensor midpoint setting mode** <Ref. to VDC-23, VDC SENSOR MID-POINT SETTING MODE (MODELS WITHOUT EyeSight), ADJUSTMENT, VDC Control Module and Hydraulic Control Unit (VDCCM&H/U).>
- **Model with EyeSight: Neutral of Steering Angle Sensor & Lateral G Sensor 0 point setting** <Ref. to VDC-23, NEUTRAL OF STEERING ANGLE SENSOR & LATERAL G SENSOR 0 POINT SETTING (MODEL WITH EyeSight), ADJUSTMENT, VDC Control Module and Hydraulic Control Unit (VDC-CM&H/U).>
- **Model with EyeSight: Longitudinal G sensor & lateral G sensor 0 point setting** <Ref. to VDC-24, LONGITUDINAL G SENSOR & LATERAL G SENSOR 0 POINT SETTING MODE (MODEL WITH EyeSight), ADJUSTMENT, VDC Control Module and Hydraulic Control Unit (VDCCM&H/U).>

7) Perform reinitialization of the auto headlight beam leveler system. (Model with auto headlight beam leveler) <Ref. to LI-18, PROCEDURE, Auto Headlight Beam Leveler System.>

Front Strut

FRONT SUSPENSION

C: DISASSEMBLY

- 1) Using a coil spring compressor, compress the coil spring - front.
- 2) Using a hexagon wrench to prevent strut rod from turning, remove the self-locking nut with ST.

CAUTION:

When installing the coil spring compressor to the coil spring, follow the operation manual accompanied with the coil spring compressor during operation.

Preparation tool:

ST: STRUT MOUNT SOCKET (20399AG000)

NOTE:

<Example of coil spring compressor installation>

The installing position of coil spring compressor varies depending on the coil spring shape and winding number.

- 3) Remove the strut mount - front, spacer - front strut and spring seat - front strut UPR from the strut.
- 4) Gradually decrease the compression pressure of compressor, and remove the coil spring - front.
- 5) Remove the dust cover - inner and the helper - front strut.

D: ASSEMBLY

- 1) Before assembly, check each part. <Ref. to FS-43, INSPECTION, Front Strut.>
- 2) Using a coil spring compressor, compress the coil spring - front.

CAUTION:

When installing the coil spring compressor to the coil spring, follow the operation manual accompanied with the coil spring compressor during operation.

NOTE:

Make sure that the vertical installation direction of the coil spring - front is as shown in the figure.

- (1) Diameter is small (upper part)
- (2) Identification paint
- (3) Diameter is large (bottom part)

- 3) Set the front coil spring correctly so that its end face (a) contacts the vertical surface (b) of the spring seat - front strut UPR as shown in the figure.

- 4) Install the dust cover - inner and the helper - front strut to the piston rod.

Front Strut

FRONT SUSPENSION

5) Pull the piston rod fully upward, and install the spring seat.

NOTE:

Position the spring seat - front strut UPR as shown in the figure.

(1) Outside of body

6) Install the spacer - front strut and the strut mount - front to the piston rod, and temporarily tighten a new self-locking nut.

7) Using a hexagon wrench to prevent strut rod from turning, tighten the new self-locking nut with ST.

CAUTION:

Make sure that the strut mount - front turns smoothly after tightening.

Preparation tool:

ST: STRUT MOUNT SOCKET (20399AG000)

Tightening torque:

55 N·m (5.61 kgf·m, 40.6 ft·lb)

8) Loosen the coil spring compressor carefully.

E: INSPECTION

Check the removed part for wear, damage and cracks, and then repair or replace it if defective.

1. STRUT

- 1) Check for oil leaks.
- 2) Move the piston rod up and down to check that it operates smoothly without any hitch.
- 3) Check the piston rod runout.

Preparation tool:

Dial gauge

1. Fix the outer shell.
2. Extend the piston rod until it stops retracting, and set the dial gauge at the L position from the end of the piston rod.

Measuring point:

$L = 10 \text{ mm (0.39 in)}$

3. While applying a force of W_1 [20 N (2 kgf, 4 lbf)] to the arrowed section, read the dial gauge indication P_1 .
4. While applying a force of W_2 [20 N (2 kgf, 4 lbf)] from the opposite side of W_1 , read the dial gauge indication P_2 .

Play limit ($P_1 + P_2$): 0.8 mm (0.031 in)

- 4) Replace the strut if faulty is found in the inspection or limit value is exceeded.

2. STRUT MOUNT - FRONT

Check the rubber part for deformation, cracks or deterioration, and then replace it with a new part if defective.

3. DUST COVER - INNER

If cracks or damage are found, replace it with a new part.

4. COIL SPRING - FRONT

If a permanent strain is found, replace it with a new part.

5. HELPER - FRONT STRUT

If major cracks or damage are found, replace it with a new part.

Front Strut

FRONT SUSPENSION

F: DISPOSAL

CAUTION:

- Before handling the strut damper and shock absorber, be sure to wear goggles to protect eyes from gas, oil and cutting powder.
- Do not disassemble the strut damper and shock absorber or place them into a fire.
- When discarding gas filled strut dampers and shock absorbers, drill holes in them to purge the gas.

- 1) Place the strut damper and shock absorber on a level surface with the piston rod fully expanded.
- 2) Make a hole into the specified position 30 mm (1.18 in) deep using a drill with 2 — 3 mm (0.08 — 0.12 in) diameter.

(1) 40 mm (1.57 in)

9. General Diagnostic Table

A: INSPECTION

1. IMPROPER VEHICLE POSTURE OR IMPROPER WHEEL ARCH HEIGHT

Possible cause	Corrective action
(1) Permanent distortion or damage of the coil spring	Replace.
(2) Rough operation of strut or shock absorber	Replace.
(3) Improper installation of strut or shock absorber	Replace with appropriate parts.
(4) Installation of the wrong coil spring	Replace with appropriate parts.

2. POOR RIDE COMFORT

- 1) Large rebound shock
- 2) Rocking of the vehicle continues too long after running over bump and hump.
- 3) Excessive shock in bumping

Possible cause	Corrective action
(1) Damaged coil spring	Replace.
(2) Overinflation of tires	Adjust.
(3) Improper wheel arch height	Replace the coil springs with new parts.
(4) Fault in operation of strut or shock absorber	Replace.
(5) Damage or deformation of strut mount or shock absorber mount	Replace.
(6) Unsuitable length (maximum or minimum) of strut or shock absorber	Replace with appropriate parts.
(7) Abnormal deformation or loss of bushing	Replace.
(8) Deformation or damage of helper in strut assembly or shock absorber	Replace.
(9) Oil leakage from the strut or shock absorber	Replace.

3. NOISE

Possible cause	Corrective action
(1) Wear or damage of strut or shock absorber component parts	Replace.
(2) Loosening of the suspension link installing bolt	Tighten to the specified torque.
(3) Abnormal deformation or loss of bushing	Replace.
(4) Unsuitable length (maximum or minimum) of strut or shock absorber	Replace with appropriate parts.
(5) Damaged coil spring	Replace.
(6) Wear or damage of the ball joint	Replace.
(7) Deformation of the clamp - stabilizer bushing	Replace.

General Description

REAR SUSPENSION

1. General Description

A: SPECIFICATION

Refer to "SPECIFICATIONS" in "FRONT SUSPENSION" section for rear suspension specifications. <Ref. to FS-2, SPECIFICATION, General Description.>

NOTE:

- Front toe-in, rear toe-in and front camber can be adjusted. Adjust if the value of toe-in or camber exceeds the tolerance range of the specification chart.
- Other items except for front toe-in, rear toe-in and front camber that are described in the specification chart cannot be adjusted. If other items exceed the tolerance range of the specification chart, check the suspension parts and connections for deformation. If defective, replace with new parts.

General Description

REAR SUSPENSION

C: CAUTION

Please clearly understand and adhere to the following general precautions. They must be strictly followed to avoid minor or serious injury to the person doing the work or people in the area.

1. EACH PROCEDURE

- Wear appropriate work clothing, including a helmet, protective goggles and protective shoes when performing any work.
- Before disposing of shock absorbers, be sure to bleed the gas out completely. Also, do not expose to flames or fire.
- Before removal, installation or disassembly, be sure to clarify the failure. Avoid unnecessary removal, installation, disassembly and replacement.
- Use SUBARU genuine grease etc. or equivalent. Do not mix grease etc. of different grades or manufacturers.
- Before securing a part on a vise, place cushioning material such as wood blocks, aluminum plate, or cloth between the part and the vise.
- Be sure to tighten fasteners including bolts and nuts to the specified torque.
- Place shop jacks or rigid racks at the specified points.
- When the suspension-related components have been replaced, perform the following VDC setting mode.
 - Model without EyeSight: VDC sensor midpoint setting mode <Ref. to VDC-23, VDC SENSOR MIDPOINT SETTING MODE (MODELS WITHOUT EyeSight), ADJUSTMENT, VDC Control Module and Hydraulic Control Unit (VDCCM&H/U).>
 - Model with EyeSight: Neutral of Steering Angle Sensor & Lateral G Sensor 0 point setting <Ref. to VDC-23, NEUTRAL OF STEERING ANGLE SENSOR & LATERAL G SENSOR 0 POINT SETTING (MODEL WITH EyeSight), ADJUSTMENT, VDC Control Module and Hydraulic Control Unit (VDCCM&H/U).>
 - Model with EyeSight: Longitudinal G sensor & lateral G sensor 0 point setting <Ref. to VDC-24, LONGITUDINAL G SENSOR & LATERAL G SENSOR 0 POINT SETTING MODE (MODEL WITH EyeSight), ADJUSTMENT, VDC Control Module and Hydraulic Control Unit (VDCCM&H/U).>

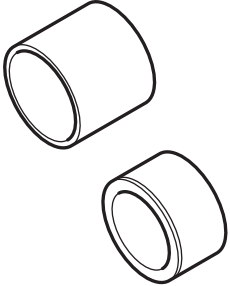

2. OIL

When handling oil, adhere to the following to prevent unexpected accident.

- Prepare container and waste cloths when performing work which oil could possibly spill. If oil spills, wipe it off immediately to prevent from penetrating into floor or flowing outside, for environmental protection.
- Follow all government regulations concerning disposal of refuse when disposing.

General Description

REAR SUSPENSION

2. GENERAL TOOL

TOOL NAME	REMARKS
Alignment tester	Used for measuring wheel alignment.
Toe-in gauge	Used for toe-in measurement.
Jack	Used for removing and installing suspension.
Bearing puller	Used for removing bushings.
Tie-rod ball joint puller	Used for disconnecting the lateral link assembly - front.
Coil spring compressor	Used for disassembling and assembling shock absorber assembly.

2. Wheel Alignment

A: INSPECTION

NOTE:

Measure and adjust the front and rear wheel alignment at a time. Refer to “Wheel Alignment” in “FRONT SUSPENSION” section for measurement or adjustment of wheel alignment.

- Inspection: <Ref. to FS-7, INSPECTION, Wheel Alignment.>
- Adjustment: <Ref. to FS-11, ADJUSTMENT, Wheel Alignment.>

Rear Sub Frame

REAR SUSPENSION

3. Rear Sub Frame

A: REMOVAL

- 1) Disconnect the ground cable from battery. <Ref. to NT-6, BATTERY, NOTE, Note.>
- 2) Lift up the vehicle, and then remove the rear wheels.
- 3) Remove the bolts and clips, and remove the under cover - front.

(1) Under cover - front

(2) Mud guard - front

(3) Spacer - under cover

- 4) Remove the exhaust pipe and muffler.
 - Center exhaust pipe & rear exhaust pipe: <Ref. to EX(H4DO)-17, REMOVAL, Rear Exhaust Pipe.>
 - Muffler: <Ref. to EX(H4DO)-20, REMOVAL, Muffler.>
- 5) Remove the bolts to remove the front heat shield cover.

- 6) Remove the propeller shaft assembly. <Ref. to DS-11, REMOVAL, Propeller Shaft.>
- 7) Remove the rear ABS wheel speed sensor from the housing assembly - rear axle.
 - (1) Remove the bolts, and remove the rear ABS wheel speed sensor.
 - (2) Remove the rear ABS wheel speed sensor harness from the upper arm assembly.

CAUTION:

- Be careful not to damage the sensor.
- Do not apply excessive force to the sensor harness.
- Leave the sensor harness clamp (white arrow) on the vehicle side.

RS-00429

- 8) Remove the caliper body assembly from the housing assembly - rear axle.
 - (1) Remove the bolts and then remove the brake hose bracket and caliper body assembly.

RS-00458

Rear Sub Frame

REAR SUSPENSION

(2) Prepare wiring harnesses etc. to be discarded, and suspend the caliper body assembly from the shock absorber assembly with the harnesses.

9) Remove the rear parking brake cable from the parking brake assembly. <Ref. to PB-11, REMOVAL, Parking Brake Assembly (Rear Disc Brake).>

10) Remove the rear parking brake cable from the back plate - rear brake.

(1) Remove the clamp B - hand brake cable (a) from the back plate - rear brake.

(2) Remove the cable clamp (b) from the back plate - rear brake.

(3) Remove the cable clamp (c) and pull out the cable assembly - parking brake.

11) Remove the clamp of the sub rear harness.

12) Remove the sensor assembly - headlight beam leveler. (Model with auto headlight beam leveler, left side only)

CAUTION:

Do not apply impact to the sensor assembly - headlight beam leveler or forcibly move the arm. Doing so may cause sensor damage and malfunction.

- (1) Disconnect the connector of the sensor assembly - headlight beam leveler.
- (2) Remove the nuts, and remove the sensor assembly - headlight beam leveler.

Rear Sub Frame

REAR SUSPENSION

13) Remove the bolt and nuts and remove the fuel tank protector. <Ref. to FU(H4DO)-112, REMOVAL, Fuel Tank Protector.>

14) Remove the rear sub frame assembly.

(1) Remove the bolts, and remove the stay - rear frame COMPL.

(2) Remove the bolts from the lower side of rear shock absorber assembly.

- (3) Support the rear sub frame assembly using a transmission jack.
- (4) Remove the bolt, and remove the left and right sub frame supports.
- (5) Remove the bolts, then remove the rear sub frame assembly.

RS-00405

15) As necessary, remove each part from the rear sub frame assembly.

B: INSTALLATION

CAUTION:

- Be sure to use a new self-locking nut.
- Always tighten the bushing in the state where the vehicle is at curb weight and the wheels are in full contact with the ground.
- Install so that the front end of the under cover (b) comes inside the bumper face - front (a), and the front end of the mud guard (c) comes outside the bumper face - front (a).

COM00138

Rear Sub Frame

REAR SUSPENSION

- 1) Check the removed parts for wear, damage and crack, and repair or replace them if faulty.
- 2) Install each part in the reverse order of removal.

Tightening torque:

- **Rear suspension parts:** <Ref. to RS-3, COMPONENT, General Description.>
- **Fuel tank protector:** <Ref. to FU(H4DO)-112, REMOVAL, Fuel Tank Protector.>
- **Rear disc brake parts:** <Ref. to BR-5, REAR DISC BRAKE, COMPONENT, General Description.>
- **Parking brake parts:** <Ref. to PB-3, PARKING BRAKE LEVER & CABLE, COMPONENT, General Description.>
- **Exhaust pipe parts:** <Ref. to EX(H4DO)-2, FRONT EXHAUST PIPE AND CENTER EXHAUST PIPE, COMPONENT, General Description.>
- **Propeller shaft parts:** <Ref. to DS-13, INSTALLATION, Propeller Shaft.>

- 3) Install the under cover - front.

Tightening torque:

18 N·m (1.84 kgf-m, 13.3 ft-lb)

- 4) Bleed air from brake system. <Ref. to BR-61, BRAKE LINE, PROCEDURE, Air Bleeding.>
- 5) Install the rear wheels.

Tightening torque:

Except for C4 model: 120 N·m (12.24 kgf-m, 88.5 ft-lb)

C4 model: 100 N·m (10.20 kgf-m, 73.8 ft-lb)

- 6) Inspect the wheel alignment and adjust if necessary.
 - Inspection: <Ref. to FS-7, INSPECTION, Wheel Alignment.>
 - Adjustment: <Ref. to FS-11, ADJUSTMENT, Wheel Alignment.>

CAUTION:

When the wheel alignment has been adjusted, perform the following VDC setting mode.

- Model without EyeSight: VDC sensor midpoint setting mode <Ref. to VDC-23, VDC SENSOR MID-POINT SETTING MODE (MODELS WITHOUT EyeSight), ADJUSTMENT, VDC Control Module and Hydraulic Control Unit (VDCCM&H/U).>
- Model with EyeSight: Neutral of Steering Angle Sensor & Lateral G Sensor 0 point setting <Ref. to VDC-23, NEUTRAL OF STEERING ANGLE SENSOR & LATERAL G SENSOR 0 POINT SETTING (MODEL WITH EyeSight), ADJUSTMENT, VDC Control Module and Hydraulic Control Unit (VDCCM&H/U).>
- Model with EyeSight: Longitudinal G sensor & lateral G sensor 0 point setting <Ref. to VDC-24, LONGITUDINAL G SENSOR & LATERAL G SENSOR 0 POINT SETTING MODE (MODEL WITH EyeSight), ADJUSTMENT, VDC Control Module and Hydraulic Control Unit (VDCCM&H/U).>

- 7) Connect the battery ground terminal.

- 8) Perform reinitialization of the auto headlight beam leveler system. (Model with auto headlight beam leveler) <Ref. to LI-18, PROCEDURE, Auto Headlight Beam Leveler System.>

C: INSPECTION

Check the removed parts for wear, damage and crack, and repair or replace them if faulty.

4. Rear Stabilizer

A: REMOVAL

- 1) Lift up the vehicle, and then remove the rear wheels.
- 2) Remove the rear stabilizer.
 - (1) Remove the left and right stabilizer links.
 - (2) Detach the clamp - stabilizer bushing and remove the rear stabilizer.

RS-00351

Rear Stabilizer

REAR SUSPENSION

B: INSTALLATION

CAUTION:

- Be sure to use a new flange nut and self-locking nut.
- Always tighten the bushing in the state where the vehicle is at curb weight and the wheels are in full contact with the ground.
- Install the clamp - stabilizer bushing with the "G" character facing upward.
- When installing, align the edge of identification paint (a) to the end face of the bushing (b).

- 1) Before installation, inspect the following items and replace any faulty part with a new one.
 - Check the bushing - stabilizer for abnormal cracks, fatigue or damage.
 - Check the stabilizer link for damage.
- 2) Install each part in the reverse order of removal.

Tightening torque:

Clamp - stabilizer bushing: 30 N·m (3.06 kgf-m, 22.1 ft-lb)

Stabilizer link: 38 N·m (3.87 kgf-m, 28.0 ft-lb)

- 3) Install the rear wheels.

Tightening torque:

Except for C4 model: 120 N·m (12.24 kgf-m, 88.5 ft-lb)

C4 model: 100 N·m (10.20 kgf-m, 73.8 ft-lb)

5. Rear Trailing Link

A: REMOVAL

- 1) Lift up the vehicle, and then remove the rear wheels.
- 2) Remove the bolts and nuts, and then remove the trailing link.

B: INSTALLATION

CAUTION:

- Be sure to use a new self-locking nut.
- Always tighten the bushing in the state where the vehicle is at curb weight and the wheels are in full contact with the ground.

- 1) Install each part in the reverse order of removal.

Tightening torque:

Refer to "COMPONENT" of "General Description". <Ref. to RS-3, COMPONENT, General Description.>

- 2) Install the rear wheels.

Tightening torque:

Except for C4 model: 120 N·m (12.24 kgf-m, 88.5 ft-lb)

C4 model: 100 N·m (10.20 kgf-m, 73.8 ft-lb)

Rear Trailing Link

REAR SUSPENSION

C: DISASSEMBLY

1. BUSHING A - TRAILING LINK

Using the ST, push out the bushing A - trailing link.

Preparation tool:

ST-A: INSTALLER (899874100)

ST-B: INSTALLER & REMOVER (BASE) (20099PA010)

2. BUSHING - TRAILING LINK

For the removal procedure of bushing - trailing link, refer to "Rear Axle" in the "DRIVE SHAFT SYSTEM" section. <Ref. to DS-40, REAR BUSHING, DISASSEMBLY, Rear Axle.>

D: ASSEMBLY**1. BUSHING A - TRAILING LINK**

- 1) Before assembly, inspect the following items and replace any faulty part with a new one.
 - Perform visual check for damage or bend on the trailing link.
 - Visually check the bushing for abnormal cracks, fatigue or damage.
- 2) Using the ST-A and ST-B, press-fit the bushing.

CAUTION:

Make sure to press the bushing straight in.

Preparation tool:

ST-A: INSTALLER (899874100)

ST-B: INSTALLER & REMOVER (BASE) (20099PA010)

**2. BUSHING - TRAILING LINK**

For the installation procedure of bushing - trailing link, refer to "Rear Axle" in the "DRIVE SHAFT SYSTEM" section. <Ref. to DS-40, REAR BUSHING, DISASSEMBLY, Rear Axle.>

Upper Arm

REAR SUSPENSION

6. Upper Arm

A: REMOVAL

- 1) Remove the rear sub frame assembly. <Ref. to RS-10, REMOVAL, Rear Sub Frame.>
- 2) Remove the bolts and nuts to remove the upper arm assembly.

B: INSTALLATION

CAUTION:

- Use a new self-locking nut.
- Always tighten the bushing when the arm is positioned in the state where the vehicle is at curb weight and the wheels are in full contact with the ground.

- 1) Before installation, inspect the following items and replace any faulty part with a new one.
 - Visually check the upper arm assembly for damage and deformation.
 - Visually check the bushing for abnormal cracks, fatigue or damage.
 - Visually check the dust cover on the ball joint for abnormal cracks, fatigue or damage.

- 2) Install the upper arm assembly to the rear sub frame assembly.
- (1) Make the installation sections of the rear lateral link assembly (the bolt on the housing assembly - rear axle side and the bolt on the rear sub frame assembly side) horizontal.
 - (2) Install the upper arm assembly to the rear sub frame assembly.

RS-00419

Tightening torque:

Upper arm assembly — rear sub frame assembly: 90 N·m (9.18 kgf-m, 66.4 ft-lb)

- 3) Connect the upper arm assembly and the housing assembly - rear axle.

Tightening torque:

Upper arm assembly — housing assembly - rear axle: 80 N·m (8.16 kgf-m, 59.0 ft-lb)

- 4) Install the rear sub frame assembly in the reverse order of removal. <Ref. to RS-15, INSTALLATION, Rear Sub Frame.>
- 5) Route the rear ABS wheel speed sensor cable to the upper arm assembly.
- 6) Install the rear wheels.

Tightening torque:

Except for C4 model: 120 N·m (12.24 kgf-m, 88.5 ft-lb)

C4 model: 100 N·m (10.20 kgf-m, 73.8 ft-lb)

- 7) Inspect the wheel alignment and adjust if necessary.
- Inspection: <Ref. to FS-7, INSPECTION, Wheel Alignment.>
 - Adjustment: <Ref. to FS-11, ADJUSTMENT, Wheel Alignment.>

CAUTION:

When the wheel alignment has been adjusted, perform the following VDC setting mode.

- Model without EyeSight: VDC sensor midpoint setting mode <Ref. to VDC-23, VDC SENSOR MID-POINT SETTING MODE (MODELS WITHOUT EyeSight), ADJUSTMENT, VDC Control Module and Hydraulic Control Unit (VDCCM&H/U).>
- Model with EyeSight: Neutral of Steering Angle Sensor & Lateral G Sensor 0 point setting <Ref. to VDC-23, NEUTRAL OF STEERING ANGLE SENSOR & LATERAL G SENSOR 0 POINT SETTING (MODEL WITH EyeSight), ADJUSTMENT, VDC Control Module and Hydraulic Control Unit (VDCCM&H/U).>
- Model with EyeSight: Longitudinal G sensor & lateral G sensor 0 point setting <Ref. to VDC-24, LONGITUDINAL G SENSOR & LATERAL G SENSOR 0 POINT SETTING MODE (MODEL WITH EyeSight), ADJUSTMENT, VDC Control Module and Hydraulic Control Unit (VDCCM&H/U).>

- 8) Connect the battery ground terminal.

- 9) Perform reinitialization of the auto headlight beam leveler system. (Model with auto headlight beam leveler) <Ref. to LI-18, PROCEDURE, Auto Headlight Beam Leveler System.>

Front Lateral Link

REAR SUSPENSION

7. Front Lateral Link

A: REMOVAL

- 1) Lift up the vehicle, and then remove the rear wheels.
- 2) Remove the bolts and nuts, and then remove the trailing link.

RS-00406

- 3) Remove the lateral link assembly - front.
 - (1) Remove the snap pin (a) and nut (b).
 - (2) Remove the ball joint from the housing assembly - rear axle.

Preparation tool:

Tie-rod ball joint puller

- (3) Scribe alignment marks (c) on the adjusting bolt for lateral link assembly - front and on the rear sub frame assembly.
- (4) Remove the adjusting bolt (d), and remove the lateral link assembly - front.

CAUTION:

When removing the adjusting bolt (d), make sure to fix the bolt head in place when loosening the nut (e).

RS-00411

B: INSTALLATION**CAUTION:**

- Be sure to use a new self-locking nut.
- Always tighten the bushing in the state where the vehicle is at curb weight and the wheels are in full contact with the ground.

1) Before installation, inspect the following items and replace any faulty part with a new one.

- Visually check the lateral link assembly - front for damage and deformation.
- Visually check the bushing for abnormal cracks, fatigue or damage.
- Visually check the dust cover on the ball joint for abnormal cracks, fatigue or damage.

2) Install each part in the reverse order of removal.

Tightening torque:

Refer to "COMPONENT" of "General Description". <Ref. to RS-3, COMPONENT, General Description.>

3) Install the rear wheels.

Tightening torque:

Except for C4 model: 120 N·m (12.24 kgf-m, 88.5 ft-lb)

C4 model: 100 N·m (10.20 kgf-m, 73.8 ft-lb)

4) Inspect the wheel alignment and adjust if necessary.

- Inspection: <Ref. to FS-7, INSPECTION, Wheel Alignment.>
- Adjustment: <Ref. to FS-11, ADJUSTMENT, Wheel Alignment.>

CAUTION:

When the wheel alignment has been adjusted, perform the following VDC setting mode.

– Model without EyeSight: VDC sensor midpoint setting mode <Ref. to VDC-23, VDC SENSOR MIDPOINT SETTING MODE (MODELS WITHOUT EyeSight), ADJUSTMENT, VDC Control Module and Hydraulic Control Unit (VDCCM&H/U).>

– Model with EyeSight: Neutral of Steering Angle Sensor & Lateral G Sensor 0 point setting <Ref. to VDC-23, NEUTRAL OF STEERING ANGLE SENSOR & LATERAL G SENSOR 0 POINT SETTING (MODEL WITH EyeSight), ADJUSTMENT, VDC Control Module and Hydraulic Control Unit (VDCCM&H/U).>

– Model with EyeSight: Longitudinal G sensor & lateral G sensor 0 point setting <Ref. to VDC-24, LONGITUDINAL G SENSOR & LATERAL G SENSOR 0 POINT SETTING MODE (MODEL WITH EyeSight), ADJUSTMENT, VDC Control Module and Hydraulic Control Unit (VDCCM&H/U).>

Front Lateral Link

REAR SUSPENSION

C: DISASSEMBLY

Using the ST, push out the bushing B - lateral link.

Preparation tool:

ST-A & ST-B: INSTALLER & REMOVER (20099AE000)

D: ASSEMBLY

1) Before assembly, inspect the following items and replace any faulty part with a new one.

- Visually check the lateral link assembly - front for damage and deformation.
- Visually check the bushing for abnormal cracks, fatigue or damage.
- Visually check the dust cover on the ball joint for damage.

2) Using the ST, press-fit the bushing B - lateral link.

CAUTION:

Make sure to press the bushing straight in.

Preparation tool:

ST-A & ST-B: INSTALLER & REMOVER (20099AE000)

8. Rear Lateral Link

A: REMOVAL

- 1) Disconnect the ground cable from battery. <Ref. to NT-6, BATTERY, NOTE, Note.>
- 2) Lift up the vehicle, and then remove the rear wheels.
- 3) Remove the sensor assembly - headlight beam leveler. (Model with auto headlight beam leveler, left side only)

CAUTION:

Do not apply impact to the sensor assembly - headlight beam leveler or forcibly move the arm. Doing so may cause sensor damage and malfunction.

- (1) Disconnect the connector of the sensor assembly - headlight beam leveler.
- (2) Remove the nuts, and remove the sensor assembly - headlight beam leveler.

- 4) Remove the bolts and nuts, and remove the lateral link assembly - rear on the left and right sides.
 - (1) Remove the nut and disconnect the rear stabilizer link.
 - (2) Remove the bolts from the lower side of rear shock absorber assembly.
 - (3) Disconnect the lateral link assembly - rear.

Rear Lateral Link

REAR SUSPENSION

B: INSTALLATION

CAUTION:

- Be sure to use a new self-locking nut.
- Always tighten the bushing in the state where the vehicle is at curb weight and the wheels are in full contact with the ground.

1) Before installation, inspect the following items and replace any faulty part with a new one.

- Visually check the lateral link assembly - rear for damage and deformation.
- Visually check the bushing for abnormal cracks, fatigue or damage.

2) Install each part in the reverse order of removal.

Tightening torque:

Refer to “COMPONENT” of “General Description”. <Ref. to RS-3, COMPONENT, General Description.>

3) Install the rear wheels.

Tightening torque:

Except for C4 model: 120 N·m (12.24 kgf-m, 88.5 ft-lb)

C4 model: 100 N·m (10.20 kgf-m, 73.8 ft-lb)

4) Inspect the wheel alignment and adjust if necessary.

- Inspection: <Ref. to FS-7, INSPECTION, Wheel Alignment.>
- Adjustment: <Ref. to FS-11, ADJUSTMENT, Wheel Alignment.>

CAUTION:

When the wheel alignment has been adjusted, perform the following VDC setting mode.

– Model without EyeSight: VDC sensor midpoint setting mode <Ref. to VDC-23, VDC SENSOR MID-POINT SETTING MODE (MODELS WITHOUT EyeSight), ADJUSTMENT, VDC Control Module and Hydraulic Control Unit (VDCCM&H/U).>

– Model with EyeSight: Neutral of Steering Angle Sensor & Lateral G Sensor 0 point setting <Ref. to VDC-23, NEUTRAL OF STEERING ANGLE SENSOR & LATERAL G SENSOR 0 POINT SETTING (MODEL WITH EyeSight), ADJUSTMENT, VDC Control Module and Hydraulic Control Unit (VDCCM&H/U).>

– Model with EyeSight: Longitudinal G sensor & lateral G sensor 0 point setting <Ref. to VDC-24, LONGITUDINAL G SENSOR & LATERAL G SENSOR 0 POINT SETTING MODE (MODEL WITH EyeSight), ADJUSTMENT, VDC Control Module and Hydraulic Control Unit (VDCCM&H/U).>

5) Perform reinitialization of the auto headlight beam leveler system. (Model with auto headlight beam leveler) <Ref. to LI-18, REINITIALIZATION, PROCEDURE, Auto Headlight Beam Leveler System.>

C: DISASSEMBLY

Using the ST, push out the bushing.

Preparation tool:

ST-A & ST-B: INSTALLER & REMOVER (20099AE010)

ST-C: INSTALLER & REMOVER (20099AE040)

RS-10013

D: ASSEMBLY

- 1) Before assembly, inspect the following items and replace any faulty part with a new one.
 - Visually check the lateral link assembly - rear for damage and deformation.
 - Visually check the bushing for abnormal cracks, fatigue or damage.
- 2) Using the ST, press the bushing into place.

Preparation tool:

ST-A & ST-B: INSTALLER & REMOVER (20099AE010)

ST-C: INSTALLER & REMOVER (20099AE040)

RS-00350

Rear Shock Absorber

REAR SUSPENSION

9. Rear Shock Absorber

A: REMOVAL

1. CROSSTREK MODEL

- 1) Disconnect the ground cable from battery. <Ref. to NT-6, BATTERY, NOTE, Note.>
- 2) Lift up the vehicle, and then remove the rear wheels.
- 3) Remove the sensor assembly - headlight beam leveler. (Model with auto headlight beam leveler, left side only)

CAUTION:

Do not apply impact to the sensor assembly - headlight beam leveler or forcibly move the arm. Doing so may cause sensor damage and malfunction.

- (1) Disconnect the connector of the sensor assembly - headlight beam leveler.
- (2) Remove the nuts, and remove the sensor assembly - headlight beam leveler.

- 4) Remove the bolts and nuts, and lower the lateral link assembly - rear.
 - (1) Remove the nut and disconnect the rear stabilizer link. (Model with rear stabilizer)
 - (2) Remove the bolts from the lower side of rear shock absorber assembly.
 - (3) Disconnect the housing assembly - rear axle from the lateral link assembly - rear.

5) Remove the mat - rear floor CTR and the spacer - rear floor side.

6) Remove the clips, and remove the trim panel - rear skirt.

Rear Shock Absorber

REAR SUSPENSION

7) Remove the lid upper rear (a) and the cap - rear strut (b) in the order from (1) to (6).

8) Remove the nuts on the upper side of rear shock absorber assembly.

9) Lower the lateral link assembly - rear, and remove the rear shock absorber assembly.

B: INSTALLATION**CAUTION:**

- Use a new flange nut.
- Always tighten the bushing in the state where the vehicle is at curb weight and the wheels are in full contact with the ground.

1) Install each part in the reverse order of removal.

Tightening torque:

Refer to “COMPONENT” of “General Description” for the tightening torque. <Ref. to RS-3, COMPONENT, General Description.>

2) Install the rear wheels.

Tightening torque:

Except for C4 model: 120 N·m (12.24 kgf-m, 88.5 ft-lb)

C4 model: 100 N·m (10.20 kgf-m, 73.8 ft-lb)

3) Inspect the wheel alignment and adjust if necessary.

- Inspection: <Ref. to FS-7, INSPECTION, Wheel Alignment.>
- Adjustment: <Ref. to FS-11, ADJUSTMENT, Wheel Alignment.>

CAUTION:

When the wheel alignment has been adjusted, perform the following VDC setting mode.

- Model without EyeSight: VDC sensor midpoint setting mode <Ref. to VDC-23, VDC SENSOR MID-POINT SETTING MODE (MODELS WITHOUT EyeSight), ADJUSTMENT, VDC Control Module and Hydraulic Control Unit (VDCCM&H/U).>
- Model with EyeSight: Neutral of Steering Angle Sensor & Lateral G Sensor 0 point setting <Ref. to VDC-23, NEUTRAL OF STEERING ANGLE SENSOR & LATERAL G SENSOR 0 POINT SETTING (MODEL WITH EyeSight), ADJUSTMENT, VDC Control Module and Hydraulic Control Unit (VDCCM&H/U).>
- Model with EyeSight: Longitudinal G sensor & lateral G sensor 0 point setting <Ref. to VDC-24, LONGITUDINAL G SENSOR & LATERAL G SENSOR 0 POINT SETTING MODE (MODEL WITH EyeSight), ADJUSTMENT, VDC Control Module and Hydraulic Control Unit (VDCCM&H/U).>

4) Perform reinitialization of the auto headlight beam leveler system. (Model with auto headlight beam leveler) <Ref. to LI-18, REINITIALIZATION, PROCEDURE, Auto Headlight Beam Leveler System.>

Rear Shock Absorber

REAR SUSPENSION

C: DISASSEMBLY

- 1) Using a coil spring compressor, compress the coil spring.
- 2) Using a hexagon wrench to prevent the shock absorber piston rod from turning, remove the self-locking nut with ST.

CAUTION:

When installing the coil spring compressor to the coil spring, follow the operation manual accompanied with the coil spring compressor during operation.

Preparation tool:

ST: STRUT MOUNT SOCKET (20399FG000)

NOTE:

<Example of coil spring compressor installation>

The installing position of coil spring compressor varies depending on the coil spring shape and winding number.

RS-00611

- 3) Remove the rubber seat - shock UPR and shock mount - rear from the shock absorber COMPL - rear.
- 4) Gradually decrease the compression pressure of compressor, and remove the coil spring - rear.
- 5) Remove the helper - rear and the dust cover - rear shock.

D: ASSEMBLY

- 1) Before assembly, check each part. <Ref. to RS-36, INSPECTION, Rear Shock Absorber.>
- 2) Using a coil spring compressor, compress the coil spring - rear.

CAUTION:

When installing the coil spring compressor to the coil spring, follow the operation manual accompanied with the coil spring compressor during operation.

3) Install by aligning with the edge surface of the coil spring - rear and the stopper portion of the lower side spring seat.

- (a) Coil spring - rear
- (b) 0+ 10 mm (0 + 0.4 in)
- (c) Spring seat stopper portion

4) Install the helper - rear and the dust cover - rear shock to the piston rod.

5) Fully pull up the piston rod in the upward direction.

6) Temporarily tighten the rubber seat - shock UPR and the shock mount - rear with new self-locking nuts.

NOTE:

Position the shock mount - rear as shown in the figure.

- A LH side
- B RH side

- (a) Front side of vehicle
- (b) Vehicle outside
- (c) $0^{\circ}\pm 10^{\circ}$
- (d) End portion of coil spring - rear

Rear Shock Absorber

REAR SUSPENSION

7) Using a hexagon wrench to prevent the shock absorber piston rod from turning, tighten the new self-locking nut with ST.

CAUTION:

Make sure that the shock mount - rear turns smoothly after tightening.

Preparation tool:

ST: STRUT MOUNT SOCKET (20399FG000)

Tightening torque:

25 N·m (2.55 kgf·m, 18.4 ft·lb)

8) Loosen the coil spring compressor carefully.

E: INSPECTION

- 1) Check for oil leaks.
- 2) Move the piston rod up and down to check that it operates smoothly without any hitch.

3) Check the piston rod for play as follows:

1. Fix the outer shell in place and fully extend the rod.
2. Set the dial gauge on the end of the rod L [10 mm (0.39 in)].
3. While applying a force of W [20 N (2 kgf, 4 lbf)] to the threaded part, read the dial gauge indication P_1 .
4. Apply a force of 20 N (2 kgf, 4 lbf) from the opposite direction of "W", and then read the dial gauge indication P_2 .

Play limit ($P_1 + P_2$): 0.8 mm (0.031 in)

F: DISPOSAL

CAUTION:

- Before discarding the strut COMPL and the shock absorber COMPL, be sure to wear goggles to protect eyes from gas, oil and cutting powder.
- Do not disassemble the strut COMPL and the shock absorber COMPL or throw them into flames.
- When discarding the strut COMPL and the shock absorber COMPL filled with gas, drill a hole on them to purge the gas.

1) Place the shock absorber on a level surface with the piston rod fully expanded.

2) Make a hole into the specified position 30 mm (1.18 in) deep using a drill with 2 — 3 mm (0.08 — 0.12 in) diameter.

(1) 40 mm (1.57 in)

General Diagnostic Table

REAR SUSPENSION

10. General Diagnostic Table

A: INSPECTION

1. IMPROPER VEHICLE POSTURE OR IMPROPER WHEEL ARCH HEIGHT

Possible cause	Corrective action
(1) Permanent distortion or damaged coil spring	Replace.
(2) Rough operation of shock absorber	Replace.
(3) Installation of the wrong shock absorber	Replace with proper parts.
(4) Installation of the wrong coil spring	Replace with proper parts.

2. POOR RIDE COMFORT

- 1) Large rebound shock
- 2) Rocking of the vehicle continues too long after running over bump and hump.
- 3) Excessive shock in bumping

Possible cause	Corrective action
(1) Damaged coil spring	Replace.
(2) Overinflation of tires	Adjust.
(3) Improper wheel arch height	Replace the coil springs with new parts.
(4) Defective operation of shock absorber	Replace.
(5) Damage or deformation of shock absorber mount	Replace.
(6) Unsuitable length (maximum or minimum) of shock absorber	Replace with appropriate parts.
(7) Deformation or loss of bushing	Replace.
(8) Deformation or damage of helper in shock absorber	Replace.
(9) Oil leakage from the shock absorber	Replace.

3. NOISE

Possible cause	Corrective action
(1) Wear or damage of shock absorber component parts	Replace.
(2) Loosening of the suspension link or arm installing bolt	Tighten to the specified torque.
(3) Deformation or loss of bushing	Replace.
(4) Unsuitable length (maximum or minimum) of shock absorber	Replace with appropriate parts.
(5) Damaged coil spring	Replace.
(6) Wear or damage of the ball joint	Replace.
(7) Deformation of the clamp - stabilizer bushing	Replace.

WHEEL AND TIRE SYSTEM

General Description

WHEEL AND TIRE SYSTEM

1. General Description

A: SPECIFICATION

1. NOTE

- (1) Inset
- (2) P.C.D.

NOTE:

Size and inflation pressure of the standard equipment tire, temporary tire and appropriate tire for equipment are described on the "Tire inflation pressure" label attached to the body side of the driver's door.

2. STANDARD EQUIPMENT TIRE & WHEEL

Tire size	Wheel size	Inset mm (in)	P.C.D. mm (in)	Tire inflation pressure kPa (kgf/cm ² , psi)	
				Front wheel	Rear wheel
P225/55R17 95H	17 × 7J	48 (1.89)	100 (3.94)	MT	220 (2.2, 32)
225/55R17 97 V				CVT	230 (2.3, 33)
				220 (2.2, 32)	210 (2.1, 30)

3. TEMPORARY TIRE & WHEEL

Tire size	Wheel size	Inset mm (in)	P.C.D. mm (in)	Tire inflation pressure kPa (kgf/cm ² , psi)	
				Front wheel	Rear wheel
T145/90D16 106M	16 × 4T	20 (0.79)	100 (3.94)	–	420 (4.2, 60)
185/65R17 90M	17 × 6JJ	55 (2.17)		–	290 (3.0, 42)

4. SERVICE DATA

Part	Axial runout	Radial runout
Steel wheel	1.5 mm (0.059 in)	
Aluminum wheel	1.0 mm (0.039 in)	

Wheel balancing	Standard	Service limit
Dynamic unbalance	5 g (0.18 oz) or less

General Description

WHEEL AND TIRE SYSTEM

C: PREPARATION TOOL

1. GENERAL TOOL

TOOL NAME	REMARKS
Air pressure gauge	Used for measuring tire air pressure.
Dial gauge	Used for measuring wheel runout.
Wheel balancer	Used for adjusting wheel balance.
Circuit tester	Used for measuring resistance, voltage and current.

2. Tire and Wheel

A: REMOVAL

- 1) Lift up the vehicle.
- 2) Remove the wheel nut.
- 3) Remove the wheels.

CAUTION:

When removing the wheels, be careful not to damage the bolt - hub.

B: INSTALLATION

- 1) Install the wheels to vehicle.
- 2) Tighten the wheel nuts to the specified torque.

Tightening torque:

Except for C4 model: 120 N·m (12.24 kgf-m, 88.5 ft-lb)

C4 model: 100 N·m (10.2 kgf-m, 73.8 ft-lb)

C: INSPECTION

1. TIRE

CAUTION:

When replacing a tire, make sure to use tires of the same size, construction and load range as originally installed.

- 1) Tire size and tire inflation pressure check <Ref. to WT-2, SPECIFICATION, General Description.>
- 2) Cracks, damage and wear check
- 3) Tire runout check
 - (1) Lift up the vehicle.
 - (2) Slowly rotate the wheel to check rim "runout" using a dial gauge.

- Aluminum wheel

Axial runout limit	Radial runout limit
1.0 mm (0.039 in)	

- Steel wheel

Axial runout limit	Radial runout limit
1.5 mm (0.059 in)	

- (3) If the rim runout exceeds service limit, replace the wheel.

2. TIRE ROTATION

NOTE:

Rotate tires periodically (9,600 km/6,000 miles) in order to prolong life and to prevent uneven wear. Rotate tires as shown in the figure depending on whether or not the direction of the tire rotation is specified.

Tire and Wheel

WHEEL AND TIRE SYSTEM

- When the direction of tire rotation is not specified

(1) Front side of vehicle

- When the direction of tire rotation is specified

(1) Front side of vehicle

3. WHEEL BALANCING

- 1) Using the wheel balancer, measure wheel balance.
- 2) Adjust the wheel balancing.

NOTE:

- Unbalance after adjusting the wheel balancing should be 5 g (0.18 oz) or less.
- When using the adhesive type weight, degrease the surface where the adhesive type weight will be applied securely.
- After applying the adhesive type weight, apply a force to the weight and attain full adhesion.
- Using the knock-on type weight, check the size of the knock-on part.

- (1) Knock-on type weight for aluminum wheel
- (2) Knock-on type weight for steel wheel

Service limit A:

Knock-on type weight for steel wheel: 2.0 mm (0.079 in)

Knock-on type weight for aluminum wheel: 5.0 mm (0.197 in)

3. Temporary Tire

A: NOTE

“T-type” or “Temporary” tire for temporary use is equipped as a temporary tire.

CAUTION:

- The “T-type” or “Temporary” tire is only for temporary use. Replace with a conventional tire as soon as possible.
- Do not use tire chains for “T-type” or “Temporary” tires. Because tire size is small, tire chains can not be installed and will damage the vehicle and tires.
- Do not drive at a speed greater than 80 km/h (50 MPH).
- Drive the vehicle as slowly as possible and avoid bumps on the road.

B: REPLACEMENT

Refer to “Tire and Wheel” for removal and installation of the “T-type” or “Temporary” tire. <Ref. to WT-5, Tire and Wheel.>

C: INSPECTION

Refer to “Tire and Wheel” for inspection of the “T-type” or “Temporary” tire. <Ref. to WT-5, TIRE, INSPECTION, Tire and Wheel.>

Tire Pressure Monitoring System

WHEEL AND TIRE SYSTEM

4. Tire Pressure Monitoring System

A: REMOVAL

1. TRANSMITTER (TIRE INFLATION PRESSURE SENSOR)

- 1) Remove the wheels from the vehicle. <Ref. to WT-5, REMOVAL, Tire and Wheel.>
- 2) Remove the tires from wheels.

CAUTION:

Use a tire changer when removing the tire from the wheel.

- 3) Loosen the screw to remove the transmitter from the valve stem.

CAUTION:

Do not reuse the valve and screw.

Replace the valve and screw with a new part even when reusing transmitter.

- (1) Wheel
- (2) Transmitter
- (3) Screw
- (4) Valve

- 4) Remove the valve from the wheel.

2. TPMS & KEYLESS CONTROL MODULE

NOTE:

TPMS control module is integrated with the keyless entry control module.

Keyless entry model

- 1) Disconnect the ground cable from battery and wait for at least 60 seconds before starting work. <Ref. to NT-6, BATTERY, NOTE, Note.>
- 2) Remove the trim panel - rear apron LH. <Ref. to EI-80, CROSSTREK MODEL, REMOVAL, Rear Quarter Trim.>

- 3) Remove the TPMS & keyless control module.
 - (1) Disconnect the connector.
 - (2) Remove the bolt and then remove the TPMS & keyless control module.

3. TPMS CM

NOTE:

TPMS control module is separated from the keyless entry control module.

- 1) Disconnect the ground cable from battery and wait for at least 60 seconds before starting work. <Ref. to NT-6, BATTERY, NOTE, Note.>
- 2) Remove the trim panel - rear apron LH. <Ref. to EI-80, CROSSTREK MODEL, REMOVAL, Rear Quarter Trim.>
- 3) Remove the TPMS CM.
 - (1) Disconnect the connector.
 - (2) Remove the bolts to remove the TPMS CM.

Tire Pressure Monitoring System

WHEEL AND TIRE SYSTEM

B: INSTALLATION

1. TRANSMITTER (TIRE INFLATION PRESSURE SENSOR)

CAUTION:

Use the new transmitter assembly or replace the new valve and screw, when installing.

1) Replace the valve and screw with a new part when reusing transmitter.

- (1) Screw
- (2) Transmitter
- (3) Valve

Tightening torque:

1.4 N·m (0.14 kgf·m, 1.0 ft·lb)

2) Install the transmitter to the wheel by aligning it with valve hole.

NOTE:

When using the jig that pulls the valve cap by hooking its neck part, use another short-type cap.

3) Install the tires to wheels.

CAUTION:

- Use a tire changer when installing tire to wheel.
- To prevent damaging the transmitter, set the tire changer boom in the position as shown in the figure.

- (1) Transmitter
- (2) Direction of turn table rotation
- (3) 135°
- (4) Tire changer boom
- (5) 90°
- (6) Starting point for fitting the bead to the rim

4) Install the wheels to vehicle. <Ref. to WT-5, INSTALLATION, Tire and Wheel.>

5) Register the transmitter ID to the TPMS & keyless control module. <Ref. to TPM(diag)-14, Register Transmitter (ID).>

2. TPMS & KEYLESS CONTROL MODULE

Install each part in the reverse order of removal.

Tightening torque:

13 N·m (1.33 kgf-m, 9.6 ft-lb)

3. TPMS CM

Install each part in the reverse order of removal.

Tightening torque:

7.5 N·m (0.76 kgf-m, 5.5 ft-lb)

C: ADJUSTMENT

Re-register the transmitter ID when transmitter has been replaced. <Ref. to TPM(diag)-14, Register Transmitter (ID).>

General Diagnostic Table

WHEEL AND TIRE SYSTEM

5. General Diagnostic Table

A: INSPECTION

Symptoms	Possible cause	Corrective action
Wheel is out of balance.	Improperly inflated tire.	Adjust the tire pressure.
	Uneven wear	Check the tire referring to "Abnormal tire wear" in this table, carry out the procedure and replace the tire.
	Front wheel alignment	Check or adjust the front wheel alignment. • Inspection: <Ref. to FS-7, INSPECTION, Wheel Alignment.> • Adjustment: <Ref. to FS-11, ADJUSTMENT, Wheel Alignment.>
	Rear wheel alignment	Check or adjust the rear wheel alignment. • Inspection: <Ref. to FS-7, INSPECTION, Wheel Alignment.> • Adjustment: <Ref. to FS-11, ADJUSTMENT, Wheel Alignment.>
	Front strut	Check the front strut. <Ref. to FS-43, INSPECTION, Front Strut.>
	Rear shock absorber	Check the rear shock absorber. <Ref. to RS-36, INSPECTION, Rear Shock Absorber.>
	Housing ASSY - front axle	Check the housing assembly - front axle. <Ref. to DS-31, INSPECTION, Front Hub Unit Bearing.>
	Hub unit COMPL - front axle	Check the hub unit COMPL - front axle. <Ref. to DS-31, INSPECTION, Front Hub Unit Bearing.>
	Hub unit COMPL - rear axle	Check the hub unit COMPL - rear axle. <Ref. to DS-51, INSPECTION, Rear Hub Unit Bearing.>
Vehicle is abnormally out of balance.	Improperly inflated tire.	Adjust the tire pressure.
	Uneven wear	Check the tire referring to "Abnormal tire wear" in this table, carry out the procedure and replace the tire.
	Front stabilizer	Inspect the front stabilizer.
	Front wheel alignment	Check or adjust the front wheel alignment. • Inspection: <Ref. to FS-7, INSPECTION, Wheel Alignment.> • Adjustment: <Ref. to FS-11, ADJUSTMENT, Wheel Alignment.>
	Rear wheel alignment	Check or adjust the rear wheel alignment. • Inspection: <Ref. to FS-7, INSPECTION, Wheel Alignment.> • Adjustment: <Ref. to FS-11, ADJUSTMENT, Wheel Alignment.>
Abnormal wheel vibration	Improperly inflated tire.	Adjust the tire pressure.
	Uneven wear	Check the tire referring to "Abnormal tire wear" in this table, carry out the procedure and replace the tire.
	Improper wheel balancing	Check the wheel balance. <Ref. to WT-6, WHEEL BALANCING, INSPECTION, Tire and Wheel.>
	Housing ASSY - front axle	Check the housing assembly - front axle. <Ref. to DS-31, INSPECTION, Front Hub Unit Bearing.>
	Hub unit COMPL - front axle	Check the hub unit COMPL - front axle. <Ref. to DS-31, INSPECTION, Front Hub Unit Bearing.>
	Hub unit COMPL - rear axle	Check the hub unit COMPL - rear axle. <Ref. to DS-51, INSPECTION, Rear Hub Unit Bearing.>
Abnormal tire wear	Improperly inflated tire.	Adjust the tire pressure.
	Improper wheel balancing	Check the wheel balance. <Ref. to WT-6, WHEEL BALANCING, INSPECTION, Tire and Wheel.>
	Front wheel alignment	Check or adjust the front wheel alignment. • Inspection: <Ref. to FS-7, INSPECTION, Wheel Alignment.> • Adjustment: <Ref. to FS-11, ADJUSTMENT, Wheel Alignment.>
	Rear wheel alignment	Check or adjust the rear wheel alignment. • Inspection: <Ref. to FS-7, INSPECTION, Wheel Alignment.> • Adjustment: <Ref. to FS-11, ADJUSTMENT, Wheel Alignment.>

14. Diagnostic Procedure with Diagnostic Trouble Code (DTC)	23
15. General Diagnostic Table	34

Basic Diagnostic Procedure

TIRE PRESSURE MONITORING SYSTEM (DIAGNOSTICS)

1. Basic Diagnostic Procedure

A: PROCEDURE

CAUTION:

Before removal or installation, be sure to remove any foreign matter (dust, moisture, oil, etc.) from the TPMS & keyless entry CM connector or TPMS CM connector.

NOTE:

To check harness for open or short circuits, shake the suspected trouble spot or connector.

	Step	Check	Yes	No
1	CHECK PRE-INSPECTION. 1) Check with the user regarding when the warning light lit or started blinking. 2) Before performing diagnostics, check all components which may adversely affect the tire pressure monitor system. <Ref. to TPM(diag)-4, INSPECTION, General Description.>	Is the component that might affect the tire pressure monitor system normal?	Go to step 2.	Repair or replace each component.
2	CHECK DIAGNOSTIC TROUBLE CODE (DTC). 1) Turn the ignition switch to OFF. 2) Connect the Subaru Select Monitor to data link connector. 3) Turn the ignition switch to ON and run the Subaru Select Monitor. NOTE: If the communication function of the Subaru Select Monitor cannot be executed normally, check the communication circuit. <Ref. to TPM(diag)-8, COMMUNICATION FOR INITIALIZING IMPOSSIBLE, INSPECTION, Subaru Select Monitor.> 4) Read the DTC. <Ref. to TPM(diag)-11, OPERATION, Read Diagnostic Trouble Code (DTC).>	Is DTC displayed?	Go to step 4.	Go to step 3.
3	PERFORM GENERAL DIAGNOSTICS. 1) Perform the inspection by referring to "General Diagnostic Table". <Ref. to TPM(diag)-34, General Diagnostic Table.> 2) Perform the Clear Memory Mode. <Ref. to TPM(diag)-12, OPERATION, Clear Memory Mode.> 3) Perform the Inspection Mode. <Ref. to TPM(diag)-16, Inspection Mode.> 4) Read the DTC. <Ref. to TPM(diag)-11, OPERATION, Read Diagnostic Trouble Code (DTC).> Check the DTC is not displayed.	Does the tire pressure warning light illuminates for about 2 seconds and then goes off after turning on the ignition switch, and then go out?	Finish the diagnosis.	Check the tire inflation pressure warning light. <Ref. to TPM(diag)-17, Tire Pressure Warning Light / Trouble Indicator Light Illumination Pattern.>

Basic Diagnostic Procedure

TIRE PRESSURE MONITORING SYSTEM (DIAGNOSTICS)

Step	Check	Yes	No
<p>4</p> <p>CHECK FOR REPRODUCTION OF MAL-FUNCTION.</p> <p>1) Perform the drive test. Drive the vehicle at 40 km/h (25 MPH) or faster for at least 10 minutes.</p> <p>2) Read the DTC. <Ref. to TPM(diag)-11, OPERATION, Read Diagnostic Trouble Code (DTC).></p>	<p>Is the DTC displayed as “Current malfunction”?</p>	<p>Go to step 5.</p>	<p>When DTC is detected as “Past faults”, the circuit has returned to a normal condition at this time. Reproduce the failure, and then perform the diagnosis again.</p> <p>NOTE: In this case, a temporary communication error due to radio wave environment inside and outside the vehicle may be possible.</p>
<p>5</p> <p>PERFORM DIAGNOSIS.</p> <p>1) Refer to “List of Diagnostic Trouble Code (DTC)”.</p> <p>2) Correct the cause of trouble.</p> <p>3) Perform the Clear Memory Mode. <Ref. to TPM(diag)-12, OPERATION, Clear Memory Mode.></p> <p>4) Perform the drive test. Drive the vehicle at 40 km/h (25 MPH) or faster for at least 10 minutes.</p> <p>5) Read the DTC. <Ref. to TPM(diag)-11, OPERATION, Read Diagnostic Trouble Code (DTC).></p>	<p>Is DTC displayed?</p>	<p>Repeat steps 1 to 4 until DTC is not shown.</p>	<p>Finish the diagnosis.</p>

General Description

TIRE PRESSURE MONITORING SYSTEM (DIAGNOSTICS)

2. General Description

A: CAUTION

1. SUPPLEMENTAL RESTRAINT SYSTEM “AIRBAG”

Airbag system wiring harness is routed near the TPM control module.

CAUTION:

- Do not use electrical test equipment on any of the airbag system wiring harness circuits.
- Be careful not to damage the wiring harness of the airbag system when servicing the TPMS & keyless entry CM or TPMS CM.

2. TPMS & KEYLESS ENTRY CM OR TPMS CM

- If the transmitter is replaced, ID registration for the transmitter is required. <Ref. to TPM(diag)-14, OPERATION, Register Transmitter (ID).>
- When adjusting tire pressure indoors in winter, there is a big temperature difference between the indoor facilities and outside. Once the car is outside where the temperature is lower, the air pressure in the tires will drop, causing the tire pressure warning light to illuminate, even if the pressure in the tires was adjusted to standard values indoors. To avoid this, it is necessary to adjust the tire pressure to the high side in consideration of the difference in temperature between inside and outside according to the following table.
- P195/65R15, P205/55R16, P225/55R17 (CVT)

Temperature °C (°F)	Indoor temperature	15.5 (60)		
	Ambient temperature	-1 (30)	-12 (10)	-23 (-10)
Air pressure kPa (psi)	Front	250 (36)	265 (38)	280 (40)
	Rear	240 (35)	255 (37)	270 (39)

- P205/50R17, P225/55R17 (MT)

Temperature °C (°F)	Indoor temperature	15.5 (60)		
	Ambient temperature	-1 (30)	-12 (10)	-23 (-10)
Air pressure kPa (psi)	Front	240 (35)	255 (37)	270 (39)
	Rear	230 (33)	245 (35)	255 (37)

B: INSPECTION

Before performing diagnosis, check the following item which might affect the quality of the tire pressure monitoring system.

1. TIRE

- Inspect that the tire pressure is within the specification while the tire is cool. (Refer to Tire Caution Label.)
- Check the tires for damage or the insertion of foreign matters.

2. BATTERY

Check the battery. <Ref. to SC(H4DO)-51, Battery.>

General Description

TIRE PRESSURE MONITORING SYSTEM (DIAGNOSTICS)

C: PREPARATION TOOL

1. SPECIAL TOOL

ILLUSTRATION	TOOL NUMBER	DESCRIPTION	REMARKS
 STSSM4	—	SUBARU SELECT MONITOR 4	Used for setting of each function and troubleshooting for electrical system. NOTE: For detailed operation procedures of Subaru Select Monitor 4, refer to “Application help”.

2. GENERAL TOOL

TOOL NAME	REMARKS
Circuit tester	Used for measuring resistance, voltage and current.
Transmitter registration tool	Used to register the transmitter ID. Manufacturer: Kent-Moore Item number: J45295
DST-i	Used together with Subaru Select Monitor 4.

Electrical Component Location

TIRE PRESSURE MONITORING SYSTEM (DIAGNOSTICS)

3. Electrical Component Location

A: LOCATION

TPM00101

(1) TPMS & keyless entry CM or TPMS CM

(2) Tire pressure warning light

(3) Snap-in type transmitter

B: WIRING DIAGRAM

Refer to “Tire Pressure Monitoring System” in the wiring diagram. <Ref. to WI-224, WIRING DIAGRAM, Tire Pressure Monitoring System.>

Subaru Select Monitor

TIRE PRESSURE MONITORING SYSTEM (DIAGNOSTICS)

5. Subaru Select Monitor

A: OPERATION

For detailed operation procedures, refer to “Application help”.

NOTE:

If TPMS & keyless entry CM or TPMS CM and Subaru Select Monitor cannot communicate, check the communication circuit. <Ref. to TPM(diag)-8, INSPECTION, Subaru Select Monitor.>

B: INSPECTION

1. COMMUNICATION FOR INITIALIZING IMPOSSIBLE

Detecting condition:

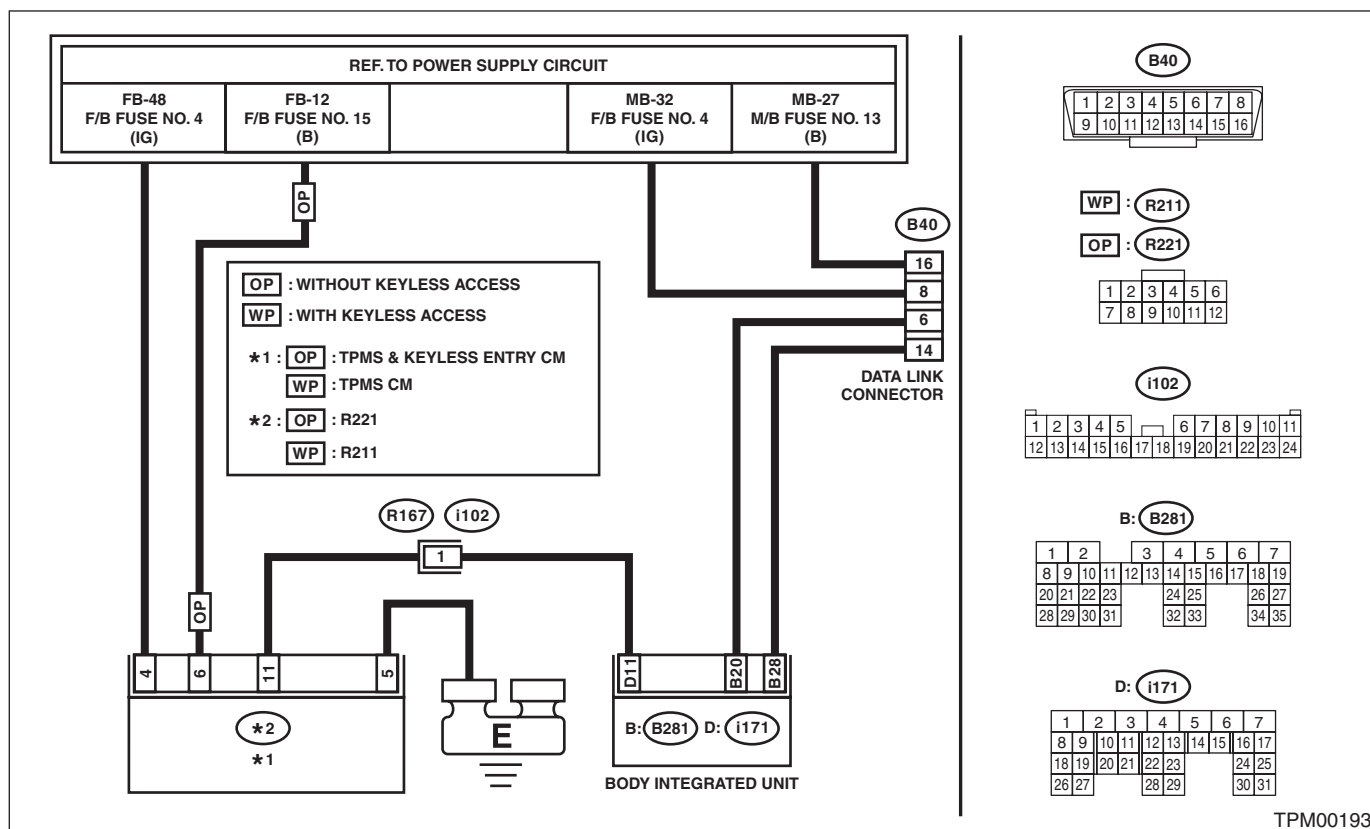

Defective harness connector

Trouble symptom:

Communication is impossible between the TPMS & keyless entry CM or TPMS CM and the Subaru Select Monitor.

WIRING DIAGRAM:

Tire Pressure Monitoring System <Ref. to WI-224, WIRING DIAGRAM, Tire Pressure Monitoring System.>

Step	Check	Yes	No
1	CHECK IGNITION SWITCH. Is the ignition switch ON?	Go to step 2.	Turn the ignition switch to ON, and select TPM mode using Subaru Select Monitor.
2	CHECK BATTERY. Check the battery voltage. <Ref. to SC(H4DO)-51, Battery.> Is the voltage 11 V or more?	Go to step 3.	Charge or replace the battery.
3	CHECK BATTERY TERMINAL. Check the battery terminal. <Ref. to SC(H4DO)-51, Battery.> Is there poor contact at battery terminal?	Replace or tighten the battery terminal.	Go to step 4.

Subaru Select Monitor

TIRE PRESSURE MONITORING SYSTEM (DIAGNOSTICS)

Step	Check	Yes	No	
4	CHECK SUBARU SELECT MONITOR COMMUNICATION. 1) Turn the ignition switch to ON. 2) Using the Subaru Select Monitor, check whether communication to other systems can be executed normally.	Is the system name displayed on Subaru Select Monitor?	Go to step 8.	Go to step 5.
5	CHECK SUBARU SELECT MONITOR COMMUNICATION. 1) Turn the ignition switch to OFF. 2) Disconnect the TPMS & keyless entry CM connector or TPMS CM connector. 3) Turn the ignition switch to ON. 4) Check whether communication to other systems can be executed normally.	Is the system name displayed on Subaru Select Monitor?	Replace the TPMS & keyless entry CM or TPMS CM. <Ref. to WT-8, Tire Pressure Monitoring System.>	Go to step 6.
6	CHECK HARNESS CONNECTOR BETWEEN EACH CONTROL MODULE AND BODY INTEGRATED UNIT. 1) Turn the ignition switch to OFF. 2) Disconnect the connector of the TPMS & keyless entry CM or TPMS CM. 3) Measure the resistance between the body integrated unit and chassis ground. Connector & terminal (B40) No. 6 — Chassis ground: (B40) No. 14 — Chassis ground:	Is the resistance 1 MΩ or more?	Go to step 7.	Repair the harness and connector between each control module and body integrated unit.
7	CHECK OUTPUT SIGNAL TO TPMS & KEYLESS ENTRY CM OR TPMS CM. 1) Turn the ignition switch to ON. 2) Measure the voltage between TPMS & keyless entry CM or TPMS CM and chassis ground. Connector & terminal (B40) No. 6 (+) — Chassis ground (-): (B40) No. 14 (+) — Chassis ground (-):	Is the voltage less than 1 V?	Go to step 8.	Repair the harness and connector between each control module and body integrated unit.
8	CHECK HARNESS CONNECTOR BETWEEN TPMS & KEYLESS ENTRY CM OR TPMS CM AND BODY INTEGRATED UNIT. 1) Turn the ignition switch to OFF. 2) Measure the resistance between TPMS & keyless entry CM connector or TPMS CM connector and body integrated unit. Connector & terminal Without keyless access with push button start (R221) No. 11 — (i171) No. 11: With keyless access with push button start (R211) No. 11 — (i171) No. 11:	Is the resistance less than 0.5 Ω?	Go to step 9.	Repair the harness and connector between TPMS & keyless entry CM or TPMS CM and body integrated unit.
9	CHECK TPMS & KEYLESS ENTRY CM CONNECTOR OR TPMS CM CONNECTOR.	Is the connector inserted into the TPMS & keyless entry CM or TPMS CM until it locks?	Go to step 10.	Insert the connector into the TPMS & keyless entry CM or TPMS CM.

Subaru Select Monitor

TIRE PRESSURE MONITORING SYSTEM (DIAGNOSTICS)

Step	Check	Yes	No
10 CHECK POWER SUPPLY CIRCUIT. 1) Turn the ignition switch to ON. 2) Measure the ignition power supply voltage between TPMS & keyless entry CM connector or TPMS CM connector and chassis ground. Connector & terminal Without keyless access with push button start (R221) No. 4 (+) — Chassis ground (-): With keyless access with push button start (R211) No. 4 (+) — Chassis ground (-):	Is the voltage 10 — 15 V?	Go to step 11.	Repair open circuit of the harness between TPMS & keyless entry CM or TPMS CM and battery.
11 CHECK HARNESS CONNECTOR BETWEEN TPMS & KEYLESS ENTRY CM OR TPMS CM AND CHASSIS GROUND. 1) Turn the ignition switch to OFF. 2) Disconnect the connector from the TPMS & keyless entry CM or TPMS CM. 3) Measure the resistance of harness between TPMS & keyless entry CM or TPMS CM and chassis ground. Connector & terminal Without keyless access with push button start (R221) No. 5 — Chassis ground: With keyless access with push button start (R211) No. 5 — Chassis ground:	Is the resistance less than 0.5 Ω?	Go to step 12.	Repair open circuit of the harness of TPMS & keyless entry CM or TPMS CM.
12 CHECK POOR CONTACT OF CONNECTOR.	Is there poor contact in TPMS & keyless entry CM power supply or TPMS CM power supply, ground line and body integrated unit?	Repair the connector.	Replace the TPMS & keyless entry CM or TPMS CM. <Ref. to WT-8, Tire Pressure Monitoring System.>

Read Diagnostic Trouble Code (DTC)

TIRE PRESSURE MONITORING SYSTEM (DIAGNOSTICS)

6. Read Diagnostic Trouble Code (DTC)

A: OPERATION

- 1) On «Start» display, select «Diagnosis».
- 2) On «Vehicle selection» display, input the target vehicle information and select «Confirmed».
- 3) On «Main Menu» display, select «Each System».
- 4) On «Select System» display, select «Tire Pressure Monitor» and then select «Enter».
- 5) On «Select Function» display, select «DTC».

NOTE:

- For detailed operation procedures, refer to “Application help”.
- For details concerning DTCs, refer to List of Diagnostic Trouble Code (DTC). <Ref. to TPM(diag)-21, List of Diagnostic Trouble Code (DTC).>
- All DTCs detected will be displayed.
- If a particular DTC is not properly stored in memory (due to a voltage drop of the TPMS & keyless entry CM or TPMS CM power supply, etc.) when a problem occurs, a DTC suffixed with a question mark appears on the Subaru Select Monitor display. This shows it may be an unreliable reading.
- When DTC is not displayed, check the indicator circuit and communication circuit. <Ref. to TPM(diag)-17, Tire Pressure Warning Light / Trouble Indicator Light Illumination Pattern.>

Clear Memory Mode

TIRE PRESSURE MONITORING SYSTEM (DIAGNOSTICS)

7. Clear Memory Mode

A: OPERATION

- 1) On «Start» display, select «Diagnosis».
- 2) On «Vehicle selection» display, input the target vehicle information and select «Confirmed».
- 3) On «Main Menu» display, select «Each System».
- 4) On «Select System» display, select «Tire Pressure Monitor» and then select «Enter».
- 5) On «Select Function» display, select «DTC».
- 6) On «DTC» display, select «Clear Memory».

NOTE:

For detailed operation procedures, refer to “Application help”.

Read Current Data

TIRE PRESSURE MONITORING SYSTEM (DIAGNOSTICS)

8. Read Current Data

A: OPERATION

- 1) On «Start» display, select «Diagnosis».
- 2) On «Vehicle selection» display, input the target vehicle information and select «Confirmed».
- 3) On «Main Menu» display, select «Each System».
- 4) On «Select System» display, select «Tire Pressure Monitor» and then select «Enter».
- 5) On «Select Function» display, select «Data Monitor».

NOTE:

For detailed operation procedures, refer to “Application help”.

B: LIST

Display	Contents to be displayed	Unit of measure
Tire 1 FN code	LEARN, LOW BAT, OFF, WAKE, RE ME, NORMAL	LEARN: Transmitted transmitter ID using the transmitter registration tool LOW BAT: Transmitter battery voltage running low OFF: Transmitter function stops (no data transmission) RE ME: Tire air changes ± 8.4 kPa WAKE: When data transmission is started from a stopped state. NORMAL: Conditions other than above
Tire 2 FN code		
Tire 3 FN code		
Tire 4 FN code		
Tire 1 air pressure	Value converted to tire pressure from data delivered from transmitter is displayed. (The figure may differ from the actual measured values.)	kPa, psig, mmHg, inHg
Tire 2 air pressure		kPa, psig, mmHg, inHg
Tire 3 air pressure		kPa, psig, mmHg, inHg
Tire 4 air pressure		kPa, psig, mmHg, inHg
Vehicle Speed	Vehicle speed signal which is input in control module	km/h, MPH
Pressure warning	Threshold where tire pressure warning light illuminates	kPa, psig, mmHg, inHg
Return pressure	Threshold where tire pressure warning light goes out	kPa, psig, mmHg, inHg

Register Transmitter (ID)

TIRE PRESSURE MONITORING SYSTEM (DIAGNOSTICS)

9. Register Transmitter (ID)

A: OPERATION

Perform the registration procedure of the transmitter in the following cases:

- Transmitter is replaced.
- TPMS & keyless entry CM or TPMS CM is replaced.

NOTE:

- If registration of the transmitter ID is not possible after two attempts, replace the TPMS & keyless entry CM or TPMS CM. <Ref. to WT-8, Tire Pressure Monitoring System.>
- During the registration, turn the ignition switch to OFF and end the Subaru Select Monitor. Or if the registration is not performed for 5 minutes or more, the registration mode is cancelled.
- When rotating tires, there is no affect on the performance or functions of the tire pressure monitoring control module even if the transmitter (ID) is not registered, however, the tire position displayed on the Subaru Select Monitor will be incorrect.

- 1) Adjust all tire pressures to the specifications.
- 2) Connect the Subaru Select Monitor, and select «Diagnosis» on the «Start» display.
- 3) On «Vehicle selection» display, input the target vehicle information and select «Confirmed».
- 4) On «Main Menu» display, select «Each System».
- 5) On «Select System» display, select «Tire Pressure Monitor» and then select «Enter».
- 6) On «Select Function» display, select «Work Support».
- 7) On «Work Support» display, select «Transmitter ID regist».
- 8) «ID registration mode When execute Registered ID is deleted Continue?» is displayed, select [OK].
- 9) Contact the transmitter registration tool to the side wall area near the air valve on the front left tire, and press the switch. The transmitter ID is sent to the TPMS & keyless entry CM or TPMS CM. (At this time, the tire pressure warning light blinks to confirm that the registration has started.)

- (1) Air valve (transmitter)
- (2) Transmitter registration tool

NOTE:

- The registration order of transmitter ID is not specified.
 - The transmitter registration tool is used by touching the side wall area near the transmitter.
 - When registration of each tire is completed, «ID registration completed» is displayed on the Select Monitor screen.
 - If registration procedure stop in the halfway (turning ignition switch to OFF, wrong registration order, etc), proceed from step 5).
- 10) When ID registration is completed, the tire pressure warning light remains lit for approximately 2 seconds, to end the registration. Switch the screen to «Data monitor» of Subaru Select Monitor. <Ref. to TPM(diag)-13, Read Current Data.>
 - 11) Check the transmitter ID that was registered, then perform a driving test. <Ref. to TPM(diag)-16, Inspection Mode.>

Display Transmitter (ID)

TIRE PRESSURE MONITORING SYSTEM (DIAGNOSTICS)

10.Display Transmitter (ID)

A: OPERATION

For detailed operation procedures, refer to Read Current Data. <Ref. to TPM(diag)-13, Read Current Data.>

Inspection Mode

TIRE PRESSURE MONITORING SYSTEM (DIAGNOSTICS)

11. Inspection Mode

A: PROCEDURE

Reproduce the malfunction occurrence condition as much as possible. Drive the vehicle at 40 km/h (25 MPH) or faster for at least ten minutes.

Tire Pressure Warning Light / Trouble Indicator Light Illumination Pattern

TIRE PRESSURE MONITORING SYSTEM (DIAGNOSTICS)

12. Tire Pressure Warning Light / Trouble Indicator Light Illumination Pattern

A: INSPECTION

TPM00071

- | | | |
|---|--|----------------------|
| (1) Ignition switch | (8) Tire inflation pressure warning light (pressure condition) | (15) Light OFF |
| (2) OFF | (9) Light OFF | (16) Blink |
| (3) ON | (10) Light ON | (17) 1 second |
| (4) Start | (11) System status | (18) Blinks 25 times |
| (5) Tire inflation pressure condition | (12) Normal | (19) 2 seconds |
| (6) Meet the specification | (13) Malfunction | |
| (7) Less than standard value
(For the pressure warning level, refer to "CURRENT DATA".) <Ref. to TPM(diag)-13, LIST, Read Current Data.> | (14) Tire inflation pressure warning light (system condition) | |

Tire Pressure Warning Light / Trouble Indicator Light Illumination Pattern

TIRE PRESSURE MONITORING SYSTEM (DIAGNOSTICS)

1) When the tire pressure warning light does not illuminate in accordance with this illumination pattern, there must be an electrical malfunction.

2) If the tire pressure warning light does not go off, check the TPMS & keyless entry CM or TPMS CM/warning light circuit and the combination meter circuit. <Ref. to TPM(diag)-18, TIRE PRESSURE WARNING LIGHT DOES NOT COME OFF, Tire Pressure Warning Light / Trouble Indicator Light Illumination Pattern.>

NOTE:

If the problem is fixed while driving at approximately 40 km/h (25 MPH) after the tire pressure warning light blinks/lights, the warning light goes out and the tire pressure monitor system operates normally. (If there is a decrease in tire pressure, or a malfunction of the system, the malfunction history is displayed.)

B: TIRE PRESSURE WARNING LIGHT DOES NOT COME ON

DETECTING CONDITION:

Defective combination meter

TROUBLE SYMPTOM:

When the ignition switch is turned to ON, the tire pressure warning light does not turn on (for approx. 2 seconds).

Step	Check	Yes	No	
1	CHECK DIAGNOSTIC TROUBLE CODE (DTC). Connect the Subaru Select Monitor, and read the Diagnostic Trouble Code. <Ref. to TPM(diag)-11, OPERATION, Read Diagnostic Trouble Code (DTC).>	Is diagnostics code (DTC) displayed?	Perform the diagnosis according to the DTC. <Ref. to TPM(diag)-21, List of Diagnostic Trouble Code (DTC).>	Replace the combination meter. <Ref. to IDI-18, REMOVAL, Combination Meter.>

C: TIRE PRESSURE WARNING LIGHT DOES NOT COME OFF

DETECTING CONDITION:

- Defective combination meter
- Tires pressure drop
- Transmitter ID not registered

TROUBLE SYMPTOM:

Tire pressure warning light remains illuminating after engine starts.

Step	Check	Yes	No	
1	CHECK DTC. Connect the Subaru Select Monitor, and read the Diagnostic Trouble Code. <Ref. to TPM(diag)-11, OPERATION, Read Diagnostic Trouble Code (DTC).>	Is a DTC displayed?	Perform the diagnosis according to the DTC. <Ref. to TPM(diag)-21, List of Diagnostic Trouble Code (DTC).>	Go to step 2.
2	CHECK TRANSMITTER (ID). Display the transmitter ID of the tire pressure monitor system.	Is the transmitter ID registered?	Go to step 3.	Register the transmitter ID. <Ref. to TPM(diag)-14, OPERATION, Register Transmitter (ID).>
3	CHECK TRANSMITTER DATA OUTPUT. 1) Select data display of the tire pressure monitoring. 2) Start the engine and check the tire pressure warning light output.	Is the warning light output ON?	Replace the TPMS & keyless entry CM or TPMS CM. <Ref. to WT-8, Tire Pressure Monitoring System.>	Replace the combination meter. <Ref. to IDI-18, REMOVAL, Combination Meter.>

Tire Pressure Warning Light / Trouble Indicator Light Illumination Pattern

TIRE PRESSURE MONITORING SYSTEM (DIAGNOSTICS)

D: TIRE PRESSURE WARNING LIGHT IS 25 TIMES BLINKING AND TURN ON

Detecting condition:

- Defective TPMS & keyless entry CM or TPMS CM
- Defective harness
- Transmitter is faulty.

Trouble symptom:

Every time the engine starts, tire pressure warning light blinks 25 times and then illuminates.

Wiring diagram:

Tire Pressure Monitoring System <Ref. to WI-224, WIRING DIAGRAM, Tire Pressure Monitoring System.>

TPM10018

Step	Check	Yes	No	
1	CHECK DTC. Connect the Subaru Select Monitor, and read the Diagnostic Trouble Code. <Ref. to TPM(diag)-11, OPERATION, Read Diagnostic Trouble Code (DTC).>	Is diagnostics code (DTC) displayed?	Perform the diagnosis according to the DTC. <Ref. to TPM(diag)-21, List of Diagnostic Trouble Code (DTC).>	Go to step 2.

Tire Pressure Warning Light / Trouble Indicator Light Illumination Pattern

TIRE PRESSURE MONITORING SYSTEM (DIAGNOSTICS)

Step	Check	Yes	No
2 CHECK LAN COMMUNICATION. Inspect LAN system. <Ref. to LAN(diag)-2, PROCEDURE, Basic Diagnostic Procedure.>	Is there any fault?	Repair it according to the diagnosis for LAN system.	Go to step 3.
3 CHECK HARNESS. Measure the resistance between TPMS & keyless entry CM or TPMS CM and body integrated unit. <i>Connector & terminal</i> <i>Without keyless access with push button start</i> <i>(R221) No. 11 — (i171) No. 11:</i> <i>With keyless access with push button start</i> <i>(R211) No. 11 — (i171) No. 11:</i>	Is the resistance less than 10 Ω?	Go to step 4.	Repair the harness.
4 CHECK CONNECTOR. Check each connector.	Is there poor contact or any other faults?	Repair the connector.	Replace the TPMS & keyless entry CM or TPMS CM. <Ref. to WT-8, Tire Pressure Monitoring System.>

List of Diagnostic Trouble Code (DTC)

TIRE PRESSURE MONITORING SYSTEM (DIAGNOSTICS)

13. List of Diagnostic Trouble Code (DTC)

A: LIST

DTC	Item	Contents of diagnosis	Remarks
C2021	TIRE 1 AIR PRESSURE LOW (NORMAL MODE)	Tire pressure of tire 1 is reduced.	<Ref. to TPM(diag)-23, DTC C2021 TIRE 1 AIR PRESSURE LOW (NORMAL MODE), Diagnostic Procedure with Diagnostic Trouble Code (DTC).>

C2521	SPEED ABNORMAL	Vehicle speed signal is not input to the control module when the vehicle speed is 6 km/h (3.7 MPH) or more.	<Ref. to TPM(diag)-32, DTC C2521 SPEED ABNORMAL, Diagnostic Procedure with Diagnostic Trouble Code (DTC).>

Diagnostic Procedure with Diagnostic Trouble Code (DTC)

TIRE PRESSURE MONITORING SYSTEM (DIAGNOSTICS)

14. Diagnostic Procedure with Diagnostic Trouble Code (DTC)

A: DTC C2021 TIRE 1 AIR PRESSURE LOW (NORMAL MODE)

NOTE:

Refer to DTC C2024 for diagnostic procedure. <Ref. to TPM(diag)-24, DTC C2024 TIRE 4 AIR PRESSURE LOW (NORMAL MODE), Diagnostic Procedure with Diagnostic Trouble Code (DTC).>

B: DTC C2022 TIRE 2 AIR PRESSURE LOW (NORMAL MODE)

NOTE:

Refer to DTC C2024 for diagnostic procedure. <Ref. to TPM(diag)-24, DTC C2024 TIRE 4 AIR PRESSURE LOW (NORMAL MODE), Diagnostic Procedure with Diagnostic Trouble Code (DTC).>

C: DTC C2023 TIRE 3 AIR PRESSURE LOW (NORMAL MODE)

NOTE:

Refer to DTC C2024 for diagnostic procedure. <Ref. to TPM(diag)-24, DTC C2024 TIRE 4 AIR PRESSURE LOW (NORMAL MODE), Diagnostic Procedure with Diagnostic Trouble Code (DTC).>

Diagnostic Procedure with Diagnostic Trouble Code (DTC)

TIRE PRESSURE MONITORING SYSTEM (DIAGNOSTICS)

D: DTC C2024 TIRE 4 AIR PRESSURE LOW (NORMAL MODE)

DTC DETECTING CONDITION:

Inflation pressure of tires dropped below the specified value.

NOTE:

For the specifications, refer to "CURRENT DATA". <Ref. to TPM(diag)-13, LIST, Read Current Data.>

TROUBLE SYMPTOM:

Tire pressure warning light illuminates.

Step	Check	Yes	No
1 CHECK TIRES. Lift up the vehicle and check for damage in the tires.	Are there cracks or damage?	Replace the tire.	Go to step 2.
2 CHECK TIRES. Check the tire air pressure.	Is the tire pressure in the specifications?	Go to step 3.	Adjust the air pressure.
3 CHECK TRANSMITTER DATA. 1) Drive at 40 km/h (25 MPH) or more. 2) Confirm the current data «Tire 1 air pressure»«Tire 2 air pressure»«Tire 3 air pressure»«Tire 4 air pressure» of the tire pressure monitor. <Ref. to TPM(diag)-13, Read Current Data.>	Is there a transmitter with different display?	Replace the transmitter (tire pressure sensor) with different display. <Ref. to WT-8, Tire Pressure Monitoring System.>	Go to step 4.
4 PERFORM DRIVING TEST. 1) Perform the Clear Memory Mode. <Ref. to TPM(diag)-12, OPERATION, Clear Memory Mode.> 2) Perform a driving test. <Ref. to TPM(diag)-16, PROCEDURE, Inspection Mode.> 3) Read the DTC of tire pressure monitoring. <Ref. to TPM(diag)-11, Read Diagnostic Trouble Code (DTC).>	Is the same DTC displayed?	Replace the TPMS & keyless entry CM or TPMS CM. <Ref. to WT-8, Tire Pressure Monitoring System.>	Even if the DTC is displayed, the system has returned to a normal condition at this time. Reproduce the failure, and then perform the diagnosis again.

CAUTION:

When driving vehicle to perform driving test, there should be always 2 persons (driver and checker) to check.

E: DTC C2121 TRANSMITTER 1 NO DATA

NOTE:

Refer to DTC C2124 for diagnostic procedure. <Ref. to TPM(diag)-25, DTC C2124 TRANSMITTER 4 NO DATA, Diagnostic Procedure with Diagnostic Trouble Code (DTC).>

F: DTC C2122 TRANSMITTER 2 NO DATA

NOTE:

Refer to DTC C2124 for diagnostic procedure. <Ref. to TPM(diag)-25, DTC C2124 TRANSMITTER 4 NO DATA, Diagnostic Procedure with Diagnostic Trouble Code (DTC).>

G: DTC C2123 TRANSMITTER 3 NO DATA

NOTE:

Refer to DTC C2124 for diagnostic procedure. <Ref. to TPM(diag)-25, DTC C2124 TRANSMITTER 4 NO DATA, Diagnostic Procedure with Diagnostic Trouble Code (DTC).>

Diagnostic Procedure with Diagnostic Trouble Code (DTC)

TIRE PRESSURE MONITORING SYSTEM (DIAGNOSTICS)

H: DTC C2124 TRANSMITTER 4 NO DATA

DTC DETECTING CONDITION:

Detected when no data is received from each transmitter for 8 minutes or more at a vehicle speed of 40 km/h (25 MPH) or more. (Timer is not cleared when the vehicle speed becomes lower than 40 km/h halfway.)

TROUBLE SYMPTOM:

Tire pressure warning light blinks 25 times and then illuminates.

Step	Check	Yes	No
1 REPRODUCTION OF FAILURE. 1) Perform the drive test. Drive the vehicle at 40 km/h (25 MPH) or faster for at least 10 minutes. 2) Read the DTC of tire pressure monitoring. <Ref. to TPM(diag)-11, Read Diagnostic Trouble Code (DTC).>	Is DTC displayed as "Present fault"?	Go to step 2.	When DTC is displayed as "Past faults", the system has returned to a normal condition at this time. Reproduce the failure, and then perform the diagnosis again. NOTE: In this case, there may be temporary poor communication due to radio wave environment inside/outside the vehicle.
2 START FRONT LEFT TRANSMITTER. 1) Connect the Subaru Select Monitor and then turn the ignition switch to ON. 2) Select «Data monitor» of the tire pressure monitor. <Ref. to TPM(diag)-13, Read Current Data.> 3) Use the transmitter registration tool and transmit the ID from the front left transmitter to check «Latest reception ID».	Is «Latest reception ID» updated?	Go to step 3.	Replace the front left transmitter. <Ref. to WT-8, Tire Pressure Monitoring System.>
3 CHECK FRONT LEFT TRANSMITTER ID. Compare the ID on the latest ID display with «Registered ID 1».	Are the two IDs same?	Go to step 4.	Record «Latest reception ID» as the front left. Go to step 4.
4 START FRONT RIGHT TRANSMITTER. Use the transmitter registration tool and transmit the ID from the front right transmitter to check «Latest reception ID».	Is «Latest reception ID» updated?	Go to step 5.	Replace the front right transmitter. <Ref. to WT-8, Tire Pressure Monitoring System.>
5 CHECK FRONT RIGHT TRANSMITTER ID. Compare the ID on the latest ID display with «Registered ID 2».	Are the two IDs same?	Go to step 6.	Record «Latest reception ID» as the front right. Go to step 6.
6 START REAR RIGHT TRANSMITTER. Use the transmitter registration tool and transmit the ID from the rear right transmitter to check «Latest reception ID».	Is «Latest reception ID» updated?	Go to step 7.	Replace the rear right transmitter. <Ref. to WT-8, Tire Pressure Monitoring System.>
7 CHECK REAR RIGHT TRANSMITTER ID. Compare the ID on the latest ID display with «Registered ID 3».	Are the two IDs same?	Go to step 8.	Record «Latest reception ID» as the rear right. Go to step 8.

Diagnostic Procedure with Diagnostic Trouble Code (DTC)

TIRE PRESSURE MONITORING SYSTEM (DIAGNOSTICS)

Step	Check	Yes	No
8 START REAR LEFT TRANSMITTER. Use the transmitter registration tool and transmit the ID from the rear left transmitter to check «Latest reception ID».	Is «Latest reception ID» updated?	Go to step 9.	Replace the rear left transmitter. <Ref. to WT-8, Tire Pressure Monitoring System.>
9 CHECK REAR LEFT TRANSMITTER ID. Compare the ID on the latest ID display with «Registered ID 4».	Are the two IDs same?	Go to step 10.	Record «Latest reception ID» as the rear left. Go to step 10.
10 CHECK MALFUNCTION TRANSMITTER.	Is ID recorded by this procedure?	Go to step 11.	Go to step 2.
11 CHECK MALFUNCTION TRANSMITTER. Check the registered ID of the transmitter indicated by DTC.	Is there checked ID in the record?	Replace the transmitter of the recorded position. <Ref. to WT-8, Tire Pressure Monitoring System.>	Replace the transmitter showing the latest ID that is not included in the registered IDs. <Ref. to WT-8, Tire Pressure Monitoring System.>

CAUTION:

When driving vehicle to perform driving test, there should be always 2 persons (driver and checker) to check.

I: DTC C2221 TRANSMITTER 1 PRESSURE DATA ABNORMAL

Diagnostic Procedure with Diagnostic Trouble Code (DTC)

TIRE PRESSURE MONITORING SYSTEM (DIAGNOSTICS)

L: DTC C2224 TRANSMITTER 4 PRESSURE DATA ABNORMAL

DTC DETECTING CONDITION:

Detected when error data is received from each transmitter at a vehicle speed of 40 km/h (25 MPH) or more.

- When comparing the data from each transmitter to the previous data, the change is large.
- The pressure exceeds what the transmitter can measure. (Excessive pressure)

TROUBLE SYMPTOM:

Tire pressure warning light blinks 25 times and then illuminates.

Step	Check	Yes	No
1 REPRODUCTION OF FAILURE. 1) Perform the drive test. Drive the vehicle at 40 km/h (25 MPH) or faster for at least 10 minutes. 2) Read the DTC of tire pressure monitoring. <Ref. to TPM(diag)-11, OPERATION, Read Diagnostic Trouble Code (DTC).>	Is DTC displayed as "Present fault"?	Go to step 2.	When DTC is displayed as "Past faults", the system has returned to a normal condition at this time. Reproduce the failure, and then perform the diagnosis again. NOTE: In this case, there may be temporary poor communication due to radio wave environment inside/outside the vehicle.
2 START FRONT LEFT TRANSMITTER. 1) Connect the Subaru Select Monitor and then turn the ignition switch to ON. 2) Select «Data monitor» of the tire pressure monitor. <Ref. to TPM(diag)-13, Read Current Data.> 3) Use the transmitter registration tool and transmit the ID from the front left transmitter to check «Latest reception ID».	Is «Latest reception ID» updated?	Go to step 3.	Replace the front left transmitter. <Ref. to WT-8, Tire Pressure Monitoring System.>
3 CHECK FRONT LEFT TRANSMITTER ID. Compare the ID on the latest ID display with «Registered ID 1».	Are the two IDs same?	Go to step 4.	Record «Latest reception ID» as the front left. Go to step 4.
4 START FRONT RIGHT TRANSMITTER. Use the transmitter registration tool and transmit the ID from the front right transmitter to check «Latest reception ID».	Is «Latest reception ID» updated?	Go to step 5.	Replace the front right transmitter. <Ref. to WT-8, Tire Pressure Monitoring System.>
5 CHECK FRONT RIGHT TRANSMITTER ID. Compare the ID on the latest ID display with «Registered ID 2».	Are the two IDs same?	Go to step 6.	Record «Latest reception ID» as the front right. Go to step 6.
6 START REAR RIGHT TRANSMITTER. Use the transmitter registration tool and transmit the ID from the rear right transmitter to check «Latest reception ID».	Is «Latest reception ID» updated?	Go to step 7.	Replace the rear right transmitter. <Ref. to WT-8, Tire Pressure Monitoring System.>
7 CHECK REAR RIGHT TRANSMITTER ID. Compare the ID on the latest ID display with «Registered ID 3».	Are the two IDs same?	Go to step 8.	Record «Latest reception ID» as the rear right. Go to step 8.

Diagnostic Procedure with Diagnostic Trouble Code (DTC)

Diagnostic Procedure with Diagnostic Trouble Code (DTC)

TIRE PRESSURE MONITORING SYSTEM (DIAGNOSTICS)

P: DTC C2324 TRANSMITTER 4 FUNCTION CODE ABNORMAL

Detected when error data is received from each transmitter at a vehicle speed of 40 km/h (25 MPH) or more.

DTC DETECTING CONDITION:

Unexpected function codes received from each transmitter.

TROUBLE SYMPTOM:

Tire pressure warning light blinks 25 times and then illuminates.

Step	Check	Yes	No
1 REPRODUCTION OF FAILURE. 1) Perform the drive test. Drive the vehicle at 40 km/h (25 MPH) or faster for at least 10 minutes. 2) Read the DTC of tire pressure monitoring. <Ref. to TPM(diag)-11, OPERATION, Read Diagnostic Trouble Code (DTC).>	Is DTC displayed as "Present fault"?	Go to step 2.	When DTC is displayed as "Past faults", the system has returned to a normal condition at this time. Reproduce the failure, and then perform the diagnosis again. NOTE: In this case, there may be temporary poor communication due to radio wave environment inside/outside the vehicle.
2 START FRONT LEFT TRANSMITTER. 1) Connect the Subaru Select Monitor and then turn the ignition switch to ON. 2) Select «Data monitor» of the tire pressure monitor. <Ref. to TPM(diag)-13, Read Current Data.> 3) Use the transmitter registration tool and transmit the ID from the front left transmitter to check «Latest reception ID».	Is «Latest reception ID» updated?	Go to step 3.	Replace the front left transmitter. <Ref. to WT-8, Tire Pressure Monitoring System.>
3 CHECK FRONT LEFT TRANSMITTER ID. Compare the ID on the latest ID display with «Registered ID 1».	Are the two IDs same?	Go to step 4.	Record «Latest reception ID» as the front left. Go to step 4.
4 START FRONT RIGHT TRANSMITTER. Use the transmitter registration tool and transmit the ID from the front right transmitter to check «Latest reception ID».	Is «Latest reception ID» updated?	Go to step 5.	Replace the front right transmitter. <Ref. to WT-8, Tire Pressure Monitoring System.>
5 CHECK FRONT RIGHT TRANSMITTER ID. Compare the ID on the latest ID display with «Registered ID 2».	Are the two IDs same?	Go to step 6.	Record «Latest reception ID» as the front right. Go to step 6.
6 START REAR RIGHT TRANSMITTER. Use the transmitter registration tool and transmit the ID from the rear right transmitter to check «Latest reception ID».	Is «Latest reception ID» updated?	Go to step 7.	Replace the rear right transmitter. <Ref. to WT-8, Tire Pressure Monitoring System.>
7 CHECK REAR RIGHT TRANSMITTER ID. Compare the ID on the latest ID display with «Registered ID 3».	Are the two IDs same?	Go to step 8.	Record «Latest reception ID» as the rear right. Go to step 8.

Diagnostic Procedure with Diagnostic Trouble Code (DTC)

TIRE PRESSURE MONITORING SYSTEM (DIAGNOSTICS)

Step	Check	Yes	No
8 START REAR LEFT TRANSMITTER. Use the transmitter registration tool and transmit the ID from the rear left transmitter to check «Latest reception ID».	Is «Latest reception ID» updated?	Go to step 9.	Replace the rear left transmitter. <Ref. to WT-8, Tire Pressure Monitoring System.>
9 CHECK REAR LEFT TRANSMITTER ID. Compare the ID on the latest ID display with «Registered ID 4».	Are the two IDs same?	Go to step 10.	Record «Latest reception ID» as the rear left. Go to step 10.
10 CHECK MALFUNCTION TRANSMITTER.	Is ID recorded by this procedure?	Go to step 11.	Replace the transmitter indicated by diagnostics trouble code (DTC). <Ref. to WT-8, Tire Pressure Monitoring System.>
11 CHECK MALFUNCTION TRANSMITTER. Check the registered ID of the transmitter indicated by DTC.	Is there checked ID in the record?	Replace the transmitter of the recorded position. <Ref. to WT-8, Tire Pressure Monitoring System.>	Replace the transmitter indicated by diagnostics trouble code (DTC). <Ref. to WT-8, Tire Pressure Monitoring System.>

Q: DTC C2421 TRANSMITTER 1 BATTERY VOLTAGE LOW

NOTE:

Diagnostic Procedure with Diagnostic Trouble Code (DTC)

TIRE PRESSURE MONITORING SYSTEM (DIAGNOSTICS)

T: DTC C2424 TRANSMITTER 4 BATTERY VOLTAGE LOW

DTC DETECTING CONDITION:

Detected when power supply voltage failure signal is received from each transmitter.

TROUBLE SYMPTOM:

Tire pressure warning light blinks 25 times and then illuminates.

	Step	Check	Yes	No
1	REPRODUCTION OF FAILURE. 1) Perform the drive test. Drive the vehicle at 40 km/h (25 MPH) or faster for at least 10 minutes. 2) Read the DTC of tire pressure monitoring. <Ref. to TPM(diag)-11, OPERATION, Read Diagnostic Trouble Code (DTC).>	Is DTC displayed as "Present fault"?	Go to step 2.	When DTC is displayed as "Past faults", the system has returned to a normal condition at this time. Reproduce the failure, and then perform the diagnosis again. NOTE: In this case, there may be temporary poor communication due to radio wave environment inside/outside the vehicle.
2	CHECK TRANSMITTER. 1) Replace all transmitters and register their IDs. <Ref. to TPM(diag)-14, OPERATION, Register Transmitter (ID).> 2) Perform the Clear Memory Mode. <Ref. to TPM(diag)-12, Clear Memory Mode.> 3) Perform the Inspection Mode. <Ref. to TPM(diag)-16, Inspection Mode.>	Is the fault eliminated?	Internal battery of the transmitter had worn out.	Replace the TPMS & keyless entry CM or TPMS CM. <Ref. to WT-8, Tire Pressure Monitoring System.>

Diagnostic Procedure with Diagnostic Trouble Code (DTC)

TIRE PRESSURE MONITORING SYSTEM (DIAGNOSTICS)

U: DTC C2521 SPEED ABNORMAL

DTC DETECTING CONDITION:

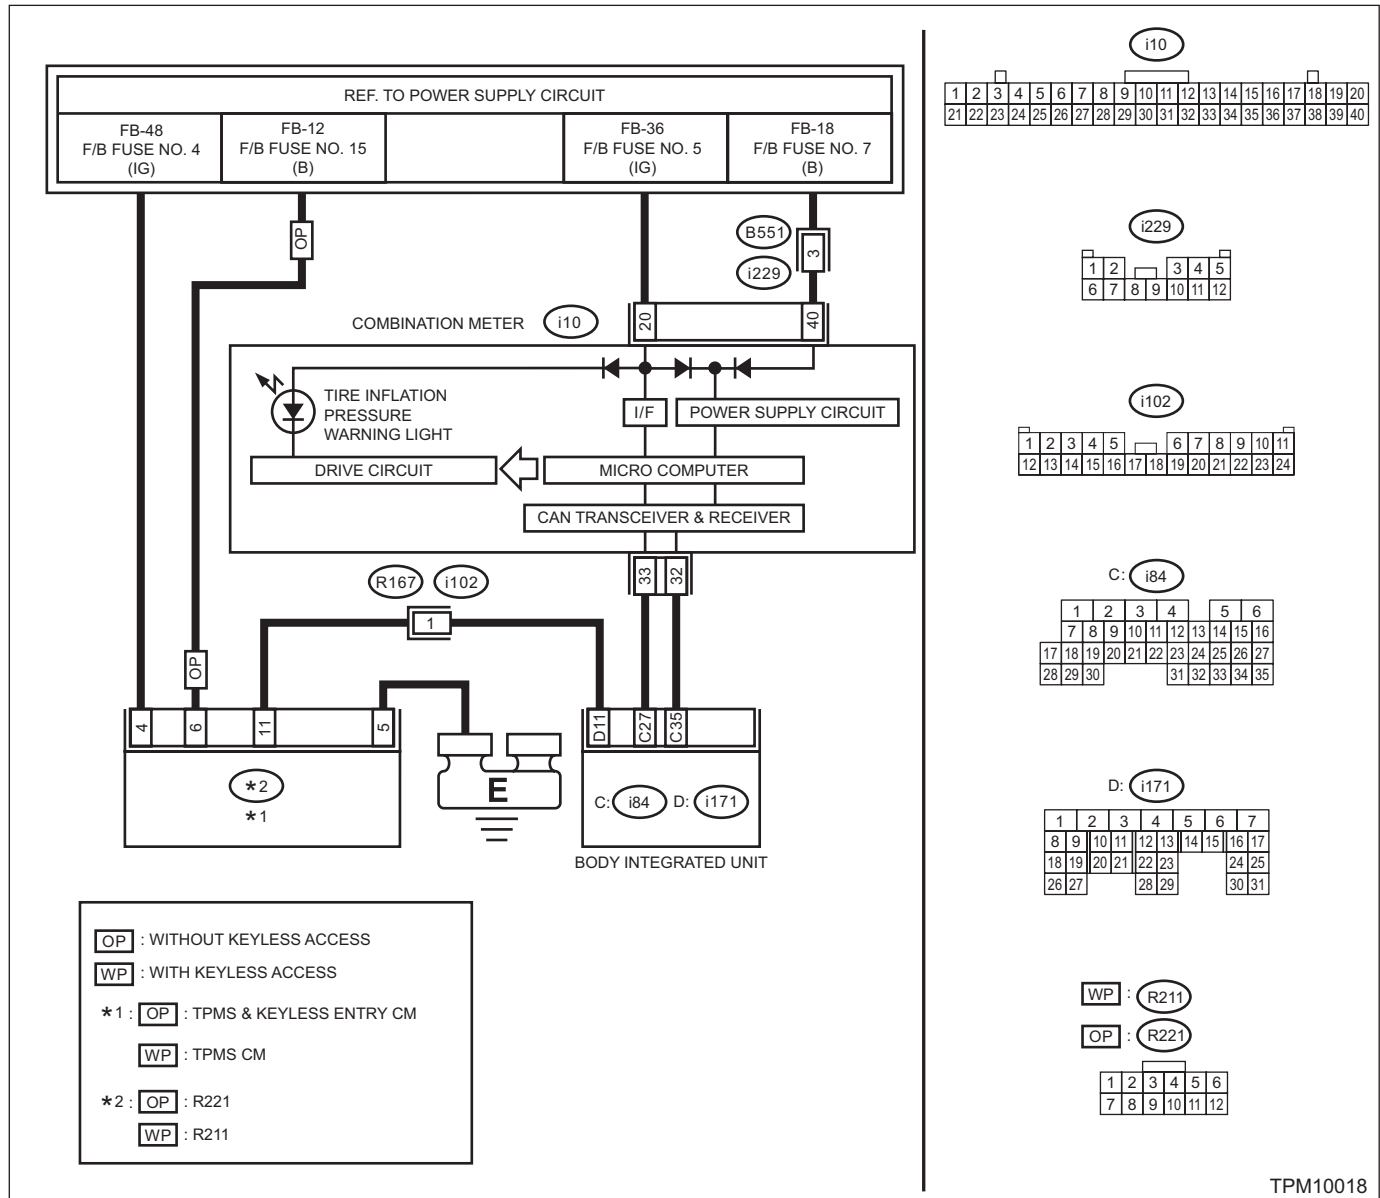

Detected when transmitter normal signal is received at a vehicle speed of less than 6 km/h (4 MPH).

Trouble symptom:

Tire pressure warning light blinks 25 times and then illuminates.

Wiring diagram:

Tire Pressure Monitoring System <Ref. to WI-224, WIRING DIAGRAM, Tire Pressure Monitoring System.>

TPM10018

Step	Check	Yes	No
1	CHECK LAN COMMUNICATION. Inspect LAN system. <Ref. to LAN(diag)-2, PROCEDURE, Basic Diagnostic Procedure.>	Repair it according to the diagnosis for LAN system.	Go to step 2.

Diagnostic Procedure with Diagnostic Trouble Code (DTC)

TIRE PRESSURE MONITORING SYSTEM (DIAGNOSTICS)

Step	Check	Yes	No
2 CHECK HARNESS (OPEN CIRCUIT). Measure the resistance between TPMS & keyless entry CM or TPMS CM and body integrated unit. Connector & terminal Without keyless access with push button start (R221) No. 11 — (i171) No. 11: (R221) No. 5 — Chassis ground: With keyless access with push button start (R211) No. 11 — (i171) No. 11: (R211) No. 5 — Chassis ground:	Is the resistance less than 10 Ω ?	Go to step 3.	Repair the harness.
3 CHECK CONNECTOR. Check each connector.	Is there poor contact or any other faults?	Repair the connector.	Replace the TPMS & keyless entry CM or TPMS CM. <Ref. to WT-8, Tire Pressure Monitoring System.>

1. General Description

A: SPECIFICATION

1. REAR DIFFERENTIAL

When replacing a rear differential assembly, select the correct one according to the following table.

NOTE:

- Using a different rear differential assembly will cause the drive train and tires to drag or emit abnormal noise.
- For option code, refer to “ID” section. <Ref. to ID-2, IDENTIFICATION, Identification.>

Model	2.0 L non-turbo	
	CVT	5MT
Rear differential type	VA1-type	
Identification	XD	41
LSD type	—	
Type of gear	Hypoid gear	
Gear ratio (number of gear teeth)	3.700 (37/10)	4.444 (40/9)
Oil capacity	0.8 L (0.8 US qt, 0.7 Imp qt)	
Rear differential gear oil	GL-5 (75W-90)	

2. IDENTIFICATION

Identification positions are shown in the following figures. For details concerning identification, refer to the “ID” section.

- T-type

(1) Identification

- VA1-type

(1) Identification

3. REAR DIFFERENTIAL GEAR OIL

Recommended gear oil:

GL-5 (75W-90) or equivalent

CAUTION:

Each oil manufacturer has its base oil and additives. Thus, do not mix two or more brands.

- (1) Item
- (2) Rear differential gear oil
- (3) API classification
- (4) SAE viscosity No. and applicable temperature

4. SERVICE DATA

Drive pinion bearing preload (for new bearing)	Measured with spring measurement (measured from the companion flange bolt)	N (kgf, lbf)	T-type	18.1 — 38.8 (1.8 — 4.0, 4.1 — 8.7)
			VA1-type	12.7 — 32.2 (1.3 — 3.3, 2.9 — 7.2)
	Measured with torque wrench	N-m (kgf-m, ft-lb)	T-type	0.69 — 1.47 (0.07 — 0.15, 0.51 — 1.08)
			VA1-type	0.48 — 1.22 (0.05 — 0.12, 0.35 — 0.90)
Side gear backlash		mm (in)	T-type	0.10 — 0.20 (0.004 — 0.008)
			VA1-type	0.05 — 0.15 (0.002 — 0.006)
Hypoid driven gear backlash		mm (in)	T-type	0.10 — 0.20 (0.004 — 0.008)
			VA1-type	0.10 — 0.15 (0.004 — 0.006)
Hypoid driven gear runout on its back surface		mm (in)	T-type	0.05 (0.002)
Total preload (measured from the companion flange bolt hole)		N (kgf, lbf)	T-type	20.7 — 54.4 (2.1 — 5.5, 4.7 — 12.2)
Companion flange mating surface runout			mm (in)	0.08 (0.003)

C: CAUTION

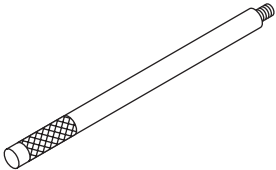

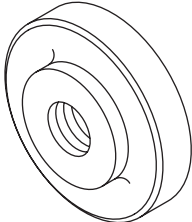

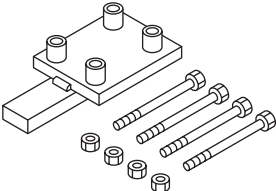

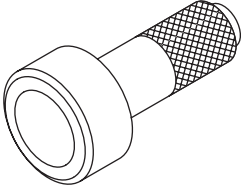

- When performing any work, always wear work clothes, a work cap and protective shoes. Additionally, wear a helmet, protective goggles, etc. if necessary.
- Remove contamination including dirt and corrosion before removal, installation, disassembly or assembly.
- Keep the disassembled parts in order and protect them from dust and dirt.
- When performing a repair, identify the cause of trouble and avoid unnecessary removal, disassembly and replacement.
- Use SUBARU genuine grease, the recommended or equivalent. Do not mix grease etc. of different grades or manufacturers.
- Do not secure a part in a vise directly. Place cushioning materials such as wood pieces, blocks, aluminum plates, or waste cloth between the part and the vise.
- Be sure to tighten fasteners including bolts and nuts to the specified torque.
- Always use the jack-up point when the shop jacks or rigid racks are used to support the vehicle.
- Apply grease onto sliding or revolving surfaces before installation.
- Before installing the O-ring or snap ring, apply a sufficient amount of gear oil to avoid damage and deformation.
- Avoid damaging the mating surface of the case.
- For parts which are not reusable, always use new parts. Other parts should be replaced with new parts as required.
- When handling oil or fuel, adhere to the following to prevent unexpected accident.
 - Be careful with fire.
 - Prepare a container to catch grease or oil, etc. If any grease or oil spills, wipe it off and clean immediately to prevent from penetrating into floor or flowing outside.
 - Follow all government and local regulations concerning disposal of refuse when disposing.
- Before disconnecting connectors of sensors or units, be sure to disconnect the ground cable from battery.
- Some vehicle components are extremely hot immediately after driving. Be wary of receiving burns from heated parts.

2. GENERAL TOOL

TOOL NAME	REMARKS
Transmission jack	Used for removing and installing the rear differential.
Puller	Used for removing the side bearing retainer.
Thickness gauge	Used for measuring clearance.
Hexagon wrench	Used for installing and removing the oil filler plug and oil drain plug.
Tire lever	Used for removing the rear drive shaft. (VA1-type)
Angle gauge	Used for installing the hypoid driven gear. (VA1-type)
DST-i	Used together with Subaru Select Monitor 4.

2. Differential Gear Oil

A: INSPECTION

- 1) Lift up the vehicle.
- 2) Remove the filler plug, and then check the gear oil. Replace the gear oil if it is contaminated, deteriorated or cloudy. <Ref. to DI-19, REPLACEMENT, Differential Gear Oil.>
- 3) Check that the gear oil level is within -5 mm (-0.2 in) from the bottom of the filler plug hole. If the level is low, make sure that there is no oil leakage and re-fill up to the bottom of filler plug hole.

NOTE:

On VA1-types at factory settings, the oil level may be within -14 mm (-0.6 in) from the bottom of the filler plug. This is at normal level, requiring no oil re-fill.

- T-type

(A) Filler plug

- VA1-type

(A) Filler plug

- 4) Install the filler plug.

NOTE:

- For the T-type, degrease the thread portion sufficiently and apply liquid gasket to the filler plug.

Liquid gasket:

THREE BOND 1105 (Part No. 004403010) or equivalent

- For VA1 type, use a new gasket.

Tightening torque:

T-type:

49 N·m (5.0 kgf·m, 36.1 ft·lb)

VA1-type:

50 N·m (5.1 kgf·m, 36.9 ft·lb)

B: REPLACEMENT

CAUTION:

- Gear oil is extremely hot just after driving. Be wary of receiving burns.
- Be careful not to spill the differential gear oil on exhaust pipe. If gear oil is spilled, wipe it off completely.

- 1) Lift up the vehicle.
- 2) Remove the drain plug and filler plug, and drain the gear oil.

- T-type

(A) Filler plug

(B) Drain plug

- VA1-type

(A) Filler plug

(B) Drain plug

Differential Gear Oil

DIFFERENTIALS

3) Install the drain plug.

NOTE:

- For the T-type, degrease the thread portion sufficiently and apply liquid gasket to the drain plug.

Liquid gasket:

THREE BOND 1105 (Part No. 004403010) or equivalent

- For VA1 type, use a new gasket.

Tightening torque:

T-type:

49 N·m (5.0 kgf-m, 36.1 ft-lb)

VA1-type:

50 N·m (5.1 kgf-m, 36.9 ft-lb)

4) Fill the differential carrier with gear oil to the bottom of filler plug.

NOTE:

Carefully refill gear oil while watching the level. Excessive or insufficient oil must be avoided.

Recommended gear oil:

<Ref. to DI-2, SPECIFICATION, General Description.>

Oil capacity:

0.8 L (0.8 US qt, 0.7 Imp qt)

- T-type

- (A) Filler plug
- (B) Drain plug

- VA1-type

- (A) Filler plug
- (B) Drain plug

5) Install the filler plug.

NOTE:

- For the T-type, degrease the thread portion sufficiently and apply liquid gasket to the filler plug.

Liquid gasket:

THREE BOND 1105 (Part No. 004403010) or equivalent

- For VA1 type, use a new gasket.

Tightening torque:

T-type:

49 N·m (5.0 kgf-m, 36.1 ft-lb)

VA1-type:

50 N·m (5.1 kgf-m, 36.9 ft-lb)

3. Front Differential Assembly

A: NOTE

1. CVT MODEL

For front differential for the CVT model, refer to the "CVT (TR580)" section. <Ref. to CVT(TR580)-316, Front Differential Assembly.>

2. 5MT MODEL

For front differential for the 5MT model, refer to the "5MT" section. <Ref. to 5MT-73, Front Differential Assembly.>

Rear Differential (T-type)

DIFFERENTIALS

4. Rear Differential (T-type)

A: REMOVAL

- 1) Shift the select lever or gear shift lever to neutral.
- 2) Release the parking brake.
- 3) Disconnect the ground cable from battery.
- 4) Lift up the vehicle.
- 5) Remove the rear wheels.
- 6) Drain differential gear oil. <Ref. to DI-19, REPLACEMENT, Differential Gear Oil.>
- 7) Remove the rear exhaust pipe. <Ref. to EX(H4DO)-17, REMOVAL, Rear Exhaust Pipe.>
- 8) Remove the center exhaust cover.

- 9) Remove the propeller shaft. <Ref. to DS-11, REMOVAL, Propeller Shaft.>
- 10) Loosen the self-lock nuts which hold the rear differential to the rear sub frame assembly.

- 11) Remove the DOJ of rear drive shaft from rear differential using ST or tire lever.

NOTE:

- For the T-type, use the ST.
- For the VA1-type, use the tire lever.
- When removing the DOJ from the rear differential, fit the tire lever or ST to the bolts as shown in the figure so as not to damage the side retainer.

T-type

ST 28099PA100 DRIVE SHAFT REMOVER

(A) Bolt

VA1-type

(A) Tire lever

(B) Bolt

- 12) Set the rear differential to transmission jack.

13) Remove the rear differential front member.

14) Remove the self-lock nuts which hold the rear differential to the rear sub frame assembly.

15) Pull out the rear differential stud bolt from rear differential mount bushing.

NOTE:

When removing the stud bolt from the rear differential mount bushing, carefully adjust the angle and location of transmission jack and jack stand, if necessary.

16) Lower the transmission jack.

17) Pull out the rear drive shaft from the rear differential.

NOTE:

If it is difficult to pull out the rear drive shaft from rear differential, use the ST for T-type and the tire lever for VA1-type.

ST 28099PA100 DRIVE SHAFT REMOVER

18) Lower the transmission jack.

19) Secure the rear drive shaft to rear lateral link using wire.

20) Remove the rear differential member plate from rear differential.

(A) Rear differential member plate

Rear Differential (T-type)

DIFFERENTIALS

B: INSTALLATION

1) Attach the rear differential member plate to the rear differential.

(A) Rear differential member plate

2) Set the rear differential to transmission jack.

3) Set the ST to the rear differential.

ST 28099PA090 OIL SEAL PROTECTOR

4) Insert the rear drive shaft until the spline portion of the rear drive shaft exceeds the side oil seal.

5) Remove ST from rear differential.

6) Push the rear differential from side to side to insert the DOJ into rear differential completely.

7) Adjust the transmission jack, if necessary, and insert the rear differential stud bolt into the rear differential mount bushing properly.

8) After inserting the rear differential stud bolt into the rear differential mount bushing, lift up the transmission jack and align the rear differential to its attachment position.

9) Tighten a new self-locking nut temporarily to the rear differential stud bolt.

10) Install the rear differential front member, and temporarily attach and tighten a new self-locking nut.

11) Remove the transmission jack.
12) Tighten the self-locking nut.

Tightening torque:

T1: 50 N·m (5.1 kgf-m, 36.9 ft-lb)

T2: 110 N·m (11.2 kgf-m, 81.1 ft-lb)

13) Tighten the self-locking nut.

Tightening torque:

70 N·m (7.1 kgf-m, 51.6 ft-lb)

14) Install the propeller shaft. <Ref. to DS-13, INSTALLATION, Propeller Shaft.>

15) Install the center exhaust cover.

Tightening torque:

18 N·m (1.8 kgf-m, 13.3 ft-lb)

16) Install the rear exhaust pipe. <Ref. to EX(H4DO)-18, INSTALLATION, Rear Exhaust Pipe.>

17) Fill differential gear oil. <Ref. to DI-19, REPLACEMENT, Differential Gear Oil.>

18) Installing procedure hereafter is in the reverse order of removal.

19) Perform "Rear differential inspection mode" using the Subaru Select Monitor. (CVT model) <Ref. to DI-64, Rear Differential Inspection Mode.>

CAUTION:

Be sure to perform rear differential inspection mode when the following work has been performed.

- Replacement of rear differential
- Replacement of rear differential hypoid gear set
- Replacement of transmission assembly
- Replacement of front differential hypoid gear set

C: DISASSEMBLY

To detect the real cause of trouble, inspect the following items before disassembling.

- Tooth contact and backlash between hypoid driven gear and drive pinion
- Hypoid driven gear runout on its back surface
- Total preload of drive pinion

1) Set the ST on vise and install the differential assembly to ST.

ST 398217700 ATTACHMENT SET

Rear Differential (T-type)

DIFFERENTIALS

- 2) Remove the drain plug and filler plug.
- 3) Remove the air breather cap.

NOTE:

- Do not attempt to remove the air breather cap unless necessary.
- Whenever the air breather cap is removed, replace it with a new part.

- (A) Air breather cap
(B) Rear cover

- 4) Remove the bolts, and then remove the rear cover.
- 5) Remove the stud bolts from rear cover if necessary.
- 6) Remove the side retainer attachment bolts, set the ST to differential case, and extract the side retainers RH and LH with a puller.

NOTE:

- Side retainer shim of each side should be kept together with its mating retainer.
- Keep the side retainers separate by attaching tags or in similar ways to make it possible to identify RH and LH sides during reassembly.

ST 398457700 ATTACHMENT

- 7) Remove the oil seal and O-ring from the side retainer.

- 8) Pull out the differential case assembly from the differential carrier.

NOTE:

- Be careful not to hit the teeth of hypoid driven gear against the differential carrier.

- 9) When replacing the side bearing, remove the side bearing race from the side retainer using the ST. ST 398527700 PULLER ASSY

- 10) Using the ST, remove the side bearing cone.

NOTE:

- Do not attempt to disassemble the parts unless necessary.
- Set the ST so that its claws catch the edge of the side bearing cone.
- Never mix up the RH and LH side bearing races and cones.

ST 18759AA000 PULLER ASSY

11) Remove the hypoid driven gear by loosening hypoid driven gear bolts.

12) Remove the pinion shaft lock pin from hypoid driven gear side using ST.
ST 899904100 STRAIGHT PIN REMOVER

13) Draw out the pinion mate shaft, and remove pinion mate gears, pinion mate gear washers, side gears, and side gear thrust washers.

NOTE:

The gears and washers should be marked with RH or LH, front or rear, or kept separately.

- (A) Side gear
- (B) Pinion mate gear
- (C) Side gear thrust washer
- (D) Differential case
- (E) Pinion mate shaft
- (F) Pinion mate gear washer

14) Remove the self-locking nut while securing the companion flange with ST.

ST 498427200 FLANGE WRENCH

15) Extract the companion flange with a puller.

- (A) Companion flange
- (B) Puller

16) Press the end of drive pinion shaft using ST and remove the rear bearing cone, pinion height adjusting washer, preload adjusting spacer and washer.

NOTE:

Hold the drive pinion so as not to drop it.

ST 398467700 DRIFT

Rear Differential (T-type)

DIFFERENTIALS

17) Remove the rear bearing cone from drive pinion by supporting the bearing cone with ST.

NOTE:

Place the replacer so that its center-recessed side faces the bearing cone.

ST 398517700 REPLACER

18) Remove the front oil seal from differential carrier using ST.

ST 398527700 PULLER ASSY

- (A) Differential carrier
- (B) Front oil seal

19) Remove the pilot bearing together with the front bearing cone and spacer using the ST.

ST 398467700 DRIFT

- (A) Pilot bearing
- (B) Spacer
- (C) Front bearing
- (D) Rear bearing race

20) When replacing the bearings, use a brass bar to tap out the front bearing race and rear bearing race in this order to remove them.

- (A) 2 cutout portions along diagonal lines
- (B) Tap alternately with brass bar.

D: ASSEMBLY

NOTE:

- Assemble in the reverse order of disassembly.
- Check and adjust each part during assembly.
- Keep the shims and washers in order, so that they are not improperly installed.
- Thoroughly clean the surfaces on which the shims, washers and bearings are to be installed.
- Apply differential gear oil when installing the bearings and thrust washers.
- Be careful not to mix up the RH and LH bearing races.
- Replace the gasket, oil seal and O-ring with a new part.
- Be careful not to mix up the rear differential side oil seal RH and LH.
- Apply differential gear oil to the lips when installing the oil seal.

1) Adjusting preload for front and rear bearings

NOTE:

Adjust the bearing preload between front and rear bearings with preload adjusting spacer and washer. Pinion height adjusting washer is not affected by this adjustment. The adjustment must not be carried out with oil seal inserted.

(1) Install the rear bearing race into the differential carrier using ST1 and ST2.

ST1 398477701 HANDLE
ST2 398477703 DRIFT 2

(2) Install the front bearing race to the differential carrier using ST1 and ST2.

NOTE:

Use a new front bearing race.

ST1 398477701 HANDLE
ST2 398477702 DRIFT

(3) Insert ST1 into the differential carrier with the pinion height adjusting washer and rear bearing cone fitted onto it.

NOTE:

- At this time, install a provisionally selected or previously used pinion height adjusting washer. Measure and record the thickness.
- If tooth contact (drive pinion, hypoid driven gear) is normal in the inspection before disassembling, verify that the washer is not deformed, and then re-use the used washer.

(4) Install the preload adjusting spacer and washer, front bearing cone, ST2, companion flange and self-locking nut.

NOTE:

Use new front bearing cone.

ST1 398507702 DUMMY SHAFT
ST2 398507703 DUMMY COLLAR

- (A) Pinion height adjusting washer
- (B) Preload adjusting spacer
- (C) Preload adjusting washer

(5) Turn the ST1 by hand to smooth the bearing, and tighten the self-locking nut while measuring the initial load or initial torque with a spring scale or torque wrench. Select the preload adjusting washer and spacer so that the specified preload is obtained when nut is tightened to the specified torque.

NOTE:

- Use a new self-locking nut.
- Measure the preload in direction of tangent to the flange.
- Be careful not to give excessive preload.
- When tightening the self-locking nut, lock ST1 with ST2 as shown in the figure.

ST1 398507702 DUMMY SHAFT

383695206	57.2 (2.252)

2) Adjusting drive pinion height:

Adjust the drive pinion height with pinion height adjusting washer installed between the rear bearing cone and the back of pinion gear.

(1) Attach the ST2.

- ST1 398507702 DUMMY SHAFT
 ST2 398507701 DIFFERENTIAL CARRIER GAUGE
 ST3 398507703 DUMMY COLLAR

(A) Pinion height adjusting washer

(2) Measure the clearance "N" between the end of ST2 and the end surface of ST1 by using a thickness gauge.

NOTE:

Make sure there is no clearance between the differential carrier and ST2.

- ST1 398507702 DUMMY SHAFT
 ST2 398507701 DIFFERENTIAL CARRIER GAUGE

(3) Obtain the thickness of pinion height adjusting washer to be inserted from the following formula, and replace the temporarily installed washer with this one.

$$T = T_o + N - (H \times 0.01) - 0.20 \text{ mm (0.0079 in)}$$

T	Thickness of pinion height adjusting washer mm (in)	
T _o	Thickness of washer temporarily inserted mm (in)	
N	Clearance of thickness gauge mm (in)	
H	Figure marked on drive pinion head	

Memo:

(Example of calculation)

$$T_o = 3.39 \text{ mm (0.1335 in)}$$

$$N = 0.24 \text{ mm (0.0094 in)}$$

$$H = + 1$$

$$T = 3.39 \text{ mm (0.1335 in)} + 0.24 \text{ mm (0.0094 in)} - 0.01 \text{ mm (0.0004 in)} - 0.20 \text{ mm (0.0079 in)} = 3.42 \text{ mm (0.1346 in)}$$

Result: Thickness = 3.42 mm (0.1346 in)

Therefore use washer 383605200.

Rear Differential (T-type)

Pinion height adjusting washer	
Part No.	Thickness mm (in)
383495200	3.09 (0.1217)

383675200	3.63 (0.1429)
383685200	3.66 (0.1441)

3) Install the selected pinion height adjusting washer on drive pinion, and press the rear bearing cone into position with ST.

ST 398177700 INSTALLER

4) Insert the drive pinion into the differential carrier, and install the preselected preload adjusting spacer and washer.

- (A) Drive pinion
- (B) Preload adjusting spacer
- (C) Preload adjusting washer
- (D) Differential carrier

5) Press-fit the front bearing cone with ST1, ST2 and ST3.

NOTE:

Use new front bearing cone.

- ST1 398507703 DUMMY COLLAR
- ST2 399780104 WEIGHT
- ST3 899580100 INSTALLER

6) Insert the spacer, then press-fit the pilot bearing with ST1 and ST2.

NOTE:

Use a new pilot bearing.

- ST1 399780104 WEIGHT
- ST2 899580100 INSTALLER

Rear Differential (T-type)

DIFFERENTIALS

7) Using the ST, install the oil seal.

NOTE:

- Use a new oil seal.
- Press-fit until the oil seal end comes 1 mm (0.04 in) inward from end of carrier.
- Apply differential gear oil to the oil seal lips.

ST 498447120 INSTALLER

8) Press-fit the companion flange with ST1 and ST2.

NOTE:

Be careful not to damage the bearing.

ST1 899874100 INSTALLER

ST2 399780104 WEIGHT

9) Apply seal material on the drive pinion shaft thread and new self-locking nut seat.

Seal material:

THREE BOND 1324 (Part No. 004403042) or equivalent

10) Attach the new self-locking nut and use the ST to fix the companion flange in place, then tighten the self-locking nut.

Tightening torque:

181.5 N·m (18.5 kgf·m, 133.9 ft·lb)

ST 498427200 FLANGE WRENCH

11) Check the initial torque or initial load.

Initial load:

18.1 — 38.8 N (1.8 — 4.0 kgf, 4.1 — 8.7 lbf)

Initial torque:

0.69 — 1.47 N·m (0.07 — 0.15 kgf·m, 0.51 — 1.08 ft·lb)

12) Assembling differential case

(1) Install the side gears and pinion mate gears, with their side gear thrust washers, pinion mate gear washer, and pinion mate shaft, into the differential case.

NOTE:

- Apply gear oil on both sides of the washer and on the pinion mate shaft before installing.
- Insert the pinion mate shaft into the differential case by aligning the pin holes.

(2) Measure the side gear backlash.

Side gear backlash:

0.10 — 0.20 mm (0.004 — 0.008 in)

(3) Adjust the backlash as specified by selecting side gear thrust washer.

Side gear thrust washer	
Part No.	Thickness mm (in)
383445201	0.75 — 0.80 (0.0295 — 0.0315)
383445202	0.80 — 0.85 (0.0315 — 0.0335)
383445203	0.85 — 0.90 (0.0335 — 0.0354)

(4) Check the condition of rotation after applying oil to the gear tooth surfaces and washer surfaces.

(5) Drive the pinion shaft lock pin into the differential case.

NOTE:

Use a new pinion shaft lock pin.

ST 899904100 STRAIGHT PIN REMOVER

13) Install the driven gear to the differential case.

NOTE:

- Before installing bolts, apply seal material to bolt threads.

Seal material:

THREE BOND 1324 (Part No. 004403042) or equivalent

- Make sure there is no clearance between the differential case and driven gear.
- Tighten opposing bolts in order.

Tightening torque:

103 N·m (10.5 kgf·m, 76.0 ft·lb)

14) Using the ST, press-fit the side bearing to the differential case.

ST 398487700 DRIFT

Rear Differential (T-type)

DIFFERENTIALS

15) Using the ST, press-fit the side bearing outer race to the side retainer.

CAUTION:

Make sure that the bearing outer races and cones are properly assembled.

ST 398417700 DRIFT

16) Side retainer shim adjustment

(1) The hypoid driven gear backlash and side bearing preload can be adjusted by the side retainer shim thickness.

(2) Install the differential case assembly into differential carrier in the reverse order of disassembly.

NOTE:

Be careful not to hit the teeth of hypoid driven gear against the differential carrier.

(3) Install the side retainer shim.

NOTE:

- Be careful not to mix up the side retainer shim RH and LH.
- Replace broken or corroded side retainer shims with a new part of the same thickness.

Side retainer shim	
Part No.	Thickness mm (in)
383475201	0.20 (0.0079)
383475202	0.25 (0.0098)
383475203	0.30 (0.0118)
383475204	0.40 (0.0157)
383475205	0.50 (0.0197)

(4) Align the arrow mark on the differential carrier with the arrow mark on the side retainer when installing the side retainer.

NOTE:

Be careful that side bearing race is not damaged by the bearing roller.

(A) Arrow mark (on the side retainer)

(B) Arrow mark (on the differential carrier)

(5) Tighten the side retainer bolts.

Tightening torque:

10.5 N·m (1.1 kgf·m, 7.7 ft·lb)

(6) Measure the hypoid driven gear to drive pinion backlash. Set the magnet base on differential carrier. Align the contact point of dial gauge with tooth face of hypoid driven gear, and move hypoid driven gear while holding drive pinion still. Read the value indicated on dial gauge. If the backlash is outside the standard range, adjust the side retainer shim by the following method.

• When backlash is less than 0.1 mm (0.004 in):

Reduce the thickness of shim on the back side of the hypoid driven gear and increase the thickness of shims on the teeth side of the hypoid driven gear.

- **When backlash exceeds 0.2 mm (0.008 in):** Increase the thickness of shim on the back side of the hypoid driven gear and reduce the thickness of shims on the teeth side of the hypoid driven gear.

Backlash:

0.10 — 0.20 mm (0.004 — 0.008 in)

(7) Measure the total preload of the drive pinion. If the total preload is outside the specification range, adjust the thickness of side retainer shims, increasing/reducing both shims by an even amount at a time.

Total preload:

20.7 — 54.4 N (2.1 — 5.5 kgf, 4.7 — 12.2 lbf)

17) Recheck the hypoid driven gear to drive pinion backlash.

Backlash:

0.10 — 0.20 mm (0.004 — 0.008 in)

18) Check pinion and hypoid driven gears rotate smoothly and make sure of the hypoid driven gear runout on its back surface. If the hypoid driven gear runout on its back surface exceeds the specification, check for any foreign objects between the hypoid driven gear and differential case, and for any deformation of the differential case or hypoid driven gear.

Hypoid driven gear back surface runout:

0.05 mm (0.002 in)

19) Check and adjustment of the tooth contact of hypoid driven gear and drive pinion

(1) Apply lead-free red dye evenly on the both sides of three to four teeth of the hypoid driven gear. Check the contact pattern after rotating the hypoid driven gear several revolutions back and forth until a definite contact pattern appears on the hypoid driven gear.

(2) When the contact pattern is not correct, re-adjust.

NOTE:

Be sure to wipe off the lead-free red dye completely after the adjustment is completed.

- Correct tooth contact

Check item: Tooth contact pattern is slightly shifted toward toe side under no-load rotation. (When driving, it moves towards the heel side.)

- (A) Toe side
- (B) Heel side

Rear Differential (T-type)

DIFFERENTIALS

- Face contact

Check item: Backlash is too large.

Contact pattern

Corrective action: Increase thickness of pinion height adjusting washer according to the procedure for bringing drive pinion close to hypoid driven gear side.

- Flank contact

Check item: Backlash is too small.

Contact pattern

Corrective action: Reduce the thickness of pinion height adjusting washer according to the procedure for bringing drive pinion away from hypoid driven gear.

- Toe contact (inside contact)

Check item: Teeth contact area is too small.

Contact pattern

Corrective action: Reduce the thickness of pinion height adjusting washer according to the procedure for bringing drive pinion away from hypoid driven gear.

- Heel contact (outside end contact)
Check item: Teeth contact area is too small.
 Contact pattern

Corrective action: Increase thickness of pinion height adjusting washer according to the procedure for bringing drive pinion close to hypoid driven gear side.

20) If proper tooth contact is not obtained, readjust the drive pinion height by changing the RH and LH side retainer shims and the hypoid gear backlash.

(1) Drive pinion height

- ST1 398507702 DUMMY SHAFT

$$T = To + N - (H \times 0.01) - 0.20 \text{ mm (0.0079 in)}$$

T	Thickness of pinion height adjusting washer mm (in)	
To	Thickness of washer temporarily inserted mm (in)	
N	Clearance of thickness gauge mm (in)	
H	Figure marked on drive pinion head	
Memo:		

(2) Hypoid gear backlash

Backlash:

0.10 — 0.20 mm (0.004 — 0.008 in)

- 21) Remove the RH and LH side retainers.
- 22) Install the O-ring to left and right side retainers.

NOTE:

Use new O-rings.

23) Install the oil seal to the side retainers on both sides. <Ref. to DI-58, REPLACEMENT, Rear Differential Side Oil Seal.>

24) Align the arrow mark on the differential carrier with the arrow mark on the side retainer when installing the side retainer.

- (A) Arrow mark (on the side retainer)
- (B) Arrow mark (on the differential carrier)

Rear Differential (T-type)

DIFFERENTIALS

25) Apply liquid gasket to the bolts indicated by arrows, and tighten the bolts.

Liquid gasket:

THREE BOND 1110F, THREE BOND 1110B or equivalent

Tightening torque:

10.5 N·m (1.1 kgf·m, 7.7 ft·lb)

26) Install the gasket and rear cover, and tighten the bolts to specified torque.

NOTE:

Use a new gasket.

Tightening torque:

29.5 N·m (3.0 kgf·m, 21.8 ft·lb)

27) When the stud bolts are removed from the rear cover, install the stud bolts so that the exposed length of stud bolt is within the range of "L".

CAUTION:

- Do not tighten forcibly if the exposed length of stud bolt does not fall within the specified range. Remove the stud bolt, and check for contamination of foreign matter and any defects in the screw hole.
- Do not tighten with a tightening torque of 49 N·m (5.0 kgf·m, 36.1 ft·lb) (reference value) or more.

Exposed length L of stud bolt:

59.0 — 61.0 mm (2.32 — 2.40 in)

28) Install the air breather cap.

NOTE:

When installing the air breather cap, do not tap section (A). Be sure to tap section (B) to install.

29) Install the drain plug.

NOTE:

Apply liquid gasket to the drain plug.

Liquid gasket:

THREE BOND 1105 (Part No. 004403010) or equivalent

Tightening torque:

49 N·m (5.0 kgf·m, 36.1 ft·lb)

30) Install the filler plug.

NOTE:

After installing the rear differential assembly to the vehicle, fill the gear oil, then apply liquid gasket, and tighten to the specified torque. <Ref. to DI-19, REPLACEMENT, Differential Gear Oil.>

E: INSPECTION

Wash all the disassembled parts clean, and examine them for wear, damage and other defects. Repair or replace the defective parts as necessary.

1) Hypoid driven gear and drive pinion

- If there is evidently an abnormal tooth contact, find out the cause and adjust until the teeth contact correctly. Replace the gear if there is an excessive worn or an incapable adjustment.
- If crack, cutout or seizure is found, replace the parts as a set. Slight damage of some teeth can be corrected by oil stone or the like.

2) Side gear and pinion mate gear

- Replace if cracks, scoring or other defects are evident on the tooth surface.
- Replace if thrust washer contact surface is worn or scored. Slight damages of the surface can be corrected by oil stones or equivalent.

3) Bearing

Replace if seizure, peeling, wear, rust, dragging during rotation, noise or other defect is evident.

4) Thrust washer of the side gear and pinion mate gear

Replace if seized, flawed, abnormally worn or having other defects.

5) Oil seal

Replace if deformed or damaged, and at every disassembling.

6) Differential carrier

Replace if the bearing bores are worn or damaged.

7) Differential case

Replace if sliding surfaces are abnormally worn, burned, or cracked.

8) Companion flange

Replace if the oil seal lip contact surface shows cracking.

1. SIDE GEAR BACKLASH

Using a dial gauge, check the backlash of side gear.

Side gear backlash:

0.10 — 0.20 mm (0.004 — 0.008 in)

If the side gear backlash is not within the specified range, select the side gear thrust washer and adjust the side gear backlash as specified.

DI-00315

2. HYPOID DRIVEN GEAR BACKLASH

Using a dial gauge, check the backlash of hypoid driven gear.

Hypoid driven gear backlash:

0.10 — 0.20 mm (0.004 — 0.008 in)

If the hypoid driven gear backlash is outside the specification range, adjust the side bearing preload and repair if necessary.

DI-00099

3. HYPOID DRIVEN GEAR RUNOUT ON ITS BACK SURFACE

Using a dial gauge, check the hypoid driven gear back surface runout.

Hypoid driven gear back surface runout:

0.05 mm (0.002 in)

If the hypoid driven gear runout on its back surface exceeds the limit, replace the hypoid driven gear.

DI-00101

4. TOOTH CONTACT BETWEEN HYPOID DRIVEN GEAR AND DRIVE PINION

Inspect the tooth contact between the hypoid driven gear and drive pinion. <Ref. to DI-28, ASSEMBLY, Rear Differential (T-type).>

Rear Differential (T-type)

DIFFERENTIALS

5. TOTAL PRELOAD

Using a spring scale, check the total preload.

Total preload:

20.7 — 54.4 N (2.1 — 5.5 kgf, 4.7 — 12.2 lb)

If the total preload is not within the specified range, adjust the side retainer shim.

6. COMPANION FLANGE

1) If rust or dirt is attached to the companion flange, remove them.

2) Set a dial gauge at a companion flange surface (mating surface of propeller shaft and companion flange), and then measure the companion flange runout.

Limit of runout:

0.08 mm (0.003 in)

3) Set the gauge inside of the companion flange, and measure the runout.

Limit of runout:

0.08 mm (0.003 in)

4) If either runout exceeds the limit, move the phase of companion flange and drive pinion 90° each, and find the point where the runout is within the limit.

5) If the runout exceeds the limit even after changing the phase, replace the companion flange and recheck the runout.

6) If the runout exceeds the limit after replacing the companion flange, the drive pinion may be assembled incorrectly or bearing is faulty.

F: ADJUSTMENT

1. SIDE GEAR BACKLASH

Adjust the side gear backlash. <Ref. to DI-28, ASSEMBLY, Rear Differential (T-type).>

2. HYPOID DRIVEN GEAR BACKLASH

Adjust hypoid driven gear backlash. <Ref. to DI-28, ASSEMBLY, Rear Differential (T-type).>

3. TOOTH CONTACT BETWEEN HYPOID DRIVEN GEAR AND DRIVE PINION

Adjust the tooth contact between hypoid driven gear and drive pinion gear. <Ref. to DI-28, ASSEMBLY, Rear Differential (T-type).>

4. TOTAL PRELOAD

Adjust the side retainer shim. <Ref. to DI-28, ASSEMBLY, Rear Differential (T-type).>

5. Rear Differential (VA-type)

A: REMOVAL

The removal procedure for VA1-type is included in "REMOVAL" for T-type. <Ref. to DI-22, REMOVAL, Rear Differential (T-type).>

B: INSTALLATION

The installation procedure for VA1-type is included in "INSTALLATION" for T-type. <Ref. to DI-24, INSTALLATION, Rear Differential (T-type).>

C: DISASSEMBLY

To detect the real cause of trouble, inspect the following items before disassembling.

- Tooth contact and backlash between hypoid driven gear and drive pinion

1) Set the ST on vise and install the differential assembly to ST.

ST 398217700 ATTACHMENT SET

- 2) Remove the drain plug and filler plug.
3) Remove the rear cover by removing retaining bolts.

NOTE:

Remove it by tapping with a plastic hammer.

- 4) Remove the stud bolts from rear cover if necessary.
5) Remove the air breather cap.

NOTE:

- Do not attempt to remove the air breather cap unless necessary.
- Whenever the air breather cap is removed, replace it with a new part.

- (A) Air breather cap
(B) Rear cover

6) Remove the lock plate RH and LH.

7) Remove the side retainers RH and LH with ST.

NOTE:

When keeping the retainers aside, use labels etc. to avoid confusing the left and right.

ST 18630AA010 WRENCH COMPL RETAINER

Rear Differential (VA-type)

DIFFERENTIALS

8) Pull out the differential case assembly from differential carrier.

NOTE:

Be careful not to hit the teeth of hypoid driven gear against the differential carrier.

9) Remove the bearing race from side retainer RH and LH with ST1 and ST2.

21) Remove the pilot bearing together with the front bearing cone and spacer using the ST.

ST 398467700 DRIFT

- (A) Pilot bearing
- (B) Spacer
- (C) Front bearing
- (D) Rear bearing race

22) When replacing the bearings, tap out the front bearing race and rear bearing race in this order using a brass bar to remove them.

- (A) 2 cutout portions along diagonal lines
- (B) Tap alternately with brass bar.

D: ASSEMBLY

NOTE:

- Assemble in the reverse order of disassembly.
- Check and adjust each part during assembly.
- Keep the shims and washers in order, so that they are not improperly installed.
- Thoroughly clean the surfaces on which the shims, washers and bearings are to be installed.
- Apply differential gear oil when installing the bearings and thrust washers.
- Be careful not to mix up the RH and LH bearing races.
- Replace the gasket, oil seal and O-ring with a new part.
- Be careful not to mix up the rear differential side oil seal RH and LH.

- Apply differential gear oil to the lips when installing the oil seal.

1) Adjusting preload for front and rear bearings

NOTE:

Adjust the bearing preload between front and rear bearings with preload adjusting spacer and washer. Pinion height adjusting washer is not affected by this adjustment. The adjustment must be carried out with oil seal removed.

(1) Install the rear bearing race into the differential carrier using ST1 and ST2.

ST1 398477701 HANDLE

ST2 398477702 DRIFT

(2) Install the front bearing race to the differential carrier using ST1 and ST2.

NOTE:

Use a new front bearing race.

ST1 398477701 HANDLE

ST2 498447110 DRIFT

(3) Insert the front bearing cone.

NOTE:

Use new front bearing cone.

(4) Measure and record the thickness of the pinion height adjusting washer.

NOTE:

- At this time, install a provisionally selected or previously used pinion height adjusting washer.
- If tooth contact (drive pinion and hypoid driven gear) is normal in the inspection before disassembling, verify that the washer is not deformed, and then reuse the used washer.

(5) Insert the ST (DUMMY SHAFT) into case with the pinion height adjusting washer and rear bearing cone fitted onto it.

(6) Install the preload adjusting spacer, washer, front bearing cone, spacer, pilot bearing, companion flange, and self-locking nut.

NOTE:

Use a new pilot bearing.

ST 498447150 DUMMY SHAFT
Part No. 32285AA000 Spacer

38336AA080	1.700 (0.0669)
38336AA200	1.713 (0.0674)
38336AA090	1.725 (0.0679)
38336AA210	1.738 (0.0684)
38336AA100	1.750 (0.0689)
38336AA220	1.763 (0.0694)
38336AA110	1.775 (0.0699)

Preload adjusting spacer	
Part No.	Length mm (in)
32288AA040	52.3 (2.059)
32288AA050	52.5 (2.067)
31454AA100	52.6 (2.071)
32288AA060	52.7 (2.075)
31454AA110	52.8 (2.079)
32288AA070	52.9 (2.083)
31454AA120	53.0 (2.087)
32288AA080	53.1 (2.091)
32288AA090	53.3 (2.098)

2) Adjusting drive pinion height:
Adjust the drive pinion height with pinion height adjusting washer installed between the rear bearing cone and the back of pinion gear.

(1) Attach the ST2.

ST1 498447150 DUMMY SHAFT
ST2 498505501 DIFFERENTIAL CARRIER GAUGE

Part No. 32285AA000 Spacer

(A) Pinion height adjusting washer
(B) Spacer (SUBARU genuine parts)

(2) Measure the clearance "N" between the end of ST2 and the end surface of ST1 by using a thickness gauge.

NOTE:

Make sure there is no clearance between the differential carrier and ST2.

ST1 498447150 DUMMY SHAFT
ST2 498505501 DIFFERENTIAL CARRIER GAUGE

(3) Calculate the thickness of pinion height adjusting washer to be inserted from the following formula, and replace the temporarily installed washer with a new washer of the calculated thickness.

NOTE:

Adjust it using the 1 — 3 washers.

$$T = T_o + N - 0.05 \text{ mm (0.0020 in)}$$

T	Thickness of pinion height adjusting washer mm (in)	
T _o	Thickness of washer temporarily inserted mm (in)	
N	Clearance of thickness gauge mm (in)	

Memo:

(Example of calculation)

$$T_o = 0.15 \text{ mm (0.0059 in)}$$

$$N = 0.1 \text{ mm (0.0039 in)}$$

$$T = 0.15 + 0.1 - 0.05 = 0.2 \text{ mm (0.0079 in)}$$

Result: Thickness = 0.2 mm (0.0079 in)

Therefore use part number 32295AA220.

Pinion height adjusting washer	
Part No.	Thickness mm (in)
32295AA200	0.150 (0.0059)
32295AA210	0.175 (0.0069)
32295AA220	0.200 (0.0079)
32295AA230	0.225 (0.0089)
32295AA240	0.250 (0.0098)
32295AA250	0.275 (0.0108)

3) Install the selected pinion height adjusting washer on drive pinion, and press the rear bearing cone into position with ST.

ST 498175500 INSTALLER

4) Insert the drive pinion into the differential carrier, and install the preselected preload adjusting spacer and washer.

- (A) Drive pinion
- (B) Preload adjusting spacer
- (C) Preload adjusting washer
- (D) Differential carrier

5) Press-fit the front bearing cone into the carrier with ST1, ST2 and the spacer.

NOTE:

Use new front bearing cone.

ST1 399780104 WEIGHT

ST2 899580100 INSTALLER

Part No. 32285AA000 Spacer

- (A) Spacer (SUBARU genuine parts)

Rear Differential (VA-type)

DIFFERENTIALS

6) Insert the spacer, then press-fit the pilot bearing with ST1 and ST2.

NOTE:

Use a new pilot bearing.

ST1 399780104 WEIGHT

ST2 899580100 INSTALLER

7) Using the ST, install the oil seal.

NOTE:

- Use a new oil seal.
- Press-fit until the oil seal end comes 1 mm (0.04 in) inward from end of carrier.
- Apply differential gear oil to the oil seal lips.

ST 498447120 INSTALLER

8) Press-fit the companion flange with ST1 and ST2.

NOTE:

Be careful not to damage the pilot bearing.

ST1 899874100 INSTALLER

ST2 399780104 WEIGHT

9) Attach the self-locking nut and use the ST to fix the companion flange in place, then tighten the self-locking nut.

NOTE:

- Use a new self-locking nut.
- Before installing the self-locking nut, apply the seal material to the threads of the drive pinion shaft and to the seating surface of the self-locking nut.

Seal material:

THREE BOND 1324 (Part No. 004403042) or equivalent

Tightening torque:

191 N·m (19.5 kgf·m, 140.9 ft·lb)

ST 498427200 FLANGE WRENCH

10) Check the initial torque or initial load.

Initial load:

12.7 — 32.2 N (1.3 — 3.3 kgf, 2.9 — 7.2 lbf)

Initial torque:

0.48 — 1.22 N·m (0.05 — 0.12 kgf·m, 0.35 — 0.90 ft·lb)

11) Assembling differential case

(1) Install the side gears and pinion mate gears, with their thrust washers and pinion mate shaft, into the differential case.

NOTE:

- Apply gear oil on both sides of the washer and on the side gear shaft before installing.
- Insert the pinion mate shaft into the differential case by aligning the pin holes.
- The side gear thrust washer inner surface has a chamfered side. Install the washer with the chamfered side facing toward the side gear.

DI-00634

(2) Measure the side gear backlash.

Side gear backlash:

0.05 — 0.15 mm (0.002 — 0.006 in)

DI-00240

(3) Adjust the side gear backlash by selecting side gear thrust washer.

Side gear thrust washer	
Part No.	Thickness mm (in)
803135011	0.925 — 0.950 (0.0364 — 0.0374)
803135012	0.950 — 0.975 (0.0374 — 0.0384)
803135013	0.975 — 1.000 (0.0384 — 0.0394)
803135014	1.000 — 1.025 (0.0394 — 0.0404)
803135015	1.025 — 1.050 (0.0404 — 0.0413)

(4) Check the condition of rotation after applying oil to the gear tooth surfaces and washer surfaces.

(5) Using the ST, drive the spring pin to the differential case.

NOTE:

Use new spring pin.

ST 899904100 STRAIGHT PIN REMOVER

12) Install the hypoid driven gear to differential case.

NOTE:

- Before installing bolts, apply seal material to bolt threads.

Seal material:

THREE BOND 1324 (Part No. 004403042) or equivalent

- Tighten opposing bolts in order.

(1) Tighten the hypoid driven gear mounting bolts to the specified torque using the ST.

ST 18270KA020 SOCKET (E20)

Tightening torque:

20 N·m (2.0 kgf·m, 14.8 ft·lb)

DI-00726

Rear Differential (VA-type)

DIFFERENTIALS

(2) While checking the tightening angle with the angle gauge, further tighten the hypoid driven gear mounting bolts.

Tightening angle:
 $35^{\circ} \pm 2^{\circ}$

13) Using the ST, press-fit the side bearing to the differential case.

ST 498485400 DRIFT

14) Assemble the side retainer.

(1) Install the oil seal into side retainer RH and LH.

CAUTION:

Pay attention to the left and right of the oil seal.

NOTE:

- Use a new oil seal.
- Apply differential gear oil to the oil seal lip.

ST 498447100 INSTALLER

(2) Install the bearing race into side retainer RH and LH.

CAUTION:

Make sure that bearing races and cones are properly assembled.

ST 398477702 DRIFT

(3) Install the differential case assembly into differential carrier in the reverse order of disassembly.

NOTE:

Be careful not to hit the teeth of hypoid driven gear against the differential carrier.

(4) Temporarily tighten the side retainers RH and LH in differential carrier to install.

15) Perform the backlash adjustment between the hypoid driven gear and drive pinion, and preload adjustment of differential side bearing.

(1) Turn the drive pinion with ST for better fitting of differential side bearing.

ST 498427200 FLANGE WRENCH

(2) Using the ST, tighten side retainer RH, and then tighten side retainer LH until there is no backlash.

ST 18630AA010 WRENCH COMPL RETAINER

(3) Loosen the side retainer LH by approx. 1 and 1/2 teeth, and tighten the side retainer RH by approx. 2 teeth [amount that the side retainer LH is turned back (approx. 1 and 1/2 teeth) + approx. 1/2 teeth]. Difference between [amount that the side retainer LH is turned back (approx. 1 and 1/2 teeth)] and [amount that the side retainer RH is tightened (approx. 2 teeth)] gives preload.

(4) Temporarily tighten the lock plate.

NOTE:

Turn over the lock plate to shift the holder by 1/2 teeth.

(5) Measure the hypoid driven gear-to-drive pinion backlash. Set the magnet base on differential carrier. Align the contact point of dial gauge with tooth face of hypoid driven gear, and move hypoid driven gear while holding drive pinion still. Read the value indicated on dial gauge.

NOTE:

If measured value of backlash is not within the specified range, repeat the procedures for pinion driven gear set backlash adjustment and the differential side bearing preload adjustment.

Backlash:

0.10 — 0.15 mm (0.004 — 0.006 in)

16) Put alignment marks on both the differential carrier and side retainer. Remove the side retainers one side at a time. After installing an O-ring and applying oil to the threaded portion, restore them to the original position.

NOTE:

Use new O-rings.

- (A) Alignment mark
- (B) Side retainer

17) Install the lock plate, and tighten the bolts to the specified torque.

Tightening torque:

25 N·m (2.5 kgf·m, 18.4 ft·lb)

Rear Differential (VA-type)

DIFFERENTIALS

18) Recheck the backlash between hypoid driven gear and drive pinion.

Backlash:

0.10 — 0.15 mm (0.004 — 0.006 in)

DI-00172

19) Checking and adjusting the tooth contact of hypoid driven gear

- (1) Apply lead-free red dye evenly on the both sides of three to four teeth of the hypoid driven gear. Check the contact pattern after rotating the hypoid driven gear several revolutions back and forth until a definite contact pattern appears on the hypoid driven gear.
- (2) When the contact pattern is not correct, re-adjust.

NOTE:

Be sure to wipe off the lead-free red dye completely after the adjustment is completed.

- Correct tooth contact

Check item: Tooth contact pattern is slightly shifted toward toe side under no-load rotation. (When driving, it moves towards the heel side.)

MT-01401

- (A) Toe side
- (B) Heel side

- Face contact

Check item: Backlash is too large.

Contact pattern

AT-00208

Corrective action: Increase thickness of pinion height adjusting washer according to the procedure for bringing drive pinion close to hypoid driven gear side.

AT-00212

- Flank contact

Check item: Backlash is too small.

Contact pattern

AT-00209

Corrective action: Reduce the thickness of pinion height adjusting washer according to the procedure for bringing drive pinion away from hypoid driven gear.

• Toe contact (inside contact)
Check item: Teeth contact area is too small.
 Contact pattern

Corrective action: Reduce the thickness of pinion height adjusting washer according to the procedure for bringing drive pinion away from hypoid driven gear side.

• Heel contact (outside end contact)
Check item: Teeth contact area is too small.
 Contact pattern

Corrective action: Increase thickness of pinion height adjusting washer according to the procedure for bringing drive pinion close to hypoid driven gear side.

20) If correct tooth contact is not obtained, readjust the drive pinion height and the differential side bearing preload (already mentioned) and the hypoid gear backlash.

21) Install the gasket and rear cover to the differential carrier, and tighten the bolts to specified torque.

NOTE:
 Use a new gasket.

Tightening torque:
 25 N·m (2.5 kgf-m, 18.4 ft-lb)

(A) Rear cover

Rear Differential (VA-type)

DIFFERENTIALS

22) When the stud bolts are removed from the rear cover, install the stud bolts so that the exposed length of stud bolt is within the range of "L".

CAUTION:

- Do not tighten forcibly if the exposed length of stud bolt does not fall within the specified range. Remove the stud bolt, and check for contamination of foreign matter and any defects in the screw hole.
- Do not tighten with a tightening torque of 55 N·m (5.6 kgf-m, 40.6 ft-lb) (reference value) or more.

Exposed length L of stud bolt:

59.0 — 61.0 mm (2.32 — 2.40 in)

23) Install the air breather cap.

NOTE:

When installing the air breather cap, do not tap section (A). Be sure to tap section (B) to install.

24) Install the drain plug.

NOTE:

Use a new gasket.

Tightening torque:

50 N·m (5.1 kgf-m, 36.9 ft-lb)

25) Install the filler plug.

NOTE:

After installing the rear differential assembly to the vehicle, fill the gear oil, then use a new gasket, and tighten to the specified torque. <Ref. to DI-19, REPLACEMENT, Differential Gear Oil.>

E: INSPECTION

Wash all the disassembled parts clean, and examine them for wear, damage or other defects. Repair or replace the defective parts as necessary.

- 1) Hypoid driven gear and drive pinion
 - If there is evidently an abnormal tooth contact, find out the cause and adjust until the teeth contact correctly. Replace the gear if there is an excessive worn or an incapable adjustment.
 - If crack, cutout or seizure is found, replace the parts as a set. Slight damage of some teeth can be corrected by oil stone or the like.
- 2) Side gear and pinion mate gear
 - Replace if cracks, scoring or other defects are evident on the tooth surface.
 - Replace if thrust washer contact surface is worn or seized. Slight damages of the surface can be corrected by oil stones or equivalent.
- 3) Bearing
 - Replace if seizure, peeling, wear, rust, dragging during rotation, noise or other defect is evident.
- 4) Side gear thrust washer
 - Replace if seized, flawed, abnormally worn or having other defects.
- 5) Oil seal
 - Replace if deformed or damaged, and at every disassembling.
- 6) Differential carrier
 - Replace if the bearing bores are worn or damaged.
- 7) Differential case
 - Replace if its sliding surfaces are abnormally worn, burned, or cracked.
- 8) Companion flange
 - Replace if the oil seal lip contact surface shows cracking.

1. SIDE GEAR BACKLASH

Using a dial gauge, check the backlash of side gear.

Side gear backlash:

0.05 — 0.15 mm (0.002 — 0.006 in)

If the side gear backlash is outside the specification range, select the side gear thrust washer and adjust the side gear backlash as specified.

2. HYPOID DRIVEN GEAR BACKLASH

Using a dial gauge, check the backlash of hypoid driven gear.

Hypoid driven gear backlash:

0.10 — 0.15 mm (0.004 — 0.006 in)

If the hypoid driven gear backlash is outside the specification range, adjust the side bearing preload and repair if necessary.

3. COMPANION FLANGE

- 1) If rust or dirt is attached to the companion flange, remove them.
- 2) Set a dial gauge at a companion flange surface (mating surface of propeller shaft and companion flange), and then measure the companion flange runout.

Limit of runout:

0.08 mm (0.003 in)

- 3) Set the gauge inside of the companion flange, and measure the runout.

Limit of runout:

0.08 mm (0.003 in)

- 4) If either runout exceeds the limit, move the phase of companion flange and drive pinion 90° each, and find the point where the runout is within the limit.

- 5) If the runout exceeds the limit even after changing the phase, replace the companion flange and recheck the runout.

- 6) If the runout exceeds the limit after replacing the companion flange, the drive pinion may be assembled incorrectly or bearing is faulty.

4. TOOTH CONTACT BETWEEN HYPOID DRIVEN GEAR AND DRIVE PINION

Inspect the tooth contact between the hypoid driven gear and drive pinion. <Ref. to DI-44, ASSEMBLY, Rear Differential (VA-type).>

F: ADJUSTMENT

1. SIDE GEAR BACKLASH

Adjust the side gear backlash. <Ref. to DI-44, ASSEMBLY, Rear Differential (VA-type).>

2. HYPOID DRIVEN GEAR BACKLASH

Adjust hypoid driven gear backlash. <Ref. to DI-44, ASSEMBLY, Rear Differential (VA-type).>

3. TOOTH CONTACT BETWEEN HYPOID DRIVEN GEAR AND DRIVE PINION

Adjust the tooth contact between hypoid driven gear and drive pinion gear. <Ref. to DI-44, ASSEMBLY, Rear Differential (VA-type).>

Rear Differential Front Oil Seal

DIFFERENTIALS

6. Rear Differential Front Oil Seal

A: INSPECTION

Make sure that there is no leakage from front oil seal portion. If there is any leakage, replace the oil seal and inspect the propeller shaft.

B: REPLACEMENT

- 1) Shift the select lever or gear shift lever to neutral.
- 2) Release the parking brake.
- 3) Disconnect the ground cable from battery.
- 4) Lift up the vehicle.
- 5) Drain differential gear oil. <Ref. to DI-19, REPLACEMENT, Differential Gear Oil.>
- 6) Remove the rear exhaust pipe. <Ref. to EX(H4DO)-17, REMOVAL, Rear Exhaust Pipe.>
- 7) Remove the center exhaust cover.

- 8) Remove the propeller shaft. <Ref. to DS-11, REMOVAL, Propeller Shaft.>
 - 9) Check the initial torque and write it down.
 - 10) Remove the self-locking nut while holding the companion flange with ST.
- ST 498427200 FLANGE WRENCH

- 11) Extract the companion flange using the ST.
- ST 399703600 PULLER ASSY

- 12) Remove the oil seal using ST or screwdriver.
- ST 398527700 PULLER ASSY

- 13) Using the ST, install the oil seal.

NOTE:

- Use a new oil seal.
 - Apply differential gear oil to the oil seal lips.
- ST 498447120 INSTALLER

- 14) Install the companion flange.

NOTE:

Use a plastic hammer to install companion flange.

15) Tighten the self-locking nut to the specified torque while holding the companion flange with ST.

CAUTION:

Tighten so that the initial torque of companion flange becomes the same as that of before oil seal replacement.

NOTE:

- Use a new self-locking nut.
- Before installing the self-locking nut, apply the seal material to the threads of the drive pinion shaft and to the seating surface of the self-locking nut.

Seal material:

THREE BOND 1324 (Part No. 004403042) or equivalent

Tightening torque:

T-type

167 — 196 N·m (17.0 — 20.0 kgf-m, 123.2 — 144.6 ft-lb)

VA1-type

162 — 220 N·m (16.5 — 22.5 kgf-m, 119.5 — 162.3 ft-lb)

ST 498427200 FLANGE WRENCH

16) Hereafter, perform assembly in the reverse order of disassembly.

17) Fill differential gear oil. <Ref. to DI-19, REPLACEMENT, Differential Gear Oil.>

Rear Differential Side Oil Seal

DIFFERENTIALS

7. Rear Differential Side Oil Seal

A: INSPECTION

Make sure that there is no leakage from side oil seal. If there is any leakage, replace the oil seal.

B: REPLACEMENT

1) Remove the rear differential. <Ref. to DI-22, REMOVAL, Rear Differential (T-type).> <Ref. to DI-41, REMOVAL, Rear Differential (VA-type).>

2) Remove the rear differential side oil seal using a ST or screwdriver wrapped with vinyl tape to prevent the side retainer from scratching.

ST 398527700 PULLER ASSY

3) Using the ST, install the oil seal.

CAUTION:

Pay attention to the left and right of the oil seal.

NOTE:

- Use a new oil seal.
- Apply differential gear oil to the oil seal lips.
- T-type

ST 398437700 OIL SEAL INSTALLER

- VA1-type

ST 498447100 INSTALLER

4) Install the rear differential. <Ref. to DI-24, INSTALLATION, Rear Differential (T-type).> <Ref. to DI-41, INSTALLATION, Rear Differential (VA-type).>

8. Rear Differential Front Member

A: REMOVAL

- 1) Disconnect the ground cable from battery.
- 2) Lift up the vehicle.
- 3) Support the rear differential using transmission jack, and then remove the rear differential front member.

(A) Rear differential front member

B: INSTALLATION

- 1) Install the rear differential front member, and temporarily attach and tighten a new self-locking nut.

- 2) Remove the transmission jack.
- 3) Tighten the self-locking nut.

Tightening torque:

T1: 50 N·m (5.1 kgf-m, 36.9 ft-lb)

T2: 110 N·m (11.2 kgf-m, 81.1 ft-lb)

C: INSPECTION

- 1) Check the rear differential front member for damage, bend and corrosion. If damage, bend or corrosion is excessive, replace the rear differential front member.
- 2) Check the bushings of rear differential member for cracking, hardening and damage. If cracking, hardening or damage is excessive, replace rear differential front member.

Rear Differential Mount Bushing

DIFFERENTIALS

9. Rear Differential Mount Bushing

A: INSPECTION

Check the rear differential mount bushing for cracks, hardening or damage. If cracking, hardening or damage is excessive, replace rear differential mount bushing.

B: REPLACEMENT

CAUTION:

- If there was so much rust in the rear differential mount bushing, remove the rust before starting work.
- Apply the molybdenum grease on the square thread of the ST (shaft and nut) before use.

1) Remove the rear differential. <Ref. to DI-22, REMOVAL, Rear Differential (T-type).> <Ref. to DI-41, REMOVAL, Rear Differential (VA-type).>

2) Fit the ST to the periphery of the sub frame cylinder, and make sure that the ST does not contact with welded spots or spatters.

ST 41399FG010 SPECIAL TOOL A

(A) Welded spot

3) If the ST contacts with welded spots or spatters, remove the excessive welds or spatters with sander or the equivalent so that the ST contacts the cylinder peripheral part.

CAUTION:

Performing the operation with the ST contacting with welded spots or spatters may break the ST. Be sure to remove excessive welds or spatters before the operation.

4) Set ST1, ST2, ST3, ST4 and ST5 as shown in the figure.

10.Rear Differential Inspection Mode

A: GENERAL DESCRIPTION

CAUTION:

Be sure to perform rear differential inspection mode.

- Follow the messages displayed on the Subaru Select Monitor when working.
- “Rear differential inspection mode” using the Subaru Select Monitor is available only for the CVT model.
- Perform rear differential inspection mode when the following work has been performed.

Transmission assembly replacement/Replacement of rear differential/Replacement of front differential hypoid gear set/Replacement of rear differential hypoid gear set

B: PROCEDURE

CAUTION:

Do not turn the power of the Subaru Select Monitor OFF during work, and do not disconnect the data link connector.

- 1) Shift the select lever to “P” range.
- 2) Apply the parking brake.
- 3) Lift up the vehicle.

WARNING:

Lift up the vehicle until the tire bottom is 30 cm or more above the ground.

- 4) Connect the Subaru Select Monitor to data link connector.
- 5) Turn the ignition switch to ON.
- 6) Select «Diagnosis» in the «Start» screen of Subaru Select Monitor.
- 7) On «Vehicle selection» display, input the vehicle information and select «Confirmed».
- 8) On «Main Menu» display, select «Each System».
- 9) On «Select System» display, select «Transmission Control System».
- 10) On «Select Function» display, select «Work Support».
- 11) On «Work Support» display, select «Rear differential inspection mode».
- 12) Follow the messages displayed on the Subaru Select Monitor screen when working.
- 13) The results of the rear differential inspection mode are displayed on the Subaru Select Monitor screen.
 - When ended normally: “The rear differential has been replaced normally.”
 - When ended abnormally: “A rear differential abnormality has been detected. Reinspect the items at the time of rear differential installation.”
 - When interrupted: “Inspection is stopped. Restart this inspection mode from the beginning.”

14) After the message “Inspection has been completed. Set the ignition switch to OFF.” appears, the rear differential inspection mode completes.

NOTE:

- When the rear differential inspection mode is completed properly, the following warning lights may illuminate. But this is not a malfunction. If warning light illuminates, clear the memory.

VDC/ABS, engine, power steering

- For detailed operation procedures, refer to “Application help”.
- If the rear differential inspection mode does not end normally, repeat the mode until it ends normally.
- When the inspection mode does not end normally, the AWD warning light will start blinking at 2 Hz.
- When the rear differential inspection mode ends abnormally, the front differential and rear differential may be different from the specifications for the vehicle.
- When the rear differential inspection mode is interrupted, the following reasons are possible.

Message	Main reasons for abnormal termination	Action to take
<ul style="list-style-type: none"> • “Inspection is stopped.” • “Inspection is stopped. Restart this inspection mode from the beginning.” 	TCM has detected a failure.	Perform the diagnosis for TCM. <Ref. to CVT(diag)-2, Basic Diagnostic Procedure.>
	VDC has a failure.	Perform the diagnosis for VDC. <Ref. to VDC(diag)-2, Basic Diagnostic Procedure.>
	Brake is applied after start during automatic running.	—
	Too delayed operation to the instructions displayed on the Subaru Select Monitor.	—
“TCM incompatible. Rear differential inspection mode is stopped.”	The model does not support the rear differential inspection mode.	Check the specifications.
The TCM has detected a fault. Inspect following the manual.	TCM has detected a failure.	Perform the diagnosis for TCM. <Ref. to CVT(diag)-2, Basic Diagnostic Procedure.>

General Diagnostic Table

DIFFERENTIALS

11. General Diagnostic Table

A: INSPECTION

Symptom or trouble	Possible cause	Remedy
1. Oil leakage	(1) Worn, scratched, or incorrectly seated front or side oil seal. Scored, battered or excessively worn sliding surface of companion flange.	Repair or replace.
	(2) Clogged or damaged air breather cap.	Clean, repair or replace.
	(3) Loose bolts on the side retainer, or incorrectly fitted O-ring.	Tighten the bolts to specified torque. Replace the O-ring.
	(4) Loose rear cover attachment bolts or damaged gasket.	Replace the gasket, and tighten the bolts to specified torque.
	(5) Loose filler plug or drain plug.	<ul style="list-style-type: none"> • Apply liquid gasket, and tighten to the specified torque. (T-type) • Replace the gasket, and tighten to the specified torque. (VA1-type)
	(6) Wear, damage or incorrect fitting of drive shaft, side retainer or oil seal.	Repair or replace.
2. Seizure NOTE: Seized or damaged parts should be replaced, and also other parts should be thoroughly checked for any defect and should be repaired or replaced as required.	(1) Insufficient backlash for hypoid gear.	Readjust or replace.
	(2) Excessive preload for side, rear or front bearing.	Readjust or replace.
	(3) Insufficient or improper oil used.	Add recommended oil to the specified level.
3. Damage NOTE: Damaged parts should be replaced, and also other parts should be thoroughly checked for any defect and should be repaired or replaced as required.	(1) Improper backlash for hypoid gear.	Readjust or replace.
	(2) Insufficient or excessive preload for side, rear or front bearing.	Readjust or replace.
	(3) Excessive backlash for differential gear.	Replace gear or thrust washer.
	(4) Loose bolts and nuts such as hypoid driven gear bolt.	Retighten.
	(5) Damage due to overloading.	Replace.
4. Noises when starting or shifting gears NOTE: Noises may be caused by differential assembly, universal joint, wheel bearing, etc. Find out what is actually making noise before disassembling.	(1) Improper tooth contact of hypoid driven gear and drive pinion.	Readjust. (Drive pinion adjustment and backlash adjustment)
	(2) Excessive backlash for hypoid driven gear.	Replace the gear or the pinion height adjusting washer.
	(3) Excessive backlash for side gear.	Replace gear or thrust washer.
	(4) Insufficient preload for front or rear bearing.	Readjust.
	(5) Loose drive pinion nut.	Tighten to the specified torque.
	(6) Loose bolts and nuts such as side retainer attachment bolt.	Tighten to the specified torque.
5. Noises when cornering	(1) Damaged differential gear.	Replace.
	(2) Excessive wear or damage of thrust washer.	Replace.
	(3) Broken pinion mate shaft.	Replace.
	(4) Stuck or damaged side bearing.	Replace.

General Diagnostic Table

DIFFERENTIALS

Symptom or trouble	Possible cause	Remedy
6. Gear Noise NOTE: Since noises from engine, muffler, transmission, propeller shaft, wheel bearings, tires, and body are sometimes mistaken for noises from differential assembly, be careful in checking them. Inspection methods to locate noises include coasting, accelerating, cruising, and lifting-up all four wheels. Perform these inspections according to the condition of trouble. When listening to noises, shift the gear into four-wheel drive and fourth speed position, trying to pick up only differential noise.	(1) Improper tooth contact of hypoid driven gear and drive pinion.	Readjust or replace the hypoid gear set.
	(2) Improper backlash of the hypoid driven gear.	Readjust.
	(3) Scored or chipped teeth of hypoid gear.	Replace hypoid gear set.
	(4) Scuffed hypoid gear.	Replace hypoid gear set.
	(5) Improper preload for front or rear bearings.	Readjust.
	(6) Stuck, scored or chipped teeth of front or rear bearing.	Replace.
	(7) Stuck, scored or chipped teeth of side bearing.	Replace.
	(8) Vibrating differential gear.	Replace the differential gear.

T1: 65 (6.6, 47.9)

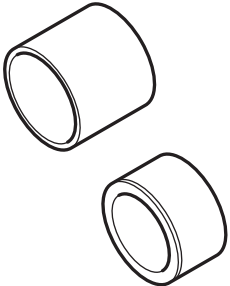

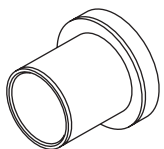

T2: 190 (19.4, 140.1)

C: CAUTION

- When performing any work, always wear work clothes, a work cap and protective shoes. Additionally, wear a helmet, protective goggles, etc. if necessary.
- Remove contamination including dirt and corrosion before removal, installation, disassembly or assembly.
- When performing a repair, identify the cause of trouble and avoid unnecessary removal, disassembly and replacement.
- Some vehicle components are extremely hot immediately after driving. Be wary of receiving burns from heated parts.
- Use SUBARU genuine grease, the recommended or equivalent. Do not mix grease etc. of different grades or manufacturers.
- Be sure to tighten fasteners including bolts and nuts to the specified torque.
- Always use the jack-up point when the shop jacks or rigid racks are used to support the vehicle.
- Apply grease onto sliding or revolving surfaces before installation.
- Be sure that the surface of brake disc, brake pad or brake shoe is free from grease or oil.
- Do not secure a part in a vise directly. Place cushioning materials such as wood blocks, aluminum plates, or waste cloth between the part and the vise.
- When the suspension-related components have been removed or replaced, perform “VDC sensor mid-point setting mode” of the VDC. <Ref. to VDC-23, VDC SENSOR MIDPOINT SETTING MODE (MODELS WITHOUT EyeSight), ADJUSTMENT, VDC Control Module and Hydraulic Control Unit (VDCCM&H/U).> <Ref. to VDC-23, NEUTRAL OF STEERING ANGLE SENSOR & LATERAL G SENSOR 0 POINT SETTING (MODEL WITH EyeSight), ADJUSTMENT, VDC Control Module and Hydraulic Control Unit (VDCCM&H/U).> <Ref. to VDC-24, LONGITUDINAL G SENSOR & LATERAL G SENSOR 0 POINT SETTING MODE (MODEL WITH EyeSight), ADJUSTMENT, VDC Control Module and Hydraulic Control Unit (VDCCM&H/U).>

General Description

DRIVE SHAFT SYSTEM

2. GENERAL TOOL

TOOL NAME	REMARKS
Tie-rod ball joint puller	Used for disconnecting joints.
Dial gauge	Used for inspecting the propeller shaft run-out.
Extension cap	Used for preventing leakage of gear oil or CVTF.
Crowbar	Used for extracting drive shaft.
Needle nose pliers	Used for tightening the boot band of the rear drive shaft. <ul style="list-style-type: none">• Snap-on 96BCP Or equivalent.

2. Propeller Shaft

A: REMOVAL

CAUTION:

- Before removing propeller shaft, wrap metal parts with a cloth or rubber material.
- Do not disassemble the center EDJ of the propeller shaft.
- Before removing propeller shaft, wrap the metal parts attached to the rubber boot of center EDJ with a cloth or rubber material, as shown in the figure. The rubber boot may be damaged due to interference with adjacent metal parts while bending the EDJ during removal.

- 1) Shift the select lever or gear shift lever to neutral.
- 2) Release the parking brake.
- 3) Lift up the vehicle.
- 4) Remove the under cover - front. <Ref. to EI-22, REMOVAL, Front Under Cover.>
- 5) Remove the center exhaust pipe, rear exhaust pipe, and muffler.
 - Center exhaust pipe & rear exhaust pipe: <Ref. to EX(H4DO)-17, REMOVAL, Rear Exhaust Pipe.>
 - Muffler: <Ref. to EX(H4DO)-20, REMOVAL, Muffler.>
- 6) Remove the bolts, and then remove the center exhaust cover.

Propeller Shaft

DRIVE SHAFT SYSTEM

7) Remove the propeller shaft assembly.

CAUTION:

Do not disassemble the propeller shaft.

- (1) Place alignment marks (A) on the flange yoke and rear differential.
- (2) Remove four bolts holding the propeller shaft to the rear differential.

- (3) Remove the center bearing.

- (4) Remove the propeller shaft from transmission.

CAUTION:

Be careful not to damage oil seals and contact surface of the sleeve yoke.

NOTE:

- Use a container to catch CVTF or oil flowing from propeller shaft.
- To prevent CVTF from leaking, install extension cap etc. to the transmission.

B: INSTALLATION

1) Before installation, check the following items, and replace the propeller shaft assembly as necessary.

- Dents or cracks on the tube surface
- Splines for deformation or abnormal wear
- Unsmooth joint operation or abnormal noise
- Center bearing for free play, noise or non-smooth operation.
- Oil seals for abnormal wear or damage
- Damaged center bearing

2) Apply fluid or gear oil to the oil seal lip and the propeller shaft.

- CVT model: SUBARU CVT OIL FOR LINEARTRONIC
- MT model: GL-5

3) Insert the sleeve yoke into the transmission and attach center bearing to body.

Tightening torque:

52 N·m (5.3 kgf-m, 38.4 ft-lb)

4) Align the alignment marks (A), and connect the yoke flange and rear differential.

Tightening torque:

31 N·m (3.2 kgf-m, 22.9 ft-lb)

5) Check the propeller shaft with the propeller shaft installed to the vehicle. <Ref. to DS-14, INSPECTION, Propeller Shaft.>

6) Install the center exhaust cover.

Tightening torque:

18 N·m (1.8 kgf-m, 13.3 ft-lb)

7) Install the center exhaust pipe, rear exhaust pipe and muffler.

- Center exhaust pipe & rear exhaust pipe: <Ref. to EX(H4DO)-18, INSTALLATION, Rear Exhaust Pipe.>
- Muffler: <Ref. to EX(H4DO)-21, INSTALLATION, Muffler.>

Propeller Shaft

DRIVE SHAFT SYSTEM

8) Install the under cover - front.

CAUTION:

Install so that the front end of the under cover (b) comes inside the bumper face - front (a), and the front end of the mud guard (c) comes outside the bumper face - front (a).

Tightening torque:

18 N·m (1.84 kgf·m, 13.3 ft·lb)

9) Lower the vehicle.

C: INSPECTION

Check the propeller shaft with the propeller shaft installed to the vehicle.

- 1) Remove the front exhaust pipe. <Ref. to EX(H4DO)-5, REMOVAL, Front Exhaust Pipe.>
- 2) Remove the center exhaust pipe, rear exhaust pipe, and muffler.
 - Center exhaust pipe & rear exhaust pipe: <Ref. to EX(H4DO)-17, REMOVAL, Rear Exhaust Pipe.>
 - Muffler: <Ref. to EX(H4DO)-20, REMOVAL, Muffler.>
- 3) Remove the bolts, and then remove the center exhaust cover.

- 4) Check the propeller shaft mounting bolt for looseness.
- (1) Yoke flange mounting bolts which connect to the rear differential
 - (2) Center bearing bracket mounting bolts

DS-00485

- 5) Check the spline and bearing for the propeller shaft.
- (1) Turn the propeller shaft by hand to check if abnormal free play exists at splines.
 - (2) Also move yokes to check if abnormal free play exists at spiders and bearings.

DS-00035

Propeller Shaft

DRIVE SHAFT SYSTEM

6) Measure the deflection of the propeller shaft.

- (1) Set the dial gauge (B) with its indicator stem at the center of the propeller shaft (A).
- (2) Turn the propeller shaft (A) slowly by hands to check for runout of the propeller shaft.

Runout:

Limit: 0.6 mm (0.024 in)

7) Check the center bearing for free play.

Move the propeller shaft near the center bearing up, down, left, right by hand, to check for any abnormal free play of the bearings.

8) Replace the propeller shaft assembly if faulty is found in the inspection.

3. Front Axle

A: REMOVAL

- 1) Lift up the vehicle, and then remove the front wheels.
- 2) Remove the axle nut.

CAUTION:

Do not loosen the axle nut while the front axle is loaded. Doing so may damage the hub unit bearing.

- (1) Lift the crimped section of axle nut.
- (2) Remove the axle nut using a socket wrench while depressing the brake pedal.

DS-00486

- 3) Remove the caliper body assembly from the front axle housing.
 - (1) Remove the mounting bolts and the brake hose bracket, and remove the caliper body assembly.
 - (2) Prepare wiring harnesses etc. to be discarded, and suspend the caliper body assembly from the strut assembly.

DS-00603

Front Axle

DRIVE SHAFT SYSTEM

4) Remove the disc rotor.

NOTE:

When the disc rotor is difficult to be removed from the front hub unit bearing, screw in 8 mm (0.31 in) bolt to the threaded part of the disc rotor (A), and remove the disc rotor.

5) Remove the bolts, and remove the front ABS wheel speed sensor.

- 6) Disconnect the tie-rod end.
 - (1) Pull out the cotter pin (a).
 - (2) Remove the castle nut (b).
 - (3) Using a tie-rod ball joint puller, remove the tie-rod end (c).

CAUTION:

Be careful not to damage the boot of the joint.

Preparation tool:

Tie-rod ball joint puller

- 7) Remove the stabilizer link and ball joint.

CAUTION:

Be careful not to damage the boot of the joint.

Front Axle

DRIVE SHAFT SYSTEM

8) Using a bar, remove the front drive shaft from transmission.

CAUTION:

Be careful not to allow the bar to damage holder area.

9) Remove the front drive shaft assembly from the front hub unit bearing.

NOTE:

If it is hard to remove, use the ST.

Preparation tool:

ST1: AXLE SHAFT PULLER (926470000)

ST2: AXLE SHAFT PULLER PLATE (28099PA110)

10) Remove the front axle housing.

(1) Place an alignment mark (a) on the adjusting bolt and the strut.

(2) Remove the adjusting bolts and flange bolts for the strut assembly, and then remove the front axle housing.

CAUTION:

- While holding the head of the adjusting bolt, loosen the flange nut.
- Be careful of the weight of front axle housing.
- Be careful not to damage the spline portion of the drive shaft.

11) Refer to "Front Hub Unit Bearing" for removal of the front hub unit bearing. <Ref. to DS-24, REMOVAL, Front Hub Unit Bearing.>

B: INSTALLATION

1) Install the front drive shaft assembly.

CAUTION:

- Do not hammer the drive shaft assembly when installing.
- Use new axle nuts.
 - (1) Insert the drive shaft assembly into the hub spline, and pull it into the specified position.
 - (2) Tighten the axle nut temporarily.

2) Install the ball joint assembly to the front axle housing.

CAUTION:

- Before tightening, make sure the lower side of front axle housing and stepped section of ball joint are in contact.
- Be careful not to damage the boot of the joint.

Tightening torque:

50 N·m (5.1 kgf·m, 36.9 ft·lb)

- | | | |
|--------------------------------------|------------------------|---------------------|
| (a) Lower side of front axle housing | (c) Front axle housing | (d) Ball joint ASSY |
| (b) Raised section of ball joint | | |

3) Install the front ABS wheel speed sensor.

Tightening torque:

7.5 N·m (0.8 kgf·m, 5.5 ft·lb)

4) Install the disc rotor.

5) Install the caliper body assembly.

Tightening torque:

Refer to "COMPONENT" of "General Description" for the tightening torque. <Ref. to BR-4, FRONT DISC BRAKE, COMPONENT, General Description.>

6) Install the brake hose bracket.

Tightening torque:

33 N·m (3.4 kgf·m, 24.3 ft·lb)

7) Install the stabilizer link.

Tightening torque:

60 N·m (6.1 kgf·m, 44.3 ft·lb)

Front Axle

DRIVE SHAFT SYSTEM

- 8) Connect the tie-rod ends.
- (1) Connect the tie-rod ends to the front axle housing.
 - (2) Tighten the castle nuts to the specified torque.

CAUTION:

When connecting the tie-rod, do not hit the cap at bottom of tie-rod end with a hammer.

Tightening torque:

27 N·m (2.8 kgf·m, 19.9 ft·lb)

- (3) Tighten the castle nut within the range of 60° so that the cotter pin hole and cutout portion of the castle nut are aligned.
- (4) Insert the cotter pin, and bend the tip of the pin to fix it.

- 9) While depressing the brake pedal, tighten a new axle nut to the specified torque and lock it securely.

CAUTION:

Do not load the front axle before tightening the axle nut. Doing so may damage the hub unit bearing.

Tightening torque:

220 N·m (22.4 kgf·m, 162.3 ft·lb)

- 10) After tightening the axle nut, lock it securely.

11) Install the front wheels, and perform the following inspections.

Tightening torque:

Except for C4 model: 120 N·m (12.2 kgf·m, 88.5 ft·lb)

C4 model: 100 N·m (10.2 kgf·m, 73.8 ft·lb)

1. Check the wheels for smooth rotation.
2. Check that there is no looseness by moving the upper and lower portions of front tire in an axial direction with the brake pedal released.
 - **Looseness exists** → Check the front hub unit bearing. <Ref. to DS-31, INSPECTION, Front Hub Unit Bearing.>

3. Check that there is no looseness by moving the upper and lower portions of front tire in an axial direction with the brake pedal depressed.

- **Looseness exists** → Replace the ball joint assembly. <Ref. to FS-27, REMOVAL, Front Ball Joint.>

12) Inspect the wheel alignment and adjust if necessary.

- Inspection: <Ref. to FS-7, INSPECTION, Wheel Alignment.>
- Adjustment: <Ref. to FS-11, ADJUSTMENT, Wheel Alignment.>

CAUTION:

When the wheel alignment has been adjusted, perform “VDC sensor midpoint setting mode”. <Ref. to VDC-23, VDC SENSOR MIDPOINT SETTING MODE (MODELS WITHOUT EyeSight), ADJUSTMENT, VDC Control Module and Hydraulic Control Unit (VDCCM&H/U).> <Ref. to VDC-23, NEUTRAL OF STEERING ANGLE SENSOR & LATERAL G SENSOR 0 POINT SETTING (MODEL WITH EyeSight), ADJUSTMENT, VDC Control Module and Hydraulic Control Unit (VDCCM&H/U).> <Ref. to VDC-24, LONGITUDINAL G SENSOR & LATERAL G SENSOR 0 POINT SETTING MODE (MODEL WITH EyeSight), ADJUSTMENT, VDC Control Module and Hydraulic Control Unit (VDCCM&H/U).>

13) Perform reinitialization of the auto headlight beam leveler system. (Model with auto headlight beam leveler) <Ref. to LI-18, PROCEDURE, Auto Headlight Beam Leveler System.>

Front Hub Unit Bearing

DRIVE SHAFT SYSTEM

4. Front Hub Unit Bearing

A: REMOVAL

- 1) Lift up the vehicle, and then remove the front wheels.
- 2) Remove the axle nut.

CAUTION:

Do not loosen the axle nut while the front axle is loaded. Doing so may damage the hub unit bearing.

- (1) Lift the crimped section of axle nut.
- (2) Remove the axle nut using a socket wrench while depressing the brake pedal.

- 3) Remove the caliper body assembly from the front axle housing.
 - (1) Remove the mounting bolts and the brake hose bracket, and remove the caliper body assembly.
 - (2) Prepare wiring harnesses etc. to be discarded, and suspend the caliper body assembly from the strut assembly.

4) Remove the disc rotor.

NOTE:

When the disc rotor is difficult to be removed from the front hub unit bearing, screw in 8 mm (0.31 in) bolt to the threaded part of the disc rotor (A), and remove the disc rotor.

5) Remove the bolts, and remove the front ABS wheel speed sensor.

Front Hub Unit Bearing

DRIVE SHAFT SYSTEM

6) Remove the bolt from the front axle housing, and remove the front hub unit bearing.

CAUTION:

- Do not get closer the tool which charged magnetism to magnetic encoder.
- Be careful not to damage the magnetic encoder.

DS-00491

(1) Magnetic encoder

(2) Front hub unit bearing

DS-00492

(a) Front axle housing

(b) Front brake back plate

(c) Front hub unit bearing

NOTE:

If it is hard to remove, use the ST.

Preparation tool:

ST1: AXLE SHAFT PULLER (926470000)

ST2: AXLE SHAFT PULLER PLATE (28099PA110)

B: INSTALLATION

1) Place the front brake back plate between the front axle housing and the front hub unit bearing, and tighten the bolt.

CAUTION:

- Do not get closer the tool which charged magnetism to magnetic encoder.
- Be careful not to damage the magnetic encoder.
- Use a new bolt.

Tightening torque:

65 N·m (6.6 kgf·m, 47.9 ft·lb)

(1) Magnetic encoder

(2) Front hub unit bearing

Front Hub Unit Bearing

(a) Front axle housing

(b) Front brake back plate

(c) Front hub unit bearing

Tightening torque:

65 N·m (6.6 kgf·m, 47.9 ft·lb)

2) Install the front drive shaft assembly.

CAUTION:

- Do not hammer the drive shaft assembly when installing.

- Use new axle nuts.

(1) Insert the drive shaft assembly into the hub spline, and pull it into the specified position.

(2) Tighten the axle nut temporarily.

3) Install the disc rotor to the front hub unit bearing.

4) Install the caliper body assembly to the front axle housing.

Tightening torque:

Refer to "COMPONENT" of "General Description" for the tightening torque. <Ref. to BR-4, FRONT DISC BRAKE, COMPONENT, General Description.>

5) Install the brake hose bracket.

Tightening torque:

33 N·m (3.4 kgf·m, 24.3 ft·lb)

6) Install the front ABS wheel speed sensor.

Tightening torque:

7.5 N·m (0.8 kgf·m, 5.5 ft·lb)

7) While pressing the brake pedal, tighten the new axle nuts to the specified torque.

CAUTION:

Do not load the front axle before tightening the axle nut. Doing so may damage the hub unit bearing.

Tightening torque:

220 N·m (22.4 kgf·m, 162.3 ft·lb)

8) After tightening the axle nut, lock it securely.

9) Install the front wheels, and perform the following inspections.

Tightening torque:

Except for C4 model: 120 N·m (12.2 kgf-m, 88.5 ft-lb)

C4 model: 100 N·m (10.2 kgf-m, 73.8 ft-lb)

1. Check the wheels for smooth rotation.
2. Check that there is no looseness by moving the upper and lower portions of front tire in an axial direction with the brake pedal released.

- **Looseness exists** → Check the front hub unit bearing. <Ref. to DS-31, INSPECTION, Front Hub Unit Bearing.>

3. Check that there is no looseness by moving the upper and lower portions of front tire in an axial direction with the brake pedal depressed.

- **Looseness exists** → Replace the ball joint assembly. <Ref. to FS-27, REMOVAL, Front Ball Joint.>

Front Hub Unit Bearing

DRIVE SHAFT SYSTEM

C: DISASSEMBLY

Using the ST or a hydraulic press, push out the hub bolt (b) from the front hub unit bearing (a).

CAUTION:

- Be careful not to hammer the hub bolts. This may deform the hub unit bearing.
- Do not reuse the hub bolt.

NOTE:

Since the hub unit bearing can not be disassembled, only hub bolts can be removed.

Preparation tool:

ST: HUB STAND (28399AG000)

DS-00494

D: ASSEMBLY

1) Install the hub unit bearing to the ST securely.

Preparation tool:

ST: HUB STAND (927080000)

2) Using a press, press the new hub bolts (b) until their seating surfaces contact the hub unit bearing (a).

NOTE:

Use the 12 mm (0.47 in) dia. holes in the HUB STAND to prevent bolts from tilting.

E: INSPECTION

1) Moving the front tire up and down by hand, check there is no looseness in bearing, and check the wheel rotates smoothly.

CAUTION:

If there is unsmooth sliding operation or abnormal noise in the bearing, replace the hub unit bearing.

Front Hub Unit Bearing

DRIVE SHAFT SYSTEM

2) Inspect the hub unit bearing for axial looseness.

1. Remove the tire and disc rotor.

2. Using a dial gauge, check the axial looseness. Replace the hub unit bearing if looseness exceeds the limit.

Service limit:

Maximum: 0.05 mm (0.0020 in)

5. Rear Axle

A: REMOVAL

- 1) Disconnect the ground cable from battery. <Ref. to NT-6, BATTERY, NOTE, Note.>
- 2) Lift up the vehicle, and then remove the rear wheels.
- 3) Remove the axle nut.

CAUTION:

Do not loosen the axle nut while the rear axle is loaded. Doing so may damage the hub unit bearing.

- (1) Lift the crimped section of axle nut.
- (2) Remove the axle nut using a socket wrench while depressing the brake pedal.

- 4) Disconnect the sensor assembly - headlight beam leveler. (Model with auto headlight beam leveler)

CAUTION:

Do not apply impact to the sensor assembly - headlight beam leveler or forcibly move the arm. Doing so may cause sensor damage and malfunction.

- (1) Disconnect the connector of the sensor assembly - headlight beam leveler.
- (2) Remove the bolts and nuts, and remove the sensor assembly - headlight beam leveler.

Rear Axle

DRIVE SHAFT SYSTEM

- 5) Remove the bolts and nuts, and lower the lateral link assembly - rear.
- (1) Remove the nut and disconnect the rear stabilizer link. (Model with rear stabilizer)
 - (2) Remove the bolts at the bottom of rear strut assembly.
 - (3) Disconnect the rear axle housing from the lateral link assembly - rear.

- 6) Remove the rear ABS wheel speed sensor from the rear axle housing.
- (1) Remove the bolts, and remove the ABS wheel speed sensor.
 - (2) Remove the rear ABS wheel speed sensor harness from the upper arm.

CAUTION:

- Be careful not to damage the sensor.
- Do not apply excessive force to the sensor harness.
- Leave the sensor harness clamp (white arrow) on the vehicle side.

7) Remove the caliper body assembly from the rear axle housing.

(1) Remove the bolts and then remove the brake hose bracket and caliper body assembly.

(2) Prepare wiring harnesses etc. to be discarded, and suspend the caliper body assembly from the strut assembly.

Rear Axle

DRIVE SHAFT SYSTEM

8) Remove the rear disc rotor.

NOTE:

If it is difficult to remove the rear disc rotor, perform the following two methods in order.

1. Remove the adjusting hole cover (A), insert the flat tip screwdriver, and rotate the adjuster assembly - rear brake until the brake shoe moves far enough to remove the disc rotor.

PB-00247

(a) Adjuster ASSY - rear brake

(c) Disc rotor

(e) Shorten the adjuster ASSY - rear brake

(b) Flat tip screwdriver

(d) Extend the adjuster ASSY - rear brake

2. If the disc rotor is not removed after performing above step, screw in an 8 mm (0.31 in) bolt to the threaded part (A) of the disc rotor, and remove the disc rotor.

PB-00254

9) Remove the rear drive shaft assembly from the rear hub unit bearing.

NOTE:

If it is hard to remove, use the ST.

Preparation tool:

ST1: AXLE SHAFT PULLER (926470000)

ST2: AXLE SHAFT PULLER PLATE (28099PA110)

10) Remove the lateral link assembly - front.

- (1) Remove the snap pin (a) and nut (b).
- (2) Remove the ball joint from the rear axle housing.

CAUTION:

Be careful not to damage the boot of the joint.

Preparation tool:

Tie-rod ball joint puller

Rear Axle

DRIVE SHAFT SYSTEM

11) Remove the rear axle housing.

(1) Remove the bolts for the upper arm, the trailing link, and the lateral link assembly - rear, and then separate the rear axle housing.

CAUTION:

Be careful not to damage the boot of the joint.

(2) Remove the rear axle housing.

CAUTION:

- Be careful of the weight of rear axle housing.
- Be careful not to damage the spline portion of the drive shaft.

12) Refer to "Rear Hub Unit Bearing" for removal of the rear hub unit bearing. <Ref. to DS-42, REMOVAL, Rear Hub Unit Bearing.>

B: INSTALLATION

1) Temporarily tighten the rear axle housing to the upper arm assembly.

2) Install the rear drive shaft assembly.

CAUTION:

- Do not hammer the drive shaft assembly when installing.
- Use new axle nuts.

(1) Insert the drive shaft assembly into the hub spline, and pull it into the specified position.

(2) Tighten the axle nut temporarily.

3) Tighten the rear strut assembly, rear stabilizer link and other links to the specified torque.

Tightening torque:

Rear suspension: <Ref. to RS-3, REAR SUSPENSION, COMPONENT, General Description.>

Rear strut: <Ref. to RS-5, REAR SHOCK ABSORBER, COMPONENT, General Description.>

4) Install the rear disc rotor.

5) Install the caliper body assembly.

Tightening torque:

Refer to "COMPONENT" of "General Description" for the tightening torque. <Ref. to BR-5, REAR DISC BRAKE, COMPONENT, General Description.>

6) Install the brake hose bracket and rear ABS wheel speed sensor.

Tightening torque:

Brake hose bracket: 33 N·m (3.4 kgf·m, 24.3 ft·lb)

Rear ABS wheel speed sensor: 7.5 N·m (0.8 kgf·m, 5.5 ft·lb)

7) Install the sensor assembly - headlight beam leveler. (Model with auto headlight beam leveler)

Tightening torque:

7.5 N·m (0.8 kgf-m, 5.5 ft-lb)

8) While pressing the brake pedal, tighten the new axle nuts to the specified torque.

CAUTION:

Do not load the rear axle before tightening the axle nut. Doing so may damage the hub unit bearing.

Tightening torque:

190 N·m (19.4 kgf-m, 140.1 ft-lb)

9) After tightening the axle nut, lock it securely.

10) Install the rear wheels, and perform the following inspections.

Tightening torque:

Except for C4 model: 120 N·m (12.2 kgf-m, 88.5 ft-lb)

C4 model: 100 N·m (10.2 kgf-m, 73.8 ft-lb)

1. Check the wheels for smooth rotation.
2. Check that there is no looseness by moving the upper and lower portions of rear tire in an axial direction with the brake pedal released.

- **Looseness exists** → Check the rear hub unit bearing. <Ref. to DS-51, INSPECTION, Rear Hub Unit Bearing.>

11) Inspect the wheel alignment and adjust if necessary.

- Inspection: <Ref. to FS-7, INSPECTION, Wheel Alignment.>
- Adjustment: <Ref. to FS-11, ADJUSTMENT, Wheel Alignment.>

12) Perform reinitialization of the auto headlight beam leveler system. (Model with auto headlight beam leveler) <Ref. to LI-18, PROCEDURE, Auto Headlight Beam Leveler System.>

Rear Axle

DRIVE SHAFT SYSTEM

C: DISASSEMBLY

1. BUSHING - REAR AXLE HOUSING

Do not remove the bushing - rear axle housing from the rear axle housing, because it cannot be replaced. If removed, replace the rear axle housing.

2. REAR BUSHING

- 1) Remove the rear axle housing. <Ref. to DS-33, REMOVAL, Rear Axle.>
- 2) Using the ST and a hydraulic press, push out the bushing.

Preparation tool:

ST1: BUSHING REMOVER (20099FG000)

ST2: INSTALLER & REMOVER (BASE) (20099PA010)

(1) Rear axle housing

(2) Rear bushing

D: ASSEMBLY**1. BUSHING - REAR AXLE HOUSING**

Do not remove the bushing - rear axle housing from the rear axle housing, because it cannot be replaced. If removed, replace the rear axle housing.

2. REAR BUSHING

1) Before assembly, inspect the following items and replace any faulty part with a new one.

- Perform visual check for damage or bend on the trailing link.
- Visually check the bushing for abnormal cracks, fatigue or damage.

2) Press-fit the bushing using ST and the hydraulic press.

CAUTION:

Make sure to press the bushing straight in.

Preparation tool:

ST1: BUSHING REMOVER (20099FG000)

ST2: INSTALLER & REMOVER (BASE) (20099PA010)

(1) Rear bushing

(2) Rear axle housing

Rear Hub Unit Bearing

DRIVE SHAFT SYSTEM

6. Rear Hub Unit Bearing

A: REMOVAL

- 1) Lift up the vehicle, and then remove the rear wheels.
- 2) Remove the axle nut.

CAUTION:

Do not loosen the axle nut while the rear axle is loaded. Doing so may damage the hub unit bearing.

- (1) Lift the crimped section of axle nut.
- (2) Remove the axle nut using a socket wrench while depressing the brake pedal.

- 3) Remove the rear ABS wheel speed sensor from the rear axle housing.
 - (1) Remove the bolts, and remove the rear ABS wheel speed sensor.
 - (2) Remove the rear ABS wheel speed sensor harness from the upper arm.

CAUTION:

- Be careful not to damage the sensor.
- Do not apply excessive force to the sensor harness.
- Leave the sensor harness clamp (white arrow) on the vehicle side.

- 4) Remove the caliper body assembly from the rear axle housing.
(1) Remove the bolts and then remove the brake hose bracket and caliper body assembly.

- (2) Prepare wiring harnesses etc. to be discarded, and suspend the caliper body assembly from the strut assembly.

Rear Hub Unit Bearing

DRIVE SHAFT SYSTEM

5) Remove the rear disc rotor.

NOTE:

If it is difficult to remove the rear disc rotor, perform the following two methods in order.

1. Remove the adjusting hole cover (A), insert the flat tip screwdriver, and rotate the adjuster assembly - rear brake until the brake shoe moves far enough to remove the disc rotor.

(a) Adjuster ASSY - rear brake

(c) Disc rotor

(e) Shorten the adjuster ASSY - rear brake

(b) Flat tip screwdriver

(d) Extend the adjuster ASSY - rear brake

2. If the disc rotor is not removed after performing above step, screw in an 8 mm (0.31 in) bolt to the threaded part (A) of the disc rotor, and remove the disc rotor.

6) Remove the bolt from the rear axle housing, and remove the rear hub unit bearing.

CAUTION:

- Be careful not to damage the magnetic encoder.
- Do not get closer the tool which charged magnetism to magnetic encoder.

D: ASSEMBLY

1) Install the rear hub unit bearing to the ST securely.

Preparation tool:

ST: HUB STAND (927080000)

(1) Rear hub unit bearing

2) Using a press, press new hub bolts (b) until their seating surfaces contact the rear hub unit bearing (a).

NOTE:

Use the 12 mm (0.47 in) dia. holes in the HUB STAND to prevent bolts from tilting.

E: INSPECTION

1) Moving the rear tire up and down by hand, check there is no looseness in bearing, and check the wheel rotates smoothly.

CAUTION:

If there is unsmooth sliding operation or abnormal noise in the bearing, replace the rear hub unit bearing.

2) Inspect the hub unit bearing for axial looseness.

1. Remove the tire and disc rotor.

2. Using a dial gauge, check the axial looseness. Replace the hub unit bearing if looseness exceeds the limit.

Service limit:

Maximum: 0.05 mm (0.0020 in)

Front Drive Shaft

DRIVE SHAFT SYSTEM

7. Front Drive Shaft

A: REMOVAL

- 1) Lift up the vehicle, and then remove the front wheels.
- 2) Remove the axle nut.

CAUTION:

Do not loosen the axle nut while the front axle is loaded. Doing so may damage the hub unit bearing.

- (1) Lift the crimped section of axle nut.
- (2) Remove the axle nut using a socket wrench while depressing the brake pedal.

- 3) Drain the transmission gear oil. (MT model)
- 4) Drain differential gear oil. (CVT model)
- 5) Disconnect the ball joint assembly.
 - (1) Remove the nut and disconnect the front stabilizer link.
 - (2) Remove the bolts, disconnect the front arm ball joint, and lower the front arm assembly.

6) Remove the front drive shaft assembly from the front axle housing.

NOTE:

If it is hard to remove, use the ST.

Preparation tool:

ST1: AXLE SHAFT PULLER (926470000)

ST2: AXLE SHAFT PULLER PLATE (28099PA110)

7) Using a bar, remove the front drive shaft assembly from transmission.

CAUTION:

Be careful not to allow the bar to damage holder area.

B: INSTALLATION

1) Before installation, check the drive shaft assembly. <Ref. to DS-61, INSPECTION, Front Drive Shaft.>

2) Replace the differential side retainer oil seal with a new part.

- MT model: <Ref. to 5MT-33, REPLACEMENT, Differential Side Retainer Oil Seal.>
- CVT model: <Ref. to CVT(TR580)-91, REPLACEMENT, Differential Side Retainer Oil Seal.>

NOTE:

After pulling out the drive shaft assembly, be sure to replace with a new oil seal.

3) Insert the drive shaft assembly into the hub spline, and pull it into the specified position.

CAUTION:

Do not hammer the drive shaft assembly when installing.

4) Tighten the axle nut temporarily.

5) Using the ST, install the front drive shaft assembly to the transmission.

Preparation tool:

ST: OIL SEAL PROTECTOR (28399SA010)

Front Drive Shaft

DRIVE SHAFT SYSTEM

6) Install the ball joint assembly to the front axle housing.

CAUTION:

Before tightening, make sure the lower side of front axle housing and stepped section of ball joint are in contact.

Tightening torque:

50 N·m (5.1 kgf-m, 36.9 ft-lb)

(a) Lower side of front axle housing

(c) Front axle housing

(d) Ball joint

(b) Raised section of ball joint

7) Install the stabilizer link.

Tightening torque:

60 N·m (6.1 kgf-m, 44.3 ft-lb)

8) While pressing the brake pedal, tighten the new axle nuts to the specified torque.

CAUTION:

Do not load the front axle before tightening the axle nut. Doing so may damage the hub unit bearing.

Tightening torque:

220 N·m (22.4 kgf-m, 162.3 ft-lb)

9) After tightening axle nut, lock it securely.

10) Fill transmission gear oil. (MT model)

11) Fill differential gear oil. (CVT model)

12) Install the front wheels.

Tightening torque:

Except for C4 model: 120 N·m (12.2 kgf-m, 88.5 ft-lb)

C4 model: 100 N·m (10.2 kgf-m, 73.8 ft-lb)

- 13) Inspect the wheel alignment and adjust if necessary.
- Inspection: <Ref. to FS-7, INSPECTION, Wheel Alignment.>
 - Adjustment: <Ref. to FS-11, ADJUSTMENT, Wheel Alignment.>

CAUTION:

When the wheel alignment has been adjusted, perform “VDC sensor midpoint setting mode”. <Ref. to VDC-23, VDC SENSOR MIDPOINT SETTING MODE (MODELS WITHOUT EyeSight), ADJUSTMENT, VDC Control Module and Hydraulic Control Unit (VDCCM&H/U).> <Ref. to VDC-23, NEUTRAL OF STEERING ANGLE SENSOR & LATERAL G SENSOR 0 POINT SETTING (MODEL WITH EyeSight), ADJUSTMENT, VDC Control Module and Hydraulic Control Unit (VDCCM&H/U).> <Ref. to VDC-24, LONGITUDINAL G SENSOR & LATERAL G SENSOR 0 POINT SETTING MODE (MODEL WITH EyeSight), ADJUSTMENT, VDC Control Module and Hydraulic Control Unit (VDCCM&H/U).>

- 14) Perform reinitialization of the auto headlight beam leveler system. (Model with auto headlight beam leveler) <Ref. to LI-18, PROCEDURE, Auto Headlight Beam Leveler System.>

C: DISASSEMBLY

- 1) Place alignment marks on the shaft and outer race (PTJ).

- 2) Remove the boot band and boot (PTJ).

CAUTION:

Be careful not to damage the boot.

- 3) Remove the snap ring from outer race (PTJ).

- 4) Remove the outer race (PTJ) from shaft assembly.

Front Drive Shaft

DRIVE SHAFT SYSTEM

5) Wipe off grease.

CAUTION:

The grease is a special type of grease. Do not mix it with other grease.

6) Place alignment marks on the roller kit and trunnion.

7) Remove the roller kit from trunnion.

CAUTION:

Be careful with the roller kit position.

8) Place alignment marks on the trunnion and shaft.

9) Remove the snap ring and trunnion.

CAUTION:

Be sure to wrap shaft splines with vinyl tape to protect the boot from scratches.

- 10) Remove the boot (PTJ).
- 11) Remove the O-ring from the groove of the shaft.

NOTE:

The EBJ is a non-disassembly part, so the axle disassembly stops here.

D: ASSEMBLY

- 1) Roll up a thick piece of paper to a size where the shaft can pass through, and affix with tape to form a cylinder.
- 2) Attach a new O-ring on this cylinder.

CAUTION:

- Always use a new O-ring.
- Be careful that the O-ring does not become scratched and that there are no foreign objects attached to it.
- Make sure to install the O-ring so that it does not twist as much as possible.
- Do not stretch the O-ring to 30 mm (1.18 in) inner diameter or more.

- (1) O-ring
- (2) Cylinder made with thick paper, etc.

- 3) Pass the cylinder material onto the shaft, and slide in the direction of the shaft axis.

- (1) Cylinder material
- (2) O-ring
- (3) Shaft

- 4) Clean the shaft boot groove, and wipe off the grease.

Front Drive Shaft

DRIVE SHAFT SYSTEM

5) Slide the cylinder material near the shaft boot groove, and move the O-ring from the cylinder material onto the shaft boot groove.

CAUTION:

- Attach the O-ring to the shaft boot groove center.
- Be careful that the O-ring does not become scratched and that there are no foreign objects attached to it.
- Make sure to install the O-ring so that it does not twist as much as possible.
- With the O-ring attached, do not wash with kerosene, gasoline, etc.

- (1) Shaft
- (2) Cylinder material
- (3) O-ring
- (4) Boot groove

6) Pass the small diameter boot band through the shaft.

7) Wrap vinyl tape around the splines of the shaft.

CAUTION:

To prevent damage to the boots, make sure to always wrap with vinyl tape for protection.

8) Install a new boot (PTJ).

CAUTION:

Make sure to fit securely on the boot groove of the shaft.

- (1) Boot (PTJ)
- (2) O-ring
- (3) Boot groove

9) Match the alignment marks, and attach the trunnion onto the shaft.

10) Attach the snap ring to the shaft.

CAUTION:

Confirm that the snap ring is completely fitted in the shaft groove.

11) Fill 100 to 110 g (3.53 to 3.88 oz) of specified grease into the interior of the outer race (PTJ).

Grease:

NKG302

12) Apply a thin coat of specified grease to the roller kit and trunnion.

13) Match the alignment marks of the roller kit and trunnion, and attach the roller kit.

CAUTION:

Be careful with the roller kit position.

Front Drive Shaft

DRIVE SHAFT SYSTEM

14) Match the alignment marks of the shaft and outer race (PTJ), and attach the outer race (PTJ).

15) Install the snap ring in the groove of the outer race (PTJ).

CAUTION:

Pull the shaft lightly and make sure that the snap ring is completely fitted in the groove.

16) Apply an even coat of the specified grease 30 to 40 g (1.06 to 1.41 oz) to the entire inner surface of boot (PTJ).

17) Attach the boot (PTJ) taking care not to twist it.

CAUTION:

- **Clean the large end of boot (PTJ) and the boot groove well, and remove the grease and other substances.**

- **When installing the boot (PTJ), position the outer race (PTJ) at center of the stroke.**

18) Set the new boot band at the specified position.

19) Tighten the boot bands using ST, torque wrench and socket flex handle.

CAUTION:

The large boot band is to be tightened so that the omega shaped part is at the position indicated in the figure below.

- (1) Omega shaped part
- (2) Boot band
- (3) Outer race (PTJ)

Tightening torque:

Large boot band

178 N·m (18.2 kgf·m, 131.3 ft·lb)

Small boot band

145 N·m (14.8 kgf·m, 106.9 ft·lb)

ST 28099AC000 BOOT BAND PLIERS

- (A) Large boot band
- (B) Boot (PTJ)
- (C) Torque wrench
- (D) Socket flex handle
- (E) Outer race (PTJ)

20) Extend and retract the PTJ repeatedly so that grease is spread evenly.

E: INSPECTION

Check the removed parts for damage, wear, corrosion etc. If faulty, repair or replace.

- **PTJ (pillow tripod joint)**

Check for seizure, corrosion, damage, wear and excessive play.

- **EBJ (high-efficiency compact ball fixed joint)**

Check for seizure, corrosion, damage and excessive play.

- **Shaft:**

Check for excessive bending, twisting, damage and wear.

- **Boot:**

Check for wear, warping, breakage and scratches.

- **Grease:**

Check for discoloration and fluidity.

Rear Drive Shaft

DRIVE SHAFT SYSTEM

8. Rear Drive Shaft

A: REMOVAL

- 1) Disconnect the ground cable from battery. <Ref. to NT-6, BATTERY, NOTE, Note.>
- 2) Lift up the vehicle, and then remove the rear wheels.
- 3) Remove the axle nut.

CAUTION:

Do not loosen the axle nut while the rear axle is loaded. Doing so may damage the hub unit bearing.

- (1) Lift the crimped section of axle nut.
- (2) Remove the axle nut using a socket wrench while depressing the brake pedal.

- 4) Remove the sensor assembly - headlight beam leveler. (Model with auto headlight beam leveler)

CAUTION:

Do not apply impact to the sensor assembly - headlight beam leveler or forcibly move the arm. Doing so may cause sensor damage and malfunction.

- (1) Disconnect the connector of the sensor assembly - headlight beam leveler.
- (2) Remove the nuts, and remove the sensor assembly - headlight beam leveler.

- 5) Drain differential gear oil.

- 6) Remove the propeller shaft. <Ref. to DS-11, REMOVAL, Propeller Shaft.>
 - 7) Loosen the joint of rear differential assembly and rear drive shaft assembly.
- T type: Pull out the rear drive shaft assembly by fitting the ST to the bolt (a) as shown in the figure.

CAUTION:

Fit the ST to the bolts as shown in the figure to prevent damage of the side bearing retainer.

Preparation tool:

ST: DRIVE SHAFT REMOVER (28099PA100)

- VA1 type: Pull out the rear drive shaft assembly by fitting the tire lever (b) to the bolt (a) as shown in the figure.

CAUTION:

To prevent damage to the side bearing retainer, use by placing the tire lever against the bolt as shown in the figure.

Preparation tool:

Tire lever

Rear Drive Shaft

DRIVE SHAFT SYSTEM

- 8) Remove the installation section of rear differential assembly.
- (1) Support the rear differential assembly with a transmission jack.
 - (2) Remove the bolts which hold the rear differential front crossmember from the rear sub frame assembly.

- (3) Remove the self-locking nuts which hold the rear differential to the rear sub frame assembly.

9) Completely pull out the rear drive shaft assembly while lowering the rear differential.

CAUTION:

Pay attention to avoid damaging the boot of drive shaft.

10) Remove the rear drive shaft assembly from the rear axle housing.

NOTE:

If it is hard to remove, use the ST.

Preparation tool:

ST1: AXLE SHAFT PULLER (926470000)

ST2: AXLE SHAFT PULLER PLATE (28099PA110)

Rear Drive Shaft

DRIVE SHAFT SYSTEM

B: INSTALLATION

1) Replace the rear differential side oil seal. <Ref. to DI-58, REPLACEMENT, Rear Differential Side Oil Seal.>

NOTE:

After pulling out the drive shaft assembly, be sure to replace with a new oil seal.

2) Insert the drive shaft assembly into the rear hub spline, and pull it into the specified position.

CAUTION:

- Be careful not to damage the magnetic encoder.
- Do not get closer the tool which charged magnetism to magnetic encoder.
- Do not hammer the drive shaft assembly when installing.

(1) Magnetic encoder

(2) Rear hub unit bearing

3) Tighten the axle nut temporarily.

4) Using the ST, install the rear drive shaft assembly to the rear differential.

Preparation tool:

ST: OIL SEAL PROTECTOR (28099PA090)

5) Install the rear differential assembly to the rear sub frame assembly.

CAUTION:

Be sure to use a new self-locking nut.

Tightening torque:

Differential assembly — bushing - differential: 70 N·m (7.1 kgf-m, 51.6 ft-lb)

Differential assembly — rear sub frame assembly: 110 N·m (11.2 kgf-m, 81.1 ft-lb)

6) Install the sensor assembly - headlight beam leveler.

Tightening torque:

7.5 N·m (0.8 kgf-m, 5.5 ft-lb)

7) While pressing the brake pedal, tighten the new axle nuts to the specified torque.

CAUTION:

Do not load the rear axle before tightening the axle nut. Doing so may damage the hub unit bearing.

Tightening torque:

190 N·m (19.4 kgf-m, 140.1 ft-lb)

8) Lock the axle nut securely.

9) Fill differential gear oil.

10) Install the rear wheels.

Tightening torque:

Except for C4 model: 120 N·m (12.2 kgf-m, 88.5 ft-lb)

C4 model: 100 N·m (10.2 kgf-m, 73.8 ft-lb)

11) Perform reinitialization of the auto headlight beam leveler system. (Model with auto headlight beam leveler) <Ref. to LI-18, PROCEDURE, Auto Headlight Beam Leveler System.>

C: DISASSEMBLY

1) Remove the outer race (DOJ) from the shaft assembly.

CAUTION:

Be careful not to damage the boot.

(1) Using a flat tip screwdriver or pliers, loosen the boot band on the large end of boot (DOJ).

CAUTION:

Be careful not to damage the boot.

(2) Remove the boot band on the small end of boot (DOJ) in the same manner.

(3) Remove the large end of boot (DOJ) from outer race (DOJ).

Rear Drive Shaft

DRIVE SHAFT SYSTEM

- (4) Remove the round snap ring at the neck of outer race (DOJ) with a flat tip screwdriver.

- (5) Remove the outer race (DOJ) from the shaft assembly.
(6) Wipe off the grease and take out the ball bearings.

CAUTION:

The grease is a special grease (grease for constant velocity joints). Do not mix with other greases.

NOTE:

Disassemble the parts taking care not to lose balls.

- (A) Outer race (DOJ)
(B) Grease

- 2) Remove the cage from the inner race.
(1) Turn the cage by a half pitch to the track groove of inner race and shift the cage.
(2) Using pliers, remove the snap ring fixing the inner race to the shaft.

- (3) Take out the inner race.
(4) Remove the cage from the shaft and remove the boot (DOJ).

CAUTION:

Wrap shaft splines with vinyl tape to protect the boot from scratches.

- 3) Remove the boot (BJ) or boot (EBJ) in the same procedure as the boot (DOJ).

NOTE:

Further disassembly of the drive shaft is impossible because the BJ and EBJ cannot be disassembled.

D: ASSEMBLY**CAUTION:**

Wrap shaft splines with vinyl tape to protect the boot from scratches.

NOTE:

Use specified grease.

Grease:

BJ, EBJ side: NKG814

DOJ side: NKG814

1) Install the inner race to the shaft.

(1) Install the boot (BJ) or boot (EBJ) in the specified position, and fill it with 50 to 60 g (1.76 to 2.12 oz) of specified grease.

(2) Place the boot (DOJ) at the center of shaft.

(3) Insert the cage onto shaft.

NOTE:

Insert the cage with the cutout portion facing the shaft end, since the cage has an orientation.

(A) Cage

(B) Cutout portion

(4) Install the inner race on shaft and fix the snap ring in place with pliers.

NOTE:

Confirm that the snap ring is completely fitted in the shaft groove.

Rear Drive Shaft

DRIVE SHAFT SYSTEM

2) Install the cage to the inner race.

- (1) Install the cage (B) with the protruding section aligned with the track on the inner race (A), and turn by a half pitch.

- (2) Fill 80 to 90 g (2.82 to 3.17 oz) of the specified grease into the inner side of the outer race (DOJ).

- (3) Apply a thin coat of specified grease to the cage pocket and ball.

- (4) Insert the ball bearings into the cage pocket.

3) Connect the shaft assembly to the outer race (DOJ).

- (1) Align the outer race (DOJ) track and ball positions, and place the shaft, inner race, cage and ball bearings in the original positions, and then fix outer race (DOJ) in place.

(A) Outer race (DOJ)

(B) Grease

- (2) Install the snap ring in the groove of the outer race (DOJ).

CAUTION:

Be careful of the following items during installation:

- Make sure that the balls, cage and inner race are completely fitted in the outer race (DOJ).
- Use care not to place the matched position of snap ring in the ball groove of outer race (DOJ).
- Pull the shaft lightly and assure that the circlip is completely fitted in the groove.

- (3) Apply an even coat of the specified grease [20 to 30 g (0.71 to 1.06 oz)] to the entire inner surface of boot (DOJ). Also apply grease to the shaft.

- (4) Attach the boot (DOJ) taking care not to twist it.

NOTE:

- The inside of the large end of boot (DOJ) and the boot groove shall be cleaned so as to be free from grease and other substances.

- When installing the boot (DOJ), position the outer race (DOJ) at center of the stroke.

- (5) Put a new boot band through the clip and wind twice in the band groove of the boot (DOJ).

- (6) Pinch the end of boot band with pliers. Hold the clip and tighten securely.

NOTE:

When tightening boot, use care so that the air within the boot is appropriate.

(7) Tighten the boot band using the ST.

NOTE:

Tighten the boot band until it cannot be moved by hand.

Preparation tool:

ST: BAND TIGHTENING TOOL (925091000)

(8) Tap the clip with the punch provided at the end of the ST.

NOTE:

Tap to an extent that the boot underneath is not damaged.

Preparation tool:

ST: BAND TIGHTENING TOOL (925091000)

(9) Cut off the boot band with an allowance of about 10 mm (0.39 in) left from the clip and bend this allowance over the clip.

CAUTION:

Make sure that the end of the boot band is in close contact with clip.

4) Install the boot band to the boot (BJ) or boot (EBJ) in the same procedure as the boot (DOJ).

5) Extend and retract the DOJ repeatedly to provide an equal coating of grease.

E: INSPECTION

Check the removed parts for damage, wear, corrosion etc. Repair or replace if defective.

• **DOJ (Double Offset Joint):**

Check for seizure, corrosion, damage, wear and excessive play.

• **BJ (Bell Joint):**

Check for seizure, corrosion, damage and excessive play.

• **EBJ (High-Efficiency Compact Ball Fixed Joint):**

Check for seizure, corrosion, damage and excessive play.

• **Shaft:**

Check for excessive bending, twisting, damage and wear.

• **Boot:**

Check for wear, warping, breakage and scratches.

• **Grease:**

Check for discoloration and fluidity.

General Diagnostic Table

DRIVE SHAFT SYSTEM

9. General Diagnostic Table

A: INSPECTION

NOTE:

Vibration while cruising may be caused by an unbalanced tire, improper tire inflation pressure, improper wheel alignment, etc.

Symptoms	Possible cause	Corrective action
Noise or vibration from propeller shaft	<ul style="list-style-type: none"> • Center bearing • Runout of propeller shaft • Loose or gap at connections 	Inspect the propeller shaft. <Ref. to DS-14, INSPECTION, Propeller Shaft.>
Abnormal wheel vibration	Wheel is out of balance.	Check the wheel balance. <Ref. to WT-6, WHEEL BALANCING, INSPECTION, Tire and Wheel.>
	Front wheel alignment	Check the front wheel alignment. <Ref. to FS-7, INSPECTION, Wheel Alignment.>
	Rear wheel alignment	Check the rear wheel alignment. <Ref. to RS-9, INSPECTION, Wheel Alignment.>
	Front strut	Check the front strut. <Ref. to FS-43, INSPECTION, Front Strut.>
	Rear shock absorber	Check the rear shock absorber. <Ref. to RS-36, INSPECTION, Rear Shock Absorber.>
	Front drive shaft	Check the front drive shaft. <Ref. to DS-61, INSPECTION, Front Drive Shaft.>
	Rear drive shaft	Check the rear drive shaft. <Ref. to DS-71, INSPECTION, Rear Drive Shaft.>
	Front hub unit bearing	Check the front hub unit bearing. <Ref. to DS-31, INSPECTION, Front Hub Unit Bearing.>
	Rear hub unit bearing	Check the rear hub unit bearing. <Ref. to DS-51, INSPECTION, Rear Hub Unit Bearing.>
Noise from the underbody	Wheel is out of balance.	Check the wheel balance. <Ref. to WT-6, WHEEL BALANCING, INSPECTION, Tire and Wheel.>
	Front wheel alignment	Check the front wheel alignment. <Ref. to FS-7, INSPECTION, Wheel Alignment.>
	Rear wheel alignment	Check the rear wheel alignment. <Ref. to RS-9, INSPECTION, Wheel Alignment.>
	Front strut	Check the front strut. <Ref. to FS-43, INSPECTION, Front Strut.>
	Rear shock absorber	Check the rear shock absorber. <Ref. to RS-36, INSPECTION, Rear Shock Absorber.>

General Description

VEHICLE DYNAMICS CONTROL (VDC)

C: CAUTION

- Wear appropriate work clothing, including a helmet, protective goggles and protective shoes when performing any work.
- Remove contamination including dirt and corrosion before removal, installation or disassembly.
- Keep the disassembled parts in order and protect them from dust and dirt.
- Before disconnecting connectors of sensors or units, be sure to disconnect the ground cable from battery.
- Before removal, installation or disassembly, be sure to clarify the failure. Avoid unnecessary removal, installation, disassembly and replacement.
- Vehicle components are extremely hot after driving. Be wary of receiving burns from heated parts.
- Be sure to tighten fasteners including bolts and nuts to the specified torque.
- Place shop jacks or rigid racks at the specified points.
- When removing, installing or replacing the VDCCM&H/U, VDCCM&H/U bracket, steering wheel or steering angle sensor, perform the following VDC setting mode.
 - Model without EyeSight: VDC sensor midpoint setting mode <Ref. to VDC-23, VDC SENSOR MID-POINT SETTING MODE (MODELS WITHOUT EyeSight), ADJUSTMENT, VDC Control Module and Hydraulic Control Unit (VDCCM&H/U).>
 - Model with EyeSight: Neutral of Steering Angle Sensor & Lateral G Sensor 0 point setting <Ref. to VDC-23, NEUTRAL OF STEERING ANGLE SENSOR & LATERAL G SENSOR 0 POINT SETTING (MODEL WITH EyeSight), ADJUSTMENT, VDC Control Module and Hydraulic Control Unit (VDCCM&H/U).>
 - Model with EyeSight: Longitudinal G sensor & lateral G sensor 0 point setting <Ref. to VDC-24, LONGITUDINAL G SENSOR & LATERAL G SENSOR 0 POINT SETTING MODE (MODEL WITH EyeSight), ADJUSTMENT, VDC Control Module and Hydraulic Control Unit (VDCCM&H/U).>

D: PREPARATION TOOL

1. SPECIAL TOOL

ILLUSTRATION	TOOL NUMBER	DESCRIPTION	REMARKS
 STSSM4	—	SUBARU SELECT MONITOR 4	Used for setting of each function and troubleshooting for electrical system. NOTE: For detailed operation procedures of Subaru Select Monitor 4, refer to “Application help”.

2. GENERAL TOOL

TOOL NAME	REMARKS
Circuit tester	Used for measuring resistance, voltage and current.
DST-i	Used together with Subaru Select Monitor 4.
Pressure gauge	Used for measuring oil pressure.
Oscilloscope	Used for measuring the sensor.
Steering wheel puller	Used for removing the steering wheel.
TORX® E5	Used for replacing the VDC control module & hydraulic control unit (VDCCM&H/U).

2. Relay and Fuse

A: LOCATION

VDC00966

Main fuse box	Fuse 50A (VDC CM&H/U)	(A)
	Fuse 30A (VDC CM&H/U)	(B)

NOTE:

For other related fuses, refer to the wiring diagram. <Ref. to WI-15, Power Supply Circuit.>

B: INSPECTION

1. CHECK FUSE

- 1) Remove the fuse and inspect visually.
- 2) If the fuse is blown out, replace the fuse.

Vehicle Dynamics Control System

VEHICLE DYNAMICS CONTROL (VDC)

3. Vehicle Dynamics Control System

A: WIRING DIAGRAM

Refer to “Vehicle Dynamics Control System” in the wiring diagram. <Ref. to WI-228, WIRING DIAGRAM, Vehicle Dynamics Control System.>

B: ELECTRICAL SPECIFICATION

Refer to the Control Module I/O Signal of the “Vehicle Dynamics Control System (VDC) (DIAGNOSTICS)”. <Ref. to VDC(diag)-12, ELECTRICAL SPECIFICATION, Control Module I/O Signal.>

C: INSPECTION

Refer to the “Vehicle Dynamics Control System (VDC) (DIAGNOSTICS)”. <Ref. to VDC(diag)-143, INSPECTION, General Diagnostic Table.>

D: NOTE

For operation procedures of each component of the vehicle dynamics control system, refer to the respective section.

- VDC control module & hydraulic control unit (VDCCM&H/U): <Ref. to VDC-9, VDC Control Module and Hydraulic Control Unit (VDCCM&H/U).>
- Yaw rate & G sensor: <Ref. to VDC-31, Yaw Rate and G Sensor.>
- Steering angle sensor: <Ref. to VDC-32, Steering Angle Sensor.>
- Front ABS wheel speed sensor: <Ref. to VDC-35, Front ABS Wheel Speed Sensor.>
- Rear ABS wheel speed sensor: <Ref. to VDC-38, Rear ABS Wheel Speed Sensor.>
- Front magnetic encoder: <Ref. to VDC-42, Front Magnetic Encoder.>
- Rear magnetic encoder: <Ref. to VDC-43, Rear Magnetic Encoder.>
- VDC OFF switch: <Ref. to VDC-44, VDC OFF Switch.>

4. VDC Control Module and Hydraulic Control Unit (VDCCM&H/U)

A: REMOVAL

1. MODELS WITHOUT EyeSight

- 1) Disconnect the ground cable from battery. <Ref. to NT-6, BATTERY, NOTE, Note.>
- 2) Remove the air intake boot. <Ref. to IN(H4DO)-12, REMOVAL, Air Intake Boot.>

CAUTION:

Move aside the intake boot to perform the operation without disconnecting the PCV hose.

- 3) Remove the VDC control module & hydraulic control unit (VDCCM&H/U).

- (1) Remove any dirt from around the VDCCM&H/U.

- (2) Pull up the lock lever (b) while pressing the lock button (a) and disconnect the VDCCM&H/U connector.

CAUTION:

Do not pull on the harness when disconnecting the connector.

VDC00933

VDC Control Module and Hydraulic Control Unit (VDCCM&H/U)

VEHICLE DYNAMICS CONTROL (VDC)

(3) Using a flare nut wrench, disconnect each brake pipe from VDCCM&H/U.

CAUTION:

- Wrap the brake pipe with a vinyl bag so as not to spill the brake fluid on the painted surface of the vehicle body.
- If brake fluid is spilled on the painted surface of the vehicle body, wash it off immediately with water and wipe clean.

VDC00934

(4) Remove the nuts and remove the VDCCM&H/U from the bracket - hydraulic unit.

CAUTION:

- Do not drop or bump the VDCCM&H/U.
- Do not turn the VDCCM&H/U upside down or place it sideways for storage.
- Be careful not to let foreign matter enter the VDCCM&H/U.
- Be careful that no water and fluid enter the connectors.

VDC00935

2. MODELS WITH EyeSight

CAUTION:

- Avoid unnecessary removal of parts in order to prevent fluid leakage.
- When the VDCCM&H/U components are removed, be sure to perform the installation according to the installation procedures. <Ref. to VDC-13, MODELS WITH EyeSight, INSTALLATION, VDC Control Module and Hydraulic Control Unit (VDCCM&H/U).>

1) Disconnect the ground cable from battery. <Ref. to NT-6, BATTERY, NOTE, Note.>

2) Remove the air intake boot. <Ref. to IN(H4DO)-12, REMOVAL, Air Intake Boot.>

3) Remove the VDC control module & hydraulic control unit (VDCCM&H/U).

(1) Remove any dirt from around the VDCCM&H/U.

(2) Push the lock button (a), pull down the lock lever (b) and disconnect the VDCCM&H/U connector.

CAUTION:

Do not pull on the harness when disconnecting the connector.

VDC01008

VDC Control Module and Hydraulic Control Unit (VDCCM&H/U)

VEHICLE DYNAMICS CONTROL (VDC)

(3) Using a flare nut wrench, disconnect each brake pipe from VDCCM&H/U.

CAUTION:

- Wrap the brake pipe with a vinyl bag so as not to spill the brake fluid on the painted surface of the vehicle body.
- If brake fluid is spilled on the painted surface of the vehicle body, wash it off immediately with water and wipe clean.

VDC01009

(4) Using a flare nut wrench, disconnect pipes (A) and (B) from VDCCM&H/U.

(5) Remove the bolt, and remove the VDCCM&H/U from the bracket - hydraulic unit.

CAUTION:

- Do not drop or bump the VDCCM&H/U.
- Do not turn the VDCCM&H/U upside down or place it sideways for storage.
- Be careful not to let foreign matter enter the VDCCM&H/U.
- Be careful that no water and fluid enter the connectors.

VDC01010

B: INSTALLATION

1. MODELS WITHOUT EyeSight

CAUTION:

- When installing the VDCCM&H/U to the bracket - hydraulic unit, make sure that there is no oil adhered to the bolts and the threads of VDCCM&H/U. If the oil is adhered, degrease it carefully before tightening.
- Connect the VDCCM&H/U connector securely.
- When installing the VDCCM&H/U, replace the damper - hydraulic unit, spacer and nut with new parts.

1) Install the VDC control module & hydraulic control unit (VDCCM&H/U) in the reverse order of removal.

Tightening torque:

Refer to "COMPONENT" of "General Description". <Ref. to VDC-4, VDC CONTROL MODULE & HYDRAULIC CONTROL UNIT (VDCCM&H/U), COMPONENT, General Description.>

2) Install the air intake boot. <Ref. to IN(H4DO)-12, INSTALLATION, Air Intake Boot.>

3) Connect the battery ground terminal. <Ref. to NT-6, BATTERY, NOTE, Note.>

4) Bleed air from the brake system. <Ref. to BR-59, Air Bleeding.>

5) Perform parameter confirmation, selection, and registration.

NOTE:

- When the VDCCM&H/U is replaced with a new part, be sure to perform the selection • registration operation.
- When the registration has not been performed, the DTC code "Parameter selection error" is detected together with the ABS/EBD/VDC warning light illumination.
 - (1) Check that the applied model and grade of the relevant vehicle are included. <Ref. to VDC(diag)-19, PARAMETER CHECK, OPERATION, Subaru Select Monitor.>
 - (2) If the applied model and grade of the target vehicle are not included, perform parameter selection and registration. <Ref. to VDC(diag)-19, PARAMETER SELECTION, OPERATION, Subaru Select Monitor.>
- 6) Perform "VDC sensor midpoint setting mode". <Ref. to VDC-23, VDC SENSOR MIDPOINT SETTING MODE (MODELS WITHOUT EyeSight), ADJUSTMENT, VDC Control Module and Hydraulic Control Unit (VDCCM&H/U).>

2. MODELS WITH EyeSight

CAUTION:

- When the VDCCM&H/U components are removed, be sure to perform the installation according to the following procedures to prevent fluid leakage.
- When installing the VDCCM&H/U to the bracket - hydraulic unit, make sure that there is no oil adhered to the bolts and the threads of VDCCM&H/U. If the oil is adhered, degrease it carefully before tightening.
- Be careful not to deform the bracket - hydraulic unit for hose assembly.
- Connect the VDCCM&H/U connector securely.

1) Install the VDCCM&H/U.

NOTE:

Refer to the following figure for tightening torque.

- (1) Set the VDCCM&H/U (a) to the bracket - hydraulic unit (b).
- (2) Set the hose assembly (c) to the bracket - hydraulic unit (b).
- (3) Set pipe A (d) and pipe B (e), and temporarily tighten the flare nuts.
- (4) Tighten the VDCCM&H/U (a) and the bracket - hydraulic unit (b).
- (5) Tighten the hose assembly (c) and the bracket - hydraulic unit (b).
- (6) Tighten pipe A (d) and pipe B (e).
- (7) Set the center pipes (f) to hose assembly (c), and temporarily tighten the flare nuts.
- (8) Install the hose assembly (c) to the vehicle body.
- (9) Tighten the flare nuts of the center pipes (f).

VDC Control Module and Hydraulic Control Unit (VDCCM&H/U)

VEHICLE DYNAMICS CONTROL (VDC)

(10) Install the brake pipes (g).

Tightening torque:

T1: 7.5 N·m (0.8 kgf-m, 5.5 ft-lb)

T2: 15 N·m (1.5 kgf-m, 11.1 ft-lb)

T3: 18 N·m (1.8 kgf-m, 13.3 ft-lb)

T4: 19 N·m (1.9 kgf-m, 14.0 ft-lb)

2) Connect the VDCCM&H/U connector.

3) Install the air intake boot. <Ref. to IN(H4DO)-12, INSTALLATION, Air Intake Boot.>

4) Connect the battery ground terminal. <Ref. to NT-6, BATTERY, NOTE, Note.>

5) Bleed air from the brake system. <Ref. to BR-59, Air Bleeding.>

6) Perform parameter confirmation, selection, and registration.

NOTE:

- When the VDCCM&H/U is replaced with a new part, be sure to perform the selection · registration operation.

- When the registration has not been performed, the DTC code “Parameter selection error” is detected together with the ABS/EBD/VDC warning light illumination.

(1) Check that the applied model and grade of the relevant vehicle are included. <Ref. to VDC(diag)-19, PARAMETER CHECK, OPERATION, Subaru Select Monitor.>

(2) If the applied model and grade of the target vehicle are not included, perform parameter selection and registration. <Ref. to VDC(diag)-19, PARAMETER SELECTION, OPERATION, Subaru Select Monitor.>

7) Perform the following VDC setting mode.

- Neutral of Steering Angle Sensor & Lateral G Sensor 0 point setting <Ref. to VDC-23, NEUTRAL OF STEERING ANGLE SENSOR & LATERAL G SENSOR 0 POINT SETTING (MODEL WITH EyeSight), ADJUSTMENT, VDC Control Module and Hydraulic Control Unit (VDCCM&H/U).>

- Longitudinal G sensor & lateral G sensor 0 point setting <Ref. to VDC-24, LONGITUDINAL G SENSOR & LATERAL G SENSOR 0 POINT SETTING MODE (MODEL WITH EyeSight), ADJUSTMENT, VDC Control Module and Hydraulic Control Unit (VDCCM&H/U).>

C: INSPECTION

1) Check the identification (a) of the VDC control module & hydraulic control unit (VDCCM&H/U).

NOTE:

For the identification, refer to "SPECIFICATION" in "General Description". <Ref. to VDC-2, SPECIFICATION, General Description.>

- Models without EyeSight

- Models with EyeSight

2) Check the condition of connection and settlement of connector, and correct or replace if defective.

VDC Control Module and Hydraulic Control Unit (VDCCM&H/U)

VEHICLE DYNAMICS CONTROL (VDC)

1. CHECKING THE HYDRAULIC UNIT ABS OPERATION BY PRESSURE GAUGE

- 1) Lift up the vehicle, and then remove the wheel.
- 2) Remove the bleeder - screws from the FL and FR caliper bodies.
- 3) Connect two pressure gauges to FL and FR caliper bodies.

CAUTION:

- Use a pressure gauge used exclusively for brake fluid measurement.
- Do not use the pressure gauge used for the measurement of transmission oil. Doing so will cause the piston seal to expand and deform.

NOTE:

Wrap sealing tape around the pressure gauge.

- 4) Bleed air from the pressure gauges and the FL and FR caliper bodies.
- 5) Perform ABS sequence control. <Ref. to VDC-25, ABS Sequence Control.>

NOTE:

When the hydraulic unit begins to work, first the FL side performs decompression, hold and compression, and then the FR side performs decompression, hold and compression.

- 6) Read values indicated on the pressure gauge and check if the fluctuation of the values between decompression and compression meets the standard values. Depress the brake pedal and check that the kick-back is normal, and tightness is normal.

Inspection conditions	Front wheel	Rear wheel
Initial value	3,500 kPa (36 kgf/cm ² , 511 psi)	3,500 kPa (36 kgf/cm ² , 511 psi)
When depressurized	500 kPa (5 kgf/cm ² , 73 psi) or less	500 kPa (5 kgf/cm ² , 73 psi) or less
When pressurized	3,500 kPa (36 kgf/cm ² , 511 psi) or more	3,500 kPa (36 kgf/cm ² , 511 psi) or more

- 7) Disconnect the pressure gauges from FL and FR caliper bodies.
- 8) Install the bleeder - screws of the FL and FR caliper bodies.
- 9) Remove the bleeder - screws from the RL and RR caliper bodies.
- 10) Connect two pressure gauges to RL and RR caliper bodies.
- 11) Bleed air from RL and RR caliper bodies, and pressure gauge.

12) Perform ABS sequence control. <Ref. to VDC-25, ABS Sequence Control.>

NOTE:

When the hydraulic unit begins to work, first the RR side performs decompression, hold and compression, and then the RL side performs decompression, hold and compression.

13) Read values indicated on the pressure gauge and check if the fluctuation of the values between decompression and compression meets specification. Depress the brake pedal and check that the kick-back is normal, and tightness is normal.

14) Disconnect the pressure gauge from the RL and RR caliper bodies.

15) Install the bleeder - screws of the RL and RR caliper bodies.

16) Bleed air from the brake system. <Ref. to BR-59, Air Bleeding.>

2. CHECKING THE HYDRAULIC UNIT ABS OPERATION WITH THE BRAKE TESTER

1) Set wheels other than the one to measure on free rollers.

2) Prepare for the ABS sequence control operation. <Ref. to VDC-25, ABS Sequence Control.>

3) Set the front wheels or rear wheels on the brake tester (a) and set the gear to neutral.

4) Operate the brake tester.

5) Perform ABS sequence control. <Ref. to VDC-25, ABS Sequence Control.>

6) When the hydraulic unit begins to work, check the following work sequence.

(1) The FL wheel performs decompression, hold and compression in sequence, and subsequently the FR wheel repeats the cycle.

(2) The RR wheel performs decompression, hold and compression in sequence, and subsequently the RL wheel repeats the cycle.

7) Read values indicated on the brake tester and check if the fluctuation of the values between decompression and compression meets specification.

Inspection conditions	Front wheel	Rear wheel
Initial value	1,000 N (102 kgf, 225 lb)	1,000 N (102 kgf, 225 lb)
When depressurized	500 N (51 kgf, 112 lb) or less	500 N (51 kgf, 112 lb) or less
When pressurized	1,000 N (102 kgf, 225 lb) or more	1,000 N (102 kgf, 225 lb) or more

8) After the inspection, depress the brake pedal and check that it is not abnormally hard, and tightness is normal.

VDC Control Module and Hydraulic Control Unit (VDCCM&H/U)

VEHICLE DYNAMICS CONTROL (VDC)

3. CHECKING THE HYDRAULIC UNIT VDC OPERATION USING A PRESSURE GAUGE

- 1) Lift up the vehicle, and then remove the wheel.
- 2) Remove the bleeder - screws from the FL and FR caliper bodies.
- 3) Connect two pressure gauges to FL and FR caliper bodies.

CAUTION:

- Use a pressure gauge used exclusively for brake fluid measurement.
- Do not use a pressure gauge used for the measuring transmission oil pressure, as the piston seal may expand and deform.

NOTE:

Wrap sealing tape around the pressure gauge.

- 4) Bleed air from the pressure gauge.
- 5) Perform VDC sequence control. <Ref. to VDC-28, VDC Sequence Control.>

NOTE:

When the hydraulic unit begins to work, first the FL side performs compression, hold, and decompression, and then the FR side performs compression, hold, and decompression.

- 6) Read values indicated on the pressure gauge and check if the fluctuation of the values between decompression and compression meets specification. Depress the brake pedal and check that it is not abnormally hard, and tightness is normal.

Inspection conditions	Front wheel	Rear wheel
When pressurized	3,000 kPa (31 kgf/cm ² , 441 psi) or more	3,000 kPa (31 kgf/cm ² , 441 psi) or more
When depressurized	500 kPa (5 kgf/cm ² , 73 psi) or less	500 kPa (5 kgf/cm ² , 73 psi) or less

- 7) Disconnect the pressure gauges from FL and FR caliper bodies.
- 8) Install the bleeder - screws of the FL and FR caliper bodies.
- 9) Remove the bleeder - screws from the RL and RR caliper bodies.
- 10) Connect two pressure gauges to RL and RR caliper bodies.
- 11) Bleed air from RL and RR caliper bodies, and pressure gauge.
- 12) Perform VDC sequence control. <Ref. to VDC-28, VDC Sequence Control.>

NOTE:

When the hydraulic unit begins to work, first the RR side performs compression, hold, and decompression, and then the RL side performs compression, hold, and decompression.

VDC Control Module and Hydraulic Control Unit (VDCCM&H/U)

VEHICLE DYNAMICS CONTROL (VDC)

- 13) Read the values indicated on the pressure gauges and check if it is within specification. Depress the brake pedal and check that it is not abnormally hard, and tightness is normal.
- 14) Disconnect the pressure gauge from the RL and RR caliper bodies.
- 15) Install the bleeder - screws of the RL and RR caliper bodies.
- 16) Bleed air from the brake system. <Ref. to BR-59, Air Bleeding.>

4. CHECK HYDRAULIC UNIT VDC OPERATION WITH BRAKE TESTER

- 1) Set wheels other than the one to measure on free rollers.
- 2) Prepare to operate the VDC sequence control. <Ref. to VDC-28, VDC Sequence Control.>
- 3) Set the front wheels or rear wheels on the brake tester (a) and set the gear to neutral.

VDC00938

- 4) Operate the brake tester.
- 5) Perform VDC sequence control. <Ref. to VDC-28, VDC Sequence Control.>
- 6) When the hydraulic unit begins to work, check the following work sequence.
 - (1) The FL wheel performs compression, hold and decompression in sequence, and subsequently the FR wheel repeats the cycle.
 - (2) The RR wheel performs compression, hold and decompression in sequence, and subsequently the RL wheel repeats the cycle.
- 7) Read values indicated on the brake tester and check if the fluctuation of the values between decompression and compression meets specification.

Inspection conditions	Front wheel	Rear wheel
When pressurized	2,000 N (204 kgf, 450 lbf) or more	2,000 N (204 kgf, 450 lbf) or more
When depressurized	500 N (51 kgf, 112 lbf) or less	500 N (51 kgf, 112 lbf) or less

- 8) After the inspection, depress the brake pedal and check that it is not abnormally hard, and tightness is normal.

VDC Control Module and Hydraulic Control Unit (VDCCM&H/U)

VEHICLE DYNAMICS CONTROL (VDC)

D: REPLACEMENT

1. ONLY FOR MODELS WITHOUT EyeSight

CAUTION:

- Because the pressure sensor built into the H/U is easily damaged by static electricity, start the operation after performing static electricity measures.
- Be careful not to touch the sensors in the H/U to prevent damage.
- Because the seal of the VDCCM cannot be replaced, do not pull or peel it by lifting it up.
- Because the screw of the H/U will become slightly worn in every replacement procedure, 5 times is the maximum number for H/U re-use. If a problem is found such as not being able to torque the screw to specifications even before 5 replacement operations are performed, replace the H/U body.
- When installing the VDCCM, always use new screws.
- When the sealing surface of the VDCCM or H/U is dirty or damaged and it cannot be cleaned or repaired, replace with a new part.

1) Remove the VDCCM&H/U. <Ref. to VDC-9, MODELS WITHOUT EyeSight, REMOVAL, VDC Control Module and Hydraulic Control Unit (VDCCM&H/U).>

2) To prevent entry of foreign objects and brake fluid leakage, plug the oil pressure port of the VDCCM&H/U using a screw plug, etc.

3) Set the pump motor section of the removed VDCCM&H/U face down on a vise.

NOTE:

Before securing a part on a vise, place cushioning material such as wood blocks, aluminum plate, or cloth between the part and the vise.

(1) Aluminum plate, etc.

(2) Vise

VDC Control Module and Hydraulic Control Unit (VDCCM&H/U)

VEHICLE DYNAMICS CONTROL (VDC)

4) Using TORX® E5, remove the four screws from VDCCM.

CAUTION:

Do not re-use the screws.

5) Slowly pull out the VDCCM upward from the H/U.

NOTE:

To prevent damaging of coil section, remove the VDCCM straight up from H/U without twisting.

6) Make sure there is no dirt or damage on the sealing surface of the H/U.

CAUTION:

- **Do not clean the VDCCM&H/U by applying compressed air.**
- **Even if damage is found on the H/U seal, do not attempt repair by filing or with a metal scraper. To remove the seal residue, always use a plastic scraper. Do not use chemical such as paint thinner, etc., to clean.**

7) Position the coil of the new VDCCM to align with the H/U valve.

8) To prevent deformation of the VDCCM housing cover, hold the corner of VDCCM and install it to the H/U without tilting.

VDC Control Module and Hydraulic Control Unit (VDCCM&H/U)

VEHICLE DYNAMICS CONTROL (VDC)

9) Using TORX[®] E5, gradually tighten new screws in order of (1) through (4).

CAUTION:

Always use new screws.

Tightening torque:

1.5 N·m (0.2 kgf-m, 1.1 ft-lb)

10) Check that there is no foreign matter in mating surface between the VDCCM&H/U.

11) Using TORX[®] E5 again, gradually tighten the screws in order of (1) through (4).

Tightening torque:

3.0 N·m (0.3 kgf-m, 2.2 ft-lb)

12) Check that there is no gap in the mating surface between VDCCM&H/U.

13) Install the VDCCM&H/U to the vehicle.

CAUTION:

When installing the VDCCM&H/U, replace the damper - hydraulic unit, spacer and nut with new parts.

14) Bleed air from the brake system. <Ref. to BR-59, PROCEDURE, Air Bleeding.>

15) Perform the selection and registration operation of parameter. <Ref. to VDC(diag)-19, PARAMETER SELECTION, OPERATION, Subaru Select Monitor.>

NOTE:

- After replacing the VDCCM, be sure to perform the selection • registration operation of parameter.
- When the registration has not been performed, the DTC code “Parameter selection error” is detected together with the ABS/EBD/VDC warning light illumination.

16) Check the parameter to confirm that the applied models and grades of the relevant vehicle are included. <Ref. to VDC(diag)-19, PARAMETER CHECK, OPERATION, Subaru Select Monitor.>

17) If the applied model and grade of the target vehicle are not included, perform parameter selection and registration. <Ref. to VDC(diag)-19, PARAMETER SELECTION, OPERATION, Subaru Select Monitor.>

18) Execute Clear Memory after parameter selection and registration operations because the DTC for “Parameter selection error” is memorized.

19) Perform “VDC sensor midpoint setting mode”. <Ref. to VDC-23, VDC SENSOR MIDPOINT SETTING MODE (MODELS WITHOUT EyeSight), ADJUSTMENT, VDC Control Module and Hydraulic Control Unit (VDCCM&H/U).>

E: ADJUSTMENT

1. VDC SENSOR MIDPOINT SETTING MODE (MODELS WITHOUT EyeSight)

After installing, replacing or adjusting the following parts, perform the VDC sensor midpoint setting mode.

- Steering angle sensor
- Steering wheel
- Suspension parts
- Wheel alignment
- VDCCM&H/U
- VDCCM&H/U bracket

1) Park the vehicle on a level surface, and set the steering wheel to the neutral position.

2) Perform the VDC sensor 0 point setting mode.

(1) Connect the Subaru Select Monitor.

NOTE:

For detailed operation procedures, refer to “Application help”.

(2) Turn the ignition switch to ON.

(3) On «Start» display, select «Diagnosis».

(4) On «Vehicle selection» display, input the target vehicle information and select «Confirmed».

(5) On «Main Menu» display, select «Each System».

(6) On «Select System» display, select «Brake Control System» and select «Enter».

(7) On «Select Function» display, select «Data Monitor».

(8) From the data monitor item list, select «Steering Angle Sensor», «Longitudinal G Sensor» and «Lateral G sensor Output».

(9) Check that the steering angle sensor output value is between -10 and 10 deg.

NOTE:

If the output value is not at the standard value, check the steering wheel.

(10) Check that output values for the longitudinal G sensor and lateral G sensor are -2 — 2 m/s².

NOTE:

If the output value is not at the standard value, check the installation conditions of VDCCM&H/U and VDC-CM&H/U bracket.

(11) On «Select Function» display, select «Work Support».

(12) From the work support item list, select «VSC(VDC) Centering Mode», and perform the setting according to the procedure displayed on the Subaru Select Monitor screen.

3) Drive the vehicle for 10 minutes, and check that there is no system malfunction or the warning light illumination while driving.

4) Make sure that the DTC is not stored.

2. NEUTRAL OF STEERING ANGLE SENSOR & LATERAL G SENSOR 0 POINT SETTING (MODEL WITH EyeSight)

After installing, replacing, or adjusting the following part, perform the Set up mode for Neutral of Steering Angle Sensor & Lateral G Sensor 0 point.

- Steering angle sensor
- Steering wheel
- Suspension parts
- Wheel alignment
- VDCCM&H/U
- VDCCM&H/U bracket

1) Set the steering wheel to the neutral position.

2) Perform the VDC sensor 0 point setting mode.

(1) Connect the Subaru Select Monitor to data link connector.

NOTE:

For detailed operation procedures, refer to “Application help”.

(2) Turn the ignition switch to ON.

(3) On «Start» display, select «Diagnosis».

VDC Control Module and Hydraulic Control Unit (VDCCM&H/U)

VEHICLE DYNAMICS CONTROL (VDC)

- (4) On «Vehicle selection» display, input the target vehicle information and select «Confirmed».
- (5) On «Main Menu» display, select «Each System».
- (6) On «Select System» display, select «Brake Control System» and select «Enter».
- (7) On «Select Function» display, select «Data Monitor».
- (8) From the data monitor item list, select «Steering Angle Sensor», «Longitudinal G Sensor» and «Lateral G sensor Output».
- (9) Check that the steering angle sensor output value is between -10 and 10 deg.

NOTE:

If the output value is not at the standard value, check the steering wheel.

- (10) Check that output values for the longitudinal G sensor and lateral G sensor are -2 — 2 m/s².

NOTE:

If the output value is not at the standard value, check the installing condition of the VDCCM&H/U and VDC-CM&H/U bracket.

- (11) On «Select Function» display, select «Work Support».
 - (12) From «Work Support», select «Set mode Str.A.Sen.N&Lat.GSen.0p», and perform the setting according to the procedure displayed on the Subaru Select Monitor screen.
- 3) Drive the vehicle for 10 minutes, and check that there is no system malfunction or the warning light illumination while driving.
 - 4) Make sure that the DTC is not stored.

3. LONGITUDINAL G SENSOR & LATERAL G SENSOR 0 POINT SETTING MODE (MODEL WITH EyeSight)

After installing or replacing the following part, perform the longitudinal G sensor & lateral G sensor 0 point setting mode.

- Suspension parts
- VDCCM&H/U
- VDCCM&H/U bracket

- 1) Park the vehicle on a level surface with all wheels aligned straight.
- 2) Perform the VDC sensor 0 point setting mode.
 - (1) Connect the Subaru Select Monitor to data link connector.

NOTE:

For detailed operation procedures, refer to “Application help”.

- (2) Turn the ignition switch to ON.
 - (3) On «Start» display, select «Diagnosis».
 - (4) On «Vehicle selection» display, input the target vehicle information and select «Confirmed».
 - (5) On «Main Menu» display, select «Each System».
 - (6) On «Select System» display, select «Brake Control System» and select «Enter».
 - (7) On «Select Function» display, select «Data Monitor».
 - (8) From the «Data monitor» display, select «Longitudinal G Sensor» and «Lateral G sensor Output».
 - (9) Check that output values for the longitudinal G sensor and lateral G sensor are -2 — 2 m/s².
 - (10) On «Select Function» display, select «Work Support».
 - (11) From «Work Support», select «Longitudinal G sensor & lateral G sensor 0 point setting mode», and perform the setting according to the procedure displayed on the Subaru Select Monitor Screen.
- 3) Drive the vehicle for 10 minutes, and check that there is no system malfunction or the warning light illumination while driving.
 - 4) Make sure that the DTC is not stored.

5. ABS Sequence Control

A: OPERATION

- 1) While the ABS sequence control is being performed, the operation of the hydraulic unit can be checked using the brake tester or pressure gauge after the hydraulic unit solenoid valve operation.
- 2) ABS sequence control can be started by the Subaru Select Monitor.

1. ABS SEQUENCE CONTROL WITH SUBARU SELECT MONITOR

NOTE:

In the event of any trouble, the ABS sequence control will not operate.

- 1) Connect the Subaru Select Monitor.

NOTE:

For detailed operation procedures, refer to "Application help".

- (1) Turn the ignition switch to ON.
 - (2) On «Start» display, select «Diagnosis».
 - (3) On «Vehicle selection» display, input the target vehicle information and select «Confirmed».
 - (4) On «Main Menu» display, select «Each System».
 - (5) On «Select System» display, select «Brake Control System» and select «Enter».
 - (6) On «Select Function» display, select «Work Support».
 - (7) From the work support item list, select «ABS Sequence Control Mode».
- 2) Follow the procedures displayed in the Subaru Select Monitor to execute the following.
 - (1) When using a brake tester, depress the brake pedal with a force of 100 N (10.2 kgf, 22.5 lbf).
 - (2) When using a pressure gauge, press the brake pedal so that the pressure gauge indicates 3,500 kPa (36 kgf/cm², 511 psi).
 - 3) The brake system being operated is displayed on the Subaru Select Monitor.

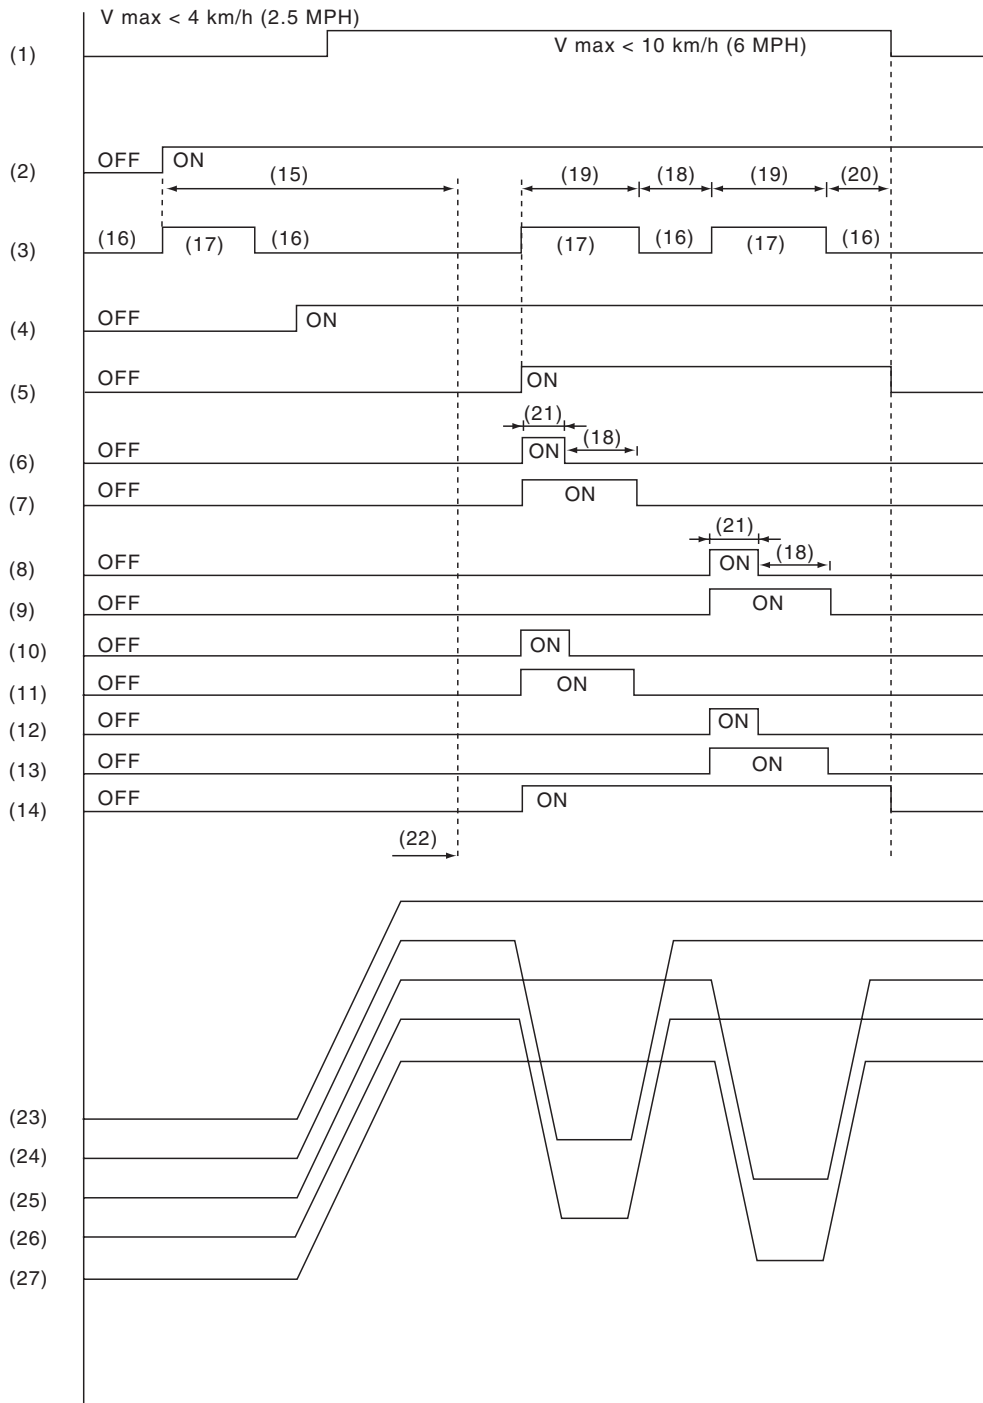

ABS Sequence Control

VEHICLE DYNAMICS CONTROL (VDC)

2. CONDITIONS FOR ABS SEQUENCE CONTROL

NOTE:

The control operation starts at point A.

VDC00988

ABS Sequence Control

VEHICLE DYNAMICS CONTROL (VDC)

- | | | |
|-----------------------------|-----------------------------|---------------------------------|

B: SPECIFICATION

1. CONDITIONS FOR COMPLETION OF ABS SEQUENCE CONTROL

When the following conditions develop, the ABS sequence control stops and ABS operation is returned to the normal control mode.

- When the speed of at least one wheel reaches 10 km/h (6 MPH).
- When the brake pedal is released during ABS sequence control and the switch - stop light becomes OFF.
- After completion of ABS sequence control.
- When a malfunction is detected.

VDC Sequence Control

VEHICLE DYNAMICS CONTROL (VDC)

6. VDC Sequence Control

A: OPERATION

1) While the VDC sequence control is performed, the operation of the hydraulic unit can be checked using the brake tester or pressure gauge after the hydraulic unit solenoid valve is operated.

2) VDC sequence control can be started by Subaru Select Monitor.

1. VDC SEQUENCE CONTROL WITH SUBARU SELECT MONITOR

NOTE:

In the event of any trouble, sequence control will not operate.

1) Connect the Subaru Select Monitor to data link connector.

NOTE:

For detailed operation procedures, refer to "Application help".

(1) Turn the ignition switch to ON.

(2) On «Start» display, select «Diagnosis».

(3) On «Vehicle selection» display, input the target vehicle information and select «Confirmed».

(4) On «Main Menu» display, select «Each System».

(5) On «Select System» display, select «Brake Control System» and select «Enter».

(6) On «Select Function» display, select «Work Support».

(7) From the work support item list, select «VDC Function Check Mode».

2) Operate according to the procedures displayed in the Subaru Select Monitor.

3) The brake system being operated is displayed on the Subaru Select Monitor.

VDC Sequence Control

2. CONDITIONS FOR VDC SEQUENCE CONTROL

NOTE:

The control operation starts at point A.

VDC10059

VDC Sequence Control

VEHICLE DYNAMICS CONTROL (VDC)

(1) All wheel speed	(13) FR decompression valve	(25) 1 second

B: SPECIFICATION

1. CONDITIONS FOR COMPLETION OF VDC SEQUENCE CONTROL

When the following conditions develop, the VDC sequence control stops and VDC operation is returned to the normal control mode.

- When the speed of at least one wheel reaches 10 km/h (6 MPH).
- After completion of VDC sequence control.
- When a malfunction is detected.

7. Yaw Rate and G Sensor

A: NOTE

Yaw rate & longitudinal G and lateral G sensor are integrated with the VDC control module & hydraulic control module (VDCCM&H/U).

B: INSPECTION

1. YAW RATE & LONGITUDINAL G AND LATERAL G SENSOR SIGNAL

Step	Check	Yes	No
1 CHECK YAW RATE & G SENSOR. 1) Check the installation condition of the VDC control module & hydraulic control module (VDCCM&H/U). 2) Using the Subaru Select Monitor, display «Data monitor». 3) Read the output of «Yaw Rate Sensor», «Longitudinal G Sensor» and «Lateral G Sensor».	When the vehicle is placed horizontally, are the displayed values $-1.5 \text{ — } 1.5 \text{ m/s}^2$ for longitudinal G and lateral G sensor, and $-4 \text{ — } 4 \text{ deg/s}$ for yaw rate sensor?	Go to step 2.	Replace the VDC control module & hydraulic control unit (VDCCM&H/U).
2 PERFORM DRIVING TEST. Drive for approximately 10 minutes, and check that there is no system malfunction or the warning light illumination while driving.	Is there any abnormal movement or the warning light illumination while driving?	Perform the diagnosis according to DTCs for the VDC system. <Ref. to VDC(diag)-39, List of Diagnostic Trouble Code (DTC).>	G sensor is normal.

Steering Angle Sensor

VEHICLE DYNAMICS CONTROL (VDC)

8. Steering Angle Sensor

A: REPLACEMENT

CAUTION:

- If the steering wheel and steering angle sensor are removed, perform the following VDC setting mode.
 - Model without EyeSight: VDC sensor midpoint setting mode <Ref. to VDC-23, VDC SENSOR MIDPOINT SETTING MODE (MODELS WITHOUT EyeSight), ADJUSTMENT, VDC Control Module and Hydraulic Control Unit (VDCCM&H/U).>
 - Model with EyeSight: Neutral of Steering Angle Sensor & Lateral G Sensor 0 point setting mode <Ref. to VDC-23, NEUTRAL OF STEERING ANGLE SENSOR & LATERAL G SENSOR 0 POINT SETTING (MODEL WITH EyeSight), ADJUSTMENT, VDC Control Module and Hydraulic Control Unit (VDCCM&H/U).>
 - Model with EyeSight: Longitudinal G sensor & lateral G sensor 0 point setting mode <Ref. to VDC-24, LONGITUDINAL G SENSOR & LATERAL G SENSOR 0 POINT SETTING MODE (MODEL WITH EyeSight), ADJUSTMENT, VDC Control Module and Hydraulic Control Unit (VDCCM&H/U).>
 - Before handling the airbag system components, always refer to “CAUTION” of “General Description” in “AIRBAG SYSTEM”. <Ref. to AB-9, CAUTION, General Description.>
 - Always use the steering wheel puller for removal to avoid deforming the steering wheel.
 - If the steering wheel has been removed, make sure that the steering roll connector is not turned from the original position.
- 1) Set the tire to the straight-ahead position.
 - 2) Disconnect the ground cable from battery and wait for at least 60 seconds before starting work. <Ref. to NT-6, BATTERY, NOTE, Note.>
 - 3) Remove the driver’s airbag module. <Ref. to AB-32, REMOVAL, Driver’s Airbag Module.>
 - 4) Remove the steering wheel. <Ref. to PS-8, REMOVAL, Steering Wheel.>
 - 5) Remove the cover assembly - column.
 - (1) Release the screws and claws.
 - (2) Remove the cap - key cylinder (a).
 - (3) Remove the cover assembly - column UPR and the cover assembly - column LWR.

PS-01384

A Model without keyless access with push button start

B Model with keyless access with push button start

Steering Angle Sensor

VEHICLE DYNAMICS CONTROL (VDC)

6) Remove the steering roll connector.

CAUTION:

Make sure that the steering roll connector is not turned from the original position.

- (1) Disconnect the connector under the steering roll connector.
- (2) Release the claws and remove the steering roll connector.

7) Remove the steering angle sensor.

- (1) Release the claws and remove the steering angle sensor (b) from the steering roll connector (a).

Steering Angle Sensor

VEHICLE DYNAMICS CONTROL (VDC)

8) Install the steering angle sensor.

(1) Apply grease to the protrusion (a) of the new steering angle sensor.

CAUTION:

Do not rotate the steering angle sensor protrusion.

(2) Align the center of steering roll connector. <Ref. to AB-60, INSTALLATION, Roll Connector.>

(3) Align the position of the protrusion and install the steering angle sensor to the steering roll connector.

9) Install each part in the reverse order of removal.

Tightening torque:

Steering wheel: 39 N·m (4.0 kgf·m, 28.8 ft·lb)

Clearance:

Between cover assembly - column and steering wheel: 4 — 6 mm (0.16 — 0.24 in)

10) Adjust the steering angle sensor. (Models without EyeSight) <Ref. to VDC-23, VDC SENSOR MID-POINT SETTING MODE (MODELS WITHOUT EyeSight), ADJUSTMENT, VDC Control Module and Hydraulic Control Unit (VDCCM&H/U).>

11) Adjust the steering angle sensor. (Models with EyeSight)

- Neutral of Steering Angle Sensor & Lateral G Sensor 0 point setting <Ref. to VDC-23, NEUTRAL OF STEERING ANGLE SENSOR & LATERAL G SENSOR 0 POINT SETTING (MODEL WITH EyeSight), ADJUSTMENT, VDC Control Module and Hydraulic Control Unit (VDCCM&H/U).>

- Longitudinal G sensor & lateral G sensor 0 point setting <Ref. to VDC-24, LONGITUDINAL G SENSOR & LATERAL G SENSOR 0 POINT SETTING MODE (MODEL WITH EyeSight), ADJUSTMENT, VDC Control Module and Hydraulic Control Unit (VDCCM&H/U).>

9. Front ABS Wheel Speed Sensor

A: REMOVAL

- 1) Disconnect the ground cable from battery. <Ref. to NT-6, BATTERY, NOTE, Note.>
- 2) Lift up the vehicle, and then remove the front wheels.
- 3) Remove the front ABS wheel speed sensor.

CAUTION:

- Be careful not to damage the sensor.
 - Do not apply excessive force to the sensor harness.
 - Leave the sensor harness clamp (white arrow) on the vehicle side.
- (1) Disconnect the connector of the front ABS wheel speed sensor in the engine compartment.

- (2) Remove each harness clip and grommet.
- (3) Remove the bolts, and remove the front ABS wheel speed sensor from the housing assembly - front axle.

Front ABS Wheel Speed Sensor

VEHICLE DYNAMICS CONTROL (VDC)

B: INSTALLATION

CAUTION:

- **Be careful not to damage the sensor.**
- **Do not apply excessive force to the sensor harness.**

Install each part in the reverse order of removal.

NOTE:

- Check the identification (mark) on the harness to make sure there is no warpage. <Ref. to VDC-2, SPECIFICATION, General Description.>
- Check if the harness is not pulled and does not come in contact with the suspension or body while operating the steering.

Tightening torque:

Front ABS wheel speed sensor: 7.5 N·m (0.8 kgf-m, 5.5 ft-lb)

Front ABS wheel speed sensor bracket: 33 N·m (3.4 kgf-m, 24.3 ft-lb)

Front wheel: Except for C4 model

120 N·m (12.2 kgf-m, 88.5 ft-lb)

Front wheel: C4 model

100 N·m (10.2 kgf-m, 73.8 ft-lb)

C: INSPECTION

1. CHECK WITH SUBARU SELECT MONITOR

1) Connect the Subaru Select Monitor to data link connector.

NOTE:

For detailed operation procedures, refer to "Application help".

- (1) On «Start» display, select «Diagnosis».
 - (2) On «Vehicle selection» display, input the target vehicle information and select «Confirmed».
 - (3) On «Main Menu» display, select «Each System».
 - (4) On «Select System» display, select «Brake Control System» and select «Enter».
 - (5) On «Select Function» display, select «Data Monitor».
 - (6) From the data monitor item list, select «FR Wheel Speed» and «FL Wheel Speed».
- 2) Check if the speed indicated on the display changes in the same manner as the speedometer reading during acceleration/deceleration when the steering wheel is in the straight-ahead position.
- 3) If the speed indicated on the display does not change in the inspection, check the ABS wheel speed sensor. <Ref. to VDC-37, CHECK ABS WHEEL SPEED SENSOR UNIT, INSPECTION, Front ABS Wheel Speed Sensor.>

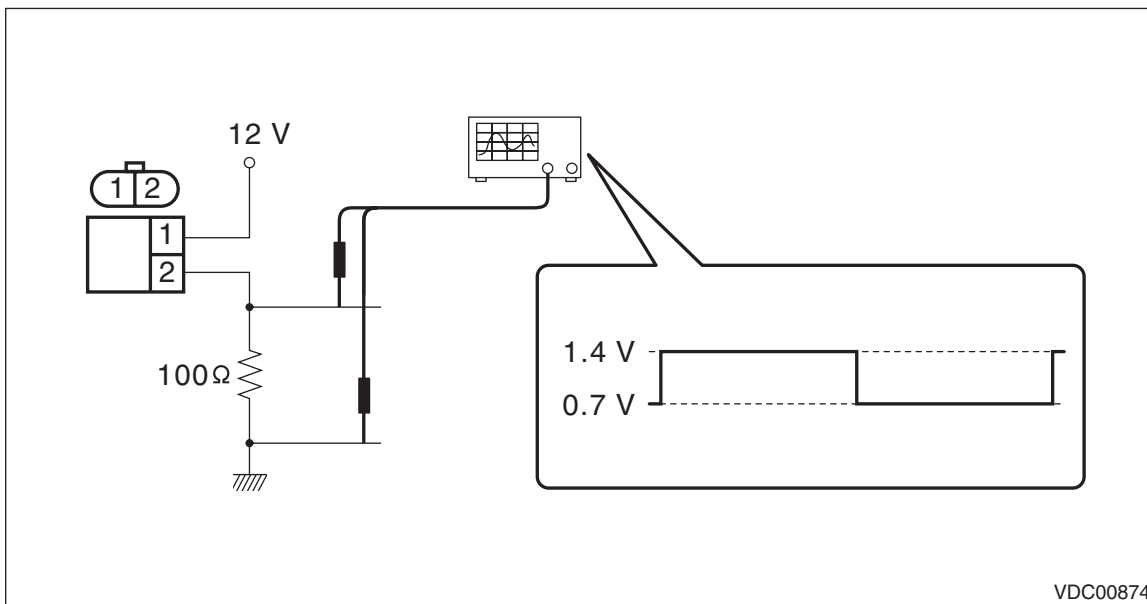

Front ABS Wheel Speed Sensor

2. CHECK ABS WHEEL SPEED SENSOR UNIT

- 1) Visually check the tip of the ABS wheel speed sensor for foreign particles or damage. If necessary, clean the tip or replace the ABS wheel speed sensor.
- 2) Disconnect the ABS wheel speed sensor connector.
- 3) Check the ABS wheel speed sensor cable for discontinuity. If defective, replace the ABS wheel speed sensor.
- 4) Connect a 12 V power supply to No. 1 terminal of ABS wheel speed sensor connector, then attach resistance to the No. 2 terminal. Rotate the wheel at about 2.75 km/h (2 MPH), and measure the voltage using an oscilloscope.

Standard value of output voltage:

0.7 — 1.4 V

- 5) Replace the ABS wheel speed sensor if the inspection result is not within the standard value.

Rear ABS Wheel Speed Sensor

VEHICLE DYNAMICS CONTROL (VDC)

10. Rear ABS Wheel Speed Sensor

A: REMOVAL

1. 5 DOOR MODEL

- 1) Disconnect the ground cable from battery.
- 2) Lift up the vehicle, and then remove the rear wheels.
- 3) Remove the rear ABS wheel speed sensor.

CAUTION:

- Be careful not to damage the sensor.
- Do not apply excessive force to the sensor harness.
- Leave the sensor harness clamp (white arrow) on the vehicle side.
 - (1) Tilt the backrest assembly of the rear seat forward.
 - (2) Remove the clips located at the bottom of the cover COMPL - rear backrest LH and RH of the rear seat back.

SE-01309

- (3) Remove the mat - rear floor CTR and the spacer - rear floor side.

EI-03517

Rear ABS Wheel Speed Sensor

VEHICLE DYNAMICS CONTROL (VDC)

(4) Remove the clips, and remove the trim panel - rear skirt.

(5) Remove the lid upper rear (a) and the cap - rear strut (b) in the order from (1) to (6).

Rear ABS Wheel Speed Sensor

VEHICLE DYNAMICS CONTROL (VDC)

- (6) Disconnect the connector of the rear ABS wheel speed sensor.

- (7) Remove the grommet from the rear wheel housing, and pull out the connector of the rear ABS wheel speed sensor.

- (8) Remove the harness clip and bolt, and remove the rear ABS wheel speed sensor.

B: INSTALLATION

CAUTION:

Be careful not to damage the sensor.

- 1) Install each part in the reverse order of removal.
- 2) Route the rear ABS wheel speed sensor cable to the upper arm assembly.

NOTE:

Check the identification (mark) on the harness to make sure there is no warpage. <Ref. to VDC-2, SPECIFICATION, General Description.>

Tightening torque:

Rear ABS wheel speed sensor: 7.5 N·m (0.8 kgf-m, 5.5 ft-lb)

Rear wheel (except for C4 model): 120 N·m (12.2 kgf-m, 88.5 ft-lb)

Rear wheel (C4 model): 100 N·m (10.2 kgf-m, 73.8 ft-lb)

C: INSPECTION

1. CHECK WITH SUBARU SELECT MONITOR

1) Connect the Subaru Select Monitor.

NOTE:

For detailed operation procedures, refer to "Application help".

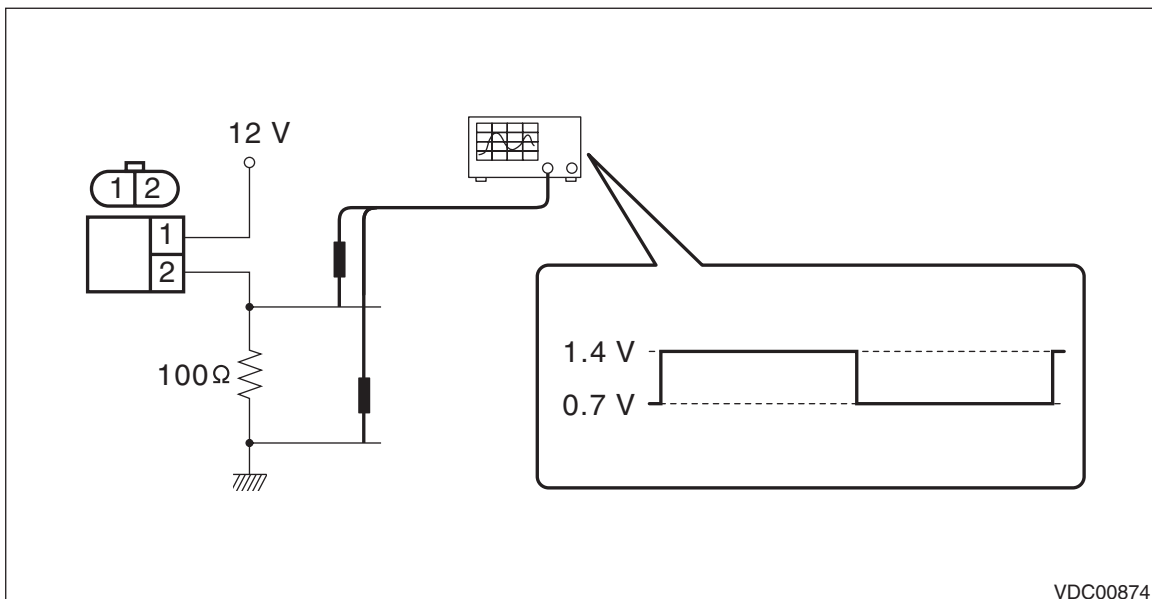

- (1) On «Start» display, select «Diagnosis».
 - (2) On «Vehicle selection» display, input the target vehicle information and select «Confirmed».
 - (3) On «Main Menu» display, select «Each System».
 - (4) On «Select System» display, select «Brake Control System» and select «Enter».
 - (5) On «Select Function» display, select «Data Monitor».
 - (6) From the data monitor item list, select «RR Wheel Speed» and «RL Wheel Speed».
- 2) Check if the speed indicated on the display changes in the same manner as the speedometer reading during acceleration/deceleration when the steering wheel is in the straight-ahead position.
- 3) If the speed indicated on the display does not change in the inspection, check the ABS wheel speed sensor. <Ref. to VDC-37, CHECK ABS WHEEL SPEED SENSOR UNIT, INSPECTION, Front ABS Wheel Speed Sensor.>

2. CHECK ABS WHEEL SPEED SENSOR UNIT

- 1) Visually check the tip of the ABS wheel speed sensor for foreign particles or damage. If necessary, clean the tip or replace the ABS wheel speed sensor.
- 2) Disconnect the ABS wheel speed sensor connector.
- 3) Check the ABS wheel speed sensor cable for discontinuity. If defective, replace the ABS wheel speed sensor.
- 4) Connect a 12 V power supply to No. 1 terminal of ABS wheel speed sensor connector, then attach resistance to the No. 2 terminal. Rotate the wheel at about 2.75 km/h (2 MPH), and measure the voltage using an oscilloscope.

Standard value of output voltage:

0.7 — 1.4 V

- 5) Replace the ABS wheel speed sensor if the inspection result is not within the standard value.

Front Magnetic Encoder

VEHICLE DYNAMICS CONTROL (VDC)

11. Front Magnetic Encoder

A: REMOVAL

Refer to “Front Hub Unit Bearing” for removal, because the front magnetic encoder is integrated with the hub unit COMPL - front axle. <Ref. to DS-24, REMOVAL, Front Hub Unit Bearing.>

B: INSTALLATION

Refer to “Front Hub Unit Bearing” for installation, because the front magnetic encoder is integrated with the hub unit COMPL - front axle. <Ref. to DS-27, INSTALLATION, Front Hub Unit Bearing.>

C: INSPECTION

Visually check the magnetic encoder for any damage. If necessary, replace with a new hub unit COMPL - front axle.

NOTE:

Because the magnetic encoder is integrated with hub unit COMPL, replace the hub unit COMPL with a new part if there is any defect found on the magnetic encoder.

12.Rear Magnetic Encoder

A: REMOVAL

Refer to “Rear Hub Unit Bearing” for removal, because the rear magnetic encoder is integrated with the hub unit COMPL - rear axle. <Ref. to DS-42, REMOVAL, Rear Hub Unit Bearing.>

B: INSTALLATION

Refer to “Rear Hub Unit Bearing” for installation, because the rear magnetic encoder is integrated with the hub unit COMPL - rear axle. <Ref. to DS-46, INSTALLATION, Rear Hub Unit Bearing.>

C: INSPECTION

Visually check the magnetic encoder parts for any damage. If necessary, replace with a new hub unit COMPL - rear axle.

NOTE:

Because the magnetic encoder is integrated with hub unit COMPL, replace the hub unit COMPL with a new part if there is any defect found on the magnetic encoder.

VDC OFF Switch

VEHICLE DYNAMICS CONTROL (VDC)

13.VDC OFF Switch

A: REMOVAL

- 1) Disconnect the ground cable from battery. <Ref. to NT-6, BATTERY, NOTE, Note.>
- 2) Remove the cover assembly - instrument panel LWR driver OUT. <Ref. to EI-54, REMOVAL, Instrument Panel Lower Cover.>
- 3) Remove the screws and release the claws, then detach the cover.

- 4) Release the claws and remove the VDC OFF switch.

B: INSTALLATION

Install each part in the reverse order of removal.

C: INSPECTION

- 1) Disconnect the VDC OFF switch connector.
- 2) Check the resistance between the VDC OFF switch terminals.

PREPARATION TOOL:

Circuit tester

VDC00969

Terminal No.	Inspection conditions	Standard
2 — 3	Switch OFF	1 M Ω or more
	Switch ON	Less than 1 Ω

- 3) Replace the VDC OFF switch if the inspection result is not within the standard value.

VDC OFF Switch

VEHICLE DYNAMICS CONTROL (VDC)

VEHICLE DYNAMICS CONTROL (VDC) (DIAGNOSTICS)

VDC(diag)

	Page
1. Basic Diagnostic Procedure	2
2. Check List for Interview	4
3. General Description	8

5. Control Module I/O Signal	12
6. Subaru Select Monitor	15
7. Read Diagnostic Trouble Code (DTC)	24
8. Inspection Mode	25
9. Clear Memory Mode	26
10. Warning Light Illumination Pattern	27
11. List of Diagnostic Trouble Code (DTC)	39
12. Diagnostic Procedure with Diagnostic Trouble Code (DTC)	47
13. General Diagnostic Table	143

Basic Diagnostic Procedure

VEHICLE DYNAMICS CONTROL (VDC) (DIAGNOSTICS)

1. Basic Diagnostic Procedure

A: PROCEDURE

CAUTION:

Remove foreign matter (dust, water, oil etc.) from the VDCCM&H/U connector during removal and installation.

NOTE:

- To check the harness for open or short circuits, shake problem spot or connector.
- Refer to "Check List for Interview". <Ref. to VDC(diag)-4, Check List for Interview.>

Step	Check	Yes	No
1 CHECK PRE-INSPECTION. 1) Ask the customer when and how the trouble occurred using the interview check list. <Ref. to VDC(diag)-4, Check List for Interview.> 2) Before performing diagnostics, check the component which might affect VDC problems. <Ref. to VDC(diag)-8, INSPECTION, General Description.>	Is the check result OK?	Go to step 2.	Repair or replace each component.
2 CHECK INDICATION OF DTC. 1) Turn the ignition switch to OFF. 2) Connect the Subaru Select Monitor to data link connector. 3) Turn the ignition switch to ON and run the Subaru Select Monitor. 4) Read the DTC using the Subaru Select Monitor. <Ref. to VDC(diag)-24, OPERATION, Read Diagnostic Trouble Code (DTC).> NOTE: If the communication function of the Subaru Select Monitor cannot be executed properly, check the communication circuit. <Ref. to VDC(diag)-20, COMMUNICATION FOR INITIALIZING IMPOSSIBLE, INSPECTION, Subaru Select Monitor.>	Is DTC displayed on Subaru Select Monitor?	Record the DTC, time stamp and freeze frame data. Go to step 4. NOTE: • For the time stamp, refer to LAN section. <Ref. to LAN(diag)-6, TIME STAMP, CAUTION, General Description.> • Depending on DTCs, time stamp may not be stored.	Go to step 3.
3 PERFORM GENERAL DIAGNOSTICS. 1) Perform the inspection by referring to "General Diagnostic Table". <Ref. to VDC(diag)-143, INSPECTION, General Diagnostic Table.> 2) Perform the Clear Memory Mode. <Ref. to VDC(diag)-26, OPERATION, Clear Memory Mode.> 3) Perform the Inspection Mode. <Ref. to VDC(diag)-25, PROCEDURE, Inspection Mode.> 4) Read the DTC. <Ref. to VDC(diag)-24, OPERATION, Read Diagnostic Trouble Code (DTC).> 5) Check that the DTC is not displayed.	Do the VDC warning light & VDC indicator light, VDC OFF indicator light and ABS warning light go off after starting the engine?	Finish the diagnosis.	Check the combination meter circuit. <Ref. to VDC(diag)-31, ABS WARNING LIGHT DOES NOT GO OFF, Warning Light Illumination Pattern.> <Ref. to VDC(diag)-32, VDC WARNING LIGHT AND VDC INDICATOR LIGHT DO NOT GO OFF, Warning Light Illumination Pattern.> <Ref. to VDC(diag)-33, VDC OFF INDICATOR LIGHT DOES NOT GO OFF, Warning Light Illumination Pattern.>

Basic Diagnostic Procedure

VEHICLE DYNAMICS CONTROL (VDC) (DIAGNOSTICS)

	Step	Check	Yes	No
4	PERFORM DIAGNOSIS. 1) Refer to "List of Diagnostic Trouble Code (DTC)". NOTE: For the DTC list, refer to "List of Diagnostic Trouble Code (DTC)". <Ref. to VDC(diag)-39, LIST, List of Diagnostic Trouble Code (DTC).> 2) Correct the cause of trouble. 3) Perform the Clear Memory Mode. <Ref. to VDC(diag)-26, OPERATION, Clear Memory Mode.> 4) Perform the Inspection Mode. <Ref. to VDC(diag)-25, PROCEDURE, Inspection Mode.> 5) Read the DTC. <Ref. to VDC(diag)-24, OPERATION, Read Diagnostic Trouble Code (DTC).>	Is DTC displayed?	Repeat step 4 until DTC is not shown.	Finish the diagnosis.

Check List for Interview

VEHICLE DYNAMICS CONTROL (VDC) (DIAGNOSTICS)

2. Check List for Interview

A: CHECK

Check the following item about the vehicle's state.

1. STATE OF ABS WARNING LIGHT

ABS warning light illuminates.	<input type="checkbox"/> Always <input type="checkbox"/> Sometimes <input type="checkbox"/> Only once <input type="checkbox"/> Does not illuminate • When/How long does it illuminate?		
Ignition key position	<input type="checkbox"/> LOCK <input type="checkbox"/> ACC <input type="checkbox"/> ON (before starting engine) <input type="checkbox"/> START <input type="checkbox"/> ON (after starting engine, engine is running) <input type="checkbox"/> ON (after starting engine, engine is at a standstill)		
Timing	<input type="checkbox"/> Immediately after turning the ignition switch to ON <input type="checkbox"/> Immediately after turning the ignition switch to START		
	<input type="checkbox"/> While accelerating	—	km/h
		—	MPH
	<input type="checkbox"/> While driving at a constant speed	km/h	MPH
	<input type="checkbox"/> While decelerating	—	km/h
		—	MPH
	<input type="checkbox"/> When turning to the right	Steering angle:	deg
		Steering time:	Sec.
	<input type="checkbox"/> When turning to the left	Steering angle:	deg
		Steering time:	Sec.
	<input type="checkbox"/> When other electrical parts are operating		
	• Part name:		
	• Operating condition:		

Check List for Interview

VEHICLE DYNAMICS CONTROL (VDC) (DIAGNOSTICS)

2. STATE OF VDC WARNING LIGHT & VDC INDICATOR LIGHT

VDC warning light & VDC indicator light illuminates.	<input type="checkbox"/> Always <input type="checkbox"/> Sometimes <input type="checkbox"/> Only once <input type="checkbox"/> Does not illuminate • When/How long does it illuminate?		
Ignition key position	<input type="checkbox"/> LOCK <input type="checkbox"/> ACC <input type="checkbox"/> ON (before starting engine) <input type="checkbox"/> START <input type="checkbox"/> ON (after starting engine, engine is running) <input type="checkbox"/> ON (after starting engine, engine is at a standstill)

General Description

VEHICLE DYNAMICS CONTROL (VDC) (DIAGNOSTICS)

3. General Description

A: CAUTION

1. SUPPLEMENTAL RESTRAINT SYSTEM “AIRBAG”

Airbag system wiring harness is routed near the ABS wheel speed sensor and VDCCM&H/U.

CAUTION:

- Do not use electrical test equipment on wiring harness and connector circuits of the airbag system.
- Be careful not to damage the airbag system wiring harness when servicing the ABS wheel speed sensor and VDCCM&H/U.

B: INSPECTION

Before performing diagnosis, check the following items which might affect VDC problems.

1. BATTERY

Check the battery. <Ref. to SC(H4DO)-52, INSPECTION, Battery.>

2. GROUND

Check the tightening torque of the ground bolt for VDC.

3. BRAKE FLUID

- 1) Check the brake fluid level.
- 2) Check the brake fluid for leaks.

4. HYDRAULIC UNIT

Check the hydraulic unit.

- When using the brake tester <Ref. to VDC-17, CHECKING THE HYDRAULIC UNIT ABS OPERATION WITH THE BRAKE TESTER, INSPECTION, VDC Control Module and Hydraulic Control Unit (VDCCM&H/U).>
- When not using the brake tester <Ref. to VDC-16, CHECKING THE HYDRAULIC UNIT ABS OPERATION BY PRESSURE GAUGE, INSPECTION, VDC Control Module and Hydraulic Control Unit (VDCCM&H/U).>

5. BRAKE DRAG

Check for brake drag.

6. BRAKE PAD AND ROTOR

Check the brake pad and rotor.

- Front <Ref. to BR-18, INSPECTION, Front Brake Pad.> <Ref. to BR-20, INSPECTION, Front Disc Rotor.>
- Rear <Ref. to BR-32, INSPECTION, Rear Brake Pad.> <Ref. to BR-36, INSPECTION, Rear Disc Rotor.>

7. TIRES

Check the tire specifications, tire wear and air pressure. <Ref. to WT-2, SPECIFICATION, General Description.>

General Description

VEHICLE DYNAMICS CONTROL (VDC) (DIAGNOSTICS)

C: PREPARATION TOOL

1. SPECIAL TOOL

ILLUSTRATION	TOOL NUMBER	DESCRIPTION	REMARKS
 STSSM4	—	SUBARU SELECT MONITOR 4	Used for setting of each function and troubleshooting for electrical system. NOTE: For detailed operation procedures of Subaru Select Monitor 4, refer to “Application help”.

2. GENERAL TOOL

TOOL NAME	REMARKS
Circuit tester	Used for measuring resistance, voltage and current.
Oscilloscope	Used for measuring the sensor.
DST-i	Used together with Subaru Select Monitor 4.

NOTE:

- Data stored at the time of trouble occurrence is shown on display.
- Each time a trouble occurs, the latest information is stored in the freeze frame data in memory.
- For detailed operation procedures, refer to “Application help”.

5. PARAMETER SELECTION

CAUTION:

- **Subaru Select Monitor is required for parameter selection.**
- **This function can be used for the replacement part of VDCCM&H/U.**

NOTE:

- When the VDCCM&H/U is replaced with a replacement part, be sure to perform the parameter selection/registration to the VDCCM&H/U using this function.
 - To check the applied model, refer to the “Model number plate” attached to the vehicle. <Ref. to ID-2, IDENTIFICATION, Identification.>
 - If you entered a wrong applied model, you can re-write it.
 - When the registration has not been performed, the DTC code “Parameter” is detected together with the ABS/EBD/VDC warning light illumination.
- 1) Connect the Subaru Select Monitor.
 - 2) On «Start» display, select «Diagnosis».
 - 3) On «Vehicle selection» display, input the vehicle information and select «Confirmed».
 - 4) On «Main Menu» display, select «Each System».
 - 5) On «Select System» display, select «Brake Control System».
 - 6) On «Select Function» display, select «Work Support».
 - 7) On «Work Support» display, select «Selection of Parameter».
 - 8) Check the applied model and option code indicated on the “Model number plate”. <Ref. to ID-2, IDENTIFICATION, Identification.>
 - 9) Enter the applied model of 7-digit alphanumeric characters and press the [Enter] key.
 - 10) When the option code input screen appears after entering the applied model, enter the option code consisting of 4-digit alphanumeric characters, and press the [Enter] key. When the option code is 3 digits, add “0” (zero) in front and enter the code as 4 digits.
 - 11) When the confirmation screen indicating the vehicle information appears, check that the correct applied model and grade are displayed and click the [OK] button.

NOTE:

When the displayed applied model and grade are different from those of the vehicle, perform registration operations again after clicking the [OK] button.

- 12) Execute the Clear Memory Mode after parameter selection and registration operations because the DTC for “Parameter selection error” is memorized. <Ref. to VDC(diag)-26, Clear Memory Mode.>

6. PARAMETER CHECK

NOTE:

The parameter data registered in the VDCCM is shown on the display.

- 1) Connect the Subaru Select Monitor.
- 2) On «Start» display, select «Diagnosis».
- 3) On «Vehicle selection» display, input the vehicle information and select «Confirmed».
- 4) On «Main Menu» display, select «Each System».
- 5) On «Select System» display, select «Brake Control System».
- 6) On «Select Function» display, select «Work Support».
- 7) On «Work Support» display, select «Confirm on parameter».
- 8) On the «Confirm on parameter» display screen, check that the applied model and grade of the target vehicle are included, and click the [OK] button.
- 9) If the applied model and grade of the target vehicle are not included on the «Confirm on parameter» display screen, perform “parameter selection and registration”. <Ref. to VDC(diag)-19, PARAMETER SELECTION, OPERATION, Subaru Select Monitor.>

Subaru Select Monitor

VEHICLE DYNAMICS CONTROL (VDC) (DIAGNOSTICS)

B: INSPECTION

1. COMMUNICATION FOR INITIALIZING IMPOSSIBLE

Detecting condition:

Defective harness connector

Trouble symptom:

Communication is impossible between VDC and Subaru Select Monitor.

WIRING DIAGRAM:

Models without EyeSight

Vehicle dynamics control system <Ref. to WI-228, WITHOUT EyeSight, WIRING DIAGRAM, Vehicle Dynamics Control System.>

Step	Check	Yes	No
1 CHECK IGNITION SWITCH.	Is the ignition switch ON?	Go to step 2.	Turn the ignition switch to ON, and select VDC using the Subaru Select Monitor.
2 CHECK BATTERY. 1) Turn the ignition switch to OFF. 2) Measure the battery voltage.	Is the voltage 11 V or more?	Go to step 3.	Charge or replace the battery.
3 CHECK BATTERY TERMINAL.	Is there poor contact at battery terminal?	Replace or tighten the battery terminal.	Go to step 4.
4 CHECK INSTALLATION OF VDCCM&H/U CONNECTOR. Turn the ignition switch to OFF.	Is the VDCCM&H/U connector inserted into VDCCM&H/U until the clamp locks onto it?	Go to step 5.	Insert VDCCM&H/U connector into VDCCM&H/U.

Subaru Select Monitor

VEHICLE DYNAMICS CONTROL (VDC) (DIAGNOSTICS)

Step	Check	Yes	No
5 CHECK LAN SYSTEM. Perform the diagnosis for LAN system. <Ref. to LAN(diag)-2, Basic Diagnostic Procedure.>	Is there any fault in LAN system?	Perform the diagnosis according to DTC for LAN system. <Ref. to LAN(diag)-92, List of Diagnostic Trouble Code (DTC).>	Go to step 6.
6 CHECK SUBARU SELECT MONITOR COMMUNICATION. 1) Turn the ignition switch to ON. 2) Check whether communication to VDC system can be executed normally.	Is the system name displayed on Subaru Select Monitor?	Check the DTC in VDC system. <Ref. to VDC(diag)-24, Read Diagnostic Trouble Code (DTC).>	Go to step 7.
7 CHECK POWER SUPPLY CIRCUIT. 1) Turn the ignition switch to ON. (Engine OFF) 2) Measure the ignition power supply voltage between VDCCM&H/U connector and chassis ground. Connector & terminal (B310) No. 1 (+) — Chassis ground (-): (B310) No. 25 (+) — Chassis ground (-): (B310) No. 28 (+) — Chassis ground (-):	Is the voltage 10 — 15 V?	Go to step 8.	Repair open circuit in harness between VDCCM&H/U and battery.
8 CHECK HARNESS CONNECTOR BETWEEN VDCCM&H/U AND CHASSIS GROUND. 1) Turn the ignition switch to OFF. 2) Disconnect the connector from the VDCCM&H/U. 3) Measure the resistance of harness between VDCCM&H/U connector and chassis ground. Connector & terminal (B310) No. 38 — Chassis ground:	Is the resistance less than 10 Ω ?	Go to step 9.	Repair the open circuit of VDCCM&H/U ground circuit and poor contact of connector.
9 CHECK POOR CONTACT OF CONNECTOR.	Is there poor contact of control module power supply, ground circuit and data link connector?	Repair the connector.	Replace the VDCCM&H/U. <Ref. to VDC-9, VDC Control Module and Hydraulic Control Unit (VDCCM&H/U).>

Subaru Select Monitor

VEHICLE DYNAMICS CONTROL (VDC) (DIAGNOSTICS)

Models with EyeSight

Vehicle dynamics control system <Ref. to WI-233, WITH EyeSight, WIRING DIAGRAM, Vehicle Dynamics Control System.>

VDC10153

Step	Check	Yes	No	
1	CHECK IGNITION SWITCH.	Is the ignition switch ON?	Go to step 2.	Turn the ignition switch to ON, and select VDC using the Subaru Select Monitor.
2	CHECK BATTERY. 1) Turn the ignition switch to OFF. 2) Measure the battery voltage.	Is the voltage 11 V or more?	Go to step 3.	Charge or replace the battery.
3	CHECK BATTERY TERMINAL.	Is there poor contact at battery terminal?	Replace or tighten the battery terminal.	Go to step 4.
4	CHECK INSTALLATION OF VDCCM&H/U CONNECTOR. Turn the ignition switch to OFF.	Is the VDCCM&H/U connector inserted into VDCCM&H/U until the clamp locks onto it?	Go to step 5.	Insert VDCCM&H/U connector into VDCCM&H/U.
5	CHECK SUBARU SELECT MONITOR COMMUNICATION. 1) Turn the ignition switch to ON. 2) Using the Subaru Select Monitor, check whether communication to other systems can be executed normally.	Is the system name displayed on Subaru Select Monitor?	Go to step 9.	Go to step 6.
6	CHECK SUBARU SELECT MONITOR COMMUNICATION. 1) Turn the ignition switch to OFF. 2) Disconnect the VDCCM&H/U connector. 3) Turn the ignition switch to ON. 4) Check whether communication to other systems can be executed normally.	Is the system name displayed on Subaru Select Monitor?	Replace the VDCCM&H/U. <Ref. to VDC-9, VDC Control Module and Hydraulic Control Unit (VDCCM&H/U).>	Go to step 7.

Subaru Select Monitor

VEHICLE DYNAMICS CONTROL (VDC) (DIAGNOSTICS)

Step	Check	Yes	No
7 CHECK HARNESS CONNECTOR BETWEEN EACH CONTROL MODULE AND DATA LINK CONNECTOR. 1) Turn the ignition switch to OFF. 2) Disconnect the connectors from ECM, TCM, power steering CM, airbag CM and impact sensor. CAUTION: When disconnecting the connector from airbag CM, always follow the precautions on AB section. <Ref. to AB-9, CAUTION, General Description.> 3) Measure the resistance between data link connector and chassis ground. Connector & terminal (B40) No. 7 — Chassis ground:	Is the resistance 1 M Ω or more?	Go to step 8.	Repair the harness and connector between each control module and data link connector.
8 CHECK HARNESS CONNECTOR BETWEEN VDCCM&H/U AND DATA LINK CONNECTOR. 1) Turn the ignition switch to ON. 2) Measure the voltage between data link connector and chassis ground. Connector & terminal (B40) No. 7 (+) — Chassis ground (-):	Is the voltage less than 1 V?	Go to step 9.	Repair the harness and connector between each control module and data link connector.
9 CHECK HARNESS CONNECTOR BETWEEN VDCCM&H/U AND DATA LINK CONNECTOR. Measure the resistance between VDCCM&H/U connector and data link connector. Connector & terminal (B310) No. 18 — (B40) No. 7:	Is the resistance less than 1 Ω ?	Go to step 10.	Repair harness and connector between VDCCM&H/U and data link connector.
10 CHECK POWER SUPPLY CIRCUIT. 1) Turn the ignition switch to ON. (Engine OFF) 2) Measure the ignition power supply voltage between VDCCM&H/U connector and chassis ground. Connector & terminal (B310) No. 1 (+) — Chassis ground (-): (B310) No. 14 (+) — Chassis ground (-): (B310) No. 20 (+) — Chassis ground (-):	Is the voltage 10 — 15 V?	Go to step 11.	Repair open circuit in harness between VDCCM&H/U and battery.
11 CHECK HARNESS CONNECTOR BETWEEN VDCCM&H/U AND CHASSIS GROUND. 1) Turn the ignition switch to OFF. 2) Disconnect the connector from the VDCCM&H/U. 3) Measure the resistance of harness between VDCCM&H/U connector and chassis ground. Connector & terminal (B310) No. 26 — Chassis ground:	Is the resistance less than 10 Ω ?	Go to step 12.	Repair the open circuit of VDCCM&H/U ground harness and poor contact of connector.
12 CHECK POOR CONTACT OF CONNECTOR.	Is there poor contact of control module power supply, ground circuit and data link connector?	Repair the connector.	Replace the VDCCM&H/U. <Ref. to VDC-9, VDC Control Module and Hydraulic Control Unit (VDCCM&H/U).>

Read Diagnostic Trouble Code (DTC)

VEHICLE DYNAMICS CONTROL (VDC) (DIAGNOSTICS)

7. Read Diagnostic Trouble Code (DTC)

A: OPERATION

- 1) On «Start» display, select «Diagnosis».
- 2) On «Vehicle selection» display, input the vehicle information and select «Confirmed».
- 3) On «Main Menu» display, select «Each System».
- 4) On «Select System» display, select «Brake Control System».
- 5) On «Select Function» display, select «DTC».

NOTE:

- For details concerning the DTC, refer to “List of Diagnostic Trouble Code (DTC)”. <Ref. to VDC(diag)-39, List of Diagnostic Trouble Code (DTC).>
- For detailed operation procedures, refer to “Application help”.

8. Inspection Mode

A: PROCEDURE

Reproduce the malfunction occurrence condition as much as possible.
Drive the vehicle at least ten minutes.

NOTE:

Make sure the vehicle is not dragged to one side under usual driving condition.

Clear Memory Mode

VEHICLE DYNAMICS CONTROL (VDC) (DIAGNOSTICS)

9. Clear Memory Mode

A: OPERATION

- 1) On «Start» display, select «Diagnosis».
- 2) On «Vehicle selection» display, input the vehicle information and select «Confirmed».
- 3) On «Main Menu» display, select «Each System».
- 4) On «Select System» display, select «Brake Control System».
- 5) On «Select Function» display, select «DTC».
- 6) On «DTC» display, select «Clear Memory».

NOTE:

For detailed operation procedures, refer to “Application help”.

Warning Light Illumination Pattern

VEHICLE DYNAMICS CONTROL (VDC) (DIAGNOSTICS)

10.Warning Light Illumination Pattern

A: INSPECTION

VDC00946

- | | | |
|-----------------------|--|--|
| (1) Ignition switch | (6) Light OFF | (11) 2 seconds or more |
| (2) OFF | (7) Light ON | (12) Brake warning light (EBD warning light) |
| (3) ON | (8) 2 seconds | (13) Parking brake |
| (4) Engine start | (9) VDC OFF indicator light | (14) Released |
| (5) ABS warning light | (10) VDC warning light & VDC indicator light | (15) Hill start assist warning light |

NOTE:

Hill start assist warning light always illuminates when the hill start assist is in the OFF mode.

Warning Light Illumination Pattern

VEHICLE DYNAMICS CONTROL (VDC) (DIAGNOSTICS)

1) When warning lights or indicator lights do not illuminate in accordance with this illumination pattern, there must be an electrical malfunction.

2) When the warning lights or indicator lights remain constantly OFF, check the combination meter circuit. <Ref. to VDC(diag)-28, EBD WARNING LIGHT, ABS WARNING, VDC OFF INDICATOR LIGHT, VDC WARNING LIGHT AND VDC INDICATOR LIGHT DO NOT COME ON, Warning Light Illumination Pattern.> <Ref. to VDC(diag)-30, HILL START ASSIST WARNING LIGHT DOES NOT COME ON, Warning Light Illumination Pattern.>

3) When the ABS warning light, VDC OFF indicator light, VDC warning light & VDC indicator light, and hill start assist warning light do not go off, check the combination meter circuit or CAN communication circuit. <Ref. to VDC(diag)-31, ABS WARNING LIGHT DOES NOT GO OFF, Warning Light Illumination Pattern.> <Ref. to VDC(diag)-33, VDC OFF INDICATOR LIGHT DOES NOT GO OFF, Warning Light Illumination Pattern.> <Ref. to VDC(diag)-32, VDC WARNING LIGHT AND VDC INDICATOR LIGHT DO NOT GO OFF, Warning Light Illumination Pattern.> <Ref. to VDC(diag)-35, HILL START ASSIST WARNING LIGHT DOES NOT GO OFF, Warning Light Illumination Pattern.>

NOTE:

- Even though the ABS warning light, and the VDC warning light & VDC indicator light do not go off in 2 seconds after illuminating, the ABS and VDC functions are normal if the warning lights go off while the vehicle is driven at the specified speed (model without EyeSight: approximately 38 km/h, model with EyeSight: approximately 12 km/h). However, while these lights are on, the functions with their warning lights illuminated do not operate.
- Even when the ABS and VDC function check is displayed on the multi-function display, the ABS and VDC functions are normal if the indicator light on the combination meter goes off. However, the functions with their indicator lights illuminated on the combination meter do not operate.
- It may take several minutes before the VDC warning light & VDC indicator light goes off, if the vehicle is parked under low temperature for a specified time. This is not defective because it is resulted from low engine coolant temperature. Perform the Clear Memory Mode because DTC may be recorded at this time. <Ref. to VDC(diag)-26, Clear Memory Mode.>
- With the vehicle jack-up/lift-up or set on free rollers, when the wheels lock or spin after starting the engine, ABS warning light, and VDC warning light & VDC indicator light may illuminate because VDCCM&H/U detects the abnormal conditions from ABS wheel speed sensor or longitudinal G sensor. In this case, this is not a malfunction. Perform the Clear Memory Mode. <Ref. to VDC(diag)-26, Clear Memory Mode.>

B: EBD WARNING LIGHT, ABS WARNING, VDC OFF INDICATOR LIGHT, VDC WARNING LIGHT AND VDC INDICATOR LIGHT DO NOT COME ON

Detecting condition:

Defective combination meter

Trouble symptom:

When the ignition switch is turned to ON (engine OFF), EBD warning light, ABS warning light, VDC OFF indicator light, and VDC warning light & VDC indicator light do not illuminate.

NOTE:

When pressing the VDC OFF switch for 10 seconds or more, the VDC OFF indicator light goes off and cannot operate any more. When turning the ignition switch from OFF to ON, the OFF operation enabled status is restored.

Step	Check	Yes	No
1 CHECK OTHER INDICATOR LIGHT. Turn the ignition switch to ON.	Immediately after the ignition switch is turned to ON, do all the indicator lights for VDC system and others illuminate?	Go to step 2.	Check the combination meter. <Ref. to IDI-7, SELF-DIAGNOSIS DISPLAY MODE, OPERATION, Combination Meter System.>

Warning Light Illumination Pattern

VEHICLE DYNAMICS CONTROL (VDC) (DIAGNOSTICS)

Step	Check	Yes	No
<p>2</p> <p>CHECK VDCCM. When the engine does not start, display the current data of VDCCM using Subaru Select Monitor.</p>	<p>Immediately after the ignition switch is turned to ON, is the «EBD Warning Light» ON?</p>	<p>Go to step 3.</p>	<ul style="list-style-type: none"> • Models without EyeSight Replace the VDCCM only. <Ref. to VDC-20, REPLACEMENT, VDC Control Module and Hydraulic Control Unit (VDCCM&H/U).> • Models with EyeSight Replace the VDCCM&H/U. <Ref. to VDC-9, VDC Control Module and Hydraulic Control Unit (VDCCM&H/U).>
<p>3</p> <p>CHECK VDCCM. When the engine does not start, display the current data of VDCCM using Subaru Select Monitor.</p>	<p>Immediately after the ignition switch is turned to ON, is the «ABS Warning Lamp» ON?</p>	<p>Go to step 4.</p>	<ul style="list-style-type: none"> • Models without EyeSight Replace the VDCCM only. <Ref. to VDC-20, REPLACEMENT, VDC Control Module and Hydraulic Control Unit (VDCCM&H/U).> • Models with EyeSight Replace the VDCCM&H/U. <Ref. to VDC-9, VDC Control Module and Hydraulic Control Unit (VDCCM&H/U).>
<p>4</p> <p>CHECK VDCCM. When the engine does not start, display the current data of VDCCM using Subaru Select Monitor.</p>	<p>Immediately after the ignition switch is turned to ON, is the «VDC Warning Lamp» ON?</p>	<p>Check the combination meter. <Ref. to IDI-7, SELF-DIAGNOSIS DISPLAY MODE, OPERATION, Combination Meter System.></p>	<ul style="list-style-type: none"> • Models without EyeSight Replace the VDCCM only. <Ref. to VDC-20, REPLACEMENT, VDC Control Module and Hydraulic Control Unit (VDCCM&H/U).> • Models with EyeSight Replace the VDCCM&H/U. <Ref. to VDC-9, VDC Control Module and Hydraulic Control Unit (VDCCM&H/U).>

Warning Light Illumination Pattern

VEHICLE DYNAMICS CONTROL (VDC) (DIAGNOSTICS)

C: HILL START ASSIST WARNING LIGHT DOES NOT COME ON

Detecting condition:

Defective combination meter

Trouble symptom:

When the ignition switch is turned to ON (engine OFF), hill start assist warning light does not illuminate.

Step	Check	Yes	No
1 CHECK OTHER INDICATOR LIGHT. Turn the ignition switch to ON. (Engine OFF)	Do other indicator lights illuminate?	Go to step 2.	Check the combination meter. <Ref. to IDI-7, SELF-DIAGNOSIS DISPLAY MODE, OPERATION, Combination Meter System.>
2 READ DTC. Read the DTC. <Ref. to VDC(diag)-24, Read Diagnostic Trouble Code (DTC).>	Is DTC displayed?	Perform the diagnosis according to DTC. <Ref. to VDC(diag)-39, List of Diagnostic Trouble Code (DTC).>	Go to step 3.
3 CHECK LAN SYSTEM. Perform the diagnosis for LAN system. <Ref. to LAN(diag)-2, Basic Diagnostic Procedure.>	Is there any fault in LAN system?	Perform the diagnosis according to DTC for LAN system. <Ref. to LAN(diag)-92, List of Diagnostic Trouble Code (DTC).>	Go to step 4.
4 CHECK COMBINATION METER. Check the combination meter. <Ref. to IDI-7, SELF-DIAGNOSIS DISPLAY MODE, OPERATION, Combination Meter System.>	Is the check result OK?	<ul style="list-style-type: none"> • Models without EyeSight Replace the VDCCM only. <Ref. to VDC-20, REPLACEMENT, VDC Control Module and Hydraulic Control Unit (VDCCM&H/U).> • Models with EyeSight Replace the VDCCM&H/U. <Ref. to VDC-9, VDC Control Module and Hydraulic Control Unit (VDCCM&H/U).> 	Replace the combination meter. <Ref. to IDI-18, Combination Meter.>

Warning Light Illumination Pattern

VEHICLE DYNAMICS CONTROL (VDC) (DIAGNOSTICS)

D: ABS WARNING LIGHT DOES NOT GO OFF

Detecting condition:

- Defective combination meter
- Defective CAN communication

Trouble symptom:

ABS warning light does not go off when starting the engine.

	Step	Check	Yes	No
1	READ DTC. Read the DTC. <Ref. to VDC(diag)-24, Read Diagnostic Trouble Code (DTC).>	Is DTC displayed?	Perform the diagnosis according to DTC. <Ref. to VDC(diag)-39, List of Diagnostic Trouble Code (DTC).>	Go to step 2.
2	CHECK VDCCM. Display the current data of VDCCM using Subaru Select Monitor.	Is the «ABS Warning Lamp» ON?	Go to step 3.	Go to step 4.
3	READ DTC. Read the DTC after driving the vehicle at 40 km/h (25 MPH) or more.	Is DTC displayed?	Perform the diagnosis according to DTC. <Ref. to VDC(diag)-39, List of Diagnostic Trouble Code (DTC).>	Go to step 4.
4	CHECK LAN SYSTEM. Perform the diagnosis for LAN system. <Ref. to LAN(diag)-2, Basic Diagnostic Procedure.>	Is there any fault in LAN system?	Perform the diagnosis according to DTC for LAN system. <Ref. to LAN(diag)-92, List of Diagnostic Trouble Code (DTC).>	Go to step 5.
5	CHECK COMBINATION METER. Check the combination meter. <Ref. to IDI-7, SELF-DIAGNOSIS DISPLAY MODE, OPERATION, Combination Meter System.>	Is the check result OK?	<ul style="list-style-type: none"> • Models without EyeSight Replace the VDCCM only. <Ref. to VDC-20, REPLACEMENT, VDC Control Module and Hydraulic Control Unit (VDCCM&H/U).> • Models with EyeSight Replace the VDCCM&H/U. <Ref. to VDC-9, VDC Control Module and Hydraulic Control Unit (VDCCM&H/U).> 	Replace the combination meter. <Ref. to IDI-18, Combination Meter.>

Warning Light Illumination Pattern

VEHICLE DYNAMICS CONTROL (VDC) (DIAGNOSTICS)

E: VDC WARNING LIGHT AND VDC INDICATOR LIGHT DO NOT GO OFF

Detecting condition:

- Defective combination meter
- Defective engine
- Defective CAN communication

Trouble symptom:

VDC warning light and VDC indicator light do not go off when starting the engine.

Step	Check	Yes	No
1 READ DTC. Read the DTC. <Ref. to VDC(diag)-24, Read Diagnostic Trouble Code (DTC).>	Is DTC displayed?	Perform the diagnosis according to DTC. <Ref. to VDC(diag)-39, List of Diagnostic Trouble Code (DTC).>	Go to step 2.
2 CHECK VDCCM. Display the current data of VDCCM using Subaru Select Monitor.	Is the «VDC Warning Lamp» ON?	Go to step 3.	Go to step 4.
3 READ DTC. Read the DTC after driving the vehicle at 40 km/h (25 MPH) or more.	Is DTC displayed?	Perform the diagnosis according to DTC. <Ref. to VDC(diag)-39, List of Diagnostic Trouble Code (DTC).>	Go to step 4.
4 CHECK LAN SYSTEM. Perform the diagnosis for LAN system. <Ref. to LAN(diag)-2, Basic Diagnostic Procedure.>	Is there any fault in LAN system?	Perform the diagnosis according to DTC for LAN system. <Ref. to LAN(diag)-92, List of Diagnostic Trouble Code (DTC).>	Go to step 5.
5 CHECK COMBINATION METER. Check the combination meter. <Ref. to IDI-7, SELF-DIAGNOSIS DISPLAY MODE, OPERATION, Combination Meter System.>	Is the check result OK?	• Models without EyeSight Replace the VDCCM only. <Ref. to VDC-20, REPLACEMENT, VDC Control Module and Hydraulic Control Unit (VDCCM&H/U).> • Models with EyeSight Replace the VDCCM&H/U. <Ref. to VDC-9, VDC Control Module and Hydraulic Control Unit (VDCCM&H/U).>	Replace the combination meter. <Ref. to IDI-18, Combination Meter.>

Warning Light Illumination Pattern

VEHICLE DYNAMICS CONTROL (VDC) (DIAGNOSTICS)

F: VDC OFF INDICATOR LIGHT DOES NOT GO OFF

Detecting condition:

- Defective combination meter
- Defective CAN communication
- VDC OFF switch is shorted.

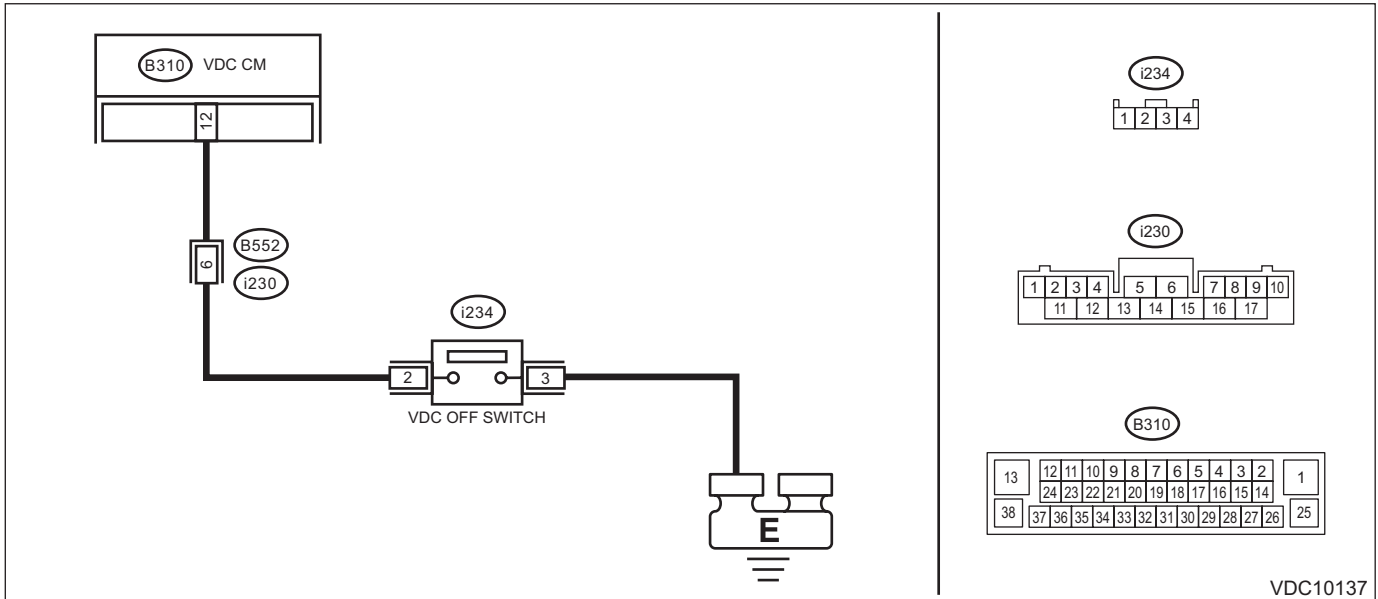

Trouble symptom:

VDC OFF indicator light does not go off when starting the engine.

Wiring diagram:

- Models without EyeSight

Vehicle dynamics control system <Ref. to WI-228, WITHOUT EyeSight, WIRING DIAGRAM, Vehicle Dynamics Control System.>

- Models with EyeSight

Vehicle dynamics control system <Ref. to WI-233, WITH EyeSight, WIRING DIAGRAM, Vehicle Dynamics Control System.>

Warning Light Illumination Pattern

VEHICLE DYNAMICS CONTROL (VDC) (DIAGNOSTICS)

Step	Check	Yes	No
1 READ DTC. Read the DTC. <Ref. to VDC(diag)-24, Read Diagnostic Trouble Code (DTC).>	Is DTC displayed?	Perform the diagnosis according to DTC. <Ref. to VDC(diag)-39, List of Diagnostic Trouble Code (DTC).>	Go to step 2.
2 CHECK VDC OFF SWITCH. Connect the Subaru Select Monitor, and display the current data of VDCCM with the engine started.	Does «OFF SW Signal» change according to operation of VDC OFF switch?	Go to step 5.	Go to step 3.
3 CHECK VDC OFF SWITCH. Remove and check VDC OFF switch. <Ref. to VDC-44, VDC OFF Switch.>	Is the check result OK?	Go to step 4.	Replace the VDC OFF switch.
4 CHECK VDC OFF SWITCH CIRCUIT. 1) Disconnect the connector from the VDCCM&H/U. 2) Measure the resistance between VDCCM&H/U connector and chassis ground. Connector & terminal Models without EyeSight (B310) No. 12 — Chassis ground: Models with EyeSight (B310) No. 22 — Chassis ground:	Is the resistance less than 10 Ω?	Check the VDC OFF switch circuit.	Go to step 5.
5 CHECK LAN SYSTEM. Perform the diagnosis for LAN system. <Ref. to LAN(diag)-2, Basic Diagnostic Procedure.>	Is there any fault in LAN system?	Perform the diagnosis according to DTC for LAN system. <Ref. to LAN(diag)-92, List of Diagnostic Trouble Code (DTC).>	Go to step 6.
6 CHECK COMBINATION METER. Check the combination meter. <Ref. to IDI-7, SELF-DIAGNOSIS DISPLAY MODE, OPERATION, Combination Meter System.>	Is the check result OK?	• Models without EyeSight Replace the VDCCM only. <Ref. to VDC-20, REPLACEMENT, VDC Control Module and Hydraulic Control Unit (VDCCM&H/U).> • Models with EyeSight Replace the VDCCM&H/U. <Ref. to VDC-9, VDC Control Module and Hydraulic Control Unit (VDCCM&H/U).>	Replace the combination meter. <Ref. to IDI-18, Combination Meter.>

Warning Light Illumination Pattern

VEHICLE DYNAMICS CONTROL (VDC) (DIAGNOSTICS)

G: HILL START ASSIST WARNING LIGHT DOES NOT GO OFF

Detecting condition:

- Defective combination meter
- Defective CAN communication

Trouble symptom:

Hill start assist warning light does not go off when starting the engine.

Step	Check	Yes	No
1 READ DTC. Read the DTC. <Ref. to VDC(diag)-24, Read Diagnostic Trouble Code (DTC).>	Is DTC displayed?	Perform the diagnosis according to DTC. <Ref. to VDC(diag)-39, List of Diagnostic Trouble Code (DTC).>	Go to step 2.
2 CHECK LAN SYSTEM. Perform the diagnosis for LAN system. <Ref. to LAN(diag)-2, Basic Diagnostic Procedure.>	Is there any fault in LAN system?	Perform the diagnosis according to DTC for LAN system. <Ref. to LAN(diag)-92, List of Diagnostic Trouble Code (DTC).>	Go to step 3.
3 CHECK COMBINATION METER. Check the combination meter. <Ref. to IDI-7, SELF-DIAGNOSIS DISPLAY MODE, OPERATION, Combination Meter System.>	Is the check result OK?	• Models without EyeSight Replace the VDCCM only. <Ref. to VDC-20, REPLACEMENT, VDC Control Module and Hydraulic Control Unit (VDCCM&H/U).> • Models with EyeSight Replace the VDCCM&H/U. <Ref. to VDC-9, VDC Control Module and Hydraulic Control Unit (VDCCM&H/U).>	Replace the combination meter. <Ref. to IDI-18, Combination Meter.>

H: BRAKE WARNING LIGHT DOES NOT GO OFF

Detecting condition:

- Brake warning light circuit is shorted.
- Defective sensor/connector
- Defective CAN communication

Trouble symptom:

After starting the engine, the brake warning light does not go off even though the parking lever is released.

Warning Light Illumination Pattern

VEHICLE DYNAMICS CONTROL (VDC) (DIAGNOSTICS)

Wiring diagram:

Parking brake / brake fluid level warning light system <Ref. to WI-181, WIRING DIAGRAM, Parking Brake / Brake Fluid Level Warning Light System.>

VDC10227

Step	Check	Yes	No	
1	CHECK INSTALLATION OF VDCCM&H/U CONNECTOR. 1) Turn the ignition switch to OFF. 2) Check that the VDCCM&H/U connector is inserted until it is locked by clamp.	Is the connector firmly inserted?	Go to step 2.	Insert the VDCCM&H/U connector until it is locked by clamp.

Warning Light Illumination Pattern

VEHICLE DYNAMICS CONTROL (VDC) (DIAGNOSTICS)

Step	Check	Yes	No
2 READ DTC. Read the DTC. <Ref. to VDC(diag)-24, Read Diagnostic Trouble Code (DTC).>	Is DTC displayed?	Perform the diagnosis according to DTC. <Ref. to VDC(diag)-39, List of Diagnostic Trouble Code (DTC).>	Go to step 3.
3 CHECK LAN SYSTEM. Perform the diagnosis for LAN system. <Ref. to LAN(diag)-2, Basic Diagnostic Procedure.>	Is there any fault in LAN system?	Perform the diagnosis according to DTC for LAN system. <Ref. to LAN(diag)-92, List of Diagnostic Trouble Code (DTC).>	Go to step 4.
4 CHECK BRAKE FLUID AMOUNT. Check the amount of brake fluid in the reservoir tank of master cylinder.	Does the level of the brake fluid amount fall between the lines of "MAX" and "MIN"?	Go to step 5.	Replenish brake fluid to the specified value.
5 CHECK BRAKE FLUID LEVEL SWITCH. 1) Turn the ignition switch to OFF. 2) Disconnect the level switch connector (B16) from master cylinder. 3) Measure the resistance between the master cylinder terminals. Terminals No. 1 — No. 2:	Is the resistance 1 MΩ or more?	Go to step 6.	Replace the master cylinder. <Ref. to BR-45, Master Cylinder.>
6 CHECK GROUND SHORT OF HARNESS. 1) Disconnect the connector (i10) from combination meter. 2) Measure the resistance between combination meter connector and chassis ground. Connector & terminal (i10) No. 23 — Chassis ground:	Is the resistance 1 MΩ or more?	Go to step 7.	Repair the harness between combination meter and brake fluid level switch.
7 CHECK PARKING BRAKE SWITCH. 1) Disconnect the connector (R4) from parking brake switch. 2) Release the parking brake. 3) Measure the resistance between parking brake switch terminal and chassis ground.	Is the resistance 1 MΩ or more?	Go to step 8.	Replace the parking brake switch.
8 CHECK GROUND SHORT OF HARNESS. 1) Disconnect the connector (i84) from body integrated unit. 2) Measure the resistance between body integrated unit connector and chassis ground. Connector & terminal (i84) No. 32 — Chassis ground:	Is the resistance 1 MΩ or more?	Go to step 9.	Repair the harness between body integrated unit and parking brake switch.
9 CHECK POOR CONTACT OF CONNECTOR. Check for poor contact of all connectors.	Is there poor contact?	Repair the connector.	Go to step 10.

Warning Light Illumination Pattern

VEHICLE DYNAMICS CONTROL (VDC) (DIAGNOSTICS)

Step	Check	Yes	No
10 CHECK COMBINATION METER. Check the combination meter. <Ref. to IDI-7, SELF-DIAGNOSIS DISPLAY MODE, OPERATION, Combination Meter System.>	Is the check result OK?	<ul style="list-style-type: none"> • Models without EyeSight Replace the VDCCM only. <Ref. to VDC-20, REPLACEMENT, VDC Control Module and Hydraulic Control Unit (VDCCM&H/U).> • Models with EyeSight Replace the VDCCM&H/U. <Ref. to VDC-9, VDC Control Module and Hydraulic Control Unit (VDCCM&H/U).> 	Replace the combination meter. <Ref. to IDI-18, Combination Meter.>

List of Diagnostic Trouble Code (DTC)

VEHICLE DYNAMICS CONTROL (VDC) (DIAGNOSTICS)

Diagnostic Procedure with Diagnostic Trouble Code (DTC)

VEHICLE DYNAMICS CONTROL (VDC) (DIAGNOSTICS)

12. Diagnostic Procedure with Diagnostic Trouble Code (DTC)

A: DTC C1211 FRONT RIGHT ABS SENSOR CIRCUIT

NOTE:

For the diagnostic procedure, refer to “DTC C1241 REAR LEFT ABS SENSOR CIRCUIT”. <Ref. to VDC(diag)-48, DTC C1241 REAR LEFT ABS SENSOR CIRCUIT, Diagnostic Procedure with Diagnostic Trouble Code (DTC).>

B: DTC C1221 FRONT LEFT ABS SENSOR CIRCUIT

NOTE:

For the diagnostic procedure, refer to “DTC C1241 REAR LEFT ABS SENSOR CIRCUIT”. <Ref. to VDC(diag)-48, DTC C1241 REAR LEFT ABS SENSOR CIRCUIT, Diagnostic Procedure with Diagnostic Trouble Code (DTC).>

C: DTC C1231 REAR RIGHT ABS SENSOR CIRCUIT

NOTE:

For the diagnostic procedure, refer to “DTC C1241 REAR LEFT ABS SENSOR CIRCUIT”. <Ref. to VDC(diag)-48, DTC C1241 REAR LEFT ABS SENSOR CIRCUIT, Diagnostic Procedure with Diagnostic Trouble Code (DTC).>

Diagnostic Procedure with Diagnostic Trouble Code (DTC)

VEHICLE DYNAMICS CONTROL (VDC) (DIAGNOSTICS)

D: DTC C1241 REAR LEFT ABS SENSOR CIRCUIT

DTC detecting condition:

- Defective ABS wheel speed sensor (broken wire, input voltage too high)
- Defective harness connector

Trouble symptom:

- ABS does not operate.
- VDC does not operate.
- Hill start assist does not operate.

Wiring diagram:

Vehicle dynamics control system <Ref. to WI-228, WITHOUT EyeSight, WIRING DIAGRAM, Vehicle Dynamics Control System.>

VDC10141

Diagnostic Procedure with Diagnostic Trouble Code (DTC)

VEHICLE DYNAMICS CONTROL (VDC) (DIAGNOSTICS)

VDC10142

Step	Check	Yes	No
1 CHECK POOR CONTACT OF CONNECTOR. Check if there is poor contact between VDCCM&H/U and ABS wheel speed sensor.	Is there poor contact?	Repair the connector.	Go to step 2.
2 CHECK HARNESS CONNECTOR BETWEEN VDCCM&H/U AND ABS WHEEL SPEED SENSOR (CHECK FOR OPEN CIRCUIT). 1) Turn the ignition switch to OFF. 2) Disconnect the connector (B310) from the VDCCM&H/U. 3) Disconnect the connector from ABS wheel speed sensor. 4) Measure the resistance between VDCCM&H/U connector and ABS wheel speed sensor connector. Connector & terminal DTC C1211 (B310) No. 4 — (B6) No. 1: (B310) No. 16 — (B6) No. 2: DTC C1221 (B310) No. 8 — (B15) No. 1: (B310) No. 19 — (B15) No. 2: DTC C1231 (B310) No. 29 — (R72) No. 1: (B310) No. 17 — (R72) No. 2: DTC C1241 (B310) No. 18 — (R73) No. 1: (B310) No. 31 — (R73) No. 2:	Is the resistance less than 1 Ω?	Go to step 3.	Repair the harness connector between VDCCM&H/U and ABS wheel speed sensor.

Diagnostic Procedure with Diagnostic Trouble Code (DTC)

VEHICLE DYNAMICS CONTROL (VDC) (DIAGNOSTICS)

Step	Check	Yes	No
3 CHECK GROUND SHORT OF HARNESS. Measure the resistance between VDCCM&H/U connector and chassis ground. Connector & terminal DTC C1211 (B310) No. 4 — Chassis ground: DTC C1221 (B310) No. 8 — Chassis ground: DTC C1231 (B310) No. 29 — Chassis ground: DTC C1241 (B310) No. 18 — Chassis ground:	Is the resistance 1 MΩ or more?	Go to step 4.	Repair the harness connector between VDCCM&H/U and ABS wheel speed sensor.
4 CHECK ABS WHEEL SPEED SENSOR POWER SUPPLY CIRCUIT. 1) Connect the VDCCM&H/U connector. 2) Turn the ignition switch to ON. 3) Measure the voltage between ABS wheel speed sensor connector and chassis ground. Connector & terminal DTC C1211 (B6) No. 2 (+) — Chassis ground (-): DTC C1221 (B15) No. 2 (+) — Chassis ground (-): DTC C1231 (R72) No. 2 (+) — Chassis ground (-): DTC C1241 (R73) No. 2 (+) — Chassis ground (-):	Is the voltage 5 — 16 V?	Go to step 6.	Go to step 5.
5 CHECK VDCCM&H/U POWER SUPPLY CIRCUIT. 1) Turn the ignition switch to OFF. 2) Disconnect the VDCCM&H/U connector. 3) Turn the ignition switch to ON. 4) Measure the voltage between VDCCM&H/U connector terminals. Connector & terminal (B310) No. 1 (+) — (B310) No. 38 (-): (B310) No. 25 (+) — (B310) No. 38 (-): (B310) No. 28 (+) — (B310) No. 38 (-):	Is the voltage 10 — 15 V?	Go to step 6.	Check the generator, battery and VDCCM&H/U power supply circuit.
6 CHECK ABS WHEEL SPEED SENSOR SIGNAL. 1) Prepare an oscilloscope. 2) Check the ABS wheel speed sensor. <Ref. to VDC-37, CHECK ABS WHEEL SPEED SENSOR UNIT, INSPECTION, Front ABS Wheel Speed Sensor.> <Ref. to VDC-41, CHECK ABS WHEEL SPEED SENSOR UNIT, INSPECTION, Rear ABS Wheel Speed Sensor.>	Is the pattern the same waveform as shown in the figure?	Go to step 7.	Replace the ABS wheel speed sensor. <Ref. to VDC-35, Front ABS Wheel Speed Sensor.> <Ref. to VDC-38, Rear ABS Wheel Speed Sensor.>
7 CHECK VDCCM&H/U. 1) Connect all connectors. 2) Perform the Clear Memory Mode. <Ref. to VDC(diag)-26, Clear Memory Mode.> 3) Perform the Inspection Mode. <Ref. to VDC(diag)-25, Inspection Mode.> 4) Read the DTC. <Ref. to VDC(diag)-24, Read Diagnostic Trouble Code (DTC).>	Is the same DTC displayed?	Replace the VDCCM only. <Ref. to VDC-20, REPLACEMENT, VDC Control Module and Hydraulic Control Unit (VDCCM&H/U).>	Go to step 8.

Diagnostic Procedure with Diagnostic Trouble Code (DTC)

VEHICLE DYNAMICS CONTROL (VDC) (DIAGNOSTICS)

Step	Check	Yes	No
8 CHECK DETECTION OF OTHER DTCS FOR VDC. <Ref. to VDC(diag)-24, Read Diagnostic Trouble Code (DTC).>	Is any other DTC displayed?	Perform the diagnosis according to DTC. <Ref. to VDC(diag)-39, List of Diagnostic Trouble Code (DTC).>	Currently, it is normal. There may have been a temporary poor contact in the harness and connector or a temporary noise interference.

E: DTC C1212 FRONT RIGHT ABS SENSOR SIGNAL

NOTE:

For the diagnostic procedure, refer to “DTC C1242 REAR LEFT ABS SENSOR SIGNAL”. <Ref. to VDC(diag)-52, DTC C1242 REAR LEFT ABS SENSOR SIGNAL, Diagnostic Procedure with Diagnostic Trouble Code (DTC).>

F: DTC C1222 FRONT LEFT ABS SENSOR SIGNAL

NOTE:

For the diagnostic procedure, refer to “DTC C1242 REAR LEFT ABS SENSOR SIGNAL”. <Ref. to VDC(diag)-52, DTC C1242 REAR LEFT ABS SENSOR SIGNAL, Diagnostic Procedure with Diagnostic Trouble Code (DTC).>

G: DTC C1232 REAR RIGHT ABS SENSOR SIGNAL

NOTE:

For the diagnostic procedure, refer to “DTC C1242 REAR LEFT ABS SENSOR SIGNAL”. <Ref. to VDC(diag)-52, DTC C1242 REAR LEFT ABS SENSOR SIGNAL, Diagnostic Procedure with Diagnostic Trouble Code (DTC).>

Diagnostic Procedure with Diagnostic Trouble Code (DTC)

VEHICLE DYNAMICS CONTROL (VDC) (DIAGNOSTICS)

H: DTC C1242 REAR LEFT ABS SENSOR SIGNAL

DTC detecting condition:

- Defective ABS wheel speed sensor signal (noise, irregular signal, etc.)
- Defective harness connector

Trouble symptom:

- ABS does not operate.
- VDC does not operate.
- Hill start assist does not operate.

Step	Check	Yes	No
1 CHECK ABS WHEEL SPEED SENSOR AND FREEZE FRAME DATA USING SUBARU SELECT MONITOR. 1) Using the Subaru Select Monitor, check the freeze frame data when DTC is detected. <Ref. to VDC(diag)-17, READ FREEZE FRAME DATA, OPERATION, Subaru Select Monitor.> 2) Compare «FR Wheel Speed», «FL Wheel Speed», «RR Wheel Speed» and «RL Wheel Speed» to determine a sensor that is not indicating the same value. 3) Check the current data of the wheel speed sensor that is not indicating the same value. <Ref. to VDC(diag)-15, READ CURRENT DATA, OPERATION, Subaru Select Monitor.>	Does the speed indicated on the data monitor change in response to the speedometer reading during acceleration/ deceleration when the steering wheel is in the straight-ahead position? In addition, are the wheel speeds of the freeze frame data for 4 wheels almost the same?	Go to step 2.	Go to step 7.
2 CHECK POOR CONTACT OF CONNECTOR. 1) Turn the ignition switch to OFF. 2) Check for poor contact of the connector between VDCCM&H/U and ABS wheel speed sensor.	Is there poor contact of connectors between VDCCM&H/U and ABS wheel speed sensor?	Repair the connector.	Go to step 3.
3 CHECK CAUSE OF SIGNAL NOISE. Make sure the radio wave devices and electronic components are installed correctly.	Are the radio wave devices and electronic components installed correctly?	Go to step 4.	Install the radio wave devices and electronic components properly.
4 CHECK CAUSE OF SIGNAL NOISE. Check if the noise sources (such as an antenna) are installed near the sensor harness.	Are noise sources installed?	Install the noise sources apart from sensor harness.	Go to step 5.
5 CHECK VDCCM&H/U. 1) Connect all connectors. 2) Perform the Clear Memory Mode. <Ref. to VDC(diag)-26, Clear Memory Mode.> 3) Perform the Inspection Mode. <Ref. to VDC(diag)-25, Inspection Mode.> 4) Read the DTC. <Ref. to VDC(diag)-24, Read Diagnostic Trouble Code (DTC).>	Is the same DTC displayed?	Replace the VDCCM only. <Ref. to VDC-20, REPLACEMENT, VDC Control Module and Hydraulic Control Unit (VDCCM&H/U).>	Go to step 6.
6 CHECK DETECTION OF OTHER DTCS FOR VDC. <Ref. to VDC(diag)-24, Read Diagnostic Trouble Code (DTC).>	Is any other DTC displayed?	Perform the diagnosis according to DTC. <Ref. to VDC(diag)-39, List of Diagnostic Trouble Code (DTC).>	Currently, it is normal. There may have been a temporary poor contact in the harness and connector or a temporary noise interference.
7 CHECK INSTALLATION OF ABS WHEEL SPEED SENSOR.	Is the ABS wheel speed sensor installation bolt tightened to 7.5 N·m (0.76 kgf·m, 5.5 ft·lb)?	Go to step 8.	Tighten the ABS wheel speed sensor installation bolts.

Diagnostic Procedure with Diagnostic Trouble Code (DTC)

VEHICLE DYNAMICS CONTROL (VDC) (DIAGNOSTICS)

	Step	Check	Yes	No
8	CHECK ABS WHEEL SPEED SENSOR SIGNAL. 1) Prepare an oscilloscope. 2) Check the ABS wheel speed sensor. <Ref. to VDC-37, CHECK ABS WHEEL SPEED SENSOR UNIT, INSPECTION, Front ABS Wheel Speed Sensor.> <Ref. to VDC-41, CHECK ABS WHEEL SPEED SENSOR UNIT, INSPECTION, Rear ABS Wheel Speed Sensor.>	Does the oscilloscope indicate the waveform pattern like shown in the figure when the tire is slowly turned? Does the oscilloscope indication repeat the waveform pattern like shown in the figure when the tire is slowly turned in equal speed for one rotation or more?	Go to step 10.	Go to step 9.
9	CHECK ABS WHEEL SPEED SENSOR OR MAGNETIC ENCODER.	Are there foreign matter, breakage or damage at the tip of ABS wheel speed sensor or magnetic encoder?	Remove dirt thoroughly. Also replace the ABS wheel speed sensor or magnetic encoder as a unit with hub unit bearing if it is broken or damaged.	Go to step 10.
10	CHECK CAUSE OF SIGNAL NOISE. Make sure the radio wave devices and electronic components are installed correctly.	Are the radio wave devices and electronic components installed correctly?	Go to step 11.	Install the radio wave devices and electronic components properly.
11	CHECK CAUSE OF SIGNAL NOISE. Check if the noise sources (such as an antenna) are installed near the sensor harness.	Are noise sources installed?	Install the noise sources apart from sensor harness.	Go to step 12.
12	CHECK VDCCM&H/U. 1) Connect all connectors. 2) Perform the Clear Memory Mode. <Ref. to VDC(diag)-26, Clear Memory Mode.> 3) Perform the Inspection Mode. <Ref. to VDC(diag)-25, Inspection Mode.> 4) Read the DTC. <Ref. to VDC(diag)-24, Read Diagnostic Trouble Code (DTC).>	Is the same DTC displayed?	Go to step 13.	Go to step 14.
13	CHECK FREEZE FRAME DATA OF ABS WHEEL SPEED SENSOR USING SUBARU SELECT MONITOR. 1) Using the Subaru Select Monitor, select "Freeze frame data". <Ref. to VDC(diag)-17, READ FREEZE FRAME DATA, OPERATION, Subaru Select Monitor.> 2) Read the ABS wheel speed sensor output.	Is the ABS wheel speed sensor output different compared with other wheels?	Replace the ABS wheel speed sensor which has a difference. <Ref. to VDC-35, Front ABS Wheel Speed Sensor.> <Ref. to VDC-38, Rear ABS Wheel Speed Sensor.>	Replace the VDCCM only. <Ref. to VDC-20, REPLACEMENT, VDC Control Module and Hydraulic Control Unit (VDCCM&H/U).>

Diagnostic Procedure with Diagnostic Trouble Code (DTC)

VEHICLE DYNAMICS CONTROL (VDC) (DIAGNOSTICS)

Step	Check	Yes	No
14	CHECK DETECTION OF OTHER DTCS FOR VDC. <Ref. to VDC(diag)-24, Read Diagnostic Trouble Code (DTC).>	Is any other DTC displayed?	Perform the diagnosis according to DTC. <Ref. to VDC(diag)-39, List of Diagnostic Trouble Code (DTC).> Currently, it is normal. There may have been a temporary poor contact in the harness and connector or a temporary noise interference. NOTE: Though the ABS warning light may remain on at this time, this is normal. Drive the vehicle at 60 km/h (37 MPH) or more in order to turn ABS warning light off. Be sure to drive the vehicle and check that the warning light goes off.

I: DTC C1251 WHEEL SPEED SENSOR SYSTEM

NOTE:

For the diagnostic procedure, refer to "DTC C1241 REAR LEFT ABS SENSOR CIRCUIT". <Ref. to VDC(diag)-48, DTC C1241 REAR LEFT ABS SENSOR CIRCUIT, Diagnostic Procedure with Diagnostic Trouble Code (DTC).>

Diagnostic Procedure with Diagnostic Trouble Code (DTC)

VEHICLE DYNAMICS CONTROL (VDC) (DIAGNOSTICS)

J: DTC C1252 WHEEL SPEED SENSOR SIGNAL OF ONE OF THE WHEELS

DTC detecting condition:

- Defective ABS wheel speed sensor signal (noise, irregular signal, etc.)
- Defective magnetic encoder
- When a wheel is turned freely for a long time

Trouble symptom:

- ABS does not operate.
- VDC does not operate.
- EBD may not operate.
- Hill start assist does not operate.

NOTE:

Brake warning light comes on as well as ABS warning light when EBD does not operate.

Step	Check	Yes	No
1 WHETHER A WHEEL TURNED FREELY OR NOT. Check if the wheels have been turned freely for one minute or more, such as when the vehicle is jacked-up, under full-lock cornering or when the wheels are not in contact with road surface.	Did the wheels turn freely?	VDC is normal. Perform the Clear Memory Mode. <Ref. to VDC(diag)-26, Clear Memory Mode.> NOTE: This diagnostic trouble code may sometimes occur if the wheels turn freely for a long time, for example when the vehicle is towed or jacked-up, or when steering wheel is continuously turned all the way.	Go to step 2.
2 CHECK TIRE SPECIFICATIONS. Turn the ignition switch to OFF.	Are the tire specifications correct?	Go to step 3.	Replace the tire.
3 CHECK WEAR OF TIRE.	Is the tire worn excessively?	Replace the tire.	Go to step 4.
4 CHECK TIRE INFLATION PRESSURE.	Is the tire pressure correct?	Go to step 5.	Adjust the tire pressure.
5 CHECK INSTALLATION OF ABS WHEEL SPEED SENSOR.	Are the ABS wheel speed sensor installation bolts tightened to 7.5 N·m (0.76 kgf·m, 5.5 ft·lb)? (For four wheels)	Go to step 6.	Tighten the ABS wheel speed sensor installation bolts.
6 CHECK ABS WHEEL SPEED SENSOR SIGNAL. 1) Prepare an oscilloscope. 2) Check the ABS wheel speed sensor. <Ref. to VDC-37, CHECK ABS WHEEL SPEED SENSOR UNIT, INSPECTION, Front ABS Wheel Speed Sensor.> <Ref. to VDC-41, CHECK ABS WHEEL SPEED SENSOR UNIT, INSPECTION, Rear ABS Wheel Speed Sensor.>	Does the oscilloscope indicate the waveform pattern like shown in the figure when the tire is slowly turned? Does the oscilloscope indication repeat the waveform pattern like shown in the figure when the tire is slowly turned in equal speed for one rotation or more? (For all four wheels)	Go to step 8.	Go to step 7.

Diagnostic Procedure with Diagnostic Trouble Code (DTC)

VEHICLE DYNAMICS CONTROL (VDC) (DIAGNOSTICS)

Step	Check	Yes	No
7 CHECK ABS WHEEL SPEED SENSOR OR MAGNETIC ENCODER.	Are there foreign matter, breakage or damage at the tip of ABS wheel speed sensor or magnetic encoder? (For all four wheels)	Remove dirt thoroughly. Also replace the ABS wheel speed sensor or magnetic encoder as a unit with hub unit bearing if it is broken or damaged.	Go to step 8 .
8 CHECK VDCCM&H/U. 1) Connect all connectors. 2) Perform the Clear Memory Mode. <Ref. to VDC(diag)-26, Clear Memory Mode.> 3) Perform the Inspection Mode. <Ref. to VDC(diag)-25, Inspection Mode.> 4) Read the DTC. <Ref. to VDC(diag)-24, Read Diagnostic Trouble Code (DTC).>	Is the same DTC displayed?	Replace the VDCCM only. <Ref. to VDC-20, REPLACEMENT, VDC Control Module and Hydraulic Control Unit (VDCCM&H/U).>	Go to step 9 .
9 CHECK DETECTION OF OTHER DTCS FOR VDC. <Ref. to VDC(diag)-24, Read Diagnostic Trouble Code (DTC).>	Is any other DTC displayed?	Perform the diagnosis according to DTC. <Ref. to VDC(diag)-39, List of Diagnostic Trouble Code (DTC).>	Currently, it is normal. There may have been a temporary poor contact in the harness and connector or a temporary noise interference.

Diagnostic Procedure with Diagnostic Trouble Code (DTC)

NOTE:

For the diagnostic procedure, refer to “DTC C1362 NORMAL CLOSING VALVE 2”. <Ref. to VDC(diag)-58, DTC C1362 NORMAL CLOSING VALVE 2, Diagnostic Procedure with Diagnostic Trouble Code (DTC).>

U: DTC C1361 NORMAL CLOSING VALVE 1

NOTE:

For the diagnostic procedure, refer to “DTC C1362 NORMAL CLOSING VALVE 2”. <Ref. to VDC(diag)-58, DTC C1362 NORMAL CLOSING VALVE 2, Diagnostic Procedure with Diagnostic Trouble Code (DTC).>

Diagnostic Procedure with Diagnostic Trouble Code (DTC)

VEHICLE DYNAMICS CONTROL (VDC) (DIAGNOSTICS)

V: DTC C1362 NORMAL CLOSING VALVE 2

DTC detecting condition:

- Defective harness connector
- Defective VDCH/U solenoid valve

Trouble symptom:

- ABS does not operate.
- EBD does not operate.
- VDC does not operate.
- Hill start assist does not operate.

Wiring diagram:

Vehicle dynamics control system <Ref. to WI-228, WITHOUT EyeSight, WIRING DIAGRAM, Vehicle Dynamics Control System.>

Step	Check	Yes	No
1 CHECK VDCCM&H/U INPUT VOLTAGE. 1) Turn the ignition switch to OFF. 2) Disconnect the connector from the VDCCM&H/U. 3) Run the engine at idle. 4) Measure the voltage between VDCCM&H/U connector and chassis ground. Connector & terminal (B310) No. 1 (+) — Chassis ground (-): (B310) No. 25 (+) — Chassis ground (-): (B310) No. 28 (+) — Chassis ground (-):	Is the voltage 10 — 15 V?	Go to step 2.	Repair the power supply circuit including the battery.
2 CHECK VDCCM&H/U GROUND CIRCUIT (CHECK FOR OPEN CIRCUIT). 1) Turn the ignition switch to OFF. 2) Measure the resistance between VDCCM&H/U connector and chassis ground. Connector & terminal (B310) No. 38 — Chassis ground:	Is the resistance less than 10 Ω?	Go to step 3.	Repair the VDCCM&H/U ground harness.

Diagnostic Procedure with Diagnostic Trouble Code (DTC)

VEHICLE DYNAMICS CONTROL (VDC) (DIAGNOSTICS)

Step	Check	Yes	No
3 CHECK POOR CONTACT OF CONNECTORS.	Is there poor contact of connector between generator, battery and VDCCM&H/U?	Repair the connector.	Go to step 4.
4 CHECK VDCCM&H/U. 1) Connect all connectors. 2) Perform the Clear Memory Mode. <Ref. to VDC(diag)-26, Clear Memory Mode.> 3) Perform the Inspection Mode. <Ref. to VDC(diag)-25, Inspection Mode.> 4) Read the DTC. <Ref. to VDC(diag)-24, Read Diagnostic Trouble Code (DTC).>	Is the same DTC displayed?	Replace the VDCCM&H/U. <Ref. to VDC-9, VDC Control Module and Hydraulic Control Unit (VDCCM&H/U).>	Go to step 5.
5 CHECK DETECTION OF OTHER DTCS FOR VDC. <Ref. to VDC(diag)-24, Read Diagnostic Trouble Code (DTC).>	Is any other DTC displayed?	Perform the diagnosis according to DTC. <Ref. to VDC(diag)-39, List of Diagnostic Trouble Code (DTC).>	Currently, it is normal. There may have been a temporary poor contact in the harness and connector or a temporary noise interference.

Diagnostic Procedure with Diagnostic Trouble Code (DTC)

VEHICLE DYNAMICS CONTROL (VDC) (DIAGNOSTICS)

W: DTC C1411 ELECTRICAL CONTROL MODULE

DTC detecting condition:

Defective VDCCM

Trouble symptom:

- ABS does not operate.
- EBD does not operate.
- VDC does not operate.
- Hill start assist does not operate.

Wiring diagram:

Vehicle dynamics control system <Ref. to WI-228, WITHOUT EyeSight, WIRING DIAGRAM, Vehicle Dynamics Control System.>

VDC10143

Step	Check	Yes	No	
1	CHECK VDCCM&H/U GROUND CIRCUIT (CHECK FOR OPEN CIRCUIT). 1) Turn the ignition switch to OFF. 2) Disconnect the connector from the VDCCM&H/U. 3) Measure the resistance between VDCCM&H/U and chassis ground. Connector & terminal (B310) No. 38 — Chassis ground:	Is the resistance less than 10 Ω?	Go to step 2.	Repair the VDCCM&H/U ground harness.
2	CHECK POOR CONTACT OF CONNECTORS.	Is there poor contact of the connector between the battery, ignition switch and VDCCM&H/U?	Repair the connector.	Go to step 3.
3	CHECK CAUSE OF SIGNAL NOISE.	Are the radio wave devices and electronic components installed correctly?	Go to step 4.	Install the radio wave devices and electronic components properly.
4	CHECK CAUSE OF SIGNAL NOISE.	Is there a noise source (such as an antenna) installed near the sensor harness and VDCCM?	Install the noise sources apart from sensor harness and VDCCM.	Go to step 5.

Diagnostic Procedure with Diagnostic Trouble Code (DTC)

VEHICLE DYNAMICS CONTROL (VDC) (DIAGNOSTICS)

Step	Check	Yes	No
5 CHECK VDCCM&H/U. 1) Connect all connectors. 2) Perform the Clear Memory Mode. <Ref. to VDC(diag)-26, Clear Memory Mode.> 3) Perform the Inspection Mode. <Ref. to VDC(diag)-25, Inspection Mode.> 4) Read the DTC. <Ref. to VDC(diag)-24, Read Diagnostic Trouble Code (DTC).>	Is the same DTC displayed?	Replace the VDCCM only. <Ref. to VDC-20, REPLACEMENT, VDC Control Module and Hydraulic Control Unit (VDCCM&H/U).>	Go to step 6.
6 CHECK DETECTION OF OTHER DTCS FOR VDC. <Ref. to VDC(diag)-24, Read Diagnostic Trouble Code (DTC).>	Is any other DTC displayed?	Perform the diagnosis according to DTC. <Ref. to VDC(diag)-39, List of Diagnostic Trouble Code (DTC).>	Currently, it is normal. There may have been a temporary poor contact in the harness and connector or a temporary noise interference.

Diagnostic Procedure with Diagnostic Trouble Code (DTC)

VEHICLE DYNAMICS CONTROL (VDC) (DIAGNOSTICS)

X: DTC C1412 SELECTED PARAMETER

DTC DETECTING CONDITION:

VDCCM parameter selection error

TROUBLE SYMPTOM:

- ABS does not operate.
- EBD does not operate.
- VDC does not operate.
- Hill start assist does not operate.

NOTE:

When the VDCCM or VDCCM&H/U is replaced, this DTC may be stored.

	Step	Check	Yes	No
1	CHECK VDCCM&H/U IDENTIFICATION SYMBOL. Check the identification symbol attached on the H/U. <Ref. to VDC-2, SPECIFICATION, General Description.>	Is the identification symbol correct?	Go to step 2.	Replace the VDCCM&H/U. <Ref. to VDC-9, VDC Control Module and Hydraulic Control Unit (VDCCM&H/U).>
2	CHECK PARAMETER SELECTED IN VDCCM. <Ref. to VDC(diag)-19, PARAMETER CHECK, OPERATION, Subaru Select Monitor.>	Does the parameter registered in the VDCCM match the relevant vehicle?	Replace the VDCCM&H/U. <Ref. to VDC-9, VDC Control Module and Hydraulic Control Unit (VDCCM&H/U).>	Select and register the correct parameter. <Ref. to VDC(diag)-19, PARAMETER SELECTION, OPERATION, Subaru Select Monitor.>

Diagnostic Procedure with Diagnostic Trouble Code (DTC)

VEHICLE DYNAMICS CONTROL (VDC) (DIAGNOSTICS)

Y: DTC C1413 POWER SUPPLY VOLTAGE

DTC detecting condition:

Improper VDCCM&H/U power supply voltage

Trouble symptom:

- ABS does not operate.
- EBD may not operate.
- VDC does not operate.
- Hill start assist does not operate.

NOTE:

Warning lights go off if voltage returns.

Wiring diagram:

Vehicle dynamics control system <Ref. to WI-228, WITHOUT EyeSight, WIRING DIAGRAM, Vehicle Dynamics Control System.>

Step	Check	Yes	No
1 CHECK GENERATOR. 1) Start the engine. 2) Run the engine at idle after warming up. 3) Measure the voltage between generator terminal B and chassis ground. Terminals Generator terminal B (+) — Chassis ground (-):	Is the voltage 10 — 15 V?	Go to step 2.	Repair the generator.
2 CHECK BATTERY TERMINAL. Turn the ignition switch to OFF.	Are the positive and negative battery terminals clamped tightly?	Go to step 3.	Install the battery terminal correctly.

Diagnostic Procedure with Diagnostic Trouble Code (DTC)

VEHICLE DYNAMICS CONTROL (VDC) (DIAGNOSTICS)

Step	Check	Yes	No
3 CHECK VDCCM&H/U INPUT VOLTAGE. 1) Disconnect the connector from the VDCCM&H/U. 2) Run the engine at idle. 3) Operate devices such as headlights, air conditioner, rear defogger, etc. which produce an electrical load. 4) Measure the voltage between VDCCM&H/U connector and chassis ground. Connector & terminal <i>(B310) No. 1 (+) — Chassis ground (-):</i> <i>(B310) No. 25 (+) — Chassis ground (-):</i> <i>(B310) No. 28 (+) — Chassis ground (-):</i>	Is the voltage 10 — 15 V?	Go to step 4.	Repair the power supply circuit.
4 CHECK VDCCM&H/U GROUND CIRCUIT (CHECK FOR OPEN CIRCUIT). 1) Turn the ignition switch to OFF. 2) Measure the resistance between VDCCM&H/U connector and chassis ground. Connector & terminal <i>(B310) No. 38 — Chassis ground:</i>	Is the resistance less than 10 Ω ?	Go to step 5.	Repair the VDCCM&H/U ground harness.
5 CHECK POOR CONTACT OF CONNECTORS.	Is there poor contact of connector between generator, battery and VDCCM&H/U?	Repair the connector.	Go to step 6.
6 CHECK VDCCM&H/U. 1) Connect all connectors. 2) Perform the Clear Memory Mode. <Ref. to VDC(diag)-26, Clear Memory Mode.> 3) Perform the Inspection Mode. <Ref. to VDC(diag)-25, Inspection Mode.> 4) Read the DTC. <Ref. to VDC(diag)-24, Read Diagnostic Trouble Code (DTC).>	Is the same DTC displayed?	Replace the VDCCM only. <Ref. to VDC-20, REPLACEMENT, VDC Control Module and Hydraulic Control Unit (VDCCM&H/U).>	Go to step 7.
7 CHECK DETECTION OF OTHER DTCS FOR VDC. <Ref. to VDC(diag)-24, Read Diagnostic Trouble Code (DTC).>	Is any other DTC displayed?	Perform the diagnosis according to DTC. <Ref. to VDC(diag)-39, List of Diagnostic Trouble Code (DTC).>	Currently, it is normal. There may have been a temporary poor contact in the harness and connector or a temporary noise interference.

Diagnostic Procedure with Diagnostic Trouble Code (DTC)

VEHICLE DYNAMICS CONTROL (VDC) (DIAGNOSTICS)

Z: DTC C1421 ECM CONTROL SYSTEM

DTC detecting condition:

ECM malfunctioning

Trouble symptom:

- ABS does not operate.
- VDC does not operate.
- Hill start assist does not operate.

Step	Check	Yes	No
1 CHECK COOPERATION CONTROL FEASIBILITY OF ECM USING SUBARU SELECT MONITOR. 1) Start the engine, and run the engine at idle approximately 5 minutes. 2) Using the Subaru Select Monitor, select "Data monitor". <Ref. to VDC(diag)-15, READ CURRENT DATA, OPERATION, Subaru Select Monitor.> 3) Check the «E/G Control Stop Flag» displayed on screen.	Is the «E/G Control Stop Flag» "1"?	Go to step 4.	Go to step 2.
2 CHECK WARNING LIGHT. Check whether the VDC warning light illuminates after driving for 1 minute or more at a speed of 10 km/h (6 MPH) or more.	Does the VDC warning light illuminate?	Go to step 3.	VDC is normal. Perform the Clear Memory Mode. <Ref. to VDC(diag)-26, Clear Memory Mode.> NOTE: DTC may be recorded if cranking is performed during driving.
3 CHECK POOR CONTACT OF CONNECTORS.	Is there poor contact of ECM connector?	Repair the connector.	Go to step 4.
4 CHECK DTC OF ECM. Read the DTC relating the ECM using the Subaru Select Monitor. <Ref. to EN(H4DO)(diag)-49, Read Diagnostic Trouble Code (DTC).>	Are any DTCs displayed?	Perform the diagnosis according to DTC. <Ref. to EN(H4DO)(diag)-96, List of Diagnostic Trouble Code (DTC).>	Go to step 5.
5 CHECK VDCCM&H/U. 1) Connect all connectors. 2) Perform the Clear Memory Mode. <Ref. to VDC(diag)-26, Clear Memory Mode.> 3) Perform the Inspection Mode. <Ref. to VDC(diag)-25, Inspection Mode.> 4) Read the DTC. <Ref. to VDC(diag)-24, Read Diagnostic Trouble Code (DTC).>	Is the same DTC displayed?	Replace the VDCCM only. <Ref. to VDC-20, REPLACEMENT, VDC Control Module and Hydraulic Control Unit (VDCCM&H/U).>	Go to step 6.
6 CHECK DETECTION OF OTHER DTCS FOR VDC. <Ref. to VDC(diag)-24, Read Diagnostic Trouble Code (DTC).>	Is any other DTC displayed?	Perform the diagnosis according to DTC. <Ref. to VDC(diag)-39, List of Diagnostic Trouble Code (DTC).>	Currently, it is normal. There may have been a temporary poor contact in the harness and connector or a temporary noise interference.

Diagnostic Procedure with Diagnostic Trouble Code (DTC)

VEHICLE DYNAMICS CONTROL (VDC) (DIAGNOSTICS)

AA:DTC C1422 VDC INTERRUPTION FOR ENGINE CONVENIENCE

DTC DETECTING CONDITION:

ECM prohibits the cooperation control.

TROUBLE SYMPTOM:

VDC does not operate.

NOTE:

- For the diagnostic procedure, refer to “DTC C1421 ECM CONTROL SYSTEM”. <Ref. to VDC(diag)-65, DTC C1421 ECM CONTROL SYSTEM, Diagnostic Procedure with Diagnostic Trouble Code (DTC).>
- Warning lights go off if the cooperation control of ECM returns.

Diagnostic Procedure with Diagnostic Trouble Code (DTC)

VEHICLE DYNAMICS CONTROL (VDC) (DIAGNOSTICS)

AB:DTC C1423 DIFFERENT ECU SPECIFICATIONS

DTC detecting condition:

Different control module specification

Trouble symptom:

- ABS does not operate.
- VDC does not operate.
- Hill start assist does not operate.

NOTE:

When parameter selection for VDCCM is improper, this DTC may be memorized.

Step	Check	Yes	No
1 CHECK VDCCM&H/U IDENTIFICATION SYMBOL. Check the identification symbol attached on the H/U. <Ref. to VDC-2, SPECIFICATION, General Description.>	Is the identification symbol correct?	Go to step 2.	Replace the VDCCM&H/U. <Ref. to VDC-9, VDC Control Module and Hydraulic Control Unit (VDCCM&H/U).>
2 CHECK PARAMETER SELECTED IN VDCCM. <Ref. to VDC(diag)-19, PARAMETER CHECK, OPERATION, Subaru Select Monitor.>	Does the parameter registered in the VDCCM match the relevant vehicle?	CVT model: Go to step 3. MT model: Go to step 5.	Select and register the correct parameter. <Ref. to VDC(diag)-19, PARAMETER SELECTION, OPERATION, Subaru Select Monitor.>
3 CHECK TCM SPECIFICATION. Check the TCM specification.	Is the specification of TCM same as vehicle specification?	Go to step 4.	Replace the TCM. <Ref. to CVT(TR580)-148, Transmission Control Module (TCM).>
4 CHECK CVT SYSTEM. 1) Start the engine. 2) Read the DTC of the CVT system. <Ref. to CVT(diag)-19, Read Diagnostic Trouble Code (DTC).>	Is DTC of CVT system displayed?	Perform the diagnosis according to DTC. <Ref. to CVT(diag)-36, List of Diagnostic Trouble Code (DTC).>	Go to step 5.
5 CHECK ECM SPECIFICATION. Check the ECM specification.	Is the specification of ECM same as vehicle specification?	Go to step 6.	Replace the ECM. <Ref. to FU(H4DO)-98, Engine Control Module (ECM).>
6 CHECK ENGINE SYSTEM. 1) Start the engine. 2) Read DTC of the engine system. <Ref. to EN(H4DO)(diag)-49, Read Diagnostic Trouble Code (DTC).>	Is engine system DTC displayed?	Perform the diagnosis according to DTC. <Ref. to EN(H4DO)(diag)-96, List of Diagnostic Trouble Code (DTC).>	Go to step 7.
7 CHECK VDCCM&H/U. 1) Perform the Clear Memory Mode. <Ref. to VDC(diag)-26, Clear Memory Mode.> 2) Perform the Inspection Mode. <Ref. to VDC(diag)-25, Inspection Mode.> 3) Read the DTC. <Ref. to VDC(diag)-24, Read Diagnostic Trouble Code (DTC).>	Is the same DTC displayed?	Replace the VDCCM only. <Ref. to VDC-20, REPLACEMENT, VDC Control Module and Hydraulic Control Unit (VDCCM&H/U).>	Go to step 8.

Diagnostic Procedure with Diagnostic Trouble Code (DTC)

VEHICLE DYNAMICS CONTROL (VDC) (DIAGNOSTICS)

Step	Check	Yes	No
8 CHECK DETECTION OF OTHER DTCS FOR VDC. <Ref. to VDC(diag)-24, Read Diagnostic Trouble Code (DTC).>	Is any other DTC displayed?	Perform the diagnosis according to DTC. <Ref. to VDC(diag)-39, List of Diagnostic Trouble Code (DTC).>	Currently, it is normal. There may have been a temporary poor contact in the harness and connector or a temporary noise interference.

Diagnostic Procedure with Diagnostic Trouble Code (DTC)

VEHICLE DYNAMICS CONTROL (VDC) (DIAGNOSTICS)

AC:DTC C1424 ECM

DTC detecting condition:

ECM malfunctioning

Trouble symptom:

- ABS does not operate.
- VDC does not operate.
- Hill start assist does not operate.

	Step	Check	Yes	No
1	CHECK ECM. 1) Start the engine. 2) Read the DTC of the ECM. <Ref. to EN(H4DO)(diag)-49, Read Diagnostic Trouble Code (DTC).>	Are any DTCs displayed?	Perform the diagnosis according to DTC. <Ref. to EN(H4DO)(diag)-96, List of Diagnostic Trouble Code (DTC).>	Go to step 2.
2	CHECK VDCCM&H/U. 1) Perform the Clear Memory Mode. <Ref. to VDC(diag)-26, Clear Memory Mode.> 2) Perform the Inspection Mode. <Ref. to VDC(diag)-25, Inspection Mode.> 3) Read the DTC. <Ref. to VDC(diag)-24, Read Diagnostic Trouble Code (DTC).>	Is the same DTC displayed?	Replace the VDCCM only. <Ref. to VDC-20, REPLACEMENT, VDC Control Module and Hydraulic Control Unit (VDCCM&H/U).>	Go to step 3.
3	CHECK DETECTION OF OTHER DTCS FOR VDC. <Ref. to VDC(diag)-24, Read Diagnostic Trouble Code (DTC).>	Is any other DTC displayed?	Perform the diagnosis according to DTC. <Ref. to VDC(diag)-39, List of Diagnostic Trouble Code (DTC).>	Currently, it is normal. There may have been a temporary poor contact in the harness and connector or a temporary noise interference.

Diagnostic Procedure with Diagnostic Trouble Code (DTC)

VEHICLE DYNAMICS CONTROL (VDC) (DIAGNOSTICS)

AD:DTC C1431 AT

DTC detecting condition:

Defective TCM

Trouble symptom:

- ABS does not operate.
- VDC does not operate.

Step	Check	Yes	No
1 CHECK TCM. 1) Start the engine. 2) Read the DTC of the TCM. <Ref. to CVT(diag)-19, Read Diagnostic Trouble Code (DTC).>	Are any DTCs displayed?	Perform the diagnosis according to DTC. <Ref. to CVT(diag)-36, List of Diagnostic Trouble Code (DTC).>	Go to step 2.
2 CHECK VDCCM&H/U. 1) Turn the ignition switch to OFF. 2) After turning the ignition switch to ON for approx. 10 seconds, turn it to OFF. 3) Turn the ignition switch to ON again. 4) Perform the Clear Memory Mode. <Ref. to VDC(diag)-26, Clear Memory Mode.> 5) Perform the Inspection Mode. <Ref. to VDC(diag)-25, Inspection Mode.> 6) Read the DTC. <Ref. to VDC(diag)-24, Read Diagnostic Trouble Code (DTC).>	Is the same DTC displayed?	Replace the VDCCM only. <Ref. to VDC-20, REPLACEMENT, VDC Control Module and Hydraulic Control Unit (VDCCM&H/U).>	Go to step 3.
3 CHECK DETECTION OF OTHER DTCS FOR VDC. <Ref. to VDC(diag)-24, Read Diagnostic Trouble Code (DTC).>	Is any other DTC displayed?	Perform the diagnosis according to DTC. <Ref. to VDC(diag)-39, List of Diagnostic Trouble Code (DTC).>	Currently, it is normal. There may have been a temporary poor contact in the harness and connector or a temporary noise interference.

AE:DTC C1432 DIFFERENT ECU SPECIFICATIONS

NOTE:

For the diagnostic procedure, refer to "DTC C1423 DIFFERENT ECU SPECIFICATIONS". <Ref. to VDC(diag)-67, DTC C1423 DIFFERENT ECU SPECIFICATIONS, Diagnostic Procedure with Diagnostic Trouble Code (DTC).>

Diagnostic Procedure with Diagnostic Trouble Code (DTC)

VEHICLE DYNAMICS CONTROL (VDC) (DIAGNOSTICS)

AF:DTC C1511 VALVE RELAY

DTC detecting condition:

Defective valve relay

Trouble symptom:

- ABS does not operate.
- EBD does not operate.
- VDC does not operate.
- Hill start assist does not operate.

Wiring diagram:

Vehicle dynamics control system <Ref. to WI-228, WITHOUT EyeSight, WIRING DIAGRAM, Vehicle Dynamics Control System.>

VDC10144

Step	Check	Yes	No
1 CHECK VDCCM&H/U INPUT VOLTAGE. 1) Turn the ignition switch to OFF. 2) Disconnect the connector from the VDCCM&H/U. 3) Run the engine at idle. 4) Measure the voltage between VDCCM&H/U connector and chassis ground. Connector & terminal (B310) No. 25 (+) — Chassis ground (-): (B310) No. 28 (+) — Chassis ground (-):	Is the voltage 10 — 15 V?	Go to step 2.	Repair the power supply circuit.
2 CHECK VDCCM&H/U INPUT VOLTAGE. Calculate the voltage difference measured in step 1. A: (B310) No. 25 (+) — Chassis ground (-): B: (B310) No. 28 (+) — Chassis ground (-):	Is the voltage difference between A and B 2 V or more?	Repair the power supply circuit.	Go to step 3.

Diagnostic Procedure with Diagnostic Trouble Code (DTC)

VEHICLE DYNAMICS CONTROL (VDC) (DIAGNOSTICS)

Step	Check	Yes	No
3 CHECK VDCCM&H/U GROUND CIRCUIT (CHECK FOR OPEN CIRCUIT). 1) Turn the ignition switch to OFF. 2) Measure the resistance between VDCCM&H/U connector and chassis ground. Connector & terminal (B310) No. 38 — Chassis ground:	Is the resistance less than 10 Ω ?	Go to step 4.	Repair the VDCCM&H/U ground harness.
4 CHECK POOR CONTACT OF CONNECTORS.	Is there poor contact of connector between generator, battery and VDCCM&H/U?	Repair the connector.	Go to step 5.
5 CHECK VDCCM&H/U. 1) Connect all connectors. 2) Perform the Clear Memory Mode. <Ref. to VDC(diag)-26, Clear Memory Mode.> 3) Perform the Inspection Mode. <Ref. to VDC(diag)-25, Inspection Mode.> 4) Read the DTC. <Ref. to VDC(diag)-24, Read Diagnostic Trouble Code (DTC).>	Is the same DTC displayed?	Replace the VDCCM only. <Ref. to VDC-20, REPLACEMENT, VDC Control Module and Hydraulic Control Unit (VDCCM&H/U).>	Go to step 6.
6 CHECK DETECTION OF OTHER DTCS FOR VDC. <Ref. to VDC(diag)-24, Read Diagnostic Trouble Code (DTC).>	Is any other DTC displayed?	Perform the diagnosis according to DTC. <Ref. to VDC(diag)-39, List of Diagnostic Trouble Code (DTC).>	Currently, it is normal. There may have been a temporary poor contact in the harness and connector or a temporary noise interference.

AG:DTC C1512 VALVE SYSTEM

NOTE:

For the diagnostic procedure, refer to "DTC C1362 NORMAL CLOSING VALVE 2". <Ref. to VDC(diag)-58, DTC C1362 NORMAL CLOSING VALVE 2, Diagnostic Procedure with Diagnostic Trouble Code (DTC).>

Diagnostic Procedure with Diagnostic Trouble Code (DTC)

VEHICLE DYNAMICS CONTROL (VDC) (DIAGNOSTICS)

AH:DTC C1521 MOTOR RELAY

DTC detecting condition:

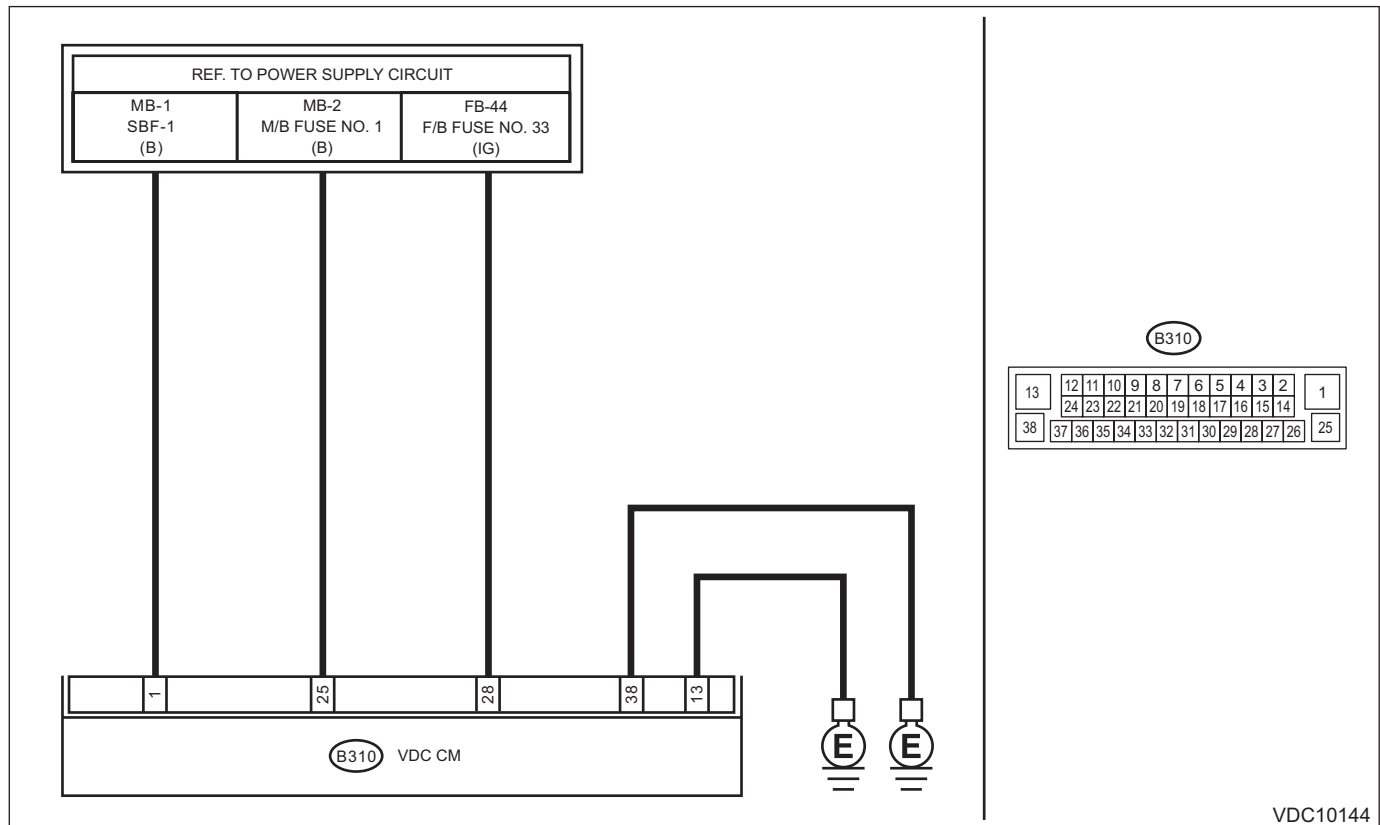

- Defective motor and motor relay
- Defective harness connector

Trouble symptom:

- ABS does not operate.
- VDC does not operate.
- EBD may not operate.
- Hill start assist does not operate.

Wiring diagram:

Vehicle dynamics control system <Ref. to WI-228, WITHOUT EyeSight, WIRING DIAGRAM, Vehicle Dynamics Control System.>

Step	Check	Yes	No
1 CHECK VDCCM&H/U INPUT VOLTAGE. 1) Turn the ignition switch to OFF. 2) Disconnect the connector from the VDCCM&H/U. 3) Turn the ignition switch to ON. 4) Measure the voltage between VDCCM&H/U connector and chassis ground. Connector & terminal (B310) No. 1 (+) — Chassis ground (-): (B310) No. 28 (+) — Chassis ground (-):	Is the voltage 10 — 15 V?	Go to step 2.	Repair the VDCCM&H/U power supply circuit.
2 CHECK VDCCM&H/U INPUT VOLTAGE. Calculate the voltage difference measured in step 1. A: (B310) No. 1 (+) — Chassis ground (-): B: (B310) No. 28 (+) — Chassis ground (-):	Is the voltage difference between A and B 2 V or more?	Repair the power supply circuit.	Go to step 3.

Diagnostic Procedure with Diagnostic Trouble Code (DTC)

VEHICLE DYNAMICS CONTROL (VDC) (DIAGNOSTICS)

Step	Check	Yes	No
3	CHECK INSTALLATION OF VDCCM&H/U GROUND.	Go to step 4.	Install the VDCCM&H/U ground terminal installation bolt correctly.
4	CHECK VDCCM&H/U GROUND CIRCUIT (CHECK FOR OPEN CIRCUIT). 1) Turn the ignition switch to OFF. 2) Measure the resistance between VDCCM&H/U connector and chassis ground. Connector & terminal (B310) No. 13 — Chassis ground: (B310) No. 38 — Chassis ground:	Go to step 5.	Repair the VDCCM&H/U ground harness.
5	CHECK VDCCM&H/U MOTOR RELAY. Measure the resistance between VDCCM&H/U terminals. Terminals No. 1 — No. 13:	Go to step 6.	Replace the VDCCM&H/U. <Ref. to VDC-9, VDC Control Module and Hydraulic Control Unit (VDCCM&H/U).>
6	CHECK POOR CONTACT OF CONNECTORS. Turn the ignition switch to OFF.	Repair the connector.	Go to step 7.
7	CHECK VDCCM&H/U. 1) Connect all connectors. 2) Perform the Clear Memory Mode. <Ref. to VDC(diag)-26, Clear Memory Mode.> 3) Perform the Inspection Mode. <Ref. to VDC(diag)-25, Inspection Mode.> 4) Read the DTC. <Ref. to VDC(diag)-24, Read Diagnostic Trouble Code (DTC).>	Replace the VDCCM&H/U. <Ref. to VDC-9, VDC Control Module and Hydraulic Control Unit (VDCCM&H/U).>	Go to step 8.
8	CHECK DETECTION OF OTHER DTCS FOR VDC. <Ref. to VDC(diag)-24, Read Diagnostic Trouble Code (DTC).>	Perform the diagnosis according to DTC. <Ref. to VDC(diag)-39, List of Diagnostic Trouble Code (DTC).>	Currently, it is normal. There may have been a temporary poor contact in the harness and connector or a temporary noise interference.

Diagnostic Procedure with Diagnostic Trouble Code (DTC)

VEHICLE DYNAMICS CONTROL (VDC) (DIAGNOSTICS)

AI: DTC C1531 BLS OFF STUCK

DTC detecting condition:

Defective stop light switch

Trouble symptom:

- ABS does not operate.
- VDC does not operate.
- Hill start assist does not operate.

WIRING DIAGRAM:

Vehicle dynamics control system <Ref. to WI-228, WITHOUT EyeSight, WIRING DIAGRAM, Vehicle Dynamics Control System.>

VDC10155

Step	Check	Yes	No
1 CHECK STOP LIGHT SWITCH. Check the stop light switch. <Ref. to BR-73, INSTALLATION, Stop Light Switch.>	Is the check result OK?	Go to step 2.	Adjust the installation position of the stop light switch. <Ref. to BR-73, INSTALLATION, Stop Light Switch.>
2 CHECK STOP LIGHT SWITCH. 1) Turn the ignition switch to OFF. 2) Disconnect the stop light switch connector. 3) Measure the resistance of stop light switch terminals. Terminals No. 3 — No. 4:	Is the resistance 1 Ω or less when the switch is ON (when pedal is depressed)?	Go to step 3.	Replace the stop light switch. <Ref. to BR-72, Stop Light Switch.>
3 CHECK STOP LIGHT POWER SUPPLY. Measure the voltage between stop light switch terminal and chassis ground. Connector & terminal (B65) No. 3 (+) — Chassis ground (-):	Is the voltage 10 — 15 V?	Go to step 4.	Repair the stop light power supply circuit.

Diagnostic Procedure with Diagnostic Trouble Code (DTC)

VEHICLE DYNAMICS CONTROL (VDC) (DIAGNOSTICS)

Step	Check	Yes	No
4 CHECK STOP LIGHT SWITCH HARNESS (CHECK FOR OPEN CIRCUIT). 1) Disconnect the connector from the VDCCM&H/U. 2) Measure the resistance between VDCCM&H/U and stop light switch. Connector & terminal (B65) No. 4 — (B310) No. 30:	Is the resistance less than 1 Ω ?	Go to step 5.	Repair the stop light switch circuit.
5 CHECK POOR CONTACT OF CONNECTORS.	Is there poor contact of connector between stop light switch and VDCCM&H/U?	Repair the connector.	Go to step 6.
6 CHECK VDCCM&H/U. 1) Connect all connectors. 2) Perform the Clear Memory Mode. <Ref. to VDC(diag)-26, Clear Memory Mode.> 3) Perform the Inspection Mode. <Ref. to VDC(diag)-25, Inspection Mode.> 4) Read the DTC. <Ref. to VDC(diag)-24, Read Diagnostic Trouble Code (DTC).>	Is the same DTC displayed?	Replace the VDCCM only. <Ref. to VDC-20, REPLACEMENT, VDC Control Module and Hydraulic Control Unit (VDCCM&H/U).>	Go to step 7.
7 CHECK DETECTION OF OTHER DTCS FOR VDC. <Ref. to VDC(diag)-24, Read Diagnostic Trouble Code (DTC).>	Is any other DTC displayed?	Perform the diagnosis according to DTC. <Ref. to VDC(diag)-39, List of Diagnostic Trouble Code (DTC).>	Currently, it is normal. There may have been a temporary poor contact in the harness and connector or a temporary noise interference.

Diagnostic Procedure with Diagnostic Trouble Code (DTC)

VEHICLE DYNAMICS CONTROL (VDC) (DIAGNOSTICS)

AJ:DTC C1532 BLS ON STUCK

DTC detecting condition:

Defective stop light switch

Trouble symptom:

- ABS does not operate.
- VDC does not operate.
- Hill start assist does not operate.

WIRING DIAGRAM:

Vehicle dynamics control system <Ref. to WI-228, WITHOUT EyeSight, WIRING DIAGRAM, Vehicle Dynamics Control System.>

VDC10155

Step	Check	Yes	No
1 INTERVIEW CUSTOMERS. Make sure that the operation was performed in which accelerator pedal and brake pedal were depressed simultaneously (with depressing brake pedal with left foot).	Were the acceleration pedal and brake pedal depressed simultaneously?	System is normal. (DTC may be recorded if the brake pedal is always depressed while driving.)	Go to step 2.
2 CHECK STOP LIGHT SWITCH. 1) Turn the ignition switch to OFF. 2) Disconnect the stop light switch connector. 3) Measure the resistance of stop light switch terminals. Terminals No. 3 — No. 4:	Is the resistance 1 MΩ or more when switch is OFF (when pedal is not depressed)?	Go to step 3.	Replace the stop light switch. <Ref. to BR-72, Stop Light Switch.>
3 CHECK STOP LIGHT SWITCH HARNESS. 1) Disconnect the connector from the VDCCM&H/U. 2) Measure the resistance between VDCCM&H/U connector and chassis ground. Connector & terminal (B310) No. 30 — Chassis ground:	Is the resistance less than 1 MΩ?	Go to step 4.	Repair the stop light switch circuit.

Diagnostic Procedure with Diagnostic Trouble Code (DTC)

VEHICLE DYNAMICS CONTROL (VDC) (DIAGNOSTICS)

Step	Check	Yes	No
4 CHECK VDCCM&H/U. 1) Connect all connectors. 2) Perform the Clear Memory Mode. <Ref. to VDC(diag)-26, Clear Memory Mode.> 3) Perform the Inspection Mode. <Ref. to VDC(diag)-25, Inspection Mode.> 4) Read the DTC. <Ref. to VDC(diag)-24, Read Diagnostic Trouble Code (DTC).>	Is the same DTC displayed?	Replace the VDCCM only. <Ref. to VDC-20, REPLACEMENT, VDC Control Module and Hydraulic Control Unit (VDCCM&H/U).>	Go to step 5.
5 CHECK DETECTION OF OTHER DTCS FOR VDC. <Ref. to VDC(diag)-24, Read Diagnostic Trouble Code (DTC).>	Is any other DTC displayed?	Perform the diagnosis according to DTC. <Ref. to VDC(diag)-39, List of Diagnostic Trouble Code (DTC).>	Currently, it is normal. There may have been a temporary poor contact in the harness and connector or a temporary noise interference.

AK:DTC C1541 CLUTCH SWITCH OFF MALFUNCTION

NOTE:

For the diagnostic procedure, refer to "DTC C1542 CLUTCH SWITCH ON MALFUNCTION". <Ref. to VDC(diag)-79, DTC C1542 CLUTCH SWITCH ON MALFUNCTION, Diagnostic Procedure with Diagnostic Trouble Code (DTC).>

Diagnostic Procedure with Diagnostic Trouble Code (DTC)

VEHICLE DYNAMICS CONTROL (VDC) (DIAGNOSTICS)

AL:DTC C1542 CLUTCH SWITCH ON MALFUNCTION

DTC detecting condition:

Abnormal clutch signal

Trouble symptom:

Hill start assist does not operate.

NOTE:

Depending on the user clutch operation patterns, the hill start assist warning light may illuminate for a while, and then go off.

Illumination condition:

While the vehicle speed is 10 km/h (6 MPH) or above, and the clutch switch signal ON (depressed) condition continues five minutes or more, if the vehicle speed lowers to 10 km/h (6 MPH) or below, the module judges as abnormal (clutch switch stuck ON), and then turns on the warning light.

Turning off condition:

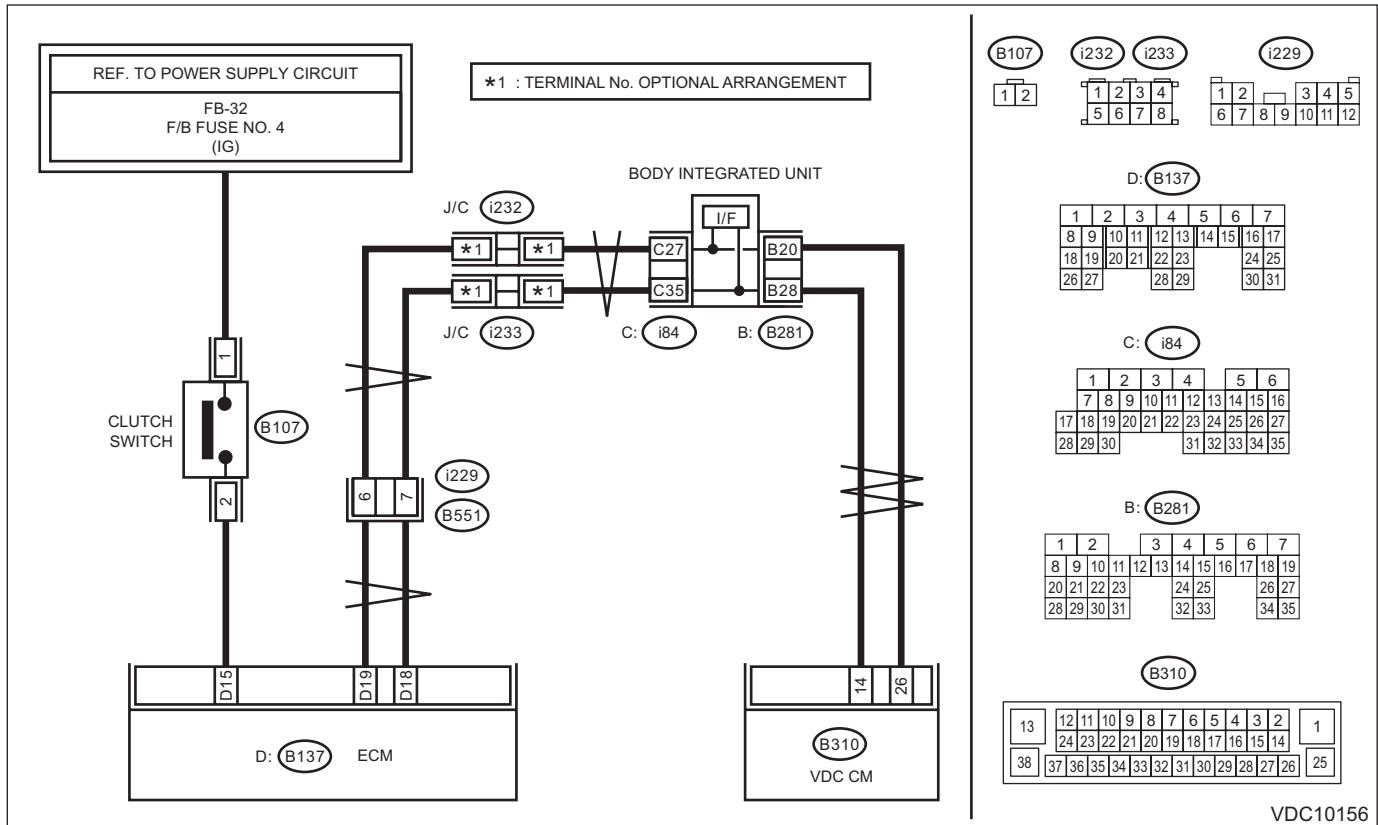

If the clutch switch signal OFF (foot released) condition continues for 2 seconds, the module turns off the warning light.

The hill start assist function does not operate, while the warning light illuminates.

Wiring diagram:

Engine electrical system <Ref. to WI-102, WITHOUT PUSH BUTTON START, WIRING DIAGRAM, Engine Electrical System.>

CAN communication system <Ref. to WI-68, CAN Communication System.>

VDC10156

Step	Check	Yes	No
1	CHECK LAN SYSTEM. Perform the diagnosis for LAN system. <Ref. to LAN(diag)-2, Basic Diagnostic Procedure.>	Is there any fault in LAN system?	Perform the diagnosis according to DTC for LAN system. <Ref. to LAN(diag)-92, List of Diagnostic Trouble Code (DTC).>
			Go to step 2.

Diagnostic Procedure with Diagnostic Trouble Code (DTC)

VEHICLE DYNAMICS CONTROL (VDC) (DIAGNOSTICS)

Step	Check	Yes	No
2 CHECK CLUTCH SIGNAL USING SUBARU SELECT MONITOR. 1) Using the Subaru Select Monitor, select "Data monitor". <Ref. to VDC(diag)-15, READ CURRENT DATA, OPERATION, Subaru Select Monitor.> 2) Read the «Clutch Switch» displayed on display.	Is "OFF" displayed when the clutch pedal is not depressed, and is "ON" displayed when depressed?	Go to step 5.	Go to step 3.
3 CHECK CLUTCH SIGNAL OF ECM USING SUBARU SELECT MONITOR. 1) Using the Subaru Select Monitor, select "Data monitor" in ECM. <Ref. to EN(H4DO)(diag)-36, DISPLAY ENGINE CURRENT DATA, OPERATION, Subaru Select Monitor.> 2) Read the «Clutch Switch» displayed on display.	Is "OFF" displayed when the clutch pedal is not depressed, and is "ON" displayed when depressed?	Go to step 5.	Go to step 4.
4 CHECK HARNESS BETWEEN ECM AND CLUTCH SWITCH (CHECK FOR OPEN CIRCUIT). 1) Turn the ignition switch to OFF. 2) Disconnect the connectors from ECM and clutch switch. 3) Measure the resistance of harness between ECM and clutch switch connector. Connector & terminal (B137) No. 15 — (B107) No. 2:	Is the resistance less than 1 Ω?	Repair the power supply circuit of clutch switch. Or replace the clutch switch. <Ref. to CL-30, Clutch Switch.>	Repair the harness between ECM and clutch switch connector.
5 CHECK VDCCM&H/U. 1) Connect all connectors. 2) Perform the Clear Memory Mode. <Ref. to VDC(diag)-26, Clear Memory Mode.> 3) Perform the Inspection Mode. <Ref. to VDC(diag)-25, Inspection Mode.> 4) Read the DTC. <Ref. to VDC(diag)-24, Read Diagnostic Trouble Code (DTC).>	Is the same DTC displayed?	Replace the VDCCM only. <Ref. to VDC-20, REPLACEMENT, VDC Control Module and Hydraulic Control Unit (VDCCM&H/U).>	Go to step 6.
6 CHECK DETECTION OF OTHER DTCS FOR VDC. <Ref. to VDC(diag)-24, Read Diagnostic Trouble Code (DTC).>	Is any other DTC displayed?	Perform the diagnosis according to DTC. <Ref. to VDC(diag)-39, List of Diagnostic Trouble Code (DTC).>	Currently, it is normal. There may have been a temporary poor contact in the harness and connector or a temporary noise interference.

AM:DTC C1561 REVERSE OFF FAULT

NOTE:

For the diagnostic procedure, refer to "DTC C1562 REVERSE ON FAULT". <Ref. to VDC(diag)-81, DTC C1562 REVERSE ON FAULT, Diagnostic Procedure with Diagnostic Trouble Code (DTC).>

Diagnostic Procedure with Diagnostic Trouble Code (DTC)

VEHICLE DYNAMICS CONTROL (VDC) (DIAGNOSTICS)

AN:DTC C1562 REVERSE ON FAULT

DTC detecting condition:

Abnormal reverse signal

Trouble symptom:

Hill start assist does not operate.

Wiring diagram:

Back-up light system <Ref. to WI-64, Back-up Light System.>

CAN communication system <Ref. to WI-68, CAN Communication System.>

Step	Check	Yes	No	
1	CHECK LAN SYSTEM. Perform the diagnosis for LAN system. <Ref. to LAN(diag)-2, Basic Diagnostic Procedure.>	Is there any fault in LAN system?	Perform the diagnosis according to DTC for LAN system. <Ref. to LAN(diag)-92, List of Diagnostic Trouble Code (DTC).>	Go to step 2.
2	CHECK REVERSE SIGNAL USING SUBARU SELECT MONITOR. 1) Using the Subaru Select Monitor, select "Data monitor". <Ref. to VDC(diag)-15, READ CURRENT DATA, OPERATION, Subaru Select Monitor.> 2) Read the «Reverse Signal» displayed on display.	Is "OFF" displayed when the shift lever is placed in any position other than reverse, and is "ON" displayed in reverse position?	Go to step 5.	Go to step 3.
3	CHECK BACK-UP LIGHT ILLUMINATION. 1) Turn the ignition switch to ON. 2) Place the shift lever in reverse position.	Does the back-up light illuminate?	Go to step 4.	Repair the back-up light circuit.

Diagnostic Procedure with Diagnostic Trouble Code (DTC)

VEHICLE DYNAMICS CONTROL (VDC) (DIAGNOSTICS)

Step	Check	Yes	No
<p>4</p> <p>CHECK HARNESS BETWEEN BODY INTEGRATED UNIT AND BACK-UP LIGHT SWITCH (CHECK FOR OPEN CIRCUIT).</p> <p>1) Turn the ignition switch to OFF. 2) Disconnect the connectors from body integrated unit and back-up light switch. 3) Measure the resistance of harness between body integrated unit and back-up light switch connector.</p> <p>Connector & terminal (B281) No. 12 — (B24) No. 1:</p>	Is the resistance less than 1 Ω ?	Replace the back-up light switch. <Ref. to 5MT-35, Switches and Harness.>	Repair the harness between body integrated unit and back-up light switch connector.
<p>5</p> <p>CHECK VDCCM&H/U.</p> <p>1) Connect all connectors. 2) Perform the Clear Memory Mode. <Ref. to VDC(diag)-26, Clear Memory Mode.> 3) Perform the Inspection Mode. <Ref. to VDC(diag)-25, Inspection Mode.> 4) Read the DTC. <Ref. to VDC(diag)-24, Read Diagnostic Trouble Code (DTC).></p>	Is the same DTC displayed?	Replace the VDCCM only. <Ref. to VDC-20, REPLACEMENT, VDC Control Module and Hydraulic Control Unit (VDCCM&H/U).>	Go to step 6.
<p>6</p> <p>CHECK DETECTION OF OTHER DTCS FOR VDC.</p> <p><Ref. to VDC(diag)-24, Read Diagnostic Trouble Code (DTC).></p>	Is any other DTC displayed?	Perform the diagnosis according to DTC. <Ref. to VDC(diag)-39, List of Diagnostic Trouble Code (DTC).>	Currently, it is normal. There may have been a temporary poor contact in the harness and connector or a temporary noise interference.

Diagnostic Procedure with Diagnostic Trouble Code (DTC)

VEHICLE DYNAMICS CONTROL (VDC) (DIAGNOSTICS)

AO:DTC C1711 STEERING ANGLE SENSOR

DTC detecting condition:

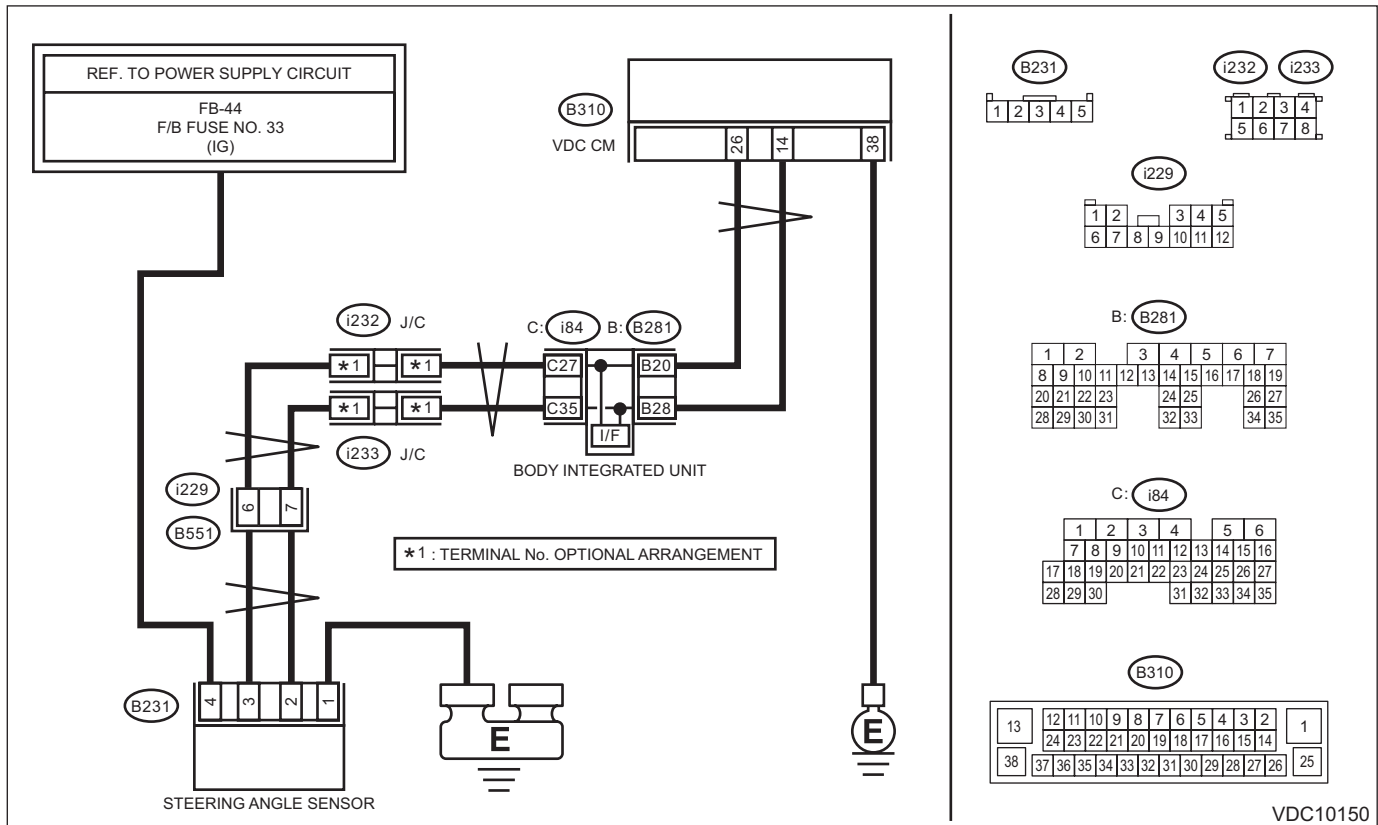

Defective steering angle sensor

Trouble symptom:

- ABS does not operate.
- VDC does not operate.
- Hill start assist does not operate.

Wiring diagram:

Vehicle dynamics control system <Ref. to WI-228, WITHOUT EyeSight, WIRING DIAGRAM, Vehicle Dynamics Control System.>

VDC10150

Step	Check	Yes	No
1 CHECK POWER SUPPLY FOR STEERING ANGLE SENSOR. 1) Turn the ignition switch to OFF. 2) Disconnect the connector from steering angle sensor. 3) Turn the ignition switch to ON. 4) Measure the voltage between steering angle sensor and chassis ground. Connector & terminal (B231) No. 4 (+) — Chassis ground (-):	Is the voltage 10 — 15 V?	Go to step 2.	Repair the steering angle sensor power supply circuit including the fuse.
2 CHECK GROUND CIRCUIT OF STEERING ANGLE SENSOR (CHECK FOR OPEN CIRCUIT). Measure the resistance between steering angle sensor and chassis ground. Connector & terminal (B231) No. 1 — Chassis ground:	Is the resistance less than 10 Ω?	Go to step 3.	Repair ground circuit in the steering angle sensor.

Diagnostic Procedure with Diagnostic Trouble Code (DTC)

VEHICLE DYNAMICS CONTROL (VDC) (DIAGNOSTICS)

Step	Check	Yes	No
3 CHECK STEERING ANGLE SENSOR HARNESS (CHECK FOR OPEN CIRCUIT). 1) Disconnect the connector from the VDCCM&H/U. 2) Measure the resistance between VDCCM&H/U and steering angel sensor. <i>Connector & terminal</i> <i>(B231) No. 2 — (B310) No. 14:</i> <i>(B231) No. 3 — (B310) No. 26:</i>	Is the resistance less than 1 Ω?	Go to step 4.	Repair the harness between the steering angle sensor and VDCCM&H/U.
4 CHECK GROUND SHORT CIRCUIT OF STEERING ANGLE SENSOR HARNESS. Measure the resistance between steering angle sensor and chassis ground. <i>Connector & terminal</i> <i>(B231) No. 2 — Chassis ground:</i> <i>(B231) No. 3 — Chassis ground:</i>	Is the resistance 10 Ω or more?	Go to step 5.	Repair the harness between the steering angle sensor and VDCCM&H/U.
5 CHECK STEERING WHEEL. 1) Drive the vehicle on a flat road. 2) Park the vehicle straight. 3) Check the steering wheel for deviation from center.	Is the deviation from the center of steering wheel less than 5°?	Go to step 6.	Perform the centering adjustment of steering wheel, and perform the VDC sensor mid-point setting mode. <Ref. to VDC-23, VDC SENSOR MIDPOINT SETTING MODE (MODELS WITHOUT EyeSight), ADJUSTMENT, VDC Control Module and Hydraulic Control Unit (VDCCM&H/U).>
6 CHECK OUTPUT OF STEERING ANGLE SENSOR USING SUBARU SELECT MONITOR. 1) Adjust steering wheel to the center position. 2) Using the Subaru Select Monitor, select "Data monitor". <Ref. to VDC(diag)-15, READ CURRENT DATA, OPERATION, Subaru Select Monitor.> 3) Read the «Steering Angle Sensor» displayed on display.	Is the reading of «Steering Angle Sensor» -10° — 10°?	Perform the VDC sensor midpoint setting mode. <Ref. to VDC-23, VDC SENSOR MIDPOINT SETTING MODE (MODELS WITHOUT EyeSight), ADJUSTMENT, VDC Control Module and Hydraulic Control Unit (VDCCM&H/U).> Go to step 7.	Check the installation of the steering wheel and steering angle sensor.
7 CHECK VDCCM&H/U. 1) Turn the ignition switch to OFF. 2) Connect all connectors. 3) Perform the Clear Memory Mode. <Ref. to VDC(diag)-26, Clear Memory Mode.> 4) Perform the Inspection Mode. <Ref. to VDC(diag)-25, Inspection Mode.> 5) Read the DTC. <Ref. to VDC(diag)-24, Read Diagnostic Trouble Code (DTC).>	Is the same DTC displayed?	Replace the steering angle sensor. <Ref. to VDC-32, Steering Angle Sensor.>	Go to step 8.

Diagnostic Procedure with Diagnostic Trouble Code (DTC)

VEHICLE DYNAMICS CONTROL (VDC) (DIAGNOSTICS)

Step	Check	Yes	No
8 CHECK DETECTION OF OTHER DTCS FOR VDC. <Ref. to VDC(diag)-24, Read Diagnostic Trouble Code (DTC).>	Is any other DTC displayed?	Perform the diagnosis according to DTC. <Ref. to VDC(diag)-39, List of Diagnostic Trouble Code (DTC).>	Currently, it is normal. There may have been a temporary poor contact in the harness and connector or a temporary noise interference.

Diagnostic Procedure with Diagnostic Trouble Code (DTC)

VEHICLE DYNAMICS CONTROL (VDC) (DIAGNOSTICS)

AP:DTC C1721 YAW RATE SENSOR

DTC DETECTING CONDITION:

Defective yaw rate & G sensor

TROUBLE SYMPTOM:

- ABS does not operate.
- VDC does not operate.
- Hill start assist does not operate.

Step	Check	Yes	No
1 INTERVIEW CUSTOMERS. Check if the vehicle ran the road with banks or sandy surface (which does not mean a dirt road).	Did the vehicle run the road with banks or sandy surface (which does not mean a dirt road)?	VDCCM&H/U may record DTC when the vehicle ran the road with banks or sandy surface (which does not mean a dirt road).	Go to step 2.
2 CHECK INSTALLATION OF VDCCM&H/U.	Is VDCCM&H/U installed properly without being tilted? Is the bracket deformation-free? Are the VDCCM&H/U installation bolts installed without missing or getting loose?	Go to step 3.	Repair the defective part. • Install VDCCM&H/U properly. • Replace the bracket if faulty. • Tighten the VDCCM&H/U installation bolt. <Ref. to VDC-4, VDC CONTROL MODULE & HYDRAULIC CONTROL UNIT (VDCCM&H/U), COMPONENT, General Description.> Go to step 3.
3 CHECK OUTPUT OF YAW RATE & G SENSOR WITH SUBARU SELECT MONITOR. 1) Drive the vehicle on a flat road. 2) Park the vehicle straight. 3) Using the Subaru Select Monitor, select "Data monitor". <Ref. to VDC(diag)-15, READ CURRENT DATA, OPERATION, Subaru Select Monitor.> 4) Read the «Yaw Rate Sensor» displayed on display.	Is the reading of «Yaw Rate Sensor» $-4 \text{ deg/s} \text{ — } 4 \text{ deg/s}$?	Go to step 4.	Replace the VDCCM only. <Ref. to VDC-20, REPLACEMENT, VDC Control Module and Hydraulic Control Unit (VDCCM&H/U).>
4 CHECK OUTPUT OF STEERING ANGLE SENSOR WITH SUBARU SELECT MONITOR. 1) Drive the vehicle on a flat road. 2) Park the vehicle straight. 3) Using the Subaru Select Monitor, select "Data monitor". <Ref. to VDC(diag)-15, READ CURRENT DATA, OPERATION, Subaru Select Monitor.> 4) Read the «Steering Angle Sensor» displayed on display.	Is the reading of «Steering Angle Sensor» $-10^\circ \text{ — } 10^\circ$?	Go to step 5.	Perform the centering adjustment of steering wheel.

Diagnostic Procedure with Diagnostic Trouble Code (DTC)

VEHICLE DYNAMICS CONTROL (VDC) (DIAGNOSTICS)

Step	Check	Yes	No
5 CHECK VDCCM&H/U. 1) Turn the ignition switch to OFF. 2) Perform the Clear Memory Mode. <Ref. to VDC(diag)-26, Clear Memory Mode.> 3) Perform the Inspection Mode. <Ref. to VDC(diag)-25, Inspection Mode.> 4) Read the DTC. <Ref. to VDC(diag)-24, Read Diagnostic Trouble Code (DTC).>	Is the same DTC displayed?	Replace the VDCCM only. <Ref. to VDC-20, REPLACEMENT, VDC Control Module and Hydraulic Control Unit (VDCCM&H/U).>	Go to step 6.
6 CHECK DETECTION OF OTHER DTCS FOR VDC. <Ref. to VDC(diag)-24, Read Diagnostic Trouble Code (DTC).>	Is any other DTC displayed?	Perform the diagnosis according to DTC. <Ref. to VDC(diag)-39, List of Diagnostic Trouble Code (DTC).>	Currently, it is normal. There may have been a temporary poor contact in the harness and connector or a temporary noise interference.

AQ:DTC C1731 G SENSOR ABNORMAL

NOTE:

For the diagnostic procedure, refer to "DTC C1732 LATERAL G SENSOR". <Ref. to VDC(diag)-88, DTC C1732 LATERAL G SENSOR, Diagnostic Procedure with Diagnostic Trouble Code (DTC).>

Diagnostic Procedure with Diagnostic Trouble Code (DTC)

VEHICLE DYNAMICS CONTROL (VDC) (DIAGNOSTICS)

AR:DTC C1732 LATERAL G SENSOR

DTC detecting condition:

Defective lateral G sensor

Trouble symptom:

- ABS does not operate.
- VDC does not operate.
- Hill start assist does not operate.

Step	Check	Yes	No
1	CHECK INSTALLATION OF VDCCM&H/U. Is VDCCM&H/U installed properly without being tilted? Is the bracket deformation-free? Are the VDCCM&H/U installation bolts installed without missing or getting loose?	Go to step 2.	Repair the defective part. • Install VDCCM&H/U properly. • Replace the bracket if faulty. • Tighten the VDCCM&H/U installation bolt. <Ref. to VDC-4, VDC CONTROL MODULE & HYDRAULIC CONTROL UNIT (VDCCM&H/U), COMPONENT, General Description.> Go to step 2.
2	CHECK OUTPUT OF STEERING ANGLE SENSOR USING SUBARU SELECT MONITOR. 1) Park the vehicle straight on a level surface. 2) Using the Subaru Select Monitor, select "Data monitor". <Ref. to VDC(diag)-15, READ CURRENT DATA, OPERATION, Subaru Select Monitor.> 3) Read the «Steering Angle Sensor» displayed on display.	Go to step 3.	Check the installation of steering angle sensor.
3	CHECK OUTPUT OF LATERAL G SENSOR AND LONGITUDINAL G SENSOR WITH SUBARU SELECT MONITOR. 1) Park the vehicle straight on a level surface. 2) Using the Subaru Select Monitor, select "Data monitor". <Ref. to VDC(diag)-15, READ CURRENT DATA, OPERATION, Subaru Select Monitor.> 3) Read the «Lateral G Sensor» «Longitudinal G Sensor» displayed on display.	Go to step 4.	Recheck from step 1, and if the problem is not solved, Go to step 7.
4	SET 0 POINT OF LATERAL G SENSOR AND LONGITUDINAL G SENSOR WITH SUBARU SELECT MONITOR. 1) Using the Subaru Select Monitor, select "Work Support". 2) Perform the VDC sensor midpoint setting mode. <Ref. to VDC-23, VDC SENSOR MIDPOINT SETTING MODE (MODELS WITHOUT EyeSight), ADJUSTMENT, VDC Control Module and Hydraulic Control Unit (VDCCM&H/U).>	Go to step 5.	Recheck from step 1, and when the 0 point setting is not possible, replace the VDCCM only. <Ref. to VDC-20, REPLACEMENT, VDC Control Module and Hydraulic Control Unit (VDCCM&H/U).>

Diagnostic Procedure with Diagnostic Trouble Code (DTC)

VEHICLE DYNAMICS CONTROL (VDC) (DIAGNOSTICS)

Step	Check	Yes	No
5 PERFORM DRIVING TEST. Drive approximately 10 minutes, and check if the warning lights illuminate or improperly operate during driving. In a safe place, drive the vehicle while alternating acceleration and deceleration as much as possible.	Did the ABS warning light or VDC warning light remain off? Does ABS or VDC operate without malfunction?	Go to step 6.	Recheck from step 1, and when the warning lights illuminate or improperly operate, replace the VDCCM only. <Ref. to VDC-20, REPLACEMENT, VDC Control Module and Hydraulic Control Unit (VDCCM&H/U).>
6 CHECK OUTPUT OF LATERAL G SENSOR AND LONGITUDINAL G SENSOR WITH SUBARU SELECT MONITOR. 1) Park the vehicle on a level surface. 2) Using the Subaru Select Monitor, select "Data monitor". <Ref. to VDC(diag)-15, READ CURRENT DATA, OPERATION, Subaru Select Monitor.> 3) Read the «Lateral G Sensor» «Longitudinal G Sensor» displayed on display.	Are the values of «Lateral G Sensor» «Longitudinal G Sensor» $-1.5 - 1.5 \text{ m/s}^2$?	Currently, it is normal. There may have been a temporary poor contact in the harness and connector or a temporary noise interference.	Recheck from step 1, and if the problem is not solved, replace the VDCCM only. <Ref. to VDC-20, REPLACEMENT, VDC Control Module and Hydraulic Control Unit (VDCCM&H/U).>
7 CHECK OUTPUT OF LATERAL G SENSOR AND LONGITUDINAL G SENSOR WITH SUBARU SELECT MONITOR. 1) Remove the VDCCM&H/U installation bolt and bracket. 2) Keep VDCCM&H/U in a horizontal position. 3) Using the Subaru Select Monitor, select "Data monitor". <Ref. to VDC(diag)-15, READ CURRENT DATA, OPERATION, Subaru Select Monitor.> 4) Read the «Lateral G Sensor» «Longitudinal G Sensor» displayed on display.	When the VDCCM&H/U is in a horizontal position, are the values of «Lateral G Sensor» «Longitudinal G Sensor» $-1.5 - 1.5 \text{ m/s}^2$?	Check the bracket and brake pipe, and install VDCCM&H/U in a horizontal position to the vehicle.	Replace the VDCCM only. <Ref. to VDC-20, REPLACEMENT, VDC Control Module and Hydraulic Control Unit (VDCCM&H/U).>

AS:DTC C1733 LONGITUDINAL G SENSOR

DTC DETECTING CONDITION:

Defective longitudinal G sensor

TROUBLE SYMPTOM:

- ABS does not operate.
- VDC does not operate.
- Hill start assist does not operate.

NOTE:

For the diagnostic procedure, refer to "DTC C1732 LATERAL G SENSOR". <Ref. to VDC(diag)-88, DTC C1732 LATERAL G SENSOR, Diagnostic Procedure with Diagnostic Trouble Code (DTC).>

Diagnostic Procedure with Diagnostic Trouble Code (DTC)

VEHICLE DYNAMICS CONTROL (VDC) (DIAGNOSTICS)

AT:DTC C1741 PRESSURE SENSOR

DTC detecting condition:

Defective pressure sensor

Trouble symptom:

- ABS does not operate.
- VDC does not operate.
- Hill start assist does not operate.

Step	Check	Yes	No
1 CHECK STOP LIGHT SWITCH CIRCUIT AND INSTALLATION CONDITION. Check the stop light switch circuit and the installation condition.	Is the check result OK?	Go to step 2.	Repair the stop light switch circuit or correct the installation condition. NOTE: If there is malfunction in the stop light circuit, DTC may be recorded in the memory.
2 CHECK OUTPUT OF PRESSURE SENSOR WITH SUBARU SELECT MONITOR. 1) Using the Subaru Select Monitor, select "Data monitor". <Ref. to VDC(diag)-15, READ CURRENT DATA, OPERATION, Subaru Select Monitor.> 2) Read the «Master Cylinder Pressure Sensor» displayed on display.	With the brake pedal released, does the value for «Master Cylinder Pressure Sensor» fall within 0 — 11 bar?	Go to step 3.	Replace the VDCCM&H/U. <Ref. to VDC-9, VDC Control Module and Hydraulic Control Unit (VDCCM&H/U).>
3 CHECK OUTPUT OF PRESSURE SENSOR WITH SUBARU SELECT MONITOR. 1) Using the Subaru Select Monitor, select "Data monitor". <Ref. to VDC(diag)-15, READ CURRENT DATA, OPERATION, Subaru Select Monitor.> 2) Read the «Master Cylinder Pressure Sensor» displayed on display.	When the brake pedal is operated, does the value of «Master Cylinder Pressure Sensor» change in accordance with the brake pedal?	Go to step 4.	Replace the VDCCM&H/U. <Ref. to VDC-9, VDC Control Module and Hydraulic Control Unit (VDCCM&H/U).>
4 CHECK VDCCM&H/U. 1) Perform the Clear Memory Mode. <Ref. to VDC(diag)-26, Clear Memory Mode.> 2) Perform the Inspection Mode. <Ref. to VDC(diag)-25, Inspection Mode.> 3) Read the DTC. <Ref. to VDC(diag)-24, Read Diagnostic Trouble Code (DTC).>	Is the same DTC displayed?	Replace the VDCCM&H/U. <Ref. to VDC-9, VDC Control Module and Hydraulic Control Unit (VDCCM&H/U).>	Go to step 5.
5 CHECK DETECTION OF OTHER DTCS FOR VDC. <Ref. to VDC(diag)-24, Read Diagnostic Trouble Code (DTC).>	Is any other DTC displayed?	Perform the diagnosis according to DTC. <Ref. to VDC(diag)-39, List of Diagnostic Trouble Code (DTC).>	Currently, it is normal. There may have been a temporary poor contact in the harness and connector or a temporary noise interference.

Diagnostic Procedure with Diagnostic Trouble Code (DTC)

VEHICLE DYNAMICS CONTROL (VDC) (DIAGNOSTICS)

AU:DTC C1811 SYSTEM

DTC detecting condition:

ABS and VDC long time sequential control

Trouble symptom:

- ABS does not operate.
- VDC does not operate.
- EBD may not operate.
- Hill start assist does not operate.

Step	Check	Yes	No
1	CHECK INSTALLATION OF VDCCM&H/U. Is VDCCM&H/U installed properly without being tilted? Is the bracket deformation-free? Are the VDCCM&H/U installation bolts installed without missing or getting loose?	Go to step 2.	Repair the defective part. • Install VDCCM&H/U properly. • Replace the bracket if faulty. • Tighten the VDCCM&H/U installation bolt. <Ref. to VDC-4, VDC CONTROL MODULE & HYDRAULIC CONTROL UNIT (VDCCM&H/U), COMPONENT, General Description.> Go to step 2.
2	CHECK STEERING WHEEL. 1) Drive the vehicle on a flat road. 2) Park the vehicle straight. 3) Check the steering wheel for deviation from center.	Go to step 3.	Perform the centering adjustment of steering wheel, and perform the VDC sensor midpoint setting mode. <Ref. to VDC-23, VDC SENSOR MIDPOINT SETTING MODE (MODELS WITHOUT EyeSight), ADJUSTMENT, VDC Control Module and Hydraulic Control Unit (VDCCM&H/U).> Go to step 3.
3	CHECK OUTPUT OF STEERING ANGLE SENSOR USING SUBARU SELECT MONITOR. 1) Adjust steering wheel to the center position. 2) Using the Subaru Select Monitor, select "Data monitor". <Ref. to VDC(diag)-15, READ CURRENT DATA, OPERATION, Subaru Select Monitor.> 3) Read the «Steering Angle Sensor» displayed on display.	Go to step 4.	Check the installation of the steering wheel and steering angle sensor, and correct the installation if it is improper. If the installation condition is correct, replace the sensor.

Diagnostic Procedure with Diagnostic Trouble Code (DTC)

Diagnostic Procedure with Diagnostic Trouble Code (DTC)

VEHICLE DYNAMICS CONTROL (VDC) (DIAGNOSTICS)

BH:DTC C0027 REAR LEFT ABS SENSOR CIRCUIT OPEN OR SHORT

DTC detecting condition:

- Defective ABS wheel speed sensor (broken wire, input voltage too high)
- Defective harness connector

Trouble symptom:

- ABS does not operate.
- VDC does not operate.
- EyeSight does not operate.

Wiring diagram:

Vehicle dynamics control system <Ref. to WI-233, WITH EyeSight, WIRING DIAGRAM, Vehicle Dynamics Control System.>

VDC10158

Diagnostic Procedure with Diagnostic Trouble Code (DTC)

VEHICLE DYNAMICS CONTROL (VDC) (DIAGNOSTICS)

VDC10159

Step	Check	Yes	No
1 CHECK POOR CONTACT OF CONNECTOR. Check if there is poor contact between VDCCM&H/U and ABS wheel speed sensor.	Is there poor contact?	Repair the connector.	Go to step 2.
2 CHECK HARNESS CONNECTOR BETWEEN VDCCM&H/U AND ABS WHEEL SPEED SENSOR (CHECK FOR OPEN CIRCUIT). 1) Turn the ignition switch to OFF. 2) Disconnect the connector (B310) from the VDCCM&H/U. 3) Disconnect the connector from ABS wheel speed sensor. 4) Measure the resistance between VDCCM&H/U connector and ABS wheel speed sensor connector. Connector & terminal DTC C0021 (B310) No. 6 — (B6) No. 1: (B310) No. 5 — (B6) No. 2: DTC C0023 (B310) No. 8 — (B15) No. 1: (B310) No. 9 — (B15) No. 2: DTC C0025 (B310) No. 12 — (R72) No. 1: (B310) No. 11 — (R72) No. 2: DTC C0027 (B310) No. 2 — (R73) No. 1: (B310) No. 3 — (R73) No. 2:	Is the resistance less than 1 Ω?	Go to step 3.	Repair the harness connector between VDCCM&H/U and ABS wheel speed sensor.

Diagnostic Procedure with Diagnostic Trouble Code (DTC)

VEHICLE DYNAMICS CONTROL (VDC) (DIAGNOSTICS)

Step	Check	Yes	No
3 CHECK GROUND SHORT OF HARNESS. Measure the resistance between VDCCM&H/U connector and chassis ground. Connector & terminal DTC C0021 (B310) No. 6 — Chassis ground: DTC C0023 (B310) No. 8 — Chassis ground: DTC C0025 (B310) No. 12 — Chassis ground: DTC C0027 (B310) No. 2 — Chassis ground:	Is the resistance 1 M Ω or more?	Go to step 4.	Repair the harness connector between VDCCM&H/U and ABS wheel speed sensor.
4 CHECK ABS WHEEL SPEED SENSOR POWER SUPPLY CIRCUIT. 1) Connect the VDCCM&H/U connector. 2) Turn the ignition switch to ON. 3) Measure the voltage between ABS wheel speed sensor connector and chassis ground. Connector & terminal DTC C0021 (B6) No. 2 (+) — Chassis ground (-): DTC C0023 (B15) No. 2 (+) — Chassis ground (-): DTC C0025 (R72) No. 2 (+) — Chassis ground (-): DTC C0027 (R73) No. 2 (+) — Chassis ground (-):	Is the voltage 5 — 16 V?	Go to step 6.	Go to step 5.
5 CHECK VDCCM&H/U POWER SUPPLY CIRCUIT. 1) Turn the ignition switch to OFF. 2) Disconnect the VDCCM&H/U connector. 3) Turn the ignition switch to ON. 4) Measure the voltage between VDCCM&H/U connector terminals. Connector & terminal (B310) No. 1 (+) — (B310) No. 26 (-): (B310) No. 14 (+) — (B310) No. 26 (-): (B310) No. 20 (+) — (B310) No. 26 (-):	Is the voltage 10 — 15 V?	Go to step 6.	Check the generator, battery and VDCCM&H/U power supply circuit.
6 CHECK ABS WHEEL SPEED SENSOR SIGNAL. 1) Prepare an oscilloscope. 2) Check the ABS wheel speed sensor. <Ref. to VDC-37, CHECK ABS WHEEL SPEED SENSOR UNIT, INSPECTION, Front ABS Wheel Speed Sensor.> <Ref. to VDC-41, CHECK ABS WHEEL SPEED SENSOR UNIT, INSPECTION, Rear ABS Wheel Speed Sensor.>	Does the oscilloscope indicate the waveform pattern as shown in the figure?	Go to step 7.	Replace the ABS wheel speed sensor. <Ref. to VDC-35, Front ABS Wheel Speed Sensor.> <Ref. to VDC-38, Rear ABS Wheel Speed Sensor.>
7 CHECK VDCCM&H/U. 1) Connect all connectors. 2) Perform the Clear Memory Mode. <Ref. to VDC(diag)-26, Clear Memory Mode.> 3) Perform the Inspection Mode. <Ref. to VDC(diag)-25, Inspection Mode.> 4) Read the DTC. <Ref. to VDC(diag)-24, Read Diagnostic Trouble Code (DTC).>	Is the same DTC displayed?	Replace the VDCCM&H/U. <Ref. to VDC-9, VDC Control Module and Hydraulic Control Unit (VDCCM&H/U).>	Go to step 8.

Diagnostic Procedure with Diagnostic Trouble Code (DTC)

VEHICLE DYNAMICS CONTROL (VDC) (DIAGNOSTICS)

Step	Check	Yes	No
8 CHECK DETECTION OF OTHER DTCS FOR VDC. <Ref. to VDC(diag)-24, Read Diagnostic Trouble Code (DTC).>	Is any other DTC displayed?	Perform the diagnosis according to DTC. <Ref. to VDC(diag)-39, List of Diagnostic Trouble Code (DTC).>	Currently, it is normal. There may have been a temporary poor contact in the harness and connector or a temporary noise interference.

BI: DTC C0022 FRONT RIGHT ABS SENSOR SIGNAL

NOTE:

For the diagnostic procedure, refer to “DTC C0028 REAR LEFT ABS SENSOR SIGNAL”. <Ref. to VDC(diag)-99, DTC C0028 REAR LEFT ABS SENSOR SIGNAL, Diagnostic Procedure with Diagnostic Trouble Code (DTC).>

BJ:DTC C0024 FRONT LEFT ABS SENSOR SIGNAL

NOTE:

For the diagnostic procedure, refer to “DTC C0028 REAR LEFT ABS SENSOR SIGNAL”. <Ref. to VDC(diag)-99, DTC C0028 REAR LEFT ABS SENSOR SIGNAL, Diagnostic Procedure with Diagnostic Trouble Code (DTC).>

BK:DTC C0026 REAR RIGHT ABS SENSOR SIGNAL

NOTE:

For the diagnostic procedure, refer to “DTC C0028 REAR LEFT ABS SENSOR SIGNAL”. <Ref. to VDC(diag)-99, DTC C0028 REAR LEFT ABS SENSOR SIGNAL, Diagnostic Procedure with Diagnostic Trouble Code (DTC).>

Diagnostic Procedure with Diagnostic Trouble Code (DTC)

VEHICLE DYNAMICS CONTROL (VDC) (DIAGNOSTICS)

BL:DTC C0028 REAR LEFT ABS SENSOR SIGNAL

DTC DETECTING CONDITION:

- Defective ABS wheel speed sensor signal (noise, irregular signal, etc.)
- Defective harness connector

TROUBLE SYMPTOM:

- ABS does not operate.
- VDC does not operate.
- EyeSight does not operate.

Step	Check	Yes	No
1 CHECK ABS WHEEL SPEED SENSOR AND FREEZE FRAME DATA USING SUBARU SELECT MONITOR. 1) Using the Subaru Select Monitor, check the freeze frame data when DTC is detected. <Ref. to VDC(diag)-17, READ FREEZE FRAME DATA, OPERATION, Subaru Select Monitor.> 2) Compare «FR Wheel Speed», «FL Wheel Speed», «RR Wheel Speed» and «RL Wheel Speed» to determine a sensor that is not indicating the same value. 3) Check the current data of the wheel speed sensor that is not indicating the same value. <Ref. to VDC(diag)-15, READ CURRENT DATA, OPERATION, Subaru Select Monitor.>	Does the speed indicated on the data monitor change in response to the speedometer reading during acceleration/ deceleration when the steering wheel is in the straight-ahead position? In addition, are the wheel speeds of the freeze frame data for 4 wheels almost the same?	Go to step 2.	Go to step 7.
2 CHECK POOR CONTACT OF CONNECTOR. 1) Turn the ignition switch to OFF. 2) Check for poor contact of the connector between VDCCM&H/U and ABS wheel speed sensor.	Is there poor contact of connectors between VDCCM&H/U and ABS wheel speed sensor?	Repair the connector.	Go to step 3.
3 CHECK CAUSE OF SIGNAL NOISE. Make sure the radio wave devices and electronic components are installed correctly.	Are the radio wave devices and electronic components installed correctly?	Go to step 4.	Install the radio wave devices and electronic components properly.
4 CHECK CAUSE OF SIGNAL NOISE. Check if the noise sources (such as an antenna) are installed near the sensor harness.	Are noise sources installed?	Install the noise sources apart from sensor harness.	Go to step 5.
5 CHECK VDCCM&H/U. 1) Connect all connectors. 2) Perform the Clear Memory Mode. <Ref. to VDC(diag)-26, Clear Memory Mode.> 3) Perform the Inspection Mode. <Ref. to VDC(diag)-25, Inspection Mode.> 4) Read the DTC. <Ref. to VDC(diag)-24, Read Diagnostic Trouble Code (DTC).>	Is the same DTC displayed?	Replace the VDCCM&H/U. <Ref. to VDC-9, VDC Control Module and Hydraulic Control Unit (VDCCM&H/U).>	Go to step 6.
6 CHECK DETECTION OF OTHER DTCS FOR VDC. <Ref. to VDC(diag)-24, Read Diagnostic Trouble Code (DTC).>	Is any other DTC displayed?	Perform the diagnosis according to DTC. <Ref. to VDC(diag)-39, List of Diagnostic Trouble Code (DTC).>	Currently, it is normal. There may have been a temporary poor contact in the harness and connector or a temporary noise interference.
7 CHECK INSTALLATION OF ABS WHEEL SPEED SENSOR.	Is the ABS wheel speed sensor installation bolt tightened to 7.5 N·m (0.76 kgf·m, 5.5 ft·lb)?	Go to step 8.	Tighten the ABS wheel speed sensor installation bolts.

Diagnostic Procedure with Diagnostic Trouble Code (DTC)

VEHICLE DYNAMICS CONTROL (VDC) (DIAGNOSTICS)

Step	Check	Yes	No
8 CHECK ABS WHEEL SPEED SENSOR SIGNAL. 1) Prepare an oscilloscope. 2) Check the ABS wheel speed sensor. <Ref. to VDC-37, CHECK ABS WHEEL SPEED SENSOR UNIT, INSPECTION, Front ABS Wheel Speed Sensor.> <Ref. to VDC-41, CHECK ABS WHEEL SPEED SENSOR UNIT, INSPECTION, Rear ABS Wheel Speed Sensor.>	Does the oscilloscope indicate the waveform pattern like shown in the figure when the tire is slowly turned? Does the oscilloscope indication repeat the waveform pattern like shown in the figure when the tire is slowly turned in equal speed for one rotation or more?	Go to step 10.	Go to step 9.
9 CHECK ABS WHEEL SPEED SENSOR OR MAGNETIC ENCODER.	Are there foreign matter, breakage or damage at the tip of ABS wheel speed sensor or magnetic encoder?	Remove dirt thoroughly. Also replace the ABS wheel speed sensor or magnetic encoder as a unit with hub unit bearing if it is broken or damaged.	Go to step 10.
10 CHECK CAUSE OF SIGNAL NOISE. Make sure the radio wave devices and electronic components are installed correctly.	Are the radio wave devices and electronic components installed correctly?	Go to step 11.	Install the radio wave devices and electronic components properly.
11 CHECK CAUSE OF SIGNAL NOISE. Check if the noise sources (such as an antenna) are installed near the sensor harness.	Are noise sources installed?	Install the noise sources apart from sensor harness.	Go to step 12.
12 CHECK VDCCM&H/U. 1) Connect all connectors. 2) Perform the Clear Memory Mode. <Ref. to VDC(diag)-26, Clear Memory Mode.> 3) Perform the Inspection Mode. <Ref. to VDC(diag)-25, Inspection Mode.> 4) Read the DTC. <Ref. to VDC(diag)-24, Read Diagnostic Trouble Code (DTC).>	Is the same DTC displayed?	Go to step 13.	Go to step 14.
13 CHECK FREEZE FRAME DATA OF ABS WHEEL SPEED SENSOR USING SUBARU SELECT MONITOR. 1) Using the Subaru Select Monitor, select "Freeze frame data". <Ref. to VDC(diag)-17, READ FREEZE FRAME DATA, OPERATION, Subaru Select Monitor.> 2) Read the ABS wheel speed sensor output.	Is the ABS wheel speed sensor output different compared with other wheels?	Replace the ABS wheel speed sensor which has a difference. <Ref. to VDC-35, Front ABS Wheel Speed Sensor.> <Ref. to VDC-38, Rear ABS Wheel Speed Sensor.>	Replace the VDCCM&H/U. <Ref. to VDC-9, VDC Control Module and Hydraulic Control Unit (VDCCM&H/U).>

Diagnostic Procedure with Diagnostic Trouble Code (DTC)

VEHICLE DYNAMICS CONTROL (VDC) (DIAGNOSTICS)

Step	Check	Yes	No
14 CHECK DETECTION OF OTHER DTCS FOR VDC. <Ref. to VDC(diag)-24, Read Diagnostic Trouble Code (DTC).>	Is any other DTC displayed?	Perform the diagnosis according to DTC. <Ref. to VDC(diag)-39, List of Diagnostic Trouble Code (DTC).>	Currently, it is normal. There may have been a temporary poor contact in the harness and connector or a temporary noise interference. NOTE: Though the ABS warning light, and the VDC warning light & VDC indicator light remain lit at this point, this is normal. Drive the vehicle at 12 km/h (7 MPH) or more in order to turn off the ABS warning light, and the VDC warning light & VDC indicator light. Be sure to drive the vehicle and check that the warning light goes off.

Diagnostic Procedure with Diagnostic Trouble Code (DTC)

VEHICLE DYNAMICS CONTROL (VDC) (DIAGNOSTICS)

BX:DTC C0064 NORMAL CLOSING VALVE 2 MALFUNCTION

DTC detecting condition:

- Defective harness connector
- Defective VDCH/U solenoid valve

Trouble symptom:

- ABS does not operate.
- EBD does not operate.
- VDC does not operate.
- EyeSight does not operate.

Wiring diagram:

Vehicle dynamics control system <Ref. to WI-233, WITH EyeSight, WIRING DIAGRAM, Vehicle Dynamics Control System.>

VDC10159

Step	Check	Yes	No
1 CHECK VDCCM&H/U INPUT VOLTAGE. 1) Turn the ignition switch to OFF. 2) Disconnect the connector from the VDCCM&H/U. 3) Run the engine at idle. 4) Measure the voltage between VDCCM&H/U connector and chassis ground. Connector & terminal (B310) No. 1 (+) — Chassis ground (-): (B310) No. 14 (+) — Chassis ground (-): (B310) No. 20 (+) — Chassis ground (-):	Is the voltage 10 — 15 V?	Go to step 2.	Repair the power supply circuit including the battery.
2 CHECK VDCCM&H/U GROUND CIRCUIT (CHECK FOR OPEN CIRCUIT). 1) Turn the ignition switch to OFF. 2) Measure the resistance between VDCCM&H/U connector and chassis ground. Connector & terminal (B310) No. 26 — Chassis ground:	Is the resistance less than 10 Ω?	Go to step 3.	Repair the VDCCM&H/U ground harness.

Diagnostic Procedure with Diagnostic Trouble Code (DTC)

VEHICLE DYNAMICS CONTROL (VDC) (DIAGNOSTICS)

Step	Check	Yes	No
3 CHECK POOR CONTACT OF CONNECTORS.	Is there poor contact of connector between generator, battery and VDCCM&H/U?	Repair the connector.	Go to step 4.
4 CHECK VDCCM&H/U. 1) Connect all connectors. 2) Perform the Clear Memory Mode. <Ref. to VDC(diag)-26, Clear Memory Mode.> 3) Perform the Inspection Mode. <Ref. to VDC(diag)-25, Inspection Mode.> 4) Read the DTC. <Ref. to VDC(diag)-24, Read Diagnostic Trouble Code (DTC).>	Is the same DTC displayed?	Replace the VDCCM&H/U. <Ref. to VDC-9, VDC Control Module and Hydraulic Control Unit (VDCCM&H/U).>	Go to step 5.
5 CHECK DETECTION OF OTHER DTCS FOR VDC. <Ref. to VDC(diag)-24, Read Diagnostic Trouble Code (DTC).>	Is any other DTC displayed?	Perform the diagnosis according to DTC. <Ref. to VDC(diag)-39, List of Diagnostic Trouble Code (DTC).>	Currently, it is normal. There may have been a temporary poor contact in the harness and connector or a temporary noise interference.

Diagnostic Procedure with Diagnostic Trouble Code (DTC)

VEHICLE DYNAMICS CONTROL (VDC) (DIAGNOSTICS)

BY:DTC C0041 ECM

DTC detecting condition:

Defective VDCCM&H/U

Trouble symptom:

- ABS does not operate.
- EBD does not operate.
- VDC does not operate.
- EyeSight does not operate.

Wiring diagram:

Vehicle dynamics control system <Ref. to WI-233, WITH EyeSight, WIRING DIAGRAM, Vehicle Dynamics Control System.>

VDC10160

Step	Check	Yes	No
1 CHECK VDCCM&H/U GROUND CIRCUIT (CHECK FOR OPEN CIRCUIT). 1) Turn the ignition switch to OFF. 2) Disconnect the connector from the VDCCM&H/U. 3) Measure the resistance between VDCCM&H/U and chassis ground. Connector & terminal (B310) No. 26 — Chassis ground:	Is the resistance less than 10 Ω ?	Go to step 2.	Repair the VDCCM&H/U ground harness.
2 CHECK POOR CONTACT OF CONNECTORS.	Is there poor contact of the connector between the battery, ignition switch and VDCCM&H/U?	Repair the connector.	Go to step 3.
3 CHECK CAUSE OF SIGNAL NOISE.	Are the radio wave devices and electronic components installed correctly?	Go to step 4.	Install the radio wave devices and electronic components properly.
4 CHECK CAUSE OF SIGNAL NOISE.	Is there a noise source (such as an antenna) installed near the sensor harness and VDCCM?	Install the noise sources apart from sensor harness and VDCCM.	Go to step 5.

Diagnostic Procedure with Diagnostic Trouble Code (DTC)

VEHICLE DYNAMICS CONTROL (VDC) (DIAGNOSTICS)

Step	Check	Yes	No
5 CHECK VDCCM&H/U. 1) Connect all connectors. 2) Perform the Clear Memory Mode. <Ref. to VDC(diag)-26, Clear Memory Mode.> 3) Perform the Inspection Mode. <Ref. to VDC(diag)-25, Inspection Mode.> 4) Read the DTC. <Ref. to VDC(diag)-24, Read Diagnostic Trouble Code (DTC).>	Is the same DTC displayed?	Replace the VDCCM&H/U. <Ref. to VDC-9, VDC Control Module and Hydraulic Control Unit (VDCCM&H/U).>	Go to step 6.
6 CHECK DETECTION OF OTHER DTCS FOR VDC. <Ref. to VDC(diag)-24, Read Diagnostic Trouble Code (DTC).>	Is any other DTC displayed?	Perform the diagnosis according to DTC. <Ref. to VDC(diag)-39, List of Diagnostic Trouble Code (DTC).>	Currently, it is normal. There may have been a temporary poor contact in the harness and connector or a temporary noise interference.

Diagnostic Procedure with Diagnostic Trouble Code (DTC)

VEHICLE DYNAMICS CONTROL (VDC) (DIAGNOSTICS)

BZ:DTC C0041 PARAMETER SELECTION ERROR

DTC DETECTING CONDITION:

VDCCM parameter selection error

TROUBLE SYMPTOM:

- ABS does not operate.
- EBD does not operate.
- VDC does not operate.
- EyeSight does not operate.

NOTE:

When the VDCCM&H/U is replaced, this DTC may be stored.

	Step	Check	Yes	No
1	CHECK VDCCM&H/U IDENTIFICATION SYMBOL. Check the identification symbol attached on the H/U. <Ref. to VDC-2, SPECIFICATION, General Description.>	Is the identification symbol correct?	Go to step 2.	Replace the VDCCM&H/U. <Ref. to VDC-9, VDC Control Module and Hydraulic Control Unit (VDCCM&H/U).>
2	CHECK PARAMETER SELECTED IN VDCCM. <Ref. to VDC(diag)-19, PARAMETER CHECK, OPERATION, Subaru Select Monitor.>	Does the parameter registered in the VDCCM match the relevant vehicle?	Replace the VDCCM&H/U. <Ref. to VDC-9, VDC Control Module and Hydraulic Control Unit (VDCCM&H/U).>	Select and register the correct parameter. <Ref. to VDC(diag)-19, PARAMETER SELECTION, OPERATION, Subaru Select Monitor.>

Diagnostic Procedure with Diagnostic Trouble Code (DTC)

VEHICLE DYNAMICS CONTROL (VDC) (DIAGNOSTICS)

CA:DTC C0042 POWER SUPPLY VOLTAGE FAILURE

DTC detecting condition:

Improper VDCCM&H/U power supply voltage

Trouble symptom:

- ABS does not operate.
- EBD may not operate.
- VDC does not operate.
- EyeSight does not operate.

NOTE:

Warning lights go off if voltage returns.

Wiring diagram:

Vehicle dynamics control system <Ref. to WI-233, WITH EyeSight, WIRING DIAGRAM, Vehicle Dynamics Control System.>

VDC10159

Step	Check	Yes	No
1 CHECK GENERATOR. 1) Start the engine. 2) Run the engine at idle after warming up. 3) Measure the voltage between generator terminal B and chassis ground. Terminals Generator terminal B (+) — Chassis ground (-):	Is the voltage 10 — 15 V?	Go to step 2.	Repair the generator.
2 CHECK BATTERY TERMINAL. Turn the ignition switch to OFF.	Are the positive and negative battery terminals clamped tightly?	Go to step 3.	Install the battery terminal correctly.

Diagnostic Procedure with Diagnostic Trouble Code (DTC)

VEHICLE DYNAMICS CONTROL (VDC) (DIAGNOSTICS)

Step	Check	Yes	No
3 CHECK VDCCM&H/U INPUT VOLTAGE. 1) Disconnect the connector from the VDCCM&H/U. 2) Run the engine at idle. 3) Operate devices such as headlights, air conditioner, defogger, etc. which produce an electrical load. 4) Measure the voltage between VDCCM&H/U connector and chassis ground. Connector & terminal (B310) No. 1 (+) — Chassis ground (-): (B310) No. 14 (+) — Chassis ground (-): (B310) No. 20 (+) — Chassis ground (-):	Is the voltage 10 — 15 V?	Go to step 4.	Repair the power supply circuit.
4 CHECK VDCCM&H/U GROUND CIRCUIT (CHECK FOR OPEN CIRCUIT). 1) Turn the ignition switch to OFF. 2) Measure the resistance between VDCCM&H/U connector and chassis ground. Connector & terminal (B310) No. 26 — Chassis ground:	Is the resistance less than 10 Ω ?	Go to step 5.	Repair the VDCCM&H/U ground harness.
5 CHECK POOR CONTACT OF CONNECTORS.	Is there poor contact of connector between generator, battery and VDCCM&H/U?	Repair the connector.	Go to step 6.
6 CHECK VDCCM&H/U. 1) Connect all connectors. 2) Perform the Clear Memory Mode. <Ref. to VDC(diag)-26, Clear Memory Mode.> 3) Perform the Inspection Mode. <Ref. to VDC(diag)-25, Inspection Mode.> 4) Read the DTC. <Ref. to VDC(diag)-24, Read Diagnostic Trouble Code (DTC).>	Is the same DTC displayed?	Replace the VDCCM&H/U. <Ref. to VDC-9, VDC Control Module and Hydraulic Control Unit (VDCCM&H/U).>	Go to step 7.
7 CHECK DETECTION OF OTHER DTCS FOR VDC. <Ref. to VDC(diag)-24, Read Diagnostic Trouble Code (DTC).>	Is any other DTC displayed?	Perform the diagnosis according to DTC. <Ref. to VDC(diag)-39, List of Diagnostic Trouble Code (DTC).>	Currently, it is normal. There may have been a temporary poor contact in the harness and connector or a temporary noise interference.

Diagnostic Procedure with Diagnostic Trouble Code (DTC)

VEHICLE DYNAMICS CONTROL (VDC) (DIAGNOSTICS)

CB:DTC C0044 TCM COMMUNICATION CIRCUIT

DTC detecting condition:

No CAN signal from TCM.

Trouble symptom:

- ABS does not operate.
- VDC does not operate.
- EyeSight does not operate.

Step	Check	Yes	No	
1	CHECK LAN SYSTEM. Perform the diagnosis for LAN system. <Ref. to LAN(diag)-2, Basic Diagnostic Procedure.>	Is there any fault in LAN system?	Perform the diagnosis according to DTC for LAN system. <Ref. to LAN(diag)-92, List of Diagnostic Trouble Code (DTC).>	Go to step 2.
2	CHECK POOR CONTACT OF CONNECTORS.	Is there poor contact of TCM connector?	Repair the connector.	Go to step 3.
3	CHECK TCM. Refer to the basic diagnostic procedure for Transmission (diagnostics).	Is the check result OK?	Go to step 4.	Replace the TCM. <Ref. to CVT(TR580)-148, Transmission Control Module (TCM).>
4	CHECK VDCCM&H/U. 1) Perform the Clear Memory Mode. <Ref. to VDC(diag)-26, Clear Memory Mode.> 2) Perform the Inspection Mode. <Ref. to VDC(diag)-25, Inspection Mode.> 3) Read the DTC. <Ref. to VDC(diag)-24, Read Diagnostic Trouble Code (DTC).>	Is the same DTC displayed?	Replace the VDCCM&H/U. <Ref. to VDC-9, VDC Control Module and Hydraulic Control Unit (VDCCM&H/U).>	Go to step 5.
5	CHECK DETECTION OF OTHER DTCS FOR VDC. <Ref. to VDC(diag)-24, Read Diagnostic Trouble Code (DTC).>	Is any other DTC displayed?	Perform the diagnosis according to DTC. <Ref. to VDC(diag)-39, List of Diagnostic Trouble Code (DTC).>	Currently, it is normal. There may have been a temporary poor contact in the harness and connector or a temporary noise interference.

Diagnostic Procedure with Diagnostic Trouble Code (DTC)

VEHICLE DYNAMICS CONTROL (VDC) (DIAGNOSTICS)

CC:DTC C0045 TCM MALFUNCTION

DTC detecting condition:

Defective TCM

Trouble symptom:

- ABS does not operate.
- VDC does not operate.
- EyeSight does not operate.

Step	Check	Yes	No
1 CHECK CVT SYSTEM. 1) Start the engine. 2) Read the DTC of the CVT system. <Ref. to CVT(diag)-19, Read Diagnostic Trouble Code (DTC).>	Is DTC of CVT system displayed?	Perform the diagnosis according to DTC. <Ref. to CVT(diag)-36, List of Diagnostic Trouble Code (DTC).>	Go to step 2.
2 CHECK VDCCM&H/U. 1) Perform the Clear Memory Mode. <Ref. to VDC(diag)-26, Clear Memory Mode.> 2) Perform the Inspection Mode. <Ref. to VDC(diag)-25, Inspection Mode.> 3) Read the DTC. <Ref. to VDC(diag)-24, Read Diagnostic Trouble Code (DTC).>	Is the same DTC displayed?	Replace the VDCCM&H/U. <Ref. to VDC-9, VDC Control Module and Hydraulic Control Unit (VDCCM&H/U).>	Go to step 3.
3 CHECK DETECTION OF OTHER DTCS FOR VDC. <Ref. to VDC(diag)-24, Read Diagnostic Trouble Code (DTC).>	Is any other DTC displayed?	Perform the diagnosis according to DTC. <Ref. to VDC(diag)-39, List of Diagnostic Trouble Code (DTC).>	Currently, it is normal. There may have been a temporary poor contact in the harness and connector or a temporary noise interference.

Diagnostic Procedure with Diagnostic Trouble Code (DTC)

VEHICLE DYNAMICS CONTROL (VDC) (DIAGNOSTICS)

CD:DTC C0045 INCORRECT VDC CONTROL MODULE SPECIFICATIONS

DTC detecting condition:

Different control module specification

Trouble symptom:

- ABS does not operate.
- VDC does not operate.
- EyeSight does not operate.

NOTE:

When parameter selection for VDCCM is improper, this DTC may be memorized.

Step	Check	Yes	No
1 CHECK VDCCM&H/U IDENTIFICATION SYMBOL. Check the identification symbol attached on the H/U. <Ref. to VDC-2, SPECIFICATION, General Description.>	Is the identification symbol correct?	Go to step 2.	Replace the VDCCM&H/U. <Ref. to VDC-9, VDC Control Module and Hydraulic Control Unit (VDCCM&H/U).>
2 CHECK PARAMETER SELECTED IN VDC-CM. <Ref. to VDC(diag)-19, PARAMETER CHECK, OPERATION, Subaru Select Monitor.>	Does the parameter registered in the VDCCM match the relevant vehicle?	Go to step 3.	Select and register the correct parameter. <Ref. to VDC(diag)-19, PARAMETER SELECTION, OPERATION, Subaru Select Monitor.>
3 CHECK TCM SPECIFICATION. Check the TCM specification.	Is the specification of TCM same as vehicle specification?	Go to step 4.	Replace the TCM. <Ref. to CVT(TR580)-148, Transmission Control Module (TCM).>
4 CHECK CVT SYSTEM. 1) Start the engine. 2) Read the DTC of the CVT system. <Ref. to CVT(diag)-19, Read Diagnostic Trouble Code (DTC).>	Is DTC of CVT system displayed?	Perform the diagnosis according to DTC. <Ref. to CVT(diag)-36, List of Diagnostic Trouble Code (DTC).>	Go to step 5.
5 CHECK ECM SPECIFICATION. Check the ECM specification.	Is the specification of ECM same as vehicle specification?	Go to step 6.	Replace the ECM. <Ref. to FU(H4DO)-98, Engine Control Module (ECM).>
6 CHECK ENGINE SYSTEM. 1) Start the engine. 2) Read DTC of the engine system. <Ref. to EN(H4DO)(diag)-49, Read Diagnostic Trouble Code (DTC).>	Is engine system DTC displayed?	Perform the diagnosis according to DTC. <Ref. to EN(H4DO)(diag)-96, List of Diagnostic Trouble Code (DTC).>	Go to step 7.
7 CHECK VDCCM&H/U. 1) Perform the Clear Memory Mode. <Ref. to VDC(diag)-26, Clear Memory Mode.> 2) Perform the Inspection Mode. <Ref. to VDC(diag)-25, Inspection Mode.> 3) Read the DTC. <Ref. to VDC(diag)-24, Read Diagnostic Trouble Code (DTC).>	Is the same DTC displayed?	Replace the VDCCM&H/U. <Ref. to VDC-9, VDC Control Module and Hydraulic Control Unit (VDCCM&H/U).>	Go to step 8.

Diagnostic Procedure with Diagnostic Trouble Code (DTC)

VEHICLE DYNAMICS CONTROL (VDC) (DIAGNOSTICS)

Step	Check	Yes	No
8 CHECK DETECTION OF OTHER DTCS FOR VDC. <Ref. to VDC(diag)-24, Read Diagnostic Trouble Code (DTC).>	Is any other DTC displayed?	Perform the diagnosis according to DTC. <Ref. to VDC(diag)-39, List of Diagnostic Trouble Code (DTC).>	Currently, it is normal. There may have been a temporary poor contact in the harness and connector or a temporary noise interference.

Diagnostic Procedure with Diagnostic Trouble Code (DTC)

VEHICLE DYNAMICS CONTROL (VDC) (DIAGNOSTICS)

CE:DTC C0046 BODY INTEGRATED MODULE COMMUNICATION CIRCUIT

DTC detecting condition:

No CAN signal received from body integrated unit.

Trouble symptom:

- VDC may not operate.
- Hill start assist does not operate.

Step	Check	Yes	No	
1	CHECK LAN SYSTEM. Perform the diagnosis for LAN system. <Ref. to LAN(diag)-2, Basic Diagnostic Procedure.>	Is there any fault in LAN system?	Perform the diagnosis according to DTC for LAN system. <Ref. to LAN(diag)-92, List of Diagnostic Trouble Code (DTC).>	Go to step 2.
2	CHECK POOR CONTACT OF CONNECTORS.	Is there poor contact of body integrated unit connector?	Repair the connector.	Go to step 3.
3	CHECK BODY INTEGRATED UNIT. Perform the diagnosis for body integrated unit. <Ref. to BC(diag)-2, Basic Diagnostic Procedure.>	Is the check result OK?	Go to step 4.	Perform the diagnosis according to DTC. <Ref. to BC(diag)-25, List of Diagnostic Trouble Code (DTC).>
4	CHECK VDCCM&H/U. 1) Connect all connectors. 2) Perform the Clear Memory Mode. <Ref. to VDC(diag)-26, Clear Memory Mode.> 3) Perform the Inspection Mode. <Ref. to VDC(diag)-25, Inspection Mode.> 4) Read the DTC. <Ref. to VDC(diag)-24, Read Diagnostic Trouble Code (DTC).>	Is the same DTC displayed?	Replace the VDCCM&H/U. <Ref. to VDC-9, VDC Control Module and Hydraulic Control Unit (VDCCM&H/U).>	Go to step 5.
5	CHECK DETECTION OF OTHER DTCS FOR VDC. <Ref. to VDC(diag)-24, Read Diagnostic Trouble Code (DTC).>	Is any other DTC displayed?	Perform the diagnosis according to DTC. <Ref. to VDC(diag)-39, List of Diagnostic Trouble Code (DTC).>	Currently, it is normal. There may have been a temporary poor contact in the harness and connector or a temporary noise interference.

Diagnostic Procedure with Diagnostic Trouble Code (DTC)

VEHICLE DYNAMICS CONTROL (VDC) (DIAGNOSTICS)

CF:DTC C0047 CAN COMMUNICATION

DTC DETECTING CONDITION:

CAN communication line circuit is open or shorted.

TROUBLE SYMPTOM:

- ABS does not operate.
- VDC does not operate.
- EyeSight does not operate.

Step	Check	Yes	No	
1	CHECK LAN SYSTEM. Perform the diagnosis for LAN system. <Ref. to LAN(diag)-2, Basic Diagnostic Procedure.>	Is there any fault in LAN system?	Perform the diagnosis according to DTC for LAN system. <Ref. to LAN(diag)-92, List of Diagnostic Trouble Code (DTC).>	Go to step 2.
2	CHECK POOR CONTACT OF CONNECTORS.	Is there poor contact of VDCCM&H/U connector?	Repair the connector.	Go to step 3.
3	CHECK OUTPUT OF STEERING ANGLE SENSOR WITH SUBARU SELECT MONITOR. 1) Using the Subaru Select Monitor, select "Data monitor". <Ref. to VDC(diag)-15, READ CURRENT DATA, OPERATION, Subaru Select Monitor.> 2) Check the «Steer Angle Sensor Op».	Does «Steer Angle Sensor Op» change?	Go to step 4.	Check output of the steering angle sensor. <Ref. to VDC(diag)-132, DTC C0071 STEER ANGLE SENSOR OP, Diagnostic Procedure with Diagnostic Trouble Code (DTC).>
4	CHECK VDCCM&H/U. 1) Connect all connectors. 2) Perform the Clear Memory Mode. <Ref. to VDC(diag)-26, Clear Memory Mode.> 3) Perform the Inspection Mode. <Ref. to VDC(diag)-25, Inspection Mode.> 4) Read the DTC. <Ref. to VDC(diag)-24, Read Diagnostic Trouble Code (DTC).>	Is the same DTC displayed?	Replace the VDCCM&H/U. <Ref. to VDC-9, VDC Control Module and Hydraulic Control Unit (VDCCM&H/U).>	Currently, it is normal. There may have been a temporary poor contact in the harness and connector or a temporary noise interference.

Diagnostic Procedure with Diagnostic Trouble Code (DTC)

VEHICLE DYNAMICS CONTROL (VDC) (DIAGNOSTICS)

CG:DTC C0049 CRUISE CONTROLLER ABNORMAL

DTC detecting condition:

Faulty signal is received from the stereo camera.

Trouble symptom:

- VDC may not operate.
- EyeSight does not operate.

Step	Check	Yes	No	
1	CHECK LAN SYSTEM. Perform the diagnosis for LAN system. <Ref. to LAN(diag)-2, Basic Diagnostic Procedure.>	Is there any fault in LAN system?	Perform the diagnosis according to DTC for LAN system. <Ref. to LAN(diag)-92, List of Diagnostic Trouble Code (DTC).>	Go to step 2.
2	CHECK POOR CONTACT OF CONNECTORS.	Is there poor contact of the stereo camera connector?	Repair the connector.	Go to step 3.
3	CHECK STEREO CAMERA. Perform the diagnosis for the EyeSight system. <Ref. to ES(diag)-2, Basic Diagnostic Procedure.>	Is the check result OK?	Go to step 4.	Perform the diagnosis according to DTC. <Ref. to ES(diag)-71, Diagnostic Procedure with Diagnostic Trouble Code (DTC).>
4	CHECK VDCCM&H/U. 1) Connect all connectors. 2) Perform the Clear Memory Mode. <Ref. to VDC(diag)-26, Clear Memory Mode.> 3) Perform the Inspection Mode. <Ref. to VDC(diag)-25, Inspection Mode.> 4) Read the DTC. <Ref. to VDC(diag)-24, Read Diagnostic Trouble Code (DTC).>	Is the same DTC displayed?	Replace the VDCCM&H/U. <Ref. to VDC-9, VDC Control Module and Hydraulic Control Unit (VDCCM&H/U).>	Go to step 5.
5	CHECK DETECTION OF OTHER DTCS FOR VDC. <Ref. to VDC(diag)-24, Read Diagnostic Trouble Code (DTC).>	Is any other DTC displayed?	Perform the diagnosis according to DTC. <Ref. to VDC(diag)-39, List of Diagnostic Trouble Code (DTC).>	Currently, it is normal. There may have been a temporary poor contact in the harness and connector or a temporary noise interference.

Diagnostic Procedure with Diagnostic Trouble Code (DTC)

VEHICLE DYNAMICS CONTROL (VDC) (DIAGNOSTICS)

CH:DTC C0051 VALVE RELAY

DTC detecting condition:

Defective valve relay

Trouble symptom:

- ABS does not operate.
- EBD does not operate.
- VDC does not operate.
- EyeSight does not operate.

Wiring diagram:

Vehicle dynamics control system <Ref. to WI-233, WITH EyeSight, WIRING DIAGRAM, Vehicle Dynamics Control System.>

VDC10159

Step	Check	Yes	No
1 CHECK VDCCM&H/U INPUT VOLTAGE. 1) Turn the ignition switch to OFF. 2) Disconnect the connector from the VDCCM&H/U. 3) Run the engine at idle. 4) Measure the voltage between VDCCM&H/U connector and chassis ground. Connector & terminal (B310) No. 1 (+) — Chassis ground (-): (B310) No. 20 (+) — Chassis ground (-):	Is the voltage 10 — 15 V?	Go to step 2.	Repair the power supply circuit.
2 CHECK VDCCM&H/U INPUT VOLTAGE. Calculate the voltage difference measured in step 1. A: (B310) No. 1 (+) — Chassis ground (-): B: (B310) No. 20 (+) — Chassis ground (-):	Is the voltage difference between A and B 2 V or more?	Repair the power supply circuit.	Go to step 3.

Diagnostic Procedure with Diagnostic Trouble Code (DTC)

VEHICLE DYNAMICS CONTROL (VDC) (DIAGNOSTICS)

Step	Check	Yes	No
3	CHECK INSTALLATION OF VDCCM&H/U GROUND.	Go to step 4.	Install the VDCCM&H/U ground terminal installation bolt correctly.
4	CHECK VDCCM&H/U GROUND CIRCUIT (CHECK FOR OPEN CIRCUIT). 1) Turn the ignition switch to OFF. 2) Measure the resistance between VDCCM&H/U connector and chassis ground. Connector & terminal (B310) No. 26 — Chassis ground:	Go to step 5.	Repair the VDCCM&H/U ground harness.
5	CHECK VDCCM&H/U VALVE RELAY. Measure the resistance between VDCCM&H/U terminals. Connector & terminal No. 1 — No. 26:	Go to step 6.	Replace the VDCCM&H/U. <Ref. to VDC-9, VDC Control Module and Hydraulic Control Unit (VDCCM&H/U).>
6	CHECK POOR CONTACT OF CONNECTORS.	Repair the connector.	Go to step 7.
7	CHECK VDCCM&H/U. 1) Connect all connectors. 2) Perform the Clear Memory Mode. <Ref. to VDC(diag)-26, Clear Memory Mode.> 3) Perform the Inspection Mode. <Ref. to VDC(diag)-25, Inspection Mode.> 4) Read the DTC. <Ref. to VDC(diag)-24, Read Diagnostic Trouble Code (DTC).>	Replace the VDCCM&H/U. <Ref. to VDC-9, VDC Control Module and Hydraulic Control Unit (VDCCM&H/U).>	Go to step 8.
8	CHECK DETECTION OF OTHER DTCS FOR VDC. <Ref. to VDC(diag)-24, Read Diagnostic Trouble Code (DTC).>	Perform the diagnosis according to DTC. <Ref. to VDC(diag)-39, List of Diagnostic Trouble Code (DTC).>	Currently, it is normal. There may have been a temporary poor contact in the harness and connector or a temporary noise interference.

Diagnostic Procedure with Diagnostic Trouble Code (DTC)

VEHICLE DYNAMICS CONTROL (VDC) (DIAGNOSTICS)

CI: DTC C0052 MOTOR MALFUNCTION

DTC detecting condition:

- Defective motor and motor relay
- Defective harness connector

Trouble symptom:

- ABS does not operate.
- VDC does not operate.
- EBD may not operate.
- EyeSight does not operate.

Wiring diagram:

Vehicle dynamics control system <Ref. to WI-233, WITH EyeSight, WIRING DIAGRAM, Vehicle Dynamics Control System.>

VDC10159

Step	Check	Yes	No
1 CHECK VDCCM&H/U INPUT VOLTAGE. 1) Turn the ignition switch to OFF. 2) Disconnect the connector from the VDCCM&H/U. 3) Turn the ignition switch to ON. 4) Measure the voltage between VDCCM&H/U connector and chassis ground. Connector & terminal (B310) No. 14 (+) — Chassis ground (-): (B310) No. 20 (+) — Chassis ground (-):	Is the voltage 10 — 15 V?	Go to step 2.	Repair the VDCCM&H/U power supply circuit.
2 CHECK VDCCM&H/U INPUT VOLTAGE. Calculate the voltage difference measured in step 1. A: (B310) No. 14 (+) — Chassis ground (-): B: (B310) No. 20 (+) — Chassis ground (-):	Is the voltage difference between A and B 2 V or more?	Repair the power supply circuit.	Go to step 3.

Diagnostic Procedure with Diagnostic Trouble Code (DTC)

VEHICLE DYNAMICS CONTROL (VDC) (DIAGNOSTICS)

Step	Check	Yes	No
3	CHECK INSTALLATION OF VDCCM&H/U GROUND.	Go to step 4.	Install the VDCCM&H/U ground terminal installation bolt correctly.
4	CHECK VDCCM&H/U GROUND CIRCUIT (CHECK FOR OPEN CIRCUIT). 1) Turn the ignition switch to OFF. 2) Measure the resistance between VDCCM&H/U connector and chassis ground. Connector & terminal (B310) No. 26 — Chassis ground:	Go to step 5.	Repair the VDCCM&H/U ground harness.
5	CHECK VDCCM&H/U MOTOR RELAY. Measure the resistance between VDCCM&H/U terminals. Connector & terminal No. 14 — No. 26:	Go to step 6.	Replace the VDCCM&H/U. <Ref. to VDC-9, VDC Control Module and Hydraulic Control Unit (VDCCM&H/U).>
6	CHECK POOR CONTACT OF CONNECTORS. Turn the ignition switch to OFF.	Repair the connector.	Go to step 7.
7	CHECK VDCCM&H/U. 1) Connect all connectors. 2) Perform the Clear Memory Mode. <Ref. to VDC(diag)-26, Clear Memory Mode.> 3) Perform the Inspection Mode. <Ref. to VDC(diag)-25, Inspection Mode.> 4) Read the DTC. <Ref. to VDC(diag)-24, Read Diagnostic Trouble Code (DTC).>	Replace the VDCCM&H/U. <Ref. to VDC-9, VDC Control Module and Hydraulic Control Unit (VDCCM&H/U).>	Go to step 8.
8	CHECK DETECTION OF OTHER DTCS FOR VDC. <Ref. to VDC(diag)-24, Read Diagnostic Trouble Code (DTC).>	Perform the diagnosis according to DTC. <Ref. to VDC(diag)-39, List of Diagnostic Trouble Code (DTC).>	Currently, it is normal. There may have been a temporary poor contact in the harness and connector or a temporary noise interference.

Diagnostic Procedure with Diagnostic Trouble Code (DTC)

VEHICLE DYNAMICS CONTROL (VDC) (DIAGNOSTICS)

CJ:DTC C0054 BLS OFF MALFUNCTION

DTC detecting condition:

Defective stop light switch

Trouble symptom:

- VDC does not operate.
- EyeSight does not operate.

Wiring diagram:

Vehicle dynamics control system <Ref. to WI-233, WITH EyeSight, WIRING DIAGRAM, Vehicle Dynamics Control System.>

VDC10161

Step	Check	Yes	No
1 CHECK STOP LIGHT SWITCH. Check the stop light switch. <Ref. to BR-73, INSTALLATION, Stop Light Switch.>	Is the check result OK?	Go to step 2.	Adjust the installation position of the stop light switch. <Ref. to BR-73, INSTALLATION, Stop Light Switch.>
2 CHECK STOP LIGHT SWITCH. 1) Turn the ignition switch to OFF. 2) Disconnect the stop light switch connector. 3) Measure the resistance of stop light switch terminals. Terminals No. 3 — No. 4:	Is the resistance less than 1 Ω when the stop light switch is ON (when pedal is depressed)?	Go to step 3.	Replace the stop light switch. <Ref. to BR-72, Stop Light Switch.>
3 CHECK STOP LIGHT RELAY. Measure the resistance of stop light relay terminals. Terminals No. 7 — No. 10:	Is the resistance less than 1 Ω ?	Go to step 4.	Replace the stop light relay.

Diagnostic Procedure with Diagnostic Trouble Code (DTC)

VEHICLE DYNAMICS CONTROL (VDC) (DIAGNOSTICS)

Step	Check	Yes	No
4 CHECK VDCCM&H/U CONNECTOR. Disconnect the connector from the VDCCM&H/U.	Is there poor contact or damage of the VDCCM&H/U connector?	Repair the VDCCM&H/U connector.	Go to step 5.
5 CHECK STOP LIGHT SWITCH CIRCUIT. Measure the resistance of stop light switch circuit. <i>Connector & terminal</i> (B310) No. 16 — (B567) No. 10: (B65) No. 4 — (B567) No. 7: (B65) No. 3 — (F/B fuse) No. 8:	Is the resistance less than 1 Ω?	Go to step 6.	Repair the stop light switch circuit.
6 CHECK STOP LIGHT SWITCH CIRCUIT. 1) Connect all connectors. 2) Turn the ignition switch to ON. 3) Measure the voltage between stop light relay and chassis ground. <i>Connector & terminal</i> (B567) No. 10 (+) — Chassis ground (-):	Is the voltage 10 V or more when the stop light switch is ON (when pedal is depressed)?	Go to step 7.	Repair the stop light switch circuit.
7 CHECK VDCCM&H/U. 1) Perform the Clear Memory Mode. <Ref. to VDC(diag)-26, Clear Memory Mode.> 2) Perform the Inspection Mode. <Ref. to VDC(diag)-25, Inspection Mode.> 3) Read the DTC. <Ref. to VDC(diag)-24, Read Diagnostic Trouble Code (DTC).>	Is the same DTC displayed?	Replace the VDCCM&H/U. <Ref. to VDC-9, VDC Control Module and Hydraulic Control Unit (VDCCM&H/U).>	Go to step 8.
8 CHECK DETECTION OF OTHER DTCS FOR VDC. <Ref. to VDC(diag)-24, Read Diagnostic Trouble Code (DTC).>	Is any other DTC displayed?	Perform the diagnosis according to DTC. <Ref. to VDC(diag)-39, List of Diagnostic Trouble Code (DTC).>	Currently, it is normal. There may have been a temporary poor contact in the harness and connector or a temporary noise interference.

Diagnostic Procedure with Diagnostic Trouble Code (DTC)

VEHICLE DYNAMICS CONTROL (VDC) (DIAGNOSTICS)

CK:DTC C0054 BLS ON MALFUNCTION

DTC detecting condition:

Defective stop light switch

Trouble symptom:

- VDC does not operate.
- EyeSight does not operate.

Wiring diagram:

Vehicle dynamics control system <Ref. to WI-233, WITH EyeSight, WIRING DIAGRAM, Vehicle Dynamics Control System.>

Step	Check	Yes	No
1 INTERVIEW CUSTOMERS. Make sure that the operation was performed in which accelerator pedal and brake pedal were depressed simultaneously (with depressing brake pedal with left foot).	Were the acceleration pedal and brake pedal depressed simultaneously?	System is normal. (DTC may be recorded if the brake pedal is always depressed while driving.)	Go to step 2.
2 CHECK STOP LIGHT RELAY. 1) Turn the ignition switch to OFF. 2) Measure the resistance of stop light relay terminals. Terminals No. 9 — No. 10:	Is the resistance less than 1 Ω ?	Replace the stop light relay.	Go to step 3.
3 CHECK VDCCM&H/U CONNECTOR. Disconnect the connector from the VDCCM&H/U.	Is there poor contact or damage of the VDCCM&H/U connector?	Repair the VDCCM&H/U connector.	Go to step 4.
4 CHECK STOP LIGHT SWITCH CIRCUIT. 1) Turn the ignition switch to ON. 2) Measure the voltage between stop light switch and chassis ground. Connector & terminal (B567) No. 10 (+) — Chassis ground (-):	Is the voltage 10 V or more when the stop light switch is OFF (when pedal is not depressed)?	Repair the stop light switch circuit.	Go to step 5.

Diagnostic Procedure with Diagnostic Trouble Code (DTC)

VEHICLE DYNAMICS CONTROL (VDC) (DIAGNOSTICS)

Step	Check	Yes	No
5 CHECK VDCCM&H/U. 1) Connect all connectors. 2) Perform the Clear Memory Mode. <Ref. to VDC(diag)-26, Clear Memory Mode.> 3) Perform the Inspection Mode. <Ref. to VDC(diag)-25, Inspection Mode.> 4) Read the DTC. <Ref. to VDC(diag)-24, Read Diagnostic Trouble Code (DTC).>	Is the same DTC displayed?	Replace the VDCCM&H/U. <Ref. to VDC-9, VDC Control Module and Hydraulic Control Unit (VDCCM&H/U).>	Go to step 6.
6 CHECK DETECTION OF OTHER DTCS FOR VDC. <Ref. to VDC(diag)-24, Read Diagnostic Trouble Code (DTC).>	Is any other DTC displayed?	Perform the diagnosis according to DTC. <Ref. to VDC(diag)-39, List of Diagnostic Trouble Code (DTC).>	Currently, it is normal. There may have been a temporary poor contact in the harness and connector or a temporary noise interference.

CL:DTC C0056 G SENSOR ABNORMAL

DTC DETECTING CONDITION:

Longitudinal G sensor signal failure

TROUBLE SYMPTOM:

- ABS does not operate.
- VDC does not operate.
- EyeSight does not operate.

NOTE:

For the diagnostic procedure, refer to "DTC C0056 G SENSOR SIGNAL". <Ref. to VDC(diag)-125, DTC C0056 G SENSOR SIGNAL, Diagnostic Procedure with Diagnostic Trouble Code (DTC).>

Diagnostic Procedure with Diagnostic Trouble Code (DTC)

VEHICLE DYNAMICS CONTROL (VDC) (DIAGNOSTICS)

CM:DTC C0056 G SENSOR SIGNAL

DTC detecting condition:

Longitudinal G sensor signal failure

Trouble symptom:

- ABS does not operate.
- VDC does not operate.
- EyeSight does not operate.

Step	Check	Yes	No
1	CHECK INSTALLATION OF VDCCM&H/U. Is VDCCM&H/U installed properly without being tilted? Is the bracket deformation-free? Are the VDCCM&H/U installation bolts installed without missing or getting loose?	Go to step 2.	Repair the defective part. • Install VDCCM&H/U properly. • Replace the bracket if faulty. • Tighten the VDCCM&H/U installation bolt. <Ref. to VDC-4, VDC CONTROL MODULE & HYDRAULIC CONTROL UNIT (VDCCM&H/U), COMPONENT, General Description.> Go to step 2.
2	CHECK OUTPUT OF LONGITUDINAL G SENSOR USING SUBARU SELECT MONITOR. 1) Park the vehicle on a level surface. 2) Using the Subaru Select Monitor, select "Data monitor". <Ref. to VDC(diag)-15, READ CURRENT DATA, OPERATION, Subaru Select Monitor.> 3) Read the «Fr Rr G sensor Output» displayed on display.	Go to step 3.	Recheck from step 1, and if the problem is not solved, Go to step 6.
3	SET 0 POINT FOR LONGITUDINAL G SENSOR USING SUBARU SELECT MONITOR. 1) Using the Subaru Select Monitor, select "Work Support". 2) Perform the "Longitudinal G sensor & lateral G sensor 0 point setting mode". <Ref. to VDC-24, LONGITUDINAL G SENSOR & LATERAL G SENSOR 0 POINT SETTING MODE (MODEL WITH EyeSight), ADJUSTMENT, VDC Control Module and Hydraulic Control Unit (VDCCM&H/U).>	Go to step 4.	Recheck from step 1, and when the 0 point setting is not possible, replace the VDCCM&H/U. <Ref. to VDC-9, VDC Control Module and Hydraulic Control Unit (VDCCM&H/U).>

Diagnostic Procedure with Diagnostic Trouble Code (DTC)

VEHICLE DYNAMICS CONTROL (VDC) (DIAGNOSTICS)

Step	Check	Yes	No
<p>4</p> <p>PERFORM DRIVING TEST. Drive approximately 10 minutes, and check if the warning lights illuminate or improperly operate during driving. In a safe place, drive the vehicle while alternating acceleration and deceleration as much as possible.</p>	<p>Did the ABS warning light or VDC warning light remain off? Does ABS or VDC operate without malfunction?</p>	Go to step 5.	<p>Recheck from step 1, and when the warning lights illuminate or improperly operate, replace the VDCCM&H/U. <Ref. to VDC-9, VDC Control Module and Hydraulic Control Unit (VDCCM&H/U).></p>
<p>5</p> <p>CHECK OUTPUT OF LONGITUDINAL G SENSOR USING SUBARU SELECT MONITOR. 1) Park the vehicle on a level surface. 2) Using the Subaru Select Monitor, select "Data monitor". <Ref. to VDC(diag)-15, READ CURRENT DATA, OPERATION, Subaru Select Monitor.> 3) Read the «Fr Rr G sensor Output» displayed on display.</p>	<p>Is the reading of «Fr Rr G sensor Output» $-1.5 \text{ — } 1.5 \text{ m/s}^2$?</p>	<p>Currently, it is normal. There may have been a temporary poor contact in the harness and connector or a temporary noise interference.</p>	<p>Recheck from step 1, and if the problem is not solved, replace the VDCCM&H/U. <Ref. to VDC-9, VDC Control Module and Hydraulic Control Unit (VDCCM&H/U).></p>
<p>6</p> <p>CHECK OUTPUT OF LONGITUDINAL G SENSOR USING SUBARU SELECT MONITOR. 1) Remove the VDCCM&H/U installation bolt and bracket. 2) Keep VDCCM&H/U in a horizontal position. 3) Using the Subaru Select Monitor, select "Data monitor". <Ref. to VDC(diag)-15, READ CURRENT DATA, OPERATION, Subaru Select Monitor.> 4) Read the «Fr Rr G sensor Output» displayed on display.</p>	<p>When the VDCCM&H/U is in a horizontal position, is the value of «Fr Rr G sensor Output» $-1.5 \text{ — } 1.5 \text{ m/s}^2$?</p>	<p>Check the bracket and brake pipe, and install VDCCM&H/U in a horizontal position to the vehicle.</p>	<p>Replace the VDCCM&H/U. <Ref. to VDC-9, VDC Control Module and Hydraulic Control Unit (VDCCM&H/U).></p>

Diagnostic Procedure with Diagnostic Trouble Code (DTC)

VEHICLE DYNAMICS CONTROL (VDC) (DIAGNOSTICS)

CN:DTC C0057 ECM COMMUNICATION CIRCUIT

DTC detecting condition:

No CAN signal from ECM.

Trouble symptom:

- VDC does not operate.
- EyeSight does not operate.

Step	Check	Yes	No	
1	CHECK LAN SYSTEM. Perform the diagnosis for LAN system. <Ref. to LAN(diag)-2, Basic Diagnostic Procedure.>	Is there any fault in LAN system?	Perform the diagnosis according to DTC for LAN system. <Ref. to LAN(diag)-92, List of Diagnostic Trouble Code (DTC).>	Go to step 2.
2	CHECK POOR CONTACT OF CONNECTORS.	Is there poor contact of ECM connector?	Repair the connector.	Go to step 3.
3	CHECK ECM. Refer to the basic diagnostic procedure of ENGINE (DIAGNOSTICS).	Is the check result OK?	Go to step 4.	Replace the ECM. <Ref. to FU(H4DO)-98, Engine Control Module (ECM).>
4	CHECK VDCCM&H/U. 1) Connect all connectors. 2) Perform the Clear Memory Mode. <Ref. to VDC(diag)-26, Clear Memory Mode.> 3) Perform the Inspection Mode. <Ref. to VDC(diag)-25, Inspection Mode.> 4) Read the DTC. <Ref. to VDC(diag)-24, Read Diagnostic Trouble Code (DTC).>	Is the same DTC displayed?	Replace the VDCCM&H/U. <Ref. to VDC-9, VDC Control Module and Hydraulic Control Unit (VDCCM&H/U).>	Go to step 5.
5	CHECK DETECTION OF OTHER DTCS FOR VDC. <Ref. to VDC(diag)-24, Read Diagnostic Trouble Code (DTC).>	Is any other DTC displayed?	Perform the diagnosis according to DTC. <Ref. to VDC(diag)-39, List of Diagnostic Trouble Code (DTC).>	Currently, it is normal. There may have been a temporary poor contact in the harness and connector or a temporary noise interference.

Diagnostic Procedure with Diagnostic Trouble Code (DTC)

VEHICLE DYNAMICS CONTROL (VDC) (DIAGNOSTICS)

CO:DTC C0057 ECM CONTROL SYSTEM

DTC detecting condition:

ECM malfunctioning

Trouble symptom:

- VDC does not operate.
- EyeSight does not operate.

Step	Check	Yes	No
1 CHECK COOPERATION CONTROL FEASIBILITY OF ECM USING SUBARU SELECT MONITOR. 1) Start the engine, and run the engine at idle approximately 5 minutes. 2) Using the Subaru Select Monitor, select "Data monitor". <Ref. to VDC(diag)-15, READ CURRENT DATA, OPERATION, Subaru Select Monitor.> 3) Check the «E/G Control Stop Flag» displayed on screen.	Is the «E/G Control Stop Flag» "1"?	Go to step 4.	Go to step 2.
2 CHECK WARNING LIGHT. Check whether the VDC warning light illuminates after driving for 1 minute or more at a speed of 10 km/h or more.	Does the VDC warning light illuminate?	Go to step 3.	VDC is normal. Perform the Clear Memory Mode. <Ref. to VDC(diag)-26, Clear Memory Mode.> NOTE: DTC may be recorded if cranking is performed during driving.
3 CHECK POOR CONTACT OF CONNECTORS.	Is there poor contact of ECM connector?	Repair the connector.	Go to step 4.
4 CHECK DTC OF ECM. Read the DTC relating the ECM using the Subaru Select Monitor. <Ref. to EN(H4DO)(diag)-49, Read Diagnostic Trouble Code (DTC).>	Are any DTCs displayed?	Perform the diagnosis according to DTC. <Ref. to EN(H4DO)(diag)-96, List of Diagnostic Trouble Code (DTC).>	Go to step 5.
5 CHECK VDCCM&H/U. 1) Connect all connectors. 2) Perform the Clear Memory Mode. <Ref. to VDC(diag)-26, Clear Memory Mode.> 3) Perform the Inspection Mode. <Ref. to VDC(diag)-25, Inspection Mode.> 4) Read the DTC. <Ref. to VDC(diag)-24, Read Diagnostic Trouble Code (DTC).>	Is the same DTC displayed?	Replace the VDCCM&H/U. <Ref. to VDC-9, VDC Control Module and Hydraulic Control Unit (VDCCM&H/U).>	Go to step 6.
6 CHECK DETECTION OF OTHER DTCS FOR VDC. <Ref. to VDC(diag)-24, Read Diagnostic Trouble Code (DTC).>	Is any other DTC displayed?	Perform the diagnosis according to DTC. <Ref. to VDC(diag)-39, List of Diagnostic Trouble Code (DTC).>	Currently, it is normal. There may have been a temporary poor contact in the harness and connector or a temporary noise interference.

Diagnostic Procedure with Diagnostic Trouble Code (DTC)

VEHICLE DYNAMICS CONTROL (VDC) (DIAGNOSTICS)

CP:DTC C0057 VDC INTERRUPTED DUE TO EGI REASON

DTC DETECTING CONDITION:

Cooperation control prohibition of ECM

TROUBLE SYMPTOM:

- VDC does not operate.
- EyeSight does not operate.

NOTE:

- For the diagnostic procedure, refer to “DTC C0057 ECM CONTROL SYSTEM”. <Ref. to VDC(diag)-128, DTC C0057 ECM CONTROL SYSTEM, Diagnostic Procedure with Diagnostic Trouble Code (DTC).>
- Warning lights go off if the cooperation control of ECM returns.

Diagnostic Procedure with Diagnostic Trouble Code (DTC)

VEHICLE DYNAMICS CONTROL (VDC) (DIAGNOSTICS)

CQ:DTC C0071 NO SIGNAL FROM STEERING ANGLE SENSOR

DTC detecting condition:

Communication from steering angle sensor is faulty.

Trouble symptom:

- VDC does not operate.
- EyeSight does not operate.

Wiring diagram:

Vehicle dynamics control system <Ref. to WI-233, WITH EyeSight, WIRING DIAGRAM, Vehicle Dynamics Control System.>

Step	Check	Yes	No	
1	<p>CHECK POWER SUPPLY FOR STEERING ANGLE SENSOR.</p> <p>1) Turn the ignition switch to OFF. 2) Disconnect the connector from steering angle sensor. 3) Turn the ignition switch to ON. 4) Measure the voltage between steering angle sensor and chassis ground.</p> <p>Connector & terminal (B231) No. 4 (+) — Chassis ground (-):</p>	Is the voltage 10 — 15 V?	Go to step 2.	Repair the steering angle sensor power supply circuit.
2	<p>CHECK GROUND CIRCUIT OF STEERING ANGLE SENSOR (CHECK FOR OPEN CIRCUIT).</p> <p>Measure the resistance between steering angle sensor and chassis ground.</p> <p>Connector & terminal (B231) No. 1 — Chassis ground:</p>	Is the resistance less than 10 Ω?	Go to step 3.	Repair ground circuit in the steering angle sensor.

Diagnostic Procedure with Diagnostic Trouble Code (DTC)

VEHICLE DYNAMICS CONTROL (VDC) (DIAGNOSTICS)

Step	Check	Yes	No
3 CHECK VDCCM&H/U. 1) Turn the ignition switch to OFF. 2) Connect all connectors. 3) Perform the Clear Memory Mode. <Ref. to VDC(diag)-26, Clear Memory Mode.> 4) Perform the Inspection Mode. <Ref. to VDC(diag)-25, Inspection Mode.> 5) Read the DTC. <Ref. to VDC(diag)-24, Read Diagnostic Trouble Code (DTC).>	Is the same DTC displayed?	Go to step 4.	Go to step 5.
4 CHECK VDCCM&H/U. 1) Turn the ignition switch to OFF. 2) Replace the steering angle sensor. <Ref. to VDC-32, Steering Angle Sensor.> 3) Perform the Clear Memory Mode. <Ref. to VDC(diag)-26, Clear Memory Mode.> 4) Perform the Inspection Mode. <Ref. to VDC(diag)-25, Inspection Mode.> 5) Read the DTC. <Ref. to VDC(diag)-24, Read Diagnostic Trouble Code (DTC).>	Is the same DTC displayed?	Replace the VDCCM&H/U. <Ref. to VDC-9, VDC Control Module and Hydraulic Control Unit (VDCCM&H/U).>	Go to step 6.
5 CHECK DETECTION OF OTHER DTCS FOR VDC. <Ref. to VDC(diag)-24, Read Diagnostic Trouble Code (DTC).>	Is any other DTC displayed?	Perform the diagnosis according to DTC. <Ref. to VDC(diag)-39, List of Diagnostic Trouble Code (DTC).>	Currently, it is normal. There may have been a temporary poor contact in the harness and connector or a temporary noise interference.
6 CHECK DETECTION OF OTHER DTCS FOR VDC. <Ref. to VDC(diag)-24, Read Diagnostic Trouble Code (DTC).>	Is any other DTC displayed?	Perform the diagnosis according to DTC. <Ref. to VDC(diag)-39, List of Diagnostic Trouble Code (DTC).>	Original steering angle sensor malfunction

Diagnostic Procedure with Diagnostic Trouble Code (DTC)

VEHICLE DYNAMICS CONTROL (VDC) (DIAGNOSTICS)

CR:DTC C0071 STEER ANGLE SENSOR OP

DTC detecting condition:

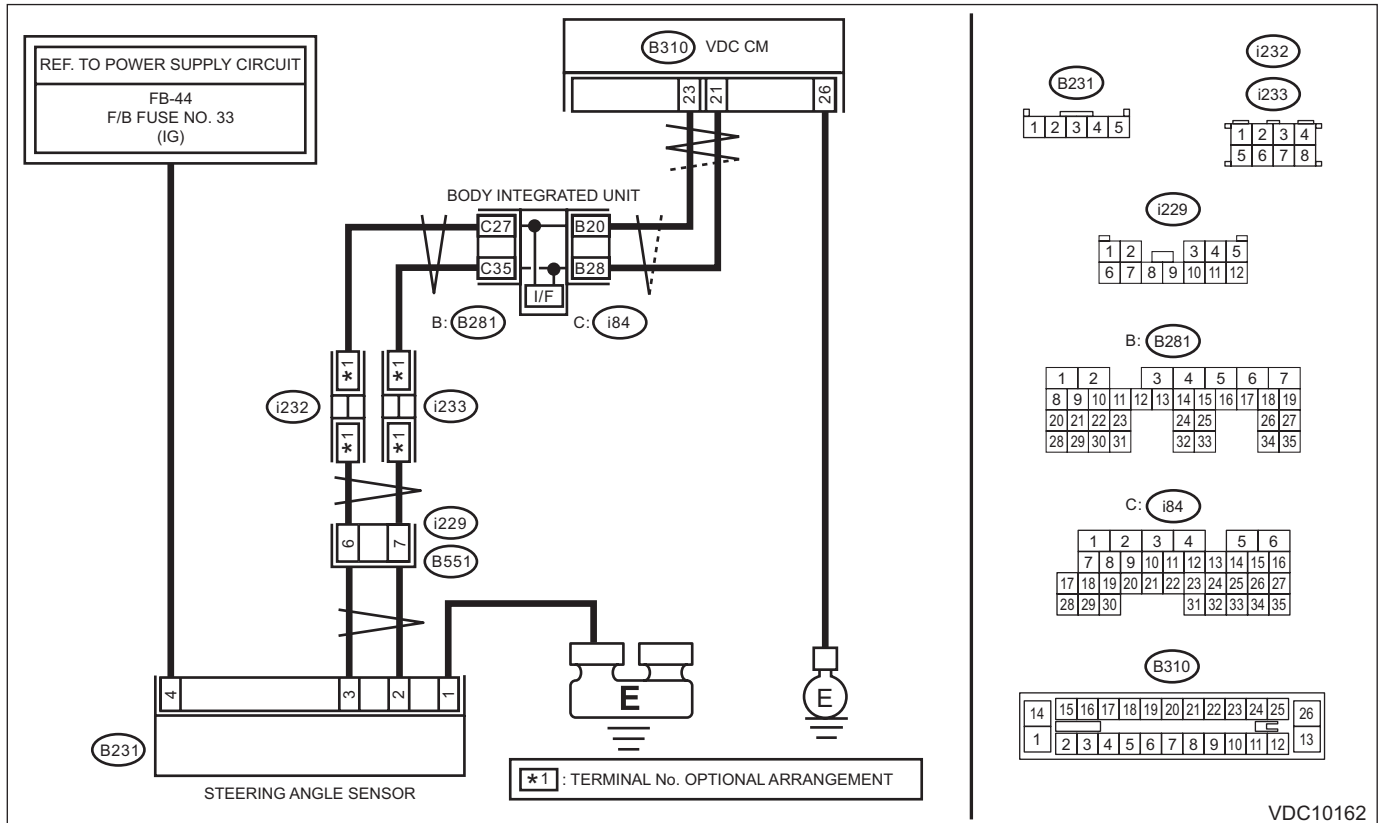

Steering angle sensor output is faulty.

Trouble symptom:

- VDC does not operate.
- EyeSight does not operate.

Wiring diagram:

Vehicle dynamics control system <Ref. to WI-233, WITH EyeSight, WIRING DIAGRAM, Vehicle Dynamics Control System.>

Step	Check	Yes	No	
1	<p>CHECK POWER SUPPLY FOR STEERING ANGLE SENSOR.</p> <p>1) Turn the ignition switch to OFF. 2) Disconnect the connector from steering angle sensor. 3) Turn the ignition switch to ON. 4) Measure the voltage between steering angle sensor and chassis ground.</p> <p>Connector & terminal (B231) No. 4 (+) — Chassis ground (-):</p>	Is the voltage 10 — 15 V?	Go to step 2.	Repair the steering angle sensor power supply circuit including the fuse.
2	<p>CHECK GROUND CIRCUIT OF STEERING ANGLE SENSOR (CHECK FOR OPEN CIRCUIT).</p> <p>Measure the resistance between steering angle sensor and chassis ground.</p> <p>Connector & terminal (B231) No. 1 — Chassis ground:</p>	Is the resistance less than 10 Ω?	Go to step 3.	Repair ground circuit in the steering angle sensor.

Diagnostic Procedure with Diagnostic Trouble Code (DTC)

VEHICLE DYNAMICS CONTROL (VDC) (DIAGNOSTICS)

Step	Check	Yes	No
<p>3 CHECK STEERING ANGLE SENSOR HARNESS (CHECK FOR OPEN CIRCUIT).</p> <p>1) Disconnect the connector from the VDCCM&H/U.</p> <p>2) Measure the resistance between VDCCM&H/U and steering angle sensor.</p> <p>Connector & terminal (B231) No. 2 — (B310) No. 21: (B231) No. 3 — (B310) No. 23:</p>	Is the resistance less than 1 Ω?	Go to step 4.	Repair the harness between the steering angle sensor and VDCCM&H/U.
<p>4 CHECK GROUND SHORT CIRCUIT OF STEERING ANGLE SENSOR HARNESS.</p> <p>Measure the resistance between steering angle sensor and chassis ground.</p> <p>Connector & terminal (B231) No. 2 — Chassis ground: (B231) No. 3 — Chassis ground:</p>	Is the resistance 10 Ω or more?	Go to step 5.	Repair the harness between the steering angle sensor and VDCCM&H/U.
<p>5 CHECK STEERING WHEEL.</p> <p>1) Drive the vehicle on a flat road.</p> <p>2) Park the vehicle straight.</p> <p>3) Check the steering wheel for deviation from center.</p>	Is the deviation from the center of steering wheel less than 5°?	Go to step 6.	Perform the centering adjustment of steering wheel, and perform Set up mode for Neutral of Steering Angle Sensor & Lateral G Sensor 0 point. <Ref. to VDC-23, NEUTRAL OF STEERING ANGLE SENSOR & LATERAL G SENSOR 0 POINT SETTING (MODEL WITH EyeSight), ADJUSTMENT, VDC Control Module and Hydraulic Control Unit (VDCCM&H/U).>
<p>6 CHECK OUTPUT OF STEERING ANGLE SENSOR USING SUBARU SELECT MONITOR.</p> <p>1) Adjust steering wheel to the center position.</p> <p>2) Using the Subaru Select Monitor, select "Data monitor". <Ref. to VDC(diag)-15, READ CURRENT DATA, OPERATION, Subaru Select Monitor.></p> <p>3) Read the «Steer Angle Sensor Op» displayed on display.</p>	Is the reading of «Steer Angle Sensor Op» -10° — 10°?	Perform Set up mode for Neutral of Steering Angle Sensor & Lateral G Sensor 0 point. <Ref. to VDC-23, NEUTRAL OF STEERING ANGLE SENSOR & LATERAL G SENSOR 0 POINT SETTING (MODEL WITH EyeSight), ADJUSTMENT, VDC Control Module and Hydraulic Control Unit (VDCCM&H/U).> Go to step 7.	Check the installation of the steering wheel and steering angle sensor.

Diagnostic Procedure with Diagnostic Trouble Code (DTC)

VEHICLE DYNAMICS CONTROL (VDC) (DIAGNOSTICS)

Step	Check	Yes	No
7 CHECK VDCCM&H/U. 1) Turn the ignition switch to OFF. 2) Connect all connectors. 3) Perform the Clear Memory Mode. <Ref. to VDC(diag)-26, Clear Memory Mode.> 4) Perform the Inspection Mode. <Ref. to VDC(diag)-25, Inspection Mode.> 5) Read the DTC. <Ref. to VDC(diag)-24, Read Diagnostic Trouble Code (DTC).>	Is the same DTC displayed?	Replace the steering angle sensor. <Ref. to VDC-32, Steering Angle Sensor.>	Go to step 8 .
8 CHECK DETECTION OF OTHER DTCS FOR VDC. <Ref. to VDC(diag)-24, Read Diagnostic Trouble Code (DTC).>	Is any other DTC displayed?	Perform the diagnosis according to DTC. <Ref. to VDC(diag)-39, List of Diagnostic Trouble Code (DTC).>	Currently, it is normal. There may have been a temporary poor contact in the harness and connector or a temporary noise interference.

Diagnostic Procedure with Diagnostic Trouble Code (DTC)

VEHICLE DYNAMICS CONTROL (VDC) (DIAGNOSTICS)

CS:DTC C0072 ABNORMAL YAW RATE SENSOR OUTPUT

DTC DETECTING CONDITION:

Defective yaw rate sensor

TROUBLE SYMPTOM:

- VDC does not operate.
- EyeSight does not operate.

Step	Check	Yes	No
1 INTERVIEW CUSTOMERS. Check if the vehicle ran the road with banks or sandy surface (which does not mean a dirt road).	Did the vehicle run the road with banks or sandy surface (which does not mean a dirt road)?	VDCCM&H/U may record DTC when the vehicle ran the road with banks or sandy surface (which does not mean a dirt road).	Go to step 2.
2 CHECK INSTALLATION OF VDCCM&H/U.	Is VDCCM&H/U installed properly without being tilted? Is the bracket deformation-free? Are the VDCCM&H/U installation bolts installed without missing or getting loose?	Go to step 3.	Repair the defective part. <ul style="list-style-type: none"> • Install VDCCM&H/U properly. • Replace the bracket if faulty. • Tighten the VDCCM&H/U installation bolt. <Ref. to VDC-4, VDC CONTROL MODULE & HYDRAULIC CONTROL UNIT (VDCCM&H/U), COMPONENT, General Description.> Go to step 3.
3 CHECK OUTPUT OF YAW RATE & G SENSOR WITH SUBARU SELECT MONITOR. 1) Drive the vehicle on a flat road. 2) Park the vehicle straight. 3) Using the Subaru Select Monitor, select "Data monitor". <Ref. to VDC(diag)-15, READ CURRENT DATA, OPERATION, Subaru Select Monitor.> 4) Read the «Yaw Rate Sensor Output» displayed on display.	Is the reading of «Yaw Rate Sensor Output» -4 — 4 deg/s?	Go to step 4.	Replace the VDCCM&H/U. <Ref. to VDC-9, VDC Control Module and Hydraulic Control Unit (VDCCM&H/U).>
4 CHECK OUTPUT OF STEERING ANGLE SENSOR WITH SUBARU SELECT MONITOR. 1) Drive the vehicle on a flat road. 2) Park the vehicle straight. 3) Using the Subaru Select Monitor, select "Data monitor". <Ref. to VDC(diag)-15, READ CURRENT DATA, OPERATION, Subaru Select Monitor.> 4) Read the «Steer Angle Sensor Op» displayed on display.	Is the reading of «Steer Angle Sensor Op» -5 — 5°?	Go to step 5.	Perform the centering adjustment of steering wheel.

Diagnostic Procedure with Diagnostic Trouble Code (DTC)

VEHICLE DYNAMICS CONTROL (VDC) (DIAGNOSTICS)

Step	Check	Yes	No
5 CHECK VDCCM&H/U. 1) Turn the ignition switch to OFF. 2) Perform the Clear Memory Mode. <Ref. to VDC(diag)-26, Clear Memory Mode.> 3) Perform the Inspection Mode. <Ref. to VDC(diag)-25, Inspection Mode.> 4) Read the DTC. <Ref. to VDC(diag)-24, Read Diagnostic Trouble Code (DTC).>	Is the same DTC displayed?	Replace the VDCCM&H/U. <Ref. to VDC-9, VDC Control Module and Hydraulic Control Unit (VDCCM&H/U).>	Go to step 6.
6 CHECK DETECTION OF OTHER DTCS FOR VDC. <Ref. to VDC(diag)-24, Read Diagnostic Trouble Code (DTC).>	Is any other DTC displayed?	Perform the diagnosis according to DTC. <Ref. to VDC(diag)-39, List of Diagnostic Trouble Code (DTC).>	Currently, it is normal. There may have been a temporary poor contact in the harness and connector or a temporary noise interference.

CT:DTC C0073 LATERAL G SENSOR POWER/OUTPUT

NOTE:

For the diagnostic procedure, refer to "DTC C0073 ABNORMAL LATERAL G SENSOR OUTPUT". <Ref. to VDC(diag)-137, DTC C0073 ABNORMAL LATERAL G SENSOR OUTPUT, Diagnostic Procedure with Diagnostic Trouble Code (DTC).>

Diagnostic Procedure with Diagnostic Trouble Code (DTC)

VEHICLE DYNAMICS CONTROL (VDC) (DIAGNOSTICS)

CU:DTC C0073 ABNORMAL LATERAL G SENSOR OUTPUT

DTC detecting condition:

Defective lateral G sensor

Trouble symptom:

- VDC does not operate.
- EyeSight does not operate.

Step	Check	Yes	No
1	CHECK INSTALLATION OF VDCCM&H/U. Is VDCCM&H/U installed properly without being tilted? Is the bracket deformation-free? Are the VDCCM&H/U installation bolts installed without missing or getting loose?	Go to step 2.	Repair the defective part. • Install VDCCM&H/U properly. • Replace the bracket if faulty. • Tighten the VDCCM&H/U installation bolt. <Ref. to VDC-4, VDC CONTROL MODULE & HYDRAULIC CONTROL UNIT (VDCCM&H/U), COMPONENT, General Description.> Go to step 2.
2	CHECK OUTPUT OF STEERING ANGLE SENSOR USING SUBARU SELECT MONITOR. 1) Park the vehicle straight on a level surface. 2) Using the Subaru Select Monitor, select "Data monitor". <Ref. to VDC(diag)-15, READ CURRENT DATA, OPERATION, Subaru Select Monitor.> 3) Read the «Steer Angle Sensor Op» displayed on display.	Go to step 3.	Check the installation of steering angle sensor.
3	CHECK OUTPUT OF LATERAL G SENSOR WITH SUBARU SELECT MONITOR. 1) Park the vehicle straight on a level surface. 2) Using the Subaru Select Monitor, select "Data monitor". <Ref. to VDC(diag)-15, READ CURRENT DATA, OPERATION, Subaru Select Monitor.> 3) Read the «Lateral G sensor Output» displayed on display.	Go to step 4.	Recheck from step 1, and if the problem is not solved, Go to step 7.
4	SET 0 POINT FOR LATERAL G SENSOR USING SUBARU SELECT MONITOR. 1) Using the Subaru Select Monitor, select "Work Support". 2) Perform Set up mode for Neutral of Steering Angle Sensor & Lateral G Sensor 0 point. <Ref. to VDC-23, NEUTRAL OF STEERING ANGLE SENSOR & LATERAL G SENSOR 0 POINT SETTING (MODEL WITH EyeSight), ADJUSTMENT, VDC Control Module and Hydraulic Control Unit (VDCCM&H/U).>	Go to step 5.	Recheck from step 1, and when the 0 point setting is not possible, replace the VDCCM&H/U. <Ref. to VDC-9, VDC Control Module and Hydraulic Control Unit (VDCCM&H/U).>

Diagnostic Procedure with Diagnostic Trouble Code (DTC)

VEHICLE DYNAMICS CONTROL (VDC) (DIAGNOSTICS)

Step	Check	Yes	No
<p>5</p> <p>PERFORM DRIVING TEST. Drive approximately 10 minutes, and check if the warning lights illuminate or improperly operate during driving. In a safe place, drive the vehicle while alternating acceleration and deceleration as much as possible.</p>	<p>Did the ABS warning light or VDC warning light remain off? Does ABS or VDC operate without malfunction?</p>	Go to step 6.	<p>Recheck from step 1, and when the warning lights illuminate or improperly operate, replace the VDCCM&H/U. <Ref. to VDC-9, VDC Control Module and Hydraulic Control Unit (VDCCM&H/U).></p>
<p>6</p> <p>CHECK OUTPUT OF LATERAL G SENSOR WITH SUBARU SELECT MONITOR. 1) Park the vehicle on a level surface. 2) Using the Subaru Select Monitor, select "Data monitor". <Ref. to VDC(diag)-15, READ CURRENT DATA, OPERATION, Subaru Select Monitor.> 3) Read the «Lateral G sensor Output» displayed on display.</p>	<p>Is the reading of «Lateral G sensor Output» $-1.5 \text{ — } 1.5 \text{ m/s}^2$?</p>	Currently, it is normal. There may have been a temporary poor contact in the harness and connector or a temporarily noise interference.	<p>Recheck from step 1, and if the problem is not solved, replace the VDCCM&H/U. <Ref. to VDC-9, VDC Control Module and Hydraulic Control Unit (VDCCM&H/U).></p>
<p>7</p> <p>CHECK OUTPUT OF LATERAL G SENSOR WITH SUBARU SELECT MONITOR. 1) Remove the VDCCM&H/U installation bolt and bracket. 2) Keep VDCCM&H/U in a horizontal position. 3) Using the Subaru Select Monitor, select "Data monitor". <Ref. to VDC(diag)-15, READ CURRENT DATA, OPERATION, Subaru Select Monitor.> 4) Read the «Lateral G sensor Output» displayed on display.</p>	<p>When the VDCCM&H/U is in a horizontal position, is the value of «Lateral G sensor Output» $-1.5 \text{ — } 1.5 \text{ m/s}^2$?</p>	Check the bracket and brake pipe, and install VDCCM&H/U in a horizontal position to the vehicle.	<p>Replace the VDCCM&H/U. <Ref. to VDC-9, VDC Control Module and Hydraulic Control Unit (VDCCM&H/U).></p>

Diagnostic Procedure with Diagnostic Trouble Code (DTC)

VEHICLE DYNAMICS CONTROL (VDC) (DIAGNOSTICS)

CV:DTC C0074 MASTER CYLINDER PRESSURE SENSOR OUTPUT

DTC detecting condition:

Defective pressure sensor

Trouble symptom:

- ABS does not operate.
- VDC does not operate.
- EyeSight does not operate.

Step	Check	Yes	No
1 CHECK STOP LIGHT SWITCH CIRCUIT. Check stop light switch open circuit.	Is the check result OK?	Go to step 2.	Repair the stop light switch circuit. NOTE: If there is malfunction in the stop light circuit, DTC may be recorded in the memory.
2 CHECK OUTPUT OF PRESSURE SENSOR WITH SUBARU SELECT MONITOR. 1) Using the Subaru Select Monitor, select "Data monitor". <Ref. to VDC(diag)-15, READ CURRENT DATA, OPERATION, Subaru Select Monitor.> 2) Read the «Master Cylinder Pressure Sensor» displayed on display.	With the brake pedal released, does the value for «Master Cylinder Pressure Sensor» fall within 0 — 11 bar?	Go to step 3.	Replace the VDCCM&H/U. <Ref. to VDC-9, VDC Control Module and Hydraulic Control Unit (VDCCM&H/U).>
3 CHECK OUTPUT OF PRESSURE SENSOR WITH SUBARU SELECT MONITOR. 1) Using the Subaru Select Monitor, select "Data monitor". <Ref. to VDC(diag)-15, READ CURRENT DATA, OPERATION, Subaru Select Monitor.> 2) Read the «Master Cylinder Pressure Sensor» displayed on display.	When the brake pedal is operated, does the value of «Master Cylinder Pressure Sensor» change in accordance with the brake pedal?	Go to step 4.	Replace the VDCCM&H/U. <Ref. to VDC-9, VDC Control Module and Hydraulic Control Unit (VDCCM&H/U).>
4 CHECK VDCCM&H/U. 1) Perform the Clear Memory Mode. <Ref. to VDC(diag)-26, Clear Memory Mode.> 2) Perform the Inspection Mode. <Ref. to VDC(diag)-25, Inspection Mode.> 3) Read the DTC. <Ref. to VDC(diag)-24, Read Diagnostic Trouble Code (DTC).>	Is the same DTC displayed?	Replace the VDCCM&H/U. <Ref. to VDC-9, VDC Control Module and Hydraulic Control Unit (VDCCM&H/U).>	Go to step 5.
5 CHECK DETECTION OF OTHER DTCS FOR VDC. <Ref. to VDC(diag)-24, Read Diagnostic Trouble Code (DTC).>	Is any other DTC displayed?	Perform the diagnosis according to DTC. <Ref. to VDC(diag)-39, List of Diagnostic Trouble Code (DTC).>	Currently, it is normal. There may have been a temporary poor contact in the harness and connector or a temporary noise interference.

Diagnostic Procedure with Diagnostic Trouble Code (DTC)

VEHICLE DYNAMICS CONTROL (VDC) (DIAGNOSTICS)

CW:DTC C0075 WHEEL CYLINDER PRESSURE SENSOR OUTPUT

DTC detecting condition:

Defective pressure sensor

Trouble symptom:

EyeSight does not operate.

Step	Check	Yes	No
1 CHECK STOP LIGHT SWITCH CIRCUIT. Check stop light switch open circuit.	Is the check result OK?	Go to step 2.	Repair the stop light switch circuit. NOTE: If there is malfunction in the stop light circuit, DTC may be recorded in the memory.
2 CHECK OUTPUT OF PRESSURE SENSOR WITH SUBARU SELECT MONITOR. 1) Using the Subaru Select Monitor, select "Data monitor". <Ref. to VDC(diag)-15, READ CURRENT DATA, OPERATION, Subaru Select Monitor.> 2) Read the «FL Wheel Cylinder Pressure Sensor» «FR Wheel Cylinder Pressure Sensor» displayed on display.	With the brake pedal released, do the values for «FL Wheel Cylinder Pressure Sensor» and «FR Wheel Cylinder Pressure Sensor» fall within 0 — 11 bar?	Go to step 3.	Replace the VDCCM&H/U. <Ref. to VDC-9, VDC Control Module and Hydraulic Control Unit (VDCCM&H/U).>
3 CHECK OUTPUT OF PRESSURE SENSOR WITH SUBARU SELECT MONITOR. 1) Using the Subaru Select Monitor, select "Data monitor". <Ref. to VDC(diag)-15, READ CURRENT DATA, OPERATION, Subaru Select Monitor.> 2) Read the «FL Wheel Cylinder Pressure Sensor» «FR Wheel Cylinder Pressure Sensor» displayed on display.	When operating the brake pedal, does the reading of «FL Wheel Cylinder Pressure Sensor» «FR Wheel Cylinder Pressure Sensor» change according to the brake pedal operation? Also, is the difference of «FL Wheel Cylinder Pressure Sensor» and «FR Wheel Cylinder Pressure Sensor» less than 10 bar?	Go to step 4.	Replace the VDCCM&H/U. <Ref. to VDC-9, VDC Control Module and Hydraulic Control Unit (VDCCM&H/U).>
4 CHECK VDCCM&H/U. 1) Perform the Clear Memory Mode. <Ref. to VDC(diag)-26, Clear Memory Mode.> 2) Perform the Inspection Mode. <Ref. to VDC(diag)-25, Inspection Mode.> 3) Read the DTC. <Ref. to VDC(diag)-24, Read Diagnostic Trouble Code (DTC).>	Is the same DTC displayed?	Replace the VDCCM&H/U. <Ref. to VDC-9, VDC Control Module and Hydraulic Control Unit (VDCCM&H/U).>	Go to step 5.
5 CHECK DETECTION OF OTHER DTCS FOR VDC. <Ref. to VDC(diag)-24, Read Diagnostic Trouble Code (DTC).>	Is any other DTC displayed?	Perform the diagnosis according to DTC. <Ref. to VDC(diag)-39, List of Diagnostic Trouble Code (DTC).>	Currently, it is normal. There may have been a temporary poor contact in the harness and connector or a temporary noise interference.

Diagnostic Procedure with Diagnostic Trouble Code (DTC)

VEHICLE DYNAMICS CONTROL (VDC) (DIAGNOSTICS)

CX:DTC C0081 SYSTEM FAILURE

DTC detecting condition:

VDC long time sequential control

Trouble symptom:

- VDC does not operate.
- EyeSight does not operate.

Step	Check	Yes	No
1	CHECK INSTALLATION OF VDCCM&H/U. Is VDCCM&H/U installed properly without being tilted? Is the bracket deformation-free? Are the VDCCM&H/U installation bolts installed without missing or getting loose?	Go to step 2.	Repair the defective part. • Install VDCCM&H/U properly. • Replace the bracket if faulty. • Tighten the VDCCM&H/U installation bolt. <Ref. to VDC-4, VDC CONTROL MODULE & HYDRAULIC CONTROL UNIT (VDCCM&H/U), COMPONENT, General Description.> Go to step 2.
2	CHECK STEERING WHEEL. 1) Drive the vehicle on a flat road. 2) Park the vehicle straight. 3) Check the steering wheel for deviation from center.	Go to step 3.	Perform the centering adjustment of steering wheel, and perform Set up mode for Neutral of Steering Angle Sensor & Lateral G Sensor 0 point. <Ref. to VDC-23, NEUTRAL OF STEERING ANGLE SENSOR & LATERAL G SENSOR 0 POINT SETTING (MODEL WITH EyeSight), ADJUSTMENT, VDC Control Module and Hydraulic Control Unit (VDCCM&H/U).> Go to step 3.
3	CHECK OUTPUT OF STEERING ANGLE SENSOR USING SUBARU SELECT MONITOR. 1) Adjust steering wheel to the center position. 2) Using the Subaru Select Monitor, select "Data monitor". <Ref. to VDC(diag)-15, READ CURRENT DATA, OPERATION, Subaru Select Monitor.> 3) Read the «Steer Angle Sensor Op» displayed on display.	Go to step 4.	Check the installation of the steering wheel and steering angle sensor, and correct the installation if it is improper. If the installation condition is correct, replace the sensor.

Diagnostic Procedure with Diagnostic Trouble Code (DTC)

VEHICLE DYNAMICS CONTROL (VDC) (DIAGNOSTICS)

Step	Check	Yes	No
<p>4 CHECK OUTPUT OF SENSORS USING SUBARU SELECT MONITOR.</p> <p>1) Drive the vehicle on a flat road. 2) Park the vehicle straight. 3) Using the Subaru Select Monitor, select "Data monitor". <Ref. to VDC(diag)-15, READ CURRENT DATA, OPERATION, Subaru Select Monitor.> 4) Read «Lateral G sensor Output», «Fr Rr G sensor Output», and «Yaw Rate Sensor Output» displayed on display.</p>	<p>Is the reading of each sensor following value? «Lateral G sensor Output»: $-2 - 2 \text{ m/s}^2$ «Fr Rr G sensor Output»: $-2 - 2 \text{ m/s}^2$ «Yaw Rate Sensor Output»: $-4 \text{ deg/s} - 4 \text{ deg/s}$</p>	Go to step 5.	Recheck from step 1, and if the problem is not solved, Go to step 8.
<p>5 SET 0 POINT FOR LONGITUDINAL G SENSOR USING SUBARU SELECT MONITOR.</p> <p>1) Using the Subaru Select Monitor, select "Work Support". 2) Perform the "Longitudinal G sensor & lateral G sensor 0 point setting mode". <Ref. to VDC-24, LONGITUDINAL G SENSOR & LATERAL G SENSOR 0 POINT SETTING MODE (MODEL WITH EyeSight), ADJUSTMENT, VDC Control Module and Hydraulic Control Unit (VDCCM&H/U).></p>	Is the 0 point setting successful?	Go to step 6.	Recheck from step 1, and when the 0 point setting is not possible, replace the VDCCM&H/U and steering angle sensor. <Ref. to VDC-9, VDC Control Module and Hydraulic Control Unit (VDCCM&H/U).> <Ref. to VDC-32, Steering Angle Sensor.>
<p>6 PERFORM DRIVING TEST.</p> <p>Drive approximately 10 minutes, and check if the warning lights illuminate or improperly operate during driving.</p>	Did the ABS warning light or VDC warning light remain off? Does ABS or VDC operate without malfunction?	Go to step 7.	Recheck from step 1, and when the warning lights illuminate or improperly operate, replace the VDCCM&H/U. <Ref. to VDC-9, VDC Control Module and Hydraulic Control Unit (VDCCM&H/U).>
<p>7 CHECK OUTPUT OF SENSORS USING SUBARU SELECT MONITOR.</p> <p>1) Park the vehicle on a level surface. 2) Using the Subaru Select Monitor, select "Data monitor". <Ref. to VDC(diag)-15, READ CURRENT DATA, OPERATION, Subaru Select Monitor.> 3) Read «Lateral G sensor Output», «Fr Rr G sensor Output», and «Yaw Rate Sensor Output» displayed on display.</p>	<p>Is the reading of each sensor following value? «Lateral G sensor Output»: $-1.5 - 1.5 \text{ m/s}^2$ «Fr Rr G sensor Output»: $-1.5 - 1.5 \text{ m/s}^2$ «Yaw Rate Sensor Output»: $-4 \text{ deg/s} - 4 \text{ deg/s}$</p>	Currently, it is normal. There may have been a temporary poor contact in the harness and connector or a temporary noise interference.	Replace the VDCCM&H/U. <Ref. to VDC-9, VDC Control Module and Hydraulic Control Unit (VDCCM&H/U).>
<p>8 CHECK OUTPUT OF SENSORS USING SUBARU SELECT MONITOR.</p> <p>1) Remove the VDCCM&H/U installation bolt and bracket. 2) Keep VDCCM&H/U in a horizontal position. 3) Using the Subaru Select Monitor, select "Data monitor". <Ref. to VDC(diag)-15, READ CURRENT DATA, OPERATION, Subaru Select Monitor.> 4) Read «Lateral G sensor Output», «Fr Rr G sensor Output», and «Yaw Rate Sensor Output» displayed on display.</p>	<p>When VDCCM&H/U is in a horizontal position, is the reading of each sensor following value? «Lateral G sensor Output»: $-1.5 - 1.5 \text{ m/s}^2$ «Fr Rr G sensor Output»: $-1.5 - 1.5 \text{ m/s}^2$ «Yaw Rate Sensor Output»: $-4 \text{ deg/s} - 4 \text{ deg/s}$</p>	Check the bracket and brake pipe, and install VDCCM&H/U in a horizontal position to the vehicle.	Replace the VDCCM&H/U. <Ref. to VDC-9, VDC Control Module and Hydraulic Control Unit (VDCCM&H/U).>

General Diagnostic Table

VEHICLE DYNAMICS CONTROL (VDC) (DIAGNOSTICS)

13. General Diagnostic Table

A: INSPECTION

Symptoms		Main probable cause	Other probable cause
Poor brake performance	Long braking/stopping distance	<ul style="list-style-type: none"> • VDCCM&H/U • Brake pad • Aeration to brake line • Tire specifications, tire wear and air pressures • Incorrect wiring or piping connections 	<ul style="list-style-type: none"> • Defective ABS wheel speed sensor or sensor gap • Defective steering angle sensor or improper neutral position • Defective yaw rate & G sensor or improper installation of VDCCM&H/U. • Master cylinder • Brake caliper • Disc rotor • Brake pipe • Brake booster
	Wheel lock	<ul style="list-style-type: none"> • VDCCM&H/U • Defective ABS wheel speed sensor or sensor gap • Incorrect wiring or piping connections 	<ul style="list-style-type: none"> • Defective steering angle sensor or improper neutral position • Defective yaw rate & G sensor or improper installation of VDCCM&H/U. • Brake caliper • Brake pipe

General Description

BRAKE

1. General Description

A: SPECIFICATION

NOTE:

Refer to "PARKING BRAKE" for parking brake specifications. <Ref. to PB-2, SPECIFICATION, General Description.>

1. FRONT DISC BRAKE

Item		Specification	
Size		16-inch type	
Type		Floating 2-POT piston type Ventilated disc	
Effective cylinder diameter	mm (in)	42.8 (1.685) × 2	
Pad dimension (Length × Width × Thickness)		117.8 × 50.5 × 11.0 (4.638 × 1.988 × 0.433)	
Pad thickness	mm (in)	Standard	11 (0.43)
		Limit	1.5 (0.059)
Effective disc diameter		244 (9.61)	
Rotor dimension (O.D. × Thickness)		294 × 24 (11.57 × 0.94)	
Disc thickness	mm (in)	Standard	24 (0.94)
		Limit	22 (0.87)
Disc runout	mm (in)	Standard	—
		Limit	0.05 (0.002)
Clearance adjustment		Automatic adjustment	

2. REAR DISC BRAKE

Item		Specification	
Size		15-inch	
Type		Floating 1-POT piston type	
Effective cylinder diameter	mm (in)	38.1 (1.500)	
Pad dimension (Length × Width × Thickness)		92.0 × 33.0 × 9.0 (3.622 × 1.299 × 0.354)	
Pad thickness	mm (in)	Standard	9.0 (0.354)
		Limit	1.5 (0.059)
Effective disc diameter		238 (9.37)	
Rotor dimension (O.D. × Thickness)		274 × 10 (10.79 × 0.39)	
Disc thickness	mm (in)	Standard	10 (0.39)
		Limit	8.5 (0.335)
Disc runout	mm (in)	Standard	—
		Limit	0.05 (0.002)
Clearance adjustment		Automatic adjustment	

3. MASTER CYLINDER

Item		Specification
Type		Tandem
Effective diameter	mm (in)	23.8 (15/16)
Reservoir type		Sealed type
Brake fluid reservoir capacity	cm ³ (cu in)	240 (14.64)

4. BRAKE BOOSTER

Item	Specification	
Type	Vacuum suspended	
Effective diameter	208 + 229 (8.19 + 9.02)	
Brake fluid pressure	Brake pedal force N (kgf, lbf)	Fluid pressure kPa (kgf/cm ² , psi)
When engine is stopped	147 (15, 33)	533 (5, 77)
	294 (30, 66)	1,551 (16, 225)
While engine operates and when the vacuum pressure is as follows: 66.7 kPa (500 mmHg, 19.69 inHg)	147 (15, 33)	6,177 (63, 896)
	294 (30, 66)	11,273 (115, 1,635)

5. BRAKE LINE, BRAKE PEDAL AND BRAKE FLUID

CAUTION:

- Do not let brake fluid come into contact with the painted surface of the vehicle body. Wash away with water immediately and wipe off if it is spilled by accident.
- Avoid mixing brake fluid of different brands or different grades even from the same brand to prevent fluid performance from degrading.
- When refilling brake fluid, do not allow dirt or dust to get into the reservoir tank.
- Always use new SUBARU genuine brake fluid when replacing or refilling the fluid. Do not reuse drained brake fluid.

Item	Specification	
Brake line	Dual circuit system	
Brake pedal	Type	Suspended type
	Free play	mm (in) 0.5 — 2.7 (0.020 — 0.11) [When pulling the brake pedal upward with a force of less than 10 N (1 kgf, 2 lbf)]
Brake fluid	FMVSS No. 116, DOT3, or DOT4	

General Description

BRAKE

B: COMPONENT

1. FRONT DISC BRAKE

BR-10166

(A) Shim-separated brake pad type

(B) Shim-integrated brake pad type

- (1) Caliper body
- (2) Bleeder - screw
- (3) Guide pin - front brake (black)
- (4) Pin boot
- (5) Piston seal
- (6) Piston - disc brake
- (7) Piston boot
- (8) Lock pin - sleeve
- (9) Lock pin - front brake (silver)
- (10) Support - front disc brake

- (11) Pad clip - upper
- (12) Pad clip - lower
- (13) Shim - disc brake front
- (14) Pad - disc brake front outer
- (15) Pad - disc brake front inner
- (16) Disc rotor
- (17) Back plate - front brake
- (18) Mounting bolt

- (19) Cap - bleeder

*1: 17 mm (width across flats)

*2: 19 mm (width across flats)

Tightening torque: N·m (kgf·m, ft·lb)

T1: 8 (0.82, 5.9)

T2: 27 (2.75, 19.9)

T3: 80 (8.16, 59)

T4: 135 (13.8, 99.6)

2. REAR DISC BRAKE

BR-10167

(1) Housing ASSY - rear axle

(17) Shim - disc brake rear inner

(33) Parking brake shoe (primary)

General Description

BRAKE

(2) Support - rear disc brake	(18) Shim - disc brake rear outer	(34) Back plate - rear brake
(3) Pad clip - rear brake	(19) Pin - secondary shoe hold-down	(35) Disc rotor (solid type)

Tightening torque: N-m (kgf-m, ft-lb)

T1: 8 (0.8, 5.9)

T2: 18 (1.8, 13.3)

General Description

BRAKE

C: CAUTION

- Wear appropriate work clothing, including a helmet, protective goggles and protective shoes when performing any work.
- Before removal, installation or disassembly, be sure to clarify the failure. Avoid unnecessary removal, installation, disassembly and replacement.
- Use SUBARU genuine grease etc. or equivalent. Do not mix grease etc. of different grades or manufacturers.
- Before securing a part on a vise, place cushioning material such as wood blocks, aluminum plate, or cloth between the part and the vise.
- Be sure to tighten fasteners including bolts and nuts to the specified torque.
- Place shop jacks or rigid racks at the specified points.

2. Front Brake Pad

A: REMOVAL

- 1) Lift up the vehicle, and then remove the front wheels.
- 2) Remove the front brake pad.
 - (1) Remove the caliper bolt on the lower side.
 - (2) Raise the caliper body assembly and support it.

NOTE:

Do not disconnect the brake hose from the caliper body assembly.

- (3) Remove the brake pad from support - front disc brake.

Front Brake Pad

BRAKE

B: INSTALLATION

NOTE:

Before installation, remove mud and foreign matter from the caliper body assembly and support - front disc brake.

- 1) Check the brake pad. <Ref. to BR-18, INSPECTION, Front Brake Pad.>
- 2) Apply a thin coat of grease to the pad clip.

Preparation items:

Grease: An item contained in the pad kit or equivalent

- 3) Install the brake pad to the support - front disc brake.

CAUTION:

- Be sure to install so that the pad return spring faces the input side of the direction of brake rotor rotation, as shown in the figure.
- Correctly install the pad return spring to the supporting surface of the pad clip as shown in the figure.
- If the pad return spring is deformed or damaged, replace the brake pad with a new part.

(a) Pad return spring

(b) Supporting surface of pad clip

(c) Direction of brake rotor rotation

NOTE:

Install the brake pad indicator in proper direction.

- | | | |
|--------------|--------------|-----------------------|
| (a) LH — IN | (c) RH — IN | (e) Pad indicator |
| (b) LH — OUT | (d) RH — OUT | (f) Pad return spring |

4) Install the caliper body assembly to the support - front disc brake.

Tightening torque:

Caliper bolt: 27 N·m (2.75 kgf-m, 19.9 ft-lb)

5) Install the front wheels.

Tightening torque:

Except for C4 model: 120 N·m (12.24 kgf-m, 88.5 ft-lb)

C4 model: 100 N·m (10.20 kgf-m, 73.8 ft-lb)

Front Brake Pad

BRAKE

C: INSPECTION

1) Check the pad thickness (A).

NOTE:

- Always replace the pads of both wheels and both sides as a set.
- Replace pad clips if they are twisted or worn.
- Replace the pad if there is oil or grease on it.

	Standard (A)	Wear limit (B)
Pad thickness	11 mm (0.43 in)	1.5 mm (0.059 in)

NOTE:

- Always replace the pads of both wheels and both sides as a set.
 - Replace pad clips if they are twisted or worn.
 - Wear indicators are installed on the inner and outer disc brake pads.
- If the pad is worn to the limit, the end of wear indicator contacts disc rotor, and a squeaking sound is heard as the wheel rotates. If the sound is heard, replace the pad.
- Replace the pad if there is oil or grease on it.
- 2) If the wear limit is exceeded in the inspection, replace the brake pad.

3. Front Disc Rotor

A: REMOVAL

- 1) Lift up the vehicle, and then remove the front wheels.
- 2) Remove the caliper body assembly from the housing assembly - front axle.
 - (1) Remove the bolt from the brake hose bracket.
 - (2) Remove the mounting bolt, and remove the caliper body assembly.
 - (3) Prepare wiring harnesses etc. to be discarded, and suspend the caliper body assembly from the front strut assembly with the harnesses.

DS-00603

- 3) Remove the front disc rotor.

NOTE:

When the disc rotor is difficult to be removed from the hub unit COMPL - front axle, screw in 8 mm (0.31 in) bolt to the threaded part of the disc rotor (A), and remove the disc rotor.

BR-00922

Front Disc Rotor

BRAKE

B: INSTALLATION

NOTE:

Before installation, remove mud and foreign matter from the caliper body assembly.

- 1) Before installation, check the front disc rotor. <Ref. to BR-20, INSPECTION, Front Disc Rotor.>
- 2) Install each part in the reverse order of removal.

Tightening torque:

Brake hose bracket: 33 N·m (3.36 kgf-m, 24.3 ft-lb)

Mounting bolt: Refer to "COMPONENT" of "General Description" for the tightening torque. <Ref. to BR-4, FRONT DISC BRAKE, COMPONENT, General Description.>

Front wheel: Except for C4 model

120 N·m (12.24 kgf-m, 88.5 ft-lb)

Front wheel: C4 model

100 N·m (10.20 kgf-m, 73.8 ft-lb)

C: INSPECTION

1. DISC ROTOR RUNOUT CHECK

- 1) Check the hub unit COMPL - front axle for free play and runout before the inspection of disc rotor runout limit. <Ref. to DS-31, INSPECTION, Front Hub Unit Bearing.>
- 2) Tighten the wheel nuts to secure disc rotor.
- 3) Set a dial gauge 10 mm (0.39 in) inward from the disc rotor outer circumference, and check the disc rotor runout while rotating the disc rotor.

Disc rotor runout limit: 0.05 mm (0.0020 in)

BR-01430

- 4) If the disc rotor runout exceeds service limit, resurface the disc rotor.
- 5) Check the disc rotor thickness after resurfacing. <Ref. to BR-21, DISC ROTOR THICKNESS CHECK, INSPECTION, Front Disc Rotor.>

2. DISC ROTOR THICKNESS CHECK

1) Set a micrometer 10 mm (0.39 in) inward from the disc rotor outer perimeter, and then measure the disc rotor thickness (A).

BR-01383

	Size	Standard	Wear limit	Disc rotor outer diameter
Disc rotor thickness (A)	15-inch	24 mm (0.94 in)	22 mm (0.87 in)	277 mm (10.91 in)
	16-inch			294 mm (11.57 in)

2) If the wear limit is exceeded in the inspection, replace the disc rotor.

Front Disc Brake Assembly

BRAKE

4. Front Disc Brake Assembly

A: REMOVAL

CAUTION:

Do not allow brake fluid to come in contact with the painted surface of the vehicle body. If it does, wash off with water and wipe away completely.

- 1) Lift up the vehicle, and then remove the front wheels.
- 2) Remove the caliper body assembly.
 - (1) Remove the union bolt and caliper bolt, and remove the caliper body assembly from the support - front disc brake.

- 3) Remove the support - front disc brake.

NOTE:

Remove the support - front disc brake only when replacing the disc rotor or the support - front disc brake. It is not necessary to remove it when servicing the caliper body assembly.

- (1) Remove the brake pad from support - front disc brake.

(2) Remove the mounting bolts, and then remove the support - front disc brake from the housing assembly - front axle.

B: INSTALLATION

NOTE:

Before installation, remove mud and foreign matter from the caliper body assembly and support - front disc brake.

- 1) Check each part. <Ref. to BR-29, INSPECTION, Front Disc Brake Assembly.>
- 2) Apply a thin coat of grease to the support - front disc brake.

Preparation items:

Grease: An item contained in the pad kit or equivalent

- 3) Install the support - front disc brake to the housing assembly - front axle.

Tightening torque:

Refer to "COMPONENT" of "General Description" for the tightening torque. <Ref. to BR-4, FRONT DISC BRAKE, COMPONENT, General Description.>

Front Disc Brake Assembly

BRAKE

4) Apply a thin coat of grease to the pad clip.

Preparation items:

Grease: An item contained in the pad kit or equivalent

5) Install the brake pad to the support - front disc brake.

CAUTION:

- Be sure to install so that the pad return spring faces the input side of the direction of brake rotor rotation, as shown in the figure.
- Correctly install the pad return spring to the supporting surface of the pad clip as shown in the figure.
- If the pad return spring is deformed or damaged, replace the brake pad with a new part.

(a) Pad return spring

(b) Supporting surface of pad clip

(c) Direction of brake rotor rotation

NOTE:

Install the brake pad indicator in proper direction.

- | | | |
|--------------|--------------|-----------------------|
| (a) LH — IN | (c) RH — IN | (e) Pad indicator |
| (b) LH — OUT | (d) RH — OUT | (f) Pad return spring |

6) Install the caliper body assembly to the support - front disc brake.

Tightening torque:

Caliper bolt: 27 N·m (2.75 kgf-m, 19.9 ft-lb)

7) Connect the brake hose using a new brake hose gasket.

Tightening torque:

Union bolt: 26 N·m (2.65 kgf-m, 19.2 ft-lb)

8) Bleed air from the brake system. <Ref. to BR-61, BRAKE LINE, PROCEDURE, Air Bleeding.>

9) Install the front wheels.

Tightening torque:

Except for C4 model: 120 N·m (12.24 kgf-m, 88.5 ft-lb)

C4 model: 100 N·m (10.20 kgf-m, 73.8 ft-lb)

Front Disc Brake Assembly

BRAKE

C: DISASSEMBLY

CAUTION:

Be careful not to allow foreign matter to enter the brake hose connector.

- 1) Remove mud and foreign matter from the caliper body.
- 2) Remove the piston - disc brake.
 - (1) Place a wooden block in the caliper body as shown in the figure to prevent the piston - disc brake from jumping out and being damaged.
 - (2) Using an air gun, gradually apply compressed air via the brake hose installation hole to push out the piston - disc brake.

BR-00932

3) Remove the piston boot (b) and piston seal (c) from the caliper body cylinder (a).

CAUTION:

Do not damage the cylinder and piston seal groove.

4) Remove the guide pin - front brake, lock pin - front brake, lock pin - sleeve, and pin boot from the support - front disc brake.

(a) Guide pin - front brake (black)

(c) Lock pin - sleeve

(d) Pin boot

(b) Lock pin - front brake (silver)

Front Disc Brake Assembly

BRAKE

D: ASSEMBLY

- 1) Before assembly, check each part. <Ref. to BR-29, INSPECTION, Front Disc Brake Assembly.>
- 2) Clean the inside of the caliper body cylinder using brake fluid.
- 3) Apply a coat of brake fluid to piston seal and install the piston seal to the caliper body cylinder groove.
- 4) Apply a coat of brake fluid to the inner surface of caliper body cylinder and the entire outer surface of the piston - disc brake.
- 5) Apply grease contained in the piston seal kit to the piston boot, and install it to the groove at the end of the cylinder.
- 6) Insert the piston - disc brake into the caliper body cylinder.
- 7) Position the piston boot in the grooves on the piston - disc brake and the caliper body cylinder.

CAUTION:

Do not force the piston - disc brake into the caliper body cylinder.

BR-00931

(a) Piston - disc brake

(c) Caliper body assembly

(d) Piston seal

(b) Piston boot

5. Rear Brake Pad

A: REMOVAL

- 1) Lift up the vehicle, and then remove the rear wheels.
- 2) Remove the rear brake pad.
 - (1) Remove the bolts and remove the brake hose bracket.
 - (2) Remove the caliper bolt, and raise and hold the caliper body assembly.

NOTE:

Do not disconnect the brake hose from the caliper body assembly.

- (3) Remove the brake pad from support - rear disc brake.

B: INSTALLATION**NOTE:**

Before installation, remove mud and foreign matter from the caliper body assembly and support - rear disc brake.

- 1) Before installation, check the brake pad. <Ref. to BR-32, INSPECTION, Rear Brake Pad.>
- 2) Apply a thin coat of grease to the pad clip.

Preparation items:

Grease: An item contained in the pad kit or equivalent

- 3) Apply a thin coat of grease to the shim - disc brake rear inner (a) and the shim - disc brake rear outer (b).

Preparation items:

Grease: Those contained in the pad kit or WAKO grease V160

(A) Pad - disc brake rear outer

(B) Pad - disc brake rear inner

- 4) Install the brake pad to the support - rear disc brake.
- 5) Install the caliper body assembly to the support - rear disc brake.

Tightening torque:

Caliper bolt: 27 N·m (2.75 kgf-m, 19.9 ft-lb)

- 6) Install the brake hose bracket.

Tightening torque:

Brake hose bracket: 33 N·m (3.36 kgf-m, 24.3 ft-lb)

- 7) Install the rear wheels.

Tightening torque:

Except for C4 model: 120 N·m (12.24 kgf-m, 88.5 ft-lb)

C4 model: 100 N·m (10.20 kgf-m, 73.8 ft-lb)

Rear Brake Pad

BRAKE

C: INSPECTION

1) Check the pad thickness.

NOTE:

- Always replace the pads of both wheels and both sides as a set.
- Replace pad clips if they are twisted or worn.
- Replace the pad if there is oil or grease on it.
- A wear indicator is installed on the pad - disc brake rear inner. If the pad is worn to the limit, the end of wear indicator contacts disc rotor, and a squeaking sound is heard as the wheel rotates. If the sound is heard, replace the pad.

	Disc rotor type	Standard (A)	Wear limit (B)
Pad thickness	Solid	9 mm (0.35 in)	1.5 mm (0.059 in)

2) If the wear limit is exceeded in the inspection, replace the brake pad.

6. Rear Disc Rotor

A: REMOVAL

- 1) Lift up the vehicle, and then remove the rear wheels.
- 2) Release the lever assembly - hand brake.
- 3) Remove the caliper body assembly from the housing assembly - rear axle.
 - (1) Remove the bolt from the brake hose bracket.
 - (2) Remove the mounting bolt, and remove the caliper body assembly.

- (3) Prepare wiring harnesses etc. to be discarded, and suspend the caliper body assembly from the shock absorber assembly - rear with the harnesses.

Rear Disc Rotor

BRAKE

4) Remove the rear disc rotor.

NOTE:

If it is difficult to remove the disc rotor, perform the following two methods in order.

1. Remove the adjusting hole cover (A), and loosen the adjuster assembly - rear brake by inserting a flat tip screwdriver.

- | | | |
|--------------------------------|---|--|
| (a) Adjuster ASSY - rear brake | (c) Disc rotor | (e) Shorten the adjuster ASSY - rear brake |
| (b) Flat tip screwdriver | (d) Extend the adjuster ASSY - rear brake | |

2. When the disc rotor is difficult to be removed from the hub unit COMPL - rear axle, screw in 8 mm (0.31 in) bolt to the threaded part of the disc rotor (A), and remove the disc rotor.

B: INSTALLATION**NOTE:**

Before installation, remove mud and foreign matter from the caliper body assembly.

- 1) Before installation, check the rear disc rotor. <Ref. to BR-36, INSPECTION, Rear Disc Rotor.>
- 2) Install each part in the reverse order of removal.

NOTE:

When installing the rear disc rotor, match the alignment mark (a) of the rear disc rotor and the alignment mark (b) of the bolt - hub.

- 3) Adjust the parking brake. <Ref. to PB-16, ADJUSTMENT, Parking Brake Assembly (Rear Disc Brake).>

Tightening torque:

Brake hose bracket: 33 N·m (3.36 kgf-m, 24.3 ft-lb)

Mounting bolt: Refer to "COMPONENT" of "General Description" for the tightening torque. <Ref. to BR-5, REAR DISC BRAKE, COMPONENT, General Description.>

Rear wheel: Except for C4 model

120 N·m (12.24 kgf-m, 88.5 ft-lb)

Rear wheel: C4 model

100 N·m (10.20 kgf-m, 73.8 ft-lb)

Rear Disc Rotor

BRAKE

C: INSPECTION

1. DISC ROTOR RUNOUT CHECK

- 1) Check the hub unit COMPL - rear axle for free play and runout before the inspection of disc rotor runout limit. <Ref. to DS-51, INSPECTION, Rear Hub Unit Bearing.>
- 2) Check the disc rotor runout.
 - (1) Remove the caliper body assembly. <Ref. to BR-38, REMOVAL, Rear Disc Brake Assembly.>
 - (2) Secure the disc rotor by tightening the five wheel nuts.
 - (3) Set a dial gauge 10 mm (0.39 in) inward from the disc rotor outer circumference, and check the outer disc rotor runout while rotating the disc rotor.

Disc rotor runout limit:
0.05 mm (0.0020 in)

- (4) Set a dial gauge 10 mm (0.39 in) inward from the disc rotor outer circumference, and check the inner disc rotor runout while rotating the disc rotor.

Disc rotor runout limit:
0.05 mm (0.0020 in)

- 3) If the disc rotor runout exceeds service limit, resurface the disc rotor.

4) Check the disc rotor thickness after resurfacing. <Ref. to BR-37, DISC ROTOR THICKNESS CHECK, INSPECTION, Rear Disc Rotor.>

2. DISC ROTOR THICKNESS CHECK

1) Set a micrometer 10 mm (0.39 in) inward from the disc rotor outer perimeter, and then measure the disc rotor thickness (A).

BR-01368

	Type of disc rotor	Standard	Wear limit	Disc rotor outer diameter
Disc rotor thickness (A)	Solid disc	10 mm (0.39 in)	8.5 mm (0.33 in)	274 mm (10.79 in)

2) If the wear limit is exceeded in the inspection, replace the disc rotor.

Rear Disc Brake Assembly

BRAKE

7. Rear Disc Brake Assembly

A: REMOVAL

CAUTION:

Do not allow brake fluid to come in contact with the painted surface of the vehicle body. If it does, wash off with water and wipe away completely.

- 1) Lift up the vehicle, and then remove the rear wheels.
- 2) Remove the caliper body assembly from the support - rear disc brake.
 - (1) Remove the brake hose bracket and union bolt.

BR-00964

BR-01003

- (2) Remove the caliper bolt, and remove the caliper body assembly.

- 3) Remove the support - rear disc brake.

NOTE:

Remove the support - rear disc brake only when replacing the disc rotor or the support - rear disc brake. It is not necessary to remove it when servicing the caliper body assembly.

- (1) Remove the brake pad from support - rear disc brake.
- (2) Remove the mounting bolts, and then remove the support - rear disc brake from the housing assembly - rear axle.

B: INSTALLATION

NOTE:

Before installation, remove mud and foreign matter from the caliper body assembly and support - rear disc brake.

- 1) Before installation, check each part. <Ref. to BR-44, INSPECTION, Rear Disc Brake Assembly.>
- 2) Apply a thin coat of grease to the support - rear disc brake.

Preparation items:

Grease: An item contained in the pad kit or equivalent

- 3) Install the support - rear disc brake to the housing assembly - rear axle.

Tightening torque:

Refer to “COMPONENT” of “General Description” for the tightening torque. <Ref. to BR-5, REAR DISC BRAKE, COMPONENT, General Description.>

Rear Disc Brake Assembly

BRAKE

4) Apply a thin coat of grease to the pad clip.

Preparation items:

Grease: An item contained in the pad kit or equivalent

5) Apply a thin coat of grease to the shim - disc brake rear inner (a) and the shim - disc brake rear outer (b).

Preparation items:

Grease: Those contained in the pad kit or WAKO grease V160

(A) Pad - disc brake rear outer

(B) Pad - disc brake rear inner

6) Install the brake pad to the support - rear disc brake.

7) Install the caliper body assembly to the support - rear disc brake.

Tightening torque:

Caliper bolt: 27 N·m (2.75 kgf-m, 19.9 ft-lb)

8) Install the brake hose bracket.

Tightening torque:

Brake hose bracket: 33 N·m (3.36 kgf-m, 14.3 ft-lb)

9) Connect the brake hose using a new brake hose gasket.

Tightening torque:

Union bolt: 26 N·m (2.65 kgf-m, 19.2 ft-lb)

10) Bleed air from the brake system. <Ref. to BR-61, BRAKE LINE, PROCEDURE, Air Bleeding.>

11) Install the rear wheels.

Tightening torque:

Except for C4 model: 120 N·m (12.24 kgf-m, 88.5 ft-lb)

C4 model: 100 N·m (10.20 kgf-m, 73.8 ft-lb)

C: DISASSEMBLY

CAUTION:

Be careful not to allow foreign matter to enter the brake hose connector.

- 1) Remove mud and foreign matter from the caliper body assembly.
- 2) Remove the piston boot from caliper body cylinder.

BR-00934

- 3) Remove the piston - disc brake.

- (1) Place a wooden block in the caliper body assembly as shown in the figure to prevent the piston - disc brake from jumping out and being damaged.
- (2) Using an air gun, gradually apply compressed air via the brake hose installation hole to push out the piston - disc brake.

BR-00935

Rear Disc Brake Assembly

BRAKE

4) Remove the piston seal from caliper body cylinder.

CAUTION:

Do not damage the cylinder and piston seal groove.

5) Remove the guide pin - rear brake, lock pin - rear brake, lock pin - sleeve, and pin boot from the support - rear disc brake.

(a) Guide pin - rear brake (black)

(c) Lock pin - sleeve

(d) Pin boot

(b) Lock pin - rear brake (silver)

D: ASSEMBLY

1) Before installation, check each part. <Ref. to BR-44, INSPECTION, Rear Disc Brake Assembly.>

2) Clean the inside of the caliper body cylinder using brake fluid.

3) Apply a coat of brake fluid to piston seal and install the piston seal to the caliper body cylinder groove.

4) Apply a coat of brake fluid to the inner surface of caliper body cylinder and the entire outer surface of the piston - disc brake.

5) Apply grease contained in the piston seal kit to the piston boot, and install it to the groove at the end of the cylinder.

6) Insert the piston - disc brake into the caliper body cylinder.

CAUTION:

Do not force the piston - disc brake into the caliper body cylinder.

7) Position the piston boot in the grooves on the piston - disc brake and the caliper body cylinder.

(a) Piston - disc brake
(b) Piston boot

(c) Caliper body

(d) Piston seal

8) Apply grease contained in the piston seal kit to the lock pin - rear brake, the outer surface of guide pin - rear brake, the inner surface of support cylinder, and the grooves of pin boot.

9) Install the pin boot to the lock pin - rear brake and guide pin - rear brake, and insert them into the support cylinder.

CAUTION:

Insert the lock pin - rear brake and guide pin - rear brake into specified position, and make sure that they slide and seat properly.

(a) Pin boot

(b) Lock pin - rear brake or guide pin - rear brake

(c) Grease applied area

Rear Disc Brake Assembly

BRAKE

E: INSPECTION

- 1) Check the caliper body cylinder and piston - disc brake for uneven wear, damage or rust.
- 2) Check the rubber parts for damage or deterioration.
- 3) If faulty is found in the inspection, replace the relevant part.

8. Master Cylinder

A: REMOVAL

CAUTION:

- Do not allow brake fluid to come in contact with the painted surface of the vehicle body. If it does, wash off with water and wipe away completely.
- Prepare a container to catch grease or oil, etc. If any grease or oil spills, wipe it off and clean immediately to prevent from penetrating into floor or flowing outside.

- 1) Disconnect the ground cable from battery and wait for at least 60 seconds before starting work. <Ref. to NT-6, BATTERY, NOTE, Note.>
- 2) Drain brake fluid from the reservoir tank completely.
- 3) Remove the master cylinder assembly.
 - (1) Disconnect the fluid level gauge connector (a).
 - (2) Disconnect the clutch hose (b). (MT model)
 - (3) Disconnect the brake pipe (c).
 - (4) Remove the nut (d), and slowly remove the master cylinder assembly from the vacuum booster assembly.

BR-00912

Master Cylinder

BRAKE

B: INSTALLATION

1) Replace the seal sub assembly for the master cylinder assembly with a new part.

CAUTION:

Be careful not to install the seal sub assembly in the wrong location.

(a) Primary piston

(b) Seal sub ASSY

(c) Install the seal sub assembly to this surface.

2) Install each part in the reverse order of removal.

Tightening torque:

Master cylinder assembly: 13 N·m (1.33 kgf-m, 9.6 ft-lb)

Brake pipe flare nut: 19 N·m (1.94 kgf-m, 14.0 ft-lb)

3) Bleed air from the brake system. <Ref. to BR-59, PROCEDURE, Air Bleeding.>

C: DISASSEMBLY

1) Remove the reservoir tank.

CAUTION:

Be careful not to tighten a vise excessively.

(1) Place the master cylinder assembly between aluminum plates and fix it on a vise.

- (2) Drive out the pin using a punch and a hammer to remove the reservoir tank.

- 2) Remove the seal from the cylinder body assembly.

D: ASSEMBLY

CAUTION:

When replacing the reservoir tank, adhere the label to the position shown in the figure. (C5 model)

Preparation items:

C5 model

Part No.: Label (25080GA010)

(a) Label

(b) Brake booster

- 1) Install the seal to the cylinder body assembly.
2) Install the reservoir tank.

CAUTION:

Be careful not to tighten a vise excessively.

- (1) Place the master cylinder assembly between aluminum plates and fix it on a vise.
(2) Drive the pin using a punch and a hammer to install the reservoir tank.

9. Brake Booster

A: REMOVAL

CAUTION:

- Do not allow brake fluid to come in contact with the painted surface of the vehicle body. If it does, wash off with water and wipe away completely.

- Before handling the airbag system components, always refer to “CAUTION” of “General Description” in “AIRBAG SYSTEM”. <Ref. to AB-9, CAUTION, General Description.>

1) Disconnect the ground cable from battery and wait for at least 60 seconds before starting work. <Ref. to NT-6, BATTERY, NOTE, Note.>

2) Remove the column assembly - steering. <Ref. to PS-18, REMOVAL, Steering Column.>

3) Drain brake fluid from the reservoir tank completely.

4) Disconnect the air conditioner pipe. <Ref. to AC-62, REMOVAL, Hose and Pipe.>

5) Remove the power steering control module. <Ref. to PS-36, REMOVAL, Power Steering Control Module.>

6) Remove the master cylinder assembly. <Ref. to BR-45, REMOVAL, Master Cylinder.>

7) Remove the clamp and remove the vacuum hose (a).

BR-10169

- 8) Remove the brake pipe assembly (a).
 (1) Disconnect the starter connector (b) and harness clip (c).
 (2) Remove the brake pipe assembly (a) from the pipe clip (d).

BR-00975

- 9) Remove the cover assembly - instrument panel LWR driver. <Ref. to EI-54, REMOVAL, Instrument Panel Lower Cover.>
 10) Remove the knee airbag module. <Ref. to AB-34, REMOVAL, Knee Airbag Module.>
 11) Remove the column assembly - steering. <Ref. to PS-18, REMOVAL, Steering Column.>
 12) Remove the snap pin (a) and clevis pin (b), and remove the operating rod from the brake pedal.

CAUTION:

- Be careful not to apply excessive force to the operating rod when handling the operating rod. The angle may change by $\pm 3^\circ$, and it may result in damage to power piston cylinder.
- Do not change the push rod length.

BR-01213

Brake Booster

BRAKE

13) Remove the vacuum booster assembly.

CAUTION:

- Do not disassemble the vacuum booster assembly.
- Make sure that the booster shell and vacuum pipe are not subject to strong impacts.
- Be careful not to drop the vacuum booster assembly. If the vacuum booster assembly is dropped accidentally, replace it.
- Be careful when placing the vacuum booster assembly on floor.
- If external force (a) is applied from above when the vacuum booster assembly is placed in this position, the resin portion as indicated by "P" may become damaged.

(1) Remove the nuts, and then remove the vacuum booster assembly.

B: INSTALLATION

- 1) Check and adjust the operating rod of the vacuum booster assembly.
 - (1) Measure the length between the vacuum booster assembly mounting surface and clevis pin hole.
 - (2) If it is not within the specification, loosen the lock nut, rotate the vacuum booster assembly operating rod to adjust the rod length.

Specification L:
136.3 mm (5.37 in)

BR-00957

- 2) Install each part in the reverse order of removal.

CAUTION:

- Apply grease to the snap pin to prevent the operating rod from wear.
- Replace the clevis pin with new parts, and apply thin coat of NIGTIGHT LYW No. 2 grease to the clevis pin.
- When installing the master cylinder assembly, replace the seal sub assembly with a new part, and install it to the vacuum booster assembly.

BR-00948

(a) Primary piston

(b) Seal sub ASSY

(c) Install the seal sub ASSY to this surface.

Brake Booster

BRAKE

Tightening torque:

Vacuum booster assembly: 18 N·m (1.84 kgf-m, 13.3 ft-lb)

Master cylinder assembly: 13 N·m (1.33 kgf-m, 9.6 ft-lb)

Brake pipe flare nut: 19 N·m (1.94 kgf-m, 14.0 ft-lb)

Operating lock nut: 22 N·m (2.24 kgf-m, 16.2 ft-lb)

Knee airbag module: 7.5 N·m (0.76 kgf-m, 5.5 ft-lb)

- 3) Install the air conditioner pipe. <Ref. to AC-11, AIR CONDITIONING UNIT, COMPONENT, General Description.>
- 4) Charge refrigerant. <Ref. to AC-28, PROCEDURE, Refrigerant Charging Procedure.>
- 5) Bleed air from the brake system. <Ref. to BR-59, PROCEDURE, Air Bleeding.>
- 6) Perform a road test to make sure the brakes do not drag.

C: INSPECTION

1. OPERATION CHECK WHEN NOT USING MEASURING DEVICES

CAUTION:

When checking operation, be sure to apply the parking brake securely.

When an operation check is performed with no measuring devices, a faulty part cannot be identified correctly. But it is possible to identify the outline of the defect by performing the check according to the following procedures.

• Air tightness check

- 1) Start the engine, and idle it for 1 to 2 minutes, then turn it OFF.
- 2) Depress the brake pedal several times applying the normal pedal force.

NOTE:

The pedal stroke should be the longest at the 1st depression, and it should become shorter at each successive depression.

- 3) If no change occurs in the pedal height when pressed, the vacuum booster assembly is faulty.

(A) Normal

(B) Not OK

(a) 1st

(b) 2nd

(c) 3rd

NOTE:

- In case of defective operation, inspect the condition of the check valve and vacuum hose as well.
- Replace them if faulty, and perform the test again.
- If no improvement is observed, check precisely with gauges.

- **Check operation**

1) While the engine is OFF, depress the brake pedal several times applying the same pedal force, to check for a change in pedal height.

(a) When engine is stopped

(b) When engine is started

2) With the brake pedal depressed, start the engine.

3) As the engine starts, the brake pedal should move slowly toward the floor. If the pedal height does not change, the vacuum booster assembly is faulty.

NOTE:

If a faulty part is detected after inspection, check precisely with measuring devices.

- **Loaded air tightness check**

Depress the brake pedal while the engine is running, and turn the engine to OFF while the pedal is depressed.

Keep the pedal depressed for 30 seconds. If the pedal height does not change, the function of vacuum booster assembly is normal. If the pedal height increases, it is faulty.

NOTE:

If a faulty part is detected after inspection, check precisely with measuring devices.

Brake Booster

BRAKE

2. OPERATION CHECK WHEN USING MEASURING DEVICES

CAUTION:

When checking operation, be sure to apply the parking brake securely.

• Check with measuring devices

Connect a measuring device as shown in the figure. After bleeding air from the pressure gauge, perform each check.

- | | | |
|--------------------|------------------|-----------------------|
| (a) Pressure gauge | (c) Adapter hose | (e) Pedal force gauge |
| (b) Vacuum gauge | (d) Vacuum hose | |

• Air tightness check

1) Start the engine and keep it running at idle until vacuum pressure indicates 66.7 kPa (500 mmHg, 19.69 inHg) while the brake pedal is not depressed.

- | | |
|--------------------|------------------|
| (a) Pressure gauge | (b) Vacuum gauge |
|--------------------|------------------|

2) Stop the engine and check the vacuum pressure.

If the value matches the following standard, the vacuum booster assembly function is normal.

Vacuum pressure: standard

The range of vacuum pressure drop within 15 seconds after stopping the engine is 3.3 kPa (25 mm-Hg, 0.98 inHg) or less.

If a faulty part is detected after inspection, it may results from one of the following causes.

- Check valve malfunction
- Leak from vacuum hose
- Leak from shell joint section or stud bolt welded section
- Damaged diaphragm
- Leak from valve body seal and bearing section
- Leak from plate and seal assembly section
- Leak from poppet valve assembly section

• **Loaded air tightness check**

1) Start the engine and depress the brake pedal with a pedal force of 196 N (20 kgf, 44 lbf).

2) Keep the engine running at idle and the pedal depressed until vacuum pressure of the vacuum gauge indicates 66.7 kPa (500 mmHg, 19.69 inHg).

- (a) Pressure gauge
- (b) Vacuum gauge

(c) Pedal force gauge

(d) Depressed

3) Stop the engine and check the vacuum gauge.

If the value matches the following standard, the vacuum booster function is normal.

Vacuum pressure: standard

The range of vacuum pressure drop within 15 seconds after stopping the engine is 3.3 kPa (25 mm-Hg, 0.98 inHg) or less.

If a faulty part is detected after inspection, refer to “AIR TIGHTNESS CHECK”.

<Ref. to BR-52, INSPECTION, Brake Booster.>

4) If the vacuum booster assembly is faulty, replace it with a new part.

Brake Booster

BRAKE

• Lack of boost action check

- 1) Turn the engine OFF, and set the value of the vacuum gauge to "0".
- 2) Check the fluid pressure when the brake pedal is depressed. The pressure must be greater than the specification listed.

Brake pedal force: N (kgf, lbf)	147 (15, 33)	294 (30, 66)
Fluid pressure: kPa (kgf/cm ² , psi)	533 (5, 77)	1,551 (16, 225)

• Boosting action check

- 1) Set the vacuum gauge reading to 66.7 kPa (500 mmHg, 19.69 inHg) with the engine running.
- 2) Check the fluid pressure when the brake pedal is depressed. The pressure must be greater than the specification listed.

Brake pedal force: N (kgf, lbf)	147 (15, 33)	294 (30, 66)
Fluid pressure: kPa (kgf/cm ² , psi)	6,177 (63, 896)	11,273 (115, 1,635)

10.Brake Fluid

A: INSPECTION

CAUTION:

- Do not let brake fluid come into contact with the painted surface of the vehicle body. Wash away with water immediately and wipe off if it is spilled by accident.
- Do not reuse drained brake fluid. When refilling brake fluid, always refill new brake fluid.
- Avoid mixing brake fluid of different brands or different grades even from the same brand to prevent fluid performance from degrading.
- Do not allow dirt or dust to get into the reservoir tank.

1) Check the fluid for discoloration.

2) Check that the amount of brake fluid is between the lines of “MIN” (a) and “MAX” (b) from a straight view or within 90° to the right and left forward.

CAUTION:

Always check the level using the specified direction because there is a partition in the reservoir tank.

BR-01487

(A) View from upper face

(a) MIN. level
(b) MAX. level

(c) Brake fluid

(d) Brake fluid level check range

3) If the brake fluid level is close to “MIN”, check the brake pipe or brake hose for any leak first. Then, check that the brake fluid level is reduced due to brake pad wear.

4) If the fluid is extremely discolored or the fluid level is less than the specified value after inspection, replenish or replace with the new fluid.

Brake Fluid

BRAKE

B: REPLACEMENT

CAUTION:

- Do not let brake fluid come into contact with the painted surface of the vehicle body. Wash away with water immediately and wipe off if it is spilled by accident.
- Do not reuse drained brake fluid. When refilling brake fluid, always refill new brake fluid.
- Avoid mixing brake fluid of different brands or different grades even from the same brand to prevent fluid performance from degrading.
- Do not allow dirt or dust to get into the reservoir tank.

NOTE:

- During the operation, keep the reservoir tank filled with brake fluid to prevent entry of air.
 - Operate the brake pedal slowly and depress it fully.
 - For convenience and safety, perform the work with 2 people.
 - The required amount of brake fluid is approximately 500 mL (16.9 US fl oz, 17.6 Imp fl oz) for the entire brake system.
- 1) Lift up the vehicle.
 - 2) Remove both the front and rear wheels.
 - 3) Drain brake fluid from the reservoir tank.
 - 4) Replenish the reservoir tank with the recommended brake fluid, and perform the same procedure as for bleeding the brake line on each brake caliper. <Ref. to BR-59, PROCEDURE, Air Bleeding.>

Preparation items:

Recommended brake fluid: FMVSS No. 116, DOT3 or DOT4

NOTE:

Repeat the full stroke depressing operation of the brake pedal 20 times slowly on each brake caliper, until new brake fluid comes out from transparent vinyl tube.

11. Air Bleeding

A: PROCEDURE

CAUTION:

- Do not let brake fluid come into contact with the painted surface of the vehicle body. Wash away with water immediately and wipe off if it is spilled by accident.
- Avoid mixing brake fluid of different brands or different grades even from the same brand to prevent fluid performance from degrading.
- Do not reuse drained brake fluid. When refilling brake fluid, always refill new brake fluid.
- Do not allow dirt or dust to get into the reservoir tank.
- Do not mix two different kinds or makes of fluid to prevent fluid performance from degrading.
- For convenience and safety, perform the work with 2 people.
- During the operation, keep the reservoir tank filled with brake fluid at MIN level or higher to prevent entry of air.

For air bleed procedure of each part, refer to the following.

- Master cylinder: <Ref. to BR-59, MASTER CYLINDER, PROCEDURE, Air Bleeding.>
- Brake line: <Ref. to BR-61, BRAKE LINE, PROCEDURE, Air Bleeding.>
- Hydraulic control unit: <Ref. to BR-62, HYDRAULIC CONTROL UNIT, PROCEDURE, Air Bleeding.>
- Caliper: <Ref. to BR-62, CALIPER, PROCEDURE, Air Bleeding.>

1. MASTER CYLINDER

NOTE:

- When the master cylinder assembly is replaced or the reservoir tank is empty, bleed the brake master cylinder and the clutch master cylinder (MT model).

For air bleed procedure of the clutch fluid, refer to "CLUTCH SYSTEM" section. <Ref. to CL-25, PROCEDURE, Clutch Fluid Air Bleeding.>

- If bleeding of the master cylinder assembly is not necessary, omit the following procedures, and perform bleeding of the brake line. <Ref. to BR-61, BRAKE LINE, PROCEDURE, Air Bleeding.>

1) Install the brake pipe to the master cylinder assembly.

- (1) Screw and tighten the flare nut (b) so that the end of the nut contacts the back side of the brake pipe flare, while pressing the brake pipe (a) toward the master cylinder assembly side.

CAUTION:

Be careful not to make scratches or other damage to the inside surface of the brake pipe flare.

Tightening torque:

Brake pipe flare nut: 19 N·m (1.94 kgf-m, 14.0 ft-lb)

BR-01088

Air Bleeding

BRAKE

2) Fill the reservoir tank of the master cylinder assembly with brake fluid.

NOTE:

- Replenish brake fluid to the MAX level.
- During the operation, keep the reservoir tank filled with brake fluid at MIN level or higher to prevent entry of air.

3) Attach a transparent vinyl tube to the bleeder - screw of the right front caliper body assembly that is the closest from the VDC control module & hydraulic control unit, and the other end of the vinyl tube to a collection container.

4) Loosen the bleeder - screw, depress the brake pedal slowly and hold it.

5) Tighten the bleeder - screw, and release the brake pedal quickly.

6) Repeat steps 4) and 5) until there are no more air bubbles in the brake fluid in the vinyl tube.

NOTE:

Air bubbles are removed after repeating the procedures six to seven times.

7) Attach a transparent vinyl tube to the bleeder - screw of the left front caliper body assembly, and the other end of the vinyl tube to a brake fluid collection container.

8) Repeat steps 4) and 5) until there are no more air bubbles in the brake fluid in the vinyl tube.

NOTE:

- Air bubbles are removed after repeating the procedures seven to eight times.
- With the procedures so far, bleed is completed for the air that entered in the master cylinder, front brake piping hose passages and front caliper.

Next, perform the following procedures to bleed air that entered in the rear brake piping hose passages and rear caliper from the hydraulic unit.

9) Attach a transparent vinyl tube to the bleeder - screw of the left rear caliper body assembly, and the other end of the vinyl tube to a brake fluid collection container.

10) Loosen the bleeder - screw, and repeat the full stroke depressing operation of the brake pedal slowly, until the brake fluid in the transparent vinyl tube has no more air bubbles, then tighten the bleeder - screw.

NOTE:

By repeating the procedures 15 times or more, air that entered in the rear brake pipe passages from the VDC control module & hydraulic control unit reaches the bleeder - screw of the left rear caliper body assembly and is discharged.

11) Attach a transparent vinyl tube to the bleeder - screw of the right rear caliper body assembly, and the other end of the vinyl tube to a brake fluid collection container.

12) Perform step 10).

NOTE:

- By repeating the procedures 10 times or more, air that entered in the rear brake pipe passages from the VDC control module & hydraulic control unit reaches the bleeder - screw of the right rear caliper body assembly and is discharged.
- With the procedures so far, bleed is completed for the air that entered in the rear brake piping hose passages and rear caliper from the hydraulic unit.

Lastly, perform the following procedures to bleed air that may remain in areas where the brake fluid flow stands.

13) Attach a transparent vinyl tube to the bleeder - screw of the right front caliper body assembly, and the other end of the vinyl tube to a brake fluid collection container.

14) After repeating firmly depressing of the brake pedal quickly five or six times, depress and hold the pedal.

15) Loosen the bleeder - screw to drain brake fluid. When the brake pedal reaches the full stroke position, tighten the bleeder - screw quickly, and release the brake pedal.

16) Repeat steps 14) and 15) until there are no more air bubbles in the transparent vinyl tube.

NOTE:

Repeat the procedures approximately four to five times.

17) Repeat steps 14) to 16) above for each brake caliper.

NOTE:

Bleed air in the order starting from the front RH → front LH → rear LH → rear RH.

18) Tighten the bleeder - screw to the specified torque.

Tightening torque:

Bleeder - screw: 8 N·m (0.82 kgf-m, 5.9 ft-lb)

19) Install the cap - bleeder to each bleeder - screw.

2. BRAKE LINE

1) When the master cylinder assembly is replaced or the reservoir tank is empty, bleed the master cylinder assembly before bleeding the brake line. <Ref. to BR-59, MASTER CYLINDER, PROCEDURE, Air Bleeding.>

2) Fill the reservoir tank of the master cylinder assembly with brake fluid.

NOTE:

While bleeding air, keep the reservoir tank filled with brake fluid to prevent entry of air.

3) Attach one end of a transparent vinyl tube to the bleeder - screw, and the other end to a brake fluid collection container.

4) Loosen the bleeder - screw, and then repeat the full stroke depressing operation of the brake pedal, until brake fluid in the transparent vinyl tube has no more air bubbles.

NOTE:

Air bubbles are removed after repeating the depressing operation 15 times or more for the front caliper, and 20 times or more for the rear caliper.

5) Perform the steps 2) to 4) above on each brake caliper.

NOTE:

Perform in the order starting from the front RH → front LH → rear LH → rear RH.

6) Tighten the loosened bleeder - screw, repeat firmly depressing of the brake pedal 5 to 6 times, and then depress and hold the brake pedal.

7) Loosen the bleeder - screw to drain the brake fluid. When the brake pedal reaches the full stroke position, immediately tighten the bleeder - screw and return the brake pedal.

8) Repeat steps 6) and 7) until there are no more air bubbles in the transparent vinyl tube.

9) Perform the steps 6) to 8) above on each brake caliper.

NOTE:

Perform in the order starting from the front RH → front LH → rear LH → rear RH.

Air Bleeding

BRAKE

10) Operate the hydraulic control unit in the sequence control mode for both ABS and VDC systems.

CAUTION:

- If there is a possibility that air enters the pressure control section in the hydraulic control unit, perform steps 11) to 16).
- For normal air bleeding operation, do not operate the sequence control for the hydraulic control unit. (Operating the sequence control may let air in the normal air bleeding passages move to the pressure control section.)

NOTE:

- Normal air bleeding operation does not help bleed air that enters the pressure control section in the hydraulic control unit.
- If there is a possibility that air enters the pressure control section in the hydraulic control unit (if VDC or ABS operates with air contained in the normal air bleeding passage), perform the sequence control mode for both of the ABS and VDC systems.

11) Perform the ABS sequence control mode. <Ref. to VDC-25, ABS Sequence Control.>

CAUTION:

Be sure to perform the ABS sequence control mode first.

12) Perform the air bleeding operation of steps 3) and 4) for the bleeder - screw on each caliper.

NOTE:

- Perform in the order starting from the front RH → front LH → rear LH → rear RH.
 - As a reference, the number of the full stroke depressing operation is six times.
- 13) Perform the VDC sequence control mode. <Ref. to VDC-28, VDC Sequence Control.>
14) Perform the air bleeding operation of steps 3) and 4) for the bleeder - screw on each caliper.
15) Repeat from steps 11) to 14) for three cycles.
16) In case air still remains at step 15), repeat steps 11) to 14) again until all air is removed.
17) Fill the reservoir tank with brake fluid up to the "MAX" level.
18) Tighten the bleeder - screw to the specified torque.

Tightening torque:

Bleeder - screw: 8 N·m (0.82 kgf-m, 5.9 ft-lb)

- 19) Install the cap - bleeder to each bleeder - screw.
20) Check that there are no brake fluid leaks at the flare nut portion or in the entire brake system.
21) After inspection, wipe off fluid around each bleeder - screw and the reservoir tank.
22) Perform a road test and ensure that the brakes operate normally.

3. HYDRAULIC CONTROL UNIT

1) Bleed air from the brake line. <Ref. to BR-61, BRAKE LINE, PROCEDURE, Air Bleeding.>

NOTE:

If there is a possibility that air enters the pressure control section in the hydraulic control unit, perform the sequence control mode for both of the ABS and VDC systems. (Refer to steps 10) to 16) for brake lining.)

4. CALIPER

1) Bleed air from the brake line. <Ref. to BR-61, BRAKE LINE, PROCEDURE, Air Bleeding.>

12.Brake Hose

A: REMOVAL

1. FRONT BRAKE HOSE

1) Disconnect the brake pipe (b) from the brake hose (a).

Preparation tool:

Flare nut wrench

2) Remove the clamp, strut mounting bolt and union bolt, and remove the front brake hose.

Brake Hose

BRAKE

2. REAR BRAKE HOSE

1) Remove the brake hose bracket bolt and union bolt.

2) Disconnect the brake pipe (a).

Preparation tool:
Flare nut wrench

- 3) Remove the brake hose clamp (b), and remove the rear brake hose (c).

B: INSTALLATION

1. FRONT BRAKE HOSE

- 1) Secure the brake hose to strut mount.

Tightening torque:

Brake hose: 33 N·m (3.36 kgf-m, 24.3 ft-lb)

- 2) Connect the brake hose to the front caliper body assembly using a new gasket.

Tightening torque:

Union bolt: 26 N·m (2.65 kgf-m, 19.2 ft-lb)

- 3) Position the disc in straight position and route the brake hose through the hole in the bracket on the wheel apron side.

CAUTION:

Do not twist the brake hose.

- 4) Temporarily tighten the flare nut which connects brake pipe and hose.
 5) Secure the brake hose to wheel apron bracket with clamp.
 6) Tighten the flare nut to the specified torque.

Tightening torque:

Brake pipe flare nut: 15 N·m (1.53 kgf-m, 11.1 ft-lb)

- 7) Bleed air from the brake system. <Ref. to BR-59, PROCEDURE, Air Bleeding.>

2. REAR BRAKE HOSE

- 1) Route the brake hose through the hole of bracket, and lightly tighten the flare nut to connect brake pipe.
 2) Insert the clamp to secure brake hose.

Tightening torque:

Brake hose bracket: 33 N·m (3.36 kgf-m, 24.3 ft-lb)

- 3) Install the brake hose to rear caliper body using a new gasket.

Tightening torque:

Union bolt: 26 N·m (2.65 kgf-m, 19.2 ft-lb)

- 4) Tighten the flare nut to the specified torque.

Tightening torque:

Brake pipe flare nut: 15 N·m (1.53 kgf-m, 11.1 ft-lb)

- 5) Bleed air from the brake system. <Ref. to BR-59, PROCEDURE, Air Bleeding.>

Brake Hose

BRAKE

C: INSPECTION

Check the hose for crack, interference with other parts, damage, and fluid leakage on connecting sections. If any faulty is found, repair or replace the relevant part.

13.Brake Pipe

A: REMOVAL

CAUTION:

- Be careful of the following items. Failure to do so may cause the airbag system malfunction.
 - Yellow connectors and harnesses with yellow tapes around them are the connectors and harnesses for the airbag system. When using a tester on these circuits, follow the cautions of “AIR-BAG SYSTEM”. <Ref. to AB-9, CAUTION, General Description.>
 - Be careful not to damage the airbag system wiring harness when servicing the electrical parts around the steering column.
- Be careful not to damage the airbag system wiring harness when servicing the center brake pipe.
- When removing the brake pipe, do not bend.

NOTE:

The airbag system wiring harness is routed near the center brake pipe.

B: INSTALLATION

CAUTION:

- Be careful of the following items. Failure to do so may cause the airbag system malfunction.
 - Yellow connectors and harnesses with yellow tapes around them are the connectors and harnesses for the airbag system. When using a tester on these circuits, follow the cautions of “AIR-BAG SYSTEM”. <Ref. to AB-9, CAUTION, General Description.>
 - Be careful not to damage the airbag system wiring harness when servicing the electrical parts around the steering column.
- Be careful not to damage the airbag system wiring harness when servicing the center brake pipe.
- When removing the brake pipe, do not bend.
- After installing the brake pipe and hose, perform air bleed.
- After installing the brake hoses, make sure that they do not contact the tires or suspension assembly, etc.

NOTE:

The airbag system wiring harness is routed near the center brake pipe.

Tightening torque:

Front brake pipes & hoses: <Ref. to BR-8, FRONT BRAKE PIPES AND HOSES, COMPONENT, General Description.>

Center & rear brake pipes and hoses: <Ref. to BR-10, CENTER AND REAR BRAKE PIPES AND HOSES, COMPONENT, General Description.>

C: INSPECTION

Check the pipe for crack and damage, and also check the connection for fluid leakage. If any faulty is found, repair or replace the relevant part.

NOTE:

Use a mirror when inspecting back sides and other locations which are hard to see.

14.Brake Pedal

A: REMOVAL

1. CVT MODEL

CAUTION:

Before handling the airbag system components, always refer to “CAUTION” of “General Description” in “AIRBAG SYSTEM”. <Ref. to AB-9, CAUTION, General Description.>

- 1) Disconnect the ground cable from battery and wait for at least 60 seconds before starting work. <Ref. to NT-6, BATTERY, NOTE, Note.>
- 2) Remove the cover assembly - instrument panel LWR driver. <Ref. to EI-54, REMOVAL, Instrument Panel Lower Cover.>
- 3) Remove the knee airbag module. <Ref. to AB-34, REMOVAL, Knee Airbag Module.>
- 4) Remove the universal joint assembly - steering. <Ref. to PS-13, REMOVAL, Universal Joint.>

CAUTION:

To prevent damage to the universal joint assembly - steering and improper steering effort, make sure to remove the universal joint assembly - steering.

- 5) Remove the column assembly - steering. <Ref. to PS-18, REMOVAL, Steering Column.>
- 6) Remove the brake pedal assembly.
 - (1) Disconnect the stop light switch connector.
 - (2) Remove the snap pin (a) and clevis pin (b), and remove the operating rod from the brake pedal.

CAUTION:

- Be careful not to apply excessive force to the operating rod when handling the operating rod. The angle may change by $\pm 3^\circ$, and it may result in damage to power piston cylinder.
- Do not change the push rod length.

BR-01213

(3) Remove the bolt and nut, and then detach the brake pedal assembly.

2. MT MODEL

NOTE:

Brake pedal is integrated with the clutch pedal.

For removal procedures of the brake pedal, refer to Clutch section. <Ref. to CL-26, REMOVAL, Clutch Pedal.>

B: INSTALLATION

CAUTION:

Before handling the airbag system components, always refer to “CAUTION” of “General Description” in “AIRBAG SYSTEM”. <Ref. to AB-9, CAUTION, General Description.>

1) Install each part in the reverse order of removal.

CAUTION:

- Apply grease to the snap pin to prevent the operating rod from wear.
- Replace the clevis pin with new parts, and apply thin coat of NIGTIGHT LYW No. 2 grease to the clevis pin.

Tightening torque:

Brake pedal: 18 N·m (1.84 kgf-m, 13.3 ft-lb)

Knee airbag module: 7.5 N·m (0.76 kgf-m, 5.5 ft-lb)

2) Install the column assembly - steering. <Ref. to PS-20, INSTALLATION, Steering Column.>

3) Install the universal joint assembly - steering. <Ref. to PS-14, INSTALLATION, Universal Joint.>

CAUTION:

- Always install the universal joint assembly - steering after installing the steering column to avoid damage to the universal joint assembly - steering.
- Be sure to follow the tightening order and tightening torque of the universal joint assembly - steering to avoid the steering effort from becoming heavy. After confirming that the steering column position is in the neutral position, tighten the universal joint assembly - steering.
- Always place the tilt lever to the lock position after the steering column is adjusted.

4) Connect the battery ground terminal. <Ref. to NT-6, BATTERY, NOTE, Note.>

5) Check that the brake light operate properly.

6) Check the brake pedal after installation. <Ref. to BR-70, INSPECTION, Brake Pedal.>

Brake Pedal

BRAKE

C: INSPECTION

1) Move the pad - brake pedal in a horizontal direction with a force of approx. 10 N (1 kgf, 2 lbf), and check that the pedal deflection is in the range of specifications.

CAUTION:

If excessive deflection is noted, replace with a new bushing.

Deflection of brake pedal:

Wear limit: 5.0 mm (0.197 in) or less

BR-00959

(a) Brake pedal (except for MT model) (b) Brake pedal (MT model)

2) Check the position of the pedal pad.

Pedal height L:

140 — 150 mm (5.51 — 5.91 in)

Brake pedal free play A:

0.5 — 2.7 mm (0.02 — 0.11 in) [When pulling the brake pedal upward with a force of less than 10 N (1 kgf, 2 lbf).]

BR-00960

(a) Stop light switch
(b) Mat

(c) Toe board

(d) Brake booster operating rod

- 3) If it is not within the specification, loosen the lock nuts of vacuum booster operating rod, and rotate the rod to adjust the pedal height L within the specification.
- 4) Tighten the lock nut.

Tightening torque:

Operating lock nut: 22 N·m (2.24 kgf-m, 16.2 ft-lb)

NOTE:

Check the brake pedal height. When adjusting, also adjust the stop light switch.

Stop Light Switch

BRAKE

15. Stop Light Switch

A: REMOVAL

CAUTION:

Before handling the airbag system components, always refer to “CAUTION” of “General Description” in “AIRBAG SYSTEM”. <Ref. to AB-9, CAUTION, General Description.>

- 1) Disconnect the ground cable from battery and wait for at least 60 seconds before starting work. <Ref. to NT-6, BATTERY, NOTE, Note.>
- 2) Remove the cover assembly - instrument panel LWR driver. <Ref. to EI-54, REMOVAL, Instrument Panel Lower Cover.>
- 3) Remove the knee airbag module. <Ref. to AB-34, REMOVAL, Knee Airbag Module.>
- 4) Remove the stop light switch.
 - (1) Disconnect the stop light switch connector.
 - (2) Remove the stop light switch by turning it counterclockwise.

BR-00961

B: INSTALLATION

1. BULB TYPE

1) Install the stop light switch.

CAUTION:

- Turn the stop light switch clockwise when installing so that it can return backward by approximately 1 mm (0.04 in) and clearance is automatically adjusted.
- If it is hard to turn the switch, reduce the switch pushing force and turn it again.
 - (1) While pulling up the brake pedal toward you, contact the stop light switch to the stopper and temporarily install it by rotating it clockwise.
 - (2) Adjust the stop light switch position, and install it. <Ref. to BR-76, ADJUSTMENT, Stop Light Switch.>
 - (3) Install the stop light switch connector.

BR-01374

- 2) Install the cover assembly - instrument panel LWR driver.
- 3) Connect the battery ground terminal.
- 4) Check that the brake light operate properly.
- 5) Check the stop light switch operation.
 - (1) Turn the ignition switch to OFF and connect the Subaru Select Monitor.
 - (2) Start the engine and warm it up to a sufficient temperature.

NOTE:

Perform the following operations with the engine running.

- (3) Display the data of «Brake Switch» and «Pressure Sensor Output» by following the Subaru Select Monitor display screen.
- (4) Check that the stop light switch is ON with the brake pedal not depressed.
- (5) Quickly depress the brake pedal 5 times.
- (6) Slowly release the brake pedal depressed at the fifth time and check that the master cylinder pressure is within the standard value when the stop light switch changes from ON to OFF.

Specification:

Less than 1 Mpa (10 bar)

2. LED TYPE

- 1) Adjust the stop light switch position, and then secure the stop light switch by turning it clockwise. <Ref. to BR-76, ADJUSTMENT, Stop Light Switch.>
- 2) Install each part in the reverse order of removal.
- 3) Check the stop light switch operation.

Stop Light Switch

BRAKE

C: INSPECTION

1. CLEARANCE CHECK

NOTE:

Check for clearance is applied only to LED model.

1) Measure the clearance between the end of the stop light switch and the stopper.

Specification:

Clearance (A) of the stop light switch: 1 mm — 2 mm (0.04 in — 0.08 in)

(a) Stop light switch

(b) Stopper

(c) Brake pedal

2) Adjust the position of the stop light switch if the inspection result is not within the standard value. <Ref. to BR-76, ADJUSTMENT, Stop Light Switch.>

2. CHECK RESISTANCE

- 1) Disconnect the stop light switch connector.
- 2) Measure the resistance between stop light switch terminals.

Preparation tool:
Circuit tester

BR-00965

- Bulb type

Terminal No.	Inspection conditions	Standard
1 — 2	When brake pedal is depressed	1 MΩ or more
	When brake pedal is released	Less than 1 Ω
3 — 4	When brake pedal is depressed	Less than 1 Ω
	When brake pedal is released	1 MΩ or more

- LED type

Terminal No.	Inspection conditions	Standard
1 — 2	When brake pedal is depressed	Less than 1 Ω
	When brake pedal is released	1 MΩ or more
3 — 4	When brake pedal is depressed	1 MΩ or more
	When brake pedal is released	Less than 1 Ω

- 3) Replace the stop light switch if the inspection result is not within the standard value.

Stop Light Switch

BRAKE

D: ADJUSTMENT

1. BULB TYPE

CAUTION:

- Turn the stop light switch clockwise when installing so that it can return backward by approximately 1 mm (0.04 in) and clearance is automatically adjusted.
- If it is hard to turn the switch, reduce the switch pushing force and turn it again.
- After adjustment, if the pedal stroke is less than 3 mm (0.12 in), it may lead to an incorrect light illumination by vibrations etc.

1) Mark the threaded portion of the stop light switch (a).

2) Measure the brake pedal stroke which turns on the stop light switch.

(1) Measure the distance (a) from the floor mat to the end of brake pedal pad.

(2) Hold the pedal to a position that the stop light illuminates, and measure the distance (b) from the floor mat to the end of brake pedal pad.

(3) Calculate the difference (stroke value) between the values (a) and (b) measured as above.

3) Adjust so that the calculated difference of stroke value fit within the specified value, and install the stop light switch.

Stop Light Switch

BRAKE

Specification:

3 mm (0.12 in) or more, less than 8 mm (0.31 in)

NOTE:

Pedal stroke volume per a pitch becomes approx. 5 mm (0.2 in).

4) After adjustment, make sure that the stop light switch illuminates normally.

2. LED TYPE

- 1) While pulling up the brake pedal (c) toward you, insert the switch - stop light (a) until it reaches the stopper (b).
- 2) Install the switch - stop light by turning it clockwise.

CAUTION:

Turn the stop light switch clockwise when installing so that it can return backward by approximately 1 mm (0.04 in) and clearance is automatically adjusted.

Insert until it contacts the stopper, and make sure that clearance (A) of the end of stop light switch and the stopper is 1 mm — 2 mm (0.04 in — 0.08 in).

(a) Stop light switch

(b) Stopper

(c) Brake pedal

3) After adjustment, make sure that the stop light switch illuminates normally.

General Diagnostic Table

BRAKE

16. General Diagnostic Table

A: INSPECTION

	Trouble and possible cause	Corrective action
1. Insufficient braking	(1) Fluid leakage from the hydraulic mechanism	Repair or replace. (cup, piston seal, piston boot, master cylinder piston kit, pipe or hose)
	(2) Entry of air into the hydraulic mechanism	Bleed air.
	(3) Wear, deteriorated surface material, water or fluid on lining	Replace, grind or clean.
	(4) Improper operation of master cylinder assembly, disc caliper, vacuum booster assembly or check valve	Repair or replace.
2. Unstable or uneven braking	(1) Fluid on lining or rotor	Correct the cause of fluid leakage, and clean or replace.
	(2) Rotor defective	Repair or replace the rotor.
	(3) Improper lining contact, deteriorated surface, deteriorated or worn lining material	Repair by grinding, or replace.
	(4) Deformed back plate	Repair or replace.
	(5) Overinflation of tires	Adjust the air pressure.
	(6) Defective wheel alignment	Adjust alignment.
	(7) Loose back plate or support installation bolt	Tighten to the specified torque.
	(8) Defective hub unit COMPL	Replace.
	(9) Defective hydraulic system	Replace the cylinder, brake pipe or hose.
	(10) Unstable performance of the parking brake	Check, adjust or replace the rear brake and cable system.
3. Excessive pedal stroke	(1) Entry of air into the hydraulic mechanism	Bleed air.
	(2) Excessive play in the master cylinder push rod	Adjust.
	(3) Fluid leakage from the hydraulic mechanism	Repair or replace. (cup, piston seal, piston boot, master cylinder piston kit, pipe or hose)
	(4) Improper lining contact or worn lining	Repair or replace.
4. Brake dragging or improper brake return	(1) Insufficient pedal play	Adjust play.
	(2) Improper master cylinder return	Clean or replace the cylinder.
	(3) Clogged hydraulic system	Replace.
	(4) Improper return or adjustment of parking brake	Repair or adjust.
	(5) Weakened spring tension or breakage of shoe return spring	Replace the spring.
	(6) Improper disc caliper operation	Repair or replace.
	(7) Faulty wheel bearing	Replace.
5. Brake noise (1) (creaking sound)	(1) Hardened or deteriorated brake pad	Replace the pad.
	(2) Worn brake pad	Replace the pad.
	(3) Loose back plate or support installation bolt	Tighten to the specified torque.
	(4) Loose hub unit COMPL	Tighten to the specified torque.
	(5) Dirty rotor	Clean the rotor, or clean and replace brake assembly.
6. Brake noise (2) (hissing sound)	(1) Worn brake pad	Replace the pad.
	(2) Improperly installed pad	Correct or replace the pad.
	(3) Loose or bent rotor	Retighten or replace.
7. Brake noise (3) (click sound)	Excessively worn pad or support	Replace the pad or the support.

PARKING BRAKE

PB

	Page
1. General Description	2
2. Parking Brake Lever	4
3. Parking Brake Cable	8
4. Parking Brake Assembly (Rear Disc Brake)	11
5. General Diagnostic Table	18

General Description

PARKING BRAKE

1. General Description

A: SPECIFICATION

Model		Rear disc brake
Type		Mechanical, drum in disc rear brakes
Effective drum diameter	mm (in)	170 (6.69)
Lining dimensions (Length x Width x Thickness)	mm (in)	147.7 x 30.0 x 3.5 (5.81 x 1.181 x 0.14)
Clearance adjustment		Manual adjustment
Lever stroke	Notches/N (kgf, lbf)	7 — 8/200 (20.4, 45)

B: COMPONENT

1. PARKING BRAKE (REAR DISC BRAKE)

- | | | |
|------------------------------------|------------------------------------|-------------------------------------|
| (1) Back plate - rear brake | (7) Spring - secondary shoe return | (13) Cup - shoe hold-down |
| (2) Retainer - rear brake | (8) Spring - strut | (14) Parking brake shoe (primary) |
| (3) Spring washer - rear brake | (9) Strut - brake | (15) Pin - primary shoe hold-down |
| (4) Parking lever - rear | (10) Adjuster ASSY - rear brake | (16) Pin - secondary shoe hold-down |
| (5) Pin - parking lever | (11) Spring - primary shoe return | |
| (6) Parking brake shoe (secondary) | (12) Spring - adjuster | |

2. PARKING BRAKE LEVER & CABLE

- | | | |
|--------------------------------------|-----------------------------------|--|
| (1) Lever assembly - hand brake | (5) Bracket | (9) Cable ASSY - parking brake LH |
| (2) Switch ASSY - hand brake | (6) Clamp A - hand brake cable | |
| (3) Adjusting nut (self-locking nut) | (7) Cable ASSY - parking brake RH | Tightening torque: N·m (kgf·m, ft·lb) |
| (4) Equalizer | (8) Clamp B - hand brake cable | T: 18 (1.84, 13.3) |

C: CAUTION

- Wear appropriate work clothing, including a helmet, protective goggles and protective shoes when performing any work.
- Before removal, installation or disassembly, be sure to clarify the failure. Avoid unnecessary removal, installation, disassembly and replacement.
- Vehicle components are extremely hot after driving. Be wary of receiving burns from heated parts.
- Use SUBARU genuine grease etc. or equivalent. Do not mix grease etc. of different grades or manufacturers.
- Be sure to tighten fasteners including bolts and nuts to the specified torque.
- Place shop jacks or rigid racks at the specified points.
- Make sure grease does not come into contact with the parking shoes.

D: PREPARATION TOOL

1. GENERAL TOOL

TOOL NAME	REMARKS
Circuit tester	Used for measuring resistance, voltage and current.

Parking Brake Lever

PARKING BRAKE

2. Parking Brake Lever

A: REMOVAL

CAUTION:

Refer to “CAUTION” of “General Description” before handling the airbag system components. <Ref. to AB-9, CAUTION, General Description.>

- 1) Set the wheel stoppers to tires.
- 2) Remove the headrest assembly - front.
- 3) Move the passenger's seat towards the front.
- 4) Remove the driver's seat. <Ref. to SE-8, REMOVAL, Front Seat.>
- 5) Disconnect the ground cable from battery and wait for at least 60 seconds before starting work. <Ref. to NT-6, BATTERY, NOTE, Note.>
- 6) Remove the console box assembly. <Ref. to EI-59, REMOVAL, Console Box.>
- 7) Remove the lever assembly - hand brake.
 - (1) Disconnect the connector (a) of the switch assembly - hand brake.
 - (2) Remove the adjusting nut (b).

CAUTION:

A self-locking nut is used for the adjusting nut of parking cable. Therefore, replace the self-locking nut with a new one when disassembling.

Parking Brake Lever

(3) Remove the bolt, and then remove the lever assembly - hand brake.

8) Remove the inner cable end (a) from the equalizer (b).

Parking Brake Lever

PARKING BRAKE

B: INSTALLATION

1) Install each part in the reverse order of removal.

CAUTION:

- The front seat mounting bolts differ between the front mounting points and the rear mounting points. When installing the front seat, make sure that you are using correct bolts at correct positions.
- Tighten the slide rail assembly installing bolts in the order as shown in the figure, in several steps by gradually increasing the torque until they reach the specified torque.

- Front (bolt A): Washer diameter 22 mm (0.87 in)
- Rear (bolt B): Washer diameter 26 mm (1.02 in)

Tightening torque:

Front seat assembly: 53 N·m (5.40 kgf-m, 39.1 ft-lb)

Tightening torque:

Lever assembly - hand brake: 18 N·m (1.84 kgf-m, 13.3 ft-lb)

Console box assembly: 6.5 N·m (0.66 kgf-m, 4.8 ft-lb)

2) Install a new adjusting nut (self-locking nut).

3) Be sure to adjust the lever stroke. <Ref. to PB-7, ADJUSTMENT, Parking Brake Lever.>

C: INSPECTION

1. LEVER ASSY

- 1) Operate the lever assembly - hand brake 3 to 4 times and fully return the lever assembly - hand brake.
- 2) While slowly pulling up the lever assembly - hand brake, count the notches.

Lever stroke:

7 to 8 notches when pulled with a force of 200 N (20.4 kgf, 45 lbf)

If it is not within the specified value, adjust the parking brake. <Ref. to PB-16, ADJUSTMENT, Parking Brake Assembly (Rear Disc Brake).>

2. SWITCH ASSEMBLY

- 1) Measure the resistance between the switch assembly - hand brake and chassis ground.

Preparation tool:

Circuit tester

PB-00257

	Switch position	Standard
A	When shaft is free (ON)	Less than 1 Ω
B	When shaft is pressed in (OFF)	10 k Ω or more

If it is not within the specified value, replace the switch assembly - hand brake.

D: ADJUSTMENT

Adjust the parking lever stroke. <Ref. to PB-17, LEVER STROKE, ADJUSTMENT, Parking Brake Assembly (Rear Disc Brake).>

Parking Brake Cable

PARKING BRAKE

3. Parking Brake Cable

A: REMOVAL

CAUTION:

- Refer to “CAUTION” of “General Description” before handling the airbag system components. <Ref. to AB-9, CAUTION, General Description.>
 - Airbag system satellite safing sensor is located in the lower of the rear seat cushion center. Be careful not to apply strong impact to the sensor when working with the rear seat cushion removed.
- 1) Remove the lever assembly - hand brake. <Ref. to PB-4, REMOVAL, Parking Brake Lever.>
 - 2) Remove the nut and remove the clamp A - hand brake cable (a).
 - 3) Remove the inner cable end (c) from the equalizer (b).

- 4) Remove the rear seat cushion assembly. <Ref. to SE-24, REMOVAL, Rear Seat.>

Parking Brake Cable

PARKING BRAKE

5) Release the clips and claws, and remove the side sill covers - rear INN on the left and right sides.

CAUTION:

Do not pull with excessive force. Doing so may damage the claws of the side sill cover - rear INN.

EI-03497

6) Remove the clips and knobs of the hook - seat cushion rear.

EI-03524

Parking Brake Cable

PARKING BRAKE

- 7) Turn over the floor carpet and remove the grommet of the cable assembly - parking brake from the rear floor.
- 8) Lift up the vehicle, and then remove the rear wheels.
- 9) Remove the fuel tank protector. <Ref. to FU(H4DO)-112, REMOVAL, Fuel Tank Protector.>
- 10) Remove the exhaust pipe and muffler.
 - Center exhaust pipe & rear exhaust pipe: <Ref. to EX(H4DO)-17, REMOVAL, Rear Exhaust Pipe.>
 - Muffler: <Ref. to EX(H4DO)-20, REMOVAL, Muffler.>
- 11) Remove the propeller shaft assembly. <Ref. to DS-11, REMOVAL, Propeller Shaft.>
- 12) Remove the cable assembly - parking brake from the lever section of parking brake shoe. <Ref. to PB-11, REMOVAL, Parking Brake Assembly (Rear Disc Brake).>
- 13) Remove the clamp B - hand brake cable (a) from the rear brake.
- 14) Remove the cable clamp (b) from the back plate - rear brake.
- 15) Remove the cable clamp (c) from the rear floor, and remove the cable assembly - parking brake.

PB-00246

B: INSTALLATION

- 1) Install each part in the reverse order of removal.

Tightening torque:

Cable clamp: 18 N·m (1.84 kgf-m, 13.3 ft-lb)

Rear wheel: Except for C4 model

120 N·m (12.24 kgf-m, 88.5 ft-lb)

Rear wheel: C4 model

100 N·m (10.20 kgf-m, 73.8 ft-lb)

NOTE:

- Apply grease to the cable guide inside the tunnel, and pass the cable through.
 - After installing the backrest assembly, make sure that each seat belt operates normally.
 - Make sure that they are properly secured on each hook on the vehicle side.
- 2) Be sure to adjust the lever stroke. <Ref. to PB-7, ADJUSTMENT, Parking Brake Lever.>

C: INSPECTION

Check the removed cable and replace if damaged, rusty or malfunctioning.

- 1) Check the cable for smooth operation.
- 2) Check the inner cable for damage and rust.
- 3) Check the outer cable for damage, bends and cracks.

4. Parking Brake Assembly (Rear Disc Brake)

A: REMOVAL

- 1) Release the parking brake.
- 2) Lift up the vehicle, and then remove the rear wheels.
- 3) Remove the rear disc rotor. <Ref. to BR-33, REMOVAL, Rear Disc Rotor.>
- 4) Remove the spring - primary shoe return and the spring - secondary shoe return.

PB-00248

- 5) Remove the parking brake shoe on the primary side.
 - (1) Remove the cup - shoe hold-down (a) and the spring - adjuster, and remove the parking brake shoe (b).

PB-00249

- (2) Remove the strut - brake and the spring - strut.
- (3) Remove the adjuster assembly - rear brake.

Parking Brake Assembly (Rear Disc Brake)

PARKING BRAKE

6) Remove the parking brake shoe on the secondary side.

(1) Rotate the cup - shoe hold-down in the direction of the front side of the vehicle.

PB-00244

(a) Approx. 45°

(2) Press and shorten the cup - shoe hold-down.

(3) Rotate the pin - secondary shoe hold-down in the opposite direction, and pull out the pin - shoe hold-down.

PB-00252

7) Remove the cable assembly - hand brake cable (a) from the parking lever - rear (b).

8) Remove the retainer - rear brake from the secondary side parking brake shoe. Remove the parking lever - rear from the brake shoe.

B: INSTALLATION

CAUTION:

Be sure the lining surface is free from brake fluid and grease.

1) Apply brake grease to the following locations.

Preparation items:

Brake grease: Dow Corning Molykote 44MA or equivalent

- Six contact surfaces of the parking brake shoe rim and back plate - rear brake
- Contact surface of the parking brake shoe and the anchor pin
- Contact surface of the parking lever assembly - rear and the strut - brake
- Contact surface of the parking brake shoe and the adjuster assembly - rear brake
- Contact surface of the parking brake shoe and the strut - brake
- Contact surface of the parking lever - rear and the parking brake shoe

2) Install the spring washer - rear brake and the lever to the secondary side parking brake shoe pin, and lock the retainer - rear brake securely.

3) Install the cable assembly - parking brake to the lever.

Parking Brake Assembly (Rear Disc Brake)

PARKING BRAKE

4) Attach the adjuster assembly - rear brake and the spring - adjuster to the parking brake shoe.

NOTE:

Install the adjuster assembly - rear brake with the screw section facing to the direction shown in the figure below.

(F) Left wheel: front side of vehicle,
right wheel: rear side of vehicle

5) Check that the cable assembly - parking brake does not fall from the cable guide.

6) Install the parking brake shoes to the back plate - rear brake with the pins - shoe hold-down and the cups - shoe hold-down.

NOTE:

- Do not reversely install the pin - primary shoe hold-down (a) and the pin - secondary shoe hold-down (b).
- When installing the pin - secondary shoe hold-down (b), face the convex portion to the rear of the vehicle not to contact with the parking lever - rear.

(A) Front side of vehicle

(B) Orientation of pin - shoe hold-down relative to the front of the vehicle

7) Install the strut - brake and the spring - strut to the parking brake shoes.

NOTE:

Install the spring - strut so that it comes towards the front side of the vehicle.

8) Install the return springs on the primary side first, and then the secondary side.

9) Install the brake disc rotor and the brake caliper assembly.

NOTE:

When installing the rear disc rotor, match the alignment mark (a) of the rear disc rotor and the alignment mark (b) of the bolt - hub.

10) Install the brake hose bracket.

Tightening torque:

Refer to "COMPONENT" of "General Description". <Ref. to BR-4, COMPONENT, General Description.>

11) Adjust the parking brake. <Ref. to PB-16, ADJUSTMENT, Parking Brake Assembly (Rear Disc Brake).>

12) Install the rear wheels.

Tightening torque:

Except for C4 model: 120 N·m (12.24 kgf-m, 88.5 ft-lb)

C4 model: 100 N·m (10.20 kgf-m, 73.8 ft-lb)

13) If new parking brake shoes are replaced, drive the vehicle to break-in the parking brake lining.

(1) Drive the vehicle at approximately 35 km/h (22 MPH) or more.

(2) While pressing the button of lever assembly - hand brake, pull the lever assembly - hand brake with a force of 150 N (15.3 kgf, 33.7 lbf).

(3) Drive the vehicle for about 200 m (0.12 mile) in this condition.

(4) Wait 5 to 10 minutes for the parking brake to cool down. Repeat steps (1) through (3) again.

(5) After breaking-in, re-adjust the parking brakes.

Parking Brake Assembly (Rear Disc Brake)

PARKING BRAKE

C: INSPECTION

1) Measure the inner diameter of the rear disc rotor. If scoring or worn is found on the disc, replace the rear disc rotor.

Disc rotor inner diameter:

Specification: 170 mm (6.69 in)

Service limit: 171 mm (6.73 in)

2) Measure the lining thickness. If it exceeds the limit, replace the brake shoe.

Lining thickness:

Specification: 3.5 mm (0.14 in)

Service limit: 1.5 mm (0.059 in)

NOTE:

Replace the right and left parking brake shoe as a set.

D: ADJUSTMENT

1. SHOE CLEARANCE

1) Return the lever assembly - hand brake completely.

2) Loosen the adjusting nut, and make the cable free.

3) Remove the adjusting hole cover (A) from the rear disc rotor.

4) Insert a flat tip screwdriver (b) into the adjustment hole, and rotate the adjuster assembly - rear brake (a) until the disc rotor cannot be turned by hand.

PB-00247

(a) Adjuster ASSY - rear brake

(c) Disc rotor

(e) Shorten the adjuster ASSY - rear brake

(b) Flat tip screwdriver

(d) Extend the adjuster ASSY - rear brake

5) Loosen the adjuster assembly - rear brake by 10 notches in the direction of the arrow (e).

CAUTION:

• **Check there is no brake drag.**

• **Make sure that the adjuster assembly - rear brake is loosened by 10 notches. If it is not loosened sufficiently, dragging may occur.**

6) Install the adjusting hole cover to the disc rotor.

7) Adjust the parking lever stroke. <Ref. to PB-17, LEVER STROKE, ADJUSTMENT, Parking Brake Assembly (Rear Disc Brake).>

2. LEVER STROKE

- 1) Adjust the shoe clearance before adjusting lever stroke. <Ref. to PB-16, SHOE CLEARANCE, ADJUSTMENT, Parking Brake Assembly (Rear Disc Brake).>
- 2) Release the claws, and then remove the boot - parking brake.

- 3) Pull the lever assembly - hand brake hard 3 to 5 times.
- 4) Turn the adjusting nut (a) until the lever stroke is at the specified value.

Lever stroke:

7 to 8 notches when pulled with a force of 200 N (20.4 kgf, 45 lbf)

- 5) Check there is no brake drag.
- 6) Check that the brake warning light illuminates when the lever assembly - hand brake is operated.

NOTE:

The light must illuminate when the first notch is reached after pulling the lever.

- 7) Install the boot - parking brake.

General Diagnostic Table

PARKING BRAKE

5. General Diagnostic Table

A: INSPECTION

Symptoms	Possible cause	Corrective action
Brake dragging	Lever assembly - hand brake is maladjusted.	Adjust.
	Parking brake cable does not move.	Repair or replace.
	Parking brake shoe clearance is maladjusted.	Adjust.
	Spring - shoe return is faulty.	Replace.
Noise from brake	Spring - shoe return is faulty.	Replace.
	Cup - shoe hold-down is faulty.	Replace.

General Description

POWER ASSISTED SYSTEM (POWER STEERING)

1. General Description

A: SPECIFICATION

Whole system

Minimum turning radius	m (ft)	5.3 (17.4)
Steering angle	Inner wheel	38.2°±1.5°
	Outer wheel	33.6°±1.5°
Steering wheel diameter	mm (in)	375 (14.76)
Lock-to-lock revolution number		2.8

Gearbox

Type	Rack and Pinion, Integral
Backlash	0 (automatic adjusting)

Power steering motor

Motor (Temperature 20°C (68°F))	Rated voltage	V	12
	Rated torque	N·m (kgf-m, ft-lb)	4.5 (0.46, 3.31)
	Rated revolution speed	r/min	1,140
	Rated current	A	85
	Rated output	W	561

Steering wheel

Free play	mm (in)	17 (0.67) or less
-----------	---------	-------------------

Column assembly - steering

Clearance Between steering wheel and cover assembly - column	mm (in)	4 — 6 (0.16 — 0.24)
---	---------	---------------------

Steering gearbox

Sliding resistance	N (kgf, lbf)	303 (31, 68) or less Difference between right and left sliding resistance: 20% or less	
Rack shaft play in the radial direction	mm (in)	Right-turn steering	Both amplitudes: 0.6 (0.024) or less
		Left-turn steering	Both amplitudes: 0.4 (0.016) or less
Input shaft play	mm (in)	In radial direction	Both amplitudes: 0.18 (0.0071) or less
		In axial direction	0.27 (0.0106) or less
Rotational resistance	N (kgf, lbf)	Maximum allowable value: 18.0 (1.8, 4.0) or less Difference between right and left sliding resistance: 20% or less	

Steering effort (with power steering assist)

At standstill with engine idling on paved road	N (kgf, lbf)	29.4 (3.0, 6.6) or less
At standstill with engine stalled on paved road	N (kgf, lbf)	294.2 (30, 66.2) or less

(1) Bracket - control module

(3) Harness bracket

(2) Power steering control module

Tightening torque: N·m (kgf-m, ft-lb)

T: 7.5 (0.76, 5.5)

C: CAUTION

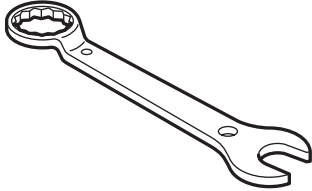

- Wear appropriate work clothing, including a helmet, protective goggles and protective shoes when performing any work.
- Before removal, installation or disassembly, be sure to clarify the failure. Avoid unnecessary removal, installation, disassembly and replacement.
- Vehicle components are extremely hot after driving. Be wary of receiving burns from heated parts.
- Use grease and oil of SUBARU genuine or the equivalent products. Do not mix them of different grades or manufacturers.
- Be sure to tighten fasteners including bolts and nuts to the specified torque.
- Place shop jacks or rigid racks at the specified points.
- Before securing a part on a vise, place cushioning material such as wooden blocks, aluminum plate or cloth between the part and the vise.
- When removing, installing or replacing the VDCCM&H/U, VDCCM&H/U bracket, steering wheel or steering angle sensor (steering roll connector), perform "VSC(VDC) Centering Mode" of the VDC. <Ref. to VDC-23, VDC SENSOR MIDPOINT SETTING MODE (MODELS WITHOUT EyeSight), ADJUSTMENT, VDC Control Module and Hydraulic Control Unit (VDCCM&H/U).>
- When the wheel alignment has been adjusted, perform "VDC sensor midpoint setting mode" of the VDC. <Ref. to VDC-23, ADJUSTMENT, VDC Control Module and Hydraulic Control Unit (VDCCM&H/U).>

General Description

POWER ASSISTED SYSTEM (POWER STEERING)

D: PREPARATION TOOL

1. SPECIAL TOOL

ILLUSTRATION	TOOL NUMBER	DESCRIPTION	REMARKS
 ST34099PA100	34099PA100	SPANNER	Used when measuring the rotational resistance of gearbox assembly.
 STSSM4	—	SUBARU SELECT MONITOR 4	Used for setting of each function and troubleshooting for electrical system. NOTE: For detailed operation procedures of Subaru Select Monitor 4, refer to “Application help”.

2. GENERAL TOOL

TOOL NAME	REMARKS
Steering wheel puller	Used for removing the steering wheel.
Circuit tester	Used for measuring resistance, voltage and current.
DST-i	Used together with Subaru Select Monitor 4.
C-clamp	Used when inspecting steering gearbox assembly.

2. Power Steering System

A: WIRING DIAGRAM

Refer to “Electric Power Steering System” in the wiring diagram. <Ref. to WI-101, WIRING DIAGRAM, Electric Power Steering System.>

B: ELECTRICAL SPECIFICATION

Refer to Control Module I/O Signal of “POWER ASSISTED SYSTEM (POWER STEERING) (DIAGNOSTICS)”. <Ref. to PS(diag)-10, ELECTRICAL SPECIFICATION, Control Module I/O Signal.>

C: INSPECTION

Refer to “POWER ASSISTED SYSTEM (POWER STEERING) (DIAGNOSTICS)”. <Ref. to PS(diag)-2, Basic Diagnostic Procedure.>

D: NOTE

For procedure of each component in the power steering system, refer to the respective section.

- Steering wheel: <Ref. to PS-8, Steering Wheel.>
- Universal joint assembly - steering: <Ref. to PS-13, Universal Joint.>
- Steering column: <Ref. to PS-18, Steering Column.>
- Electric power steering gearbox: <Ref. to PS-22, Electric Power Steering Gearbox.>
- Power steering control module: <Ref. to PS-36, Power Steering Control Module.>

Steering Wheel

POWER ASSISTED SYSTEM (POWER STEERING)

3. Steering Wheel

A: REMOVAL

CAUTION:

Before handling the airbag system components, always refer to “CAUTION” of “General Description” in “AIRBAG SYSTEM”. <Ref. to AB-9, CAUTION, General Description.>

- 1) Set the tire to the straight-ahead position.
- 2) Disconnect the ground cable from battery and wait for at least 60 seconds before starting work. <Ref. to NT-6, BATTERY, NOTE, Note.>
- 3) Remove the driver's airbag module. <Ref. to AB-32, REMOVAL, Driver's Airbag Module.>
- 4) Remove the steering wheel.

CAUTION:

- Always use the steering wheel puller for removal to avoid deforming the steering wheel.
- If the steering wheel has been removed, make sure that the steering roll connector is not turned from the original position.

- (1) Disconnect the connector and remove the nut.
- (2) Put an alignment mark (a) using a ruler as shown in the figure, and remove the steering wheel.

Preparation tool:

Steering wheel puller

PS-10102

Steering Wheel

POWER ASSISTED SYSTEM (POWER STEERING)

B: INSTALLATION

CAUTION:

- Before handling the airbag system components, refer to “CAUTION” of “General Description” in “AIRBAG SYSTEM”. <Ref. to AB-9, CAUTION, General Description.>
 - If the steering wheel and steering angle sensor are removed, perform the following VDC setting mode. <Ref. to VDC-23, VDC SENSOR MIDPOINT SETTING MODE (MODELS WITHOUT EyeSight), ADJUSTMENT, VDC Control Module and Hydraulic Control Unit (VDCCM&H/U).>
 - Model without EyeSight: VDC sensor midpoint setting mode <Ref. to VDC-23, VDC SENSOR MIDPOINT SETTING MODE (MODELS WITHOUT EyeSight), ADJUSTMENT, VDC Control Module and Hydraulic Control Unit (VDCCM&H/U).>
 - Model with EyeSight: Neutral of Steering Angle Sensor & Lateral G Sensor 0 point setting <Ref. to VDC-23, NEUTRAL OF STEERING ANGLE SENSOR & LATERAL G SENSOR 0 POINT SETTING MODE (MODEL WITH EyeSight), ADJUSTMENT, VDC Control Module and Hydraulic Control Unit (VDCCM&H/U).>
 - Model with EyeSight: Longitudinal G sensor & lateral G sensor 0 point setting <Ref. to VDC-24, LONGITUDINAL G SENSOR & LATERAL G SENSOR 0 POINT SETTING MODE (MODEL WITH EyeSight), ADJUSTMENT, VDC Control Module and Hydraulic Control Unit (VDCCM&H/U).>
- 1) Align the center position of the roll connector. <Ref. to AB-62, ADJUSTMENT, Roll Connector.>
 - 2) Install each part in the reverse order of removal.

NOTE:

Align the alignment marks on the steering wheel and the column assembly - steering.

Tightening torque:

Steering wheel: 39 N·m (3.98 kgf·m, 28.8 ft·lb)

Clearance:

Between cover assembly - column and steering wheel: 4 — 6 mm (0.16 — 0.24 in)

C: DISASSEMBLY

1. CROSSTREK MODEL

- 1) Remove the screw, disconnect the connector and remove the paddle shift switch. (Model with paddle shift)

PS-01820

Steering Wheel

POWER ASSISTED SYSTEM (POWER STEERING)

2) Release the claws and remove the screws, then detach the cover - spoke.

3) Remove connector and screw, and remove the cover - steering wheel LWR.

Steering Wheel

POWER ASSISTED SYSTEM (POWER STEERING)

- 4) Release the claws and remove the screws, then detach the satellite switch.

- 5) Release the claws, and then remove the MID switch.

D: ASSEMBLY

Assemble each part in the reverse order of disassembly.

Steering Wheel

POWER ASSISTED SYSTEM (POWER STEERING)

E: INSPECTION

1. PADDLE SHIFT SWITCH

Check the resistance of paddle switch.

Step	Check	Yes	No
1 SHIFT-UP SWITCH CONTINUITY CHECK. 1) Operate the + side of paddle shift assembly and hold it. 2) Measure the resistance between terminals of the paddle shift assembly connector. <i>Terminals</i> No. 4 — No. 3:	Is the resistance less than 10 Ω ?	Go to step 2.	Replace the paddle shift assembly.
2 SHIFT-DOWN SWITCH CONTINUITY CHECK. 1) Operate the – side of paddle shift assembly and hold it. 2) Measure the resistance between terminals of the paddle shift assembly connector. <i>Terminals</i> No. 1 — No. 4:	Is the resistance less than 10 Ω ?	Go to step 3.	Replace the paddle shift assembly.
3 CHECK SHIFT SWITCH INSULATION. 1) Do not operate the paddle shift assembly. 2) Measure the resistance between terminals of the paddle shift assembly connector. <i>Terminals</i> No. 4 — No. 3: No. 1 — No. 4:	Is the resistance 1 M Ω or more?	Paddle shift assembly is normal.	Replace the paddle shift assembly.

Replace the paddle switch if the inspection result is not within the standard value.

2. SATELLITE SWITCH ASSEMBLY

- Audio (navigation) switch: <Ref. to ET-38, SATELLITE SWITCH ASSEMBLY, INSPECTION, Switches and Harness.>
- EyeSight steering switch <Ref. to ES-34, EyeSight STEERING SWITCH, INSPECTION, Switches and Harness.>
- Cruise control command switch: <Ref. to CC-7, INSPECTION, Cruise Control Command Switch.>

3. MID SWITCH

Refer to “Steering Switch” of “INSTRUMENTATION/DRIVER INFO” section. <Ref. to IDI-29, INSPECTION, Steering Switch.>

4. Universal Joint

A: REMOVAL

1) Adjust the tilt position of the column assembly - steering to the lowest position and lock the tilt lever.

2) Remove the universal joint assembly - steering.

(1) Place alignment marks on the universal joint assembly - steering.

NOTE:

Place alignment marks on the following positions.

- Between the column assembly - steering and the universal joint assembly - steering
- Between the steering gearbox assembly and the universal joint assembly - steering

(2) Remove the bolt, and remove the universal joint assembly - steering.

Universal Joint

POWER ASSISTED SYSTEM (POWER STEERING)

3) Prevent the steering wheel from turning using the seat belt.

B: INSTALLATION

- 1) Before installation, check the universal joint assembly - steering. <Ref. to PS-16, INSPECTION, Universal Joint.>
- 2) Adjust the tilt position of the column assembly - steering to the neutral position and lock the tilt lever.

Universal Joint

POWER ASSISTED SYSTEM (POWER STEERING)

3) Align the cutout portion (a) at serrated section of the column shaft (c) and yoke (b), then install the universal joint assembly - steering into column shaft.

CAUTION:

Be sure to align the protrusion section (a) of the column shaft side with the cutout (a) of the serration. If another cutout portions (d) are used for alignment, the bolt of the universal joint assembly - steering cannot be assembled.

(A) Column shaft side

(B) Gearbox side

4) Install the universal joint assembly - steering to the serrations of the gearbox assembly by matching the alignment marks.

5) Tighten the bolts on the gearbox side first, and then the column shaft side.

CAUTION:

Be sure to follow the tightening order and tightening torque of the universal joint assembly - steering to avoid the steering effort from becoming heavy.

Tightening torque:

24 N·m (2.45 kgf·m, 17.7 ft-lb)

Clearance:

Universal joint assembly - steering coupling to adjacent parts: 15 mm (0.59 in) or more

Universal Joint

POWER ASSISTED SYSTEM (POWER STEERING)

C: INSPECTION

Check for wear, damage or any other faults.

1) Check the universal joint assembly - steering for excessive looseness.

Service limit:

Play of the universal joint assembly - steering: 0 mm (0 in)

2) Measure the swing torque of the universal joint assembly - steering.

(1) Place the universal joint assembly - steering between wooden blocks and fix it on a vise.

(2) With the yoke (a) of gearbox side facing up, measure the swing torque in two directions.

Service limit:

Maximum load: 3.8 N (0.39 kgf, 0.86 lbf) or less

Universal Joint

POWER ASSISTED SYSTEM (POWER STEERING)

(3) With the yoke (b) of column assembly - steering side facing up, measure the swing torque in two directions.

PS-01137

Service limit:

Maximum load: 7.3 N (0.74 kgf, 1.64 lbf) or less

(4) Replace as necessary, if it is found defective.

Steering Column

POWER ASSISTED SYSTEM (POWER STEERING)

5. Steering Column

A: REMOVAL

CAUTION:

Before handling the airbag system components, always refer to “CAUTION” of “General Description” in “AIRBAG SYSTEM”. <Ref. to AB-9, CAUTION, General Description.>

- 1) Disconnect the ground cable from battery and wait for at least 60 seconds before starting work. <Ref. to NT-6, BATTERY, NOTE, Note.>
- 2) Remove the driver's airbag module. <Ref. to AB-32, REMOVAL, Driver's Airbag Module.>
- 3) Remove the steering wheel. <Ref. to PS-8, REMOVAL, Steering Wheel.>
- 4) Remove the cover assembly - instrument panel LWR driver. <Ref. to EI-54, REMOVAL, Instrument Panel Lower Cover.>
- 5) Remove the knee airbag module. <Ref. to AB-34, REMOVAL, Knee Airbag Module.>
- 6) Remove the cover assembly - column.
 - (1) Release the screws and claws.
 - (2) Remove the cap - key cylinder (a). (Model with keyless access with push button start)
 - (3) Remove the cover assembly - column UPR and the cover assembly - column LWR.

A Model without keyless access with push button start

B Model with keyless access with push button start

- 7) Remove the switch assembly - combination.

- (1) Disconnect the connector, and loosen the clamp to release the claws.

Steering Column

POWER ASSISTED SYSTEM (POWER STEERING)

- (2) Pull out the switch assembly - combination from the column assembly - steering.

- 8) Remove all connectors from the column assembly - steering.

- 9) Remove the universal joint assembly - steering. <Ref. to PS-13, REMOVAL, Universal Joint.>

CAUTION:

To prevent damage to the universal joint assembly - steering and improper steering effort, make sure to remove the universal joint assembly - steering.

- 10) Remove the two nuts under the beam COMPL - steering securing the column assembly - steering.

- 11) Pull out the column assembly - steering from the hole on toe board.

CAUTION:

Do not loosen the tilt lever when the column assembly - steering is not secured to the vehicle.

- 12) Remove the ignition key lock from the column assembly - steering. <Ref. to SL-58, REPLACEMENT, Ignition Key Lock.>

Steering Column

POWER ASSISTED SYSTEM (POWER STEERING)

B: INSTALLATION

CAUTION:

If the steering wheel and steering angle sensor are removed, perform the following VDC setting mode.

- Model without EyeSight: VDC sensor midpoint setting mode <Ref. to VDC-23, VDC SENSOR MID-POINT SETTING MODE (MODELS WITHOUT EyeSight), ADJUSTMENT, VDC Control Module and Hydraulic Control Unit (VDCCM&H/U).>
- Model with EyeSight: Neutral of Steering Angle Sensor & Lateral G Sensor 0 point setting <Ref. to VDC-23, NEUTRAL OF STEERING ANGLE SENSOR & LATERAL G SENSOR 0 POINT SETTING (MODEL WITH EyeSight), ADJUSTMENT, VDC Control Module and Hydraulic Control Unit (VDCCM&H/U).>
- Model with EyeSight: Longitudinal G sensor & lateral G sensor 0 point setting <Ref. to VDC-24, LONGITUDINAL G SENSOR & LATERAL G SENSOR 0 POINT SETTING MODE (MODEL WITH EyeSight), ADJUSTMENT, VDC Control Module and Hydraulic Control Unit (VDCCM&H/U).>

1) Install the grommet to the toe board.

2) Insert the end of the column assembly - steering into the toe board grommet.

3) Tighten the column assembly - steering installation bolt located under the beam COMPL - steering with the tilt lever fixed.

Tightening torque:

20 N·m (2.04 kgf·m, 14.8 ft·lb)

- 4) Connect all connectors located under the beam COMPL - steering.
- 5) Install the airbag module. <Ref. to AB-33, INSTALLATION, Driver's Airbag Module.>
- 6) Install the knee airbag module. <Ref. to AB-34, INSTALLATION, Knee Airbag Module.>
- 7) Install the cover assembly - instrument panel LWR driver INN and OUT.
- 8) Install the universal joint assembly - steering. <Ref. to PS-14, INSTALLATION, Universal Joint.>

CAUTION:

- Always install the universal joint assembly - steering after installing the steering column to avoid damage to the universal joint assembly - steering.
- Be sure to follow the tightening order and tightening torque of the universal joint assembly - steering to avoid the steering effort from becoming heavy.

9) Align the center position of the steering roll connector. <Ref. to AB-62, ADJUSTMENT, Roll Connector.>

10) Install the steering wheel. <Ref. to PS-9, INSTALLATION, Steering Wheel.>

C: INSPECTION

1. UNIT INSPECTION

Check the following items, and if there is anything out of standard value, it is considered to be damaged. If so, replace it with a new part.

Steering Column

POWER ASSISTED SYSTEM (POWER STEERING)

- Measure the whole length of the column assembly - steering.

Standard: Overall length L

Tilt and telescopic column (measure while minimized)

$819.7^{+1.5}_{-1.5}$ mm ($32.27^{+0.059}_{-0.059}$ in)

- Check the steering wheel deflection in axial and vertical directions.

Specification:

Axial deflection A (deflection of steering wheel)

Less than 6 mm (0.24 in)

Vertical deflection L (runout of steering wheel)

Less than 17 mm (0.68 in)

2. INSPECTION OF AIRBAG SYSTEM

Refer to "Airbag System" for airbag inspection procedure. <Ref. to AB-33, INSTALLATION, Driver's Airbag Module.>

Electric Power Steering Gearbox

POWER ASSISTED SYSTEM (POWER STEERING)

6. Electric Power Steering Gearbox

A: REMOVAL

CAUTION:

- The power steering control module continues to operate after the engine stops and calculate the temperature in the control module. Therefore, before starting service of the power steering system which requires disconnection of the connector, stop the engine and allow approx. 30 minutes until the control module becomes cold.

- Before removal or installation, be sure to remove any foreign matter (dust, moisture, oil, etc.) from the power steering control module connector.

- 1) Lift up the vehicle, and then remove the front wheels.
- 2) Remove the under cover - front. <Ref. to EI-22, REMOVAL, Front Under Cover.>
- 3) Remove the universal joint assembly - steering. <Ref. to PS-13, REMOVAL, Universal Joint.>
- 4) Disconnect the ground cable from battery. <Ref. to NT-6, BATTERY, NOTE, Note.>
- 5) Adjust the tilt position of the column assembly - steering to the lowest position and lock the tilt lever.

- 6) Remove the universal joint assembly - steering. <Ref. to PS-13, REMOVAL, Universal Joint.>
- 7) Disconnect the connector and harness clamp from power steering control module.

Electric Power Steering Gearbox

POWER ASSISTED SYSTEM (POWER STEERING)

- 8) Disconnect the tie-rod end.
 - (1) Pull out the cotter pin (a).
 - (2) Remove the castle nut (b).
 - (3) Using a tie-rod ball joint puller, remove the tie-rod end (c).

Preparation tool:
Tie-rod ball joint puller

- 9) Remove the front crossmember support.

Electric Power Steering Gearbox

POWER ASSISTED SYSTEM (POWER STEERING)

- 10) Remove the front exhaust pipe assembly. <Ref. to EX(H4DO)-5, REMOVAL, Front Exhaust Pipe.>
- 11) Remove the support plate - front crossmember (a).

- 12) Remove the bolts securing the steering gearbox assembly, and remove the stiffener (a) and steering gearbox assembly.

Electric Power Steering Gearbox

POWER ASSISTED SYSTEM (POWER STEERING)

B: INSTALLATION

- 1) Insert the steering gearbox assembly into crossmember, being careful not to damage the boot of the steering gearbox assembly.
- 2) Install the steering gearbox assembly to the crossmember by tightening the bolts through the stiffener (a) to the specified torque.

Tightening torque:

60 N·m (6.12 kgf·m, 44.3 ft·lb)

- 3) Install the universal joint assembly - steering. <Ref. to PS-14, INSTALLATION, Universal Joint.>

CAUTION:

Tighten the bolts of the universal joint assembly - steering in the order of steering gearbox side and column shaft side.

- 4) Install the support plate - front crossmember (a).

Tightening torque:

Support plate - front crossmember: 60 N·m (6.12 kgf·m, 44.3 ft·lb)

Front support: 100 N·m (10.20 kgf·m, 73.8 ft·lb)

Electric Power Steering Gearbox

POWER ASSISTED SYSTEM (POWER STEERING)

- 5) Connect the tie-rod ends and knuckle arm.
 - (1) Connect the tie-rod end (a) to the housing assembly - front axle.
 - (2) Tighten the castle nuts (b) to the specified torque.

CAUTION:

During connection, do not hit the cap at bottom of tie-rod end with a hammer.

Castle nut tightening torque:

27 N·m (2.75 kgf-m, 19.9 ft-lb)

- (3) Tighten within the range of 60° so that the cotter pin hole and cutout portion of the castle nut (b) are aligned.
- (4) Insert the cotter pin (c), and bend the tip of the pin to fix it.

- 6) Install the front crossmember - support.

Tightening torque:

60 N·m (6.12 kgf-m, 44.3 ft-lb)

- 7) Install the front exhaust pipe assembly. <Ref. to EX(H4DO)-7, INSTALLATION, Front Exhaust Pipe.>
- 8) Install the under cover - front. <Ref. to EI-22, INSTALLATION, Front Under Cover.>
- 9) Install the front wheels.
- 10) Lower the vehicle.
- 11) Tighten the wheel nuts to the specified torque.

Tightening torque:

Except for C4 model: 120 N·m (12.24 kgf-m, 88.5 ft-lb)

C4 model: 100 N·m (10.20 kgf-m, 73.8 ft-lb)

- 12) Connect the power steering control module harness connector.
- 13) Connect the battery ground terminal.

CAUTION:

When the wheel alignment has been adjusted, perform the adjustment of the steering angle sensor.

– Model without EyeSight: VDC sensor midpoint setting mode <Ref. to VDC-23, VDC SENSOR MID-POINT SETTING MODE (MODELS WITHOUT EyeSight), ADJUSTMENT, VDC Control Module and Hydraulic Control Unit (VDCCM&H/U).>

– Model with EyeSight: Neutral of Steering Angle Sensor & Lateral G Sensor 0 point setting <Ref. to VDC-23, NEUTRAL OF STEERING ANGLE SENSOR & LATERAL G SENSOR 0 POINT SETTING (MODEL WITH EyeSight), ADJUSTMENT, VDC Control Module and Hydraulic Control Unit (VDCCM&H/U).>

– Model with EyeSight: Longitudinal G sensor & lateral G sensor 0 point setting <Ref. to VDC-24, LONGITUDINAL G SENSOR & LATERAL G SENSOR 0 POINT SETTING MODE (MODEL WITH EyeSight), ADJUSTMENT, VDC Control Module and Hydraulic Control Unit (VDCCM&H/U).>

Electric Power Steering Gearbox

POWER ASSISTED SYSTEM (POWER STEERING)

14) After adjusting toe-in and steering angle, tighten the lock nut on tie-rod end.

Tightening torque:

85 N·m (8.67 kgf·m, 62.7 ft·lb)

NOTE:

When adjusting toe-in, hold the boot - steering gearbox as shown to prevent it from being rotated or twisted. If it becomes twisted, straighten it.

PS-01343

C: DISASSEMBLY

CAUTION:

- Nut for fixing the rack is on the driver's side only. When removing the tie-rod on the passenger's side, turn over the boot - steering gearbox on the driver's side, and fix the rack during operation.
- When fixing the steering gearbox assembly in a vise, apply a wooden piece on the flange portion.

1) Remove the tie-rod end (a) and lock nut (b) from the steering gearbox assembly.

2) Remove the clip - boot tie-rod (c) located outside the boot - steering gearbox using the pliers, and then slide the boot - steering gearbox to the tie-rod end side.

PS-01330

Electric Power Steering Gearbox

POWER ASSISTED SYSTEM (POWER STEERING)

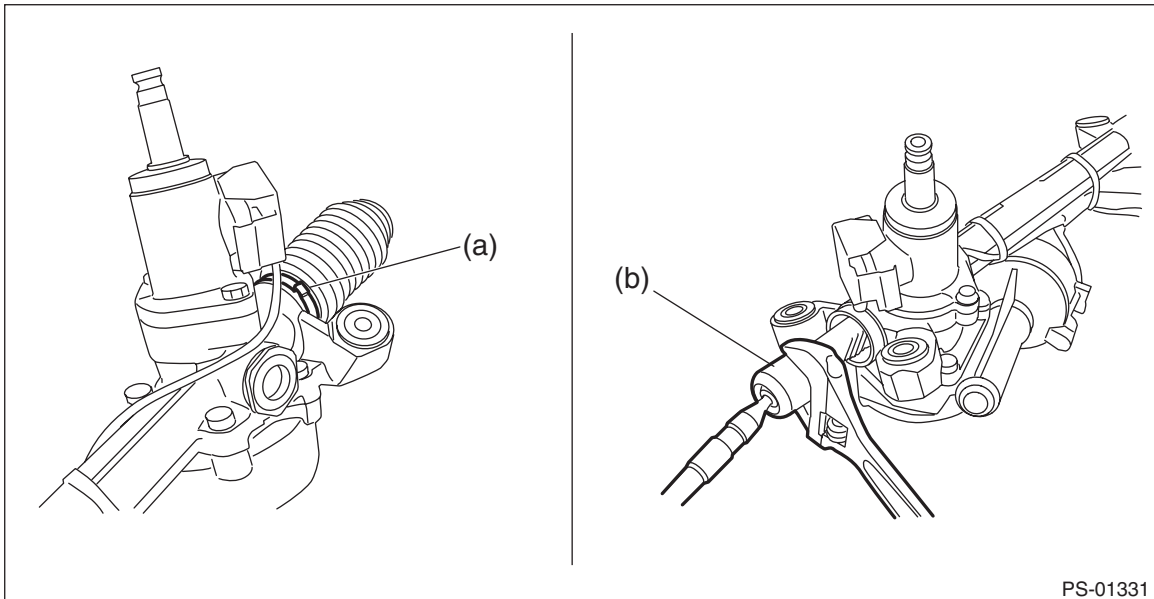

3) Remove the tie-rod (b) from the gearbox assembly.

(1) Using a flat tip screwdriver, remove the band - boot (a) from the boot - steering gearbox.

NOTE:

Replace the boot - steering gearbox or the band - boot (a) if there is damage, cracks or deterioration.

(2) Remove the tie-rod (b).

D: ASSEMBLY

1) Install the tie-rod into rack.

Tightening torque:

90 N·m (9.18 kgf·m, 66.4 ft·lb)

NOTE:

Check the mating face of rack and tie-rod for foreign matter such as dust etc.

2) Apply a coat of grease to the tie-rod groove, and then install the boot - steering gearbox to the housing.

NOTE:

Make sure that the boot - steering gearbox is installed without unusual inflation or deflation.

Electric Power Steering Gearbox

POWER ASSISTED SYSTEM (POWER STEERING)

3) Using the boot clamp pliers, crimp the boot so that the clearance (b) of the band - boot (a) crimp portion becomes 2 mm (0.08 in) or less.

NOTE:

Use a new band - boot.

4) Fix the end of the boot - steering gearbox with clip - boot tie-rod (a).

5) After installation, check that the end of the boot - steering gearbox is installed to the groove (b) of the tie-rod.

6) If the tie-rod end has been removed, screw in lock nut and tie-rod end to the threaded portion of tie-rod, and tighten the lock nut temporarily in a position as shown in the figure.

Installed tie-rod length L:

33 mm (1.3 in)

Electric Power Steering Gearbox

POWER ASSISTED SYSTEM (POWER STEERING)

7) Inspect the steering gearbox assembly as follows:

1. "A" Holding the tie-rod end, repeat lock to lock several times as quickly as possible.
2. "B" Holding the tie-rod end, turn it slowly at a radius several times as large as possible.
3. Finally, make sure that the boot - steering gearbox is installed in the specified position without inflating.

8) Remove the steering gearbox assembly from ST.

E: INSPECTION

1. UNIT INSPECTION

Check components for wear, damage or other faults. Adjust or replace if necessary.

2. LIMIT

Make a measurements as follows. If it exceeds the specified service limits, adjust or replace.

NOTE:

When fixing the steering gearbox assembly in a vise, apply a wooden piece on the flange portion.

Rack shaft sliding resistance:

Limit: 303 N (31 kgf, 68 lbf) or less

Left/right differential of sliding resistance: 20% or less

Electric Power Steering Gearbox

POWER ASSISTED SYSTEM (POWER STEERING)

3. RACK SHAFT PLAY IN THE RADIAL DIRECTION

NOTE:

- When fixing the steering gearbox assembly in a vise, apply a wooden piece on the flange portion.
- When fixing the magnet stand in the steering gearbox assembly, perform the following procedure.
 - Fix the iron plate on the flange portion using a c-clamp, and place the magnet stand on the iron plate.
 - Use bolts and nuts to fix directly on the flange portion of the steering gearbox assembly. (Secure the gauge firmly on the gearbox body. (Avoid the input shaft and the rack shaft.))

Right-turn steering:

Service limit:

Both amplitudes: 0.6 mm (0.024 in) or less

Left-turn steering:

Service limit:

Both amplitudes: 0.6 mm (0.024 in) or less

Condition:

L: 5 mm (0.2 in) from dust cover

Rack shaft end P: 98 N (10 kgf, 22 lbf)

NOTE:

<Example of magnet stand and dial gauge installation>

The location where the magnet stand is installed varies to stabilize the magnet stand.

Electric Power Steering Gearbox

POWER ASSISTED SYSTEM (POWER STEERING)

4. INPUT SHAFT PLAY

NOTE:

- When fixing the steering gearbox assembly in a vise, apply a wooden piece on the flange portion.
- When fixing the magnet stand in the steering gearbox assembly, perform the following procedure.
 - Fix the iron plate on the flange portion using a c-clamp, and place the magnet stand on the iron plate.
 - Use bolts and nuts to fix directly on the flange portion of the steering gearbox assembly. (Secure the gauge firmly on the gearbox body. (Avoid the input shaft and the rack shaft.))

In radial direction:

Limit: Both amplitudes: 0.6 mm (0.024 in) or less

Condition: Input shaft tip $P = 98 \text{ N}$ (10 kgf, 22 lbf)

In axial direction:

Limit: 0.27 mm (0.0106 in) or less

Condition: Input shaft tip $P = 20 - 49 \text{ N}$ (2 - 5 kgf, 4 - 11 lbf)

NOTE:

<Example of magnet stand and dial gauge installation>

The location where the magnet stand is installed varies to stabilize the magnet stand.

(a) Vise

(b) Wooden block

(c) C-clamp

(d) Iron plate

(e) Dust cover

Electric Power Steering Gearbox

POWER ASSISTED SYSTEM (POWER STEERING)

5. TURNING RESISTANCE OF GEARBOX

1) Using the ST, measure the rotational resistance of the steering gearbox assembly.

Preparation tool:

ST: SPANNER (34099PA100)

Service limit:

Maximum allowable resistance: 18.0 N (1.8 kgf, 4.0 lbf) or less

Difference between right and left rotational resistance: 20% or less

Electric Power Steering Gearbox

POWER ASSISTED SYSTEM (POWER STEERING)

F: ADJUSTMENT

1. GEARBOX BACKLASH ADJUSTMENT

- 1) Remove the steering gearbox assembly. <Ref. to PS-22, REMOVAL, Electric Power Steering Gearbox.>
- 2) Loosen the lock nut and adjusting screw.
- 3) Apply a coat of grease to the sliding surface (B) of the pad - pressure (a) and seating surface (C) of spring - gearbox (b), and then insert the pad - pressure (a) into steering body.
- 4) Charge the adjusting screw (c) with grease (D), and then insert the spring - gearbox (b) into adjusting screw. Then install on the steering body.

Preparation items:

Grease: Multemp AC-P

- 5) Apply liquid gasket to 1/3 or more (A) of entire perimeter of adjusting screw thread (c).

Preparation items:

Liquid gasket: THREE BOND TB-1111B

- 6) Tighten the adjusting screw to 9.8 N·m (1.0 kgf-m, 7.2 ft-lb), then loosen it.
- 7) Tighten the adjusting screw to 6 N·m (0.6 kgf-m, 4.4 ft-lb).
- 8) Loosen the adjusting screw by 20°.
- 9) While fixing the adjusting screw, tighten the lock nuts.

Tightening torque:

49.4 N·m (5.04 kgf-m, 36.4 ft-lb)

Electric Power Steering Gearbox

POWER ASSISTED SYSTEM (POWER STEERING)

2. FRONT WHEEL ALIGNMENT ADJUSTMENT

- 1) Adjust the front toe. <Ref. to FS-13, FRONT WHEEL TOE-IN, ADJUSTMENT, Wheel Alignment.>
- 2) Check the steering angle of the wheels.

Standard of steering angle:

<i>Inner wheel</i>	$38.2^{\circ} \pm 1.5^{\circ}$
<i>Outer wheel</i>	$33.6^{\circ} \pm 1.5^{\circ}$

- 3) When the steering wheel is in the following condition, perform the steering wheel installation over again.
 - When wheels are set in the straight ahead position, the steering wheel spokes are not horizontal.
 - Error is more than 5° on the periphery of the steering wheel.

(1) 5° or less

- 4) If the steering wheel spokes are not horizontal with vehicle set in the straight ahead position after this adjustment, correct it by turning the right and left tie-rods in the opposite direction from each other by the same angle. Also check that there are no abnormal steering effort, failure of the steering wheel to return or other faults.
- 5) Adjust the steering angle sensor. (Models without EyeSight) <Ref. to VDC-23, VDC SENSOR MIDPOINT SETTING MODE (MODELS WITHOUT EyeSight), ADJUSTMENT, VDC Control Module and Hydraulic Control Unit (VDCCM&H/U).>
- 6) Adjust the steering angle sensor. (Models with EyeSight)
 - Neutral of Steering Angle Sensor & Lateral G Sensor 0 point setting <Ref. to VDC-23, NEUTRAL OF STEERING ANGLE SENSOR & LATERAL G SENSOR 0 POINT SETTING (MODEL WITH EyeSight), ADJUSTMENT, VDC Control Module and Hydraulic Control Unit (VDCCM&H/U).>
 - Longitudinal G sensor & lateral G sensor 0 point setting <Ref. to VDC-24, LONGITUDINAL G SENSOR & LATERAL G SENSOR 0 POINT SETTING MODE (MODEL WITH EyeSight), ADJUSTMENT, VDC Control Module and Hydraulic Control Unit (VDCCM&H/U).>

Power Steering Control Module

POWER ASSISTED SYSTEM (POWER STEERING)

7. Power Steering Control Module

A: REMOVAL

- 1) Disconnect the ground cable from battery. <Ref. to NT-6, BATTERY, NOTE, Note.>
- 2) Remove the power steering control module.
 - (1) Disconnect the connector of the power steering control module.
 - (2) Remove the nuts, and remove the power steering control module.

PS-01341

B: INSTALLATION

- 1) Install each part in the reverse order of removal.

CAUTION:

Make sure that the connector is securely locked.

Tightening torque:

Power steering control module: 7.5 N·m (0.76 kgf-m, 5.5 ft-lb)

General Diagnostic Table

POWER ASSISTED SYSTEM (POWER STEERING)

8. General Diagnostic Table

A: INSPECTION

Trouble	Possible cause	Corrective action
<ul style="list-style-type: none"> Steering effort is heavy in all ranges. Steering effort is heavy at stand still. Steering wheel vibrates when turning. 	1. Tire and wheel <ul style="list-style-type: none"> Improper tire out of specifications Improper wheel out of specification Tires not properly inflated 	Replace or reinflate.
	2. Measure the steering wheel effort. <Ref. to PS-33, TURNING RESISTANCE OF GEARBOX, INSPECTION, Electric Power Steering Gearbox.>	Adjust or replace.
<ul style="list-style-type: none"> Vehicle leads to one side or the other. Returning force of steering wheel to center is poor. Steering wheel vibrates when turning. 	1. Tire and wheel <ul style="list-style-type: none"> Flat tire Mixed use of different tires Mixed use of different wheels Abnormal wear of tire Unequal tread remaining Unequal pressure of tire 	Adjust, fix or replace.
	2. Front wheel alignment <ul style="list-style-type: none"> Improper or unequal caster Improper or unequal toe-in Loose suspension connections 	Adjust or retighten.
	3. Measure the steering wheel effort. <Ref. to PS-33, TURNING RESISTANCE OF GEARBOX, INSPECTION, Electric Power Steering Gearbox.>	Adjust or replace.

NOTE:

When performing repeated steering operation with the vehicle at standstill, the steering effort may be temporarily heavy because the heat generated in the system activates the power steering protection control. This is not a malfunction caused by the steering system. After a while, it will return to normal steering effort. (In this case, the steering warning light will not come on and there will be no DTC.)

1. NOISE AND VIBRATION

NOTE:

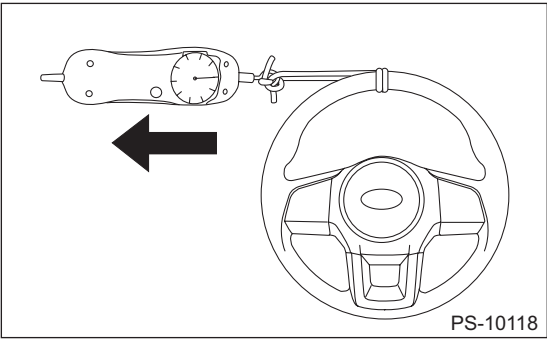

- When turning the steering wheel with the brake applied when the vehicle is parked, a screeching noise may be generated by the brake disc and pads. This is not a fault in the steering system.
- There may be a small vibration around the steering devices when turning the steering wheel at standstill, even though the component parts are operating properly.

Trouble	Possible cause	Corrective action
Rattling noise (intermittent) While engine is running.	Interference with adjacent parts	Check the clearance. Correct if necessary.
	Looseness of linkage, play of steering, improper tightening (looseness) of suspension joint or column assembly - steering	Retighten or replace.
	Noise emitted from inside of the gearbox	Replace the gearbox assembly.
Knocking When turning steering wheel in both directions with small angle repeatedly at engine ON or OFF.	Excessive backlash Loosened lock nut for adjusting backlash	Adjust the backlash. When the noise remains after adjustment, replace the gearbox assembly.
	Insufficient tightening or play in the tie-rod or tie-rod end	Retighten or replace.
Grinding noise (intermittent) While engine is running. (While operating the steering.)	Fault inside of gearbox	Replace the gearbox assembly.
	Faulty bearing of the column assembly - steering	Apply grease or replace.
	Occurs when turning the steering wheel with brakes (service or parking) applied.	If the noise goes off when brake is released, it is normal.
Vibration While engine is running. (with/without steering turned)	Excessive play in steering, looseness of suspension parts	Retighten.

General Diagnostic Table

POWER ASSISTED SYSTEM (POWER STEERING)

2. MEASUREMENT OF STEERING EFFORT

Step	Check	Yes	No	
1	CHECK STEERING WARNING LIGHT.	Does the steering warning light illuminate?	Read the DTC, and inspect according to it.	Go to step 2.
2	CHECK STEERING WARNING LIGHT. 1) Connect the Subaru Select Monitor, and turn the steering wheel. (One lock to lock) 2) Check the "EPS operation flag" in the current data.	Is the EPS operation flag normal without displaying any DTC code?	Go to step 3.	If the EPS operation flag is "Assist limitation", stop the engine for approx. 10 minutes and perform the procedures from step 1 again.
3	CHECK STEERING EFFORT. 1) Stop the vehicle on paved road. 2) Set the tire air pressure to the specification. 3) Start the engine. 4) Run the engine at idle. 5) Install a spring scale on the steering wheel. 6) Pull the spring scale at a right angle to the steering wheel, and measure both right and left steering wheel efforts.	Is the steering effort less than 29.4 N (3.0 kgf, 6.6 lbf)?	Go to step 4.	Go to step 8.
				
4	CHECK STEERING EFFORT. 1) Stop the engine. 2) Pull the spring scale at a right angle to the steering wheel, and measure both right and left steering wheel efforts.	Is the steering effort less than 294.2 N (30 kgf, 66.2 lbf)?	Go to step 5.	Perform the inspection or adjustment around the suspension part.
5	CHECK TORQUE SENSOR OUTPUT VALUE. 1) Connect the Subaru Select Monitor. 2) Read the output of torque sensor voltage. NOTE: When measuring, place the steering wheel at the center position.	Is the voltage 2.425 — 2.575 V?	Go to step 6.	Replace the gear-box assembly. <Ref. to PS-22, Electric Power Steering Gear-box.>
6	CHECK TORQUE SENSOR OUTPUT VALUE. 1) Remove the universal joint assembly - steering. 2) Connect the Subaru Select Monitor. 3) Read the output of torque sensor voltage.	Is the voltage 2.425 — 2.575 V?	Go to step 7.	Replace the gear-box assembly. <Ref. to PS-22, Electric Power Steering Gear-box.>

General Diagnostic Table

POWER ASSISTED SYSTEM (POWER STEERING)

Step	Check	Yes	No
7 CHECK TORQUE SENSOR OUTPUT VALUE. 1) Remove the universal joint assembly - steering. NOTE: Check that the universal joint assembly - steering moves up and down smoothly without installing the bolt. Then tighten the bolts first on the gearbox side and then on the column shaft side. 2) Connect the Subaru Select Monitor. 3) Read the output of torque sensor voltage.	Is the voltage 2.425 — 2.575 V?	Go to step 8.	Check the universal joint assembly - steering. <Ref. to PS-22, Electric Power Steering Gearbox.>
8 CHECK STEERING WHEEL EFFORT. 1) Remove the universal joint assembly - steering. 2) Measure the steering wheel effort.	Is the steering effort less than 2.26 N (0.23 kgf, 0.51 lbf)?	Go to step 9.	Replace the column assembly - steering. <Ref. to PS-22, Electric Power Steering Gearbox.>
9 CHECK STEERING WHEEL EFFORT. Measure the steering wheel effort.	Is the difference of steering effort between right and left less than 20%?	Go to step 10.	Replace the column assembly - steering. <Ref. to PS-18, Steering Column.>
10 CHECK UNIVERSAL JOINT ASSEMBLY - STEERING. Measure the swing torque of joint. (Yoke of column assembly - steering side) <Ref. to PS-16, INSPECTION, Universal Joint.>	Is the swing torque of the universal joint assembly - steering less than 7.3 N (0.74 kgf, 1.64 lbf)?	Go to step 11.	Replace the universal joint assembly - steering with a new part. <Ref. to PS-13, Universal Joint.>
11 CHECK UNIVERSAL JOINT ASSEMBLY - STEERING. Measure the swing torque of joint. (Yoke of gearbox side) <Ref. to PS-16, INSPECTION, Universal Joint.>	Is the swing torque of the universal joint assembly - steering less than 3.8 N (0.39 kgf, 0.86 lbf)?	Go to step 12.	Replace the universal joint assembly - steering with a new part. <Ref. to PS-13, Universal Joint.>
12 CHECK FRONT WHEEL. Check the front wheels.	Does the front wheels have unsteady revolution or rattling, or does the brake drag?	Inspect, readjust and replace if necessary.	Go to step 13.
13 CHECK TIE-ROD ENDS. Remove the tie-rod ends.	Does the tie-rod ends of suspension have unsteady revolution or rattling?	Inspect and replace if necessary.	Go to step 14.
14 CHECK BALL JOINT. Remove the ball joint.	Does the ball joints of suspension have unsteady revolution or rattling?	Inspect and replace if necessary.	Go to step 15.
15 CHECK GEARBOX. Measure the rotating of gearbox. <Ref. to PS-30, LIMIT, INSPECTION, Electric Power Steering Gearbox.>	Is the rotational resistance of steering gearbox less than 18.0 N (1.8 kgf, 4.0 lbf)? Is the difference between clockwise and counterclockwise less than 20%?	Go to step 16.	Replace the gearbox assembly. <Ref. to PS-22, Electric Power Steering Gearbox.>
16 CHECK GEARBOX. Measure the sliding of gearbox.	Is the sliding resistance of the steering gearbox less than 303 N (31 kgf, 68 lbf)? Is the difference between the right and left sliding resistances less than 20%?	Steering effort is normal.	Replace the gearbox assembly. <Ref. to PS-22, Electric Power Steering Gearbox.>

12. Diagnostic Procedure with Diagnostic Trouble Code (DTC)	25

Basic Diagnostic Procedure

POWER ASSISTED SYSTEM (POWER STEERING) (DIAGNOSTICS)

1. Basic Diagnostic Procedure

A: PROCEDURE

CAUTION:

- The power steering control module continues to operate after the engine stops and calculate the temperature in the control module. Therefore, before starting service of the power steering system which requires disconnection of the connector, stop the engine and allow approx. 10 minutes until the control module becomes cold.
- Before removal or installation, be sure to remove any foreign matter (dust, moisture, oil, etc.) from the power steering control module connector.

NOTE:

- Shake the connector at the suspected trouble location to check for open or short circuits of the harness.
- Refer to "Check List for Interview". <Ref. to PS(diag)-4, Check List for Interview.>

	Step	Check	Yes	No
1	<p>CHECK PRE-INSPECTION.</p> <p>1) Ask the customer when and how the trouble occurred using the interview check list. <Ref. to PS(diag)-4, Check List for Interview.></p> <p>2) Check the illumination status of the STEERING warning light while the engine is running.</p> <p>3) Before performing diagnostics, check components which might affect power steering problems. <Ref. to PS(diag)-7, INSPECTION, General Description.></p> <p>4) Save the data of «Overheating protection intervention history», «IGN count from overheating protection (most recent)», «IGN count from overheating protection (previous)», «IGN count from overheating protection (before previous)», and «Assist limit history (low voltage, high voltage)» using Subaru Select Monitor. <Ref. to PS(diag)-12, READ CURRENT DATA, OPERATION, Subaru Select Monitor.></p>	Is the check result OK?	Go to step 2.	Repair or replace each component.
2	<p>CHECK INDICATION OF DTC.</p> <p>1) Turn the ignition switch to OFF.</p> <p>2) Connect the Subaru Select Monitor to data link connector.</p> <p>3) Turn the ignition switch to ON and run the Subaru Select Monitor.</p> <p>4) Read the DTC using the Subaru Select Monitor. <Ref. to PS(diag)-17, OPERATION, Read Diagnostic Trouble Code (DTC).></p> <p>NOTE: If the communication function of the Subaru Select Monitor cannot be executed properly, check the communication circuit. <Ref. to PS(diag)-14, COMMUNICATION FOR INITIALIZING IMPOSSIBLE, INSPECTION, Subaru Select Monitor.></p>	Is DTC displayed?	Record the DTC. Go to step 4.	Go to step 3.

Basic Diagnostic Procedure

POWER ASSISTED SYSTEM (POWER STEERING) (DIAGNOSTICS)

Step	Check	Yes	No
3 PERFORM GENERAL DIAGNOSTICS. 1) If the STEERING warning light is illuminated while the engine is running, perform the Clear Memory Mode. <Ref. to PS(diag)-19, OPERATION, Clear Memory Mode.> 2) Perform the Inspection Mode. <Ref. to PS(diag)-18, Inspection Mode.> 3) Read the DTC. <Ref. to PS(diag)-17, OPERATION, Read Diagnostic Trouble Code (DTC).> 4) Check that the DTC is not displayed.	Does the STEERING warning light illuminate at ignition switch ON, and turn off two seconds after the engine is started?	Finish the diagnosis.	<Ref. to PS(diag)-16, WITHOUT DTC, INSPECTION, Subaru Select Monitor.>
4 CHECK FREEZE FRAME DATA. Using the Subaru Select Monitor, check the freeze frame data for the power steering control module.	Are freeze frame data recorded?	Record the freeze frame data. Go to step 5.	Go to step 5.
5 PERFORM DIAGNOSIS. 1) Refer to "List of Diagnostic Trouble Code (DTC)". <Ref. to PS(diag)-23, LIST, List of Diagnostic Trouble Code (DTC).> 2) Correct the cause of trouble. 3) Check the illumination status of the STEERING warning light while the engine is running, and if the warning light is lit, perform Clear Memory Mode. <Ref. to PS(diag)-19, OPERATION, Clear Memory Mode.> 4) Perform the Inspection Mode. <Ref. to PS(diag)-18, Inspection Mode.> 5) Read the DTC. <Ref. to PS(diag)-17, OPERATION, Read Diagnostic Trouble Code (DTC).>	Is DTC displayed?	Repeat step 5 until DTC is not shown.	Finish the diagnosis.

Check List for Interview

POWER ASSISTED SYSTEM (POWER STEERING) (DIAGNOSTICS)

2. Check List for Interview

A: CHECK

Check the following items regarding condition of the vehicle.

1. TROUBLE STATUS

Phenomenon of the vehicle	<input type="checkbox"/> Steering is heavy <input type="checkbox"/> Steering is not smooth <input type="checkbox"/> Steering is unstable (wondering) <input type="checkbox"/> Steering does not return to center <input type="checkbox"/> Steering is not straight
	<input type="checkbox"/> Steering force required is not the same for right and left turn <input type="checkbox"/> Steering force required is not even <input type="checkbox"/> Steering is too light
	<input type="checkbox"/> Noise <input type="checkbox"/> Vibration <input type="checkbox"/> STEERING warning light illuminates <input type="checkbox"/> Other
Frequency	<input type="checkbox"/> Always <input type="checkbox"/> Sometimes <input type="checkbox"/> Immediately after starting the engine <input type="checkbox"/> Only once <input type="checkbox"/> Other
	<input type="checkbox"/> Recovers after leaving it for minutes
Steering wheel operation	<input type="checkbox"/> Dry steering <input type="checkbox"/> When turning <input type="checkbox"/> Quick steering <input type="checkbox"/> Slow steering <input type="checkbox"/> Returning the steering wheel
	<input type="checkbox"/> Releasing the steering wheel <input type="checkbox"/> Only supporting the steering wheel by hand <input type="checkbox"/> Repetitive dry steering
Steering wheel status / direction	<input type="checkbox"/> Around center position <input type="checkbox"/> Near end of lock to lock
	<input type="checkbox"/> When turning the steering to right <input type="checkbox"/> When turning the steering to left <input type="checkbox"/> Both to right and to left
	<input type="checkbox"/> (1) Steering angle: degrees <input type="checkbox"/> (2) Maneuvering time: minutes

General Description

POWER ASSISTED SYSTEM (POWER STEERING) (DIAGNOSTICS)

3. General Description

A: CAUTION

1. SRS AIRBAG SYSTEM

The airbag system wiring harness is routed near the power steering control module.

CAUTION:

- Do not use the electrical test equipment on the airbag system wiring harnesses or connector circuits.
- Be careful not to damage the airbag system wiring harness during maintenance of the power steering control module.

B: INSPECTION

Before performing diagnosis, check the following items which might be affecting the power steering problem.

1. BATTERY

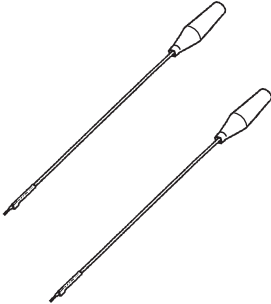

Check the battery. <Ref. to SC(H4DO)-52, INSPECTION, Battery.>

2. TIRES

Check the tire specifications, tire wear and air pressure. <Ref. to WT-2, SPECIFICATION, General Description.>

C: PREPARATION TOOL

1. SPECIAL TOOL

ILLUSTRATION	TOOL NUMBER	DESCRIPTION	REMARKS
 STSSM4	—	SUBARU SELECT MONITOR 4	Used for setting of each function and troubleshooting for electrical system. NOTE: For detailed operation procedures of Subaru Select Monitor 4, refer to "Application help".
 ST34199AG100	34199AG100	SPECIAL TOOL HARNESS	Used for troubleshooting the electrical system.

2. GENERAL TOOL

TOOL NAME	REMARKS
Circuit tester	Used for measuring resistance, voltage and current.
Oscilloscope	Used for measuring the sensor.
DST-i	Used together with Subaru Select Monitor 4.

Electrical Component Location

POWER ASSISTED SYSTEM (POWER STEERING) (DIAGNOSTICS)

4. Electrical Component Location

Control Module I/O Signal

POWER ASSISTED SYSTEM (POWER STEERING) (DIAGNOSTICS)

5. Control Module I/O Signal

A: ELECTRICAL SPECIFICATION

PS-01241

NOTE:

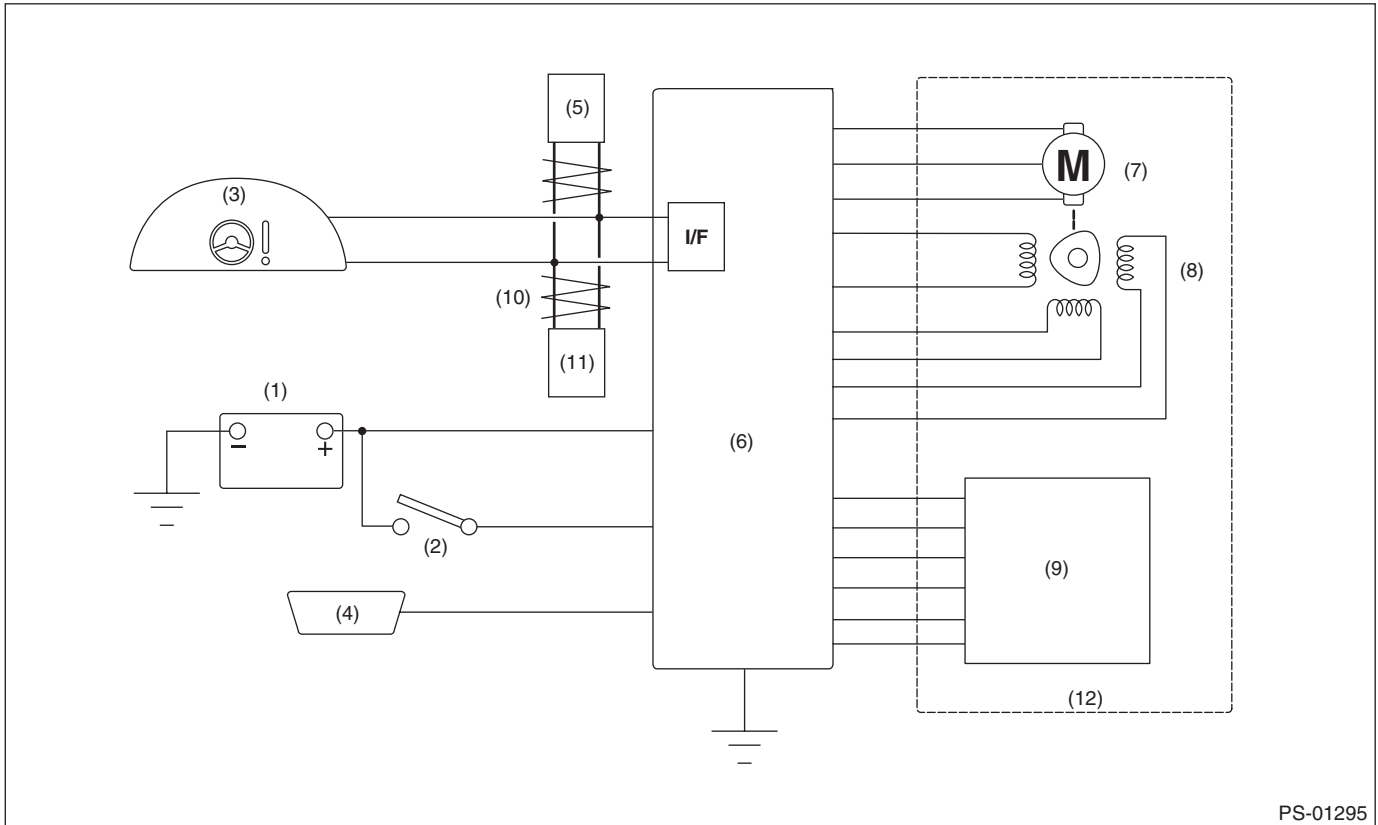

The terminal numbers of the power steering control module connectors are as indicated in the figure.

Contents	Terminal No.	Input/output signal
		Measured value and measuring conditions
Power supply (IG SW)	A1	Battery voltage is detected with the ignition switch ON when measuring between A1 — B1.
Subaru Select Monitor communication line	A2	Digital signal; can not be measured
Shield GND	A3	0 V is constantly detected.
Main torque sensor	A4	The voltage changes when the steering is operated to the right or left with the ignition switch ON.
Sub torque sensor	A5	The voltage changes when the steering is operated to the right or left with the ignition switch ON.
CAN communication	A6	Digital signal; can not be measured
CAN communication	A7	Digital signal; can not be measured
Torque sensor operating power supply	A8	Approximately 8 V is detected with ignition switch ON.
Torque sensor ground	A9	0 V is constantly detected.
Torque sensor standard power supply	A10	Approximately 3 V is detected with ignition switch ON.
Ground	B1	Battery voltage is constantly detected when measuring between B1 — B2.
Power supply	B2	
Resolver S1	C1	Varies depending on the operational status of the motor.
Resolver S3	C2	
Resolver S2	C3	
Resolver S4	C4	
Excitation power supply for resolver	C5	
Common output	C6	
Motor U phase	D1	Varies depending on the motor output.
Motor V phase	D2	
Motor W phase	D3	

Control Module I/O Signal

Subaru Select Monitor

POWER ASSISTED SYSTEM (POWER STEERING) (DIAGNOSTICS)

6. Subaru Select Monitor

A: OPERATION

1. HOW TO USE SUBARU SELECT MONITOR

For detailed operation procedures, refer to “Application help”.

2. READ CURRENT DATA

- 1) On «Start» display, select «Diagnosis».
- 2) On «Vehicle selection» display, input the vehicle information and select «Confirmed».
- 3) On «Main Menu» display, select «Each System».
- 4) On «Select System» display, select «Power Steering».
- 5) On «Select Function» display, select «Data Monitor».

Display	Contents to be displayed	Range	Unit
Torque sensor main output	Main torque sensor output voltage is displayed.	0 — 5	V
Torque sensor sub output	Sub torque sensor output voltage is displayed.	0 — 5	V
Torque sensor reference voltage	Torque sensor standard voltage is displayed.	0 — 5	V
Power current	The current flowing to CM is displayed.	-128 — 127	A
Vehicle Speed	Vehicle speed is displayed. (CAN communication data)	0 — 255	km/h
Engine Speed	Engine speed is displayed. (CAN communication data)	0 — 12750	rpm
Detection current at ECM	The current flowing to the motor relay is displayed.	-128 — 127	A
3-phase motor current (U-phase)	The U phase actual current value as calculated by the microcomputer from the torque sensor input is displayed.	-128 — 127	A
3-phase motor current (V-phase)	The V phase actual current value as calculated by the microcomputer from the torque sensor input is displayed.	-128 — 127	A
Motor angular speed	Data from the resolver sensor is displayed.	-4096 — 4064	rpm
CU Temperature	The thermistor temperature of the steering control module is displayed.	-50 — 205	°C
Power supply voltage	Battery voltage is displayed.	0 — 25.5	V
Torque sensor power supply voltage	The power supply voltage output to the torque sensor is displayed.	0 — 10.2	V
IG Voltage	The power supply voltage supplied to the ECM is displayed.	0 — 25.5	V
CAN Bus Status	Either Active/Passive/Bus Off is displayed.	—	—
EPS operating condition	Either Normal/Assist Stop/Assist Limitation is displayed.	—	—
Target Current at ECM	The motor target current value required for assist is displayed.	-128 — 127	A
Steering angle	Steering angle of steering wheel is displayed.	-640 — 635	deg
Reading assist MAP	Either MAP1/MAP2/MAP3 is displayed.	—	—
Overheating protection intervention history	Number of interventions to the overheat protection control (assist limitation for protecting the power steering from overheating)*1	0 — 250	times
IG Count after ECU Overheat Protection(latest)	Number of times the ignition switch is ON from the intervention to overheat protection control (most recent) until now*2	0 — 65000	times
IGN count from overheating protection (previous)	Number of times the ignition switch is ON from the intervention to overheat protection control (previous) until now*2	0 — 65000	times
IGN count from overheating protection (before previous)	Number of times the ignition switch is ON from the intervention to overheat protection control (before previous) until now*2	0 — 65000	times
Assist limit history (low voltage, high voltage)	Number of intervention to assist limit when the power supply voltage is low or high*1	0 — 250	times
IG OFF Number while Driving	Number of times the ignition switch is turned OFF during driving*1	0 — 250	times

NOTE:

- *1 When the value exceeds the maximum of 250 times, 250 is displayed.
- *2 When there is no intervention of the overheating protection control, “65535” is displayed. If an error such as control unit memory error, etc. occurs, “65534” is displayed.
- For detailed operation procedures, refer to “Application help”.

Subaru Select Monitor

POWER ASSISTED SYSTEM (POWER STEERING) (DIAGNOSTICS)

3. READ FREEZE FRAME DATA

- 1) On «Start» display, select «Diagnosis».
- 2) On «Vehicle selection» display, input the vehicle information and select «Confirmed».
- 3) On «Main Menu» display, select «Each System».
- 4) On «Select System» display, select «Power Steering».
- 5) On «Select Function» display, select «DTC».
- 6) On «DTC» display, select «FFD».

Display	Contents to be displayed	Range	Unit
Torque sensor main output	Main torque sensor output voltage is displayed.	0 — 5	V
Torque sensor sub output	Sub torque sensor output voltage is displayed.	0 — 5	V
Torque sensor reference voltage	Torque sensor standard voltage is displayed.	0 — 5	V
Power current	The current flowing to CM is displayed.	-128 — 127	A
Vehicle Speed	Vehicle speed is displayed. (CAN communication data)	0 — 255	km/h
Engine Speed	Engine speed is displayed. (CAN communication data)	0 — 12750	rpm
Detection current at ECM	The current flowing to the motor relay is displayed.	-128 — 127	A
3-phase motor current (U-phase)	The U phase actual current value as calculated by the micro-computer from the torque sensor input is displayed.	-128 — 127	A
3-phase motor current (V-phase)	The V phase actual current value as calculated by the micro-computer from the torque sensor input is displayed.	-128 — 127	A
Motor angular speed	Data from the resolver sensor is displayed.	-4096 — 4064	rpm
CU Temperature	The thermistor temperature of the steering control module is displayed.	-50 — 205	°C
Power supply voltage	Battery voltage is displayed.	0 — 25.5	V
Torque sensor power supply voltage	The power supply voltage output to the torque sensor is displayed.	0 — 10.2	V
IG Voltage	The power supply voltage supplied to the ECM is displayed.	0 — 25.5	V
CAN Bus Status	Either Active/Passive/Bus Off is displayed.	—	—
EPS operating condition	Either Normal/Assist Stop/Assist Limitation is displayed.	—	—
Target Current at ECM	The motor target current value required for assist is displayed.	-128 — 127	A
Steering angle	Steering angle of steering wheel is displayed.	-640 — 635	deg
Reading assist MAP	Either MAP1/MAP2/MAP3 is displayed.	—	—
Overheating protection intervention history	Number of interventions to the overheat protection control (assist limitation for protecting the power steering from overheating)*1	0 — 250	times
IG Count after ECU Overheat Protection(latest)	Number of times the ignition switch is ON from the intervention to overheat protection control (most recent) until now*2	0 — 65000	times
IGN count from overheating protection (previous)	Number of times the ignition switch is ON from the intervention to overheat protection control (previous) until now*2	0 — 65000	times
IGN count from overheating protection (before previous)	Number of times the ignition switch is ON from the intervention to overheat protection control (before previous) until now*2	0 — 65000	times
Assist limit history (low voltage, high voltage)	Number of intervention to assist limit when the power supply voltage is low or high*1	0 — 250	times
IGN-OFF Intervention Count while Running	Number of times the ignition switch is turned OFF while driving*1	0 — 250	times

NOTE:

- Freeze frame data stored at the time of trouble occurrence is shown on the display.
- Each time a trouble occurs, the latest information is stored in the freeze frame data in memory.
- One freeze frame data is stored.
- For detailed operation procedures, refer to “Application help”.

Subaru Select Monitor

POWER ASSISTED SYSTEM (POWER STEERING) (DIAGNOSTICS)

B: INSPECTION

1. COMMUNICATION FOR INITIALIZING IMPOSSIBLE

Detecting condition:

- Defective harness connector
- Defective power steering control module

Trouble symptom:

- Communication is impossible between the power steering control module and Subaru Select Monitor.
- After starting the engine, the STEERING warning light does not illuminate but steering effort is heavy.

Wiring diagram:

Electric power steering system <Ref. to WI-101, Electric Power Steering System.>

PS-01693

Step	Check	Yes	No
1	CHECK IGNITION SWITCH. Is the ignition switch ON?	Go to step 2.	Turn the ignition switch to ON, and select the power steering mode using the Subaru Select Monitor.

Subaru Select Monitor

POWER ASSISTED SYSTEM (POWER STEERING) (DIAGNOSTICS)

Step	Check	Yes	No	
2	CHECK BATTERY. 1) Turn the ignition switch to OFF. 2) Measure the battery voltage.	Is the voltage 12 V or more?	Go to step 3.	Charge or replace the battery.
3	CHECK BATTERY TERMINAL.	Is there poor contact at battery terminal?	Replace or tighten the battery terminal.	Go to step 4.
4	CHECK SUBARU SELECT MONITOR COMMUNICATION. 1) Turn the ignition switch to ON. 2) Using the Subaru Select Monitor, check whether communication to other systems can be executed normally.	Is the system name displayed on Subaru Select Monitor?	Go to step 8.	Go to step 5.
5	CHECK SUBARU SELECT MONITOR COMMUNICATION. 1) Turn the ignition switch to OFF. 2) Disconnect the power steering control module connector. 3) Turn the ignition switch to ON. 4) Check whether communication to other systems can be executed normally.	Is the system name displayed on Subaru Select Monitor?	Replace the power steering control module. <Ref. to PS-36, Power Steering Control Module.>	Go to step 6.
6	CHECK HARNESS CONNECTOR BETWEEN EACH CONTROL MODULE AND DATA LINK CONNECTOR. 1) Turn the ignition switch to OFF. 2) Disconnect the connectors from ECM, VDC CM, airbag CM and body integrated unit. CAUTION: When disconnecting the connector from airbag CM, always follow the precautions on AB section. <Ref. to AB-9, CAUTION, General Description.> 3) Measure the resistance between data link connector and chassis ground. Connector & terminal (B40) No. 7 — Chassis ground:	Is the resistance 1 M Ω or more?	Go to step 7.	Repair the short circuit to ground in harness and connector between each control module and data link connector.
7	CHECK HARNESS CONNECTOR BETWEEN POWER STEERING CONTROL MODULE AND DATA LINK CONNECTOR. 1) Turn the ignition switch to ON. 2) Measure the voltage between the power steering control module and chassis ground. Connector & terminal (B40) No. 7 (+) — Chassis ground (-):	Is the voltage less than 1 V?	Go to step 8.	Repair the short circuit to power supply in harness and connector between each control module and data link connector.
8	CHECK HARNESS CONNECTOR BETWEEN POWER STEERING CONTROL MODULE AND DATA LINK CONNECTOR. Measure the resistance between the power steering control module connector and the data link connector. Connector & terminal (B450) No. 2 — (B40) No. 7:	Is the resistance less than 0.5 Ω ?	Go to step 9.	Repair the open circuit or poor contact of harness and connectors between the power steering control module and data link connector.
9	CHECK POWER STEERING CONTROL MODULE CONNECTOR INSTALLATION. Turn the ignition switch to OFF.	Is the power steering control module connector inserted into the power steering control module until the clamp locks?	Go to step 10.	Insert the power steering control module connector into the power steering control module.

Subaru Select Monitor

POWER ASSISTED SYSTEM (POWER STEERING) (DIAGNOSTICS)

Step	Check	Yes	No
10 CHECK POWER SUPPLY CIRCUIT. 1) Turn the ignition switch to OFF. 2) Disconnect the power steering control module connector (B452). 3) Turn the ignition switch to ON. (Engine OFF) 4) Measure the ignition power supply voltage between the power steering control module connector and chassis ground. Connector & terminal (B450) No. 1 (+) — Chassis ground (-): (B452) No. 2 (+) — Chassis ground (-):	Is the voltage 10 — 15 V?	Go to step 11.	Repair the open circuit of harness or the poor contact of connector between the power steering control module and the battery.
11 CHECK HARNESS CONNECTOR BETWEEN POWER STEERING CONTROL MODULE AND CHASSIS GROUND. 1) Turn the ignition switch to OFF. 2) Disconnect the connector from the power steering control module. 3) Measure the resistance in the harness between the power steering control module and chassis ground. Connector & terminal (B452) No. 1 — Chassis ground:	Is the resistance less than 0.5 Ω?	Go to step 12.	Repair the open circuit or poor contact of the harness between the power steering control module and chassis ground.
12 CHECK POOR CONTACT OF CONNECTOR.	Is there poor contact of power steering control module power supply, ground circuit and data link connector?	Repair the connector.	Replace the power steering control module. <Ref. to PS-36, Power Steering Control Module.>

2. WITHOUT DTC

Detecting condition:

- Defective combination meter
- Open circuit of harness

Trouble symptom:

- The STEERING warning light will not turn off.
- «No DTC» will be displayed on Subaru Select Monitor.

NOTE:

When the STEERING warning light is OFF and «No DTC» is displayed on Subaru Select Monitor when all DTCs are read, the system is operating properly.

Step	Check	Yes	No
1 CHECK LAN SYSTEM. Perform the diagnosis for LAN system using the Subaru Select Monitor. <Ref. to LAN(diag)-2, Basic Diagnostic Procedure.>	Is DTC U0131 detected?	Perform the diagnosis according to DTC for LAN system. <Ref. to LAN(diag)-92, List of Diagnostic Trouble Code (DTC).>	Go to step 2.
2 CHECK COMBINATION METER. Check the STEERING warning light when the ignition switch is turned from OFF to ON.	Does the STEERING warning light illuminate at ignition switch ON, and turn off two seconds after the engine is started?	Finish the diagnosis.	Replace the combination meter. <Ref. to IDI-18, Combination Meter.>

Read Diagnostic Trouble Code (DTC)

POWER ASSISTED SYSTEM (POWER STEERING) (DIAGNOSTICS)

7. Read Diagnostic Trouble Code (DTC)

A: OPERATION

- 1) On «Start» display, select «Diagnosis».
- 2) On «Vehicle selection» display, input the vehicle information and select «Confirmed».
- 3) On «Main Menu» display, select «Each System».
- 4) On «Select System» display, select «Power Steering».
- 5) On «Select Function» display, select «DTC».

NOTE:

- For details concerning the DTC, refer to “List of Diagnostic Trouble Code (DTC)”. <Ref. to PS(diag)-23, List of Diagnostic Trouble Code (DTC).>
- For detailed operation procedures, refer to “Application help”.

Inspection Mode

POWER ASSISTED SYSTEM (POWER STEERING) (DIAGNOSTICS)

8. Inspection Mode

A: PROCEDURE

Reproduce the malfunction occurrence condition as much as possible.

Clear Memory Mode

POWER ASSISTED SYSTEM (POWER STEERING) (DIAGNOSTICS)

9. Clear Memory Mode

A: OPERATION

- 1) On «Start» display, select «Diagnosis».
- 2) On «Vehicle selection» display, input the vehicle information and select «Confirmed».
- 3) On «Main Menu» display, select «Each System».
- 4) On «Select System» display, select «Power Steering».
- 5) On «Select Function» display, select «DTC».
- 6) On «DTC» display, select «Clear Memory».

NOTE:

- Before performing memory clear, check the current data, and if there are any data of DTC, trouble status information, overheating protection intervention history, IGN count from overheating protection and assist limit history, save them.
- For detailed operation procedures, refer to “Application help”.

STEERING Warning Light

POWER ASSISTED SYSTEM (POWER STEERING) (DIAGNOSTICS)

10. STEERING Warning Light

A: STEERING WARNING LIGHT DOES NOT COME ON

1. POWER STEERING ASSIST ENABLED

Detecting condition:

- Defective combination meter
- Defective harness

Trouble symptom:

When the ignition switch is turned to ON (engine OFF), the STEERING warning light does not illuminate.

NOTE:

It is operating normally if the warning light illuminates when the ignition switch is turned to ON (engine OFF), and turns off approximately two seconds after engine start.

Step	Check	Yes	No
1 CHECK ILLUMINATION OF OTHER LIGHTS. Turn the ignition switch to ON. (Engine OFF)	Do other warning lights illuminate?	Go to step 2.	Check the combination meter. <Ref. to IDI-11, INSPECTION, Combination Meter System.>
2 CHECK LAN SYSTEM. Perform the diagnosis for LAN system using the Subaru Select Monitor. <Ref. to LAN(diag)-2, Basic Diagnostic Procedure.>	Is a DTC of the CAN communication system displayed?	Perform the diagnosis according to DTC. <Ref. to LAN(diag)-92, List of Diagnostic Trouble Code (DTC).>	Go to step 3.
3 CHECK COMBINATION METER. Check the combination meter. <Ref. to IDI-7, SELF-DIAGNOSIS DISPLAY MODE, OPERATION, Combination Meter System.>	Is the check result OK?	Current condition is normal.	Replace the combination meter. <Ref. to IDI-18, Combination Meter.>

2. POWER STEERING ASSIST DISABLED

Detecting condition:

CAN communication error (engine rpm signal not received)

Trouble symptom:

- There is no assist due to power supply voltage failure.
- The STEERING warning light is normal but there is no power steering assist (steering feels heavy).

Step	Check	Yes	No
1 CHECK BATTERY. Check the battery. <Ref. to SC(H4DO)-52, INSPECTION, Battery.>	Is the check result OK?	Go to step 2.	Charge or replace the battery.
2 CHECK BATTERY TERMINALS AND FUSE. Check the battery terminals and the fuse.	Is the check result OK?	Go to step 3.	Repair or replace faulty parts.
3 CHECK DTC. Using the Subaru Select Monitor, read all DTCs.	Is DTC related to VDC system or ignition power supply system displayed?	Perform the diagnosis according to DTC. <Ref. to VDC(diag)-39, List of Diagnostic Trouble Code (DTC).>	Go to step 4.
4 CHECK CURRENT DATA. 1) Start the engine. 2) Display the current data «Engine Speed» of the power steering control module using the Subaru Select Monitor.	Is «Engine Speed» the same as that in the combination meter?	Go to step 5.	Check the CAN communication. <Ref. to LAN(diag)-2, Basic Diagnostic Procedure.>

STEERING Warning Light

POWER ASSISTED SYSTEM (POWER STEERING) (DIAGNOSTICS)

Step	Check	Yes	No
5 CHECK CURRENT DATA. Display the current data «EPS Status» of the power steering control module using the Subaru Select Monitor.	Is «Assist limitation» displayed?	It is possible that temporary assist limitation has occurred due to overheat protection. Stop the engine for approx. 10 minutes, and check again.	Go to step 6.
6 CHECK CURRENT DATA. 1) Display the current data «Torque sensor main output» and «Torque sensor sub output» of the power steering control module using the Subaru Select Monitor. 2) Move the steering wheel to the left and right.	Do the values of «Torque sensor main output» and «Torque sensor sub output» change according to the operations?	Go to step 7.	Check the installation status of torque sensor, and check again.
7 CHECK CURRENT DATA. Display the current data «IG Voltage» of the power steering control module using the Subaru Select Monitor.	Is the value of «IG Voltage» steady? (While shaking the harness)	Go to step 8.	Check the ignition switch and IG voltage harness, and repair the defective part.
8 CHECK CONNECTOR. 1) Turn the ignition switch to OFF. 2) Disconnect the connector (B450).	Are there any damages to terminal or other parts either on the power steering control module side or on the connector side?	Repair the terminal.	Replace the power steering control module. <Ref. to PS-36, Power Steering Control Module.>

NOTE:

- During driving, the assist system will not be activated when the ignition voltage drops.
- Power steering assist is not started unless both of the ignition switch ON signal and the engine speed signal are input.
- In any of the following cases, the power steering assist is limited and steering wheel operation may become heavy.

If the steering wheel is held to an end for a long time, or the steering wheel turning to right and left at slow speed is repeated during parking, the assist limitation (overheat protection control) may operate to prevent failures by overheat.

In this case, by stopping the engine for approx. 10 minutes for cooling, the assist will start operating. While assist limitation (overheat protection control) is in active, «Assist limitation» is displayed in the «EPS operating condition» in the Subaru Select Monitor “Data monitor”.

- History can be confirmed on «Overheating protection intervention history» or «IGN count from overheating protection» of “Data monitor”.
- The overheat protection control system is normal operation, therefore, the STEERING warning light will not come on and there will be no DTC displayed.
- If the power steering system connector is disconnected while cooling under the overheat protection control, different DTC may be recorded. If there is no DTC and assist limitation is in active, stop the engine for approx. 10 minutes for cooling.

STEERING Warning Light

POWER ASSISTED SYSTEM (POWER STEERING) (DIAGNOSTICS)

B: STEERING WARNING LIGHT DOES NOT GO OFF

Detecting condition:

- Defective combination meter
- Open circuit of harness

Trouble symptom:

When starting the engine, the STEERING warning light continues to illuminate.

	Step	Check	Yes	No
1	CHECK DTC. Read the DTC of the power steering control module using the Subaru Select Monitor. <Ref. to PS(diag)-17, Read Diagnostic Trouble Code (DTC).>	Is DTC displayed?	Perform the diagnosis according to DTC. <Ref. to PS(diag)-23, List of Diagnostic Trouble Code (DTC).>	Go to step 2.
2	CHECK LAN SYSTEM. Perform the diagnosis for LAN system using the Subaru Select Monitor. <Ref. to LAN(diag)-2, Basic Diagnostic Procedure.>	Is a DTC related to CAN communication detected?	Perform the diagnosis according to DTC. <Ref. to LAN(diag)-92, List of Diagnostic Trouble Code (DTC).>	Check the combination meter. <Ref. to IDI-11, INSPECTION, Combination Meter System.>

List of Diagnostic Trouble Code (DTC)

POWER ASSISTED SYSTEM (POWER STEERING) (DIAGNOSTICS)

11. List of Diagnostic Trouble Code (DTC)

A: LIST

DTC	Item	Content of diagnosis	Note
None	Without DTC	Normal	<Ref. to PS(diag)-16, WITHOUT DTC, INSPECTION, Subaru Select Monitor.>
	“Assist limitation” is displayed in the current data «EPS operating condition».	Assist limitation is performed due to overheat protection control.	<Ref. to PS(diag)-20, POWER STEERING ASSIST DISABLED, STEERING WARNING LIGHT DOES NOT COME ON, STEERING Warning Light.>
	«Overheating protection intervention history» in current data display shows 1 or more.	There are previous records of intervention to overheat protection control.	<Ref. to PS(diag)-20, POWER STEERING ASSIST DISABLED, STEERING WARNING LIGHT DOES NOT COME ON, STEERING Warning Light.>

Diagnostic Procedure with Diagnostic Trouble Code (DTC)

POWER ASSISTED SYSTEM (POWER STEERING) (DIAGNOSTICS)

12. Diagnostic Procedure with Diagnostic Trouble Code (DTC)

A: DTC C2511 TORQUE SENSOR MAIN

Trouble symptom:

- The steering wheel operation feels heavy.
- STEERING warning light illuminates.

Wiring diagram:

Electric power steering system <Ref. to WI-101, Electric Power Steering System.>

Step	Check	Yes	No
1 CHECK TORQUE SENSOR SIGNAL. 1) Display the current data of the power steering control module using the Subaru Select Monitor. 2) Check the voltage of «Torque sensor main output», «Torque sensor sub output», «Torque sensor reference voltage» and «Torque sensor power supply voltage».	Are the voltage of «Torque sensor main output» and «Torque sensor sub output» 2.5 ± 0.1 V? Is the voltage of «Torque sensor reference voltage» 3 ± 0.1 V? Is the voltage of «Torque sensor power supply voltage» 8 ± 0.4 V?	Check for poor contact of the connector, and check the conditions again. If the condition recur, go to the next step. Go to step 2. If it does not recur, complete the inspection.	Go to step 2.
2 CHECK HARNESS. 1) Turn the ignition switch to OFF. 2) Disconnect the connectors (B450, B451). 3) Using a tester and test harness, check the internal resistance of the harness terminals. Connector & terminal (B450) No. 4 — (B451) No. 3: (B450) No. 5 — (B451) No. 5: (B450) No. 8 — (B451) No. 1: (B450) No. 9 — (B451) No. 2: (B450) No. 10 — (B451) No. 4:	Is the resistance less than 10 Ω ?	Go to step 3.	Repair or replace the harness.

Diagnostic Procedure with Diagnostic Trouble Code (DTC)

POWER ASSISTED SYSTEM (POWER STEERING) (DIAGNOSTICS)

Step	Check	Yes	No
3 CHECK POWER STEERING CONTROL MODULE. 1) Connect the connector (B450) to the power steering control module. 2) Turn the ignition switch to ON. 3) Short the circuit between connector (B451) terminals. Terminals No. 4 — No. 3: No. 4 — No. 5: 4) Using the Subaru Select Monitor, check the voltages of «Torque sensor main output» and «Torque sensor sub output».	Are the voltages of «Torque sensor main output» and «Torque sensor sub output» before you short the circuit 0 ± 0.1 V? Are the voltages of «Torque sensor main output» and «Torque sensor sub output» after you short the circuit 3 ± 0.1 V?	Replace the steering gearbox. <Ref. to PS-22, Electric Power Steering Gearbox.>	Replace the power steering control module. <Ref. to PS-36, Power Steering Control Module.>

B: DTC C2512 TORQUE SENSOR SUB

NOTE:

Refer to “DTC C2511 TORQUE SENSOR MAIN” for diagnostic procedure. <Ref. to PS(diag)-25, DTC C2511 TORQUE SENSOR MAIN, Diagnostic Procedure with Diagnostic Trouble Code (DTC).>

C: DTC C2513 TORQUE SENSOR MUCH TOLERANCE

NOTE:

Refer to “DTC C2511 TORQUE SENSOR MAIN” for diagnostic procedure. <Ref. to PS(diag)-25, DTC C2511 TORQUE SENSOR MAIN, Diagnostic Procedure with Diagnostic Trouble Code (DTC).>

Diagnostic Procedure with Diagnostic Trouble Code (DTC)

POWER ASSISTED SYSTEM (POWER STEERING) (DIAGNOSTICS)

D: DTC C2514 TORQUE SENSOR POWER SUPPLY

Trouble symptom:

- The steering wheel operation feels heavy.
- STEERING warning light illuminates.

Wiring diagram:

Electric power steering system <Ref. to WI-101, Electric Power Steering System.>

Step	Check	Yes	No
1 CHECK TORQUE SENSOR SIGNAL. 1) Display the current data of the power steering control module using the Subaru Select Monitor. 2) Check the voltage of «Torque sensor main output», «Torque sensor sub output», «Torque sensor reference voltage» and «Torque sensor power supply voltage».	Are the voltage of «Torque sensor main output» and «Torque sensor sub output» 2.5 ± 0.1 V? Is the voltage of «Torque sensor reference voltage» 3 ± 0.1 V? Is the voltage of «Torque sensor power supply voltage» 8 ± 0.4 V?	Check for poor contact of the connector, and check the conditions again. If the condition recur, go to the next step. Go to step 2. If it does not recur, complete the inspection.	Go to step 2.
2 CHECK HARNESS. 1) Turn the ignition switch to OFF. 2) Disconnect the connector (B451). 3) Using a tester and test harness, check the internal resistance of the harness terminals. Connector & terminal (B450) No. 4 — (B451) No. 3: (B450) No. 5 — (B451) No. 5: (B450) No. 8 — (B451) No. 1: (B450) No. 9 — (B451) No. 2: (B450) No. 10 — (B451) No. 4:	Is the resistance less than 10Ω ?	Replace the power steering control module. <Ref. to PS-36, Power Steering Control Module.>	Repair or replace the harness.

Diagnostic Procedure with Diagnostic Trouble Code (DTC)

POWER ASSISTED SYSTEM (POWER STEERING) (DIAGNOSTICS)

E: DTC C2521 MOTOR MALFUNCTION

Trouble symptom:

- The steering wheel operation feels heavy.
- STEERING warning light illuminates.

Wiring diagram:

Electric power steering system <Ref. to WI-101, Electric Power Steering System.>

PS-01307

Step	Check	Yes	No
1 CHECK MOTOR UNIT. 1) Turn the ignition switch to OFF. 2) Disconnect the connector (PS2) from the power steering control module. 3) Use a tester to check for continuity in the motor. Connector & terminal (PS2) No. 1 — No. 2: (PS2) No. 1 — No. 3: (PS2) No. 2 — No. 3:	Is there continuity?	Go to step 2.	Replace the steering gearbox. <Ref. to PS-22, Electric Power Steering Gearbox.>
2 CHECK MOTOR INSULATION. Use a tester to check for short circuits in the motor. Connector & terminal (PS2) No. 1 — Steering gearbox body: (PS2) No. 2 — Steering gearbox body: (PS2) No. 3 — Steering gearbox body:	Is the resistance 1 MΩ or more?	Replace the power steering control module. <Ref. to PS-36, Power Steering Control Module.>	Replace the steering gearbox. <Ref. to PS-22, Electric Power Steering Gearbox.>

Diagnostic Procedure with Diagnostic Trouble Code (DTC)

POWER ASSISTED SYSTEM (POWER STEERING) (DIAGNOSTICS)

F: DTC C2522 RESOLVER SENSOR

Trouble symptom:

- The steering wheel operation feels heavy.
- STEERING warning light illuminates.

Wiring diagram:

Electric power steering system <Ref. to WI-101, Electric Power Steering System.>

Step	Check	Yes	No
1 PERFORM UNIT CHECK OF RESOLVER SENSOR. 1) Turn the ignition switch to OFF. 2) Disconnect the connector (PS1) from the power steering control module. 3) Use a tester to check for continuity in the resolver sensor. Connector & terminal (PS1) No. 1 — No. 2 : (PS1) No. 3 — No. 4 : (PS1) No. 5 — No. 6 :	Is there continuity?	Go to step 2.	Replace the steering gearbox. <Ref. to PS-22, Electric Power Steering Gearbox.>
2 CHECK RESOLVER SENSOR INSULATION. Using a tester, check for short circuits in the resolver sensor. Connector & terminal (PS1) No. 1 — Steering gearbox body: (PS1) No. 2 — Steering gearbox body: (PS1) No. 3 — Steering gearbox body: (PS1) No. 4 — Steering gearbox body: (PS1) No. 5 — Steering gearbox body: (PS1) No. 6 — Steering gearbox body:	Is the resistance 1 MΩ or more?	Replace the power steering control module. <Ref. to PS-36, Power Steering Control Module.>	Replace the steering gearbox. <Ref. to PS-22, Electric Power Steering Gearbox.>

G: DTC C2531 CONTROL MODULE CPU

TROUBLE SYMPTOM:

- The steering wheel operation feels heavy.
- STEERING warning light illuminates.

NOTE:

When this code is displayed, replace the power steering control module with new parts. <Ref. to PS-36, Power Steering Control Module.>

Diagnostic Procedure with Diagnostic Trouble Code (DTC)

POWER ASSISTED SYSTEM (POWER STEERING) (DIAGNOSTICS)

H: DTC C2532 CONTROL MODULE PERIPHERAL CIRCUIT

TROUBLE SYMPTOM:

- The steering wheel operation feels heavy.
- STEERING warning light illuminates.

WIRING DIAGRAM:

Electric power steering system <Ref. to WI-101, Electric Power Steering System.>

PS-01307

Step	Check	Yes	No	
1	CHECK CONNECTOR. Check the connection status of the power steering control module and motor harness (PS2).	Is the connector firmly installed?	Go to step 2.	Install the connector, and check again.
2	CHECK CONNECTOR. Check the appearance at connection of the power steering control module and motor harness (PS2).	Is the motor harness grommet coming out from the connector?	Replace the steering gearbox. <Ref. to PS-22, Electric Power Steering Gearbox.>	Go to step 3.
3	CHECK MOTOR UNIT. 1) Turn the ignition switch to OFF. 2) Disconnect the connector (PS2) from the power steering control module. 3) Use a tester to check for continuity in the motor. Connector & terminal (PS2) No. 1 — No. 2: (PS2) No. 1 — No. 3: (PS2) No. 2 — No. 3:	Is there continuity? (While shaking the harness)	Go to step 4.	Replace the steering gearbox. <Ref. to PS-22, Electric Power Steering Gearbox.>
4	CHECK MOTOR INSULATION. Use a tester to check for short circuits in the motor. Connector & terminal (PS2) No. 1 — Steering gearbox body: (PS2) No. 2 — Steering gearbox body: (PS2) No. 3 — Steering gearbox body:	Is the resistance 1 MΩ or more? (While shaking the harness)	Replace the power steering control module. <Ref. to PS-36, Power Steering Control Module.>	Replace the steering gearbox. <Ref. to PS-22, Electric Power Steering Gearbox.>

Diagnostic Procedure with Diagnostic Trouble Code (DTC)

POWER ASSISTED SYSTEM (POWER STEERING) (DIAGNOSTICS)

I: DTC C2533 CONTROL MODULE BOARD TEMPERATURE SENSOR

TROUBLE SYMPTOM:

The steering wheel operation feels heavy.

NOTE:

When this code is displayed, replace the power steering control module with new parts. <Ref. to PS-36, Power Steering Control Module.>

Diagnostic Procedure with Diagnostic Trouble Code (DTC)

POWER ASSISTED SYSTEM (POWER STEERING) (DIAGNOSTICS)

J: DTC C2541 VEHICLE DYNAMICS CONTROL MODULE VEHICLE SPEED SENSOR

Trouble symptom:

The steering wheel operation feels heavy.

Step	Check	Yes	No
1 CHECK DTC. Read the DTC of the VDC system using the Subaru Select Monitor.	Is a DTC related to VDC CM or vehicle speed signal detected?	Perform the diagnosis according to the DTC.	Go to step 2.
2 CHECK LAN SYSTEM. Perform the diagnosis for LAN system using the Subaru Select Monitor. <Ref. to LAN(diag)-2, Basic Diagnostic Procedure.>	Is a DTC related to CAN communication detected?	Perform the diagnosis according to the DTC. <Ref. to LAN(diag)-92, List of Diagnostic Trouble Code (DTC).>	Go to step 3.
3 CHECK VEHICLE SPEED SIGNAL. 1) Display the current data «Vehicle Speed» of the power steering control module using the Subaru Select Monitor. 2) Lift up the vehicle (so that the wheels turn freely), start the engine, and raise engine speed in gear. CAUTION: Be careful that no one is near the spinning tires and nothing gets caught in them. 3) Check for whether the data changes according to vehicle speed.	Is the data in sync with the vehicle speed?	It is possible that temporary poor communication occurs. Perform the Clear Memory Mode. <Ref. to PS(diag)-19, Clear Memory Mode.>	Replace the power steering control module. <Ref. to PS-36, Power Steering Control Module.>

K: DTC C2543 ERROR PASSIVE

Trouble symptom:

The steering wheel operation feels heavy.

Step	Check	Yes	No
1 CHECK LAN SYSTEM. Perform the diagnosis for LAN system using the Subaru Select Monitor. <Ref. to LAN(diag)-2, Basic Diagnostic Procedure.>	Is a DTC related to CAN communication detected?	Perform the diagnosis according to the DTC. <Ref. to LAN(diag)-92, List of Diagnostic Trouble Code (DTC).>	Check for poor contact of the connector, and check the conditions again. If the condition recurs, perform the diagnosis according to the DTC. <Ref. to LAN(diag)-92, List of Diagnostic Trouble Code (DTC).> If it does not recur, complete the inspection.

Diagnostic Procedure with Diagnostic Trouble Code (DTC)

POWER ASSISTED SYSTEM (POWER STEERING) (DIAGNOSTICS)

L: DTC C2551 POWER SUPPLY RELAY

Trouble symptom:

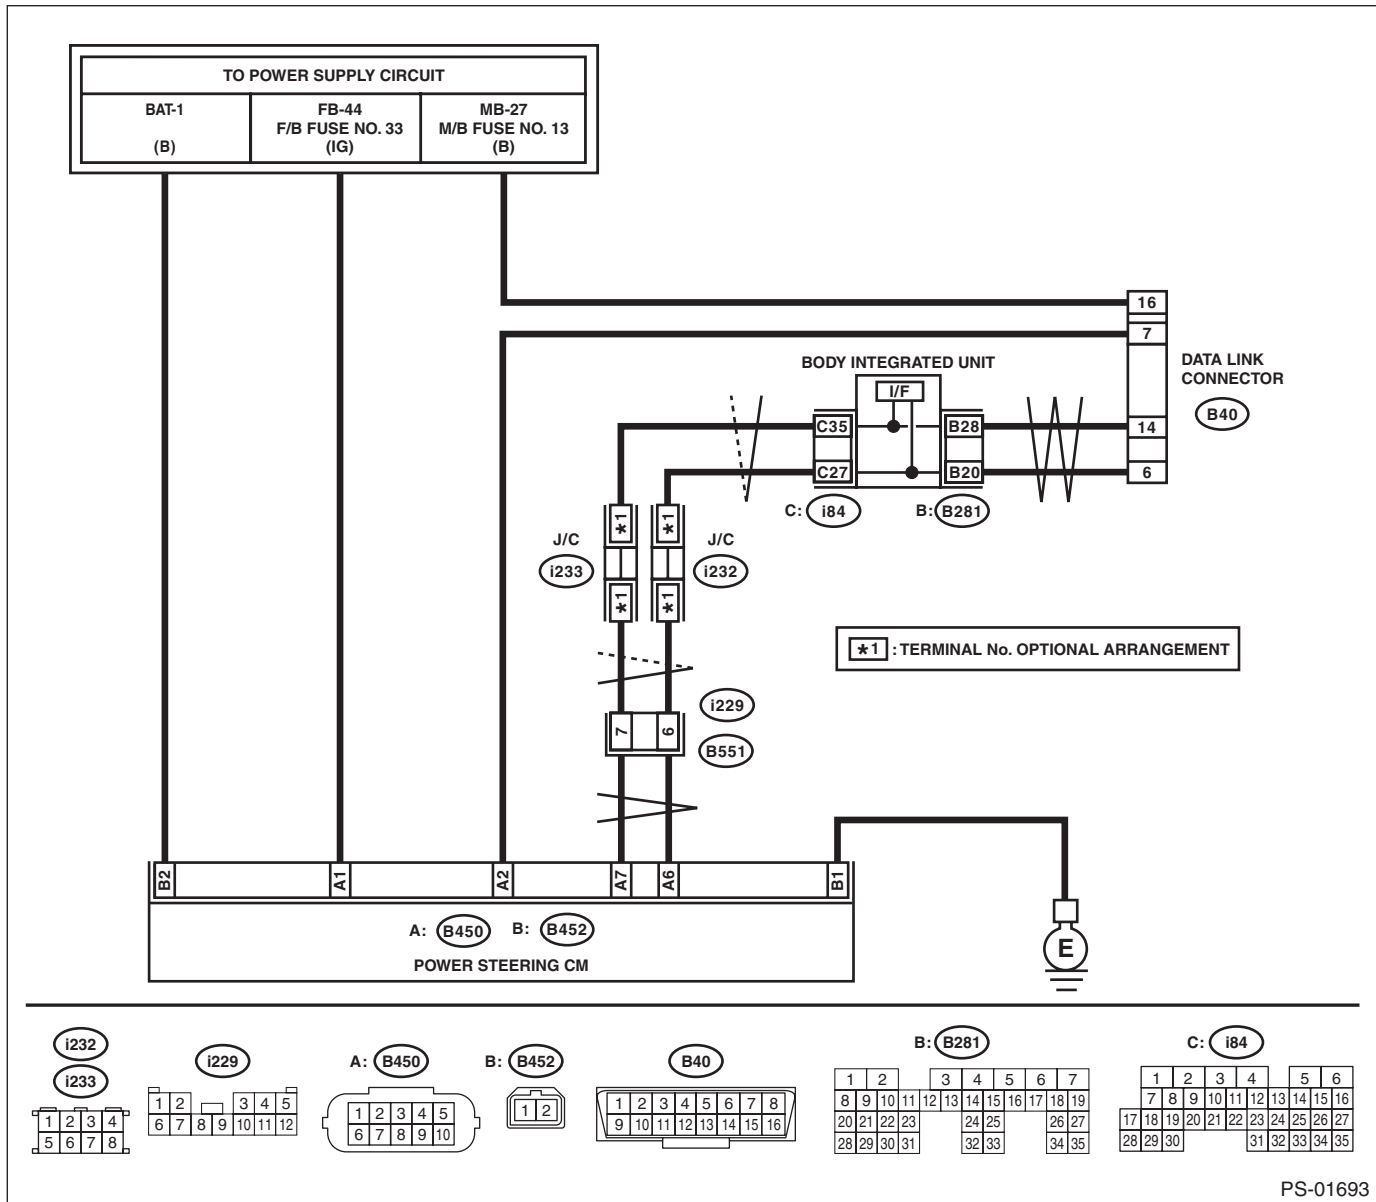

- The steering wheel operation feels heavy.
- STEERING warning light illuminates.

NOTE:

If power supply voltage failure exists at the vehicle side, the warning light goes off if the normal voltage returns.

Wiring diagram:

Electric power steering system <Ref. to WI-101, Electric Power Steering System.>

PS-01693

Step	Check	Yes	No
1	CHECK BATTERY. Check the battery. <Ref. to SC(H4DO)-52, INSPECTION, Battery.>	Go to step 2.	Charge or replace the battery.
2	CHECK BATTERY TERMINALS AND FUSE. Check the battery terminals and the fuse.	Go to step 3.	Repair or replace faulty parts.

Diagnostic Procedure with Diagnostic Trouble Code (DTC)

POWER ASSISTED SYSTEM (POWER STEERING) (DIAGNOSTICS)

Step	Check	Yes	No
3 CHECK WIRING HARNESS. 1) Disconnect the connector of the power steering control module. 2) Turn the ignition switch to ON. 3) Using a tester and test harness, check the voltage between terminals. Connector & terminal (B452) No. 2 (+) — Chassis ground (-):	Is the voltage 12 V or more?	Go to step 4.	Repair the open circuit of harness or the poor contact of connector between the power steering control module and the battery.
4 CHECK GROUND CIRCUIT. 1) Turn the ignition switch to OFF. 2) Using a tester and test harness, check the resistance between terminals. Connector & terminal (B452) No. 1 — Chassis ground:	Is the resistance less than 1 Ω ?	Check for poor contact of terminals in the power steering control module, and if there are no malfunctions, replace the power steering control module. <Ref. to PS-36, Power Steering Control Module.>	Repair the open circuit or poor contact of the harness between the power steering control module and chassis ground.

M: DTC C2552 MOTOR RELAY

TROUBLE SYMPTOM:

- The steering wheel operation feels heavy.
- STEERING warning light illuminates.

NOTE:

When this code is displayed, replace the power steering control module with new parts. <Ref. to PS-36, Power Steering Control Module.>

N: DTC U0073 CONTROL MODULE COMMUNICATION BUS OFF

NOTE:

Refer to "LAN SYSTEM" for diagnostic procedure. <Ref. to LAN(diag)-2, Basic Diagnostic Procedure.>

O: DTC U0122 LOST COMMUNICATION WITH VEHICLE DYNAMICS CONTROL MODULE

NOTE:

Refer to "LAN SYSTEM" for diagnostic procedure. <Ref. to LAN(diag)-2, Basic Diagnostic Procedure.>

P: DTC U0416 INVALID DATA RECEIVED FROM VEHICLE DYNAMICS CONTROL MODULE

NOTE:

Refer to "LAN SYSTEM" for diagnostic procedure. <Ref. to LAN(diag)-2, Basic Diagnostic Procedure.>

Q: DTC U1120 LOST COMMUNICATION WITH AUTOSTART STOP CONTROL MODULE

NOTE:

Refer to "LAN SYSTEM" for diagnostic procedure. <Ref. to LAN(diag)-2, Basic Diagnostic Procedure.>

BODY 1 SECTION

This service manual has been prepared to provide SUBARU service personnel with the necessary information and data for the correct maintenance and repair of SUBARU vehicles.

This manual includes the procedures for maintenance, disassembling, reassembling, inspection and adjustment of components and diagnostics for guidance of experienced mechanics.

Please peruse and utilize this manual fully to ensure complete repair work for satisfying our customers by keeping their vehicle in optimum condition. When replacement of parts during repair work is needed, be sure to use SUBARU genuine parts.

All information, illustration and specifications contained in this manual are based on the latest product information available at the time of publication approval.

HVAC SYSTEM (HEATER, VENTILATOR AND A/C)

1. General Description

A: SPECIFICATION

1. HEATER SYSTEM

Item		Specifications	Condition
Heating capacity		5.0 kW (4,299 kcal/h, 17,059 BTU/h) or more	<ul style="list-style-type: none"> Air flow control dial or switch: FOOT Temperature control dial: HI (MAX HOT) Temperature difference between hot water and inlet air: 65°C (149°F) Hot water flow rate: 360 L (95.1 US gal, 79.2 Imp gal)/h
Air flow rate		290 m ³ (10,243 cu ft)/h	FOOT mode (FRESH), MAX HOT at 12.5 V
Max air flow rate		480 m ³ (16,954 cu ft)/h	<ul style="list-style-type: none"> Temperature control dial: LO (MAX COOL) Fan dial: HI (MAX) Auto A/C model: 7th position Manual A/C model: 4th position FRESH/RECIRC switch: RECIRC
Heater core	Dimensions (W × H × T)	257.5 × 118.5 × 27 mm (10.1 × 4.67 × 1.06 in)	—
Blower motor	Type	Magnet motor 300 W or less	12 V
	Fan type and size (diameter × width)	Sirocco fan type 150 × 75 mm (5.91 × 2.95 in)	—

2. A/C SYSTEM

Item		Specifications
Type of air conditioner		Reheat air-mix type
Cooling capacity		5.0 kW (4,299 kcal/h, 17,059 BTU/h)
Refrigerant		HFC-134a (CH ₂ FCF ₃) [0.475±0.025 kg (1.05±0.06 lb)]
Compressor	Type	Rotary fixed capacity (DKV-10Z)
	Discharge	105 cc (6.41 cu in)/rev
	Max. permissible speed	7,700 r/min
Magnet clutch	Type	Dry, single-disc type
	Power consumption	45 W
	Type of belt	V-belt 6 PK
	Pulley dia. (effective dia.)	110 mm (4.33 in)
	Pulley ratio	1.3
Condenser	Type	Sub cool type
	Core face area	0.188 m ² (2.002 sq ft)
	Core thickness	16 mm (0.63 in)
	Radiation area	4.5 m ² (48.44 sq ft)
Expansion valve	Type	Block
Evaporator	Type	Dual-tank
	Dimensions (W × H × T)	290.1 × 172 × 39 mm (11.42 × 6.77 × 1.54 in)
Blower fan	Fan type	Sirocco fan
	Outer diameter × Width	150 × 75 mm (5.91 × 2.95 in)
	Power consumption	280 W
Condenser fan (sub fan)	Motor type	Magnet
	Power consumption	120 W
	Fan outer diameter	320 mm (12.6 in)

General Description

HVAC SYSTEM (HEATER, VENTILATOR AND A/C)

Item		Specifications	
Radiator fan (main fan)		Motor type	Magnet
		Power consumption	120 W
		Fan outer diameter	320 mm (12.6 in)
Idle speed		No load	650±100 r/min
		A/C ON	800 — 900±50 r/min
Triple switch (Pressure switch)	Low-pressure switch operating pressure	ON → OFF	196±25 kPa (2.00±0.25 kgf/cm ² , 28.4±3.6 psi)
		OFF → ON	225±30 kPa (2.29±0.31 kgf/cm ² , 32.6±4.3 psi)
	High-pressure switch operating pressure	ON → OFF	2,940±200 kPa (29.98±2.04 kgf/cm ² , 426.3±29 psi)
		OFF → ON	2,350±200 kPa (24.00±2.04 kgf/cm ² , 340.7±29.0 psi)
	Middle-pressure switch operating pressure	ON → OFF	1,470±120 kPa (14.99±1.22 kgf/cm ² , 213.15±17.4 psi)
		OFF → ON	1,770±100 kPa (18.05±1.02 kgf/cm ² , 256.65±14.5 psi)
Thermo-control amplifier working temperature		<p style="text-align: right;">AC-00601</p> <p style="text-align: center;">(1) ON (2) OFF (3) 1.5±0.3°C (34.7±0.5°F) (4) 1.0±0.5°C (33.8±0.9°F)</p>	

General Description

HVAC SYSTEM (HEATER, VENTILATOR AND A/C)

3. BASIC OPERATION

The cooling system cools down the compartment by using the pipes connecting parts and cycling the evaporable liquid (refrigerant) within the sealed system in a repeated process of “vaporization — liquefaction — re-vaporization”.

Item	Operation
Compressor	Sucks and pressurizes the low temperature, low pressure refrigerant gas that was vaporized at the evaporator by absorbing heat from the compartment, and sends the high temperature, high pressure refrigerant gas to the condenser.
Condenser	Cools the high temperature, high pressure refrigerant gas sent from the compressor for condense and liquefaction.
Expansion valve	<ul style="list-style-type: none"> • Sprays the high temperature, high pressure liquid refrigerant from the small hole in order to let the refrigerant expand rapidly to turn it into low temperature, low pressure mist. • The refrigerant amount is adjusted according to the refrigerant vaporization condition in the evaporator.
Evaporator	The evaporator turns into a low temperature condition when the mist refrigerant that was turned into a low temperature, low pressure condition at the expansion valve is vaporized in large quantity in the evaporator. Passing air flow through the low temperature evaporator emits cold air.

B: LOCATION

Refer to “LOCATION” for “HVAC SYSTEM (AUTO A/C) (DIAGNOSTICS)” section. <Ref. to AC(diag)-4, LOCATION, Electrical Component Location.>

General Description

HVAC SYSTEM (HEATER, VENTILATOR AND A/C)

D: CAUTION

- Before disassembling or reassembling parts, always disconnect the battery ground cable from battery. When replacing the radio, control module, and other parts provided with memory functions, record the memory contents before disconnecting the battery ground cable. Otherwise, the memory is cleared.
- Reassemble the parts in the reverse order of disassembly procedure unless otherwise indicated.
- Connect the connectors securely during reassembly.
- After reassembly, make sure that each component operates normally.

1. HFC-134A A/C SYSTEM

- The cooling system components for the HFC-134a system using such as the refrigerant and compressor oil are different from the conventional CFC-12 system components and they are incompatible with each other.
- Vehicles with the HFC-134a system can be identified by the label (A) attached to the vehicle. Before maintenance, check A/C system which is installed to the vehicle.

2. COMPRESSOR OIL

- HFC-134a compressor oil has no compatibility with that of CFC-12 system.
- Use only the manufacturer-authorized compressor oil for the HFC-134a system; only use DH-PR (ZXL200PG).
- Do not mix multiple compressor oils.

If CFC-12 compressor oil is used in the HFC-134a A/C system, the compressor may become stuck due to poor lubrication, or the refrigerant may leak due to swelling of rubber parts.

On the other hand, if HFC-134a compressor oil is used in a CFC-12 A/C system, the durability of the A/C system will be lowered.

- HFC-134a compressor oil is very hygroscopic. When replacing or installing/removing A/C parts, immediately isolate the oil from atmosphere using a plug or tape. In order to avoid moisture, store the oil in a container with its cap tightly closed.

3. REFRIGERANT

- CFC-12 refrigerant cannot be used in a HFC-134a A/C system. HFC-134a refrigerant, also cannot be used in a CFC-12 A/C system.
- If an incorrect or no refrigerant is used, it will result in poor lubrication and the compressor itself may be damaged.

General Description

HVAC SYSTEM (HEATER, VENTILATOR AND A/C)

4. HANDLING OF REFRIGERANT

- The refrigerant boils at approx. -30°C (-22°F). When handling it, be sure to wear protective goggles and protective gloves. Direct contact of the refrigerant with skin may cause frostbite. If the refrigerant gets into your eye, avoid rubbing your eyes with your hands. Wash your eye with plenty of water, and receive medical treatment from an eye doctor.
- Do not heat a service can. If a service can is directly heated, or put into boiling water, the inside pressure will become extremely high. This may cause the can to explode. If a service can must be warmed up, use warm water of 40°C (104°F) or less.
- Do not drop or impact a service can. (Observe the precautions and operation procedure described on the refrigerant can.)
- When the engine is running, do not open the high-pressure valve of manifold gauge. The high-pressure gas will back-flow resulting in an explosion of the can.
- Provide good ventilation and do not work in a closed area.
- In order to prevent global warming, avoid releasing HFC-134a into the atmosphere. Using a refrigerant recovery system, discharge and recycle the gas.

(A) Goggles
(B) Gloves

(C) Do not apply impact.
(D) No direct heat on container

(E) Do not discharge

General Description

HVAC SYSTEM (HEATER, VENTILATOR AND A/C)

5. O-RING CONNECTIONS

- Always use a new O-ring.
- In order to keep the O-rings free of lint which will cause a refrigerant gas leak, perform work without using gloves or waste cloths.
- Apply compressor oil to O-rings to avoid sticking, before installation.
- Use a torque wrench to tighten the O-ring fittings. Over-tightening will result in damage of the O-ring and deformation of the pipe end.
- If the work is interrupted before completing pipe connections, recap the pipes, components and fittings with a plug or tape to prevent foreign matter from entering.
- Visually check the surfaces and mating surfaces of O-rings, threads and connecting points. If a failure is found, replace the applicable parts.
- Install the O-rings straight against the pipe groove.

(A) O-ring

(B) OK

(C) NG

- Use compressor oil specified in the service manual to lubricate the O-rings. Apply oil to the top and sides of O-rings before installation. Apply compressor oil to the pipe grooves.

General Description

HVAC SYSTEM (HEATER, VENTILATOR AND A/C)

- After tightening, use a clean cloth to remove excess compressor oil from the connections and any oil which may have run on the vehicle body or other parts.
- If any leakage is suspected after tightening, do not tighten the connections further, but disconnect the connections, remove the O-rings, and check the O-rings, threads, and connections.

E: PREPARATION TOOL

1. SPECIAL TOOL

ILLUSTRATION	TOOL NUMBER	DESCRIPTION	REMARKS
 <p style="text-align: center;">STSSM4</p>	—	SUBARU SELECT MONITOR 4	Used for setting of each function and troubleshooting for electrical system. NOTE: For detailed operation procedures of Subaru Select Monitor 4, refer to “Application help”.

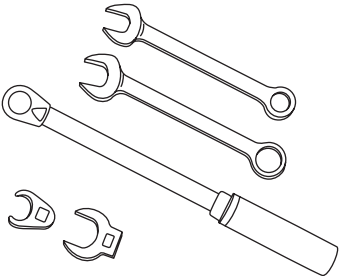

2. GENERAL TOOL

CAUTION:

When working on vehicles with a HFC-134a system, only use HFC-134a specified tools and parts. Do not mix CFC-12 tools and parts. If HFC-134a and CFC-12 compressor oil is mixed, it will result in poor lubrication and the compressor itself may be damaged.

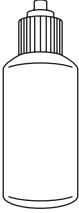

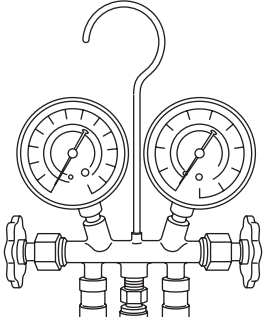

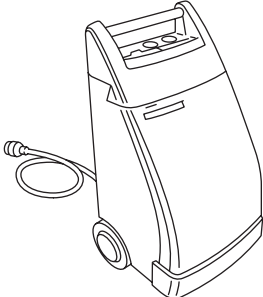

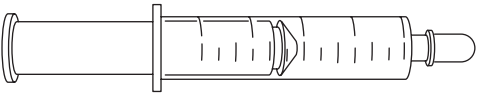

In order to prevent the mixture of HFC-134a and CFC-12 parts and liquid, the type of tool and screw, and the replacement valves used are different. The gas leak detectors for the HFC-134a and CFC-12 systems must also not be interchanged.

	HFC-134a	CFC-12
Tool and screw type	Millimeter size	Inch size
Valve type	Quick joint type	Screw-in type

TOOL NAME/ILLUSTRATION	REMARKS
Circuit tester	Used for measuring resistance, voltage and current.
DST-i	Used together with Subaru Select Monitor 4.
Wrench  <p style="text-align: right;">AC-00213</p>	Various WRENCHES will be required to service any A/C system. 7 — 40 N·m (0.7 to 4.1 kgf-m, 5 to 30 ft-lb) torque wrench and various crow-foot wrenches will be needed. Open end or flare nut wrenches will be needed to affix the pipe and hose fittings.

Refrigerant Pressure with Manifold Gauge Set

HVAC SYSTEM (HEATER, VENTILATOR AND A/C)

3. Refrigerant Pressure with Manifold Gauge Set

A: PROCEDURE

1. REFRIGERANT GAS PRESSURE INSPECTION

1) Prepare the vehicle.

NOTE:

Check that the ambient temperature is 25 — 40°C (77 — 104°F) and that the humidity is 30% — 80%.

- Place the vehicle in the shade and windless condition, and open the front hood.
- Open the front windows and close all doors.

2) Check the refrigerant pressure.

Preparation tool:

Manifold gauge set

- (1) Connect the manifold gauge set, and start the engine.
- (2) Set the vehicle to the following conditions.

Item	Condition
Engine	Warmed up (Engine coolant temperature indicator light: OFF)
Air vent grille	Shutter is fully open.
A/C switch	ON
Temperature adjustment dial	LO (MAX COOL)
FRESH/RECIRC switch	RECIRC
Air flow control dial or switch	VENT
Fan dial	Auto A/C model: 5/7 level
	Manual A/C model: 3/4 level

(3) In the condition of step (2), idle the engine for 30 minutes.

(4) Read the gauge values on both high pressure side and low pressure side for manifold gauge.

3) Measure the air vent grille outlet opening temperature, ambient temperature and humidity.

Preparation tool:

Thermometer and hygrometer

NOTE:

For outlet opening temperature, measure the average temperature of center grille assembly and side grille assembly.

Refrigerant Pressure with Manifold Gauge Set

HVAC SYSTEM (HEATER, VENTILATOR AND A/C)

4) Check that the high and low pressures and outlet opening temperature for ambient temperature and humidity is within the standard value described in the chart below.

5) Refer to “DIAGNOSIS WITH SYMPTOM” if the inspection result is not within the standard value. <Ref. to AC-23, INSPECTION WITH PRESSURE SYMPTOMS, INSPECTION, Refrigerant Pressure with Manifold Gauge Set.>

B: INSPECTION

1. INSPECTION WITH PRESSURE SYMPTOMS

Symptoms	Reference
Both high and low pressure sides are low.	<Ref. to AC-24, BOTH HIGH AND LOW PRESSURE SIDES ARE LOW, INSPECTION, Refrigerant Pressure with Manifold Gauge Set.>
Both high and low pressure sides are high.	<Ref. to AC-24, BOTH HIGH AND LOW PRESSURE SIDES ARE HIGH, INSPECTION, Refrigerant Pressure with Manifold Gauge Set.>
Both high and low pressure sides are equal, or high-pressure side is low.	<Ref. to AC-24, BOTH HIGH AND LOW PRESSURE SIDES ARE EQUAL, OR HIGH-PRESSURE SIDE IS LOW, INSPECTION, Refrigerant Pressure with Manifold Gauge Set.>
High-pressure side is high.	<Ref. to AC-25, HIGH-PRESSURE SIDE IS HIGH, INSPECTION, Refrigerant Pressure with Manifold Gauge Set.>
Low-pressure side is low.	<Ref. to AC-25, LOW-PRESSURE SIDE IS LOW, INSPECTION, Refrigerant Pressure with Manifold Gauge Set.>
Low-pressure side is high.	<Ref. to AC-26, LOW-PRESSURE SIDE IS HIGH, INSPECTION, Refrigerant Pressure with Manifold Gauge Set.>

Refrigerant Pressure with Manifold Gauge Set

HVAC SYSTEM (HEATER, VENTILATOR AND A/C)

2. BOTH HIGH AND LOW PRESSURE SIDES ARE LOW

	Step	Check	Yes	No
1	CHECK REFRIGERANT LEAKAGE. Check the refrigerant for leakage. <Ref. to AC-31, INSPECTION, Refrigerant Leak Check.> NOTE: When the pressure on the high-pressure side is less than 0.69 Mpa: Go to Step 2.	Are there any refrigerant leakage?	Repair the refrigerant leakage.	Go to step 2.
2	FILL PROPER AMOUNT OF REFRIGERANT. Drain the refrigerant completely, and then refill the proper amount of refrigerant. <ul style="list-style-type: none"> • Recovery: <Ref. to AC-27, PROCEDURE, Refrigerant Recovery Procedure.> • Refill: <Ref. to AC-28, PROCEDURE, Refrigerant Charging Procedure.> 	Is the refrigerant pressure within the specified range?	Refrigerant pressure is normal.	Perform appropriate inspection with pressure symptoms.

3. BOTH HIGH AND LOW PRESSURE SIDES ARE HIGH

	Step	Check	Yes	No
1	FILL PROPER AMOUNT OF REFRIGERANT. Drain the refrigerant completely, and then refill the proper amount of refrigerant. <ul style="list-style-type: none"> • Recovery: <Ref. to AC-27, PROCEDURE, Refrigerant Recovery Procedure.> • Refill: <Ref. to AC-28, PROCEDURE, Refrigerant Charging Procedure.> 	Is the refrigerant pressure within the specified range?	Refrigerant pressure is normal.	Perform appropriate inspection with pressure symptoms.

4. BOTH HIGH AND LOW PRESSURE SIDES ARE EQUAL, OR HIGH-PRESSURE SIDE IS LOW

	Step	Check	Yes	No
1	CHECK REFRIGERANT LEAKAGE. Check the refrigerant for leakage. <Ref. to AC-31, INSPECTION, Refrigerant Leak Check.> NOTE: When the pressure on the high-pressure side is less than 0.69 Mpa: Go to Step 2.	Are there any refrigerant leakage?	Repair the refrigerant leakage.	Go to step 2.
2	FILL PROPER AMOUNT OF REFRIGERANT. Drain the refrigerant completely, and then refill the proper amount of refrigerant. <ul style="list-style-type: none"> • Recovery: <Ref. to AC-27, PROCEDURE, Refrigerant Recovery Procedure.> • Refill: <Ref. to AC-28, PROCEDURE, Refrigerant Charging Procedure.> 	Is the refrigerant pressure within the specified range?	Refrigerant pressure is normal.	Inspect the compressor. <Ref. to AC(diag)-25, COOL AIR DOES NOT COME OUT WHEN PRESSING THE A/C SWITCH. FOG CANNOT BE CLEARED. (COMPRESSOR DOES NOT OPERATE.), DIAGNOSTIC PROCEDURE WITH PHENOMENON, Diagnostics with Phenomenon.>

Refrigerant Pressure with Manifold Gauge Set

HVAC SYSTEM (HEATER, VENTILATOR AND A/C)

5. HIGH-PRESSURE SIDE IS HIGH

	Step	Check	Yes	No
1	CHECK CONDENSER. Check the condenser. <Ref. to AC-53, INSPECTION, Condenser.>	Is condenser normal?	Go to step 2.	Clean or replace the condenser.
2	CHECK RADIATOR FAN. Check the radiator fan system. <Ref. to CO(H4DO)-8, Radiator Fan System.>	Is radiator fan system normal?	Go to step 3.	Repair or replace the faulty parts of the radiator fan system.
3	FILL PROPER AMOUNT OF REFRIGERANT. Drain the refrigerant completely, and then refill the proper amount of refrigerant. • Recovery: <Ref. to AC-27, PROCEDURE, Refrigerant Recovery Procedure.> • Refill: <Ref. to AC-28, PROCEDURE, Refrigerant Charging Procedure.>	Is the refrigerant pressure within the specified range?	Refrigerant pressure is normal.	Check the high-pressure hose and condenser for deformation or clogging, and replace if defective.

6. LOW-PRESSURE SIDE IS LOW

	Step	Check	Yes	No
1	CHECK REFRIGERANT LEAKAGE. Check the refrigerant for leakage. <Ref. to AC-31, INSPECTION, Refrigerant Leak Check.> NOTE: When the pressure on the high-pressure side is less than 0.69 Mpa: Go to Step 2.	Are there any refrigerant leakage?	Repair the refrigerant leakage.	Go to step 2.
2	FILL PROPER AMOUNT OF REFRIGERANT. Drain the refrigerant completely, and then refill the proper amount of refrigerant. • Recovery: <Ref. to AC-27, PROCEDURE, Refrigerant Recovery Procedure.> • Refill: <Ref. to AC-28, PROCEDURE, Refrigerant Charging Procedure.>	Is the refrigerant pressure within the specified range?	Refrigerant pressure is normal.	Go to step 3.
3	REPLACE EXPANSION VALVE. Replace the expansion valve. <Ref. to AC-60, REMOVAL, Expansion Valve.>	Is the refrigerant pressure within the specified range?	Refrigerant pressure is normal.	Inspect the compressor. <Ref. to AC(diag)-25, COOL AIR DOES NOT COME OUT WHEN PRESSING THE A/C SWITCH. FOG CANNOT BE CLEARED. (COMPRESSOR DOES NOT OPERATE.), DIAGNOSTIC PROCEDURE WITH PHENOMENON, Diagnostics with Phenomenon.>

Refrigerant Pressure with Manifold Gauge Set

HVAC SYSTEM (HEATER, VENTILATOR AND A/C)

7. LOW-PRESSURE SIDE IS HIGH

	Step	Check	Yes	No
1	FILL PROPER AMOUNT OF REFRIGERANT. Drain the refrigerant completely, and then refill the proper amount of refrigerant. <ul style="list-style-type: none">• Recovery: <Ref. to AC-27, PROCEDURE, Refrigerant Recovery Procedure.>• Refill: <Ref. to AC-28, PROCEDURE, Refrigerant Charging Procedure.>	Is the refrigerant pressure within the specified range?	Refrigerant pressure is normal.	Go to step 2.
2	REPLACE EXPANSION VALVE. Replace the expansion valve. <Ref. to AC-60, REMOVAL, Expansion Valve.>	Is the refrigerant pressure within the specified range?	Refrigerant pressure is normal.	Replace the evaporator. <Ref. to AC-56, REMOVAL, Evaporator.>

Refrigerant Recovery Procedure

HVAC SYSTEM (HEATER, VENTILATOR AND A/C)

4. Refrigerant Recovery Procedure

A: PROCEDURE

CAUTION:

- During operation, be sure to wear protective goggles and protective gloves.
- Connect the refrigerant recovery system with the manifold gauge set to discharge the refrigerant from the A/C system and recycle the gas.
- When recycling the discharged refrigerant, keep service cans on hand. Because the recovery rate with the recovery system is approx. 90%, service cans are necessary to charge the refrigerant.
- Follow the detailed operation procedure described in the operation manual attached to the refrigerant recovery system.

- | | | |
|------------------------|---|-------------------------------------|
| (1) Manifold gauge | (4) High pressure valve | (7) High-pressure hose |
| (2) Low pressure valve | (5) Low-pressure hose | (8) Low-pressure side service port |
| (3) Center valve | (6) Center manifold hose (vacuum pump and charge) | (9) High-pressure side service port |

- 1) Perform compressor oil return operation. <Ref. to AC-35, PROCEDURE, Compressor Oil.>
- 2) Turn the ignition switch to OFF.
- 3) Attach the manifold gauge set.

Preparation tool:

Manifold gauge set

- (1) Check that all valves are fully closed.
- (2) Install the low/high pressure hoses to the service ports on the low/high pressure sides of the vehicle respectively.

CAUTION:

Confirm that the connections are secure.

- (3) Connect the center hose to the refrigerant recovery system.

Preparation tool:

Refrigerant recovery system

- 4) Follow the operation manual attached to the refrigerant recovery system to collect the refrigerant.

Refrigerant Charging Procedure

HVAC SYSTEM (HEATER, VENTILATOR AND A/C)

5. Refrigerant Charging Procedure

A: PROCEDURE

CAUTION:

- While working, be sure to wear protective goggles and protective gloves.
- Air in the cycle can cause insufficient air conditioning, and water in the cycle can cause clogging in the cycle (icing) and rust. To remove this air and water content, use a vacuum pump to perform evacuation before filling with refrigerant. By making the inside of the cycle a vacuum, the water content will evaporate even at normal temperatures, and can be removed.

- | | | |
|------------------------|---|-------------------------------------|
| (1) Manifold gauge | (4) High pressure valve | (7) High-pressure hose |
| (2) Low pressure valve | (5) Low-pressure hose | (8) Low-pressure side service port |
| (3) Center valve | (6) Center manifold hose (vacuum pump and charge) | (9) High-pressure side service port |

1) Attach the manifold gauge set.

Preparation tool:

Manifold gauge set

- (1) Check that all valves are fully closed.
- (2) Install the low/high pressure hoses to the service ports on the low/high pressure sides of the vehicle respectively.

CAUTION:

Confirm that the connections are secure.

- (3) Connect the center manifold hose of the manifold gauge to the vacuum pump.

Preparation tool:

Vacuum pump

Refrigerant Charging Procedure

HVAC SYSTEM (HEATER, VENTILATOR AND A/C)

2) Perform evacuation.

CAUTION:

Make sure to perform evacuation using a vacuum pump.

- (1) Open the low-pressure valve, high-pressure valve and center valve.
- (2) Operate the vacuum pump.
- (3) Perform evacuation for 5 minutes or more, and when the low pressure gauge needle reaches -0.1 MPa (-1.0 kgf/cm², -14 psi), close the center manifold hose valve, and stop the vacuum pump.
- (4) Leave alone for 5 to 10 minutes after closing the low pressure side and high pressure side valves, and check whether there is any change in the low pressure gauge needle indication. If the needle position changes, this indicates a leak. Check the pipe and hose connections, and repair the location with the problem. After repair, retry charging the refrigerant from the step 1).
- (5) If there is no leakage, continue evacuation for additional 20 — 30 minutes, close all valves and then stop the vacuum pump.

3) Charge refrigerant.

- (1) Follow the can tap operation manual to attach it to the refrigerant can.

Preparation tool:

Can tap

- (2) Disconnect the center manifold hose from the vacuum pump, and connect the hose to the tap valve.

Preparation tool:

Weight scale

NOTE:

When 13.6 kg (30 lb) refrigerant container (1) is used, measure the amount of refrigerant with a refrigerant charging scale (2), and connect with the center manifold hose.

- (3) Open the tap valve of HFC-134a supply container (refrigerant can or refrigerant container).
- (4) Loosen the center manifold hose connection on the manifold gauge for a few seconds (if there is a purge valve on the manifold gauge, push this instead) to allow the air in the center manifold hose to be bled by the refrigerant pressure.
- (5) Open the low-pressure side and high-pressure side valves of the manifold gauge to fill with refrigerant.

NOTE:

If the HFC-134a supply container is empty, close all manifold gauge valves and the tap valve of HFC-134a supply container, and replace the empty supply container with a new one. After replacing with a new HFC-134a supply container, perform air purge, and resume the filling operation.

- (6) If the low pressure gauge indicates approximately 0.2 MPa (2.0 kgf/cm², 29 psi) or refrigerant filling efficiency drops, close the low-pressure side valve and high-pressure side valve.
- (7) Check that the low-pressure side valve and high-pressure side valve are closed, turn off the A/C switch and start the engine.

CAUTION:

When filling with the engine running, do not open the high pressure side valve. Always fill from the low pressure side.

- (8) To prevent damage to the compressor, push the A/C switch ON-OFF quickly a few times.

Refrigerant Charging Procedure

HVAC SYSTEM (HEATER, VENTILATOR AND A/C)

(9) Set the vehicle to the following conditions.

Item	Condition
Engine speed	1,500 r/min
A/C switch	ON
Temperature adjustment dial	LO (MAX COOL)
Fan dial	HI (MAX)
FRESH/RECIRC switch	RECIRC
Air flow control dial or switch	VENT
Window	OPEN

(10) Open the low-pressure side valve, check the refrigerant pressure with a manifold gauge and fill with refrigerant up to the specified amount. <Ref. to AC-23, INSPECTION WITH PRESSURE SYMPTOMS, INSPECTION, Refrigerant Pressure with Manifold Gauge Set.>

4) Using an electronic leak detector (leak tester), check for refrigerant leaks in the system. <Ref. to AC-31, INSPECTION, Refrigerant Leak Check.>

5) After filling with refrigerant, close all valves and remove the manifold gauge set.

6) Attach cap to the service port of the low-pressure side and high-pressure side.

Refrigerant Leak Check

HVAC SYSTEM (HEATER, VENTILATOR AND A/C)

6. Refrigerant Leak Check

A: INSPECTION

1) Attach the manifold gauge set.

Preparation tool:

Manifold gauge set

- (1) Check that all valves are fully closed.
- (2) Install the low/high pressure hoses to the service ports on the low/high pressure sides of the vehicle respectively.

CAUTION:

Confirm that the connections are secure.

- (3) Start the engine, operate the A/C system for approx. 10 minutes, and check that the high-pressure side indicates 0.69 MPa (7.0 kgf/cm², 100 psi) or more.

2) Turn the ignition switch to OFF to start the leak test.

Preparation tool:

Electronic leak detector (leak tester)

Items	Condition	Corrective action
Pipe	Check the connections of pipe and expansion valve.	Check the O-ring at connection and tightening torque. If necessary, replace each part.
	Check the connection between pressure switch or pressure sensor and high-pressure pipe.	Replace the pressure switch or pressure sensor.
	Check the connection between pipe and condenser.	Check the O-ring at connection and tightening torque. If necessary, replace each part.
Condenser	Check the welded part of condenser and core.	Replace the condenser.
Hose (high-pressure)	Check the connection between hose (high-pressure) and compressor.	Check the O-ring at connection and tightening torque. If necessary, replace each part.
	Check the connection between hose (high-pressure) and condenser.	Check the O-ring at connection and tightening torque. If necessary, replace each part.
	Check the rubber part of the flexible hose and pipe seam. CAUTION: Carefully check the external surface of flexible hoses and pipes at approx. 25 mm (0.98 in) per second.	Replace the hose (high pressure).
	Check the valve and cap in the service port.	Check the rubber seal of the valve and cap. If necessary, replace valve or cap.
Compressor	Check the compressor pulley and vicinity of shaft seal. CAUTION: Some shaft seals will show a slight amount of leakage, about 3 g (0.1 oz) per year. This is not a problem.	Replace the compressor.

Refrigerant Leak Check

HVAC SYSTEM (HEATER, VENTILATOR AND A/C)

Items	Condition	Corrective action
Hose (low-pressure)	Check the connection between hose (low pressure) and expansion valve.	Check the O-ring at connection and tightening torque. If necessary, replace each part.
	Check the connection between hose (low pressure) and compressor.	Check the O-ring at connection and tightening torque. If necessary, replace each part.
	Check the rubber part of the flexible hose and pipe seam. CAUTION: Carefully check the external surface of flexible hoses and pipes at approx. 25 mm (0.98 in) per second.	Replace the hose (low pressure).
	Check the valve and cap in the service port.	Check the rubber seal of the valve and cap. If necessary, replace valve or cap.
Evaporator	Remove the drain hose from the heater case, and check the end part for 10 seconds or more.	Replace the evaporator.
	Check the air vent grille. NOTE: Turn the ignition switch to ON, and run the blower at high speed for approx. 1 minute. Stop the blower to check the air vent grille on the instrument panel. While moving the tester closer to the grille, run the blower for 1 or 2 seconds, then stop it. Check the grille at that position for at least 10 seconds.	Replace the evaporator.

Relay and Fuse

HVAC SYSTEM (HEATER, VENTILATOR AND A/C)

7. Relay and Fuse

A: LOCATION

AC-03457

Main fuse box	A/C relay	(A)
Relay & fuse box	Fuse 15 A (blower motor relay)	(B)
	Fuse 15 A (blower motor relay)	(C)
	Fuse 7.5 A (A/C control panel, A/C relay, sub fan relay, pressure switch and blower motor relay)	(D)
	Fuse 7.5 A (A/C control panel)	(E)
Blower motor unit	Blower motor relay	(F)

NOTE:

For other related fuses, refer to the wiring diagram. <Ref. to WI-15, Power Supply Circuit.>

Relay and Fuse

HVAC SYSTEM (HEATER, VENTILATOR AND A/C)

B: INSPECTION

1. CHECK FUSE

- 1) Remove the fuse and inspect visually.
- 2) If the fuse is blown out, replace the fuse.

NOTE:

If the fuse is blown again, check the system wiring harness.

2. CHECK RELAY

- 1) Check the resistance between relay terminals.

- A/C relay

Terminal No.	Inspection conditions	Standard	Circuit
1 — 2	Always	1 M Ω or more	
1 — 2	Apply battery voltage between terminals 4 and 3.	Less than 1 Ω	

LI-01273

- Blower motor relay

Terminal No.	Inspection conditions	Standard	Circuit
1 — 4	Always	1 M Ω or more	
1 — 4	Apply battery voltage between terminals 2 and 3.	Less than 1 Ω	

AC-02796

- 2) Replace the relay if the inspection result is not within the standard.

8. Compressor Oil

A: PROCEDURE

NOTE:

Before making repairs, perform the oil return operation to return the compressor oil in circulation with the refrigerant to the compressor assembly.

- 1) Increase the engine speed to 1,500 r/min.
- 2) Turn the A/C switch to ON.
- 3) Turn the temperature control dial to LO (MAX COOL).
- 4) Turn the FRESH/RECIRC switch to RECIRC position.
- 5) Turn the fan dial to HI (MAX).
- 6) Leave in this condition for 10 minutes.

B: ADJUSTMENT

- If a component has been replaced, add an appropriate amount of compressor oil (same as the amount of remaining oil in removed component).
- When replacing the compressor assembly, the new compressor assembly will already have the specified amount of oil in it. Adjust the oil amount (so that the amount remains the same as that of the removed compressor assembly) and install the new compressor assembly.

NOTE:

Since the hygroscopicity of compressor oil is high, perform this series of works quickly.

Blower Motor Unit Assembly

HVAC SYSTEM (HEATER, VENTILATOR AND A/C)

9. Blower Motor Unit Assembly

A: REMOVAL

CAUTION:

Before handling the airbag system components, refer to “CAUTION” of “General Description” in “AIRBAG SYSTEM”. <Ref. to AB-9, CAUTION, General Description.>

- 1) Disconnect the ground cable from battery and wait for at least 60 seconds before starting work. <Ref. to NT-6, BATTERY, NOTE, Note.>
- 2) Remove the glove box. <Ref. to EI-56, REMOVAL, Glove Box.>
- 3) Remove the engine control module (ECM). <Ref. to FU(H4DO)-98, REMOVAL, Engine Control Module (ECM).>
- 4) Remove the blower motor unit assembly.
 - (1) Release the claws, and then remove the grille assembly - ventilation RH.
 - (2) Disconnect the blower motor relay and each connector.

AC-02706

- (3) Remove the bolts and nuts to remove blower motor unit assembly.

NOTE:

Remove the RH upper nut from the mounting portion of the grille assembly - ventilation RH.

AC-02707

Blower Motor Unit Assembly

HVAC SYSTEM (HEATER, VENTILATOR AND A/C)

B: INSTALLATION

CAUTION:

- Before handling the airbag system components, refer to “CAUTION” of “General Description” in “AIRBAG SYSTEM”. <Ref. to AB-9, CAUTION, General Description.>
- After installing the grille assembly - ventilation RH, check that the air vent grille of the grille assembly - ventilation RH is inserted correctly into the air vent duct.

Install each part in the reverse order of removal.

Tightening torque:

Blower motor unit: <Ref. to AC-9, BLOWER MOTOR UNIT, COMPONENT, General Description.>

Blower Motor

HVAC SYSTEM (HEATER, VENTILATOR AND A/C)

10. Blower Motor

A: REMOVAL

- 1) Disconnect the ground cable from battery. <Ref. to NT-6, BATTERY, NOTE, Note.>
- 2) Release the clips, and remove the under cover assembly - passenger.

- 3) Remove the blower - motor.
 - (1) Disconnect the connector.
 - (2) Remove the screws and detach the blower - motor.

B: INSTALLATION

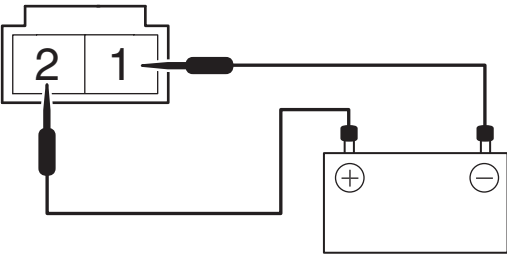

Install each part in the reverse order of removal.

Blower Motor

HVAC SYSTEM (HEATER, VENTILATOR AND A/C)

C: INSPECTION

1) Check the motor operation when battery voltage is applied between the terminals of motor.

Terminal No.	Inspection conditions	Specification	Connection diagram
2 (+) — 1 (-)	Connect battery to the terminals	Rotation	 <p>AC-02797</p>

2) If it does not operate normally, replace the blower - motor.

Power Transistor (Auto A/C Model)

HVAC SYSTEM (HEATER, VENTILATOR AND A/C)

11. Power Transistor (Auto A/C Model)

A: REMOVAL

- 1) Disconnect the ground cable from battery. <Ref. to NT-6, BATTERY, NOTE, Note.>
- 2) Remove the glove box. <Ref. to EI-56, REMOVAL, Glove Box.>
- 3) Remove the screws and remove the duct - foot RH.

NOTE:

Remove the connector and harness clip of the motor - actuator mix RH, and move the harness aside.

- 4) Remove the power transistor.
 - (1) Disconnect the connector.
 - (2) Remove the power transistor while pressing the power transistor claw part and sliding it.

B: INSTALLATION

Install each part in the reverse order of removal.

Blower Resistor (Manual A/C Model)

HVAC SYSTEM (HEATER, VENTILATOR AND A/C)

12. Blower Resistor (Manual A/C Model)

A: REMOVAL

- 1) Disconnect the ground cable from battery. <Ref. to NT-6, BATTERY, NOTE, Note.>
- 2) Remove the glove box. <Ref. to EI-56, REMOVAL, Glove Box.>
- 3) Remove the engine control module (ECM). <Ref. to FU(H4DO)-98, REMOVAL, Engine Control Module (ECM).>
- 4) Remove the resistor.
 - (1) Disconnect the connector.
 - (2) Remove the screw and remove the resistor.

AC-02775

B: INSTALLATION

Install each part in the reverse order of removal.

C: INSPECTION

- 1) Check the resistance between resistor terminals.

Preparation tool:
Circuit tester

Terminal No.	Standard	Connection diagram
4 — 3	Approx. 0.43 Ω	<p>The connection diagram shows a circuit tester with a resistance symbol (Ω) and a diagonal slash. The positive lead (+) is connected to terminal 4, and the negative lead (-) is connected to terminals 3, 2, and 1. Dashed lines indicate the internal connections between the terminals.</p>
4 — 2	Approx. 1.03 Ω	
4 — 1	Approx. 3 Ω	

AC-02897

- 2) Replace the resistor if the inspection result is not within the standard.

Heater Core

HVAC SYSTEM (HEATER, VENTILATOR AND A/C)

13.Heater Core

A: REMOVAL

CAUTION:

Before handling the airbag system components, refer to “CAUTION” of “General Description” in “AIRBAG SYSTEM”. <Ref. to AB-9, CAUTION, General Description.>

1) Using the refrigerant recovery system, discharge refrigerant. <Ref. to AC-27, PROCEDURE, Refrigerant Recovery Procedure.>

2) Disconnect the ground cable from battery and wait for at least 60 seconds before starting work. <Ref. to NT-6, BATTERY, NOTE, Note.>

3) Drain the coolant from the radiator. <Ref. to CO(H4DO)-13, DRAINING OF ENGINE COOLANT, REPLACEMENT, Engine Coolant.>

4) Remove the heater and cooling unit assembly. <Ref. to AC-54, REMOVAL, Heater and Cooling Unit.>

5) Remove the heater core.

(1) Remove the screw and detach the clamp - pipe.

AC-02687

(2) Remove the screws and detach the cover - heater pipe.

AC-02688

Heater Core

HVAC SYSTEM (HEATER, VENTILATOR AND A/C)

- (3) Remove the clamp, and remove the pipe - inlet and outlet.

- (4) Remove the screws and detach the plate - heater core.

Heater Core

HVAC SYSTEM (HEATER, VENTILATOR AND A/C)

(5) Pull out the heater core from the case - heater unit.

B: INSTALLATION

CAUTION:

- Replace O-rings and clamps with new parts and install securely.
- Before handling the airbag system components, refer to “CAUTION” of “General Description” in “AIRBAG SYSTEM”. <Ref. to AB-9, CAUTION, General Description.>

1) Install each part in the reverse order of removal.

2) Fill engine coolant. <Ref. to CO(H4DO)-14, FILLING OF ENGINE COOLANT, REPLACEMENT, Engine Coolant.>

3) Charge refrigerant. <Ref. to AC-28, PROCEDURE, Refrigerant Charging Procedure.>

Control Panel

HVAC SYSTEM (HEATER, VENTILATOR AND A/C)

14. Control Panel

A: REMOVAL

CAUTION:

Before handling the airbag system components, refer to “CAUTION” of “General Description” in “AIRBAG SYSTEM”. <Ref. to AB-9, CAUTION, General Description.>

- 1) Disconnect the ground cable from battery and wait for at least 60 seconds before starting work. <Ref. to NT-6, BATTERY, NOTE, Note.>
- 2) Remove the cover assembly - instrument panel LWR driver. <Ref. to EI-54, REMOVAL, Instrument Panel Lower Cover.>
- 3) Remove the knee airbag module. <Ref. to AB-34, REMOVAL, Knee Airbag Module.>
- 4) Remove the glove box. <Ref. to EI-56, REMOVAL, Glove Box.>
- 5) Remove the center grille assembly. <Ref. to AC-86, CENTER GRILLE ASSEMBLY, REMOVAL, Air Vent Grille.>
- 6) Remove the audio assembly or navigation assembly. <Ref. to ET-28, REMOVAL, Audio.>
- 7) Remove the screws to remove the heater control assembly.

AC-03781

NOTE:

For manual A/C model, refer to the instructions above to remove.

B: INSTALLATION

CAUTION:

- Before handling the airbag system components, refer to “CAUTION” of “General Description” in “AIRBAG SYSTEM”. <Ref. to AB-9, CAUTION, General Description.>
- After installing the center grille assembly, check that the air vent grille of the center grille assembly is inserted correctly into the air vent duct.

Install each part in the reverse order of removal.

Control Panel

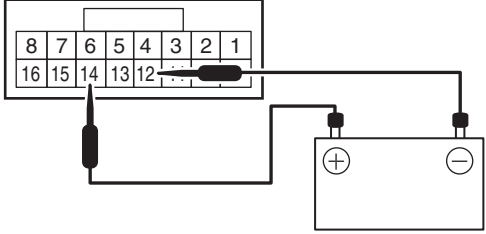

HVAC SYSTEM (HEATER, VENTILATOR AND A/C)

C: INSPECTION

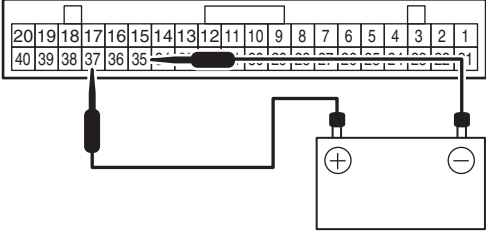

1. CHECK ILLUMINATION

1) Check the illumination operation when battery voltage is applied between the terminals of control panel.

- Manual A/C model

Terminal No.	Inspection conditions	Specification	Connection diagram
14 (+) — 12 (-)	Connect battery to the terminals	Light ON	 <p style="text-align: right;">AC-02733</p>

- Auto A/C model

Terminal No.	Inspection conditions	Specification	Connection diagram
37 (+) — 35 (-)	Connect battery to the terminals	Light ON	 <p style="text-align: right;">AC-02734</p>

2) If it does not operate normally, replace the heater control assembly.

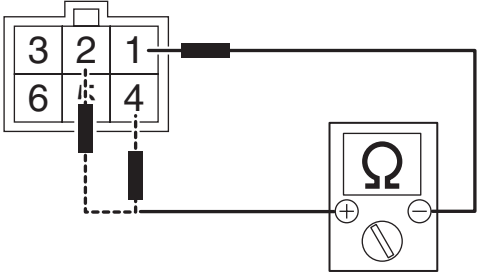

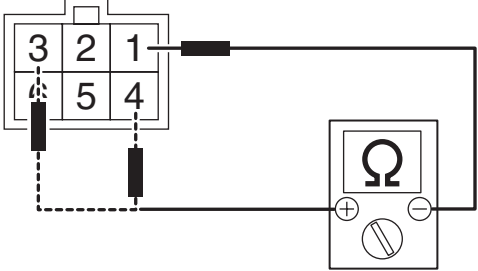

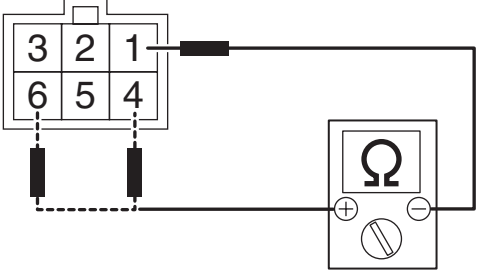

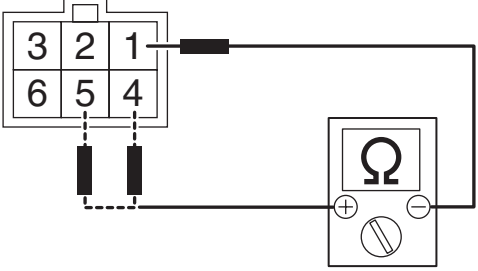

Control Panel

HVAC SYSTEM (HEATER, VENTILATOR AND A/C)

2. BLOWER SWITCH (MANUAL A/C MODEL)

1) Measure the resistance between the control panel terminals.

Preparation tool:
Circuit tester

Terminal No.	Inspection conditions	Standard	Connection diagram
—	OFF	—	—
1 — 2, 4	1 (LO)	Less than 1 Ω	 <p>AC-02798</p>
1 — 3, 4	2 (M1)	Less than 1 Ω	 <p>AC-02799</p>
1 — 4, 6	3 (M2)	Less than 1 Ω	 <p>AC-02800</p>
1 — 4, 5	4 (HI)	Less than 1 Ω	 <p>AC-02801</p>

2) Replace the heater control assembly if the inspection result is not within the standard.

Compressor

HVAC SYSTEM (HEATER, VENTILATOR AND A/C)

15. Compressor

A: REMOVAL

1. CROSSTREK MODEL

- 1) Perform compressor oil return operation. <Ref. to AC-35, PROCEDURE, Compressor Oil.>
- 2) Turn the A/C switch to OFF, and turn the ignition switch to OFF.
- 3) Using the refrigerant recovery system, discharge refrigerant. <Ref. to AC-27, PROCEDURE, Refrigerant Recovery Procedure.>
- 4) Disconnect the ground cable from battery.
- 5) Remove the V-belts. <Ref. to ME(H4DO)-83, REMOVAL, V-belt.>
- 6) Remove the harness clips and bolts and remove the V-belt cover bracket.

AC-03782

- 7) Remove the bolt, and detach the hose - pressure suction and the hose - pressure discharge.

CAUTION:

Seal the disconnected hose and engaging part of compressor with a plug or vinyl tape to prevent foreign matter from entering.

AC-03783

Compressor

HVAC SYSTEM (HEATER, VENTILATOR AND A/C)

- 8) Remove the compressor assembly.
 - (1) Disconnect the connector.
 - (2) Remove the bolts and remove the compressor assembly.

NOTE:

Tighten the engine hanger together with the compressor assembly.

AC-03784

B: INSTALLATION

CAUTION:

- Replace the O-rings on the hose - pressure suction and discharge with new parts, and then apply compressor oil.
- After replacing the compressor assembly, adjust the amount of the compressor oil. <Ref. to AC-35, ADJUSTMENT, Compressor Oil.>

1) Install each part in the reverse order of removal.

Tightening torque:

Air conditioning unit: <Ref. to AC-11, AIR CONDITIONING UNIT, COMPONENT, General Description.>

Compressor: <Ref. to AC-12, COMPRESSOR, COMPONENT, General Description.>

V-belt cover bracket and generator bracket: <Ref. to SC(H4DO)-5, GENERATOR BRACKET, COMPONENT, General Description.>

2) Charge refrigerant. <Ref. to AC-28, PROCEDURE, Refrigerant Charging Procedure.>

Compressor

HVAC SYSTEM (HEATER, VENTILATOR AND A/C)

C: INSPECTION

1. MAGNET CLUTCH CLEARANCE INSPECTION

1) Check the clearance of entire circumference around the drive plate and pulley.

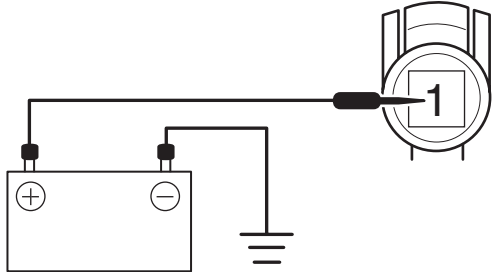

Specification:

0.3 — 0.6 mm (0.0118 — 0.0236 in)

2) Replace the compressor assembly if the inspection result is not within the standard.

2. MAGNET CLUTCH OPERATION INSPECTION

1) Check the magnet clutch operation when battery voltage is applied to the compressor terminal.

Terminal No.	Inspection conditions	Specification	Connection diagram
1 (+) — Chassis ground (-)	Battery connection between compressor terminal and chassis ground	Engaged	 <p style="text-align: right;">AC-02772</p>

2) If it does not operate normally, replace the compressor assembly.

Condenser

HVAC SYSTEM (HEATER, VENTILATOR AND A/C)

16. Condenser

A: REMOVAL

- 1) Using the refrigerant recovery system, discharge refrigerant. <Ref. to AC-27, PROCEDURE, Refrigerant Recovery Procedure.>
- 2) Remove the air intake duct. <Ref. to IN(H4DO)-13, REMOVAL, Air Intake Duct.>
- 3) Remove the clip, and remove the bracket - grille.

NOTE:

To prevent damage to the bracket - grille, make sure to remove all clips.

- 4) Remove the bolt, and disconnect the hose - pressure discharge and the pipe - evaporator cooling from the condenser assembly - air conditioner.

CAUTION:

Seal the disconnected hose, pipe and engaging part of condenser assembly with a plug or vinyl tape to prevent foreign matter from entering.

Condenser

HVAC SYSTEM (HEATER, VENTILATOR AND A/C)

5) Remove the bolts and remove the radiator upper bracket.

6) Remove the condenser assembly - air conditioner.

(1) Remove the bolt.

Condenser

HVAC SYSTEM (HEATER, VENTILATOR AND A/C)

(2) By lifting the condenser assembly - air conditioner, pull it out through the space between the radiator and the radiator panel.

CAUTION:

Be careful not to damage the condenser and radiator fin. If a damaged fin is found, repair it using a thin screwdriver.

AC-03882

B: INSTALLATION

CAUTION:

- If the condenser assembly - air conditioner has been replaced, add an appropriate amount of compressor oil. <Ref. to AC-35, ADJUSTMENT, Compressor Oil.>
- Replace the O-rings with new parts, and then apply compressor oil.
- Confirm that the lower guide of condenser assembly - air conditioner fits into the holes on radiator panel.

1) Install each part in the reverse order of removal.

Tightening torque:

Air conditioning unit: <Ref. to AC-11, AIR CONDITIONING UNIT, COMPONENT, General Description.>

Radiator upper bracket: <Ref. to CO(H4DO)-5, RADIATOR & RADIATOR FAN, COMPONENT, General Description.>

2) Charge refrigerant. <Ref. to AC-28, PROCEDURE, Refrigerant Charging Procedure.>

C: INSPECTION

1) Check to see that the condenser fins are not clogged with debris or insects. Blow with compressed air or flush fins with water as needed.

2) If any oil leak is found, replace the condenser assembly - air conditioner.

Heater and Cooling Unit

HVAC SYSTEM (HEATER, VENTILATOR AND A/C)

17.Heater and Cooling Unit

A: REMOVAL

CAUTION:

Before handling the airbag system components, refer to “CAUTION” of “General Description” in “AIRBAG SYSTEM”. <Ref. to AB-9, CAUTION, General Description.>

- 1) Disconnect the ground cable from battery and wait for at least 60 seconds before starting work. <Ref. to NT-6, BATTERY, NOTE, Note.>
- 2) Using the refrigerant recovery system, discharge refrigerant. <Ref. to AC-27, PROCEDURE, Refrigerant Recovery Procedure.>
- 3) Drain the coolant from the radiator. <Ref. to CO(H4DO)-13, DRAINING OF ENGINE COOLANT, REPLACEMENT, Engine Coolant.>
- 4) Remove the air intake boot. <Ref. to IN(H4DO)-12, REMOVAL, Air Intake Boot.>

CAUTION:

Move aside the air intake boot to perform the operation without disconnecting the PCV hose.

- 5) Remove the clips and bolts, and remove the hose - pressure suction and the pipe - evaporator cooling from the expansion valve - cooling.

CAUTION:

Seal the disconnected hose, pipe and engaging part of expansion valve with a plug or vinyl tape to prevent foreign matter from entering.

- 6) Loosen the heater hose clamps and detach the hoses.

NOTE:

Put alignment marks to hoses, clamps, etc.

- 7) Remove the instrument panel assembly. <Ref. to EI-61, REMOVAL, Instrument Panel Assembly.>
- 8) Remove the engine control module (ECM). <Ref. to FU(H4DO)-98, REMOVAL, Engine Control Module (ECM).>
- 9) Remove the blower motor unit assembly. <Ref. to AC-36, REMOVAL, Blower Motor Unit Assembly.>
- 10) Remove the heater and cooling unit assembly.

Heater and Cooling Unit

HVAC SYSTEM (HEATER, VENTILATOR AND A/C)

- (1) Disconnect each connector and the hose - drain.

- (2) Remove the bolt and nuts, and remove the heater & cooling unit assembly.

B: INSTALLATION

CAUTION:

- Replace O-rings with new parts and install securely.
- Before handling the airbag system components, refer to “CAUTION” of “General Description” in “AIRBAG SYSTEM”. <Ref. to AB-9, CAUTION, General Description.>

- 1) Install each part in the reverse order of removal.

Tightening torque:

Heater and cooling unit: <Ref. to AC-5, HEATER AND COOLING UNIT, COMPONENT, General Description.>

Air conditioning unit: <Ref. to AC-11, AIR CONDITIONING UNIT, COMPONENT, General Description.>

- 2) Fill engine coolant. <Ref. to CO(H4DO)-14, FILLING OF ENGINE COOLANT, REPLACEMENT, Engine Coolant.>

- 3) Charge refrigerant. <Ref. to AC-28, PROCEDURE, Refrigerant Charging Procedure.>

Evaporator

HVAC SYSTEM (HEATER, VENTILATOR AND A/C)

18. Evaporator

A: REMOVAL

CAUTION:

Before handling the airbag system components, refer to “CAUTION” of “General Description” in “AIRBAG SYSTEM”. <Ref. to AB-9, CAUTION, General Description.>

- 1) Disconnect the ground cable from battery and wait for at least 60 seconds before starting work. <Ref. to NT-6, BATTERY, NOTE, Note.>
- 2) Using the refrigerant recovery system, discharge refrigerant. <Ref. to AC-27, PROCEDURE, Refrigerant Recovery Procedure.>
- 3) Remove the air intake boot. <Ref. to IN(H4DO)-12, REMOVAL, Air Intake Boot.>

CAUTION:

Move aside the air intake boot to perform the operation without disconnecting the PCV hose.

- 4) Remove the expansion valve - cooling. <Ref. to AC-60, REMOVAL, Expansion Valve.>
- 5) Remove the glove box. <Ref. to EI-56, REMOVAL, Glove Box.>
- 6) Remove the engine control module (ECM). <Ref. to FU(H4DO)-98, REMOVAL, Engine Control Module (ECM).>
- 7) Remove the blower motor unit assembly. <Ref. to AC-36, REMOVAL, Blower Motor Unit Assembly.>
- 8) Remove the evaporator assembly - cooling.
 - (1) Disconnect the connector and lock of the thermostat - cooling.
 - (2) Remove the screws and detach the cover.

Evaporator

HVAC SYSTEM (HEATER, VENTILATOR AND A/C)

(3) Remove the cover - heater unit.

1. Disconnect the connector for the power transistor or resistor.
2. Remove the screws and clips to remove the cover - heater unit.

(4) Remove the bolt, and detach the pipe - evaporator core.

CAUTION:

Seal the disconnected pipe and engaging part of evaporator assembly with a plug or vinyl tape to prevent foreign matter from entering.

Preparation tool:

Hexagon wrench: 4 mm (0.16 in)

Evaporator

HVAC SYSTEM (HEATER, VENTILATOR AND A/C)

- (5) Pull out the evaporator assembly - cooling from the case - heater unit.

AC-02704

- (6) Remove the thermostat - cooling from the evaporator assembly - cooling.

AC-02705

Evaporator

HVAC SYSTEM (HEATER, VENTILATOR AND A/C)

B: INSTALLATION

CAUTION:

- If the evaporator assembly - cooling has been replaced, add an appropriate amount of compressor oil. <Ref. to AC-35, ADJUSTMENT, Compressor Oil.>
 - When the evaporator assembly - cooling has been replaced, replace the packing of the expansion valve - cooling with a new one, and then apply compressor oil.
 - Make sure that the water seal packing on the cover attachment area is securely attached.
 - Replace the O-rings with new parts, and then apply compressor oil.
 - After installing the grille assembly - ventilation RH, check that the air vent grille of the grille assembly - ventilation RH is inserted correctly into the air vent duct.
 - Before handling the airbag system components, refer to “CAUTION” of “General Description” in “AIRBAG SYSTEM”. <Ref. to AB-9, CAUTION, General Description.>
- 1) Install the thermostat - cooling to the specified position. <Ref. to AC-75, INSTALLATION, Evaporator Sensor.>
 - 2) Install each part in the reverse order of removal.

Tightening torque:

Heater and cooling unit: <Ref. to AC-5, HEATER AND COOLING UNIT, COMPONENT, General Description.>

- 3) Charge refrigerant. <Ref. to AC-28, PROCEDURE, Refrigerant Charging Procedure.>

C: INSPECTION

- 1) Check the evaporator fin for dust. Blow with compressed air or flush fins with water as needed.
- 2) If any oil leak is found, replace the evaporator assembly - cooling.

Expansion Valve

HVAC SYSTEM (HEATER, VENTILATOR AND A/C)

19. Expansion Valve

A: REMOVAL

- 1) Disconnect the ground cable from battery. <Ref. to NT-6, BATTERY, NOTE, Note.>
- 2) Using the refrigerant recovery system, discharge refrigerant. <Ref. to AC-27, PROCEDURE, Refrigerant Recovery Procedure.>
- 3) Remove the air intake boot. <Ref. to IN(H4DO)-12, REMOVAL, Air Intake Boot.>

CAUTION:

Move aside the air intake boot to perform the operation without disconnecting the PCV hose.

- 4) Remove the expansion valve - cooling.

(1) Remove the clips and bolts, and detach the hose - pressure suction and the pipe - evaporator cooling.

CAUTION:

Seal the disconnected hose, pipe and engaging part of expansion valve with a plug or vinyl tape to prevent foreign matter from entering.

Expansion Valve

HVAC SYSTEM (HEATER, VENTILATOR AND A/C)

(2) Remove the bolt, and remove the expansion valve - cooling.

CAUTION:

Seal the pipe and engaging part of expansion valve with a plug or vinyl tape to prevent foreign matter from entering.

Preparation tool:

Hexagon wrench: 4 mm (0.16 in)

B: INSTALLATION

CAUTION:

Replace the O-rings with new parts, and then apply compressor oil.

1) Install each part in the reverse order of removal.

Tightening torque:

Heater and cooling unit: <Ref. to AC-5, HEATER AND COOLING UNIT, COMPONENT, General Description.>

Air conditioning unit: <Ref. to AC-11, AIR CONDITIONING UNIT, COMPONENT, General Description.>

2) Charge refrigerant. <Ref. to AC-28, PROCEDURE, Refrigerant Charging Procedure.>

Hose and Pipe

HVAC SYSTEM (HEATER, VENTILATOR AND A/C)

20.Hose and Pipe

A: REMOVAL

1. LOW-PRESSURE HOSE

- 1) Using the refrigerant recovery system, discharge refrigerant. <Ref. to AC-27, PROCEDURE, Refrigerant Recovery Procedure.>
- 2) Remove the air intake boot. <Ref. to IN(H4DO)-12, REMOVAL, Air Intake Boot.>

CAUTION:

Move aside the air intake boot to perform the operation without disconnecting the PCV hose.

- 3) Remove the bolts and remove the hose - pressure suction.

CAUTION:

- Do not apply excessive force to the hose.
- Seal the disconnected hose, compressor and engaging part of expansion valve with a plug or vinyl tape to prevent foreign matter from entering.

Hose and Pipe

HVAC SYSTEM (HEATER, VENTILATOR AND A/C)

2. HIGH-PRESSURE HOSE

- 1) Using the refrigerant recovery system, discharge refrigerant. <Ref. to AC-27, PROCEDURE, Refrigerant Recovery Procedure.>
- 2) Remove the reservoir tank. <Ref. to CO(H4DO)-67, REMOVAL, Reservoir Tank.>
- 3) Remove the bolts, and remove the hose - pressure discharge.

CAUTION:

- Do not apply excessive force to the hose.
- Seal the disconnected hose, compressor and engaging part of compressor with a plug or vinyl tape to prevent foreign matter from entering.

3. A/C PIPE

- 1) Using the refrigerant recovery system, discharge refrigerant. <Ref. to AC-27, PROCEDURE, Refrigerant Recovery Procedure.>
- 2) Remove the battery. <Ref. to SC(H4DO)-51, REMOVAL, Battery.>
- 3) Remove the reservoir tank. <Ref. to CO(H4DO)-67, REMOVAL, Reservoir Tank.>
- 4) Remove the air intake boot.) <Ref. to IN(H4DO)-12, REMOVAL, Air Intake Boot.>

CAUTION:

Move aside the air intake boot to perform the operation without disconnecting the PCV hose.

- 5) Remove the pipe - evaporator cooling.
 - (1) Remove the cable clamps and bolts, and remove the battery cable stay.
 - (2) Disconnect the battery sensor harness from the main fuse box.
 - (3) Disconnect the pressure switch connector.
 - (4) Remove the bolts, and detach the hose - pressure suction from the expansion valve - cooling.

Hose and Pipe

HVAC SYSTEM (HEATER, VENTILATOR AND A/C)

(5) Remove the bolts, and detach the pipe - evaporator cooling from the condenser assembly - air conditioner.

(6) Remove the pipe - evaporator cooling from the clip and expansion valve, and remove the pipe - evaporator cooling in numerical order as shown in the figure.

CAUTION:

- Do not apply excessive force to the pipe.
- Seal the engaging parts of disconnected pipe, hose, expansion valve and condenser with a plug or vinyl tape to prevent foreign matter from entering.
- Do not pull the harness and cable forcibly.

Hose and Pipe

HVAC SYSTEM (HEATER, VENTILATOR AND A/C)

B: INSTALLATION

CAUTION:

- If the hose and pipe have been replaced, add an appropriate amount of compressor oil to the compressor. <Ref. to AC-35, ADJUSTMENT, Compressor Oil.>
- Replace the O-rings with new parts, and then apply compressor oil.
- When connecting hoses and pipes, do not apply excessive force. After installing, check that no torsion or excessive tension applied to the hoses.

1) Install each part in the reverse order of removal.

Tightening torque:

Air conditioning unit: <Ref. to AC-11, AIR CONDITIONING UNIT, COMPONENT, General Description.>

2) Charge refrigerant. <Ref. to AC-28, PROCEDURE, Refrigerant Charging Procedure.>

C: INSPECTION

- 1) Check the hoses for cracks, damage and expansion. Replace the hose if faulty.
- 2) Check the pipes for crack or damage. Replace the pipe if faulty.

Pressure Switch (Triple Pressure Switch)

HVAC SYSTEM (HEATER, VENTILATOR AND A/C)

21. Pressure Switch (Triple Pressure Switch)

A: INSPECTION

- 1) Connect the manifold gauge to the service valve on the high-pressure side.
- 2) Disconnect the connector.
- 3) Start the air conditioner, and check the operating pressure of switch by turning the compressor assembly (magnet clutch) to ON/OFF. Operation of each switch is as follows.

(1) High pressure switch	(6) 1,770±100 kPa (18.05±1.02 kg/cm ² , 256.65±14.5 psi)	(11) OFF
(2) Middle pressure switch	(7) 1,470±120 kPa (14.99±1.22 kg/cm ² , 213.15±17.4 psi)	(12) Operative range of compressor ASSY
(3) Low pressure switch	(8) 225±30 kPa (2.29±0.31 kg/cm ² , 32.6±4.3 psi)	(13) Inoperative range of compressor ASSY
(4) 2,350±200 kPa (24.00±2.04 kg/cm ² , 340.7±29.0 psi)	(9) 196±25 kPa (2.00±0.25 kg/cm ² , 28.4±3.6 psi)	(14) Low pressure
(5) 2,940±200 kPa (29.98±2.04 kg/cm ² , 426.3±29.0 psi)	(10) ON	(15) High pressure

NOTE:

- High pressure switch turns the compressor assembly (magnet clutch) to OFF when the refrigerant pressure becomes extremely high to prevent the evaporator, air conditioner piping and expansion valve from getting damaged or frozen, etc.
- The middle pressure switch is used to effectively control the radiator fan output by judging high load/low load in normal pressure range.
- The low pressure switch detects a refrigerant shortage and deactivates the compressor assembly (magnet clutch) if the refrigerant pressure is abnormally low. (Because any further compressor assembly operation in such a state may lead to compressor seizure)

Ambient Sensor

HVAC SYSTEM (HEATER, VENTILATOR AND A/C)

22.Ambient Sensor

A: REMOVAL

- 1) Disconnect the ground cable from battery. <Ref. to SC(H4DO)-51, REMOVAL, Battery.>
- 2) Remove the ambient sensor.
 - (1) Disconnect the connector.
 - (2) Release the claws, and then remove the ambient sensor from the bracket.

AC-03186

B: INSTALLATION

Install each part in the reverse order of removal.

Ambient Sensor

HVAC SYSTEM (HEATER, VENTILATOR AND A/C)

C: INSPECTION

- 1) Visually check the ambient sensor for dirt or damage, and clean or replace as necessary.
- 2) Check the resistance between ambient sensor terminals.

CAUTION:

During inspection, be careful not to touch the sensor end in order to avoid misjudgment due to body temperature.

Preparation tool:

Circuit tester

Terminal No.	Inspection conditions	Standard
1 — 2	10°C	5.82 — 6.18 kΩ
	15°C	4.58 — 4.87 kΩ
	20°C	3.64 — 3.86 kΩ
	25°C	2.91 — 3.09 kΩ
	30°C	2.35 — 2.49 kΩ
	35°C	1.9 — 2.02 kΩ
	40°C	1.56 — 1.65 kΩ
	45°C	1.28 — 1.36 kΩ
	50°C	1.06 — 1.12 kΩ
	55°C	0.88 — 0.93 kΩ
	60°C	0.74 — 0.78 kΩ

- 3) Replace the ambient sensor if the inspection result is not within the standard value.

Sunload Sensor (Auto A/C Model)

HVAC SYSTEM (HEATER, VENTILATOR AND A/C)

23.Sunload Sensor (Auto A/C Model)

A: REMOVAL

CAUTION:

Be careful not to damage the sensors and interior trims when removing.

1) Disconnect the ground cable from battery. <Ref. to NT-6, BATTERY, NOTE, Note.>

2) Remove the sunload sensor.

(1) Release the connectors and claws, and then remove the grille - front defroster.

(2) Press the left and right claws to remove the sunload sensor from the grille - front defroster.

Sunload Sensor (Auto A/C Model)

HVAC SYSTEM (HEATER, VENTILATOR AND A/C)

B: INSTALLATION

Install each part in the reverse order of removal.

C: INSPECTION

- 1) Check if there is anything that affects sensing, around the sunload sensor.
 - (1) Is the sunload sensor free from any object that disturbs sensing?
 - (2) Is the windshield glass free from any object such as sticker or film that disturbs sensing?
 - **Yes** → Go to step 2).
 - **No** → Remove everything that affects sensing.
- 2) Using the Subaru Select Monitor, check «Quantity of Sunload».

NOTE:

For detailed operation procedures, refer to “Application help”.

- (1) Cover the sunload sensor with cloth.
- (2) Does the «Quantity of Sunload» indicate 0 W/m² when the direct sunlight is shielded?
 - **Yes** → Go to step 3).
 - **No** → Replace the sunload sensor.
- 3) From step 2), expose the sunload sensor to light.
 - (1) Place intense light such as incandescent light at 300 mm (11.81 in) or less from the sunload sensor.
 - (2) Does «Quantity of Sunload» indicate 2,000 W/m² or less?

CAUTION:

The value changes depending on the angle of light.

- **Yes** → The sunload sensor is normal.
- **No** → Replace the sunload sensor.

In-Vehicle Sensor (Auto A/C Model)

HVAC SYSTEM (HEATER, VENTILATOR AND A/C)

24. In-Vehicle Sensor (Auto A/C Model)

A: REMOVAL

CAUTION:

Be careful not to damage the sensors and interior trims when removing.

- 1) Disconnect the battery ground cable and wait for at least 60 seconds before starting work. <Ref. to NT-6, BATTERY, NOTE, Note.>
- 2) Remove the cover assembly - instrument panel LWR driver INN. <Ref. to EI-54, REMOVAL, Instrument Panel Lower Cover.>
- 3) Remove the in-vehicle sensor.
 - (1) Disconnect the connector, and remove the aspirator hose.

AC-02714

- (2) Release the claws and remove the cover switch - starter.
- (3) Remove the screw and remove the in-vehicle sensor from the cover switch - starter.

AC-02715

In-Vehicle Sensor (Auto A/C Model)

HVAC SYSTEM (HEATER, VENTILATOR AND A/C)

B: INSTALLATION

Install each part in the reverse order of removal.

C: INSPECTION

1) Set the vehicle to the following conditions.

Item	Condition
Ignition switch	ON
A/C switch	ON
Temperature adjustment dial	HI (MAX HOT)
Air flow control dial or switch	DEF
Fan dial	HI (MAX)

2) Check the suction port (A) for in-vehicle sensor of the cover assembly - instrument panel LWR driver INN.

- (1) Put a strip of paper close to the front side of the suction port (A).
- (2) Can you see the paper moving towards the port and the air being sucked into the port?

CAUTION:

Be careful not to let the paper get sucked into the port.

- **Yes** → Go to step 5).
- **No** → Go to step 3).

3) Remove the cover assembly - instrument panel LWR driver INN, and check the aspirator hose (A).

- (1) Are the aspirator hoses on both sides of the case and sensor connected securely?
 - (2) Is the aspirator hose free from any kinks or cracks?
- **Yes** → Go to step 4).
 - **No** → Repair or replace the aspirator hose if necessary.

In-Vehicle Sensor (Auto A/C Model)

HVAC SYSTEM (HEATER, VENTILATOR AND A/C)

- 4) Check if there is anything that affects sensing, around the in-vehicle sensor.
 - (1) Is the in-vehicle sensor hole free from clogging?
 - (2) Is the peripheral area of in-vehicle sensor free from any heat-producing parts (such as audio, navigation system etc.)?
 - **Yes** → Go to step 5).
 - **No** → Remove everything that affects sensing.
- 5) Perform the inspection of in-vehicle sensor unit.
 - (1) Disconnect the in-vehicle sensor connector.
 - (2) Is the resistance between terminals of in-vehicle sensor within standard value?

CAUTION:

During inspection, be careful not to touch the sensor end in order to avoid misjudgment due to body temperature.

Preparation tool:
Circuit tester

AC-02728

Terminal No.	Inspection conditions	Standard
1 — 2	10°C	3.772 — 4.101 kΩ
	15°C	3.096 — 3.338 kΩ
	20°C	2.556 — 2.734 kΩ
	25°C	2.121 — 2.251 kΩ
	30°C	1.756 — 1.878 kΩ
	35°C	1.462 — 1.574 kΩ
	40°C	1.223 — 1.326 kΩ
	45°C	1.028 — 1.122 kΩ
	50°C	0.868 — 0.9542 kΩ
	55°C	0.7363 — 0.8147 kΩ
60°C	0.6273 — 0.6984 kΩ	

- **Yes** → The in-vehicle sensor is normal.
- **No** → Replace the in-vehicle sensor.

Evaporator Sensor

HVAC SYSTEM (HEATER, VENTILATOR AND A/C)

25. Evaporator Sensor

A: REMOVAL

CAUTION:

Before handling the airbag system components, refer to “CAUTION” of “General Description” in “AIRBAG SYSTEM”. <Ref. to AB-9, CAUTION, General Description.>

- 1) Using the refrigerant recovery system, discharge refrigerant. <Ref. to AC-27, PROCEDURE, Refrigerant Recovery Procedure.>
- 2) Disconnect the ground cable from battery and wait for at least 60 seconds before starting work. <Ref. to NT-6, BATTERY, NOTE, Note.>
- 3) Remove the evaporator assembly - cooling. <Ref. to AC-56, REMOVAL, Evaporator.>
- 4) Remove the thermostat - cooling from the evaporator assembly - cooling.

Evaporator Sensor

HVAC SYSTEM (HEATER, VENTILATOR AND A/C)

B: INSTALLATION

CAUTION:

- Make sure that the water seal packing on the cover attachment area is securely attached.
 - Replace the O-rings with new parts, and then apply compressor oil.
 - Before handling the airbag system components, refer to “CAUTION” of “General Description” in “AIRBAG SYSTEM”. <Ref. to AB-9, CAUTION, General Description.>
- 1) Install the thermostat - cooling at the position shown in the figure below.

AC-02718

- (1) Evaporator ASSY - cooling (3) Thermostat - cooling (5) Fifth row fin from the left end
 (2) Center (4) 130 mm (5.12 in) from the upper end of the fins

- 2) Install each part in the reverse order of removal.
 3) Charge refrigerant. <Ref. to AC-28, PROCEDURE, Refrigerant Charging Procedure.>

C: INSPECTION

1. MANUAL A/C MODEL

WIRING DIAGRAM:

AC-10002

Evaporator Sensor

HVAC SYSTEM (HEATER, VENTILATOR AND A/C)

1) Prepare the vehicle.

NOTE:

Check that the ambient temperature is 25 — 40°C (77 — 104°F) and that the humidity is 30% — 80%.

- Place the vehicle in the workshop or in the shade and windless condition.
- Open all windows.

2) Set the vehicle to the following conditions and idle the engine for 15 minutes.

Item	Condition
Engine	Idling
Air vent grille	Shutter is fully open.
A/C switch	OFF
Temperature adjustment dial	LO (MAX COOL)
FRESH/RECIRC switch	RECIRC
Air flow control dial	VENT
Fan dial	3/4 level

3) Check evaporator sensor power supply input

Preparation tool:

Circuit tester

- (1) Turn the ignition switch to OFF.
- (2) Disconnect the evaporator sensor connector.
- (3) Turn the ignition switch to ON.
- (4) Measure the voltage between evaporator sensor connector and chassis ground.

Connector & terminal

(B88) No. 3 (+) — Chassis ground (-):

- (5) Is the voltage approx. 12 V?
 - **Yes** → Go to step 4).
 - **No** → Repair or replace the harness.

4) Check evaporator sensor ground circuit

- (1) Turn the ignition switch to OFF.
- (2) Check continuity between evaporator sensor connector and chassis ground.

Connector & terminal

(B88) No. 2 — Chassis ground:

- (3) Is there continuity?
 - **Yes** → Go to step 6).
 - **No** → Go to step 5).
- 5) Check open circuit in evaporator sensor ground circuit

- (1) Disconnect the control panel connector.
- (2) Check continuity between evaporator sensor connector and control panel connector.

Connector & terminal

(B88) No. 2 — (i16) No. 2:

- (3) Is there continuity?
 - **Yes** → Replace the control panel.
 - **No** → Repair or replace the harness.

Evaporator Sensor

HVAC SYSTEM (HEATER, VENTILATOR AND A/C)

- 6) Check evaporator sensor signal output
 - (1) Connect the evaporator sensor connector and the control panel connector.
 - (2) Disconnect the engine control module (ECM) connector.
 - (3) Turn the ignition switch to ON.
 - (4) Turn the A/C switch to ON.
 - (5) Measure the voltage between engine control module (ECM) connector and chassis ground.

Connector & terminal

(B137) No. 26 (+) — Chassis ground (-):

- (6) Is the voltage approx. 8 V or more?
 - **Yes** → Evaporator sensor is normal.
 - **No** → Go to step 7).
- 7) Check open circuit in evaporator sensor signal output circuit
 - (1) Turn the ignition switch to OFF.
 - (2) Disconnect the evaporator sensor connector.
 - (3) Check continuity between evaporator sensor connector and engine control module (ECM) connector.

Connector & terminal

(B88) No. 1 — (B137) No. 26:

- (4) Is there continuity?
 - **Yes** → Replace the evaporator sensor.
 - **No** → Repair or replace the harness.

2. AUTO A/C MODEL

- 1) Prepare the vehicle.

NOTE:

Check that the ambient temperature is 25 — 40°C (77 — 104°F) and that the humidity is 30% — 80%.

- Place the vehicle in the workshop or in the shade and windless condition.
- Open all windows.

- 2) Set the vehicle to the following conditions.

Item	Condition
Engine	Idling
Air vent grille	Shutter is fully open.
A/C switch	OFF
Temperature adjustment dial	LO (MAX COOL)
FRESH/RECIRC switch	RECIRC
Air flow control dial or switch	VENT
Fan dial	5/7 level

- 3) Using the Subaru Select Monitor, check «Evaporator Temperature».

NOTE:

For detailed operation procedures, refer to “Application help”.

- (1) Idle the engine for 15 minutes, and then compare the air flow outlet temperature with «Evaporator Temperature».

Preparation tool:

Thermometer and hygrometer

NOTE:

For outlet opening temperature, measure the average temperature of center grille assembly and side grille assembly.

- (2) Do the air flow outlet temperature and «Evaporator Temperature» differ by 3°C (5.4°F) or more?
 - **Yes** → Go to step 4).
 - **No** → Evaporator sensor is normal.

Evaporator Sensor

HVAC SYSTEM (HEATER, VENTILATOR AND A/C)

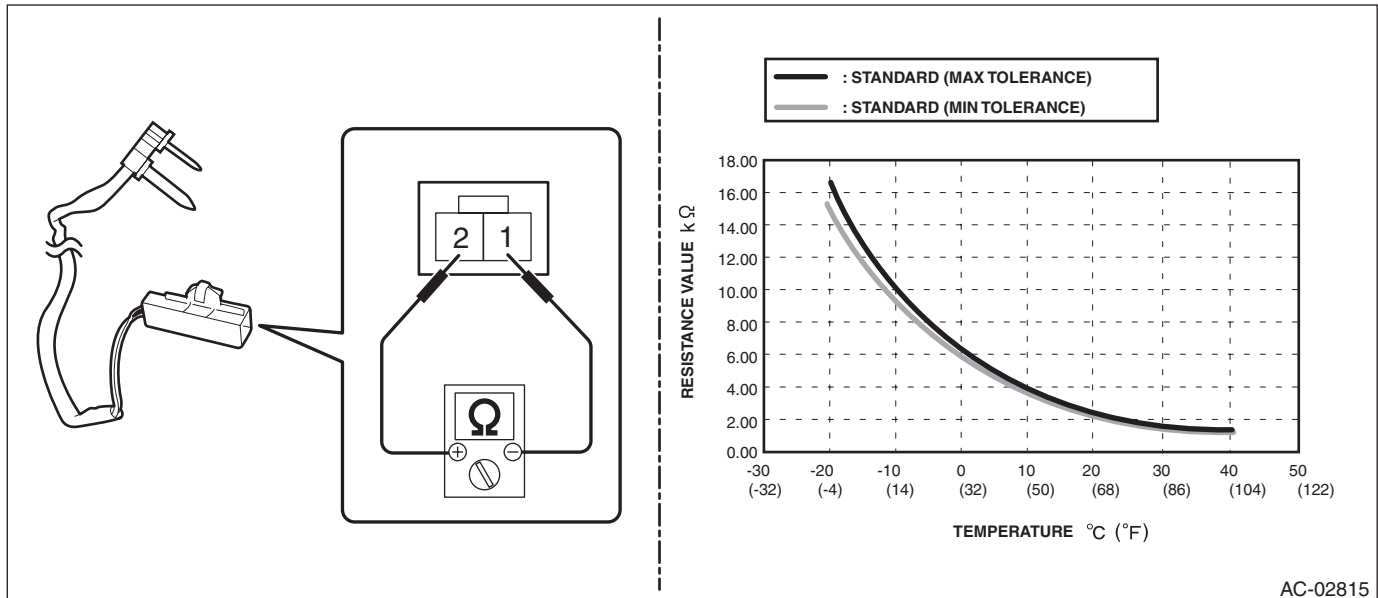

4) Check the evaporator sensor.

(1) Disconnect the evaporator sensor connector.

(2) Is the resistance between terminals of evaporator sensor within standard value?

Preparation tool:

Circuit tester

Terminal No.	Inspection conditions	Standard
1 — 2	-20°C	15.37 — 16.62 kΩ
	-15°C	12.09 — 12.87 kΩ
	-10°C	9.576 — 10.05 kΩ
	-5°C	7.636 — 7.899 kΩ
	0°C	6.132 — 6.256 kΩ
	5°C	4.891 — 5.057 kΩ
	10°C	3.928 — 4.113 kΩ
	15°C	3.174 — 3.366 kΩ
	20°C	2.581 — 2.77 kΩ
	25°C	2.111 — 2.292 kΩ
	30°C	1.737 — 1.907 kΩ
	35°C	1.437 — 1.595 kΩ
	40°C	1.195 — 1.34 kΩ

- **Yes** → Evaporator sensor is normal.
- **No** → Replace the evaporator sensor.

FRESH/RECIRC Door Actuator

HVAC SYSTEM (HEATER, VENTILATOR AND A/C)

26.FRESH/RECIRC Door Actuator

A: REMOVAL

CAUTION:

Before handling the airbag system components, refer to “CAUTION” of “General Description” in “AIRBAG SYSTEM”. <Ref. to AB-9, CAUTION, General Description.>

1) Disconnect the ground cable from battery and wait for at least 60 seconds before starting work. <Ref. to NT-6, BATTERY, NOTE, Note.>

2) Remove the glove box. <Ref. to EI-56, REMOVAL, Glove Box.>

3) Remove the engine control module (ECM). <Ref. to FU(H4DO)-98, REMOVAL, Engine Control Module (ECM).>

4) Remove the blower motor unit assembly. <Ref. to AC-36, REMOVAL, Blower Motor Unit Assembly.>

5) Remove the screws and detach the motor - actuator blower.

- Manual A/C model

- Auto A/C model

FRESH/RECIRC Door Actuator

HVAC SYSTEM (HEATER, VENTILATOR AND A/C)

B: INSTALLATION

CAUTION:

- After installing the grille assembly - ventilation RH, check that the air vent grille of the grille assembly - ventilation RH is inserted correctly into the air vent duct.
- Before handling the airbag system components, refer to “CAUTION” of “General Description” in “AIRBAG SYSTEM”. <Ref. to AB-9, CAUTION, General Description.>

Install each part in the reverse order of removal.

C: INSPECTION

1. CHECK LINK

- 1) Visually check the operation range of the link, and remove the foreign material if any.
- 2) Operate the FRESH/RECIRC switch to check that the link operates normally.
- 3) If it does not operate normally as the result of inspection, check the motor - actuator blower.

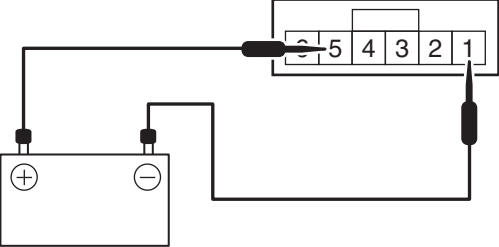

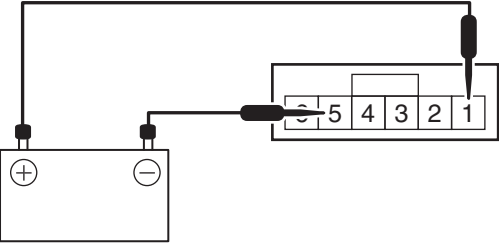

2. CHECK ACTUATOR

- 1) Check the actuator operation when battery voltage is applied between the terminals of actuator.

CAUTION:

Disconnect the battery immediately after the actuator stops operation. Otherwise, the motor may be damaged.

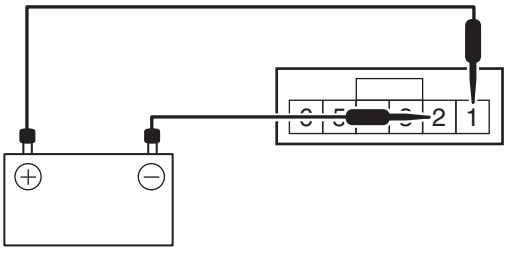

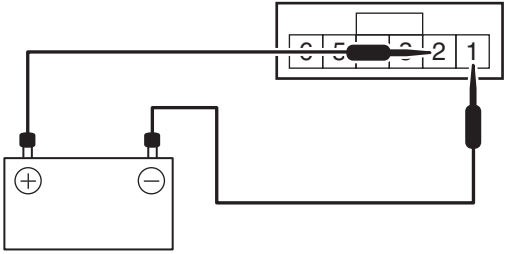

- Manual A/C model

Terminal No.	Inspection conditions	Operating position	Connection diagram
5 (+) — 1 (-)	Connect battery to the terminals	RECIRC	 <p style="text-align: right;">AC-02738</p>
1 (+) — 5 (-)		FRESH	 <p style="text-align: right;">AC-02739</p>

FRESH/RECIRC Door Actuator

HVAC SYSTEM (HEATER, VENTILATOR AND A/C)

- Auto A/C model

Terminal No.	Inspection conditions	Operating position	Connection diagram
1 (+) — 2 (-)	Connect battery to the terminals	RECIRC	 <p style="text-align: right;">AC-02742</p>
2 (+) — 1 (-)		FRESH	 <p style="text-align: right;">AC-02741</p>

2) If it does not operate normally as the result of inspection, replace the motor - actuator blower.

Mode Door Actuator

HVAC SYSTEM (HEATER, VENTILATOR AND A/C)

27.Mode Door Actuator

A: REMOVAL

CAUTION:

Before handling the airbag system components, refer to “CAUTION” of “General Description” in “AIRBAG SYSTEM”. <Ref. to AB-9, CAUTION, General Description.>

- 1) Disconnect the ground cable from battery and wait for at least 60 seconds before starting work. <Ref. to NT-6, BATTERY, NOTE, Note.>
- 2) Remove the cover assembly - instrument panel LWR driver. <Ref. to EI-54, REMOVAL, Instrument Panel Lower Cover.>
- 3) Remove the knee airbag module. <Ref. to AB-34, REMOVAL, Knee Airbag Module.>
- 4) Remove the motor - actuator mode.
 - (1) Disconnect the connector, and remove the rod from the rod clamp.
 - (2) Remove the screws and detach the motor - actuator mode.

B: INSTALLATION

CAUTION:

Before handling the airbag system components, refer to “CAUTION” of “General Description” in “AIRBAG SYSTEM”. <Ref. to AB-9, CAUTION, General Description.>

Install each part in the reverse order of removal.

Mode Door Actuator

HVAC SYSTEM (HEATER, VENTILATOR AND A/C)

C: INSPECTION

1. CHECK LINK

- 1) Visually check the operation range of the link, and remove the foreign material if any.
- 2) Operate the air flow control dial or switch to check that the link operates normally.
- 3) If it does not operate normally as the result of inspection, check the motor - actuator mode.

2. CHECK ACTUATOR

- 1) Check the resistance between actuator terminals.

Preparation tool:

Circuit tester

Terminal No.	Inspection conditions	Standard	Connector Sketch
3 — 1	Always	80 — 100 Ω	
3 — 2			
3 — 5			
3 — 6			

AC-02839

- 2) Replace the motor - actuator mode if it is found defective as a result of inspection.

Air Mix Door Actuator

HVAC SYSTEM (HEATER, VENTILATOR AND A/C)

28. Air Mix Door Actuator

A: REMOVAL

1. LH

CAUTION:

Before handling the airbag system components, refer to “CAUTION” of “General Description” in “AIRBAG SYSTEM”. <Ref. to AB-9, CAUTION, General Description.>

- 1) Disconnect the ground cable from battery and wait for at least 60 seconds before starting work. <Ref. to NT-6, BATTERY, NOTE, Note.>
- 2) Remove the cover assembly - instrument panel LWR driver. <Ref. to EI-54, REMOVAL, Instrument Panel Lower Cover.>
- 3) Remove the knee airbag module. <Ref. to AB-34, REMOVAL, Knee Airbag Module.>
- 4) Remove the motor - actuator mix.
 - (1) Disconnect the connector, and remove the rod from the rod clamp.
 - (2) Remove the screws and detach the motor - actuator mix.

AC-02746

2. RH

- 1) Disconnect the ground cable from battery and wait for at least 60 seconds before starting work. <Ref. to NT-6, BATTERY, NOTE, Note.>
- 2) Remove the glove box. <Ref. to EI-56, REMOVAL, Glove Box.>

Air Mix Door Actuator

HVAC SYSTEM (HEATER, VENTILATOR AND A/C)

- 3) Remove the motor - actuator mix.
 - (1) Disconnect the connector, and remove the rod from the rod clamp.
 - (2) Remove the screws and detach the motor - actuator mix.

AC-02724

B: INSTALLATION

CAUTION:

Before handling the airbag system components, refer to “CAUTION” of “General Description” in “AIRBAG SYSTEM”. <Ref. to AB-9, CAUTION, General Description.>

Install each part in the reverse order of removal.

C: INSPECTION

1. CHECK LINK

- 1) Visually check the operation range of the link, and remove the foreign material if any.
- 2) Operate the temperature control dial to check that the link operates normally.
- 3) If it does not operate normally as the result of inspection, check the motor - actuator mix.

2. CHECK ACTUATOR

- 1) Check the resistance between actuator terminals.

Preparation tool:

Circuit tester

Terminal No.	Inspection conditions	Standard	Connector Sketch
3 — 1	Always	80 — 100 Ω	
3 — 2			
3 — 5			
3 — 6			

AC-02839

- 2) Replace the motor - actuator mix if it is found defective as a result of inspection.

Air Vent Grille

HVAC SYSTEM (HEATER, VENTILATOR AND A/C)

29. Air Vent Grille

A: REMOVAL

1. CENTER GRILLE ASSEMBLY

CAUTION:

- Do not put your finger on the fin of the air vent grille. Doing so may damage the fin.
- Always pull the center grille assembly toward you slowly. If attempting to remove by turning it upward, the claws and connectors may be damaged.

- 1) Disconnect the ground cable from battery. <Ref. to NT-6, BATTERY, NOTE, Note.>
- 2) Remove the center grille assembly.
 - (1) Attach the protective tape (a) to the instrument panel assembly.
 - (2) Release the claw by using a clip remover wrapped with protective tape.
 - (3) Disconnect the connector and remove the center grille assembly.

EI-04599

- 3) Release the claws, and then remove the grille assembly - CTR ventilation from the center grille assembly.

AC-03787

Air Vent Grille

HVAC SYSTEM (HEATER, VENTILATOR AND A/C)

2. SIDE GRILLE ASSEMBLY

LH side

- 1) Disconnect the ground cable from battery. <Ref. to NT-6, BATTERY, NOTE, Note.>
- 2) Remove the cover assembly - instrument panel LWR driver OUT. <Ref. to EI-54, REMOVAL, Instrument Panel Lower Cover.>
- 3) Remove the grille assembly - ventilation LH.

CAUTION:

- When using a flat tip screwdriver, apply protective tape or cloth and be careful not to cause damage.
- Do not pull the grille assembly - ventilation forcibly. Doing so may cause deformation or damage.
 - (1) Push the claw (a) on the outlet dial side upward from the back of the instrument panel assembly.
 - (2) While pushing, pull the grille assembly - ventilation toward you to release the claw.
 - (3) Release the other claw (b) in the same manner, then remove the grille assembly - ventilation LH.

AC-03788

Air Vent Grille

HVAC SYSTEM (HEATER, VENTILATOR AND A/C)

RH side

- 1) Disconnect the ground cable from battery. <Ref. to NT-6, BATTERY, NOTE, Note.>
- 2) Remove the pocket assembly and the back panel - pocket. <Ref. to EI-56, REMOVAL, Glove Box.>
- 3) Remove the grille assembly - ventilation RH.

CAUTION:

- When using a flat tip screwdriver, apply protective tape or cloth and be careful not to cause damage.
- Do not pull the grille assembly - ventilation forcibly. Doing so may cause deformation or damage.
 - (1) Push the claw (a) on the outlet dial side upward from the back of the instrument panel assembly.
 - (2) While pushing, pull the grille assembly - ventilation toward you to release the claw.
 - (3) Release the other claw (b) in the same manner, then remove the grille assembly - ventilation RH.

B: INSTALLATION

CAUTION:

After installing the center grille assembly or grille assembly - ventilation, check that the air vent grille is inserted correctly into the air vent duct.

Install each part in the reverse order of removal.

C: INSPECTION

- 1) Check that the direction and amount of air can be adjusted smoothly. Replace the grille assembly - ventilation if faulty.
- 2) Check that the adjustment can be maintained in each position. Replace the grille assembly - ventilation if faulty.

Heater Duct

HVAC SYSTEM (HEATER, VENTILATOR AND A/C)

30.Heater Duct

A: REMOVAL

CAUTION:

Before handling the airbag system components, refer to “CAUTION” of “General Description” in “AIRBAG SYSTEM”. <Ref. to AB-9, CAUTION, General Description.>

- 1) Disconnect the battery ground cable and wait for at least 60 seconds before starting work. <Ref. to NT-6, BATTERY, NOTE, Note.>
- 2) Remove the front seats. <Ref. to SE-8, REMOVAL, Front Seat.>
- 3) Remove the heater and cooling unit assembly. <Ref. to AC-54, REMOVAL, Heater and Cooling Unit.>
- 4) Remove the duct - rear heater.
 - (1) Lift the floor carpet.
 - (2) Remove the clips, and remove the duct - rear heater CTR (A).
 - (3) Release the claws, and remove the duct - rear heater (B) on LH and RH sides.

B: INSTALLATION

CAUTION:

Before handling the airbag system components, refer to “CAUTION” of “General Description” in “AIRBAG SYSTEM”. <Ref. to AB-9, CAUTION, General Description.>

Install each part in the reverse order of removal.

Heater Vent Duct

HVAC SYSTEM (HEATER, VENTILATOR AND A/C)

31.Heater Vent Duct

A: REMOVAL

CAUTION:

Before handling the airbag system components, refer to “CAUTION” of “General Description” in “AIRBAG SYSTEM”. <Ref. to AB-9, CAUTION, General Description.>

1) Disconnect the battery ground cable and wait for at least 60 seconds before starting work. <Ref. to NT-6, BATTERY, NOTE, Note.>

2) Remove the instrument panel assembly. <Ref. to EI-61, REMOVAL, Instrument Panel Assembly.>

3) Remove the screws and remove the duct - center vent (A) and the duct - side ventilation (B) on LH and RH sides.

B: INSTALLATION

CAUTION:

Before handling the airbag system components, refer to “CAUTION” of “General Description” in “AIRBAG SYSTEM”. <Ref. to AB-9, CAUTION, General Description.>

Install each part in the reverse order of removal.

32.A/C Filter

A: REPLACEMENT

- 1) Remove the pocket assembly.
 - (1) Attach the protective tape (a) to the panel center LWR.
 - (2) Remove the damper COMPL - pocket.
 - (3) Release the stoppers and remove the pocket assembly by pulling it toward you.

EI-03419

- 2) Pinch the tabs to release the lock, and remove the filter kit.

AC-03574

NOTE:

Pull out while tilting the front side of the filter downward to prevent dirt or dust from falling inside the case.

- 3) Install each part in the reverse order of removal.

Diagnostics with Phenomenon

HVAC SYSTEM (HEATER, VENTILATOR AND A/C)

33.Diagnostics with Phenomenon

A: INSPECTION

Refer to “Diagnostics with Phenomenon” for “HVAC SYSTEM (AUTO A/C) (DIAGNOSTICS)” section. <Ref. to AC(diag)-8, Diagnostics with Phenomenon.>

HVAC SYSTEM (AUTO A/C) (DIAGNOSTICS)

AC(diag)

	Page
1. Basic Diagnostic Procedure	2
2. General Description	3
3. Electrical Component Location	4
4. Auto A/C Control Module I/O Signal	6

11. List of Diagnostic Trouble Code (DTC)	39
12. Diagnostic Procedure with Diagnostic Trouble Code (DTC)	41

Basic Diagnostic Procedure

HVAC SYSTEM (AUTO A/C) (DIAGNOSTICS)

1. Basic Diagnostic Procedure

A: PROCEDURE

NOTE:

When the sunload sensor check is performed indoors or in the shade, it could be diagnosed as sensor having an open circuit. Always perform the inspection in direct sunlight.

Step	Check	Yes	No
1 START INSPECTIONS. 1) Prepare the tools. <Ref. to AC-17, PREPARATION TOOL, General Description.> 2) Perform the pre-inspection. <Ref. to AC(diag)-3, INSPECTION, General Description.>	Is any malfunction found in pre-inspection?	Fix the malfunction found in pre-inspection, and go to the next inspection step. Go to step 2.	Go to step 2.
2 CHECK DTC. 1) Under the failure condition, leave the vehicle for one minute or more. 2) Read the DTC using Subaru Select Monitor. <Ref. to AC(diag)-33, Read Diagnostic Trouble Code (DTC).> NOTE: <ul style="list-style-type: none">• If the communication function of the Subaru Select Monitor cannot be executed properly, check the communication circuit. <Ref. to AC(diag)-37, COMMUNICATION FOR INITIALIZING IMPOSSIBLE, Diagnostic Procedure for Subaru Select Monitor Communication.>• Record the time stamp and the freeze frame data recorded together with the DTC. For time stamp, refer to "LAN SYSTEM". <Ref. to LAN(diag)-6, TIME STAMP, CAUTION, General Description.>	Is DTC displayed?	<Ref. to AC(diag)-39, LIST, List of Diagnostic Trouble Code (DTC).>	Refer to Diagnostics with Phenomenon. <Ref. to AC(diag)-8, INSPECTION, Diagnostics with Phenomenon.>

General Description

HVAC SYSTEM (AUTO A/C) (DIAGNOSTICS)

2. General Description

A: CAUTION

- 1) Never connect the battery in reverse polarity.
 - Doing so may immediately damage the A/C control panel.
- 2) Do not disconnect the battery cables while the engine is running.
 - A large counter electromotive force will be generated in the generator, and this voltage may damage electronic parts such as A/C control panel etc.
- 3) Before disconnecting the connectors of sensors and the A/C control panel, be sure to turn off the ignition switch.
 - A/C control panel may be damaged.
- 4) Every A/C-related part is a precision part. Do not drop them.
- 5) Airbag system harness is routed near the A/C control panel and junction box.

CAUTION:

- Do not use electrical test equipment on the airbag system harness and connector.
- Be careful not to damage the airbag system harness when servicing the A/C control panel and junction box.

B: INSPECTION

Before performing diagnosis, check the following items which might affect the A/C system problems.

1. BATTERY

Check the battery. <Ref. to SC(H4DO)-52, INSPECTION, Battery.>

C: PREPARATION TOOL

1. SPECIAL TOOL

ILLUSTRATION	TOOL NUMBER	DESCRIPTION	REMARKS
 STSSM4	—	SUBARU SELECT MONITOR 4	Used for setting of each function and troubleshooting for electrical system. NOTE: For detailed operation procedures of Subaru Select Monitor 4, refer to “Application help”.

2. GENERAL TOOL

TOOL NAME	REMARKS
Circuit tester	Used for measuring resistance, voltage and current.
DST-i	Used together with Subaru Select Monitor 4.

Electrical Component Location

B: WIRING DIAGRAM

1. AIR CONDITIONER AUTO A/C MODEL

Refer to "Air Conditioning System" in the wiring diagram. <Ref. to WI-44, WIRING DIAGRAM, Air Conditioning System.>

Diagnostics with Phenomenon

HVAC SYSTEM (AUTO A/C) (DIAGNOSTICS)

5. Diagnostics with Phenomenon

A: INSPECTION

1. Perform the diagnosis according to the diagnostic procedure of the corresponding symptom that is shown in the symptom list.
2. If there are multiple symptoms, perform the diagnosis in the symptom sequence (1 → 2 → ... → 13).

1. SYMPTOM LIST

Symptoms		Diagnostic procedure
1	Nothing is displayed on the screen. No illumination appears on the indicator.	<Ref. to AC(diag)-9, NOTHING IS DISPLAYED ON THE SCREEN. NO ILLUMINATION APPEARS ON THE INDICATOR, DIAGNOSTIC PROCEDURE WITH PHENOMENON, Diagnostics with Phenomenon.>
2	Air conditioner does not stop when pressing the OFF switch.	<Ref. to AC(diag)-10, AIR CONDITIONER DOES NOT STOP WHEN PRESSING THE OFF SWITCH, DIAGNOSTIC PROCEDURE WITH PHENOMENON, Diagnostics with Phenomenon.>
3	Windshield grass does not clear when pressing the DEF switch.	<Ref. to AC(diag)-11, WINDSHIELD GRASS DOES NOT CLEAR WHEN PRESSING THE DEF SWITCH, DIAGNOSTIC PROCEDURE WITH PHENOMENON, Diagnostics with Phenomenon.>
4	Cold air not emitted.	<Ref. to AC(diag)-12, COLD AIR NOT EMITTED, DIAGNOSTIC PROCEDURE WITH PHENOMENON, Diagnostics with Phenomenon.>
5	Warm air not emitted.	<Ref. to AC(diag)-14, WARM AIR NOT EMITTED, DIAGNOSTIC PROCEDURE WITH PHENOMENON, Diagnostics with Phenomenon.>
6	Compartment temperature is lower than setting temperature.	<Ref. to AC(diag)-16, COMPARTMENT TEMPERATURE IS LOWER THAN SETTING TEMPERATURE, DIAGNOSTIC PROCEDURE WITH PHENOMENON, Diagnostics with Phenomenon.>
7	Compartment temperature is higher than setting temperature.	<Ref. to AC(diag)-18, COMPARTMENT TEMPERATURE IS HIGHER THAN SETTING TEMPERATURE, DIAGNOSTIC PROCEDURE WITH PHENOMENON, Diagnostics with Phenomenon.>
8	Air does not come out. Airflow is low. (Blower motor does not rotate.)	<Ref. to AC(diag)-20, AIR DOES NOT COME OUT. AIRFLOW IS LOW, DIAGNOSTIC PROCEDURE WITH PHENOMENON, Diagnostics with Phenomenon.>
9	Airflow cannot be adjusted. (Blower motor turns at a high speed.)	<Ref. to AC(diag)-23, AIR CANNOT BE CONTROLLED, DIAGNOSTIC PROCEDURE WITH PHENOMENON, Diagnostics with Phenomenon.>
10	Cool air does not come out when pressing the A/C switch. Fog cannot be cleared. (Compressor does not operate.)	<Ref. to AC(diag)-25, COOL AIR DOES NOT COME OUT WHEN PRESSING THE A/C SWITCH. FOG CANNOT BE CLEARED. (COMPRESSOR DOES NOT OPERATE.), DIAGNOSTIC PROCEDURE WITH PHENOMENON, Diagnostics with Phenomenon.>
11	Unable to switch suction vents.	<Ref. to AC(diag)-27, UNABLE TO SWITCH SUCTION VENTS, DIAGNOSTIC PROCEDURE WITH PHENOMENON, Diagnostics with Phenomenon.>
12	Unable to switch blow vents.	<Ref. to AC(diag)-29, UNABLE TO SWITCH VENTS, DIAGNOSTIC PROCEDURE WITH PHENOMENON, Diagnostics with Phenomenon.>
13	Illumination does not illuminate or cannot be dimmed.	<Ref. to AC(diag)-30, ILLUMINATION DOES NOT ILLUMINATE OR CANNOT BE DIMMED, DIAGNOSTIC PROCEDURE WITH PHENOMENON, Diagnostics with Phenomenon.>

Diagnostics with Phenomenon

HVAC SYSTEM (AUTO A/C) (DIAGNOSTICS)

B: DIAGNOSTIC PROCEDURE WITH PHENOMENON

1. NOTHING IS DISPLAYED ON THE SCREEN. NO ILLUMINATION APPEARS ON THE INDICATOR

Trouble symptom:

- When the AUTO button is pressed with IGN ON, nothing is displayed on the screen or indicators do not illuminate.
- Self diagnosis using A/C control panel does not operate.

Trouble causes:

- A/C control panel power supply circuit failure
- CAN communication failure

Wiring diagram:

Air conditioning system <Ref. to WI-44, WIRING DIAGRAM, Air Conditioning System.>

AC-02655

Step	Check	Yes	No
1 CHECK FUSE. 1) Turn the ignition switch to OFF. 2) Remove a fuse from fuse & relay box. 3) Check the condition of fuse.	Is the fuse blown out?	Replace the fuse.	Go to step 2.
2 CHECK CONNECTOR. Check for poor contact of connector.	Is there poor contact of connector?	Repair the connector.	Go to step 3.
3 CHECK A/C CONTROL PANEL POWER CIRCUIT. 1) Remove the A/C control panel. 2) Disconnect the A/C control panel connector. 3) Measure the voltage between A/C control panel connector terminal and chassis ground after turning the ignition switch to ON. Connector & terminal (i88) No. 15 (+) — Chassis ground (-): (i88) No. 31 (+) — Chassis ground (-): (i88) No. 32 (+) — Chassis ground (-):	Is the voltage 10 V or more?	Go to step 4.	Check for open or short circuit in the harness between A/C control panel and fuse.

Diagnostics with Phenomenon

HVAC SYSTEM (AUTO A/C) (DIAGNOSTICS)

Step	Check	Yes	No
4 CHECK A/C CONTROL PANEL GROUND CIRCUIT. Measure the resistance of harness between A/C control panel and chassis ground after turning the ignition switch to OFF. Connector & terminal (i88) No. 34 — Chassis ground:	Is the resistance less than 10 Ω ?	Go to step 5.	Repair the harness for ground line.
5 CHECK FOR POOR CONTACT. Check poor contact of A/C control panel connector.	Is there poor contact of connector?	Repair the connector.	Replace the A/C control panel. <Ref. to AC-45, REMOVAL, Control Panel.>

2. AIR CONDITIONER DOES NOT STOP WHEN PRESSING THE OFF SWITCH

TROUBLE SYMPTOM:

Even when the OFF switch is pressed, the blower fan does not turn off, the inlet opening remains in FRESH mode, and the compressor does not turn off.

Trouble causes:

- CAN communication failure
- A/C control panel failure
- Blower motor failure
- Intake door actuator failure
- Compressor failure

Step	Check	Yes	No
1 CHECK A/C CONTROL PANEL. 1) Turn the ignition switch to ON. 2) Press the OFF switch of the A/C control panel. 3) Using Subaru Select Monitor, check the following data in "Read Current Data". <Ref. to AC(diag)-35, Read Current Data.> <ul style="list-style-type: none"> • Blower fan level • Fresh/Recircle Air Door Actuator Position Target 	Does "Blower Fan Level" indicate 0 and "Fresh/Recircle Air Door Actuator Position Target" indicate 100%?	Go to step 2.	Replace the A/C control panel. <Ref. to AC-45, REMOVAL, Control Panel.>
2 CHECK BLOWER MOTOR. With the OFF switch pressed, check the blower motor operation.	Is the blower motor stopped?	Go to step 3.	<Ref. to AC(diag)-23, AIR CANNOT BE CONTROLLED, DIAGNOSTIC PROCEDURE WITH PHENOMENON, Diagnostics with Phenomenon.>
3 CHECK INTAKE DOOR ACTUATOR. With the OFF switch pressed, check the FRESH/RECIRC door operation.	Does the FRESH/RECIRC door set to FRESH?	Go to step 4.	<Ref. to AC(diag)-27, UNABLE TO SWITCH SUCTION VENTS, DIAGNOSTIC PROCEDURE WITH PHENOMENON, Diagnostics with Phenomenon.>

Diagnostics with Phenomenon

HVAC SYSTEM (AUTO A/C) (DIAGNOSTICS)

Step	Check	Yes	No
4 CHECK COMPRESSOR. With the OFF switch pressed, check the compressor operation.	Is the compressor stopped?	The circuit has returned to a normal condition at this time. Reproduce the failure, and then perform the diagnosis again. NOTE: In this case, temporary poor contact of connector, temporary open or short circuit of harness may be the cause.	<Ref. to AC(diag)-25, COOL AIR DOES NOT COME OUT WHEN PRESSING THE A/C SWITCH. FOG CANNOT BE CLEARED. (COMPRESSOR DOES NOT OPERATE.), DIAGNOSTIC PROCEDURE WITH PHENOMENON, Diagnostics with Phenomenon.>

3. WINDSHIELD GRASS DOES NOT CLEAR WHEN PRESSING THE DEF SWITCH

TROUBLE SYMPTOM:

Even when the DEF switch is pressed, the defroster indicator does not illuminate, the outlet opening is not set to DEF, the compressor does not turn on and the FRESH/RECIRC does not switch to FRESH.

Trouble causes:

- CAN communication failure
- A/C control panel failure
- Mode door actuator failure
- Compressor failure
- Intake door actuator failure

Step	Check	Yes	No
1 CHECK A/C CONTROL PANEL. 1) Turn the ignition switch to ON. 2) Press the DEF switch of the A/C control panel. 3) Using Subaru Select Monitor, check the following data in "Read Current Data". <Ref. to AC(diag)-35, Read Current Data.> <ul style="list-style-type: none"> • Mode Door Actuator Position Target • Fresh/Recircle Air Door Actuator Position Target 	Does "Mode Door Actuator Position Target" indicate 100% and "Fresh/Recircle Air Door Actuator Position Target" indicate 100%?	Go to step 2.	Replace the A/C control panel. <Ref. to AC-45, REMOVAL, Control Panel.>
2 CHECK MODE DOOR ACTUATOR. With the DEF switch ON, check the mode door operation.	Does the air come out from the DEF outlet opening?	Go to step 3.	<Ref. to AC(diag)-29, UNABLE TO SWITCH VENTS, DIAGNOSTIC PROCEDURE WITH PHENOMENON, Diagnostics with Phenomenon.>
3 CHECK INTAKE DOOR ACTUATOR. With the DEF switch ON, check the FRESH/RECIRC door operation.	Is FRESH/RECIRC switch turned to "FRESH?"	Go to step 4.	<Ref. to AC(diag)-27, UNABLE TO SWITCH SUCTION VENTS, DIAGNOSTIC PROCEDURE WITH PHENOMENON, Diagnostics with Phenomenon.>

Diagnostics with Phenomenon

HVAC SYSTEM (AUTO A/C) (DIAGNOSTICS)

	Step	Check	Yes	No
4	CHECK COMPRESSOR. With the DEF switch ON, check the compressor operation.	Does the compressor operate?	The circuit has returned to a normal condition at this time. Reproduce the failure, and then perform the diagnosis again. NOTE: In this case, temporary poor contact of connector, temporary open or short circuit of harness may be the cause.	<Ref. to AC(diag)-25, COOL AIR DOES NOT COME OUT WHEN PRESSING THE A/C SWITCH. FOG CANNOT BE CLEARED. (COMPRESSOR DOES NOT OPERATE.), DIAGNOSTIC PROCEDURE WITH PHENOMENON, Diagnostics with Phenomenon.>

4. COLD AIR NOT EMITTED

Trouble symptom:

Cold air not emitted.

Trouble causes:

- Airflow capacity failure
- Refrigerant pressure failure
- CAN communication failure
- A/C control panel failure
- Air mix actuator RH failure
- Air mix actuator LH failure (only with left/right independent air conditioning function)
- Intake door actuator failure
- Evaporator sensor failure
- In-vehicle sensor failure
- Ambient sensor failure
- Sunload sensor failure

	Step	Check	Yes	No
1	CHECK MAX COOL. Set the A/C control panel dials as follows. Temperature control dial: MAX COOL FRESH/RECIRC switch: RECIRC Mode switch or mode dial: VENT A/C switch: ON	Does it fail to blow the cold air?	Go to step 2.	Go to step 4.
2	CHECK AIRFLOW CAPACITY. Check the airflow capacity. <Ref. to AC(diag)-20, AIR DOES NOT COME OUT. AIRFLOW IS LOW, DIAGNOSTIC PROCEDURE WITH PHENOMENON, Diagnostics with Phenomenon.>	Is the airflow capacity normal?	Go to step 3.	Perform repair according to inspection procedure.
3	CHECK AMOUNT OF REFRIGERANT PRESSURE. Check the refrigerant pressure. <Ref. to AC-22, REFRIGERANT GAS PRESSURE INSPECTION, PROCEDURE, Refrigerant Pressure with Manifold Gauge Set.>	Is the refrigerant pressure normal?	Go to step 4.	Perform repair according to refrigerant pressure inspection.

Diagnostics with Phenomenon

HVAC SYSTEM (AUTO A/C) (DIAGNOSTICS)

Step	Check	Yes	No
4 CHECK A/C CONTROL PANEL. 1) Turn the temperature control dials (driver's side) and (passenger's side) to MAX COOL. 2) Using Subaru Select Monitor, display the following data in "Read Current Data". <Ref. to AC(diag)-35, Read Current Data.> <ul style="list-style-type: none"> • Heater Control Panel Setting Value (driver's) • Heater Control Panel Setting Value (passenger's) 	Do "Heater Control Panel Setting Value (Driver's)" and "Heater Control Panel Setting Value (Passenger's)" indicate "60"*1?	Go to step 5.	Replace the A/C control panel. <Ref. to AC-45, REMOVAL, Control Panel.>
5 CHECK A/C CONTROL PANEL. 1) Turn the temperature control dials (driver's side) and (passenger's side) to MAX HOT. 2) Using Subaru Select Monitor, display the following data in "Read Current Data". <Ref. to AC(diag)-35, Read Current Data.> <ul style="list-style-type: none"> • Heater Control Panel Setting Value (driver's) • Heater Control Panel Setting Value (passenger's) 	Do "Heater Control Panel Setting Value (Driver's)" and "Heater Control Panel Setting Value (Passenger's)" indicate "90"*2?	Go to step 6.	Replace the A/C control panel. <Ref. to AC-45, REMOVAL, Control Panel.>
6 CHECK DTC. 1) Turn the ignition switch to ON. 2) Turn the temperature control dial at MAX COOL and leave for 16 seconds or more. (For vehicles with left/right independent air conditioner, perform setting on both sides.) 3) Read the DTC using Subaru Select Monitor. <Ref. to AC(diag)-33, Read Diagnostic Trouble Code (DTC).>	Is DTC B14E1, B14E2, B14E3 or B14E4 displayed?	Perform the diagnosis according to DTC.	Go to step 7.
7 CHECK DTC. 1) Turn the ignition switch to ON. 2) Turn the temperature control dial at MAX HOT and leave for 16 seconds or more. (For vehicles with left/right independent air conditioner, perform setting on both sides.) 3) Read the DTC using Subaru Select Monitor. <Ref. to AC(diag)-33, Read Diagnostic Trouble Code (DTC).>	Is DTC B14E1, B14E2, B14E3 or B14E4 displayed?	Perform the diagnosis according to DTC.	Go to step 8.
8 CHECK INTAKE DOOR ACTUATOR. Visually check the intake door actuator operation.	Is the intake door actuator normal?	Go to step 9.	Check the intake door actuator. <Ref. to AC(diag)-27, UNABLE TO SWITCH SUCTION VENTS, DIAGNOSTIC PROCEDURE WITH PHENOMENON, Diagnostics with Phenomenon.>
9 CHECK EVAPORATOR SENSOR UNIT. Perform the inspection of evaporator sensor unit. <Ref. to AC-75, INSPECTION, Evaporator Sensor.>	Is the evaporator sensor normal?	Go to step 10.	Replace the evaporator sensor. <Ref. to AC-74, REMOVAL, Evaporator Sensor.>
10 CHECK IN-VEHICLE SENSOR UNIT. Check in-vehicle sensor. <Ref. to AC-72, INSPECTION, In-Vehicle Sensor (Auto A/C Model).>	Is the in-vehicle sensor normal?	Go to step 11.	Replace the in-vehicle sensor. <Ref. to AC-71, REMOVAL, In-Vehicle Sensor (Auto A/C Model).>

Diagnostics with Phenomenon

HVAC SYSTEM (AUTO A/C) (DIAGNOSTICS)

Step	Check	Yes	No
11 CHECK AMBIENT SENSOR UNIT. Check the ambient sensor. <Ref. to AC-68, INSPECTION, Ambient Sensor.>	Is the ambient sensor normal?	Go to step 12.	Replace the ambient sensor. <Ref. to AC-67, REMOVAL, Ambient Sensor.>
12 CHECK SUNLOAD SENSOR UNIT. Check the sunload sensor unit. <Ref. to AC-70, INSPECTION, Sunload Sensor (Auto A/C Model).>	Is the sunload sensor normal?	The circuit has returned to a normal condition at this time. Reproduce the failure, and then perform the diagnosis again. NOTE: In this case, temporary poor contact of connector, temporary open or short circuit of harness may be the cause.	Replace the sunload sensor. <Ref. to AC-69, REMOVAL, Sunload Sensor (Auto A/C Model).>

*1: For the 75°F center specification. For the 25°C center specification, the value is 18.

*2: For the 75°F center specification. For the 25°C center specification, the value is 32.

5. WARM AIR NOT EMITTED

Trouble symptom:

Warm air not emitted.

Trouble causes:

- Airflow capacity failure
- Coolant level failure
- CAN communication failure
- A/C control panel failure
- Air mix actuator RH failure
- Air mix actuator LH failure (only with left/right independent air conditioning function)
- Intake door actuator failure
- Evaporator sensor failure
- In-vehicle sensor failure
- Ambient sensor failure
- Sunload sensor failure

Step	Check	Yes	No
1 CHECK MAX HOT. Set the A/C control panel dials as follows. Temperature control dial: MAX HOT FRESH/RECIRC switch: FRESH Mode switch or mode dial: HEAT A/C switch: OFF	Does it fail to blow the hot air?	Go to step 2.	Go to step 4.
2 CHECK AIRFLOW CAPACITY. Check the airflow capacity. <Ref. to AC(diag)-20, AIR DOES NOT COME OUT. AIRFLOW IS LOW, DIAGNOSTIC PROCEDURE WITH PHENOMENON, Diagnostics with Phenomenon.>	Is the airflow capacity normal?	Go to step 3.	Perform repair according to inspection procedure.

Diagnostics with Phenomenon

HVAC SYSTEM (AUTO A/C) (DIAGNOSTICS)

Step	Check	Yes	No	
3	CHECK ENGINE COOLANT. Check engine coolant amount.	Is the engine coolant level within the specification?	Go to step 4.	Fill engine coolant. If there is coolant leakage, repair the leaks according to Engine Cooling System Trouble in General. <Ref. to CO(H4DO)-68, Engine Cooling System Trouble in General.>
4	CHECK A/C CONTROL PANEL. 1) Turn the temperature control dials (driver's side) and (passenger's side) to MAX COOL. 2) Using Subaru Select Monitor, display the following data in "Read Current Data". <Ref. to AC(diag)-35, Read Current Data.> • Heater Control Panel Setting Value (driver's) • Heater Control Panel Setting Value (passenger's)	Do "Heater Control Panel Setting Value (Driver's)" and "Heater Control Panel Setting Value (Passenger's)" indicate "60"*1?	Go to step 5.	Replace the A/C control panel. <Ref. to AC-45, REMOVAL, Control Panel.>
5	CHECK A/C CONTROL PANEL. 1) Turn the temperature control dials (driver's side) and (passenger's side) to MAX HOT. 2) Using Subaru Select Monitor, display the following data in "Read Current Data". <Ref. to AC(diag)-35, Read Current Data.> • Heater Control Panel Setting Value (driver's) • Heater Control Panel Setting Value (passenger's)	Do "Heater Control Panel Setting Value (Driver's)" and "Heater Control Panel Setting Value (Passenger's)" indicate "90"*2?	Go to step 6.	Replace the A/C control panel. <Ref. to AC-45, REMOVAL, Control Panel.>
6	CHECK DTC. 1) Turn the ignition switch to ON. 2) Turn the temperature control dial at MAX COOL and leave for 16 seconds or more. (For vehicles with left/right independent air conditioner, perform setting on both sides.) 3) Read the DTC using Subaru Select Monitor. <Ref. to AC(diag)-33, Read Diagnostic Trouble Code (DTC).>	Is DTC B14E1, B14E2, B14E3 or B14E4 displayed?	Perform the diagnosis according to DTC.	Go to step 7.
7	CHECK DTC. 1) Turn the ignition switch to ON. 2) Turn the temperature control dial at MAX HOT and leave for 16 seconds or more. (For vehicles with left/right independent air conditioner, perform setting on both sides.) 3) Read the DTC using Subaru Select Monitor. <Ref. to AC(diag)-33, Read Diagnostic Trouble Code (DTC).>	Is DTC B14E1, B14E2, B14E3 or B14E4 displayed?	Perform the diagnosis according to DTC.	Go to step 8.
8	CHECK INTAKE DOOR ACTUATOR. Visually check the intake door actuator operation.	Is the intake door actuator normal?	Go to step 9.	Check the intake door actuator. <Ref. to AC(diag)-27, UNABLE TO SWITCH SUCTION VENTS, DIAGNOSTIC PROCEDURE WITH PHENOMENON, Diagnostics with Phenomenon.>

Diagnostics with Phenomenon

HVAC SYSTEM (AUTO A/C) (DIAGNOSTICS)

Step	Check	Yes	No
9 CHECK EVAPORATOR SENSOR UNIT. Perform the inspection of evaporator sensor unit. <Ref. to AC-75, INSPECTION, Evaporator Sensor.>	Is the evaporator sensor normal?	Go to step 10.	Replace the evaporator sensor. <Ref. to AC-74, REMOVAL, Evaporator Sensor.>
10 CHECK IN-VEHICLE SENSOR UNIT. Check in-vehicle sensor circuit. <Ref. to AC-72, INSPECTION, In-Vehicle Sensor (Auto A/C Model).>	Is the in-vehicle sensor circuit normal?	Go to step 11.	Replace the in-vehicle sensor. <Ref. to AC-71, REMOVAL, In-Vehicle Sensor (Auto A/C Model).>
11 CHECK AMBIENT SENSOR UNIT. Check the ambient sensor. <Ref. to AC-68, INSPECTION, Ambient Sensor.>	Is the ambient sensor normal?	Go to step 12.	Replace the ambient sensor. <Ref. to AC-67, REMOVAL, Ambient Sensor.>
12 CHECK SUNLOAD SENSOR UNIT. Check the sunload sensor unit. <Ref. to AC-70, INSPECTION, Sunload Sensor (Auto A/C Model).>	Is the sunload sensor normal?	The circuit has returned to a normal condition at this time. Reproduce the failure, and then perform the diagnosis again. NOTE: In this case, temporary poor contact of connector, temporary open or short circuit of harness may be the cause.	Replace the sunload sensor. <Ref. to AC-69, REMOVAL, Sunload Sensor (Auto A/C Model).>

*1: For the 75°F center specification. For the 25°C center specification, the value is 18.

*2: For the 75°F center specification. For the 25°C center specification, the value is 32.

6. COMPARTMENT TEMPERATURE IS LOWER THAN SETTING TEMPERATURE

Trouble symptom:

Compartment temperature is excessively lower than setting temperature.

Trouble causes:

- Large airflow capacity
- Refrigerant pressure failure
- CAN communication failure
- A/C control panel failure
- Air mix actuator RH failure
- Air mix actuator LH failure (only with left/right independent air conditioning function)
- Evaporator sensor failure
- In-vehicle sensor failure
- Ambient sensor failure
- Sunload sensor failure

Step	Check	Yes	No
1 CHECK AIRFLOW CAPACITY. Check the airflow capacity. <Ref. to AC(diag)-23, AIR CANNOT BE CONTROLLED, DIAGNOSTIC PROCEDURE WITH PHENOMENON, Diagnostics with Phenomenon.>	Is the airflow capacity normal?	Go to step 2.	Perform repair according to inspection procedure.

Diagnostics with Phenomenon

HVAC SYSTEM (AUTO A/C) (DIAGNOSTICS)

Step	Check	Yes	No
2 CHECK AMOUNT OF REFRIGERANT PRESSURE. Check the refrigerant pressure. <Ref. to AC-22, REFRIGERANT GAS PRESSURE INSPECTION, PROCEDURE, Refrigerant Pressure with Manifold Gauge Set.>	Is the refrigerant pressure normal?	Go to step 3.	Perform repair according to refrigerant pressure inspection.
3 CHECK A/C CONTROL PANEL. 1) Turn the temperature control dials (driver's side) and (passenger's side) to MAX COOL. 2) Using Subaru Select Monitor, display the following data in "Read Current Data". <Ref. to AC(diag)-35, Read Current Data.> <ul style="list-style-type: none"> • Heater Control Panel Setting Value (driver's) • Heater Control Panel Setting Value (passenger's) 	Do "Heater Control Panel Setting Value (Driver's)" and "Heater Control Panel Setting Value (Passenger's)" indicate "60"*1?	Go to step 4.	Replace the A/C control panel. <Ref. to AC-45, REMOVAL, Control Panel.>
4 CHECK A/C CONTROL PANEL. 1) Turn the temperature control dials (driver's side) and (passenger's side) to MAX HOT. 2) Using Subaru Select Monitor, display the following data in "Read Current Data". <Ref. to AC(diag)-35, Read Current Data.> <ul style="list-style-type: none"> • Heater Control Panel Setting Value (driver's) • Heater Control Panel Setting Value (passenger's) 	Do "Heater Control Panel Setting Value (Driver's)" and "Heater Control Panel Setting Value (Passenger's)" indicate "90"*2?	Go to step 5.	Replace the A/C control panel. <Ref. to AC-45, REMOVAL, Control Panel.>
5 CHECK DTC. 1) Turn the ignition switch to ON. 2) Turn the temperature control dial at MAX COOL and leave for 16 seconds or more. (For vehicles with left/right independent air conditioner, perform setting on both sides.) 3) Read the DTC using Subaru Select Monitor. <Ref. to AC(diag)-33, Read Diagnostic Trouble Code (DTC).>	Is DTC B14E1, B14E2, B14E3 or B14E4 displayed?	Perform the diagnosis according to DTC.	Go to step 6.
6 CHECK DTC. 1) Turn the ignition switch to ON. 2) Turn the temperature control dial at MAX HOT and leave for 16 seconds or more. (For vehicles with left/right independent air conditioner, perform setting on both sides.) 3) Read the DTC using Subaru Select Monitor. <Ref. to AC(diag)-33, Read Diagnostic Trouble Code (DTC).>	Is DTC B14E1, B14E2, B14E3 or B14E4 displayed?	Perform the diagnosis according to DTC.	Go to step 7.
7 CHECK EVAPORATOR SENSOR UNIT. Perform the inspection of evaporator sensor unit. <Ref. to AC-75, INSPECTION, Evaporator Sensor.>	Is the evaporator sensor normal?	Go to step 8.	Replace the evaporator sensor. <Ref. to AC-74, REMOVAL, Evaporator Sensor.>
8 CHECK IN-VEHICLE SENSOR UNIT. Check in-vehicle sensor circuit. <Ref. to AC-72, INSPECTION, In-Vehicle Sensor (Auto A/C Model).>	Is the in-vehicle sensor circuit normal?	Go to step 9.	Replace the in-vehicle sensor. <Ref. to AC-71, REMOVAL, In-Vehicle Sensor (Auto A/C Model).>
9 CHECK AMBIENT SENSOR UNIT. Check the ambient sensor. <Ref. to AC-68, INSPECTION, Ambient Sensor.>	Is the ambient sensor normal?	Go to step 10.	Replace the ambient sensor. <Ref. to AC-67, REMOVAL, Ambient Sensor.>

Diagnostics with Phenomenon

HVAC SYSTEM (AUTO A/C) (DIAGNOSTICS)

Step	Check	Yes	No
10 CHECK SUNLOAD SENSOR UNIT. Check the sunload sensor unit. <Ref. to AC-70, INSPECTION, Sunload Sensor (Auto A/C Model).>	Is the sunload sensor normal?	The circuit has returned to a normal condition at this time. Reproduce the failure, and then perform the diagnosis again. NOTE: In this case, temporary poor contact of connector, temporary open or short circuit of harness may be the cause.	Replace the sunload sensor. <Ref. to AC-69, REMOVAL, Sunload Sensor (Auto A/C Model).>

*1: For the 75°F center specification. For the 25°C center specification, the value is 18.

*2: For the 75°F center specification. For the 25°C center specification, the value is 32.

7. COMPARTMENT TEMPERATURE IS HIGHER THAN SETTING TEMPERATURE

Trouble symptom:

Compartment temperature is excessively higher than setting temperature.

Trouble causes:

- Large airflow capacity
- CAN communication failure
- A/C control panel failure
- Air mix actuator RH failure
- Air mix actuator LH failure (only with left/right independent air conditioning function)
- Intake door actuator failure
- Evaporator sensor failure
- In-vehicle sensor failure
- Ambient sensor failure
- Sunload sensor failure

Step	Check	Yes	No
1 CHECK AIRFLOW CAPACITY. Check the airflow capacity. <Ref. to AC(diag)-23, AIR CANNOT BE CONTROLLED, DIAGNOSTIC PROCEDURE WITH PHENOMENON, Diagnostics with Phenomenon.>	Is the airflow capacity normal?	Go to step 2.	Perform repair according to inspection procedure.
2 CHECK A/C CONTROL PANEL. 1) Turn the temperature control dials (driver's side) and (passenger's side) to MAX COOL. 2) Using Subaru Select Monitor, display the following data in "Read Current Data". <Ref. to AC(diag)-35, Read Current Data.> <ul style="list-style-type: none"> • Heater Control Panel Setting Value (driver's) • Heater Control Panel Setting Value (passenger's) 	Do "Heater Control Panel Setting Value (Driver's)" and "Heater Control Panel Setting Value (Passenger's)" indicate "60"*1?	Go to step 3.	Replace the A/C control panel. <Ref. to AC-45, REMOVAL, Control Panel.>

Diagnostics with Phenomenon

HVAC SYSTEM (AUTO A/C) (DIAGNOSTICS)

Step	Check	Yes	No
3 CHECK A/C CONTROL PANEL. 1) Turn the temperature control dials (driver's side) and (passenger's side) to MAX HOT. 2) Using Subaru Select Monitor, display the following data in "Read Current Data". <Ref. to AC(diag)-35, Read Current Data.> • Heater Control Panel Setting Value (driver's) • Heater Control Panel Setting Value (passenger's)	Do "Heater Control Panel Setting Value (Driver's)" and "Heater Control Panel Setting Value (Passenger's)" indicate "90"*2?	Go to step 4.	Replace the A/C control panel. <Ref. to AC-45, REMOVAL, Control Panel.>
4 CHECK DTC. 1) Turn the ignition switch to ON. 2) Turn the temperature control dial at MAX COOL and leave for 16 seconds or more. (For vehicles with left/right independent air conditioner, perform setting on both sides.) 3) Read the DTC using Subaru Select Monitor. <Ref. to AC(diag)-33, Read Diagnostic Trouble Code (DTC).>	Is DTC B14E1, B14E2, B14E3 or B14E4 displayed?	Perform the diagnosis according to DTC.	Go to step 5.
5 CHECK DTC. 1) Turn the ignition switch to ON. 2) Turn the temperature control dial at MAX HOT and leave for 16 seconds or more. (For vehicles with left/right independent air conditioner, perform setting on both sides.) 3) Read the DTC using Subaru Select Monitor. <Ref. to AC(diag)-33, Read Diagnostic Trouble Code (DTC).>	Is DTC B14E1, B14E2, B14E3 or B14E4 displayed?	Perform the diagnosis according to DTC.	Go to step 6.
6 CHECK INTAKE DOOR ACTUATOR. Visually check the intake door actuator operation.	Is the intake door actuator normal?	Go to step 7.	Check the intake door actuator. <Ref. to AC(diag)-27, UNABLE TO SWITCH SUCTION VENTS, DIAGNOSTIC PROCEDURE WITH PHENOMENON, Diagnostics with Phenomenon.>
7 CHECK EVAPORATOR SENSOR UNIT. Perform the inspection of evaporator sensor unit. <Ref. to AC-75, INSPECTION, Evaporator Sensor.>	Is the evaporator sensor normal?	Go to step 8.	Replace the evaporator sensor. <Ref. to AC-74, REMOVAL, Evaporator Sensor.>
8 CHECK IN-VEHICLE SENSOR UNIT. Check in-vehicle sensor circuit. <Ref. to AC-72, INSPECTION, In-Vehicle Sensor (Auto A/C Model).>	Is the in-vehicle sensor circuit normal?	Go to step 9.	Replace the in-vehicle sensor. <Ref. to AC-71, REMOVAL, In-Vehicle Sensor (Auto A/C Model).>
9 CHECK AMBIENT SENSOR UNIT. Check the ambient sensor. <Ref. to AC-68, INSPECTION, Ambient Sensor.>	Is the ambient sensor normal?	Go to step 10.	Replace the ambient sensor. <Ref. to AC-67, REMOVAL, Ambient Sensor.>

Diagnostics with Phenomenon

HVAC SYSTEM (AUTO A/C) (DIAGNOSTICS)

Step	Check	Yes	No
10 CHECK SUNLOAD SENSOR UNIT. Check the sunload sensor unit. <Ref. to AC-70, INSPECTION, Sunload Sensor (Auto A/C Model).>	Is the sunload sensor normal?	The circuit has returned to a normal condition at this time. Reproduce the failure, and then perform the diagnosis again. NOTE: In this case, temporary poor contact of connector, temporary open or short circuit of harness may be the cause.	Replace the sunload sensor. <Ref. to AC-69, REMOVAL, Sunload Sensor (Auto A/C Model).>

*1: For the 75°F center specification. For the 25°C center specification, the value is 18.

*2: For the 75°F center specification. For the 25°C center specification, the value is 32.

8. AIR DOES NOT COME OUT. AIRFLOW IS LOW

Trouble symptom:

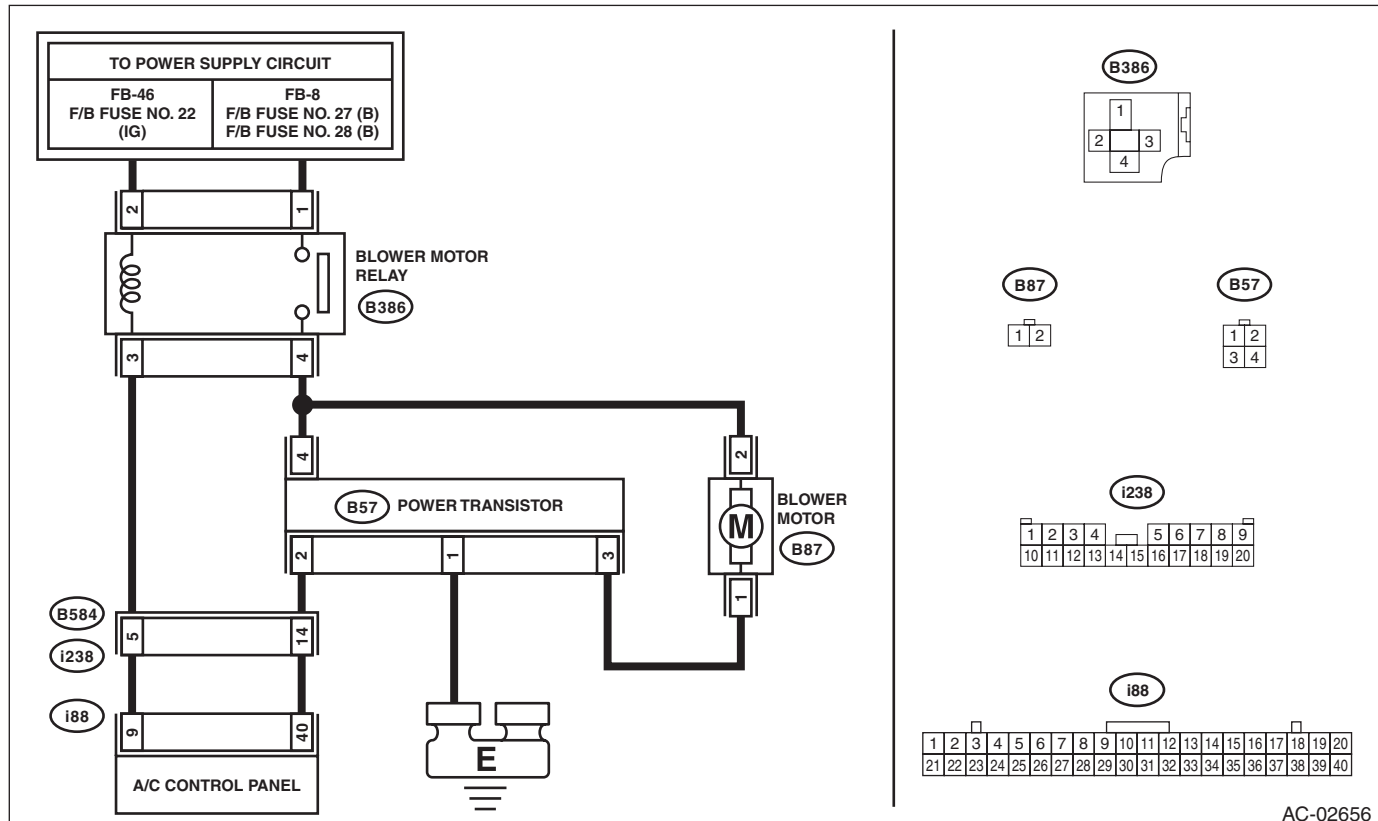

- Airflow capacity is insufficient.
- Air does not come out when operating the fan dial.

Trouble causes:

- Airflow capacity failure
- CAN communication failure
- A/C control panel failure
- Blower motor failure

Wiring diagram:

Air conditioning system <Ref. to WI-44, WIRING DIAGRAM, Air Conditioning System.>

AC-02656

Diagnostics with Phenomenon

HVAC SYSTEM (AUTO A/C) (DIAGNOSTICS)

Step	Check	Yes	No
1 CHECK A/C CONTROL PANEL. 1) Using Subaru Select Monitor, display the following data in "Read Current Data". <Ref. to AC(diag)-35, Read Current Data.> <ul style="list-style-type: none"> • Air mix door actuator position (driver's side) • Air mix door actuator position (passenger's) • Blower fan level 2) Turn the temperature control dial at MAX COOL and increase and decrease the A/C control panel fan dial. (For vehicles with left/right independent air conditioner, perform setting on both sides.)	Do "Air mix door actuator position (driver's side)" and "Air mix door actuator position (passenger's side)" indicate "0%"? Also, does the value of "Blower Fan Level" increase or decrease in conjunction with the fan dial operation?	Go to step 2.	Go to step 5.
2 CHECK AIRFLOW CAPACITY. Turn the temperature control dial to LO (both dials for the models equipped with left/right independent air conditioning function), A/C control panel fan dial to MAX and FRESH/RECIRC switch to RECIRC.	Is the airflow capacity insufficient for the same model?	Go to step 3.	The circuit has returned to a normal condition at this time. Reproduce the failure, and then perform the diagnosis again. NOTE: In this case, temporary poor contact of connector, temporary open or short circuit of harness may be the cause.
3 CHECK A/C FILTER. Check the A/C filter.	Is the A/C filter normal?	Go to step 4.	Clean or replace the A/C filter.
4 CHECK EACH DUCT. Check each duct joint for disconnection or clogging.	Is each duct normal?	Go to step 5.	Repair the faulty duct.
5 CHECK A/C CONTROL PANEL. 1) Turn the ignition switch to ON. 2) Turn the fan dial to the maximum position. 3) Using the Subaru Select Monitor, check "Blower Fan Level" of the current data from the A/C diagnosis. <Ref. to AC(diag)-35, Read Current Data.>	Does "Blower Fan Level" indicate "7"?	Go to step 6.	Replace the A/C control panel. <Ref. to AC-45, REMOVAL, Control Panel.>
6 CHECK A/C CONTROL PANEL. 1) Turn the fan dial to the minimum position. 2) Using the Subaru Select Monitor, check "Blower Fan Level" of the current data from the A/C diagnosis. <Ref. to AC(diag)-35, Read Current Data.>	Does "Blower Fan Level" indicate "1"?	Go to step 7.	Replace the A/C control panel. <Ref. to AC-45, REMOVAL, Control Panel.>
7 CHECK CONNECTOR. Check for poor contact of connector.	Is there poor contact of connector?	Repair the connector.	Go to step 8.
8 CHECK FUSE. 1) Remove a fuse in the fuse & relay box. 2) Check the condition of fuse.	Is the fuse blown out?	Replace the fuse.	Go to step 9.

Diagnostics with Phenomenon

HVAC SYSTEM (AUTO A/C) (DIAGNOSTICS)

Step	Check	Yes	No
9 CHECK BLOWER MOTOR RELAY ON SIGNAL. 1) Stop the engine. 2) Turn the fan dial OFF. 3) Turn the ignition switch to ON. 4) Using a tester, measure the voltage between the A/C control panel connector (i88) and chassis ground. Connector & terminal (i88) No. 9 (+) — Chassis ground (-):	Is the voltage 10 V or more?	Go to step 10.	<ul style="list-style-type: none"> • Check for open or short circuit in the harness between fuse and ECM. • Check the blower relay connector and relay unit. <Ref. to AC-34, CHECK RELAY, INSPECTION, Relay and Fuse.>
10 CHECK BLOWER MOTOR RELAY ON SIGNAL. 1) Start the engine. 2) Turn the fan dial to ON. 3) Using a tester, measure the voltage between the A/C control panel connector (i88) and chassis ground. Connector & terminal (i88) No. 9 (+) — Chassis ground (-):	Is the voltage 0 V?	Go to step 11.	Replace the A/C control panel. <Ref. to AC-45, REMOVAL, Control Panel.>
11 CHECK BLOWER MOTOR POWER SUPPLY CIRCUIT. 1) Turn the ignition switch to ON. 2) Turn the fan dial to ON. 3) Use a tester to measure the voltage between the blower motor connector (B87) and chassis ground. Connector & terminal (B87) No. 2 (+) — Chassis ground (-):	Is the voltage 10 V or more?	Go to step 12.	<ul style="list-style-type: none"> • Check the blower motor power supply line harness for open circuit or connector disconnection. • Check the blower relay connector and relay unit. <Ref. to AC-34, CHECK RELAY, INSPECTION, Relay and Fuse.>
12 CHECK BLOWER MOTOR UNIT. Check the blower motor. <Ref. to AC-39, INSPECTION, Blower Motor.>	Is the blower motor OK?	Go to step 13.	Replace the blower motor. <Ref. to AC-38, REMOVAL, Blower Motor.>
13 CHECK HARNESS. 1) Disconnect the power transistor and A/C control panel connector. 2) Using a tester, measure the resistance between harness terminals. Connector & terminal (B386) No. 4 — (B57) No. 4: (B87) No. 1 — (B57) No. 3: (B57) No. 2 — (i88) No. 40: (B57) No. 1 — Chassis ground:	Is the resistance less than 1 Ω ?	Go to step 14.	Repair or replace the open circuit of harness.
14 CHECK HARNESS. Use a tester to measure the harness resistance between the power transistor connector and chassis ground. Connector & terminal (B57) No. 2 — Chassis ground:	Is the resistance less than 1 Ω ?	Repair or replace the short circuit of the harness.	Go to step 15.

Diagnostics with Phenomenon

HVAC SYSTEM (AUTO A/C) (DIAGNOSTICS)

Step	Check	Yes	No	
15	CHECK POWER TRANSISTOR. Replace the power transistor with a properly functioning part.	Does the blower motor rotate?	Replace the power transistor. <Ref. to AC-40, REMOVAL, Power Transistor (Auto A/C Model).>	Replace the A/C control panel. <Ref. to AC-45, REMOVAL, Control Panel.>

9. AIR CANNOT BE CONTROLLED

Trouble symptom:

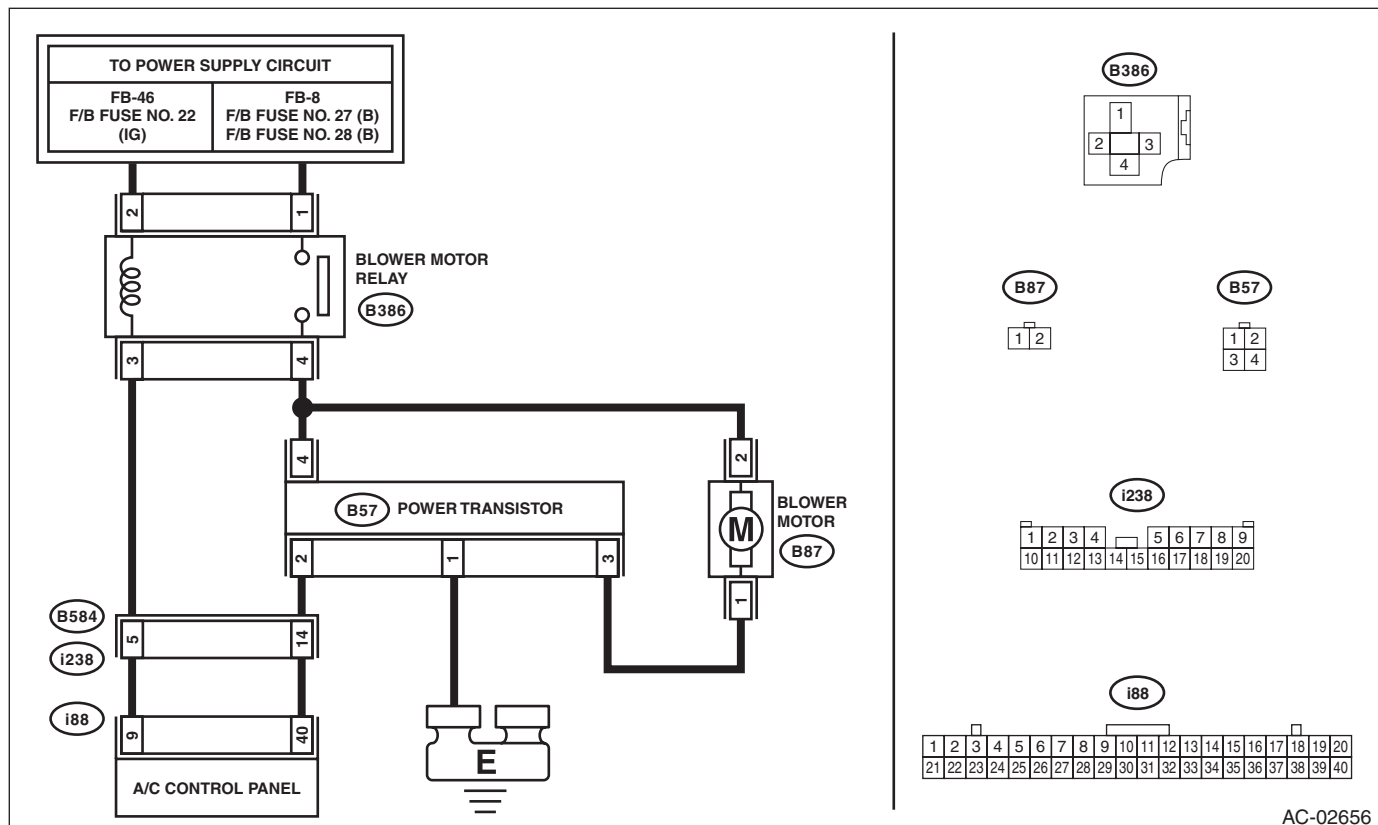

- The blower rotates even though the blower switch is not turned on.
- The blower motor continues to rotate at high speed. (Not adjustable.)

Trouble causes:

- Airflow capacity failure
- CAN communication failure
- A/C control panel failure
- Blower motor failure

Wiring diagram:

Air conditioning system <Ref. to WI-44, WIRING DIAGRAM, Air Conditioning System.>

AC-02656

Step	Check	Yes	No	
1	CHECK A/C CONTROL PANEL. 1) Turn the ignition switch to ON. 2) Turn the fan dial to the maximum position. 3) Using the Subaru Select Monitor, check "Blower Fan Level" of the current data from the A/C diagnosis. <Ref. to AC(diag)-35, Read Current Data.>	Does "Blower Fan Level" indicate "7"?	Go to step 2.	Replace the A/C control panel. <Ref. to AC-45, REMOVAL, Control Panel.>

Diagnostics with Phenomenon

HVAC SYSTEM (AUTO A/C) (DIAGNOSTICS)

Step	Check	Yes	No
2 CHECK A/C CONTROL PANEL. 1) Turn the fan dial to the minimum position. 2) Using the Subaru Select Monitor, check "Blower Fan Level" of the current data from the A/C diagnosis. <Ref. to AC(diag)-35, Read Current Data.>	Does "Blower Fan Level" indicate "1"?	Go to step 3.	Replace the A/C control panel. <Ref. to AC-45, REMOVAL, Control Panel.>
3 CHECK HARNESS. 1) Turn the ignition switch to OFF. 2) Disconnect the power transistor connector. 3) Use a tester to measure the resistance between the power transistor connector and chassis ground. Connector & terminal (B57) No. 4 — Chassis ground:	Is the resistance less than 1 Ω ?	Repair or replace the short circuit of the harness between blower motor and power transistor.	Go to step 4.
4 CHECK HARNESS. 1) Remove the A/C control panel. 2) Turn the ignition switch to ON. 3) Use a tester to measure the resistance between the power transistor connector and chassis ground. Connector & terminal (B57) No. 2 — Chassis ground:	Is the resistance less than 1 Ω ?	Repair or replace the short circuit of the harness between A/C control panel and power transistor.	Go to step 5.
5 CHECK HARNESS. 1) Connect the disconnected connectors. 2) Turn the ignition switch to ON. 3) Use a tester to measure the voltage between the power transistor connector and chassis ground. Connector & terminal (B57) No. 2 (+) — Chassis ground (-):	Is the voltage approx. 9 V when fan dial in 1st, and approx. 3.5 V when fan dial in 6th?	Replace the power transistor. <Ref. to AC-40, REMOVAL, Power Transistor (Auto A/C Model).>	Go to step 6.
6 CHECK A/C CONTROL PANEL. 1) Turn the fan dial OFF. 2) Disconnect the power transistor connector. 3) Use a tester to measure the resistance between the power transistor connector and chassis ground. Connector & terminal (B57) No. 2 — Chassis ground:	When the fan dial is OFF and other than OFF, does the resistance change?	Replace the power transistor. <Ref. to AC-40, REMOVAL, Power Transistor (Auto A/C Model).>	Replace the A/C control panel. <Ref. to AC-45, REMOVAL, Control Panel.>

Diagnostics with Phenomenon

HVAC SYSTEM (AUTO A/C) (DIAGNOSTICS)

10. COOL AIR DOES NOT COME OUT WHEN PRESSING THE A/C SWITCH. FOG CANNOT BE CLEARED. (COMPRESSOR DOES NOT OPERATE.)

Trouble symptom:

Compressor does not operate after turning the A/C switch to ON and fan dial between LO and HI.

Trouble causes:

Compressor failure

Wiring diagram:

Air conditioning system <Ref. to WI-44, WIRING DIAGRAM, Air Conditioning System.>

AC-10174

Step	Check	Yes	No
1 CHECK A/C CONTROL PANEL. 1) Leave the vehicle under the condition at ambient temperature of 15°C (59°F) or more. 2) Turn the ignition switch to ON. 3) Turn the fan dial to the maximum position. 4) Press the A/C switch.	Is "A/C" displayed on the A/C control panel?	Go to step 2.	Replace the A/C control panel. <Ref. to AC-45, REMOVAL, Control Panel.>

Diagnostics with Phenomenon

HVAC SYSTEM (AUTO A/C) (DIAGNOSTICS)

Step	Check	Yes	No
2 CHECK EVAPORATOR SENSOR. Using the Subaru Select Monitor, check "Evaporator Temperature" of the current data from the A/C diagnosis. <Ref. to AC(diag)-35, Read Current Data.>	Does the data indicate -0.5 degrees or more?	Go to step 4.	Go to step 3.
3 CHECK EVAPORATOR SENSOR. Check the evaporator sensor. <Ref. to AC-75, INSPECTION, Evaporator Sensor.>	Is the sensor normal?	Go to step 4.	Replace the evaporator sensor. <Ref. to AC-74, REMOVAL, Evaporator Sensor.>
4 CHECK PRESSURE SWITCH. Check the pressure switch connection.	Is the connector normal?	Go to step 5.	Repair the connector.
5 CHECK PRESSURE SWITCH. Using the Subaru Select Monitor, check "A/C Pressure Switch" of the current data from Air Conditioning Diagnosis. <Ref. to AC(diag)-35, Read Current Data.>	Does the data indicate normal?	Go to step 10.	Go to step 6.
6 CHECK AMOUNT OF REFRIGERANT PRESSURE. Check the refrigerant pressure. <Ref. to AC-22, REFRIGERANT GAS PRESSURE INSPECTION, PROCEDURE, Refrigerant Pressure with Manifold Gauge Set.>	Is the refrigerant pressure normal?	Go to step 7.	Perform repair according to refrigerant pressure inspection.
7 CHECK CONNECTOR. Check poor contact of A/C control panel connector.	Is the connector normal?	Go to step 8.	Repair the connector.
8 CHECK FUSE. 1) Turn the ignition switch to ON. 2) Remove a fuse in the fuse & relay box. 3) Check the fuse.	Is the fuse normal?	Go to step 9.	Replace the fuse.
9 CHECK PRESSURE SWITCH SIGNAL. 1) Turn the ignition switch to OFF. 2) Disconnect the A/C control panel connector. 3) Turn the ignition switch to ON. 4) Measure the voltage between A/C control panel connector terminal and chassis ground. Connector & terminal (i88) No. 11 (+) — Chassis ground (-):	Is the voltage 10 V or more?	Replace the A/C control panel. <Ref. to AC-45, REMOVAL, Control Panel.>	<ul style="list-style-type: none"> • Check for open or short circuit in the harness between fuse and A/C control panel. • Check for poor contact of pressure switch connector.
10 CHECK CAN COMMUNICATION CIRCUIT. Using the Subaru Select Monitor, check "A/C Switch" of the current data from Engine Diagnosis. <Ref. to EN(H4DO)(diag)-36, DISPLAY ENGINE CURRENT DATA, OPERATION, Subaru Select Monitor.>	Does the data indicate ON?	Go to step 12.	Go to step 11.
11 CHECK CAN COMMUNICATION CIRCUIT. Perform the diagnosis for LAN system. <Ref. to LAN(diag)-2, PROCEDURE, Basic Diagnostic Procedure.>	Is the system normal?	Repair it according to DTC of LAN system.	Replace the A/C control panel. <Ref. to AC-45, REMOVAL, Control Panel.>

Diagnostics with Phenomenon

HVAC SYSTEM (AUTO A/C) (DIAGNOSTICS)

Step	Check	Yes	No
12 CHECK A/C RELAY ON SIGNAL. 1) Disconnect the ECM connector. 2) Turn the ignition switch to ON. 3) Measure the voltage between ECM connector terminal and chassis ground. Connector & terminal (B135) No. 35 (+) — Chassis ground (-):	Is the voltage 10 V or more?	Go to step 13.	<ul style="list-style-type: none"> • Check for open or short in the harness between pressure switch and ECM. • Check poor contact of A/C relay connector. • Check the A/C relay. <Ref. to AC-34, INSPECTION, Relay and Fuse.>
13 CHECK A/C RELAY ON SIGNAL. 1) Start the engine. 2) Turn the A/C switch to ON. 3) Turn the temperature control dial at maximum cool position. 4) Measure the voltage between ECM connector terminal and chassis ground. Connector & terminal (B135) No. 35 (+) — Chassis ground (-):	Is the voltage 0 V?	Go to step 14.	Replace the ECM. <Ref. to FU(H4DO)-98, Engine Control Module (ECM).>
14 CHECK MAGNET CLUTCH POWER SUPPLY CIRCUIT. 1) Stop the engine. 2) Disconnect the magnet clutch connector. 3) Start the engine. 4) Turn the A/C switch to ON. 5) Turn the temperature control dial at maximum cool position. 6) Measure the voltage between magnet clutch connector terminal and chassis ground. Connector & terminal (F24) No. 1 (+) — Chassis ground (-):	Is the voltage 10 V or more?	Check the magnet clutch. <Ref. to AC-50, INSPECTION, Compressor.>	<ul style="list-style-type: none"> • Check for open or short circuit in the harness between fuse and magnet clutch. • Check poor contact of A/C relay connector. • Check the A/C relay. <Ref. to AC-34, INSPECTION, Relay and Fuse.>

11.UNABLE TO SWITCH SUCTION VENTS

TROUBLE SYMPTOM:

Even when the FRESH/RECIRC switch is pressed, the inlet opening does not switch to RECIRC → FRESH or FRESH → RECIRC.

Trouble causes:

Intake door actuator failure

Step	Check	Yes	No
1 VISUALLY CHECK FRESH/RECIRC DOOR OPERATION. 1) Remove the glove box. <Ref. to EI-56, REMOVAL, Glove Box.> 2) Operate the FRESH/RECIRC switch, and visually check the intake door operation.	Does the intake door operate normally? Is the portion between intake door and intake door case sealed completely?	The circuit has returned to a normal condition at this time. Reproduce the failure, and then perform the diagnosis again. NOTE: In this case, temporary poor contact of connector, temporary open or short circuit of harness may be the cause.	Go to step 2.

Diagnostics with Phenomenon

HVAC SYSTEM (AUTO A/C) (DIAGNOSTICS)

Step	Check	Yes	No
2 CHECK A/C CONTROL PANEL. 1) Turn the ignition switch to ON. 2) Using the Subaru Select Monitor, check "Fresh/Recircle Air Door Actuator Position Target" of the current data from the A/C diagnosis. <Ref. to AC(diag)-35, Read Current Data.> 3) Operate the FRESH/RECIRC switch.	Does "Fresh/Recircle Air Door Actuator Position Target" indicate 0 ↔ 100?	Go to step 3.	Replace the A/C control panel. <Ref. to AC-45, REMOVAL, Control Panel.>
3 CHECK DTC. 1) Turn the FRESH/RECIRC switch to RECIRC, and leave for 16 seconds or more. 2) Read the DTC using Subaru Select Monitor. <Ref. to AC(diag)-33, Read Diagnostic Trouble Code (DTC).>	Is DTC B14E9, B14EA and B14EB displayed?	Perform the diagnosis according to DTC.	Go to step 4.
4 CHECK DTC. 1) Turn the FRESH/RECIRC switch to FRESH, and leave for 16 seconds or more. 2) Read the DTC using Subaru Select Monitor. <Ref. to AC(diag)-33, Read Diagnostic Trouble Code (DTC).>	Is DTC B14E9, B14EA and B14EB displayed?	Perform the diagnosis according to DTC.	The circuit has returned to a normal condition at this time. Reproduce the failure, and then perform the diagnosis again. NOTE: In this case, temporary poor contact of connector, temporary open or short circuit of harness may be the cause.

Diagnostics with Phenomenon

HVAC SYSTEM (AUTO A/C) (DIAGNOSTICS)

12.UNABLE TO SWITCH VENTS

TROUBLE SYMPTOM:

- Unable to switch blow vents.
- Outlet opening does not switch in the sequence of FACE → B/L → FOOT → F/D after operating the mode switch or mode dial.

Trouble causes:

Mode door actuator failure

Step	Check	Yes	No
1 CHECK A/C CONTROL PANEL. 1) Turn the ignition switch to ON. 2) Using the Subaru Select Monitor, check "Mode Door Actuator Position Target" of the current data from the A/C diagnosis. <Ref. to AC(diag)-35, Read Current Data.> 3) Operate the mode change switch.	Does the value for "Mode Door Actuator Position Target" change?	Go to step 2.	Replace the A/C control panel. <Ref. to AC-45, REMOVAL, Control Panel.>
2 CHECK DTC. 1) Set the mode change switch to DEF, and wait for 16 seconds or more. 2) Read the DTC using Subaru Select Monitor. <Ref. to AC(diag)-33, Read Diagnostic Trouble Code (DTC).>	Is DTC B14E5 and B14E6 displayed?	Perform the diagnosis according to DTC.	Go to step 3.
3 CHECK DTC. 1) Set the mode change switch to VENT, and wait for 16 seconds or more. 2) Using the Subaru Select Monitor, read DTC of A/C control panel. <Ref. to AC(diag)-33, Read Diagnostic Trouble Code (DTC).>	Is DTC B14E5 and B14E6 displayed?	Perform the diagnosis according to DTC.	The circuit has returned to a normal condition at this time. Reproduce the failure, and then perform the diagnosis again. NOTE: In this case, temporary poor contact of connector, temporary open or short circuit of harness may be the cause.

Diagnostics with Phenomenon

HVAC SYSTEM (AUTO A/C) (DIAGNOSTICS)

13.ILLUMINATION DOES NOT ILLUMINATE OR CANNOT BE DIMMED

Trouble symptom:

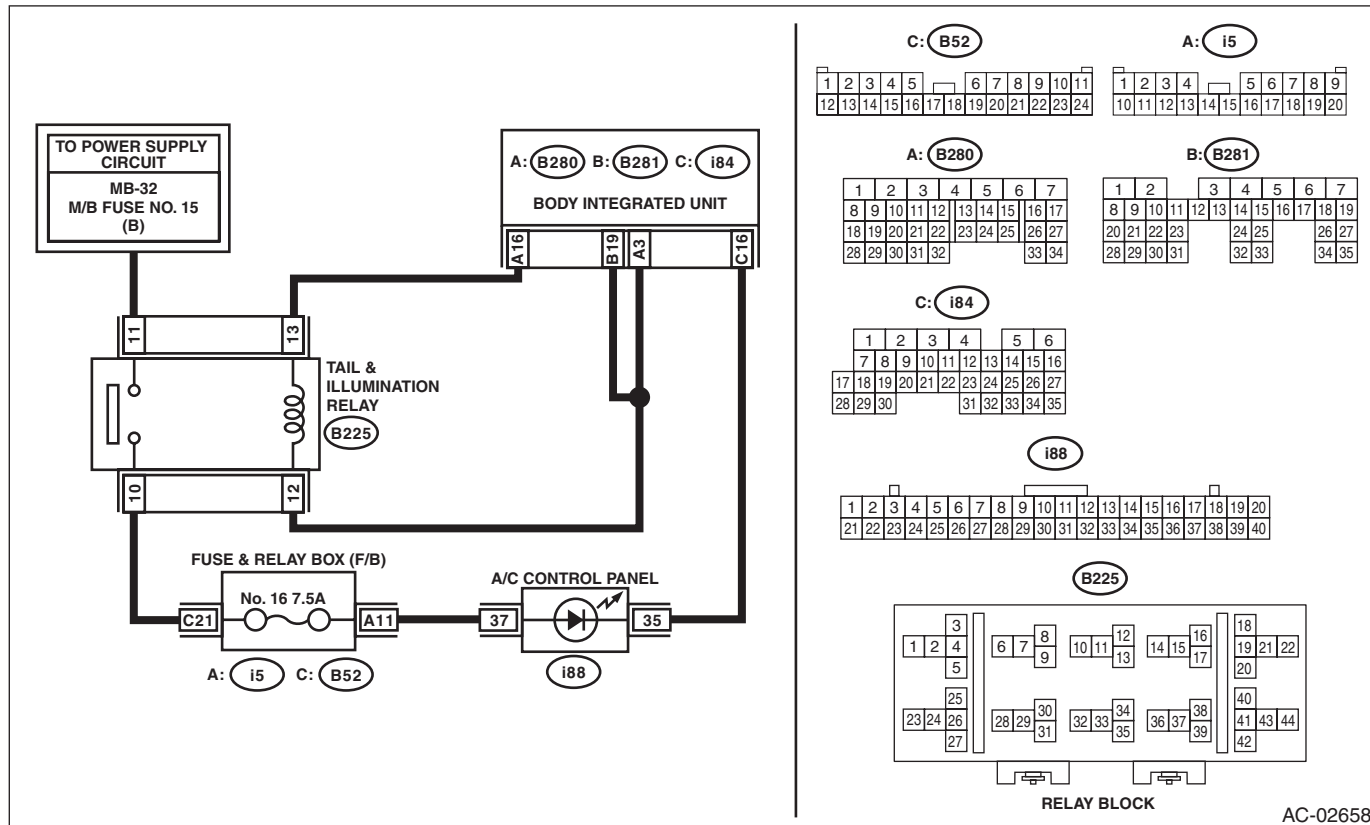

Even when the lighting switch is operated, the illumination does not come on. Even when the illumination control is operated, the illumination does not dim.

Trouble symptom:

Open circuit in illumination circuit

Wiring diagram:

Clearance Light and Illumination Light System <Ref. to WI-71, WIRING DIAGRAM, Clearance Light and Illumination Light System.>

Step	Check	Yes	No
1	CHECK ILLUMINATION. Make sure that all illuminations except A/C come on.	Go to step 2.	Check the illumination circuit. <Ref. to LI-10, INSPECTION, Clearance Light and Illumination Light System.>
2	CHECK CONNECTOR. Check for poor contact of connector.	Repair the connector.	Go to step 3.
3	CHECK HARNESS. 1) Turn the lighting switch to ON. 2) Using a tester, measure the voltage between the A/C control panel connector and chassis ground. Connector & terminal (i88) No. 37 (+) — Chassis ground (-):	Go to step 4.	Repair or replace the open circuit of harness.

Diagnostics with Phenomenon

HVAC SYSTEM (AUTO A/C) (DIAGNOSTICS)

Step	Check	Yes	No
4 CHECK HARNESS. 1) Turn the lighting switch to OFF. 2) Measure the resistance between A/C control panel connector and body integrated unit connector. <i>Connector & terminal</i> <i>(i88) No. 35 — (i84) No. 16:</i>	Is the resistance less than 10 Ω ?	Go to step 5.	Repair or replace the open circuit of harness.
5 CHECK A/C CONTROL PANEL UNIT. Check the A/C control panel. <Ref. to AC-45, REMOVAL, Control Panel.>	Is A/C control panel OK?	A/C control panel illumination circuit is normal.	Replace the A/C control panel. <Ref. to AC-45, REMOVAL, Control Panel.>

Subaru Select Monitor

HVAC SYSTEM (AUTO A/C) (DIAGNOSTICS)

6. Subaru Select Monitor

A: OPERATION

For detailed operation procedures, refer to “Application help”.

NOTE:

When initialization communication using Select Monitor is impossible, perform diagnosis according to “Diagnostic Procedure Used When Abnormal Communication with Subaru Select Monitor Occurs”. <Ref. to AC(diag)-37, Diagnostic Procedure for Subaru Select Monitor Communication.>

Read Diagnostic Trouble Code (DTC)

HVAC SYSTEM (AUTO A/C) (DIAGNOSTICS)

7. Read Diagnostic Trouble Code (DTC)

A: OPERATION

- 1) On «Start» display, select «Diagnosis».
- 2) On «Vehicle selection» display, input the target vehicle information and select «Confirmed».
- 3) On «Main Menu» display, select «Each System».
- 4) On «Select System» display, select «Air Conditioner» and select «Enter».
- 5) On «Select Function» display, select «DTC».

NOTE:

- For detailed operation procedures, refer to “Application help”.
- For details concerning DTC, refer to “List of Diagnostic Trouble Code (DTC)”. <Ref. to AC(diag)-39, List of Diagnostic Trouble Code (DTC).>

Clear Memory Mode

HVAC SYSTEM (AUTO A/C) (DIAGNOSTICS)

8. Clear Memory Mode

A: OPERATION

- 1) On «Start» display, select «Diagnosis».
- 2) On «Vehicle selection» display, input the target vehicle information and select «Confirmed».
- 3) On «Main Menu» display, select «Each System».
- 4) On «Select System» display, select «Air Conditioner» and select «Enter».
- 5) On «Select Function» display, select «DTC».
- 6) On «DTC» display, select «Clear Memory».

NOTE:

For detailed operation procedures, refer to “Application help”.

Read Current Data

HVAC SYSTEM (AUTO A/C) (DIAGNOSTICS)

9. Read Current Data

A: OPERATION

- 1) On «Start» display, select «Diagnosis».
- 2) On «Vehicle selection» display, input the target vehicle information and select «Confirmed».
- 3) On «Main Menu» display, select «Each System».
- 4) On «Select System» display, select «Air Conditioner» and select «Enter».
- 5) On «Select Function» display, select «Data Monitor».

NOTE:

For detailed operation procedures, refer to “Application help”.

Diagnostic Procedure for Subaru Select Monitor Communication

HVAC SYSTEM (AUTO A/C) (DIAGNOSTICS)

10. Diagnostic Procedure for Subaru Select Monitor Communication

A: COMMUNICATION FOR INITIALIZING IMPOSSIBLE

Diagnosis:

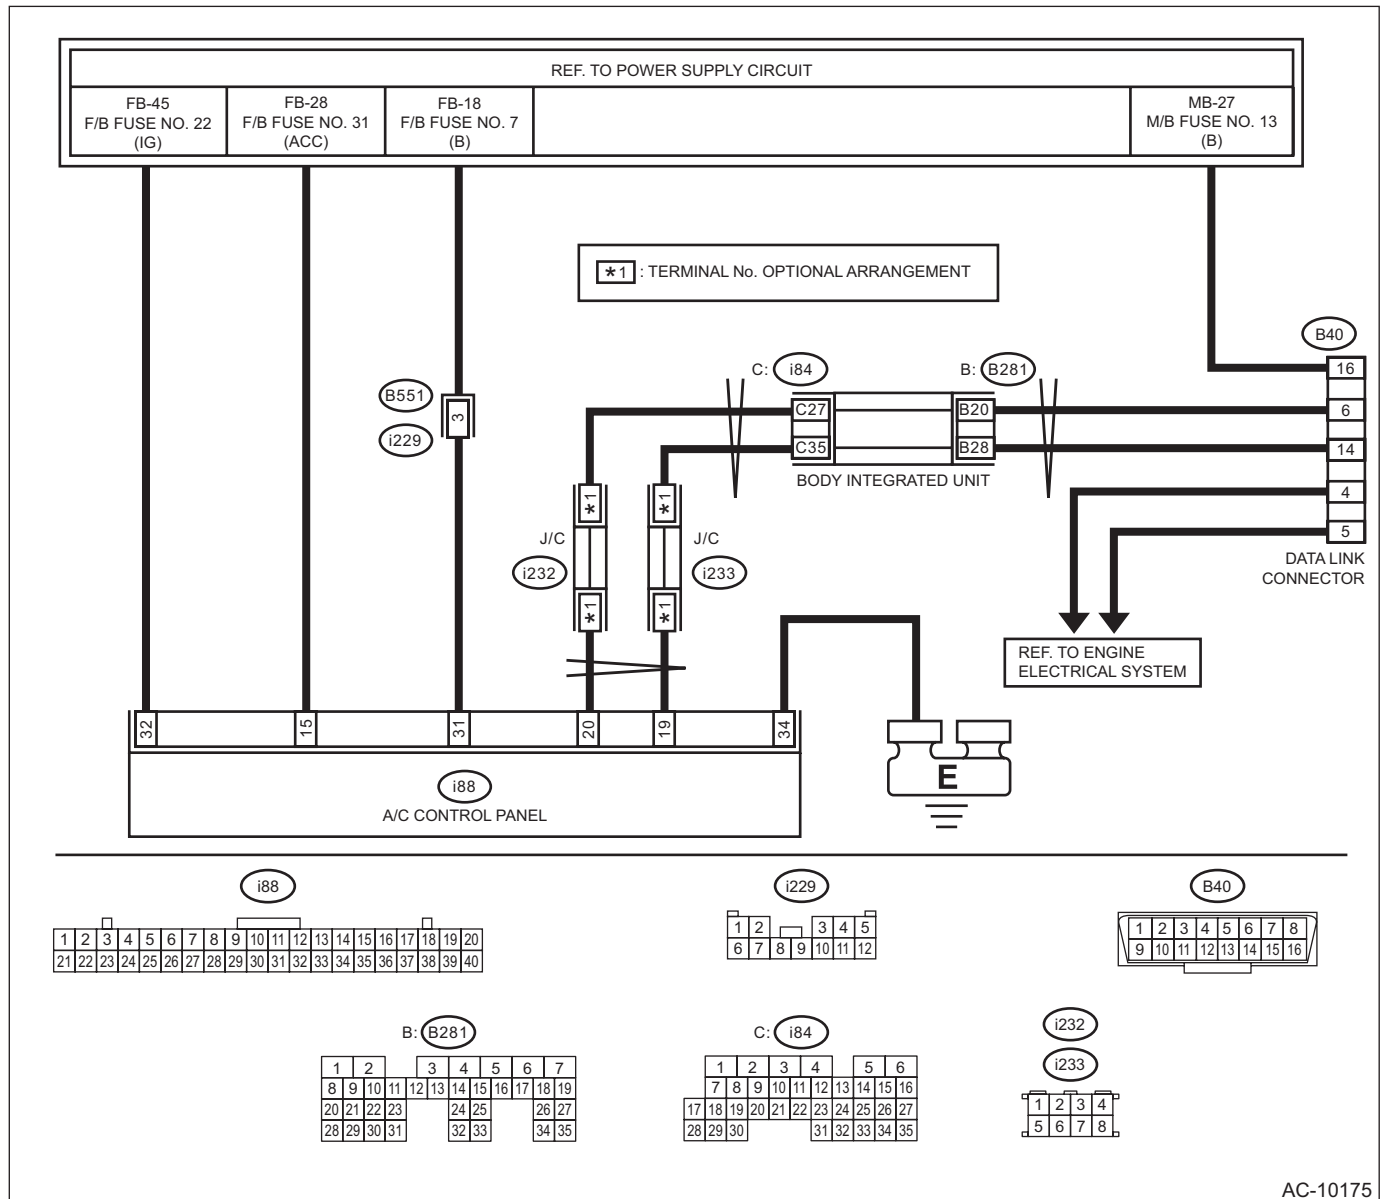

Defective CAN communication circuit

Trouble symptom:

- LAN system is abnormal.
- Communication failure between Subaru Select Monitor and A/C control panel

Wiring diagram:

Air conditioning system <Ref. to WI-44, WIRING DIAGRAM, Air Conditioning System.>

Step	Check	Yes	No
1	CHECK POWER SUPPLY CIRCUIT. Connect DST-i to data link connector.	Does DST-i turn ON? Go to step 4.	Go to step 2.

Diagnostic Procedure for Subaru Select Monitor Communication

HVAC SYSTEM (AUTO A/C) (DIAGNOSTICS)

Step	Check	Yes	No
2 CHECK POWER SUPPLY CIRCUIT. Measure the voltage between data link connector and chassis ground. Connector & terminal (B40) No. 16 (+) — Chassis ground (-):	Is the voltage 10 V or more?	Go to step 3.	Repair the power supply circuit. NOTE: In this case, repair the following item: • Open or ground short circuit of harness between battery and data link connector • Blown out of fuse (M/B No. 12)
3 CHECK HARNESS BETWEEN DATA LINK CONNECTOR AND CHASSIS GROUND (OPEN). 1) Turn the ignition switch to OFF. 2) Measure the resistance of harness between data link connector and chassis ground. Connector & terminal (B40) No. 4 — Chassis ground: (B40) No. 5 — Chassis ground:	Is the resistance less than 5 Ω?	Repair the poor contact of data link connector.	Repair the harness and connector.
4 CHECK SUBARU SELECT MONITOR. 1) Connect the Subaru Select Monitor to a normal vehicle. 2) Start the engine and perform communication between the Subaru Select Monitor and vehicle.	Is communication possible?	Go to step 5.	Use another Subaru Select Monitor because the CAN communication circuit of the Subaru Select Monitor is faulty.
5 CHECK LAN SYSTEM. Check the LAN system. <Ref. to LAN(diag)-2, PROCEDURE, Basic Diagnostic Procedure.>	Is LAN system normal?	Go to step 6.	Repair it according to the diagnosis for LAN system.
6 CHECK CONNECTOR. Check for poor contact of power supply circuit connector.	Is there poor contact of connector?	Repair the connector.	Go to step 7.
7 CHECK FUSE. 1) Turn the ignition switch to OFF. 2) Remove a fuse from the fuse box. 3) Check the fuse.	Is the fuse blown out?	Replace the fuse.	Go to step 8.
8 CHECK A/C CONTROL PANEL POWER CIRCUIT. 1) Disconnect the A/C control panel connector. 2) Measure the voltage between A/C control panel connector terminal and chassis ground after turning the ignition switch to ON. Connector & terminal (i88) No. 15 (+) — Chassis ground (-): (i88) No. 31 (+) — Chassis ground (-): (i88) No. 32 (+) — Chassis ground (-):	Is the voltage 10 V or more?	Go to step 9.	Check for open or short circuit in the harness between A/C control panel and fuse.
9 CHECK A/C CONTROL PANEL GROUND CIRCUIT (OPEN). Measure the resistance of harness between A/C control panel and chassis ground. Connector & terminal (i88) No. 34 — Chassis ground:	Is the resistance less than 5 Ω?	Check the connection between the data link connector and Subaru Select Monitor.	Repair the harness for ground line.

List of Diagnostic Trouble Code (DTC)

HVAC SYSTEM (AUTO A/C) (DIAGNOSTICS)

11.List of Diagnostic Trouble Code (DTC)

A: LIST

DTC	Item	Content of diagnosis	Note
B1430	IN-VEHICLE (POST EVAPORATOR) TEMPERATURE SENSOR CIRCUIT OPEN	In-vehicle air temperature sensor circuit is open.	<Ref. to AC(diag)-41, DTC B1430 IN-VEHICLE (POST EVAPORATOR) TEMPERATURE SENSOR CIRCUIT OPEN, Diagnostic Procedure with Diagnostic Trouble Code (DTC).>
B1431	IN-VEHICLE (POST EVAPORATOR) TEMPERATURE SENSOR CIRCUIT SHORT-CIRCUIT	In-vehicle air temperature sensor circuit is shorted.	<Ref. to AC(diag)-43, DTC B1431 IN-VEHICLE (POST EVAPORATOR) TEMPERATURE SENSOR CIRCUIT SHORT-CIRCUIT, Diagnostic Procedure with Diagnostic Trouble Code (DTC).>
B1432	AMBIENT TEMPERATURE SENSOR CIRCUIT OPEN (AIR-CONDITIONER)	Ambient air temperature sensor circuit is open.	<Ref. to AC(diag)-45, DTC B1432 AMBIENT TEMPERATURE SENSOR CIRCUIT OPEN (AIR-CONDITIONER), Diagnostic Procedure with Diagnostic Trouble Code (DTC).>
B1433	AMBIENT TEMPERATURE SENSOR CIRCUIT SHORT-CIRCUIT (AIR-CONDITIONER)	Ambient air temperature sensor circuit is shorted.	<Ref. to AC(diag)-47, DTC B1433 AMBIENT TEMPERATURE SENSOR CIRCUIT SHORT-CIRCUIT (AIR-CONDITIONER), Diagnostic Procedure with Diagnostic Trouble Code (DTC).>
B1434	EVAPORATOR TEMPERATURE SENSOR CIRCUIT OPEN	Post evaporator sensor circuit is open.	<Ref. to AC(diag)-49, DTC B1434 EVAPORATOR TEMPERATURE SENSOR CIRCUIT OPEN, Diagnostic Procedure with Diagnostic Trouble Code (DTC).>
B1435	EVAPORATOR TEMPERATURE SENSOR CIRCUIT SHORT-CIRCUIT	Post evaporator sensor circuit is shorted.	<Ref. to AC(diag)-51, DTC B1435 EVAPORATOR TEMPERATURE SENSOR CIRCUIT SHORT-CIRCUIT, Diagnostic Procedure with Diagnostic Trouble Code (DTC).>
B14A1	SUNLOAD SENSOR CIRCUIT LOW/OPEN	Sunload sensor circuit is open.	<Ref. to AC(diag)-53, DTC B14A1 SUNLOAD SENSOR CIRCUIT LOW/OPEN, Diagnostic Procedure with Diagnostic Trouble Code (DTC).>
B14A2	SUNLOAD SENSOR CIRCUIT SHORT-CIRCUIT	Sunload sensor circuit is shorted.	<Ref. to AC(diag)-55, DTC B14A2 SUNLOAD SENSOR CIRCUIT SHORT-CIRCUIT, Diagnostic Procedure with Diagnostic Trouble Code (DTC).>
B14E1	AIR MIX DOOR ACTUATOR STEPPING MOTOR CIRCUIT OPEN (DRIVER)	Air mix door actuator stepping motor circuit is open.	<Ref. to AC(diag)-57, DTC B14E1 AIR MIX DOOR ACTUATOR STEPPING MOTOR CIRCUIT OPEN (DRIVER), Diagnostic Procedure with Diagnostic Trouble Code (DTC).>
B14E2	AIR MIX DOOR ACTUATOR STEPPING MOTOR CIRCUIT SHORT-CIRCUIT (DRIVER)	Air mix door actuator stepping motor circuit is shorted.	<Ref. to AC(diag)-59, DTC B14E2 AIR MIX DOOR ACTUATOR STEPPING MOTOR CIRCUIT SHORT-CIRCUIT (DRIVER), Diagnostic Procedure with Diagnostic Trouble Code (DTC).>
B14E3	AIR MIX DOOR ACTUATOR STEPPING MOTOR CIRCUIT OPEN (PASSENGER)	Air mix door actuator stepping motor circuit is open.	<Ref. to AC(diag)-61, DTC B14E3 AIR MIX DOOR ACTUATOR STEPPING MOTOR CIRCUIT OPEN (PASSENGER), Diagnostic Procedure with Diagnostic Trouble Code (DTC).>
B14E4	AIR MIX DOOR ACTUATOR STEPPING MOTOR CIRCUIT SHORT-CIRCUIT (PASSENGER)	Air mix door actuator stepping motor circuit is shorted.	<Ref. to AC(diag)-63, DTC B14E4 AIR MIX DOOR ACTUATOR STEPPING MOTOR CIRCUIT SHORT-CIRCUIT (PASSENGER), Diagnostic Procedure with Diagnostic Trouble Code (DTC).>
B14E5	MODE DOOR ACTUATOR STEPPING MOTOR CIRCUIT OPEN	Mode door actuator stepping motor circuit is open.	<Ref. to AC(diag)-65, DTC B14E5 MODE DOOR ACTUATOR STEPPING MOTOR CIRCUIT OPEN, Diagnostic Procedure with Diagnostic Trouble Code (DTC).>
B14E6	MODE DOOR ACTUATOR STEPPING MOTOR CIRCUIT SHORT-CIRCUIT	Mode door actuator stepping motor circuit is shorted.	<Ref. to AC(diag)-67, DTC B14E6 MODE DOOR ACTUATOR STEPPING MOTOR CIRCUIT SHORT-CIRCUIT, Diagnostic Procedure with Diagnostic Trouble Code (DTC).>

U0422	INVALID DATA RECEIVED FROM BODY CONTROL MODULE	An error occurred in BIU data.	<Ref. to AC(diag)-75, DTC U0422 INVALID DATA RECEIVED FROM BODY CONTROL MODULE, Diagnostic Procedure with Diagnostic Trouble Code (DTC).>
U0423	INVALID DATA RECEIVED FROM INSTRUMENT PANEL CLUSTER CONTROL MODULE	An error occurred in METER data.	<Ref. to AC(diag)-75, DTC U0423 INVALID DATA RECEIVED FROM INSTRUMENT PANEL CLUSTER CONTROL MODULE, Diagnostic Procedure with Diagnostic Trouble Code (DTC).>

Diagnostic Procedure with Diagnostic Trouble Code (DTC)

HVAC SYSTEM (AUTO A/C) (DIAGNOSTICS)

12. Diagnostic Procedure with Diagnostic Trouble Code (DTC)

A: DTC B1430 IN-VEHICLE (POST EVAPORATOR) TEMPERATURE SENSOR CIRCUIT OPEN

DTC detecting condition:

In-vehicle sensor circuit is open.

Trouble symptom:

In-vehicle air temperature is falsely recognized as 25°C (77°F), and the compartment temperature is adjusted.

Wiring diagram:

Air conditioning system <Ref. to WI-44, WIRING DIAGRAM, Air Conditioning System.>

AC-02660

Step	Check	Yes	No
1 CHECK CONNECTOR. 1) Check the condition of connector connection. 2) Read the DTC using Subaru Select Monitor. <Ref. to AC(diag)-33, Read Diagnostic Trouble Code (DTC).>	Is B1430 displayed?	Go to step 2.	Even if DTC is displayed, the circuit has returned to a normal condition at this time. Reproduce the failure, and then perform the diagnosis again. NOTE: In this case, temporary poor contact of connector, temporary open or short circuit of harness may be the cause.
2 CHECK IN-VEHICLE SENSOR. 1) Disconnect the in-vehicle sensor. 2) Short the connector. 3) Read the DTC using Subaru Select Monitor. <Ref. to AC(diag)-33, Read Diagnostic Trouble Code (DTC).>	Is B1431 displayed?	Replace the in-vehicle sensor. <Ref. to AC-71, REMOVAL, In-Vehicle Sensor (Auto A/C Model).>	Go to step 3.

Diagnostic Procedure with Diagnostic Trouble Code (DTC)

HVAC SYSTEM (AUTO A/C) (DIAGNOSTICS)

Step	Check	Yes	No
3 CHECK HARNESS. 1) Restore the temporary shorted lines made in step 2. 2) Turn the ignition switch to ON. 3) Using the tester, measure the voltage between terminals. Connector & terminal (i55) No. 2 (+) — No. 1 (-):	Is the voltage 4.5 — 5.0 V?	Go to step 4.	Repair or replace the open circuit of harness.
4 CHECK HARNESS (OPEN CIRCUIT). 1) Disconnect the connector from the A/C control panel. 2) Using a tester, check continuity between terminals. Connector & terminal (i55) No. 1 — (i88) No. 14: (i55) No. 2 — (i88) No. 17:	Is there continuity?	Replace the A/C control panel. <Ref. to AC-45, REMOVAL, Control Panel.>	Repair or replace the open circuit of harness.

Diagnostic Procedure with Diagnostic Trouble Code (DTC)

HVAC SYSTEM (AUTO A/C) (DIAGNOSTICS)

B: DTC B1431 IN-VEHICLE (POST EVAPORATOR) TEMPERATURE SENSOR CIRCUIT SHORT-CIRCUIT

DTC detecting condition:

In-vehicle sensor circuit is shorted.

Trouble symptom:

In-vehicle air temperature is falsely recognized as 25°C (77°F), and the compartment temperature is adjusted.

Wiring diagram:

Air conditioning system <Ref. to WI-44, WIRING DIAGRAM, Air Conditioning System.>

AC-02660

Step	Check	Yes	No
1 CHECK CONNECTOR. 1) Check the condition of connector connection. 2) Read the DTC using Subaru Select Monitor. <Ref. to AC(diag)-33, Read Diagnostic Trouble Code (DTC).>	Is B1431 displayed?	Go to step 2.	Even if DTC is displayed, the circuit has returned to a normal condition at this time. Reproduce the failure, and then perform the diagnosis again. NOTE: In this case, temporary poor contact of connector, temporary open or short circuit of harness may be the cause.
2 CHECK IN-VEHICLE SENSOR. 1) Disconnect the in-vehicle sensor. <Ref. to AC-71, REMOVAL, In-Vehicle Sensor (Auto A/C Model).> 2) Read the DTC using Subaru Select Monitor. <Ref. to AC(diag)-33, Read Diagnostic Trouble Code (DTC).>	Is B1430 displayed?	Replace the in-vehicle sensor. <Ref. to AC-71, REMOVAL, In-Vehicle Sensor (Auto A/C Model).>	Go to step 3.

Diagnostic Procedure with Diagnostic Trouble Code (DTC)

HVAC SYSTEM (AUTO A/C) (DIAGNOSTICS)

Step	Check	Yes	No
3 CHECK HARNESS. 1) Turn the ignition switch to ON. 2) Using the tester, measure the voltage between terminals. Connector & terminal (i55) No. 2 (+) — No. 1 (-):	Is the voltage 4.5 — 5.0 V?	Check the connection of the in-vehicle sensor circuit.	Go to step 4.
4 CHECK HARNESS (SHORTED BETWEEN LINES). 1) Disconnect the connector from the A/C control panel. 2) Using a tester, check continuity between terminals. Connector & terminal (i55) No. 1 — No. 2:	Is there continuity?	Repair or replace the short circuit of the harness.	Replace the A/C control panel. <Ref. to AC-45, REMOVAL, Control Panel.>

Diagnostic Procedure with Diagnostic Trouble Code (DTC)

HVAC SYSTEM (AUTO A/C) (DIAGNOSTICS)

C: DTC B1432 AMBIENT TEMPERATURE SENSOR CIRCUIT OPEN (AIR-CONDITIONER)

DTC detecting condition:

Ambient sensor circuit is open.

Trouble symptom:

Ambient temperature is falsely recognized, and the compartment temperature is adjusted.

Wiring diagram:

Air conditioning system <Ref. to WI-44, WIRING DIAGRAM, Air Conditioning System.>

AC-10191

Step	Check	Yes	No
<p>1</p> <p>CHECK CONNECTOR.</p> <p>1) Check the connecting conditions of combination meter connector and ambient sensor connector.</p> <p>2) Read the DTC using Subaru Select Monitor. <Ref. to AC(diag)-33, Read Diagnostic Trouble Code (DTC).></p>	<p>Is B1432 displayed?</p>	<p>Go to step 2.</p>	<p>Even if DTC is displayed, the circuit has returned to a normal condition at this time. Reproduce the failure, and then perform the diagnosis again.</p> <p>NOTE: In this case, temporary poor contact of connector, temporary open or short circuit of harness may be the cause.</p>

Diagnostic Procedure with Diagnostic Trouble Code (DTC)

HVAC SYSTEM (AUTO A/C) (DIAGNOSTICS)

Step	Check	Yes	No
2 CHECK AMBIENT SENSOR. 1) Disconnect the ambient sensor. 2) Short the connector F78. 3) Read the DTC using Subaru Select Monitor. <Ref. to AC(diag)-33, Read Diagnostic Trouble Code (DTC).>	Is B1433 displayed?	Replace the ambient sensor. <Ref. to AC-67, REMOVAL, Ambient Sensor.>	Go to step 3.
3 CHECK HARNESS. 1) Restore the temporary shorted lines made in step 2. 2) Turn the ignition switch to ON. 3) Using the tester, measure the voltage between terminals. <i>Connector & terminal</i> <i>(F78) No. 1 (+) — No. 2 (-):</i>	Is the voltage 4.5 — 5.0 V?	Go to step 4.	Repair or replace the open circuit of harness.
4 CHECK HARNESS (OPEN CIRCUIT). 1) Disconnect the connector from the combination meter. 2) Using a tester, check continuity between terminals. <i>Connector & terminal</i> <i>(F78) No. 1 — (i10) No. 27:</i> <i>(F78) No. 2 — (i10) No. 36:</i>	Is there continuity?	Replace the combination meter. <Ref. to IDI-18, REMOVAL, Combination Meter.>	Repair or replace the open circuit of harness.

Diagnostic Procedure with Diagnostic Trouble Code (DTC)

HVAC SYSTEM (AUTO A/C) (DIAGNOSTICS)

D: DTC B1433 AMBIENT TEMPERATURE SENSOR CIRCUIT SHORT-CIRCUIT (AIR-CONDITIONER)

DTC detecting condition:

Ambient sensor circuit is shorted.

Trouble symptom:

Ambient temperature is falsely recognized, and the compartment temperature is adjusted.

Wiring diagram:

Air conditioning system <Ref. to WI-44, WIRING DIAGRAM, Air Conditioning System.>

AC-10191

Step	Check	Yes	No
<p>1</p> <p>CHECK CONNECTOR.</p> <p>1) Check the connecting conditions of combination meter connector and ambient sensor connector.</p> <p>2) Read the DTC using Subaru Select Monitor. <Ref. to AC(diag)-33, Read Diagnostic Trouble Code (DTC).></p>	<p>Is B1433 displayed?</p>	<p>Go to step 2.</p>	<p>Even if DTC is displayed, the circuit has returned to a normal condition at this time. Reproduce the failure, and then perform the diagnosis again.</p> <p>NOTE: In this case, temporary poor contact of connector, temporary open or short circuit of harness may be the cause.</p>

Diagnostic Procedure with Diagnostic Trouble Code (DTC)

HVAC SYSTEM (AUTO A/C) (DIAGNOSTICS)

Step	Check	Yes	No
2 CHECK AMBIENT SENSOR. 1) Disconnect the ambient sensor. <Ref. to AC-67, REMOVAL, Ambient Sensor.> 2) Read the DTC using Subaru Select Monitor. <Ref. to AC(diag)-33, Read Diagnostic Trouble Code (DTC).>	Is B1432 displayed?	Replace the ambient sensor. <Ref. to AC-67, REMOVAL, Ambient Sensor.>	Go to step 3.
3 CHECK HARNESS. 1) Turn the ignition switch to ON. 2) Using the tester, measure the voltage between terminals. Connector & terminal (F78) No. 1 (+) — No. 2 (-):	Is the voltage 4.5 — 5.0 V?	Even if DTC is displayed, the circuit has returned to a normal condition at this time. Reproduce the failure, and then perform the diagnosis again. NOTE: In this case, temporary poor contact of connector, temporary open or short circuit of harness may be the cause.	Go to step 4.
4 CHECK HARNESS (SHORTED BETWEEN LINES). 1) Disconnect the connector from the combination meter. 2) Using a tester, check continuity between terminals. Connector & terminal (F78) No. 1 — No. 2:	Is there continuity?	Repair or replace the short circuit of the harness.	Replace the combination meter. <Ref. to IDI-18, REMOVAL, Combination Meter.>

Diagnostic Procedure with Diagnostic Trouble Code (DTC)

HVAC SYSTEM (AUTO A/C) (DIAGNOSTICS)

E: DTC B1434 EVAPORATOR TEMPERATURE SENSOR CIRCUIT OPEN

DTC detecting condition:

Evaporator sensor circuit is open.

Trouble symptom:

Evaporator temperature is falsely recognized as low, and the compartment temperature is adjusted.

Wiring diagram:

Air conditioning system <Ref. to WI-44, WIRING DIAGRAM, Air Conditioning System.>

Step	Check	Yes	No
1 CHECK CONNECTOR. 1) Check the condition of connector connection. 2) Read the DTC using Subaru Select Monitor. <Ref. to AC(diag)-33, Read Diagnostic Trouble Code (DTC).>	Is B1434 displayed?	Go to step 2.	Even if DTC is displayed, the circuit has returned to a normal condition at this time. Reproduce the failure, and then perform the diagnosis again. NOTE: In this case, temporary poor contact of connector, temporary open or short circuit of harness may be the cause.
2 CHECK EVAPORATOR SENSOR. 1) Disconnect the evaporator sensor. 2) Short the evaporator sensor connector (B88). 3) Read the DTC using Subaru Select Monitor. <Ref. to AC(diag)-33, Read Diagnostic Trouble Code (DTC).>	Is B1435 displayed?	Replace the evaporator sensor. <Ref. to AC-56, REMOVAL, Evaporator.>	Go to step 3.

Diagnostic Procedure with Diagnostic Trouble Code (DTC)

HVAC SYSTEM (AUTO A/C) (DIAGNOSTICS)

Step	Check	Yes	No
3 CHECK HARNESS. 1) Restore the temporary shorted lines made in step 2. 2) Turn the ignition switch to ON. 3) Using the tester, measure the voltage between terminals. Connector & terminal (B88) No. 2 (+) — No. 1 (-):	Is the voltage 4.5 — 5.0 V?	Go to step 4.	Repair or replace the open circuit of harness.
4 CHECK HARNESS (OPEN CIRCUIT). 1) Disconnect the connector from the A/C control panel. 2) Using a tester, check continuity between terminals. Connector & terminal (B88) No. 1 — (i88) No. 14: (B88) No. 2 — (i88) No. 18:	Is there continuity?	Replace the A/C control panel. <Ref. to AC-45, REMOVAL, Control Panel.>	Repair or replace the open circuit of harness.

Diagnostic Procedure with Diagnostic Trouble Code (DTC)

HVAC SYSTEM (AUTO A/C) (DIAGNOSTICS)

F: DTC B1435 EVAPORATOR TEMPERATURE SENSOR CIRCUIT SHORT-CIRCUIT

DTC detecting condition:

Evaporator sensor circuit is shorted.

Trouble symptom:

Evaporator temperature is falsely recognized as high, and the compartment temperature is adjusted.

Wiring diagram:

Air conditioning system <Ref. to WI-44, WIRING DIAGRAM, Air Conditioning System.>

AC-02662

Step	Check	Yes	No
1 CHECK CONNECTOR. 1) Check the condition of connector connection. 2) Read the DTC using Subaru Select Monitor. <Ref. to AC(diag)-33, Read Diagnostic Trouble Code (DTC).>	Is B1435 displayed?	Go to step 2.	Even if DTC is displayed, the circuit has returned to a normal condition at this time. Reproduce the failure, and then perform the diagnosis again. NOTE: In this case, temporary poor contact of connector, temporary open or short circuit of harness may be the cause.
2 CHECK EVAPORATOR SENSOR. 1) Disconnect the evaporator sensor. 2) Read the DTC using Subaru Select Monitor. <Ref. to AC(diag)-33, Read Diagnostic Trouble Code (DTC).>	Is B1434 displayed?	Replace the evaporator sensor. <Ref. to AC-56, REMOVAL, Evaporator.>	Go to step 3.

Diagnostic Procedure with Diagnostic Trouble Code (DTC)

HVAC SYSTEM (AUTO A/C) (DIAGNOSTICS)

Step	Check	Yes	No
3 CHECK HARNESS. 1) Turn the ignition switch to ON. 2) Using the tester, measure the voltage between terminals. Connector & terminal (B88) No. 2 (+) — No. 1 (-):	Is the voltage 4.5 — 5.0 V?	Even if DTC is displayed, the circuit has returned to a normal condition at this time. Reproduce the failure, and then perform the diagnosis again. NOTE: In this case, temporary poor contact of connector, temporary open or short circuit of harness may be the cause.	Go to step 4.
4 CHECK HARNESS (SHORTED BETWEEN LINES). 1) Disconnect the connector from the A/C control panel. 2) Using a tester, check continuity between terminals. Connector & terminal (B88) No. 1 — No. 2:	Is there continuity?	Repair or replace the short circuit of the harness.	Replace the A/C control panel. <Ref. to AC-45, REMOVAL, Control Panel.>

Diagnostic Procedure with Diagnostic Trouble Code (DTC)

HVAC SYSTEM (AUTO A/C) (DIAGNOSTICS)

G: DTC B14A1 SUNLOAD SENSOR CIRCUIT LOW/OPEN

DTC detecting condition:

Sunload sensor circuit is open. (Displayed for current malfunction)

NOTE:

When the sunload sensor check is performed indoors or in the shade, it could be diagnosed as having an open circuit. Always check the sunload sensor in direct sunlight.

Trouble symptom:

Operation is performed as no sunload.

Wiring diagram:

Air conditioning system <Ref. to WI-44, WIRING DIAGRAM, Air Conditioning System.>

AC-02663

Step	Check	Yes	No
1 CHECK CONNECTOR. 1) Check the condition of connector connection. 2) Read the DTC using Subaru Select Monitor. <Ref. to AC(diag)-33, Read Diagnostic Trouble Code (DTC).>	Is B14A1 displayed?	Go to step 2.	Even if DTC is displayed, the circuit has returned to a normal condition at this time. Reproduce the failure, and then perform the diagnosis again. NOTE: In this case, temporary poor contact of connector, temporary open or short circuit of harness may be the cause.
2 CHECK SUNLOAD SENSOR. 1) Disconnect the sunload sensor. 2) Short the connector. 3) Read the DTC using Subaru Select Monitor. <Ref. to AC(diag)-33, Read Diagnostic Trouble Code (DTC).>	Is B14A2 displayed?	Replace the sunload sensor. <Ref. to AC-69, REMOVAL, Sunload Sensor (Auto A/C Model).>	Go to step 3.

Diagnostic Procedure with Diagnostic Trouble Code (DTC)

HVAC SYSTEM (AUTO A/C) (DIAGNOSTICS)

Step	Check	Yes	No
3 CHECK HARNESS. 1) Restore the temporary shorted lines made in step 2. 2) Turn the ignition switch to ON. 3) Using the tester, measure the voltage between terminals. Connector & terminal (i51) No. 2 (+) — No. 1 (-):	Is the voltage 4.5 — 5.0 V?	Go to step 4.	Repair or replace the open circuit of the harness.
4 CHECK HARNESS (OPEN CIRCUIT). 1) Disconnect the connector from the A/C control panel. 2) Using a tester, check continuity between terminals. Connector & terminal (i51) No. 1 — (i88) No. 14: (i51) No. 2 — (i88) No. 16:	Is there continuity?	Replace the A/C control panel. <Ref. to AC-45, REMOVAL, Control Panel.>	Repair or replace the open circuit of harness.

Diagnostic Procedure with Diagnostic Trouble Code (DTC)

HVAC SYSTEM (AUTO A/C) (DIAGNOSTICS)

H: DTC B14A2 SUNLOAD SENSOR CIRCUIT SHORT-CIRCUIT

DTC detecting condition:

Sunload sensor circuit is shorted.

Trouble symptom:

Operation is performed as no sunload.

Wiring diagram:

Air conditioning system <Ref. to WI-44, WIRING DIAGRAM, Air Conditioning System.>

AC-02663

Step	Check	Yes	No
1 CHECK CONNECTOR. 1) Check the condition of connector connection. 2) Read the DTC using Subaru Select Monitor. <Ref. to AC(diag)-33, Read Diagnostic Trouble Code (DTC).>	Is B14A2 displayed?	Go to step 2.	Even if DTC is displayed, the circuit has returned to a normal condition at this time. Reproduce the failure, and then perform the diagnosis again. NOTE: In this case, temporary poor contact of connector, temporary open or short circuit of harness may be the cause.
2 CHECK SUNLOAD SENSOR. 1) Disconnect the sunload sensor. 2) Read the DTC using Subaru Select Monitor. <Ref. to AC(diag)-33, Read Diagnostic Trouble Code (DTC).>	Is B14A1 displayed?	Replace the sunload sensor. <Ref. to AC-69, REMOVAL, Sunload Sensor (Auto A/C Model).>	Go to step 3.
3 CHECK HARNESS. 1) Turn the ignition switch to ON. 2) Using the tester, measure the voltage between terminals. Connector & terminal (i51) No. 2 (+) — No. 1 (-):	Is the voltage 4.5 — 5.0 V?	Check the connection of the sunload sensor circuit.	Go to step 4.

Diagnostic Procedure with Diagnostic Trouble Code (DTC)

HVAC SYSTEM (AUTO A/C) (DIAGNOSTICS)

Step	Check	Yes	No
4 CHECK HARNESS (SHORTED BETWEEN LINES). 1) Disconnect the connector from the A/C control panel. 2) Using a tester, check continuity between terminals. Connector & terminal (i51) No. 1 — No. 2:	Is there continuity?	Repair or replace the short circuit of the harness.	Replace the A/C control panel. <Ref. to AC-45, REMOVAL, Control Panel.>

Diagnostic Procedure with Diagnostic Trouble Code (DTC)

HVAC SYSTEM (AUTO A/C) (DIAGNOSTICS)

I: DTC B14E1 AIR MIX DOOR ACTUATOR STEPPING MOTOR CIRCUIT OPEN (DRIVER)

DTC detecting condition:

Air mix door actuator stepping motor circuit is open.

Trouble symptom:

Temperature cannot be adjusted.

Wiring diagram:

Air conditioning system <Ref. to WI-44, WIRING DIAGRAM, Air Conditioning System.>

AC-02743

Step	Check	Yes	No
1 CHECK CONNECTOR. 1) Check the condition of connector connection. 2) Read the DTC using Subaru Select Monitor. <Ref. to AC(diag)-33, Read Diagnostic Trouble Code (DTC).>	Is B14E1 displayed?	Go to step 2.	Even if DTC is displayed, the circuit has returned to a normal condition at this time. Reproduce the failure, and then perform the diagnosis again. NOTE: In this case, temporary poor contact of connector, temporary open or short circuit of harness may be the cause.

Diagnostic Procedure with Diagnostic Trouble Code (DTC)

HVAC SYSTEM (AUTO A/C) (DIAGNOSTICS)

Step	Check	Yes	No
<p>2</p> <p>CHECK ACTUATOR.</p> <p>1) Turn the ignition switch to OFF.</p> <p>2) Disconnect the air mix door actuator connector.</p> <p>3) Turn the ignition switch to ON.</p> <p>4) Measure the voltage between the air mix door actuator connector terminal and chassis ground.</p> <p>Connector & terminal Without left/right independent air conditioning function <i>(B239) No. 3 (+) — Chassis ground (-):</i> With left/right independent air conditioning function <i>(B235) No. 3 (+) — Chassis ground (-):</i></p>	<p>Is the voltage approx. 10 V or more?</p>	<p>Go to step 3.</p>	<p>Check the DC power supply circuit.</p>

Diagnostic Procedure with Diagnostic Trouble Code (DTC)

HVAC SYSTEM (AUTO A/C) (DIAGNOSTICS)

J: DTC B14E2 AIR MIX DOOR ACTUATOR STEPPING MOTOR CIRCUIT SHORT-CIRCUIT (DRIVER)

DTC detecting condition:

Air mix door actuator stepping motor circuit is shorted.

Trouble symptom:

Temperature cannot be adjusted.

Wiring diagram:

Air conditioning system <Ref. to WI-44, WIRING DIAGRAM, Air Conditioning System.>

AC-02743

Step	Check	Yes	No
1 CHECK CONNECTOR. 1) Check the condition of connector connection. 2) Read the DTC using Subaru Select Monitor. <Ref. to AC(diag)-33, Read Diagnostic Trouble Code (DTC).>	Is B14E2 displayed?	Go to step 2.	Even if DTC is displayed, the circuit has returned to a normal condition at this time. Reproduce the failure, and then perform the diagnosis again. NOTE: In this case, temporary poor contact of connector, temporary open or short circuit of harness may be the cause.

Diagnostic Procedure with Diagnostic Trouble Code (DTC)

HVAC SYSTEM (AUTO A/C) (DIAGNOSTICS)

Step	Check	Yes	No
<p>2</p> <p>CHECK POWER SUPPLY OF AIR MIX DOOR ACTUATOR.</p> <p>1) Turn the ignition switch to OFF. 2) Disconnect the air mix door actuator connector. 3) Turn the ignition switch to ON. 4) Measure the voltage between the air mix door actuator connector terminal and chassis ground.</p> <p>Connector & terminal Without left/right independent air conditioning function (B239) No. 3 (+) — Chassis ground (-): With left/right independent air conditioning function (B235) No. 3 (+) — Chassis ground (-):</p>	Is the voltage approx. 10 V or more?	Go to step 3.	Check the DC power supply circuit.
<p>3</p> <p>CHECK AIR MIX DOOR ACTUATOR.</p> <p>1) Turn the ignition switch to OFF. 2) Measure the resistance between air mix door actuator terminals using a tester.</p> <p>Connector & terminal Without left/right independent air conditioning function (B239) No. 3 — No. 1: (B239) No. 3 — No. 2: (B239) No. 3 — No. 5: (B239) No. 3 — No. 6: With left/right independent air conditioning function (B235) No. 3 — No. 1: (B235) No. 3 — No. 2: (B235) No. 3 — No. 5: (B235) No. 3 — No. 6:</p>	Is the resistance 80 — 100 Ω?	Go to step 4.	Replace the actuator. <Ref. to AC-84, REMOVAL, Air Mix Door Actuator.>
<p>4</p> <p>CHECK HARNESS BETWEEN A/C CONTROL PANEL AND AIR MIX DOOR ACTUATOR (SHORTED TO POWER SUPPLY).</p> <p>1) Disconnect the A/C control panel connector. 2) Measure the voltage between air mix door actuator connector and chassis ground.</p> <p>Connector & terminal Without left/right independent air conditioning function (B239) No. 1 (+) — Chassis ground (-): (B239) No. 2 (+) — Chassis ground (-): (B239) No. 5 (+) — Chassis ground (-): (B239) No. 6 (+) — Chassis ground (-): With left/right independent air conditioning function (B235) No. 1 (+) — Chassis ground (-): (B235) No. 2 (+) — Chassis ground (-): (B235) No. 5 (+) — Chassis ground (-): (B235) No. 6 (+) — Chassis ground (-):</p>	Is there any voltage?	Repair or replace the short circuit of the harness.	Replace the A/C control panel. <Ref. to AC-45, REMOVAL, Control Panel.>

Diagnostic Procedure with Diagnostic Trouble Code (DTC)

HVAC SYSTEM (AUTO A/C) (DIAGNOSTICS)

K: DTC B14E3 AIR MIX DOOR ACTUATOR STEPPING MOTOR CIRCUIT OPEN (PASSENGER)

DTC detecting condition:

Air mix door actuator stepping motor circuit is open.

Trouble symptom:

Temperature cannot be adjusted.

Wiring diagram:

Air conditioning system <Ref. to WI-44, WIRING DIAGRAM, Air Conditioning System.>

Step	Check	Yes	No
1 CHECK CONNECTOR. 1) Check the condition of connector connection. 2) Read the DTC using Subaru Select Monitor. <Ref. to AC(diag)-33, Read Diagnostic Trouble Code (DTC).>	Is B14E3 displayed?	Go to step 2.	Even if DTC is displayed, the circuit has returned to a normal condition at this time. Reproduce the failure, and then perform the diagnosis again. NOTE: In this case, temporary poor contact of connector, temporary open or short circuit of harness may be the cause.

Diagnostic Procedure with Diagnostic Trouble Code (DTC)

HVAC SYSTEM (AUTO A/C) (DIAGNOSTICS)

Step	Check	Yes	No
2 CHECK ACTUATOR. 1) Turn the ignition switch to OFF. 2) Disconnect the air mix door actuator connector. 3) Turn the ignition switch to ON. 4) Measure the voltage between the air mix door actuator connector terminal and chassis ground. Connector & terminal (B239) No. 3 (+) — Chassis ground (-):	Is the voltage approx. 10 V or more?	Go to step 3.	Check the DC power supply circuit.
3 CHECK AIR MIX DOOR ACTUATOR. 1) Turn the ignition switch to OFF. 2) Measure the resistance between air mix door actuator terminals using a tester. Connector & terminal (B239) No. 3 — No. 1: (B239) No. 3 — No. 2: (B239) No. 3 — No. 5: (B239) No. 3 — No. 6:	Is the resistance 80 — 100 Ω ?	Go to step 4.	Replace the actuator. <Ref. to AC-84, REMOVAL, Air Mix Door Actuator.>
4 CHECK HARNESS BETWEEN A/C CONTROL PANEL AND AIR MIX DOOR ACTUATOR (OPEN). 1) Disconnect the A/C control panel connector. 2) Measure the resistance between A/C control panel and air mix door actuator connector. Connector & terminal (B239) No. 1 — (i88) No. 28: (B239) No. 2 — (i88) No. 27: (B239) No. 5 — (i88) No. 26: (B239) No. 6 — (i88) No. 25:	Is there continuity?	Replace the A/C control panel. <Ref. to AC-45, REMOVAL, Control Panel.>	Repair or replace the open circuit of harness.

Diagnostic Procedure with Diagnostic Trouble Code (DTC)

HVAC SYSTEM (AUTO A/C) (DIAGNOSTICS)

L: DTC B14E4 AIR MIX DOOR ACTUATOR STEPPING MOTOR CIRCUIT SHORT-CIRCUIT (PASSENGER)

DTC detecting condition:

Air mix door actuator stepping motor circuit is shorted.

Trouble symptom:

Temperature cannot be adjusted.

Wiring diagram:

Air conditioning system <Ref. to WI-44, WIRING DIAGRAM, Air Conditioning System.>

Step	Check	Yes	No
1 CHECK CONNECTOR. 1) Check the condition of connector connection. 2) Read the DTC using Subaru Select Monitor. <Ref. to AC(diag)-33, Read Diagnostic Trouble Code (DTC).>	Is B14E4 displayed?	Go to step 2.	Even if DTC is displayed, the circuit has returned to a normal condition at this time. Reproduce the failure, and then perform the diagnosis again. NOTE: In this case, temporary poor contact of connector, temporary open or short circuit of harness may be the cause.

Diagnostic Procedure with Diagnostic Trouble Code (DTC)

HVAC SYSTEM (AUTO A/C) (DIAGNOSTICS)

Step	Check	Yes	No
2 CHECK POWER SUPPLY OF AIR MIX DOOR ACTUATOR. 1) Turn the ignition switch to OFF. 2) Disconnect the air mix door actuator connector. 3) Turn the ignition switch to ON. 4) Measure the voltage between the air mix door actuator connector terminal and chassis ground. <i>Connector & terminal</i> <i>(B239) No. 3 (+) — Chassis ground (-):</i>	Is the voltage approx. 10 V or more?	Go to step 3.	Check the DC power supply circuit.
3 CHECK AIR MIX DOOR ACTUATOR. 1) Turn the ignition switch to OFF. 2) Measure the resistance between air mix door actuator terminals using a tester. <i>Connector & terminal</i> <i>(B239) No. 3 — No. 1:</i> <i>(B239) No. 3 — No. 2:</i> <i>(B239) No. 3 — No. 5:</i> <i>(B239) No. 3 — No. 6:</i>	Is the resistance 80 — 100 Ω?	Go to step 4.	Replace the actuator. <Ref. to AC-84, REMOVAL, Air Mix Door Actuator.>
4 CHECK HARNESS BETWEEN A/C CONTROL PANEL AND AIR MIX DOOR ACTUATOR (SHORTED TO POWER SUPPLY). 1) Disconnect the A/C control panel connector. 2) Measure the voltage between air mix door actuator connector and chassis ground. <i>Connector & terminal</i> <i>(B239) No. 1 (+) — Chassis ground (-):</i> <i>(B239) No. 2 (+) — Chassis ground (-):</i> <i>(B239) No. 5 (+) — Chassis ground (-):</i> <i>(B239) No. 6 (+) — Chassis ground (-):</i>	Is there any voltage?	Repair or replace the short circuit of the harness.	Replace the A/C control panel. <Ref. to AC-45, REMOVAL, Control Panel.>

Diagnostic Procedure with Diagnostic Trouble Code (DTC)

HVAC SYSTEM (AUTO A/C) (DIAGNOSTICS)

M: DTC B14E5 MODE DOOR ACTUATOR STEPPING MOTOR CIRCUIT OPEN

DTC detecting condition:

Mode door actuator stepping motor circuit is open.

Trouble symptom:

Vent does not change.

Wiring diagram:

Air conditioning system <Ref. to WI-44, WIRING DIAGRAM, Air Conditioning System.>

Step	Check	Yes	No
1 CHECK CONNECTOR. 1) Check the condition of connector connection. 2) Read the DTC using Subaru Select Monitor. <Ref. to AC(diag)-33, Read Diagnostic Trouble Code (DTC).>	Is B14E5 displayed?	Go to step 2.	Even if DTC is displayed, the circuit has returned to a normal condition at this time. Reproduce the failure, and then perform the diagnosis again. NOTE: In this case, temporary poor contact of connector, temporary open or short circuit of harness may be the cause.

Diagnostic Procedure with Diagnostic Trouble Code (DTC)

HVAC SYSTEM (AUTO A/C) (DIAGNOSTICS)

Step	Check	Yes	No
2 CHECK ACTUATOR. 1) Turn the ignition switch to OFF. 2) Disconnect the mode door actuator connector. 3) Turn the ignition switch to ON. 4) Measure the voltage between the mode door actuator connector terminal and chassis ground. Connector & terminal (B77) No. 3 (+) — Chassis ground (-):	Is the voltage approx. 10 V or more?	Go to step 3.	Check the DC power supply circuit.
3 CHECK AIR MIX DOOR ACTUATOR. 1) Turn the ignition switch to OFF. 2) Measure the resistance between mode door actuator terminals using a tester. Connector & terminal (B77) No. 3 — No. 1: (B77) No. 3 — No. 2: (B77) No. 3 — No. 5: (B77) No. 3 — No. 6:	Is the resistance 80 — 100 Ω ?	Go to step 4.	Replace the actuator. <Ref. to AC-82, REMOVAL, Mode Door Actuator.>
4 CHECK HARNESS BETWEEN A/C CONTROL PANEL AND MODE DOOR ACTUATOR (OPEN). 1) Disconnect the A/C control panel connector. 2) Measure the resistance between A/C control panel and air mix door actuator connector. Connector & terminal (B77) No. 1 — (i88) No. 4: (B77) No. 2 — (i88) No. 3: (B77) No. 5 — (i88) No. 2: (B77) No. 6 — (i88) No. 1:	Is there continuity?	Replace the A/C control panel. <Ref. to AC-45, REMOVAL, Control Panel.>	Repair or replace the open circuit of harness.

Diagnostic Procedure with Diagnostic Trouble Code (DTC)

HVAC SYSTEM (AUTO A/C) (DIAGNOSTICS)

N: DTC B14E6 MODE DOOR ACTUATOR STEPPING MOTOR CIRCUIT SHORT-CIRCUIT

DTC detecting condition:

Mode door actuator stepping motor circuit is shorted.

Trouble symptom:

Vent does not change.

Wiring diagram:

Air conditioning system <Ref. to WI-44, WIRING DIAGRAM, Air Conditioning System.>

AC-02666

Step	Check	Yes	No
1 CHECK CONNECTOR. 1) Check the condition of connector connection. 2) Read the DTC using Subaru Select Monitor. <Ref. to AC(diag)-33, Read Diagnostic Trouble Code (DTC).>	Is B14E6 displayed?	Go to step 2.	Even if DTC is displayed, the circuit has returned to a normal condition at this time. Reproduce the failure, and then perform the diagnosis again. NOTE: In this case, temporary poor contact of connector, temporary open or short circuit of harness may be the cause.

Diagnostic Procedure with Diagnostic Trouble Code (DTC)

HVAC SYSTEM (AUTO A/C) (DIAGNOSTICS)

Step	Check	Yes	No
2 CHECK POWER SUPPLY FOR MODE DOOR ACTUATOR. 1) Turn the ignition switch to OFF. 2) Disconnect the mode door actuator connector. 3) Turn the ignition switch to ON. 4) Measure the voltage between the mode door actuator connector terminal and chassis ground. Connector & terminal (B77) No. 3 (+) — Chassis ground (-):	Is the voltage approx. 10 V or more?	Go to step 3.	Check the DC power supply circuit.
3 CHECK MODE DOOR ACTUATOR. 1) Turn the ignition switch to OFF. 2) Measure the resistance between mode door actuator terminals using a tester. Connector & terminal (B77) No. 3 — No. 1: (B77) No. 3 — No. 2: (B77) No. 3 — No. 5: (B77) No. 3 — No. 6:	Is the resistance 80 — 100 Ω?	Go to step 4.	Replace the actuator. <Ref. to AC-82, REMOVAL, Mode Door Actuator.>
4 CHECK HARNESS BETWEEN A/C CONTROL PANEL AND MODE DOOR ACTUATOR (SHORTED TO POWER SUPPLY). 1) Disconnect the A/C control panel connector. 2) Turn the ignition switch to ON. 3) Measure the voltage between mode door actuator connector and chassis ground. Connector & terminal (B77) No. 1 (+) — Chassis ground (-): (B77) No. 2 (+) — Chassis ground (-): (B77) No. 5 (+) — Chassis ground (-): (B77) No. 6 (+) — Chassis ground (-):	Is there any voltage?	Repair or replace the short circuit of the harness.	Replace the A/C control panel. <Ref. to AC-45, REMOVAL, Control Panel.>

Diagnostic Procedure with Diagnostic Trouble Code (DTC)

HVAC SYSTEM (AUTO A/C) (DIAGNOSTICS)

O: DTC B14E9 INTAKE DOOR ACTUATOR CIRCUIT OPEN

DTC detecting condition:

Intake door actuator potentiometer circuit is open.

Trouble symptom:

FRESH/RECIRC does not operate.

Wiring diagram:

Air conditioning system <Ref. to WI-44, WIRING DIAGRAM, Air Conditioning System.>

AC-02668

Step	Check	Yes	No
1 CHECK CONNECTOR. 1) Check the condition of connector connection. 2) Read the DTC using Subaru Select Monitor. <Ref. to AC(diag)-33, Read Diagnostic Trouble Code (DTC).>	Is B14E9 displayed?	Go to step 2.	Even if DTC is displayed, the circuit has returned to a normal condition at this time. Reproduce the failure, and then perform the diagnosis again. NOTE: In this case, temporary poor contact of connector, temporary open or short circuit of harness may be the cause.
2 CHECK HARNESS. 1) Turn the ignition switch to ON. 2) Using the tester, measure the voltage between terminals. Connector & terminal (B163) No. 4 (+) — No. 6 (-):	Is the voltage 4.5 — 5.0 V?	Go to step 3.	Repair or replace the open circuit of harness.

Diagnostic Procedure with Diagnostic Trouble Code (DTC)

HVAC SYSTEM (AUTO A/C) (DIAGNOSTICS)

Step	Check	Yes	No
3 CHECK HARNESS (OPEN CIRCUIT). 1) Turn the ignition switch to OFF. 2) Using a tester, check continuity between terminals. <i>Connector & terminal</i> (B163) No. 1 — (i88) No. 8: (B163) No. 2 — (i88) No. 6: (B163) No. 4 — (i88) No. 10: (B163) No. 5 — (i88) No. 12: (B163) No. 6 — (i88) No. 14:	Is there continuity?	Go to step 4.	Repair or replace the open circuit of harness.
4 CHECK ACTUATOR. 1) Turn the ignition switch to ON. 2) Using the tester, measure the voltage between terminals. <i>Connector & terminal</i> (B163) No. 5 (+) — No. 6 (-):	Is the voltage 0.5 — 4.5 V?	Replace the A/C control panel. <Ref. to AC-45, REMOVAL, Control Panel.>	Go to step 5.
5 CHECK HARNESS (SHORTED BETWEEN LINES). 1) Turn the ignition switch to OFF. 2) Using the tester, measure the resistance between terminals. <i>Connector & terminal</i> (B163) No. 4 — No. 5:	Is the resistance less than 1 Ω ?	Repair or replace the short circuit of the harness.	Replace the actuator. <Ref. to AC-79, REMOVAL, FRESH/RECIRC Door Actuator.>

Diagnostic Procedure with Diagnostic Trouble Code (DTC)

HVAC SYSTEM (AUTO A/C) (DIAGNOSTICS)

P: DTC B14EA INTAKE DOOR ACTUATOR CIRCUIT SHORT-CIRCUIT

DTC detecting condition:

Intake door actuator potentiometer circuit is shorted.

Trouble symptom:

FRESH/RECIRC does not operate.

Wiring diagram:

Air conditioning system <Ref. to WI-44, WIRING DIAGRAM, Air Conditioning System.>

AC-02668

Step	Check	Yes	No
1 CHECK CONNECTOR. 1) Check the condition of connector connection. 2) Read the DTC using Subaru Select Monitor. <Ref. to AC(diag)-33, Read Diagnostic Trouble Code (DTC).>	Is B14EA displayed?	Go to step 2.	Even if DTC is displayed, the circuit has returned to a normal condition at this time. Reproduce the failure, and then perform the diagnosis again. NOTE: In this case, temporary poor contact of connector, temporary open or short circuit of harness may be the cause.
2 CHECK ACTUATOR. 1) Turn the ignition switch to ON. 2) Using the tester, measure the voltage between terminals. Connector & terminal (B163) No. 4 (+) — No. 6 (-):	Is the voltage 4.5 — 5.0 V?	Go to step 3.	Repair or replace the open circuit of harness.

Diagnostic Procedure with Diagnostic Trouble Code (DTC)

HVAC SYSTEM (AUTO A/C) (DIAGNOSTICS)

Step	Check	Yes	No
3 CHECK HARNESS (OPEN CIRCUIT). 1) Turn the ignition switch to OFF. 2) Using a tester, check continuity between terminals. <i>Connector & terminal</i> <i>(B163) No. 4 — (i88) No. 10:</i> <i>(B163) No. 5 — (i88) No. 12:</i> <i>(B163) No. 6 — (i88) No. 14:</i>	Is there continuity?	Go to step 4.	Repair or replace the open circuit of harness.
4 CHECK ACTUATOR. 1) Turn the ignition switch to ON. 2) Using the tester, measure the voltage between terminals. <i>Connector & terminal</i> <i>(B163) No. 5 (+) — No. 6 (-):</i>	Is the voltage 0.5 — 4.5 V?	Replace the A/C control panel. <Ref. to AC-45, REMOVAL, Control Panel.>	Go to step 5.
5 CHECK HARNESS (SHORTED BETWEEN LINES). 1) Turn the ignition switch to OFF. 2) Using the tester, measure the resistance between terminals. <i>Connector & terminal</i> <i>(B163) No. 5 — No. 6:</i>	Is the resistance less than 1 Ω ?	Repair or replace the short circuit of the harness.	Replace the actuator. <Ref. to AC-79, REMOVAL, FRESH/RECIRC Door Actuator.>

Diagnostic Procedure with Diagnostic Trouble Code (DTC)

HVAC SYSTEM (AUTO A/C) (DIAGNOSTICS)

Q: DTC B14EB INTAKE DOOR ACTUATOR STUCK

DTC detecting condition:

- Intake door actuator is locked.
- The potentiometer value of the actuator does not change.

Trouble symptom:

FRESH/RECIRC does not operate.

Wiring diagram:

Air conditioning system <Ref. to WI-44, WIRING DIAGRAM, Air Conditioning System.>

AC-02668

Step	Check	Yes	No
1 CHECK CONNECTOR. 1) Check the condition of connector connection. 2) Read the DTC using Subaru Select Monitor. <Ref. to AC(diag)-33, Read Diagnostic Trouble Code (DTC).>	Is B14EB displayed?	Go to step 2.	Even if DTC is displayed, the circuit has returned to a normal condition at this time. Reproduce the failure, and then perform the diagnosis again. NOTE: In this case, temporary poor contact of connector, temporary open or short circuit of harness may be the cause.
2 CHECK SYSTEM OPERATION. Using the Subaru Select Monitor, change the setting of "Fresh/Rec Air Dr Act Trgt Open Angle" from Air Conditioning Diagnosis and perform the active test.	Did the actuator move to the specified target opening angle?	Intake door actuator circuit is normal.	Go to step 3.

Diagnostic Procedure with Diagnostic Trouble Code (DTC)

HVAC SYSTEM (AUTO A/C) (DIAGNOSTICS)

Step	Check	Yes	No
3 CHECK HARNESS. 1) Turn the ignition switch to ON. 2) Using the tester, measure the voltage between terminals. <i>Connector & terminal</i> <i>(B163) No. 4 (+) — No. 6 (-):</i>	Is the voltage 4.5 — 5.0 V?	Go to step 4.	Repair or replace the open circuit of harness.
4 CHECK HARNESS (OPEN CIRCUIT). 1) Disconnect the connector from the A/C control panel. 2) Using a tester, check continuity between terminals. <i>Connector & terminal</i> <i>(B163) No. 1 — (i88) No. 8:</i> <i>(B163) No. 2 — (i88) No. 6:</i> <i>(B163) No. 4 — (i88) No. 10:</i> <i>(B163) No. 5 — (i88) No. 12:</i> <i>(B163) No. 6 — (i88) No. 14:</i>	Is there continuity?	Go to step 5.	Repair or replace the open circuit of harness.
5 CHECK INTAKE DOOR ACTUATOR. Check the intake door actuator parts.	Is the actuator normal?	Replace the A/C control panel. <Ref. to AC-45, REMOVAL, Control Panel.>	Replace the actuator. <Ref. to AC-79, REMOVAL, FRESH/RECIRC Door Actuator.>

R: DTC U0073 CONTROL MODULE COMMUNICATION BUS OFF

Detected when CAN line abnormality is detected.

NOTE:

Perform the diagnosis for LAN system. <Ref. to LAN(diag)-2, PROCEDURE, Basic Diagnostic Procedure.>

S: DTC U0100 LOST COMMUNICATION WITH ECM/PCM “A”

Detected when CAN data from the engine control module (ECM) does not arrive.

NOTE:

Perform the diagnosis for LAN system. <Ref. to LAN(diag)-2, PROCEDURE, Basic Diagnostic Procedure.>

T: DTC U0101 LOST COMMUNICATION WITH TCM

Detected when CAN data from TCM does not arrive.

NOTE:

Perform the diagnosis for LAN system. <Ref. to LAN(diag)-2, PROCEDURE, Basic Diagnostic Procedure.>

U: DTC U0122 LOST COMMUNICATION WITH VEHICLE DYNAMICS CONTROL MODULE

Detected when CAN data from VDC does not arrive.

NOTE:

Perform the diagnosis for LAN system. <Ref. to LAN(diag)-2, PROCEDURE, Basic Diagnostic Procedure.>

V: DTC U0140 LOST COMMUNICATION WITH BODY CONTROL MODULE

Detected when CAN data from BIU does not arrive.

NOTE:

Perform the diagnosis for LAN system. <Ref. to LAN(diag)-2, PROCEDURE, Basic Diagnostic Procedure.>

W: DTC U0155 LOST COMMUNICATION WITH INSTRUMENT PANEL CLUSTER (IPC) CONTROL MODULE

Detected when CAN data from meter does not arrive.

NOTE:

Perform the diagnosis for LAN system. <Ref. to LAN(diag)-2, PROCEDURE, Basic Diagnostic Procedure.>

Diagnostic Procedure with Diagnostic Trouble Code (DTC)

HVAC SYSTEM (AUTO A/C) (DIAGNOSTICS)

X: DTC U0401 INVALID DATA RECEIVED FROM ECM/PCM “A”

Detected when there is malfunction in CAN data from the engine control module (ECM).

NOTE:

Perform the diagnosis for LAN system. <Ref. to LAN(diag)-2, PROCEDURE, Basic Diagnostic Procedure.>

Y: DTC U0402 INVALID DATA RECEIVED FROM TCM

This is detected when CAN data from TCM is abnormal.

NOTE:

Perform the diagnosis for LAN system. <Ref. to LAN(diag)-2, PROCEDURE, Basic Diagnostic Procedure.>

Z: DTC U0416 INVALID DATA RECEIVED FROM VEHICLE DYNAMICS CONTROL MODULE

This is detected when CAN data from VDC is abnormal.

NOTE:

Perform the diagnosis for LAN system. <Ref. to LAN(diag)-2, PROCEDURE, Basic Diagnostic Procedure.>

AA:DTC U0422 INVALID DATA RECEIVED FROM BODY CONTROL MODULE

Detected when CAN data from BIU is abnormal.

NOTE:

Perform the diagnosis for LAN system. <Ref. to LAN(diag)-2, PROCEDURE, Basic Diagnostic Procedure.>

AB:DTC U0423 INVALID DATA RECEIVED FROM INSTRUMENT PANEL CLUSTER CONTROL MODULE

This is detected when CAN data from meter is abnormal.

NOTE:

Perform the diagnosis for LAN system. <Ref. to LAN(diag)-2, PROCEDURE, Basic Diagnostic Procedure.>

Diagnostic Procedure with Diagnostic Trouble Code (DTC)

12.STEERING ROLL CONNECTOR

AB-10260

B: CAUTION

1. BEFORE STARTING ALL WORKS

- Before performing vehicle maintenance, turn the ignition switch to OFF and disconnect the negative terminal from battery. <Ref. to NT-6, BATTERY, NOTE, Note.>
- The airbag system (including pretensioner) is fitted with a backup power supply. After disconnecting the battery ground cable, the airbag may operate if you do not wait for 60 seconds or more before starting the service of airbag system.
- If the airbag warning light illuminates, check or repair the vehicle immediately to prevent it from airbag system malfunction.
- Do not allow water or oil to come in contact with the connector terminals. Also, do not touch the connector terminals directly.

- If damage, open circuit or rust is found on airbag system wiring harness, do not repair the harness. Always replace the faulty harness with a new genuine part.

- When painting or performing sheet metal work on the front part of the vehicle, including the front wheel apron, front fender and radiator panel side, remove the front sub sensors and wiring harness of airbag system.
- When painting or performing sheet metal work on the side of the vehicle, including the side sill, center pillar and front and rear doors, remove the front door impact sensor, side airbag sensors, curtain airbag sensor, satellite safing sensor and wiring harness of the airbag system.

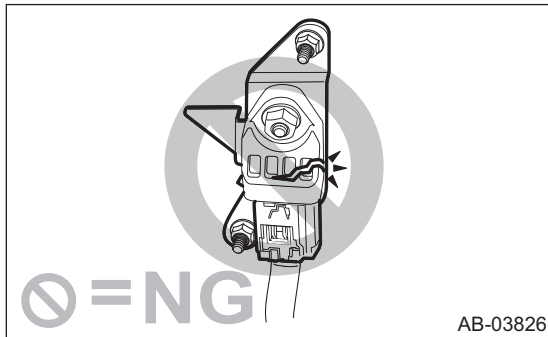

- When attaching the steering wheel and steering roll connector, be sure to adjust the steering roll connector.

General Description

AIRBAG SYSTEM

2. BEFORE STARTING PARTS REPLACEMENT

- If airbag sensors, airbag module, airbag control module, pretensioners, harnesses, or the cover - satellite safing are deformed or damaged, replace with new parts.

- Install the wiring harness securely with the specified clips to avoid interference or tangled with other parts.

- Do not use the airbag or pretensioner parts from other vehicles. Always replace the defective parts with new parts.
- Never reuse any activated airbag module and pretensioner.
- Do not discard undeployed airbag or pretensioner. For the disposal procedures, refer to "Airbag Module Disposal".
- Do not reuse the bolts and nuts when the following parts are removed. Always replace with the specified new bolts and nuts.
 - Airbag control module
 - Front door impact sensor
 - Front sub sensor
 - Satellite safing sensor
 - Side airbag sensor
 - Curtain airbag sensor
- When attaching the steering wheel and steering roll connector, be sure to adjust the steering roll connector.
- After removing each parts of the airbag system, keep them with the pad side facing upward on a dry, clean and flat surface away from heat, light sources, moisture and dust.

- Observe the following; the airbag system component or the internal parts of seat belt pretensioner may be damaged or the reliability may be greatly lowered.
 - Do not drop or otherwise apply impact.
 - Do not store it under high temperature environment at 85°C (185°F) or more, or do not near it to open flames.
 - Do not allow water, oil or grease to come in contact.

- When storing a removed airbag module, observe the following items. If the pad of the airbag module is in contact with other objects, it may cause a serious accident if the airbag accidentally operates.
 - Do not place the airbag module with the pad side facing downward.
 - Do not place any objects on the airbag module.
 - Do not pile up the airbag module.
- Driver's airbag module

General Description

AIRBAG SYSTEM

- Passenger's airbag module and side airbag module

- Do not disassemble driver's airbag module, knee airbag module, passenger's airbag module, side airbag module, curtain airbag module or pretensioner.
- The removed front seat with airbag module must be kept at least 200 mm (8 in) away from walls and other objects.

3. BEFORE STARTING TROUBLESHOOTING

- Even if any part must be replaced as the result of troubleshooting, do not use an airbag part or pretensioner part from other vehicles. Always replace the defective parts with new parts.
- When checking the airbag system, be sure to use a digital circuit tester. Use of an analog circuit tester may cause the airbag to activate erroneously due to a minimal current inside tester.

- Do not allow water or oil to come in contact with the connector terminals. Also, do not touch the connector terminals directly.

- When checking, use a test harness (1). Damage to connector terminal causes malfunction. Do not directly put the tester probe on airbag connector terminal.

- Do not check the continuity of airbag modules and pretensioners.

- If damage, open circuit or rust is found on airbag system wiring harness, do not repair the harness. Always replace the faulty harness with a new genuine part.

TOOL NAME	REMARKS
Steering wheel puller	Used for removing the steering wheel.
TORX® T40	Used for removing and installing the beam COMPL - steering.
Circuit tester	Used for measuring resistance, voltage and current.

2. Airbag Connector

A: PROCEDURE

1. POWER SUPPLY

1) How to disconnect:

CAUTION:

When pulling the slide lock or disconnecting connector, be sure to hold the connector, not the harness.

(1) Push the lock (a).

(2) While holding down the lock (a), disconnect the connector.

2) How to connect:

CAUTION:

Be sure to insert the connector in until it is locked. Then pull it gently to make sure that it is locked.

Holding the connector, push it in securely until a clicking sound is heard.

2. AIRBAG CONTROL MODULE

1) How to disconnect:

- (1) Push the lock lever plate (a).
- (2) While holding down the lock lever plate (a), pull the lever toward you.

2) How to connect:

CAUTION:

Be sure to insert the connector in until it is locked. Then pull it gently to make sure that it is locked. Insert the connector and push the lock lever in securely.

3. DRIVER'S AIRBAG MODULE (ROLL CONNECTOR)

1) How to disconnect:

CAUTION:

When pulling the slide lock or disconnecting connector, be sure to hold the connector, not the harness.

- (1) Pull the slide lock (a) in the direction of arrow.
- (2) With the slide lock pulled, disconnect the connector.

2) How to connect:

CAUTION:

Be sure to insert the connector in until it is locked. Then pull it gently to make sure that it is locked. Holding the the connector, push it in securely until a clicking sound is heard.

Airbag Connector

AIRBAG SYSTEM

4. PASSENGER'S AIRBAG MODULE

1) How to disconnect:

CAUTION:

When pulling the slide lock or disconnecting connector, be sure to hold the connector, not the harness.

- (1) Pull the slide lock (a) in the direction of arrow.
- (2) With the slide lock pulled, disconnect the connector.

2) How to connect:

CAUTION:

Be sure to insert the connector in until it is locked. Then pull it gently to make sure that it is locked. Holding the connector, push it in securely until a clicking sound is heard.

5. DRIVER'S AIRBAG MODULE, CURTAIN AIRBAG MODULE & PRETENSIONER

1) How to disconnect:

- (1) Using a flat tip screwdriver, pry the push lock upward to unlock.
- (2) Pull the connector to disconnect from the airbag module assembly or the retractor assembly.

2) How to connect:

CAUTION:

- Be sure to insert the connector in until it is locked.
- Press in the push lock securely. Then pull it gently to make sure that it is locked.

Connect the connector in the reverse order of disconnecting. At this time, be sure to insert until a clicking sound is heard.

6. FRONT SUB SENSOR

1) How to disconnect:

CAUTION:

When pulling the slide lock or disconnecting connector, be sure to hold the connector, not the harness.

- (1) Push the lock arm.
- (2) Holding outer part, pull it one step in the direction of arrow.

- (3) Push the lock arm again.
- (4) Holding outer part, pull it in the direction of arrow to disconnect the connector.

Airbag Connector

AIRBAG SYSTEM

2) How to connect:

CAUTION:

Be sure to insert the connector in until it is locked. Then pull it gently to make sure that it is locked. Holding the connector, push it in securely until a clicking sound is heard.

7. FRONT DOOR IMPACT SENSOR AND SATELLITE SAFING SENSOR

1) How to disconnect:

CAUTION:

When pulling the slide lock or disconnecting connector, be sure to hold the connector, not the harness.

Holding outer part (a), pull it in the direction of arrow.

2) How to connect:

CAUTION:

- **The outer part (a) returns to the original position. Therefore do not touch the outer part.**
 - **Be sure to insert the connector in until it is locked. Then pull it gently to make sure that it is locked.**
- Holding the connector, push it in securely until a clicking sound is heard.

8. FRONT DOOR IMPACT SENSOR (BETWEEN AIRBAG REAR HARNESS AND DOOR HARNESS)

1) How to disconnect:

CAUTION:

When pulling the slide lock or disconnecting connector, be sure to hold the connector, not the harness.

- (1) Pull the slide lock (a) in the direction of arrow.
- (2) With the slide lock pulled, disconnect the connector.

2) How to connect:

CAUTION:

- The outer part (a) returns to the original position. Therefore do not touch the outer part.
- Be sure to insert the connector in until it is locked. Then pull it gently to make sure that it is locked.

Holding the connector, push it in securely until a clicking sound is heard.

9. SIDE AIRBAG SENSOR AND CURTAIN AIRBAG SENSOR

1) How to disconnect:

CAUTION:

When pulling the slide lock or disconnecting connector, be sure to hold the connector, not the harness.

- (1) Push the lock arm.
- (2) Holding outer part, pull it one step in the direction of arrow.

Airbag Connector

AIRBAG SYSTEM

(3) Push the lock arm again.

(4) Holding outer part, pull it in the direction of arrow to disconnect the connector.

2) How to connect:

CAUTION:

Be sure to insert the connector in until it is locked. Then pull it gently to make sure that it is locked. Holding the connector, push it in securely until a clicking sound is heard.

10.SIDE AIRBAG MODULE

1) How to disconnect:

CAUTION:

When pulling the slide lock or disconnecting connector, be sure to hold the connector, not the harness.

(1) Move the slide lock (a) in the direction of arrow and hold it.

(2) While holding the slide lock (a), pull the connector (b) in the direction of arrow.

2) How to connect:

CAUTION:

Be sure to insert the connector in until it is locked. Then pull it gently to make sure that it is locked. Holding the the connector, push it in securely until a clicking sound is heard.

11. BUCKLE SWITCH RH

1) How to disconnect:

CAUTION:

When pulling the slide lock or disconnecting connector, be sure to hold the connector, not the harness.

- (1) Move the slide lock (A) in the direction of arrow and hold it.
- (2) While holding the slide lock (A), pull the connector (B) in the direction of arrow.

2) How to connect:

CAUTION:

Be sure to insert the connector in until it is locked. Then pull it gently to make sure that it is locked. Holding the connector, push it in securely until a clicking sound is heard.

12. OCCUPANT DETECTION SYSTEM (BETWEEN AIRBAG REAR HARNESS AND SEAT HARNESS)

Refer to "OCCUPANT DETECTION SYSTEM" section. <Ref. to OD(diag)-13, OCCUPANT DETECTION SYSTEM (BETWEEN AIRBAG REAR HARNESS AND SEAT HARNESS), PROCEDURE, Airbag Connector.>

Airbag Connector

AIRBAG SYSTEM

13.KNEE AIRBAG MODULE

1) How to disconnect:

- (1) Using a flat tip screwdriver, pry the push lock upward to unlock.
- (2) Pull the connector to disconnect from the airbag module assembly.

AB-02506

2) How to connect:

CAUTION:

- Be sure to insert the connector in until it is locked.
- Press in the push lock securely. Then pull it gently to make sure that it is locked.

AB-02507

Connect the connector in the reverse order of disconnecting. At this time, be sure to insert until a clicking sound is heard.

3. Inspection Locations after a Collision

A: INSPECTION

If the vehicle is involved in a collision, even if it is a slight collision, be sure to check the following systems.

1. DRIVER'S AIRBAG MODULE ASSEMBLY

1) Frontal collision (driver's airbag module assembly activated)

1. Replace the following parts with new ones.

- Airbag control module
- Driver's airbag module
- Knee airbag module
- Passenger's airbag module (if deployed)
- Side airbag module (if deployed)
- Curtain airbag module (right and left / if deployed)
- Seat belt pretensioner (right and left)
- Lap seat belt pretensioner (passenger's side only)
- Front sub sensor (right and left)
- Instrument panel assembly (because it is integrated with passenger's airbag module) (if passenger's airbag module is deployed)
- Steering wheel
- Column assembly - steering
- Roll connector
- Pad assembly - front seat backrest (if the side airbag is deployed)
- Frame assembly - front seat cushion (if the side airbag is deployed)
- Frame assembly - front seat backrest (if the side airbag is deployed)
- Cover COMPL - front seat backrest (if the side airbag is deployed)
- Trim panel - roof assembly (if the curtain airbag is deployed)
- Trim panel of each pillar (if the curtain airbag is deployed)

2. Visually inspect the following items and replace any damaged part with a new one.

- Universal joint assembly - steering
- Steering gearbox
- Beam COMPL - steering
- Harnesses and connectors on body side that are linked to the replaced parts

2) Frontal collision (driver's airbag module not activated)

Visually inspect the following items and replace any damaged or cracked part with a new one.

Specially inspect the damage of airbag module body, mounting bracket and harness connector.

- Driver's airbag module
- Knee airbag module
- Passenger's airbag module
- Seat belt pretensioner (right and left)
- Lap seat belt pretensioner (passenger's side only)
- Front sub sensor (right and left)
- Instrument panel assembly (because it is integrated with passenger's airbag module)

3) No frontal collision

Visually inspect the airbag modules for damage or contamination and replace any faulty part with a new one.

Inspection Locations after a Collision

AIRBAG SYSTEM

2. KNEE AIRBAG MODULE

1) Frontal collision (knee airbag module activated)

1. Replace the following parts with new ones.

- Airbag control module
- Driver's airbag module
- Knee airbag module
- Passenger's airbag module (if deployed)
- Side airbag module (if deployed)
- Curtain airbag module (right and left / if deployed)
- Seat belt pretensioner (right and left)
- Lap seat belt pretensioner (passenger's side only)
- Front sub sensor (right and left)
- Instrument panel assembly (because it is integrated with passenger's airbag module) (if passenger's airbag module is deployed)
- Steering wheel
- Column assembly - steering
- Roll connector
- Pad assembly - front seat backrest (if the side airbag is deployed)
- Frame assembly - front seat cushion (if the side airbag is deployed)
- Frame assembly - front seat backrest (if the side airbag is deployed)
- Cover COMPL - front seat backrest (if the side airbag is deployed)
- Trim panel - roof assembly (if the curtain airbag is deployed)
- Trim panel of each pillar (if the curtain airbag is deployed)

2. Visually inspect the following items and replace any damaged part with a new one.

- Universal joint assembly - steering
- Steering gearbox
- Beam COMPL - steering
- Harnesses and connectors on body side that are linked to the replaced parts

2) Frontal collision (knee airbag module not activated)

Visually inspect the following items and replace any damaged or cracked part with a new one.

Specially inspect the damage of airbag module body, mounting bracket and harness connector.

- Driver's airbag module
- Knee airbag module
- Passenger's airbag module
- Seat belt pretensioner (right and left)
- Lap seat belt pretensioner (passenger's side only)
- Front sub sensor (right and left)
- Instrument panel assembly (because it is integrated with passenger's airbag module)

3) No frontal collision

Visually inspect the airbag modules for damage or contamination and replace any faulty part with a new one.

3. PASSENGER'S AIRBAG MODULE

1) Frontal collision (passenger's airbag module activated)

1. Replace the following parts with new ones.

- Airbag control module
- Driver's airbag module
- Knee airbag module
- Passenger's airbag module
- Side airbag module (if deployed)
- Curtain airbag module (right and left / if deployed)
- Seat belt pretensioner (right and left)
- Lap seat belt pretensioner (passenger's side only)
- Front sub sensor (right and left)
- Instrument panel assembly (because it is integrated with passenger's airbag module)
- Steering wheel
- Column assembly - steering
- Roll connector
- Pad assembly - front seat backrest (if the side airbag is deployed)
- Frame assembly - front seat cushion (if the side airbag is deployed)
- Frame assembly - front seat backrest (if the side airbag is deployed)
- Cover COMPL - front seat backrest (if the side airbag is deployed)
- Trim panel - roof assembly (if the curtain airbag is deployed)
- Trim panel of each pillar (if the curtain airbag is deployed)

2. Visually inspect the following items and replace any damaged part with a new one.

- Universal joint assembly - steering
- Steering gearbox
- Beam COMPL - steering
- Harnesses and connectors on body side that are linked to the replaced parts

2) Frontal collision (passenger's airbag module not activated)

Visually inspect the following items and replace any damaged or cracked part with a new one.

Specially inspect the damage of airbag module body, mounting bracket and harness connector.

- Driver's airbag module
- Knee airbag module
- Passenger's airbag module
- Seat belt pretensioner (right and left)
- Lap seat belt pretensioner (passenger's side only)
- Front sub sensor (right and left)
- Instrument panel assembly (because it is integrated with passenger's airbag module)

3) No frontal collision

Visually inspect the airbag modules for damage or contamination and replace any faulty part with a new one.

Inspection Locations after a Collision

AIRBAG SYSTEM

4. SIDE AIRBAG MODULE

1) Side impact (side airbag module activated)

1. Replace the following parts with new ones.

- Airbag control module
- Satellite safing sensor
- Cover - satellite safing
- Front door impact sensor
- Seat belt pretensioner (collision side / if deployed)
- Side airbag module (collision side)
- Side airbag sensor (collision side)
- Curtain airbag module (collision side)
- Curtain airbag sensor (collision side)
- Pad assembly - front seat backrest (collision side)
- Frame assembly - front backrest (collision side)
- Cover COMPL - front backrest (collision side)
- Trim panel - roof assembly
- Trim panel for each pillar (collision side)

2. Visually inspect the following items and replace any damaged part with a new one.

- Headrest assembly
- Bushing - lock headrest
- Slide rail assembly - OUT
- Slide rail assembly - INN
- Cover - hinge front seat
- Knob - lifter
- Lever - reclining
- Harnesses and connectors on body side that are linked to the replaced parts

2) Side impact (side airbag module not activated)

Visually inspect the following items and replace any damaged or cracked part (collision side) with a new one.

Specially inspect the damage of airbag module body, mounting bracket and harness connector.

- Pad assembly - front seat backrest
- Frame assembly - front backrest
- Cover COMPL - front backrest
- Satellite safing sensor
- Cover - satellite safing
- Front door impact sensor
- Side airbag module
- Side airbag sensor
- Curtain airbag module
- Curtain airbag sensor

3) No side impact

Visually inspect the airbag modules for contamination and replace any faulty part (collision side) with a new one.

5. CURTAIN AIRBAG MODULE

1) Side impact or roll over (curtain airbag module activated)

1. Replace the following parts with new ones.

- Airbag control module
- Satellite safing sensor
- Cover - satellite safing
- Curtain airbag module (operating side)
- Seat belt pretensioner (if deployed)
- Front door impact sensor (operating side)
- Side airbag sensor (operating side)
- Curtain airbag sensor (operating side)
- Pad assembly - front seat backrest (collision side)
- Frame assembly - front backrest (collision side)
- Cover COMPL - front backrest (collision side)
- Trim panel - roof assembly
- Trim panel for each pillar (operating side)
- Airbag bracket (model with sunroof) (operating side)

2. Visually inspect the following items and replace any damaged part with a new one.

- Assist rail - front and rear
- Bracket - assist rail front and rear
- Harnesses and connectors on body side that are linked to the replaced parts

2) Side impact (curtain airbag module not activated)

Visually inspect the following items and replace any damaged or cracked part with a new one.

Specially inspect the damage of airbag module body, mounting bracket and harness connector.

- Trim panel - roof assembly
- Trim panel for each pillar
- Curtain airbag module
- Satellite safing sensor
- Satellite safing cover
- Front door impact sensor
- Side airbag sensor
- Curtain airbag sensor

3) No side impact or roll over

Visually inspect the airbag modules for damage or contamination and replace any faulty part with a new one.

6. AIRBAG CONTROL MODULE

Check for the following, and replace the damaged parts with new parts.

- Control module is cracked or deformed.
- Mounting bracket is cracked or deformed.
- Connector is scratched, cracked or deformed.
- Driver's airbag module has been activated.
- Knee airbag module has been activated.
- Passenger's airbag module has been activated.
- Side airbag module has been activated.
- Curtain airbag module has been activated.
- Seat belt pretensioner has been activated.
- Lap seat belt pretensioner has been activated.

Inspection Locations after a Collision

AIRBAG SYSTEM

7. FRONT SUB SENSOR

If the section of vehicle as shown in the figure is damaged, check the following items and replace the damaged parts with new parts.

- Front sub sensor is cracked or deformed.
- Connector is scratched, cracked or deformed.
- Driver's airbag module, knee airbag module or passenger's airbag module has been activated.

8. FRONT DOOR IMPACT SENSOR, SATELLITE SAFING SENSOR, SIDE AIRBAG SENSOR AND CURTAIN AIRBAG SENSOR

If the section of vehicle as shown in the figure is damaged, check the following items and replace the damaged parts with new parts.

- Front door impact sensor, satellite safing sensor, sensor cover, side airbag sensor and curtain airbag sensor are cracked or deformed.
- Mounting bracket is cracked or deformed.
- Connector is scratched, cracked or deformed.
- Side airbag module or curtain airbag module has been activated. (Operating side)

9. ROLL CONNECTOR

Check the following items and replace any damaged, cracked, or deformed parts with new parts.

- Combination switch
- Steering roll connector

10.CHECK STEERING SYSTEM

For steering wheel, column assembly - steering, universal joint assembly - steering, and steering gearbox, check the following items, and if there is anything out of standard value, it is considered to be damaged. If so, replace it with a new part.

- Check the following items for the column assembly - steering. <Ref. to PS-20, INSPECTION, Steering Column.>
 - Mounting conditions and deflection of front and rear, upward and downward directions of the steering wheel and column assembly - steering.
 - Deflection of front and rear, upward and downward directions, and mounting condition to vehicle body of the column assembly - steering. (After a collision, absorbing part of the column assembly - steering may have been operated.)
- Check for deflection and the swing load of the universal joint assembly - steering. <Ref. to PS-16, INSPECTION, Universal Joint.>
- Check the following items for the steering gearbox. <Ref. to PS-30, INSPECTION, Electric Power Steering Gearbox.>
 - Rack sliding resistance and deflection
 - Input shaft play
 - Rotational resistance of gearbox

11.PASSENGER'S SEAT

CAUTION:

If any of the following applies, replace the pad assembly - front seat cushion & frame assembly - front cushion as a unit. Do not disassemble.

- **The frame assembly - front cushion or the pad assembly - front seat cushion is cracked or deformed.**
 - **Harness and/or connector is cracked, deformed or open. Harness wire is exposed.**
 - **Scratches, cracks, or deformation found on the occupant detection system sensor mat or occupant detection control module, or attachment brackets of the control module. (Only for passenger's airbag deployment control occupant detection system)**
- 1) Check for the following, and replace the damaged parts with new parts.
 - Body or bracket of the seat belt inner - front is scratched, cracked or deformed.
 - Frame assembly - front backrest is cracked or deformed.
 - Headrest assembly for deformation or play
 - If the cover - front cushion and the cover COMPL - front backrest is damaged or frayed, replace the cover with a new part.
 - If the cover - front cushion and the seat heater are replaced, replace the cover hang wire with a new part.
 - 2) When the passenger's seat cover COMPL - front seat has been removed or replaced, make sure that the occupant detection system operates normally.
 - 3) Use the Subaru Select Monitor to check whether the passenger's seat belt buckle switch is operating normally.

12.INSPECTION OF OTHER PARTS

Check for the following parts, and replace the damaged parts with new parts.

- 1) Check the direct type connector of driver's airbag module, knee airbag module, curtain airbag module, and pretensioner for damage, and also check each harness for pinching and connector damage. Replace the main harness as an assembly if damage is found.
- 2) Check the seat cushion, backrest, slide rail and headrest for installation condition and looseness.
- 3) If any break or fray is found in the cover COMPL - front backrest of the driver's seat or passenger's seat, the side airbag system may not operate normally. In this case, replace the cover COMPL - front backrest with a new part.
- 4) Use the Subaru Select Monitor to check whether the passenger's seat belt buckle switch is operating normally.

4. Driver's Airbag Module

A: REMOVAL

CAUTION:

Before handling the airbag system components, refer to "CAUTION" of "General Description" in "AIRBAG SYSTEM". <Ref. to AB-9, CAUTION, General Description.>

- 1) Position the front wheels straight ahead.
- 2) Turn the ignition switch to OFF.
- 3) Disconnect the ground cable from battery and wait for at least 60 seconds before starting work. <Ref. to NT-6, BATTERY, NOTE, Note.>
- 4) Remove the driver's airbag module.
 - (1) Using a hexagon wrench etc. wrapped by protective tape, insert the snap pins and release the locks (three locations).

- (2) Disconnect the horn harness and airbag connector, and remove the driver's airbag module. <Ref. to AB-18, DRIVER'S AIRBAG MODULE, CURTAIN AIRBAG MODULE & PRETENSIONER, PROCEDURE, Airbag Connector.>

B: INSTALLATION

CAUTION:

- Before handling the airbag system components, refer to “CAUTION” of “General Description” in “AIRBAG SYSTEM”. <Ref. to AB-9, CAUTION, General Description.>

- Do not allow harness and connectors to interfere or get tangled up with other parts.

1) Before installation, inspect the following items and replace any faulty part with a new one.

- Airbag module is cracked or deformed.
- Harness and/or connector is cracked, deformed or open.
- Harness wire is exposed.
- The steering wheel is in the way, making it difficult to install the airbag module.
- The clearance between the driver's airbag module and steering wheel is not constant.

2) Install the driver's airbag module.

(1) Connect the airbag connector to the airbag module securely.

CAUTION:

- Be sure to insert the connector in until it is locked.

- Press in the push lock securely. Then pull it gently to make sure that it is locked.

(2) Connect the horn harness.

(3) Press in the locks (three positions) to install the airbag module.

CAUTION:

Make sure that the airbag module locks (three positions) are securely locked.

3) Install each part in the reverse order of removal.

CAUTION:

Make sure that the snap pin is set inside the guide.

Knee Airbag Module

AIRBAG SYSTEM

5. Knee Airbag Module

A: REMOVAL

CAUTION:

Before handling the airbag system components, refer to “CAUTION” of “General Description” in “AIRBAG SYSTEM”. <Ref. to AB-9, CAUTION, General Description.>

- 1) Turn the ignition switch to OFF.
- 2) Disconnect the ground cable from battery and wait for at least 60 seconds before starting work. <Ref. to NT-6, BATTERY, NOTE, Note.>
- 3) Remove the cover assembly - instrument panel LWR driver. <Ref. to EI-54, REMOVAL, Instrument Panel Lower Cover.>
- 4) Remove the nuts to remove the knee airbag module and disconnect the harness connector. <Ref. to AB-24, KNEE AIRBAG MODULE, PROCEDURE, Airbag Connector.>

B: INSTALLATION

CAUTION:

• Before handling the airbag system components, refer to “CAUTION” of “General Description” in “AIRBAG SYSTEM”. <Ref. to AB-9, CAUTION, General Description.>

- Do not allow harness and connectors to interfere or get tangled up with other parts.
- Be sure to insert the connector in until it is locked.
- Press in the push lock securely. Then pull it gently to make sure that it is locked.

- 1) Before installation, inspect the following items and replace any faulty part with a new one.
 - Airbag module is cracked or deformed.
 - Knee airbag module bracket is cracked or deformed.
 - Harness and/or connector is cracked, deformed or open.
 - Harness wire is exposed.
 - Depending on the condition of the beam COMPL - steering, installation of the knee airbag module is difficult.
- 2) Install each part in the reverse order of removal.

Tightening torque:

Knee airbag module: 7.5 N·m (0.76 kgf·m, 5.5 ft·lb)

6. Passenger's Airbag Module

A: REMOVAL

CAUTION:

Before handling the airbag system components, refer to "CAUTION" of "General Description" in "AIRBAG SYSTEM". <Ref. to AB-9, CAUTION, General Description.>

- 1) Turn the ignition switch to OFF.
- 2) Disconnect the ground cable from battery and wait for at least 60 seconds before starting work. <Ref. to NT-6, BATTERY, NOTE, Note.>

NOTE:

On CVT models, shift the select lever into "N" before disconnecting the battery ground cable.

- 3) Remove the console box assembly, the cover - shift lever and the panel center LWR on the RH and LH sides. <Ref. to EI-59, REMOVAL, Console Box.>
- 4) Remove the cover - instrument panel side LH and the cover assembly - instrument panel LWR driver. <Ref. to EI-54, REMOVAL, Instrument Panel Lower Cover.>
- 5) Remove the cover switch - starter. (Models without the keyless access with push button start)
 - (1) Release the claws and remove the cover switch - starter.
 - (2) Disconnect the connector and aspirator hose.

Passenger's Airbag Module

AIRBAG SYSTEM

- 6) Remove the panel - switch. (Model with keyless access with push button start)
- (1) Release the claw of the switch - push button start, and disconnect the connector.
 - (2) Release the claws, and then remove the panel - switch.
 - (3) Disconnect the connector and aspirator hose.

- 7) Remove the knee airbag module. <Ref. to AB-34, REMOVAL, Knee Airbag Module.>
8) Release the clips and claws, then detach the left and right grille speaker side.

NOTE:

Remove the grille speaker side by using a plastic remover.

9) Remove the trim panel - front pillar UPR on the left and right sides. <Ref. to EI-77, REMOVAL, Upper Inner Trim.>

10) Remove the glove box assembly. <Ref. to EI-56, REMOVAL, Glove Box.>

11) On manual A/C models, disconnect the control cables from both sides of the heater & cooling unit.

EI-04586

12) Remove the center grille assembly. <Ref. to AC-86, REMOVAL, Air Vent Grille.>

13) Remove the audio assembly or navigation assembly. <Ref. to ET-28, REMOVAL, Audio.>

14) Remove the multi-function display assembly. <Ref. to IDI-25, REMOVAL, Multi-function Display (MFD).>

15) Remove the combination meter assembly. <Ref. to IDI-18, REMOVAL, Combination Meter.>

16) Disconnect the passenger's airbag module connector. <Ref. to AB-18, PASSENGER'S AIRBAG MODULE, PROCEDURE, Airbag Connector.>

EI-03445

17) Remove the column assembly - steering. <Ref. to PS-18, REMOVAL, Steering Column.>

18) Remove the cover side sill - front INN and cover side sill - front on the RH and LH side. <Ref. to EI-73, REMOVAL, Lower Inner Trim.>

19) Remove the body side weather strip - flange front.

20) Remove the instrument panel assembly and the beam COMPL - steering as a unit. <Ref. to EI-61, REMOVAL, Instrument Panel Assembly.>

Passenger's Airbag Module

AIRBAG SYSTEM

21) Remove the screws and remove the front (A) and side vent duct LH/RH (B).

22) Separate the panel COMPL - instrument and the beam COMPL - steering.
(1) Remove the clamps and bolts of the passenger's airbag module harness.

(2) Remove the left and right speakers and the sunload sensor.

NOTE:

Detach the harness clamp together.

(3) Disconnect the front accessory socket connector.

(4) Remove the nut (a) and screws (b), (c), (d), (e), (f), (g) and (h).

(5) While being careful with the harness, separate the panel COMPL - instrument and the beam COMPL - steering.

EI-03468

Passenger's Airbag Module

AIRBAG SYSTEM

23) Remove the claws, and remove the passenger's airbag module.

24) For handling of the removed airbag module, refer to "CAUTION". <Ref. to AB-9, CAUTION, General Description.>

B: INSTALLATION

CAUTION:

- Before handling the airbag system components, refer to "CAUTION" of "General Description" in "AIRBAG SYSTEM". <Ref. to AB-9, CAUTION, General Description.>
- Do not allow harness and connectors to interfere or get tangled up with other parts.
- When reusing the tether clip on the upper part of the trim panel - front pillar UPR, check that there is no damage to the tether clip. If the tether clip is damaged, always replace it with a new tether clip. If the tether clip is damaged, its holding force is reduced and the trim panel - front pillar UPR may come off.

1) Before installation, inspect the following items and replace any faulty part with a new one.

- Passenger's airbag lid (instrument panel surface) is cracked or deformed.
- Airbag module is cracked or deformed.
- Harness and/or connector is cracked, deformed or open.
- Harness wire is exposed.
- Mounting bracket is cracked or deformed.

2) Install the remaining parts in the reverse order of removal.

Tightening torque:

Knee airbag module: 7.5 N·m (0.76 kgf·m, 5.5 ft·lb)

NOTE:

Refer to the installation procedure of the "Instrument Panel Assembly". <Ref. to EI-69, INSTALLATION, Instrument Panel Assembly.>

7. Side Airbag Module

A: REMOVAL

CAUTION:

Before handling the airbag system components, refer to “CAUTION” of “General Description” in “AIRBAG SYSTEM”. <Ref. to AB-9, CAUTION, General Description.>

NOTE:

Remove the passenger's side by referring to driver's side.

- 1) Remove the headrest assembly.
- 2) Disconnect the ground cable from battery and wait for at least 60 seconds before starting work. <Ref. to NT-6, BATTERY, NOTE, Note.>
- 3) Remove the front seats. <Ref. to SE-8, REMOVAL, Front Seat.>
- 4) Separate the backrest assembly and the seat cushion assembly. <Ref. to SE-10, DISASSEMBLY, Front Seat.>
- 5) Remove the side airbag module.

CAUTION:

Do not open the protective cover of the side airbag module. If any damage is present in the protective cover or the cloth of side airbag module comes out from the protective cover slit, replace the side airbag module with a new part.

- (1) Remove the plastic fastener at the back side (bottom) of backrest assembly.
- (2) Open the fastener at the rear side of backrest assembly.

NOTE:

If it is hard to open, use a metal clip, etc.

Side Airbag Module

AIRBAG SYSTEM

- (3) Remove the hexagon cap nut and nuts.
- (4) While taking care not to damage the airbag protective cover, remove the side airbag module.

B: INSTALLATION

CAUTION:

- Before handling the airbag system components, refer to “CAUTION” of “General Description” in “AIRBAG SYSTEM”. <Ref. to AB-9, CAUTION, General Description.>
- Make sure that the side airbag module is installed as shown in the figure.

- | | | |
|---|--|-----------------------------|
| (1) Pad ASSY - front seat backrest | (4) Side airbag module inflator | (7) Side airbag guide cloth |
| (2) Frame ASSY - front backrest | (5) Nut | |
| (3) Side airbag module protective cover | (6) Cover COMPL - front backrest cover | |

- Be careful not to stain or damage the cover COMPL - front backrest during assembly.
- Do not reuse hog rings.
- Secure the hog ring using hog ring pliers.
- Install the hog rings to the specified points securely and make sure that there is no wrinkle or twisting on the cover COMPL - front backrest.

- 1) Before installation, inspect the following items and replace any faulty part with a new one.
 - Make sure that there is no foreign matter on side airbag module.
 - Front seat, airbag module and mounting bracket are damaged or deformed.
 - Harness and/or connector is cracked, deformed or open.
 - Harness wire is exposed.
- 2) Install the side airbag module to the frame assembly - front backrest.

Tightening torque:

Side airbag module: 6 N·m (0.61 kgf-m, 4.4 ft-lb)

- 3) Install the side airbag harness to the frame assembly - front backrest.
- 4) Install the cover COMPL - front backrest.
- 5) Secure the backrest hinge.

Tightening torque:

Refer to “COMPONENT” of “General Description”. <Ref. to SE-2, FRONT SEAT, COMPONENT, General Description.>

- 6) Install the side airbag harness to the back of the seat cushion assembly using a cable clip.

CAUTION:

After restoring the seat, operate the reclining and sliding mechanisms to check that the side airbag harness is not caught.

- 7) Install the front seat assembly to the body. <Ref. to SE-9, INSTALLATION, Front Seat.>
- 8) Connect the battery ground terminal. <Ref. to NT-6, BATTERY, NOTE, Note.>

8. Curtain Airbag Module

A: REMOVAL

1. CROSTREK MODEL

CAUTION:

Before handling the airbag system components, refer to “CAUTION” of “General Description” in “AIRBAG SYSTEM”. <Ref. to AB-9, CAUTION, General Description.>

- 1) Turn the ignition switch to OFF.
- 2) Disconnect the ground cable from battery and wait for at least 60 seconds before starting work. <Ref. to NT-6, BATTERY, NOTE, Note.>
- 3) Remove the trim panel - roof assembly. <Ref. to EI-85, CROSTREK MODEL, REMOVAL, Roof Trim.>
- 4) Remove the curtain airbag module.

CAUTION:

- Be careful not to damage the curtain airbag module during removal.
- Never open the curtain airbag module before activation. Never reuse the deployed curtain airbag module.
- Remove the modules in order starting from the vehicle front.
 - (1) Remove all the bolts and clips, and remove the curtain airbag module.

AB-10263

(2) Disconnect the curtain airbag module connector. <Ref. to AB-18, DRIVER'S AIRBAG MODULE, CURTAIN AIRBAG MODULE & PRETENSIONER, PROCEDURE, Airbag Connector.>

AB-02912

B: INSTALLATION

CAUTION:

- Before handling the airbag system components, refer to “CAUTION” of “General Description” in “AIRBAG SYSTEM”. <Ref. to AB-9, CAUTION, General Description.>
- When installing the curtain airbag module, install a specified part at specified place.
- Be careful not to damage the curtain airbag module during installation.
- Never open the curtain airbag module before activation. Never reuse the deployed curtain airbag module.
- Make sure that there are no foreign matter on airbag module.
- When reusing the tether clip on the upper part of the trim panel - front pillar UPR, check that there is no damage to the tether clip. If the tether clip is damaged, always replace it with a new tether clip. If the tether clip is damaged, its holding force is reduced and the trim panel - front pillar UPR may come off.
- For installation of the stereo camera cover, refer to “INSTALLATION”, “Stereo Camera” in the “EyeSight” section and observe the precautions for installation. <Ref. to ES-10, INSTALLATION, Stereo Camera.>

1) Before installation, inspect the following items and replace any faulty part with a new one.

- Airbag cover is scratched or torn.
- Harness and/or connector is cracked, deformed or open.
- Harness wire is exposed.
- Mounting bracket and securing clip are cracked or deformed.

2) Install the curtain airbag module.

CAUTION:

- Be sure to insert the connector in until it is locked.
- Press in the push lock securely. Then pull it gently to make sure that it is locked.

Tightening torque:

7.5 N·m (0.76 kgf·m, 5.5 ft·lb)

3) Install the remaining parts in the reverse order of removal.

Airbag Control Module

AIRBAG SYSTEM

9. Airbag Control Module

A: REMOVAL

CAUTION:

- Before handling the airbag system components, refer to “CAUTION” of “General Description” in “AIRBAG SYSTEM”. <Ref. to AB-9, CAUTION, General Description.>
- Do not disassemble the airbag control module.
- If the airbag control module is deformed or if there is any trace of water on the module, replace the airbag control module with a new one.
- Do not drop the airbag control module.
- After removal, keep the airbag control module on a dry, clean surface away from moisture, heat and dust.

1) Turn the ignition switch to OFF.

2) Disconnect the ground cable from battery and wait for at least 60 seconds before starting work. <Ref. to NT-6, BATTERY, NOTE, Note.>

NOTE:

On CVT models, shift the select lever into “N” before disconnecting the battery ground cable.

3) Remove the console box assembly and the cover - shift lever. <Ref. to EI-59, REMOVAL, Console Box.>

4) On manual A/C models, disconnect the control cables from both sides of the heater & cooling unit.

- 5) Remove the center grille assembly. <Ref. to AC-86, REMOVAL, Air Vent Grille.>
- 6) Remove the audio assembly or navigation assembly. <Ref. to ET-28, REMOVAL, Audio.>
- 7) Remove the airbag control module.
 - (1) Disconnect the connector from airbag control module. <Ref. to AB-17, AIRBAG CONTROL MODULE, PROCEDURE, Airbag Connector.>
 - (2) Remove the bolt and nuts and remove the airbag control module.

AB-03429

B: INSTALLATION

CAUTION:

Do not reuse the bolt and nut.

Always use new bolts and nuts for them.

- 1) Before installation, inspect the following items and replace any faulty part with a new one.
 - Control module is deformed.
 - Control module connector is damaged.
 - Control module mounting bracket is damaged.
- 2) Install each part in the reverse order of removal.

Tightening torque:

Airbag control module: 25 N·m (2.55 kgf-m, 18.4 ft-lb)

Console box assembly: 6.5 N·m (0.66 kgf-m, 4.8 ft-lb)

10. Front Sub Sensor

A: REMOVAL

CAUTION:

Before handling the airbag system components, refer to “CAUTION” of “General Description” in “AIRBAG SYSTEM”. <Ref. to AB-9, CAUTION, General Description.>

- 1) Turn the ignition switch to OFF.
- 2) Disconnect the ground cable from battery and wait for at least 60 seconds before starting work. <Ref. to NT-6, BATTERY, NOTE, Note.>
- 3) Remove the bumper face - front. <Ref. to EI-27, REMOVAL, Front Bumper.>

NOTE:

When removing the front sub sensor, remove the bumper beam COMPL - front as necessary.

- 4) Remove the bolt, and then detach the front sub sensor. <Ref. to AB-19, FRONT SUB SENSOR, PROCEDURE, Airbag Connector.>

AB-02904

B: INSTALLATION

CAUTION:

- If the airbag has been activated, replace the front sub sensor with a new part.
- Do not reuse the bolt and nut.

Always replace with the specified new bolts and nuts.

- When installing the sensor, insert the set pin on the backside of the sensor into the hole on the body side securely.

1) Before installation, inspect the following items and replace any faulty part with a new part.

- Front sub sensor damage
- Connector damage

2) Install each part in the reverse order of removal.

CAUTION:

- Install so that the front end of the under cover (b) comes inside the bumper face - front (a), and the front end of the mud guard (c) comes outside the bumper face - front (a).

- Before installing the bumper face, match the claws on the bracket - front bumper with the engaging position of flange section on the bumper face side. If the engaging position is not correct, the flange section may be broken or the clearance between fender panel and bumper face may not be uniform.

Tightening torque:

Front sub sensor: 13 N·m (1.33 kgf·m, 9.6 ft·lb)

Bumper beam COMPL - front: 32 N·m (3.36 kgf·m, 24.3 ft·lb)

Front Door Impact Sensor

AIRBAG SYSTEM

11. Front Door Impact Sensor

A: REMOVAL

CAUTION:

Before handling the airbag system components, refer to “CAUTION” of “General Description” in “AIRBAG SYSTEM”. <Ref. to AB-9, CAUTION, General Description.>

- 1) Operate the power window switch to close the front door glass.
- 2) Turn the ignition switch to OFF.
- 3) Disconnect the ground cable from battery and wait for at least 60 seconds before starting work. <Ref. to NT-6, BATTERY, NOTE, Note.>
- 4) Remove the trim panel - front door. <Ref. to EI-50, FRONT DOOR, REMOVAL, Door Trim.>
- 5) Remove the sealing cover. <Ref. to EB-25, REMOVAL, Front Sealing Cover.>
- 6) Remove the front door impact sensor.
 - (1) Remove the front door inner pad (a).

CAUTION:

If the clip is damaged, replace it with a new part because the panel assembly - front door may be deformed.

- (2) Remove the nuts and then remove the front door impact sensor.
- (3) Disconnect the airbag connector and remove the front door impact sensor. <Ref. to AB-20, FRONT DOOR IMPACT SENSOR AND SATELLITE SAFING SENSOR, PROCEDURE, Airbag Connector.>

B: INSTALLATION

CAUTION:

Do not reuse the bolt and nut.

Always replace with the specified new bolts and nuts.

- 1) Before installation, inspect the following items and replace any faulty part with a new part.
 - The front door impact sensor or connector is damaged.
 - Inner panel area of the panel assembly - front door is deformed.
 - Side airbag module has been activated.

Tightening torque:

Front door impact sensor: 7.5 N·m (0.76 kgf-m, 5.5 ft-lb)

- 2) Install each part in the reverse order of removal.

12.Side Airbag Sensor

A: REMOVAL

CAUTION:

- Before handling the airbag system components, refer to “CAUTION” of “General Description” in “AIRBAG SYSTEM”. <Ref. to AB-9, CAUTION, General Description.>
 - Airbag system satellite safing sensor is located in the lower of the rear seat cushion center. Be careful not to apply strong impact to the sensor when working with the rear seat cushion removed.
- 1) Move the seat all the way forward, from which the side airbag sensor is to be removed.

NOTE:

This is to remove the seat belt retractor assembly.

- 2) Turn the ignition switch to OFF.
- 3) Disconnect the ground cable from battery and wait for at least 60 seconds before starting work. <Ref. to NT-6, BATTERY, NOTE, Note.>
- 4) Remove the rear seat cushion assembly. <Ref. to SE-24, REMOVAL, Rear Seat.>
- 5) Remove the following lower inner trims. (On the side where the side airbag sensor is removed) <Ref. to EI-73, REMOVAL, Lower Inner Trim.>
- Cover side sill - front INN
 - Cover side sill - rear INN
 - Trim panel - center pillar LWR
- 6) Remove the seat belt retractor. (On the side where the side airbag sensor is removed)
- (1) Turn over the floor mat to disconnect the belt tension sensor connector. <Ref. to AB-18, DRIVER'S AIRBAG MODULE, CURTAIN AIRBAG MODULE & PRETENSIONER, PROCEDURE, Airbag Connector.>

NOTE:

Also disconnect the connector of the passenger's lap seat belt pretensioner.

- (2) Remove the bolt to remove the seat belt retractor.

AB-02907

Side Airbag Sensor

AIRBAG SYSTEM

7) Remove the nuts and then remove the side airbag sensor. <Ref. to AB-21, SIDE AIRBAG SENSOR AND CURTAIN AIRBAG SENSOR, PROCEDURE, Airbag Connector.>

CAUTION:

- Do not separate the side airbag sensor and bracket. It causes the airbag system malfunction.
- If the sensor is removed from the bracket, be sure to replace with a new part.

AB-02909

B: INSTALLATION**CAUTION:**

Do not reuse the bolt and nut.

Always replace with the specified new bolts and nuts.

1) Before installation, inspect the following items and replace any faulty part with a new part.

- The side airbag sensor, sensor bracket, or connector are damaged.
- Side airbag module has been activated.
- Curtain airbag module has been activated.

Tightening torque:

Side airbag sensor: 7.5 N·m (0.76 kgf·m, 5.5 ft·lb)

2) Install each part in the reverse order of removal.

NOTE:

Assemble the trim panel - center pillar LWR to the trim panel - center pillar UPR securely.

EI-03453

Tightening torque:

Front seat belt: <Ref. to SB-2, FRONT SEAT BELT, COMPONENT, General Description.>

13. Curtain Airbag Sensor

A: REMOVAL

1. CROSSTREK MODEL

CAUTION:

- Before handling the airbag system components, refer to “CAUTION” of “General Description” in “AIRBAG SYSTEM”. <Ref. to AB-9, CAUTION, General Description.>

- Airbag system satellite safing sensor is located in the lower of the rear seat cushion center. Be careful not to apply strong impact to the sensor when working with the rear seat cushion removed.

1) Turn the ignition switch to OFF.

2) Disconnect the ground cable from battery and wait for at least 60 seconds before starting work. <Ref. to NT-6, BATTERY, NOTE, Note.>

3) Remove the screws and clips, and remove the trim panel - rear quarter pillar UPR. (On the side where the curtain airbag sensor is removed)

Curtain Airbag Sensor

AIRBAG SYSTEM

- 4) Remove the rear seat cushion assembly. <Ref. to SE-24, REMOVAL, Rear Seat.>
- 5) Release the clips and claws, and then remove the side sill cover - rear INN. (On the side where the curtain airbag sensor is removed)

CAUTION:

Do not pull with excessive force. Doing so may damage the claws of the side sill cover - rear INN.

EI-03497

- 6) Remove the mat - rear floor CTR and the spacer - rear floor side.

EI-03517

Curtain Airbag Sensor

AIRBAG SYSTEM

7) Remove the clips, and remove the trim panel - rear skirt.

8) Remove the trim panel - rear apron. (On the side where the curtain airbag sensor is removed)

- (1) Remove the caps, and remove the bolts.
- (2) Remove the screws.
- (3) Disengage the clips, and remove the trim panel - rear apron.

NOTE:

For LH side, disconnect the connector of the luggage room light.

9) Remove the nuts and then remove the curtain airbag sensor. <Ref. to AB-21, SIDE AIRBAG SENSOR AND CURTAIN AIRBAG SENSOR, PROCEDURE, Airbag Connector.>

B: INSTALLATION

CAUTION:

- Do not reuse the bolt and nut.

Always replace with the specified new bolts and nuts.

- When installing the sensor, insert the set pin on the backside of the sensor into the hole on the body side securely.

1) Before installation, inspect the following items and replace any faulty part with a new one.

- Curtain airbag sensor or connector is damaged.
- Curtain airbag module has been activated.

2) Install each part in the reverse order of removal.

Tightening torque:

Curtain airbag sensor: 7.5 N·m (0.76 kgf-m, 5.5 ft-lb)

Satellite Safing Sensor

AIRBAG SYSTEM

14. Satellite Safing Sensor

A: REMOVAL

CAUTION:

Before handling the airbag system components, refer to “CAUTION” of “General Description” in “AIRBAG SYSTEM”. <Ref. to AB-9, CAUTION, General Description.>

- 1) Turn the ignition switch to OFF.
- 2) Disconnect the ground cable from battery and wait for at least 60 seconds before starting work. <Ref. to NT-6, BATTERY, NOTE, Note.>
- 3) Remove the rear seat cushion assembly. <Ref. to SE-24, REMOVAL, Rear Seat.>
- 4) Remove the satellite safing sensor.
 - (1) Remove the clip, and remove the cover - satellite safing.
 - (2) Remove the bolts and then remove the satellite safing sensor. <Ref. to AB-20, FRONT DOOR IMPACT SENSOR AND SATELLITE SAFING SENSOR, PROCEDURE, Airbag Connector.>

B: INSTALLATION

CAUTION:

- Do not reuse the bolt and nut.
- Always replace with the specified new bolts and nuts.
- When installing the cover - satellite safing, push the cover securely until it contacts the floor panel.
 - If the cover - satellite safing is too loose at its mounting portion to remove easily, replace with a new cover - satellite safing.
 - After installing the cover - satellite safing, make sure that the sensor harness does not get caught.
- 1) Before installation, inspect the following items and replace any faulty part with a new one.
 - The satellite safing sensor connector is damaged.
 - The cover - satellite safing is damaged.
 - Side airbag or curtain airbag has been activated.
 - 2) Install the remaining parts in the reverse order of removal.

Tightening torque:

7.5 N·m (0.76 kgf-m, 5.5 ft-lb)

15. Roll Connector

A: REMOVAL

CAUTION:

Before handling the airbag system components, refer to “CAUTION” of “General Description” in “AIRBAG SYSTEM”. <Ref. to AB-9, CAUTION, General Description.>

- 1) Position the front wheels straight ahead.
- 2) Turn the ignition switch to OFF.
- 3) Disconnect the ground cable from battery and wait for at least 60 seconds before starting work. <Ref. to NT-6, BATTERY, NOTE, Note.>
- 4) Remove the driver's airbag module. <Ref. to AB-32, REMOVAL, Driver's Airbag Module.>
- 5) Remove the steering wheel. <Ref. to PS-8, REMOVAL, Steering Wheel.>
- 6) Remove the cover assembly - column. <Ref. to PS-18, REMOVAL, Steering Column.>
- 7) Remove the roll connector.

CAUTION:

Make sure that the roll connector is not turned from the original position.

- (1) Disconnect the connector under the roll connector.
- (2) Release the claws and remove the roll connector.

AB-02914

Roll Connector

AIRBAG SYSTEM

(3) Release the claws and separate the roll connector (a) and steering angle sensor (b).

B: INSTALLATION

CAUTION:

If the steering wheel and steering angle sensor (steering roll connector) are removed, be sure to perform the following operations.

- Align the center position of the steering roll connector.
- Perform the neutral position setting of the steering angle sensor.

1) Before attaching a new roll connector, apply a thin coat of grease contained in the connector onto the areas shown by the arrows.

- 2) Install each part in the reverse order of removal.
- 3) Align the center position of the steering roll connector. <Ref. to AB-62, ADJUSTMENT, Roll Connector.>
- 4) Install the steering wheel. <Ref. to PS-9, INSTALLATION, Steering Wheel.>
- 5) Install the driver's airbag module. <Ref. to AB-33, INSTALLATION, Driver's Airbag Module.>
- 6) Connect the battery ground terminal. <Ref. to NT-6, BATTERY, NOTE, Note.>
- 7) Perform the neutral position setting of the steering angle sensor. <Ref. to VDC-23, VDC SENSOR MID-POINT SETTING MODE (MODELS WITHOUT EyeSight), ADJUSTMENT, VDC Control Module and Hydraulic Control Unit (VDCCM&H/U).>

C: INSPECTION

1. VISUAL INSPECTION

Check for the following, and replace the damaged parts with new parts.

- Combination switch is cracked or deformed.
- Roll connector is cracked or deformed.

2. UNIT INSPECTION OF ROLL CONNECTOR

CAUTION:

- Do not rotate the roll connector to more than the specified number of turns. Otherwise, the roll connector internal wire may be broken.
- When determining the end stop, rotate the connector slowly without applying excessive force. Applying excessive force at the end stop may break the internal wire.

- 1) Adjust the roll connector. <Ref. to AB-62, ADJUSTMENT, Roll Connector.>
- 2) Set the roll connector to the central position.
- 3) Connect the test harness to the connector E and connector F.

Preparation tool:

Test harness N (98299SA000)

Test harness Q (98299SA040)

- Connector E - Test harness N (1N)
 - Connector F - Test harness Q (1Q)
- 4) With the following conditions, check the resistance between the test harness connector terminals.
 - Perform the check with the roll connector centered (front wheels direct straightforward).
 - Rotate the roll connector counterclockwise from the center (front wheels direct straightforward) to an end stop. Then, perform the check while rotating it clockwise to approximately 4.5 turns.

Preparation tool:

Circuit tester

AB-02915

Terminal No.	Inspection conditions	Standard
(2N) No. 1 — (2N) No. 2	Always	Less than 1 Ω
(2Q) No. 1 — (2Q) No. 2	Always	Less than 1 Ω

NOTE:

The connector D is designed to short the terminals D1/D2 and D3/D4 when disconnected.

- 5) Replace the roll connector with a new part if the inspection result is not within the standard value.

Roll Connector

AIRBAG SYSTEM

D: ADJUSTMENT

CAUTION:

- Do not rotate the roll connector to more than the specified number of turns. Otherwise, the roll connector internal wire may be broken.
 - When determining the end stop, rotate the connector slowly without applying excessive force. Applying excessive force at the end stop may break the internal wire.
- 1) Check that front wheels are positioned in straight ahead direction.
 - 2) Rotate the roll connector counterclockwise until it stops.
 - 3) Rotate the roll connector clockwise approx. 2.5 turns until “▲” marks are aligned.

16. Airbag Module Disposal (Deployment Processing on Vehicle)

A: PROCEDURE

WARNING:

Make sure to follow the instructions below. Otherwise, personal injuries may occur.

- Before discarding an airbag module, always perform an operation process to prevent any false activation.
- Wear protective gloves, safety goggles and earplugs during this operation. Wash your hands afterwards.
- Do not touch the airbag module just after activation because it is very hot. Before handling it for disposal, wait for 40 minutes.

CAUTION:

- Airbag module operation process should be performed on a flat place in safety area. Do not perform the process outdoors when there is rain or strong wind.
- Activating an airbag module causes a high explosive noise, be sure to warn people in the area, and do not allow anyone within 5 m (16 ft) radius of the disposal site.
- After activating the airbag module, smoke may arise. Therefore, it must be activated in a well-ventilated place with no smoke detector nearby.
- Do not expose the activated airbag module to water.
- Wrap the activated airbag module in a sealed vinyl bag when discarding.
- If it is impossible to perform an airbag module operation process due to some situational reasons, consult SUBARU dealership or one of the authorized workshops.

1. DRIVER'S AIRBAG MODULE

- 1) Turn the ignition switch to OFF.
- 2) Disconnect the ground cable from battery and wait for at least 60 seconds before starting work. <Ref. to NT-6, BATTERY, NOTE, Note.>
- 3) Remove the cover assembly - column.
 - (1) Remove the screws.
 - (2) Remove the cap - key cylinder (a). (Model with keyless access with push button start)
 - (3) Release the claw, and remove the cover assembly - column UPR and the cover assembly - column LWR.

A Model without keyless access with push button start

B Model with keyless access with push button start

Airbag Module Disposal (Deployment Processing on Vehicle)

AIRBAG SYSTEM

4) Disconnect the driver's airbag module connector.

5) Cut off the harness on the body side of the removed connector approx. 70 mm (2.76 in) from the edge of the connector.

Preparation tool:
Nippers

6) Peel off the shield approx. 20 mm (0.79 in) from the two harnesses of the removed body side connector.

Preparation tool:
Wire stripper

Airbag Module Disposal (Deployment Processing on Vehicle)

AIRBAG SYSTEM

7) Twist the end of harness as shown in the figure.

8) Prepare a six-meter (19 ft) long vinyl-shielded parallel wire. Peel off the shield of both ends approx. 20 mm (0.79 in) and twist one end together into shorted condition.

9) The other end, not shorted, will be connected to harnesses of repaired body connector as shown in the figure, and insulated with vinyl tape.

NOTE:

No concern about polarity.

10) After completing the connecting work, connect the body side connector to the connector of the airbag connector lower side again.

11) Bring the vinyl wire for operation out of the vehicle and make sure there is no person in the vehicle.

Airbag Module Disposal (Deployment Processing on Vehicle)

AIRBAG SYSTEM

- 12) Extend the wiring of airbag deployment tool to the limit, and close all the windows and sunroof completely.

- 13) Move the battery at least 5 m (16 ft) from the vehicle, and confirm safety in the area.
14) Connect the airbag deployment tool alligator clip to the battery negative (-) terminal.
15) Connect the other cable of airbag deployment tool to the battery positive (+) terminal, and activate the airbag module.

CAUTION:

- After activation, the airbag module will be extremely hot. Let it cool down for at least 40 minutes in an area with no one around.
- Do not expose the activated airbag module to water.

- 16) Remove the driver's airbag module. <Ref. to AB-32, REMOVAL, Driver's Airbag Module.>
17) Place the activated airbag module in a sealed vinyl bag, then discard.

2. KNEE AIRBAG MODULE

- 1) Turn the ignition switch to OFF.
- 2) Disconnect the ground cable from battery and wait for at least 60 seconds before starting work. <Ref. to NT-6, BATTERY, NOTE, Note.>
- 3) Remove the cover assembly - instrument panel LWR driver. <Ref. to EI-54, REMOVAL, Instrument Panel Lower Cover.>
- 4) Remove the nuts to remove the knee airbag module and disconnect the harness connector. <Ref. to AB-18, DRIVER'S AIRBAG MODULE, CURTAIN AIRBAG MODULE & PRETENSIONER, PROCEDURE, Airbag Connector.>

- 5) Short the terminal to the alligator clip furnished as airbag deployment tool.

CAUTION:

The airbag deployment tool should be kept shorted on the terminals until just before activation of airbag module.

Preparation tool:

ST: AIRBAG DEPLOYMENT TOOL (98299PA030)

- 6) Connect the airbag deployment tool (A) and test harness adapter D (B).

Preparation tool:

ST: TEST HARNESS ADAPTER D (98299SA010)

Airbag Module Disposal (Deployment Processing on Vehicle)

AIRBAG SYSTEM

7) Connect the test harness adapter D to the knee airbag module and install the knee airbag module to the vehicle again.

Tightening torque:

7.5 N·m (0.76 kgf·m, 5.5 ft·lb)

8) Make sure there is no one inside the vehicle.

9) Extend the wiring of airbag deployment tool to the limit, and close all the windows and sunroof completely.

10) Move the battery at least 5 m (16 ft) from the vehicle, and confirm safety in the area.

11) Connect the airbag deployment tool alligator clip to the battery negative (-) terminal.

12) Connect the other cable of airbag deployment tool to the battery positive (+) terminal, and activate the airbag module.

CAUTION:

- **After activation, the airbag module will be extremely hot. Let it cool down for at least 40 minutes in an area with no one around.**
- **Do not expose the activated airbag module to water.**

13) Remove the bolts and remove knee airbag module.

- 14) Place the activated airbag module in a sealed vinyl bag, then discard.

NOTE:

When necessary, fold the fabric part of airbag into three or four sections, rope and seal in a vinyl bag.

3. PASSENGER'S AIRBAG MODULE

- 1) Turn the ignition switch to OFF.
- 2) Disconnect the ground cable from battery and wait for at least 60 seconds before starting work. <Ref. to NT-6, BATTERY, NOTE, Note.>
- 3) Remove the cover - shift lever, the panel center LWR RH, and the console box assembly. <Ref. to EI-59, REMOVAL, Console Box.>
- 4) Disconnect the passenger's airbag module connector.

- 5) Short the terminal to the alligator clip furnished as airbag deployment tool.

CAUTION:

The airbag deployment tool should be kept shorted on the terminals until just before activation of air-bag module.

Preparation tool:

ST: AIRBAG DEPLOYMENT TOOL (98299PA030)

Airbag Module Disposal (Deployment Processing on Vehicle)

AIRBAG SYSTEM

6) Connect airbag deployment tool (A) and test harness adapter AM (B).

Preparation tool:

ST: TEST HARNESS ADAPTER AM (98299FJ000)

7) Connect test harness adapter AM to airbag connector.

8) Make sure there is no one inside the vehicle.

9) Extend the wiring of airbag deployment tool to the limit, and close all the windows and sunroof completely.

10) Move the battery at least 5 m (16 ft) from the vehicle, and confirm safety in the area.

11) Connect the airbag deployment tool alligator clip to the battery negative (-) terminal.

Airbag Module Disposal (Deployment Processing on Vehicle)

AIRBAG SYSTEM

12) Connect the other cable of airbag deployment tool to the battery positive (+) terminal, and activate the airbag module.

CAUTION:

- After activation, the airbag module will be extremely hot. Let it cool down for at least 40 minutes in an area with no one around.
- Do not expose the activated airbag module to water.

13) Remove the passenger's airbag module. <Ref. to AB-35, REMOVAL, Passenger's Airbag Module.>

14) Place the activated airbag module in a sealed vinyl bag, then discard.

4. SIDE AIRBAG MODULE

- 1) Turn the ignition switch to OFF.
- 2) Disconnect the ground cable from battery and wait for at least 60 seconds before starting work. <Ref. to NT-6, BATTERY, NOTE, Note.>
- 3) Disconnect the side airbag module connector under the front seat cushion. <Ref. to AB-22, SIDE AIRBAG MODULE, PROCEDURE, Airbag Connector.>
- 4) Adjust both the front seat and front seat backrest to the center positions.
- 5) Short the terminal to the alligator clip furnished as airbag deployment tool.

CAUTION:

The airbag deployment tool should be kept shorted on the terminals until just before activation of airbag module.

Preparation tool:

ST: AIRBAG DEPLOYMENT TOOL (98299PA030)

Airbag Module Disposal (Deployment Processing on Vehicle)

AIRBAG SYSTEM

6) Connect the airbag deployment tool (A) and test harness adapter K (B).

Preparation tool:

ST: TEST HARNESS ADAPTER K (98299FG010)

7) Connect the test harness adapter K to side airbag module connector (yellow).

CAUTION:

Do not place any object on front seat.

8) Make sure there is no one inside the vehicle.

9) Extend the wiring of airbag deployment tool to the limit, and close all the windows and sunroof completely.

10) Move the battery at least 5 m (16 ft) from the vehicle, and confirm safety in the area.

11) Connect the airbag deployment tool alligator clip to the battery negative (-) terminal.

12) Connect the other cable of airbag deployment tool to the battery positive (+) terminal, and activate the airbag module.

CAUTION:

- After activation, the airbag module will be extremely hot. Let it cool down for at least 40 minutes in an area with no one around.
- Do not expose the activated airbag module to water.

13) Remove the side airbag module. <Ref. to AB-41, REMOVAL, Side Airbag Module.>

- 14) Place the activated airbag module in a sealed vinyl bag, then discard.

5. CURTAIN AIRBAG MODULE

- 1) Turn the ignition switch to OFF.
- 2) Disconnect the ground cable from battery and wait for at least 60 seconds before starting work. <Ref. to NT-6, BATTERY, NOTE, Note.>
- 3) Remove the roof trim. <Ref. to EI-85, REMOVAL, Roof Trim.>
- 4) Disconnect the curtain airbag harness. <Ref. to AB-16, PROCEDURE, Airbag Connector.>

- 5) Short the terminal to the alligator clip furnished as airbag deployment tool.

CAUTION:

The airbag deployment tool should be kept shorted on the terminals until just before activation of airbag module.

Preparation tool:

ST: AIRBAG DEPLOYMENT TOOL (98299PA030)

Airbag Module Disposal (Deployment Processing on Vehicle)

AIRBAG SYSTEM

6) Connect the airbag deployment tool (A) and test harness adapter D (B).

Preparation tool:

ST: TEST HARNESS ADAPTER D (98299SA010)

7) Connect the test harness adapter D to the curtain airbag module.

8) Make sure there is no one inside the vehicle.

9) Extend the wiring of airbag deployment tool to the limit, and close all the windows and sunroof completely.

10) Move the battery at least 5 m (16 ft) from the vehicle, and confirm safety in the area.

11) Connect the airbag deployment tool alligator clip to the battery negative (-) terminal.

Airbag Module Disposal (Deployment Processing on Vehicle)

AIRBAG SYSTEM

12) Connect the other cable of airbag deployment tool to the battery positive (+) terminal, and activate the airbag module.

CAUTION:

- After activation, the airbag module will be extremely hot. Let it cool down for at least 40 minutes in an area with no one around.
- Do not expose the activated airbag module to water.

13) Remove the bolts and clips, and remove the curtain airbag module.

14) Place the activated airbag module in a sealed vinyl bag, then discard.

NOTE:

When necessary, fold the fabric part of airbag into three or four sections, rope and seal in a vinyl bag.

Basic Diagnostic Procedure

AIRBAG SYSTEM (DIAGNOSTICS)

1. Basic Diagnostic Procedure

A: PROCEDURE

	Step	Check	Yes	No
1	CHECK WARNING LIGHT. Check whether the airbag warning light in the combination meter is lit.	Does the airbag warning light illuminate?	Go to step 2.	Perform the diagnosis according to phenomenon of the problem.
2	READ DTC. 1) Turn the ignition switch to OFF. 2) Connect the Subaru Select Monitor to data link connector. 3) Turn the ignition switch to ON and run the Subaru Select Monitor. 4) Read the DTC. (Current malfunction) <Ref. to AB(diag)-21, Read Diagnostic Trouble Code (DTC).> NOTE: If the communication function of the Subaru Select Monitor cannot be executed properly, check the communication circuit. <Ref. to AB(diag)-18, COMMUNICATION FOR INITIALIZING IMPOSSIBLE, INSPECTION, Subaru Select Monitor.> 5) Record all DTCs, time stamp and freeze frame data. NOTE: For time stamp, refer to "LAN SYSTEM". <Ref. to LAN(diag)-6, TIME STAMP, CAUTION, General Description.>	Are any DTCs displayed?	Go to step 3.	Go to "Airbag Warning Light Failure" <Ref. to AB(diag)-28, Airbag Warning Light Failure.>.
3	PERFORM DIAGNOSIS. 1) Determine the possible cause from "List of Diagnostic Trouble Code (DTC)" <Ref. to AB(diag)-29, List of Diagnostic Trouble Code (DTC).> 2) Inspect the DTC using "List of Diagnostic Trouble Code (DTC)". 3) Repair the trouble cause. 4) Perform the Clear Memory Mode. <Ref. to AB(diag)-23, Clear Memory Mode.> 5) Perform the Inspection Mode. <Ref. to AB(diag)-22, Inspection Mode.> 6) Read any other DTCs displayed. <Ref. to AB(diag)-21, Read Diagnostic Trouble Code (DTC).>	Are any DTCs displayed?	Perform the procedure 1) to 5) in step 3.	Finish the diagnosis.

General Description

AIRBAG SYSTEM (DIAGNOSTICS)

3. HOW TO USE PROBE

Insert the probe into the harness hole, and contact it with the terminal.

(A) Cross section

(1) Probe

(3) Harness

(5) Connection

(2) Connector (housing)

(4) Terminal

CAUTION:

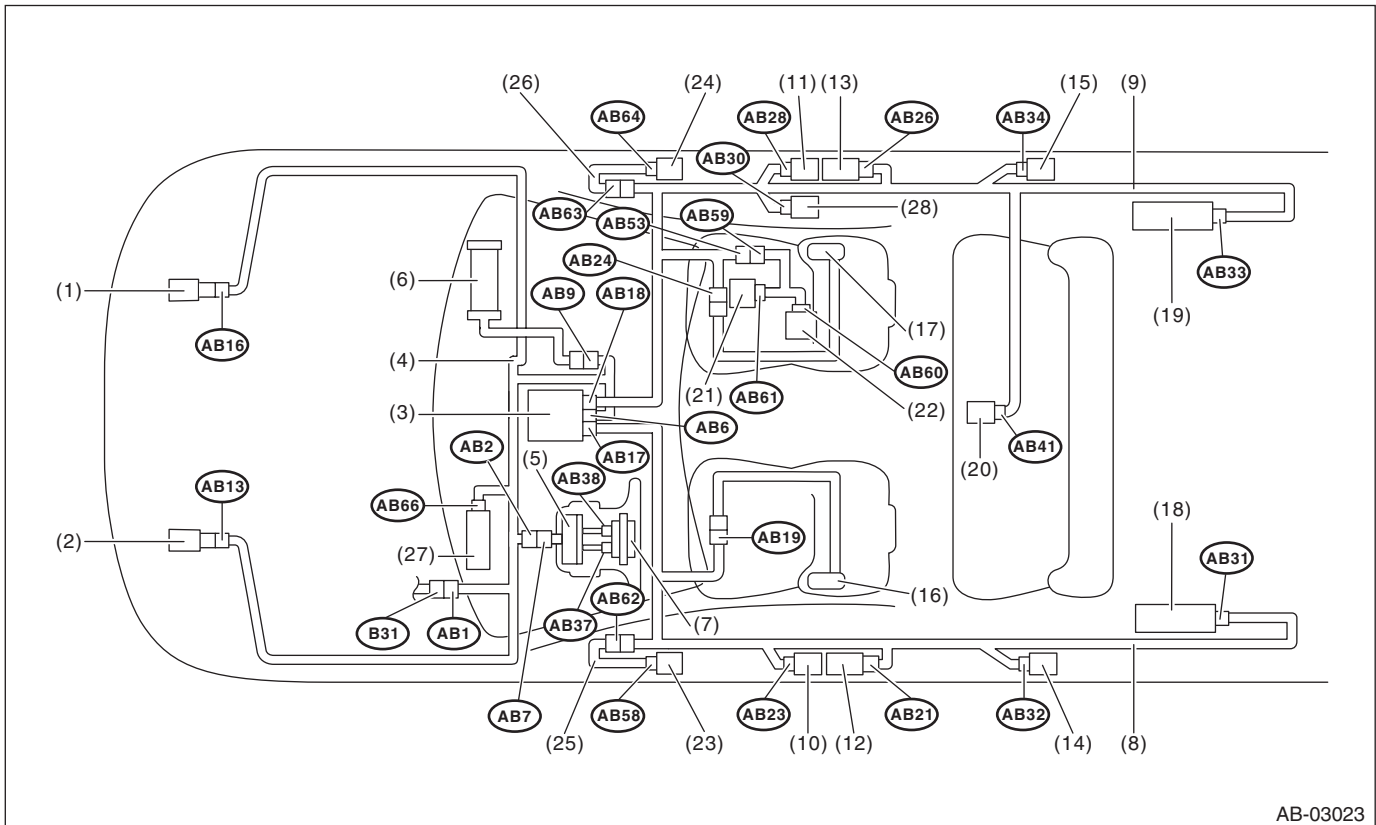

- Do not insert the probe forcibly.
- Be careful not to contact it to the connection (5) between the terminal and harness. (Harness will come off easily from connector if doing so.)

Electrical Component Location

AIRBAG SYSTEM (DIAGNOSTICS)

5. Airbag Connector

A: PROCEDURE

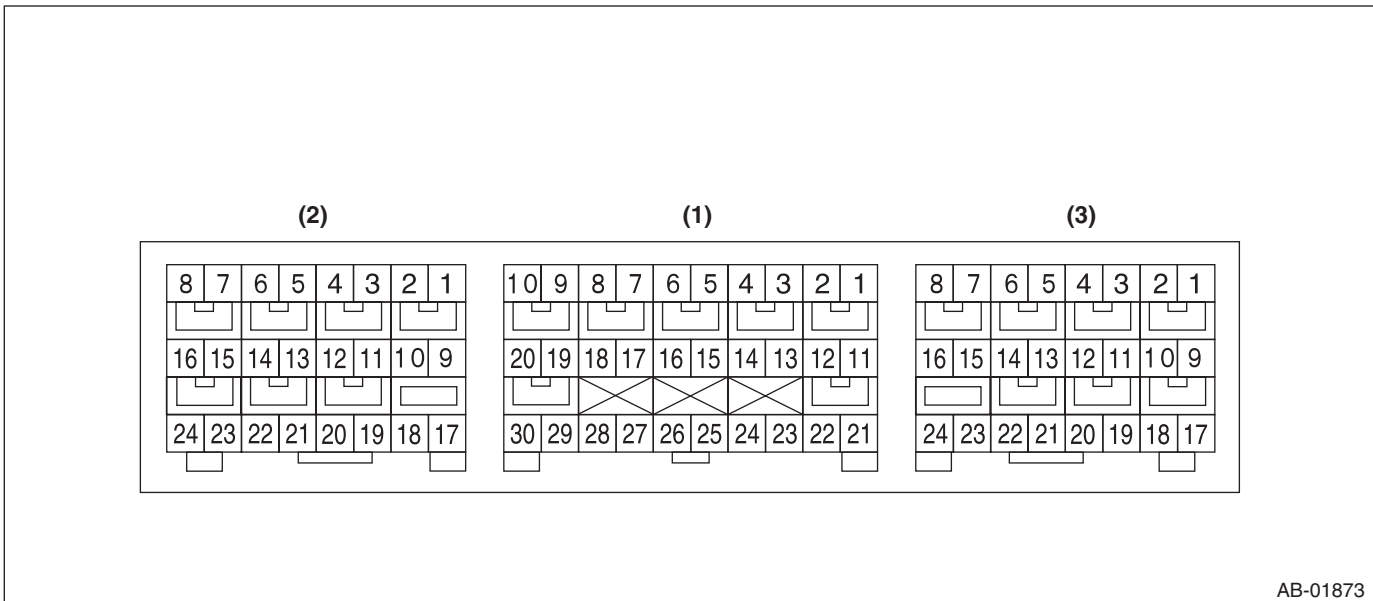

For operation procedures, refer to “Airbag Connector” of Airbag System. <Ref. to AB-16, Airbag Connector.>

Airbag Control Module I/O Signal

AIRBAG SYSTEM (DIAGNOSTICS)

6. Airbag Control Module I/O Signal

A: ELECTRICAL SPECIFICATION

- Terminal numbers in airbag control module connector are shown in the figure.
- The airbag warning light illuminates when the connector is removed from the airbag control module.

Item		Control module terminal No.
Ignition power supply	Dedicated fuse	(1) — 21
Passenger's airbag module level one	+	(1) — 4
	-	(1) — 3
Passenger's airbag module level two	+	(1) — 1
	-	(1) — 2
Driver's airbag module level one	+	(1) — 5
	-	(1) — 6
Driver's airbag module level two	+	(1) — 8
	-	(1) — 7
Driver's knee airbag module	+	(1) — 9
	-	(1) — 10
CAN-H		(1) — 13
CAN-L		(1) — 22
Collision detection signal		(1) — 24
Front sub sensor LH	+	(1) — 30
	-	(1) — 28
Front sub sensor RH	+	(1) — 29
	-	(1) — 27
Ground line (GND)		(1) — 25
		(1) — 26
Passenger's airbag ON indicator		(1) — 23
Passenger's airbag OFF indicator		(1) — 17
Passenger's seat belt warning		(1) — 15
Side airbag sensor LH Curtain airbag sensor LH Front door impact sensor LH	+	(2) — 24
	-	(2) — 23
Seat belt pretensioner LH	+	(2) — 5
	-	(2) — 6

Airbag Control Module I/O Signal

AIRBAG SYSTEM (DIAGNOSTICS)

Item		Control module terminal No.
Side airbag module LH	+	(2) — 1
	—	(2) — 2
Curtain airbag module LH	+	(2) — 4
	—	(2) — 3
Occupant detection control module	+	(3) — 16
	—	(3) — 24
Side airbag sensor RH	+	(3) — 17
Curtain airbag sensor RH	—	(3) — 18
Front door impact sensor RH		
Side airbag module RH	+	(3) — 8
	—	(3) — 7
Curtain airbag module RH	+	(3) — 5
	—	(3) — 6
Seat belt pretensioner RH	+	(3) — 4
	—	(3) — 3
Lap seat belt pretensioner RH	+	(3) — 1
	—	(3) — 2

B: WIRING DIAGRAM

Refer to “Airbag System” in WI section. <Ref. to WI-39, WIRING DIAGRAM, Airbag System.>

Subaru Select Monitor

AIRBAG SYSTEM (DIAGNOSTICS)

7. Subaru Select Monitor

A: OPERATION

For detailed operation procedures, refer to "Application help".

B: INSPECTION

1. COMMUNICATION FOR INITIALIZING IMPOSSIBLE

DTC detecting condition:

Defective harness connector

Trouble symptom:

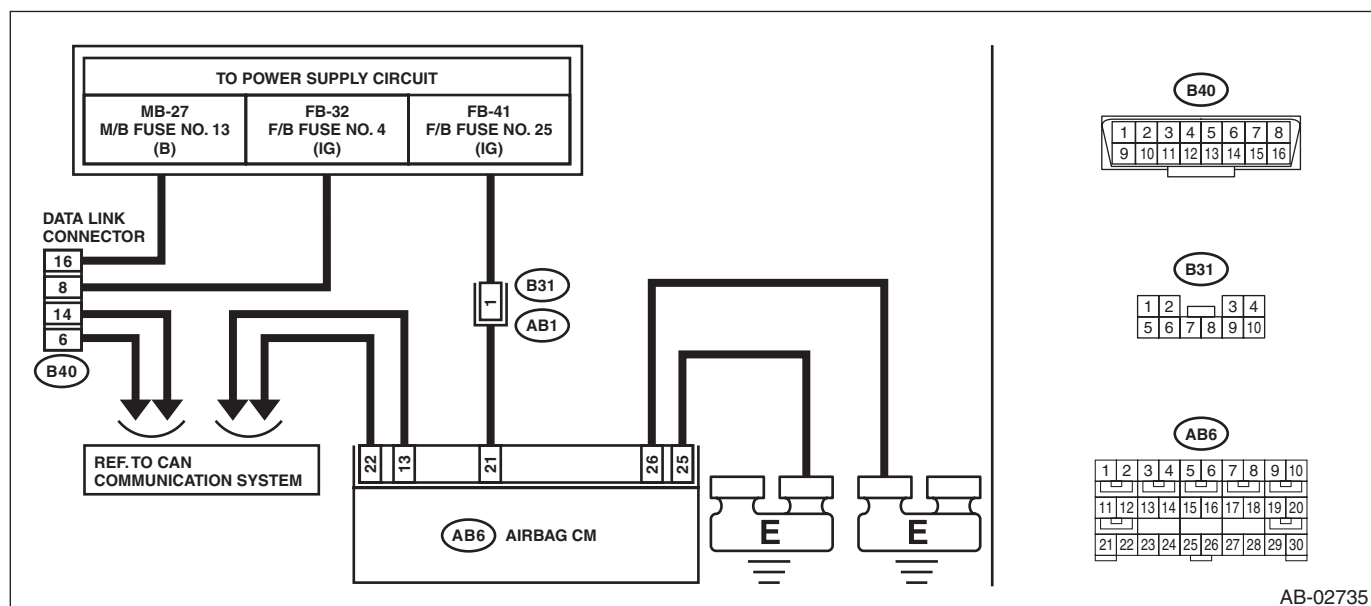

Communication is impossible between the airbag control module and the Subaru Select Monitor.

CAUTION:

Before performing diagnosis, refer to "CAUTION" in "General Description". <Ref. to AB(diag)-4, CAUTION, General Description.>

WIRING DIAGRAM:

Airbag system <Ref. to WI-39, WIRING DIAGRAM, Airbag System.>

AB-02735

Step	Check	Yes	No
1	CHECK IGNITION SWITCH. Is the ignition switch ON?	Go to step 2.	Turn the ignition switch to ON, and select the airbag mode using the Subaru Select Monitor.
2	CHECK BATTERY. 1) Turn the ignition switch to OFF. 2) Measure the battery voltage. Is the voltage 11 V or more?	Go to step 3.	Charge or replace the battery.
3	CHECK BATTERY TERMINAL. Check the battery terminal. Is there poor contact at battery terminal?	Replace or tighten the battery terminal.	Go to step 4.
4	CHECK SUBARU SELECT MONITOR COMMUNICATION. 1) Turn the ignition switch to ON. 2) Using the Subaru Select Monitor, check whether communication to other systems can be executed normally. Is the system name displayed on Subaru Select Monitor?	Go to step 9.	Go to step 5.
5	CHECK SUBARU SELECT MONITOR. Is Subaru Select Monitor powered on?	Go to step 7.	Go to step 6.

Subaru Select Monitor

AIRBAG SYSTEM (DIAGNOSTICS)

Step	Check	Yes	No
6 CHECK FUSE. Remove a fuse in the data link connector and visually check the fuse.	Is the fuse OK?	Repair the harness between the battery and the data link connector.	Replace the fuse. If the fuse is blown out again, check the power supply circuit.
7 CHECK AIRBAG CONTROL MODULE CONNECTOR. 1) Turn the ignition switch to OFF, disconnect the battery ground cable, and wait for 60 seconds or more. 2) Confirm that the connectors of airbag control module (AB6, AB17, AB18) are securely connected.	Is the connector of the airbag control module securely connected?	Go to step 8.	Connect the connector of the airbag control module.
8 CHECK SUBARU SELECT MONITOR COMMUNICATION. 1) Disconnect the airbag control module connector. 2) Connect the battery ground terminal. 3) Turn the ignition switch to ON. 4) Check whether communication to other systems can be executed normally.	Is the system name displayed on Subaru Select Monitor?	Replace the airbag control module. <Ref. to AB-46, Airbag Control Module.>	Go to step 9.
9 CHECK FUSE. Remove fuse No. 25 from the fuse & relay box, and perform visual inspection.	Is the fuse OK?	Go to step 10.	Replace the fuse. If the fuse is blown out again, check the power supply circuit.
10 CHECK AIRBAG CONTROL MODULE CONNECTOR. 1) Turn the ignition switch to OFF, disconnect the battery ground cable, and wait for 60 seconds or more. 2) Confirm that the connectors of airbag control module (AB6, AB17, AB18) are securely connected.	Is the connector of the airbag control module securely connected?	Go to step 11.	Connect the connector of the airbag control module.
11 CHECK CAN COMMUNICATION. Inspect LAN system. <Ref. to LAN(diag)-2, PROCEDURE, Basic Diagnostic Procedure.>	Is there any fault?	Repair it according to the diagnosis for LAN system.	Go to step 12.
12 CHECK POWER SUPPLY CIRCUIT. 1) Disconnect the connectors (AB6, AB17, AB18) from airbag control module. 2) Connect the connector (1AG) in the test harness AG to the connectors (AB6, AB17, AB18). 3) Turn the ignition switch to ON. 4) Measure the voltage between connector (2AG) in the test harness AG and chassis ground. <i>Connector & terminal (2AG) No. 1 (+) — Chassis ground (-):</i>	Is the voltage 10 V or more?	Go to step 13.	Repair the harness between the airbag control module and the battery. Or replace the airbag main harness along with the bulkhead harness.
13 CHECK BETWEEN AIRBAG CONTROL MODULE AND CHASSIS GROUND. 1) Turn the ignition switch to OFF. 2) Measure the resistance between connector (2AG) in the test harness AG and chassis ground. <i>Connector & terminal (2AG) No. 4 — Chassis ground: (2AG) No. 3 — Chassis ground:</i>	Is the resistance less than 10 Ω ?	Go to step 14.	Repair the harness between the airbag control module and the chassis ground. Or replace the airbag main harness along with the bulkhead harness.

Subaru Select Monitor

AIRBAG SYSTEM (DIAGNOSTICS)

Step	Check	Yes	No
14 CHECK POOR CONTACT OF CONNECTOR.	Is there poor contact of the control module power supply, ground circuit and data link connector?	Repair the connector. (Replace the harness without repairing the airbag system connector.)	Replace the airbag control module. <Ref. to AB-46, REMOVAL, Airbag Control Module.>

8. Read Diagnostic Trouble Code (DTC)

A: OPERATION

- 1) On «Start» display, select «Diagnosis».
- 2) On «Vehicle selection» display, input the target vehicle information and select «Confirmed».
- 3) On «Main Menu» display, select «Each System».
- 4) On «Select System» display, select «Airbag» and select «Enter».
- 5) On «Airbag» display, select «DTC».

NOTE:

- For detailed operation procedures, refer to “Application help”.
- For details concerning DTC, refer to “List of Diagnostic Trouble Code (DTC)” in AIRBAG SYSTEM. <Ref. to AB(diag)-29, List of Diagnostic Trouble Code (DTC).>

9. Inspection Mode

A: PROCEDURE

Recreate the circumstance by referring to the conditions described in the checklist.

10. Clear Memory Mode

A: OPERATION

- 1) On «Start» display, select «Diagnosis».
- 2) On «Vehicle selection» display, input the target vehicle information and select «Confirmed».
- 3) On «Main Menu» display, select «Each System».
- 4) On «Select System» display, select «Airbag» and select «Enter».
- 5) On «Airbag» display, select «DTC».
- 6) On «DTC» display, select «Clear Memory».

NOTE:

- For detailed operation procedures, refer to “Application help”.
- Clear the DTC stored in the airbag control module after repairing the airbag system.

Read Current Data

AIRBAG SYSTEM (DIAGNOSTICS)

11. Read Current Data

A: OPERATION

Check the operating condition of each sensor in the event of malfunction in the seat belt buckle switch, or when the seat belt buckle switch has been replaced.

- 1) On «Start» display, select «Diagnosis».
- 2) On «Vehicle selection» display, input the target vehicle information and select «Confirmed».
- 3) On «Main Menu» display, select «Each System».
- 4) On «Select System» display, select «Airbag» and select «Enter».
- 5) On «Airbag» display, select «Data monitor».

NOTE:

For detailed operation procedures, refer to “Application help”.

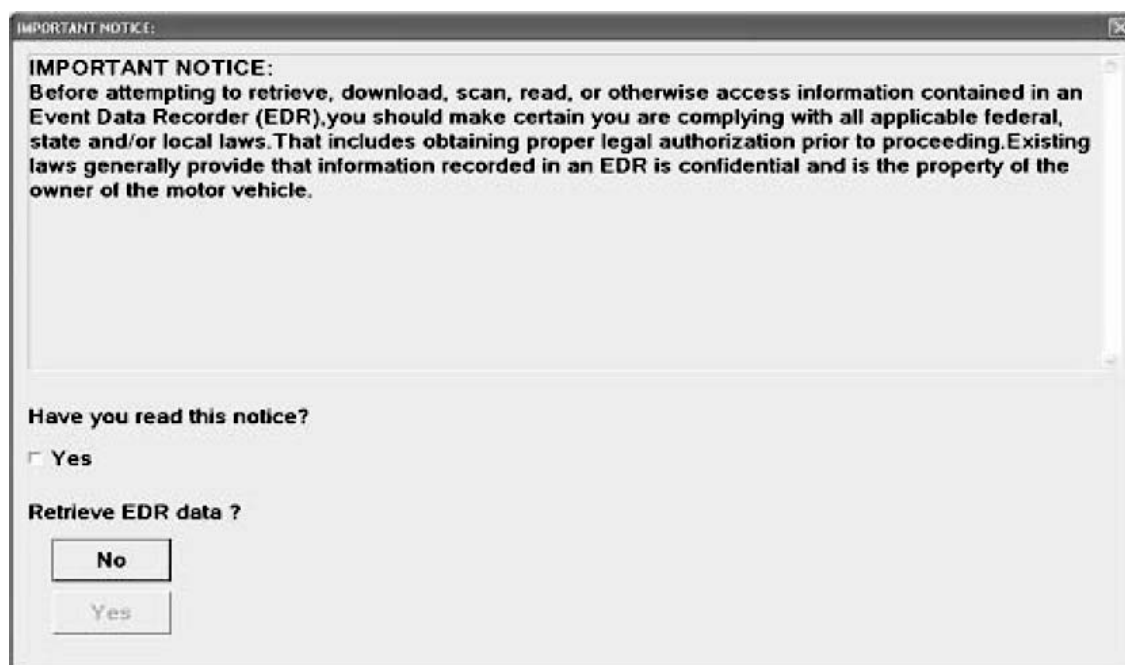

B: LIST

Item	Display	Note
Trip Count	—	—
Count	—	—
Time Count [msec]	—	—
Belt Buckle Switch RH	Unbelted/Belted	“Belted” when passenger’s seat belt is fastened “Unbelted” when passenger’s seat belt is not fastened
Passenger Occupant Status	Occupied/Empty or CRS	“Occupied” when the occupant is present “Empty or CRS” when the seat is unoccupied or when child restraint seat is installed CAUTION: When checking the operating status, be careful of the followings. <ul style="list-style-type: none">• When the seat is unoccupied: Do not place anything on the seat.• Child restraint seat: Install the seat according to its instruction manual.• When the seat is occupied: Someone who weighs at least approx. 70 kg (155 lb) must be seated during the check.
Passenger Airbag Status	ON/OFF	“ON” when the passenger occupant status is “Occupied” “OFF” when the status is “Empty or CRS”

12.Event Record Data

A: OPERATION

- 1) On «Start» display, select «Diagnosis».
- 2) On «Vehicle selection» display, input the target vehicle information and select «Confirmed».
- 3) On «Main Menu» display, select «Each System».
- 4) On «Select System» display, select «Airbag» and select «Enter».
- 5) On «Airbag» display, select «Work Support».
- 6) On «Work Support» display, select «Event Record Data». After selection, «IMPORTANT NOTICE» screen is displayed.
- 7) After checking the content of «IMPORTANT NOTICE», click the checkbox for “Yes”.
- 8) If the applicable law is not violated, click the «Yes» button to display the EDR data.

AB-02847

- 9) Select the items to be checked from each event record data.
- 10) Select the record data to be checked from each record data.
- 11) The selected record data is displayed. If there is no data recorded, «Event record data are not recorded» is displayed.
- 12) Select [Exit] to return to each event record data screen.

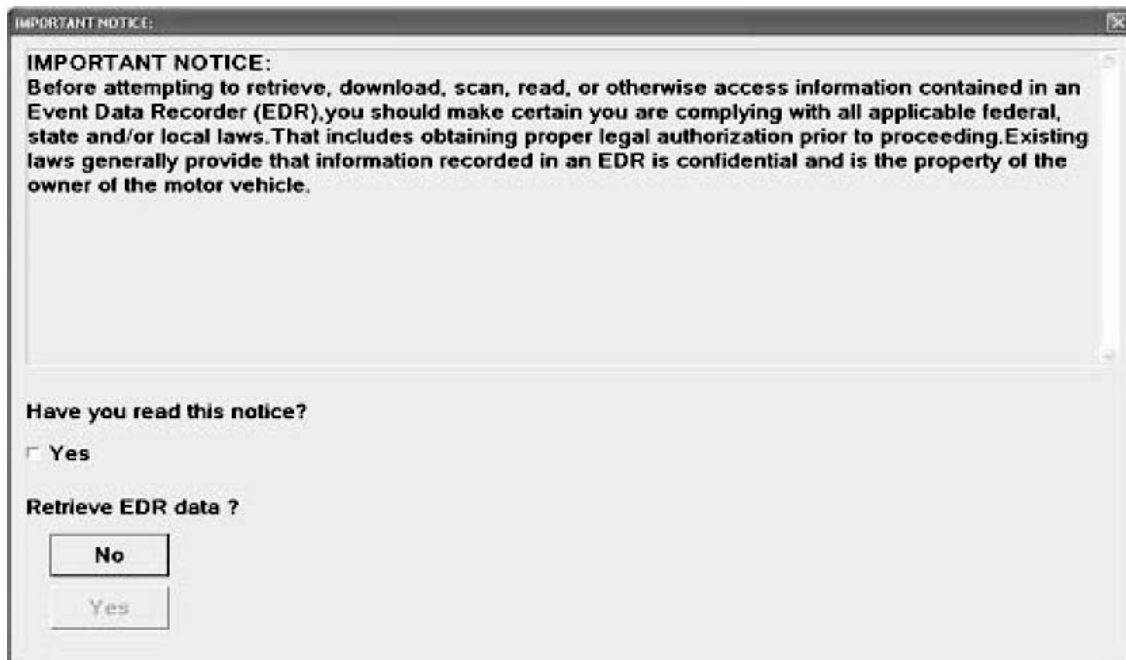

Batch save of Event record data

AIRBAG SYSTEM (DIAGNOSTICS)

13. Batch save of Event record data

A: OPERATION

- 1) On «Start» display, select «Diagnosis».
- 2) On «Vehicle selection» display, input the target vehicle information and select «Confirmed».
- 3) On «Main Menu» display, select «Each System».
- 4) On «Select System» display, select «Airbag» and select «Enter».
- 5) On «Airbag» display, select «Work Support».
- 6) On «Work Support» display, select «Batch save of Event record data». After selection, «IMPORTANT NOTICE» screen is displayed.
- 7) After checking the content of «IMPORTANT NOTICE», click the checkbox for “Yes”.
- 8) If the applicable law is not violated, click the «Yes» button to display the EDR data.

AB-02847

- 9) Specify the destination for the event record data to save the data there.
- 10) After saving the file, click the «OK» button to return the menu screen.

14. Airbag Warning Light Illumination Pattern

A: INSPECTION

Turn the ignition switch to ON, and confirm that the airbag warning light remains on for approx. 6 seconds then turns off afterwards.

- (1) Airbag warning light
- (2) Approx. 6 seconds
- (3) Ignition switch ON

Airbag Warning Light Failure

AIRBAG SYSTEM (DIAGNOSTICS)

15. Airbag Warning Light Failure

A: AIRBAG WARNING LIGHT REMAINS ON

Detecting condition:

- Airbag warning light is faulty.
- Airbag control module to combination meter circuit is shorted or open.
- Grounding circuit is faulty.
- Airbag control module is faulty.
- Connector connection is improper.
- Connections of (AB6, AB17, AB18) to airbag control module are improper.

CAUTION:

Before performing diagnosis, refer to “CAUTION” in “General Description”. <Ref. to AB(diag)-4, CAUTION, General Description.>

	Step	Check	Yes	No
1	CHECK CAN COMMUNICATION. Inspect LAN system. <Ref. to LAN(diag)-2, PROCEDURE, Basic Diagnostic Procedure.>	Is there any fault?	Repair it according to diagnosis of LAN system.	Go to step 2.
2	CHECK DTC. 1) Turn the ignition switch to OFF, disconnect the battery ground cable, and wait for 60 seconds or more. 2) Check the connection status of airbag CM connector.	Is there poor contact of connector?	Reconnect the connector. Or repair the connector.	Go to step 3.
3	CHECK FOR POOR CONTACT. Check the combination meter. <Ref. to IDI(diag)-2, PROCEDURE, Basic Diagnostic Procedure.>	Is there any fault?	Repair it according to INSTRUMENTATION/DRIVER INFO (DIAGNOSTICS).	Replace the airbag CM. <Ref. to AB-46, REMOVAL, Airbag Control Module.>

B: AIRBAG WARNING LIGHT REMAINS OFF

NOTE:

For the diagnostic procedure, refer to “AIRBAG WARNING LIGHT REMAINS ON”. <Ref. to AB(diag)-28, AIRBAG WARNING LIGHT REMAINS ON, Airbag Warning Light Failure.>

AIRBAG SYSTEM (DIAGNOSTICS)

17. Diagnostic Chart with Trouble Code

A: DTC U0073 CONTROL MODULE COMMUNICATION BUS OFF

Diagnosis start condition:

Ignition voltage remains at 10 V or more for 1 second.

DTC detecting condition:

Detected when malfunction occurs in CAN line.

NOTE:

Perform the diagnosis for LAN system. <Ref. to LAN(diag)-2, PROCEDURE, Basic Diagnostic Procedure.>

Diagnostic Chart with Trouble Code

AIRBAG SYSTEM (DIAGNOSTICS)

B: DTC B1000 AIRBAG ECU MALFUNCTION

DIAGNOSIS START CONDITION:

Ignition voltage is 10 V to 16 V.

DTC DETECTING CONDITION:

Airbag control module is faulty.

CAUTION:

Before performing diagnosis, refer to “CAUTION” in “General Description”. <Ref. to AB(diag)-4, CAUTION, General Description.>

	Step	Check	Yes	No
1	CHECK DTC. Read the DTC. (Current malfunction) <Ref. to AB(diag)-21, Read Diagnostic Trouble Code (DTC).>	Is any of B1000, B1003, B1105, B1106, B1115, B1116, B1120, B1121, B1125, B1126, B1135, B1136, B1145, B1146, B1170, B1185, B1195, B1196 or B1199 displayed?	Replace the airbag control module. <Ref. to AB-46, Airbag Control Module.>	Perform the Clear Memory Mode. <Ref. to AB(diag)-23, Clear Memory Mode.>

C: DTC B1003 AIRBAG ECU MALFUNCTION

NOTE:

Refer to DTC B1103 for details on DTC B1000. <Ref. to AB(diag)-39, DTC B1000 AIRBAG ECU MALFUNCTION, Diagnostic Chart with Trouble Code.>

D: DTC B1105 AIRBAG ECU MALFUNCTION

NOTE:

Refer to DTC B1105 for details on DTC B1000. <Ref. to AB(diag)-39, DTC B1000 AIRBAG ECU MALFUNCTION, Diagnostic Chart with Trouble Code.>

E: DTC B1106 AIRBAG ECU MALFUNCTION

NOTE:

Refer to DTC B1106 for details on DTC B1000. <Ref. to AB(diag)-39, DTC B1000 AIRBAG ECU MALFUNCTION, Diagnostic Chart with Trouble Code.>

F: DTC B1115 AIRBAG ECU MALFUNCTION

NOTE:

Refer to DTC B1115 for details on DTC B1000. <Ref. to AB(diag)-39, DTC B1000 AIRBAG ECU MALFUNCTION, Diagnostic Chart with Trouble Code.>

G: DTC B1116 AIRBAG ECU MALFUNCTION

NOTE:

Refer to DTC B1116 for details on DTC B1000. <Ref. to AB(diag)-39, DTC B1000 AIRBAG ECU MALFUNCTION, Diagnostic Chart with Trouble Code.>

H: DTC B1120 AIRBAG ECU MALFUNCTION

NOTE:

Refer to DTC B1120 for details on DTC B1000. <Ref. to AB(diag)-39, DTC B1000 AIRBAG ECU MALFUNCTION, Diagnostic Chart with Trouble Code.>

I: DTC B1121 AIRBAG ECU MALFUNCTION

NOTE:

Refer to DTC B1121 for details on DTC B1000. <Ref. to AB(diag)-39, DTC B1000 AIRBAG ECU MALFUNCTION, Diagnostic Chart with Trouble Code.>

Diagnostic Chart with Trouble Code

AIRBAG SYSTEM (DIAGNOSTICS)

J: DTC B1125 AIRBAG ECU MALFUNCTION

NOTE:

Refer to DTC B1125 for details on DTC B1000. <Ref. to AB(diag)-39, DTC B1000 AIRBAG ECU MALFUNCTION, Diagnostic Chart with Trouble Code.>

K: DTC B1126 AIRBAG ECU MALFUNCTION

NOTE:

Refer to DTC B1126 for details on DTC B1000. <Ref. to AB(diag)-39, DTC B1000 AIRBAG ECU MALFUNCTION, Diagnostic Chart with Trouble Code.>

L: DTC B1135 AIRBAG ECU MALFUNCTION

NOTE:

Refer to DTC B1135 for details on DTC B1000. <Ref. to AB(diag)-39, DTC B1000 AIRBAG ECU MALFUNCTION, Diagnostic Chart with Trouble Code.>

M: DTC B1136 AIRBAG ECU MALFUNCTION

NOTE:

Refer to DTC B1136 for details on DTC B1000. <Ref. to AB(diag)-39, DTC B1000 AIRBAG ECU MALFUNCTION, Diagnostic Chart with Trouble Code.>

N: DTC B1145 AIRBAG ECU MALFUNCTION

NOTE:

Refer to DTC B1145 for details on DTC B1000. <Ref. to AB(diag)-39, DTC B1000 AIRBAG ECU MALFUNCTION, Diagnostic Chart with Trouble Code.>

O: DTC B1146 AIRBAG ECU MALFUNCTION

NOTE:

Refer to DTC B1146 for details on DTC B1000. <Ref. to AB(diag)-39, DTC B1000 AIRBAG ECU MALFUNCTION, Diagnostic Chart with Trouble Code.>

P: DTC B1170 AIRBAG ECU MALFUNCTION

NOTE:

Refer to DTC B1170 for details on DTC B1000. <Ref. to AB(diag)-39, DTC B1000 AIRBAG ECU MALFUNCTION, Diagnostic Chart with Trouble Code.>

Q: DTC B1185 AIRBAG ECU MALFUNCTION

NOTE:

Refer to DTC B1185 for details on DTC B1000. <Ref. to AB(diag)-39, DTC B1000 AIRBAG ECU MALFUNCTION, Diagnostic Chart with Trouble Code.>

R: DTC B1195 AIRBAG ECU MALFUNCTION

NOTE:

Refer to DTC B1195 for details on DTC B1000. <Ref. to AB(diag)-39, DTC B1000 AIRBAG ECU MALFUNCTION, Diagnostic Chart with Trouble Code.>

S: DTC B1196 AIRBAG ECU MALFUNCTION

NOTE:

Refer to DTC B1196 for details on DTC B1000. <Ref. to AB(diag)-39, DTC B1000 AIRBAG ECU MALFUNCTION, Diagnostic Chart with Trouble Code.>

T: DTC B1199 AIRBAG ECU MALFUNCTION

NOTE:

Refer to DTC B1199 for details on DTC B1000. <Ref. to AB(diag)-39, DTC B1000 AIRBAG ECU MALFUNCTION, Diagnostic Chart with Trouble Code.>

Diagnostic Chart with Trouble Code

AIRBAG SYSTEM (DIAGNOSTICS)

U: DTC B11E0 ROLLOVER DEPLOYMENT HISTORY

DIAGNOSIS START CONDITION:

Ignition voltage is 10 V to 16 V.

DTC DETECTING CONDITION:

This DTC is indicated when the curtain airbag module and the seat belt pretensioner are deployed.

Once this DTC is displayed, the memory cannot be cleared. Replace the following parts.

- Airbag control module <Ref. to AB-46, Airbag Control Module.>
- Curtain airbag module <Ref. to AB-44, Curtain Airbag Module.>
- Front outer seat belt with pretensioner <Ref. to SB-15, Front Seat Belt.>

V: DTC B11F2 FRONT IMPACT DEPLOYMENT

DIAGNOSIS START CONDITION:

Ignition voltage is 10 V to 16 V.

DTC DETECTING CONDITION:

This DTC is indicated when the front airbag module and the pretensioner are deployed.

Once this DTC is displayed, the memory cannot be cleared. Therefore replace the following parts.

- Airbag control module <Ref. to AB-46, Airbag Control Module.>
- Driver's airbag module <Ref. to AB-32, Driver's Airbag Module.>
- Passenger's airbag module <Ref. to AB-35, Passenger's Airbag Module.>
- Driver's knee airbag module <Ref. to AB-34, Knee Airbag Module.>
- Front sub sensor of both sides <Ref. to AB-48, Front Sub Sensor.>
- Front outer seat belt with pretensioner of both sides <Ref. to SB-15, Front Seat Belt.>
- Steering roll connector <Ref. to AB-59, Roll Connector.>
- Occupant detection system (passenger's seat cushion & frame assembly) <Ref. to SE-8, Front Seat.>
- Curtain airbag module on both sides (when activated) <Ref. to AB-44, Curtain Airbag Module.>

W: DTC B11F3 FRONT IMPACT DEPLOYMENT

NOTE:

For details on DTC B11F3, refer to DTC B11F2. <Ref. to AB(diag)-41, DTC B11F2 FRONT IMPACT DEPLOYMENT, Diagnostic Chart with Trouble Code.>

X: DTC B11F4 FRONT IMPACT DEPLOYMENT

NOTE:

For details on DTC B11F4, refer to DTC B11F2. <Ref. to AB(diag)-41, DTC B11F2 FRONT IMPACT DEPLOYMENT, Diagnostic Chart with Trouble Code.>

Y: DTC B11F5 FRONT IMPACT DEPLOYMENT

NOTE:

For details on DTC B11F5, refer to DTC B11F2. <Ref. to AB(diag)-41, DTC B11F2 FRONT IMPACT DEPLOYMENT, Diagnostic Chart with Trouble Code.>

Diagnostic Chart with Trouble Code

AIRBAG SYSTEM (DIAGNOSTICS)

Z: DTC B11F7 SIDE IMPACT DEPLOYMENT

DIAGNOSIS START CONDITION:

Ignition voltage is 10 V to 16 V.

DTC DETECTING CONDITION:

This DTC is displayed when the side airbag module and curtain airbag module are deployed.

Once this DTC is displayed, the memory cannot be cleared. Replace the following parts.

- Airbag control module <Ref. to AB-46, Airbag Control Module.>
- Side airbag module (operating side) <Ref. to AB-41, Side Airbag Module.>
- Side airbag sensor (operating side) <Ref. to AB-51, Side Airbag Sensor.>
- Curtain airbag module (operating side) <Ref. to AB-44, Curtain Airbag Module.>
- Curtain airbag sensor (operating side) <Ref. to AB-54, Curtain Airbag Sensor.>
- Satellite safing sensor <Ref. to AB-58, Satellite Safing Sensor.>
- Front door impact sensor (operating side) <Ref. to AB-50, Front Door Impact Sensor.>
- Front outer seat belt with pretensioner on the collision side (when activated) <Ref. to SB-15, Front Seat Belt.>

AA:DTC B11F8 SIDE IMPACT DEPLOYMENT

NOTE:

For details on DTC B11F8, refer to DTC B11F7. <Ref. to AB(diag)-42, DTC B11F7 SIDE IMPACT DEPLOYMENT, Diagnostic Chart with Trouble Code.>

AB:DTC B11F9 SIDE IMPACT DEPLOYMENT

NOTE:

For details on DTC B11F9, refer to DTC B11F7. <Ref. to AB(diag)-42, DTC B11F7 SIDE IMPACT DEPLOYMENT, Diagnostic Chart with Trouble Code.>

AC:DTC B11FA SIDE IMPACT DEPLOYMENT

NOTE:

For details on DTC B11FA, refer to DTC B11F7. <Ref. to AB(diag)-42, DTC B11F7 SIDE IMPACT DEPLOYMENT, Diagnostic Chart with Trouble Code.>

AD:DTC B11FB SIDE IMPACT DEPLOYMENT

NOTE:

For details on DTC B11FB, refer to DTC B11F7. <Ref. to AB(diag)-42, DTC B11F7 SIDE IMPACT DEPLOYMENT, Diagnostic Chart with Trouble Code.>

AE:DTC B11FC SIDE IMPACT DEPLOYMENT

NOTE:

For details on DTC B11FC, refer to DTC B11F7. <Ref. to AB(diag)-42, DTC B11F7 SIDE IMPACT DEPLOYMENT, Diagnostic Chart with Trouble Code.>

AF:DTC B1610 FRONT SUB SENSOR RH FAILURE

DIAGNOSIS START CONDITION:

Ignition voltage is 10 V to 16 V.

DTC DETECTING CONDITION:

Front sub sensor (RH) is faulty.

If DTC B1610 is displayed, the circuit within the front sub sensor (RH) is faulty.

Replace the front sub sensor (RH). <Ref. to AB-48, Front Sub Sensor.>

AG:DTC B1612 FRONT SUB SENSOR RH LOST COMMUNICATION

NOTE:

For details on DTC B1612, refer to DTC B1613. <Ref. to AB(diag)-43, DTC B1613 FRONT SUB SENSOR RH INITIALIZATION ERROR, Diagnostic Chart with Trouble Code.>

Diagnostic Chart with Trouble Code

AIRBAG SYSTEM (DIAGNOSTICS)

AH:DTC B1613 FRONT SUB SENSOR RH INITIALIZATION ERROR

Diagnosis start condition:

Ignition voltage is 10 V to 16 V.

DTC detecting condition:

- Open or short circuit in harness of front sensor bus (RH)
- Front sub sensor (RH) is faulty.
- Airbag control module is faulty.

CAUTION:

Before performing diagnosis, refer to “CAUTION” in “General Description”. <Ref. to AB(diag)-4, CAUTION, General Description.>

Wiring diagram:

Airbag system <Ref. to WI-39, WIRING DIAGRAM, Airbag System.>

Step	Check	Yes	No
1 CHECK POOR CONTACT OF CONNECTORS. Check for poor contact of the connectors (AB6, AB16) between the airbag control module and the front sub sensor (RH).	Is there poor contact?	Replace the airbag main harness along with body harness.	Go to step 2.

Diagnostic Chart with Trouble Code

AIRBAG SYSTEM (DIAGNOSTICS)

Step	Check	Yes	No
<p>2 CHECK AIRBAG MAIN HARNESS (FRONT SENSOR BUS RH).</p> <p>1) Turn the ignition switch to OFF, disconnect the battery ground cable, and wait for 60 seconds or more.</p> <p>2) Remove the instrument panel lower cover and column cover, and disconnect the connectors (AB7) and (AB2).</p> <p>3) Remove the console front panel and disconnect the connector (AB9).</p> <p>4) Disconnect the connectors (AB6, AB17, AB18) from airbag control module.</p> <p>5) Connect the connector (1AG) in the test harness AG to the connectors (AB6, AB17, AB18).</p> <p>6) Disconnect the connector (AB16) from the front sub sensor (RH), and then connect the connector (1H) in the test harness H to connector (AB16).</p> <p>7) Measure the resistance between connector (4AG) in the test harness AG and connector (3H) in the test harness H.</p> <p>Connector & terminal (4AG) No. 14 — (3H) No. 5: (4AG) No. 12 — (3H) No. 6:</p>	Is the resistance less than 10 Ω?	Go to step 3.	Replace the airbag main harness along with body harness.
<p>3 CHECK AIRBAG MAIN HARNESS (FRONT SENSOR BUS RH).</p> <p>Measure the resistance between connector (4AG) in the test harness AG and chassis ground, and the resistance between connector (4AG) terminals in the test harness AG.</p> <p>Connector & terminal (4AG) No. 12 — Chassis ground: (4AG) No. 14 — Chassis ground: (4AG) No. 12 — (4AG) No. 14:</p>	Is the resistance 1 MΩ or more?	Go to step 4.	Replace the airbag main harness along with body harness.
<p>4 CHECK AIRBAG CONTROL MODULE.</p> <p>1) Connect all connectors.</p> <p>2) Clear the memory. <Ref. to AB(diag)-23, Clear Memory Mode.></p> <p>3) Perform the Inspection Mode. <Ref. to AB(diag)-22, Inspection Mode.></p> <p>4) Read the DTC. (Current malfunction) <Ref. to AB(diag)-21, Read Diagnostic Trouble Code (DTC).></p>	Is DTC B1613 displayed?	Replace the front sub sensor (RH). <Ref. to AB-48, REMOVAL, Front Sub Sensor.> Replace the airbag control module if not operating normally even after replacing the sensor. <Ref. to AB-46, REMOVAL, Airbag Control Module.>	Go to step 5.
<p>5 CHECK FOR ANY OTHER DTC ON DISPLAY.</p>	Is any other DTC displayed?	Check DTC using "List of Diagnostic Trouble Code". <Ref. to AB(diag)-29, List of Diagnostic Trouble Code (DTC).>	Finish the diagnosis.

Diagnostic Chart with Trouble Code

AIRBAG SYSTEM (DIAGNOSTICS)

AI: DTC B1615 FRONT SUB SENSOR LH FAILURE

DIAGNOSIS START CONDITION:

Ignition voltage is 10 V to 16 V.

DTC DETECTING CONDITION:

Front sub sensor (LH) is faulty.

If DTC B1615 is displayed, the circuit within the front sub sensor (LH) is faulty.

Replace the front sub sensor (LH). <Ref. to AB-48, Front Sub Sensor.>

AJ:DTC B1617 FRONT SUB SENSOR LH LOST COMMUNICATION

NOTE:

For details on DTC B1617, refer to DTC B1618. <Ref. to AB(diag)-46, DTC B1618 FRONT SUB SENSOR LH INITIALIZATION ERROR, Diagnostic Chart with Trouble Code.>

Diagnostic Chart with Trouble Code

AIRBAG SYSTEM (DIAGNOSTICS)

AK:DTC B1618 FRONT SUB SENSOR LH INITIALIZATION ERROR

Diagnosis start condition:

Ignition voltage is 10 V to 16 V.

DTC detecting condition:

- Open or short circuit in harness of front sensor bus (LH)
- Front sub sensor (LH) is faulty.
- Airbag control module is faulty.

CAUTION:

Before performing diagnosis, refer to “CAUTION” in “General Description”. <Ref. to AB(diag)-4, CAUTION, General Description.>

Wiring diagram:

Airbag system <Ref. to WI-39, WIRING DIAGRAM, Airbag System.>

AB-02796

Step	Check	Yes	No
1 CHECK POOR CONTACT OF CONNECTORS. Check for poor contact of the connectors (AB6, AB13) between the airbag control module and the front sub sensor (LH).	Is there poor contact?	Replace the airbag main harness along with body harness.	Go to step 2.

Diagnostic Chart with Trouble Code

AIRBAG SYSTEM (DIAGNOSTICS)

Step	Check	Yes	No
<p>2 CHECK AIRBAG MAIN HARNESS (FRONT SENSOR BUS LH).</p> <p>1) Turn the ignition switch to OFF, disconnect the battery ground cable, and wait for 60 seconds or more.</p> <p>2) Remove the instrument panel lower cover and column cover, and disconnect the connectors (AB7) and (AB2).</p> <p>3) Remove the console front panel and disconnect the connector (AB9).</p> <p>4) Disconnect the connectors (AB6, AB17, AB18) from airbag control module.</p> <p>5) Connect the connector (1AG) in the test harness AG to the connectors (AB6, AB17, AB18).</p> <p>6) Disconnect the connector (AB13) from the front sub sensor (LH), and then connect the connector (1H) in the test harness H to connector (AB13).</p> <p>7) Measure the resistance between connector (4AG) in the test harness AG and connector (3H) in the test harness H.</p> <p>Connector & terminal (4AG) No. 7 — (3H) No. 5: (4AG) No. 9 — (3H) No. 6:</p>	<p>Is the resistance less than 10 Ω?</p>	<p>Go to step 3.</p>	<p>Replace the airbag main harness along with body harness.</p>
<p>3 CHECK AIRBAG MAIN HARNESS (FRONT SENSOR BUS LH).</p> <p>Measure the resistance between connector (4AG) in the test harness AG and chassis ground, and the resistance between connector (4AG) terminals in the test harness AG.</p> <p>Connector & terminal (4AG) No. 7 — Chassis ground: (4AG) No. 9 — Chassis ground: (4AG) No. 7 — (4AG) No. 9:</p>	<p>Is the resistance 1 MΩ or more?</p>	<p>Go to step 4.</p>	<p>Replace the airbag main harness along with body harness.</p>
<p>4 CHECK AIRBAG CONTROL MODULE.</p> <p>1) Connect all connectors.</p> <p>2) Clear the memory. <Ref. to AB(diag)-23, Clear Memory Mode.></p> <p>3) Perform the Inspection Mode. <Ref. to AB(diag)-22, Inspection Mode.></p> <p>4) Read the DTC. (Current malfunction) <Ref. to AB(diag)-21, Read Diagnostic Trouble Code (DTC).></p>	<p>Is DTC B1618 displayed?</p>	<p>Replace the front sub sensor (LH). <Ref. to AB-48, REMOVAL, Front Sub Sensor.></p> <p>Replace the airbag control module if not operating normally even after replacing the sensor. <Ref. to AB-46, REMOVAL, Airbag Control Module.></p>	<p>Go to step 5.</p>

Diagnostic Chart with Trouble Code

AIRBAG SYSTEM (DIAGNOSTICS)

AL:DTC B16F2 FRONT SUB SENSOR RH RECOGNITION ERROR

Diagnosis start condition:

Ignition voltage is 10 V to 16 V.

DTC detecting condition:

Front sub sensor (RH) is misinstalled.

CAUTION:

Before performing diagnosis, refer to “CAUTION” in “General Description”. <Ref. to AB(diag)-4, CAUTION, General Description.>

	Step	Check	Yes	No
1	REPLACE FRONT SUB SENSOR. 1) Turn the ignition switch to OFF, disconnect the battery ground cable, and wait for 60 seconds or more. 2) Replace the front sub sensor (RH) with a genuine sensor. <Ref. to AB-48, REMOVAL, Front Sub Sensor.>	Does the warning light go off?	Finish the diagnosis.	Replace the airbag control module. <Ref. to AB-46, REMOVAL, Airbag Control Module.>

AM:DTC B16F3 FRONT SUB SENSOR LH RECOGNITION ERROR

Diagnosis start condition:

Ignition voltage is 10 V to 16 V.

DTC detecting condition:

Front sub sensor (LH) is misinstalled.

CAUTION:

Before performing diagnosis, refer to “CAUTION” in “General Description”. <Ref. to AB(diag)-4, CAUTION, General Description.>

	Step	Check	Yes	No
1	REPLACE FRONT SUB SENSOR. 1) Turn the ignition switch to OFF, disconnect the battery ground cable, and wait for 60 seconds or more. 2) Replace the front sub sensor (LH) with a genuine sensor. <Ref. to AB-48, REMOVAL, Front Sub Sensor.>	Does the warning light go off?	Finish the diagnosis.	Replace the airbag control module. <Ref. to AB-46, REMOVAL, Airbag Control Module.>

AN:DTC B1620 SIDE AIRBAG SENSOR RH FAILURE

DIAGNOSIS START CONDITION:

Ignition voltage is 10 V to 16 V.

DTC DETECTING CONDITION:

Side airbag sensor (RH) is faulty.

When DTC B1620 is displayed, the circuit within the side airbag sensor (RH) is faulty.

Replace the side airbag sensor (RH). <Ref. to AB-51, Side Airbag Sensor.>

AO:DTC B1622 SIDE AIRBAG SENSOR RH LOST COMMUNICATION

NOTE:

For details on DTC B1622, refer to DTC B1623. <Ref. to AB(diag)-49, DTC B1623 SIDE AIRBAG SENSOR RH INITIALIZATION ERROR, Diagnostic Chart with Trouble Code.>

Diagnostic Chart with Trouble Code

AIRBAG SYSTEM (DIAGNOSTICS)

AP:DTC B1623 SIDE AIRBAG SENSOR RH INITIALIZATION ERROR

Diagnosis start condition:

Ignition voltage is 10 V to 16 V.

DTC detecting condition:

- Open or short circuit in harness of side sensor bus (RH)
- Side airbag sensor (RH) and curtain airbag sensor (RH) are faulty.
- Airbag control module is faulty.

CAUTION:

Before performing diagnosis, refer to “CAUTION” in “General Description”. <Ref. to AB(diag)-4, CAUTION, General Description.>

Wiring diagram:

Airbag system <Ref. to WI-39, WIRING DIAGRAM, Airbag System.>

AB-10265

Step	Check	Yes	No
1 CHECK POOR CONTACT OF CONNECTORS. Check for poor contact of the connectors between the airbag control module and the side airbag sensor (RH).	Is there poor contact?	Replace the airbag rear harness along with body harness.	Go to step 2.

Diagnostic Chart with Trouble Code

AIRBAG SYSTEM (DIAGNOSTICS)

Step	Check	Yes	No
<p>2 CHECK AIRBAG REAR HARNESS (BETWEEN AIRBAG CONTROL MODULE AND SIDE AIRBAG SENSOR RH).</p> <p>1) Turn the ignition switch to OFF, disconnect the battery ground cable, and wait for 60 seconds or more.</p> <p>2) Disconnect the connector (AB26) from seat belt pretensioner (RH).</p> <p>3) Disconnect the connector (AB33) from curtain airbag module (RH).</p> <p>4) Disconnect connector (AB24) of the side airbag module (RH).</p> <p>5) Disconnect the connectors (AB6, AB17, AB18) from airbag control module.</p> <p>6) Connect the connector (1AG) in the test harness AG to the connectors (AB6, AB17, AB18).</p> <p>7) Disconnect the connector (AB28) from side airbag sensor (RH), and connect the connector (2V) in test harness V to connector (AB28).</p> <p>8) Measure the resistance between connector (5AG) in the test harness AG and connector (3V) in the test harness V.</p> <p>Connector & terminal (5AG) No. 14 — (3V) No. 1: (5AG) No. 16 — (3V) No. 2:</p>	<p>Is the resistance less than 10 Ω?</p>	<p>Go to step 3.</p>	<p>Replace the airbag rear harness along with body harness.</p>

<p>4 CHECK AIRBAG CONTROL MODULE.</p> <p>1) Connect all connectors.</p> <p>2) Clear the memory. <Ref. to AB(diag)-23, Clear Memory Mode.></p> <p>3) Perform the Inspection Mode. <Ref. to AB(diag)-22, Inspection Mode.></p> <p>4) Read the DTC. (Current malfunction) <Ref. to AB(diag)-21, Read Diagnostic Trouble Code (DTC).></p>	<p>Is DTC B1623 displayed?</p>	<p>Go to step 5.</p>	<p>Go to step 6.</p>

Diagnostic Chart with Trouble Code

AIRBAG SYSTEM (DIAGNOSTICS)

Step	Check	Yes	No
5 REPLACE SIDE AIRBAG SENSOR (RH) AND CHECK AIRBAG CONTROL MODULE AFTER REPLACEMENT. 1) Turn the ignition switch to OFF, disconnect the battery ground cable, and wait for 60 seconds or more. 2) Replace the side airbag sensor (RH). <Ref. to AB-51, REMOVAL, Side Airbag Sensor.> 3) Connect all connectors. 4) Clear the memory. <Ref. to AB(diag)-23, Clear Memory Mode.> 5) Perform the Inspection Mode. <Ref. to AB(diag)-22, Inspection Mode.> 6) Read the DTC. (Current malfunction) <Ref. to AB(diag)-21, Read Diagnostic Trouble Code (DTC).>	Is the system normal?	Go to step 6.	Replace the curtain airbag sensor RH. <Ref. to AB-54, REMOVAL, Curtain Airbag Sensor.> Replace the airbag control module if not operating normally even after replacing the sensor. <Ref. to AB-46, REMOVAL, Airbag Control Module.>
6 CHECK FOR ANY OTHER DTC ON DISPLAY.	Is any other DTC displayed?	Check DTC using "List of Diagnostic Trouble Code (DTC)". <Ref. to AB(diag)-29, List of Diagnostic Trouble Code (DTC).>	Finish the diagnosis.

AQ:DTC B1625 SIDE AIRBAG SENSOR LH FAILURE

DIAGNOSIS START CONDITION:

Ignition voltage is 10 V to 16 V.

DTC DETECTING CONDITION:

Side airbag sensor (LH) is faulty.

When DTC B1625 is displayed, the circuit within the side airbag sensor (LH) is faulty.

Replace the side airbag sensor (LH). <Ref. to AB-51, Side Airbag Sensor.>

AR:DTC B1627 SIDE AIRBAG SENSOR LH LOST COMMUNICATION

NOTE:

For details on DTC B1627, refer to DTC B1628. <Ref. to AB(diag)-52, DTC B1628 SIDE AIRBAG SENSOR LH INITIALIZATION ERROR, Diagnostic Chart with Trouble Code.>

Diagnostic Chart with Trouble Code

AIRBAG SYSTEM (DIAGNOSTICS)

AS:DTC B1628 SIDE AIRBAG SENSOR LH INITIALIZATION ERROR

Diagnosis start condition:

Ignition voltage is 10 V to 16 V.

DTC detecting condition:

- Open or short circuit in harness of side sensor bus (LH)
- Side airbag sensor (LH) and curtain airbag sensor (LH) are faulty.
- Airbag control module is faulty.

CAUTION:

Before performing diagnosis, refer to “CAUTION” in “General Description”. <Ref. to AB(diag)-4, CAUTION, General Description.>

AIRBAG SYSTEM (DIAGNOSTICS)

Step	Check	Yes	No
5 REPLACE SIDE AIRBAG SENSOR (LH) AND CHECK AIRBAG CONTROL MODULE AFTER REPLACEMENT. 1) Turn the ignition switch to OFF, disconnect the battery ground cable, and wait for 60 seconds or more. 2) Replace the side airbag sensor (LH). <Ref. to AB-51, REMOVAL, Side Airbag Sensor.> 3) Connect all connectors. 4) Clear the memory. <Ref. to AB(diag)-23, Clear Memory Mode.> 5) Perform the Inspection Mode. <Ref. to AB(diag)-22, Inspection Mode.> 6) Read the DTC. (Current malfunction) <Ref. to AB(diag)-21, Read Diagnostic Trouble Code (DTC).>	Is the system normal?	Go to step 6.	Replace the curtain airbag sensor LH. <Ref. to AB-54, REMOVAL, Curtain Airbag Sensor.> Replace the airbag control module if not operating normally even after replacing the sensor. <Ref. to AB-46, REMOVAL, Airbag Control Module.>
6 CHECK FOR ANY OTHER DTC ON DISPLAY.	Is any other DTC displayed?	Check DTC using "List of Diagnostic Trouble Code (DTC)". <Ref. to AB(diag)-29, List of Diagnostic Trouble Code (DTC).>	Finish the diagnosis.

AT:DTC B1630 CURTAIN AIRBAG SENSOR RH FAILURE

DIAGNOSIS START CONDITION:

Ignition voltage is 10 V to 16 V.

DTC DETECTING CONDITION:

Curtain airbag sensor (RH) is faulty.

If DTC B1630 is displayed, the circuit within the curtain airbag sensor (RH) is faulty.

Replace the curtain airbag sensor (RH). <Ref. to AB-54, Curtain Airbag Sensor.>

AU:DTC B1632 CURTAIN AIRBAG SENSOR RH LOST COMMUNICATION

NOTE:

For details on DTC B1632, refer to DTC B1633. <Ref. to AB(diag)-55, DTC B1633 CURTAIN AIRBAG SENSOR RH INITIALIZATION ERROR, Diagnostic Chart with Trouble Code.>

Diagnostic Chart with Trouble Code

AIRBAG SYSTEM (DIAGNOSTICS)

AV:DTC B1633 CURTAIN AIRBAG SENSOR RH INITIALIZATION ERROR

Diagnosis start condition:

Ignition voltage is 10 V to 16 V.

DTC detecting condition:

- Open or short circuit in harness of side sensor bus (RH)
- Side airbag sensor (RH) and curtain airbag sensor (RH) are faulty.
- Airbag control module is faulty.

CAUTION:

Before performing diagnosis, refer to "CAUTION" in "General Description". <Ref. to AB(diag)-4, CAUTION, General Description.>

Wiring diagram:

Airbag system <Ref. to WI-39, WIRING DIAGRAM, Airbag System.>

AB-10265

Step	Check	Yes	No	
1	CHECK DTC. Read the DTC. (Current malfunction) <Ref. to AB(diag)-21, Read Diagnostic Trouble Code (DTC).>	Is DTC B1622 or B1623 displayed?	Perform the diagnosis according to DTC.	Go to step 2.
2	CHECK POOR CONTACT OF CONNECTORS. Check for poor contact of the connectors between the airbag control module and the door sensor (RH).	Is there poor contact?	Replace the airbag rear harness and the door harness.	Go to step 3.

Diagnostic Chart with Trouble Code

AIRBAG SYSTEM (DIAGNOSTICS)

Step	Check	Yes	No
<p>8 CHECK AIRBAG REAR HARNESS (BETWEEN SIDE AIRBAG SENSOR AND CURTAIN AIRBAG SENSOR LH). Measure the resistance between connector (3V) in test harness V and chassis ground, and the resistance between connector (3V) terminals in test harness V.</p> <p>Connector & terminal (3V) No. 2 — Chassis ground: (3V) No. 1 — Chassis ground: (3V) No. 1 — (3V) No. 2:</p>	Is the resistance 1 MΩ or more?	Go to step 9.	Replace the airbag rear harness along with body harness.
<p>9 CHECK AIRBAG REAR HARNESS AND DOOR HARNESS (BETWEEN CURTAIN AIRBAG SENSOR LH AND DOOR SENSOR LH). 1) Disconnect the connector (AB58) from the front door impact sensor (LH), and connect the connector (1H) in the test harness H to connector (AB58). 2) Measure the resistance between connector (3V) in the test harness V and connector (3H) in the test harness H.</p> <p>Connector & terminal (3V) No. 4 — (3H) No. 5: (3V) No. 5 — (3H) No. 6:</p>	Is the resistance less than 10 Ω?	Go to step 10.	Check the door harness, and if any fault is found, replace the harness. If there is no fault, replace the airbag rear harness together with body harness.
<p>10 CHECK AIRBAG REAR HARNESS AND DOOR HARNESS (BETWEEN CURTAIN AIRBAG SENSOR LH AND DOOR SENSOR LH). Measure the resistance between connector (3V) in test harness V and chassis ground, and the resistance between connector (3V) terminals in test harness V.</p> <p>Connector & terminal (3V) No. 4 — Chassis ground: (3V) No. 5 — Chassis ground: (3V) No. 4 — (3V) No. 5:</p>	Is the resistance 1 MΩ or more?	Go to step 11.	Check the door harness, and if any fault is found, replace the harness. If there is no fault, replace the airbag rear harness together with body harness.
<p>11 CHECK AIRBAG CONTROL MODULE. 1) Connect all connectors. 2) Clear the memory. <Ref. to AB(diag)-23, Clear Memory Mode.> 3) Perform the Inspection Mode. <Ref. to AB(diag)-22, Inspection Mode.> 4) Read the DTC. (Current malfunction) <Ref. to AB(diag)-21, Read Diagnostic Trouble Code (DTC).></p>	Is DTC B1647 displayed?	Go to step 12.	Go to step 15.
<p>12 REPLACE SIDE AIRBAG SENSOR (LH) AND CHECK AIRBAG CONTROL MODULE AFTER REPLACEMENT. 1) Turn the ignition switch to OFF, disconnect the battery ground cable, and wait for 60 seconds or more. 2) Replace the side airbag sensor (LH). <Ref. to AB-51, REMOVAL, Side Airbag Sensor.> 3) Connect all connectors. 4) Clear the memory. <Ref. to AB(diag)-23, Clear Memory Mode.> 5) Perform the Inspection Mode. <Ref. to AB(diag)-22, Inspection Mode.> 6) Read the DTC. (Current malfunction) <Ref. to AB(diag)-21, Read Diagnostic Trouble Code (DTC).></p>	Is DTC B1647 displayed?	Go to step 13.	Go to step 15.

Diagnostic Chart with Trouble Code

AIRBAG SYSTEM (DIAGNOSTICS)

Step	Check	Yes	No
13 REPLACE CURTAIN AIRBAG SENSOR (LH) AND CHECK AIRBAG CONTROL MODULE AFTER REPLACEMENT. 1) Turn the ignition switch to OFF, disconnect the battery ground cable, and wait for 60 seconds or more. 2) Replace the curtain airbag sensor (LH). <Ref. to AB-54, REMOVAL, Curtain Airbag Sensor.> 3) Connect all connectors. 4) Clear the memory. <Ref. to AB(diag)-23, Clear Memory Mode.> 5) Perform the Inspection Mode. <Ref. to AB(diag)-22, Inspection Mode.> 6) Read the DTC. (Current malfunction) <Ref. to AB(diag)-21, Read Diagnostic Trouble Code (DTC).>	Is DTC B1647 displayed?	Go to step 14.	Go to step 15.
14 REPLACE FRONT DOOR IMPACT SENSOR (LH) AND CHECK AIRBAG CONTROL MODULE AFTER REPLACEMENT. 1) Turn the ignition switch to OFF, disconnect the battery ground cable, and wait for 60 seconds or more. 2) Replace the front door impact sensor (LH). <Ref. to AB-50, REMOVAL, Front Door Impact Sensor.> 3) Connect all connectors. 4) Clear the memory. <Ref. to AB(diag)-23, Clear Memory Mode.> 5) Perform the Inspection Mode. <Ref. to AB(diag)-22, Inspection Mode.> 6) Read the DTC. (Current malfunction) <Ref. to AB(diag)-21, Read Diagnostic Trouble Code (DTC).>	Is DTC B1647 displayed?	Replace the airbag control module. <Ref. to AB-46, REMOVAL, Airbag Control Module.>	Go to step 15.
15 CHECK FOR ANY OTHER DTC ON DISPLAY.	Is any other DTC displayed?	Perform the diagnosis according to DTC.	Finish the diagnosis.

BF:DTC B1650 OCCUPANT DETECTION SYSTEM MALFUNCTION

NOTE:

Refer to "Occupant Detection System" for details on DTC B1650. <Ref. to OD(diag)-23, DTC B1650 OCCUPANT DETECTION SYSTEM MALFUNCTION, Diagnostic Procedure with Diagnostic Trouble Code (DTC).>

BG:DTC B1655 FRONT BUCKLE SWITCH RH FAILURE

NOTE:

Refer to "Occupant Detection System" for details on DTC B1655. <Ref. to OD(diag)-25, DTC B1655 FRONT BUCKLE SWITCH RH FAILURE, Diagnostic Procedure with Diagnostic Trouble Code (DTC).>

Diagnostic Chart with Trouble Code

AIRBAG SYSTEM (DIAGNOSTICS)

BH:DTC B1660 PASSENGER'S AIRBAG ON INDICATOR FAILURE

Diagnosis start condition:

Ignition voltage is 10 V to 16 V.

DTC detecting condition:

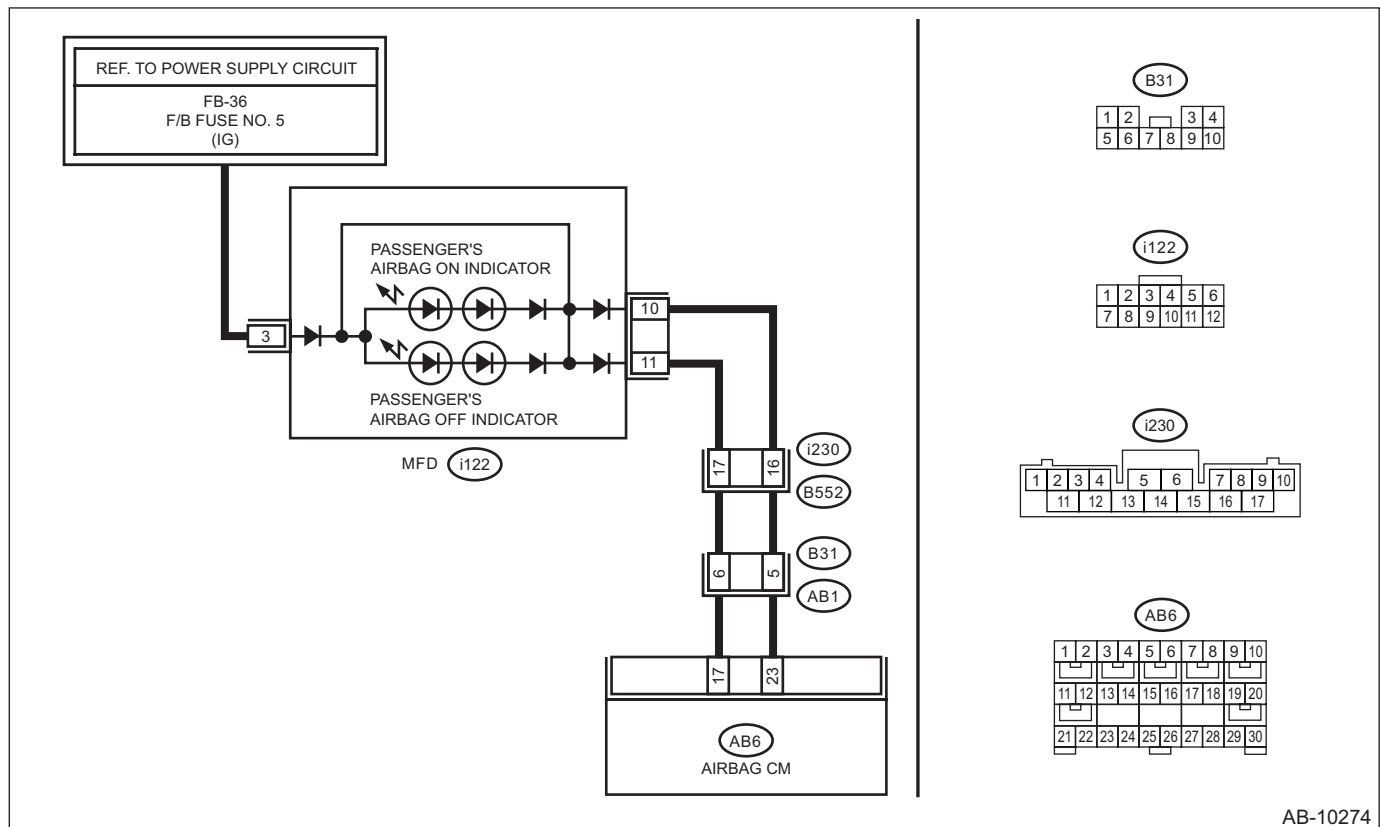

- Passenger's airbag indicator is faulty.
- Airbag control module is faulty.
- Airbag main harness circuit is open or shorted.
- Body harness circuit is open.

CAUTION:

Before performing diagnosis, refer to "CAUTION" in "General Description". <Ref. to AB(diag)-4, CAUTION, General Description.>

Wiring diagram:

Airbag system <Ref. to WI-39, WIRING DIAGRAM, Airbag System.>

AB-10274

Step	Check	Yes	No
1 CHECK FOR POOR CONTACT. 1) Turn the ignition switch to OFF, disconnect the battery ground cable, and wait for 60 seconds or more. 2) Check that the connector between the airbag control module and MFD is securely connected.	Is there poor contact of any connector?	Repair the bulk-head harness. Or replace the airbag main harness along with body harness.	Go to step 2.
2 CHECK AIRBAG MAIN HARNESS. 1) Disconnect the connectors (AB6, AB17, AB18) from airbag control module. 2) Connect the battery ground terminal and turn the ignition switch to ON. NOTE: Neither of ON/OFF illuminates when it is normal.	Does the passenger's airbag indicator illuminate?	Go to step 3.	Go to step 4.

Diagnostic Chart with Trouble Code

AIRBAG SYSTEM (DIAGNOSTICS)

Step	Check	Yes	No
3 CHECK AIRBAG MAIN HARNESS. 1) Turn the ignition switch to OFF, disconnect the battery ground cable, and wait for 60 seconds or more. 2) Remove the MFD and disconnect the connector (i122). 3) Connect the connector (1AG) in the test harness AG to the connectors (AB6, AB17, AB18). 4) Measure the resistance between connector (2AG) in the test harness AG and chassis ground. Connector & terminal (2AG) No. 9 — (2AG) No. 8: (2AG) No. 9 — Chassis ground: (2AG) No. 8 — Chassis ground:	Is the resistance 1 M Ω or more?	Replace the MFD. <Ref. to IDI-25, REMOVAL, Multi-function Display (MFD).>	Repair the bulk-head harness. Or replace the airbag main harness along with body harness.
4 CHECK AIRBAG MAIN HARNESS. 1) Turn the ignition switch to OFF, disconnect the battery ground cable, and wait for 60 seconds or more. 2) Disconnect the connectors (AB6, AB17, AB18) from the airbag control module, and connect the connector (1AH) in the test harness AH. 3) Connect the connector (2AH) in the test harness AH and the connector (1AG) in the test harness AG. 4) Connect the connectors (7AG) and (8AG) in the test harness AG. 5) Connect the battery ground terminal and turn the ignition switch to ON.	Does the passenger's airbag indicator illuminate?	Replace the airbag control module. <Ref. to AB-46, Airbag Control Module.>	Go to step 5.
5 CHECK AIRBAG MAIN HARNESS. 1) Turn the ignition switch to OFF, disconnect the battery ground cable, and wait for 60 seconds or more. 2) Remove the MFD and disconnect the connector (i122). 3) Measure the resistance between connector (2AG) in the test harness AG and connector (i122). Connector & terminal (2AG) No. 9 — (i122) No. 11: (2AG) No. 8 — (i122) No. 10:	Is the resistance less than 10 Ω ?	Go to step 6.	Repair the bulk-head harness. Or replace the airbag main harness along with body harness.
6 CHECK BODY HARNESS. 1) Turn the ignition switch to ON. 2) Measure the voltage between connector (i122) and chassis ground. Connector & terminal (i122) No. 3 (+) — Chassis ground (-):	Is the voltage 10 V or more?	Replace the MFD. <Ref. to IDI-25, REMOVAL, Multi-function Display (MFD).>	Check the power supply circuit of MFD.

Diagnostic Chart with Trouble Code

AIRBAG SYSTEM (DIAGNOSTICS)

BI: DTC B1675 SATELLITE SAFING SENSOR FAILURE

Diagnosis start condition:

Ignition voltage is 10 V to 16 V.

DTC detecting condition:

- Satellite safing sensor is faulty.
- Airbag control module is faulty.

CAUTION:

Before performing diagnosis, refer to “CAUTION” in “General Description”. <Ref. to AB(diag)-4, CAUTION, General Description.>

	Step	Check	Yes	No
1	REPLACE SATELLITE SAFING SENSOR. 1) Turn the ignition switch to OFF, disconnect the battery ground cable, and wait for 60 seconds or more. 2) Replace the satellite safing sensor with a genuine sensor. <Ref. to AB-58, REMOVAL, Satellite Safing Sensor.>	Does the warning light go off?	Finish the diagnosis.	Replace the airbag control module. <Ref. to AB-46, REMOVAL, Airbag Control Module.>

BJ:DTC B1676 LOST COMMUNICATION WITH SATELLITE SAFING SENSOR

NOTE:

Diagnostic Chart with Trouble Code

AIRBAG SYSTEM (DIAGNOSTICS)

BL:DTC B16F8 SATELLITE SAFING SENSOR RECOGNITION ERROR

Diagnosis start condition:

Ignition voltage is 10 V to 16 V.

DTC detecting condition:

- Satellite safing sensor is misinstalled.
- Airbag control module is faulty.

	Step	Check	Yes	No
1	REPLACE SATELLITE SAFING SENSOR. 1) Turn the ignition switch to OFF, disconnect the battery ground cable, and wait for 60 seconds or more. 2) Replace the satellite safing sensor with a genuine sensor. <Ref. to AB-58, REMOVAL, Satellite Safing Sensor.>	Does the warning light go off?	Finish the diagnosis.	Replace the airbag control module. <Ref. to AB-46, REMOVAL, Airbag Control Module.>

BM:DTC B16F9 DOOR SENSOR RH RECOGNITION ERROR

Diagnosis start condition:

Ignition voltage is 10 V to 16 V.

DTC detecting condition:

- Front door impact sensor (RH) is misinstalled.
- Airbag control module is faulty.

CAUTION:

Before performing diagnosis, refer to “CAUTION” in “General Description”. <Ref. to AB(diag)-4, CAUTION, General Description.>

	Step	Check	Yes	No
1	REPLACE FRONT DOOR IMPACT SENSOR (RH). 1) Turn the ignition switch to OFF, disconnect the battery ground cable, and wait for 60 seconds or more. 2) Replace the front door impact sensor (RH) with a genuine sensor. <Ref. to AB-50, REMOVAL, Front Door Impact Sensor.>	Does the warning light go off?	Finish the diagnosis.	Replace the airbag control module. <Ref. to AB-46, REMOVAL, Airbag Control Module.>

BN:DTC B1690 DOOR SENSOR RH FAILURE

DIAGNOSIS START CONDITION:

Ignition voltage is 10 V to 16 V.

DTC DETECTING CONDITION:

Front door impact sensor (RH) is faulty.

If DTC B1690 is displayed, the circuit within the front door impact sensor (RH) is faulty.

Replace the front door impact sensor (RH). <Ref. to AB-50, REMOVAL, Front Door Impact Sensor.>

BO:DTC B1692 LOST COMMUNICATION WITH DOOR SENSOR RH

Diagnostic Chart with Trouble Code

AIRBAG SYSTEM (DIAGNOSTICS)

BU:DTC B161A LOST COMMUNICATION WITH FRONT SATELLITE SENSOR BUS

Diagnosis start condition:

Ignition voltage is 10 V to 16 V.

DTC detecting condition:

- Harness between airbag control module and front sub sensor is open or shorted.
- Front sub sensor is faulty.
- Airbag control module is faulty.

CAUTION:

Before performing diagnosis, refer to “CAUTION” in “General Description”. <Ref. to AB(diag)-4, CAUTION, General Description.>

Wiring diagram:

Airbag system <Ref. to WI-39, WIRING DIAGRAM, Airbag System.>

AB-02797

Step	Check	Yes	No
1	CHECK POOR CONTACT OF CONNECTORS. Check for poor contact of the connectors between the airbag control module and the front sub sensor.	Is there poor contact?	Replace the airbag main harness along with body harness. Go to step 2.

Diagnostic Chart with Trouble Code

AIRBAG SYSTEM (DIAGNOSTICS)

Step	Check	Yes	No
6 CHECK AIRBAG CONTROL MODULE. 1) Connect all connectors. 2) Clear the memory. <Ref. to AB(diag)-23, Clear Memory Mode.> 3) Perform the Inspection Mode. <Ref. to AB(diag)-22, Inspection Mode.> 4) Read the DTC. (Current malfunction) <Ref. to AB(diag)-21, Read Diagnostic Trouble Code (DTC).>	Is DTC B161A displayed?	Replace the front sub sensor (LH) and front sub sensor (RH). <Ref. to AB-48, REMOVAL, Front Sub Sensor.> Replace the airbag control module if not operating normally even after replacing the sensor. <Ref. to AB-46, REMOVAL, Airbag Control Module.>	Go to step 7.
7 CHECK FOR ANY OTHER DTC ON DISPLAY.	Is any other DTC displayed?	Check DTC using "List of Diagnostic Trouble Code". <Ref. to AB(diag)-29, List of Diagnostic Trouble Code (DTC).>	Finish the diagnosis.

Diagnostic Chart with Trouble Code

AIRBAG SYSTEM (DIAGNOSTICS)

BV:DTC B16F1 PASSENGER'S SEAT BELT WARNING FAILURE

Diagnosis start condition:
Ignition voltage is 10 V to 16 V.

DTC detecting condition:

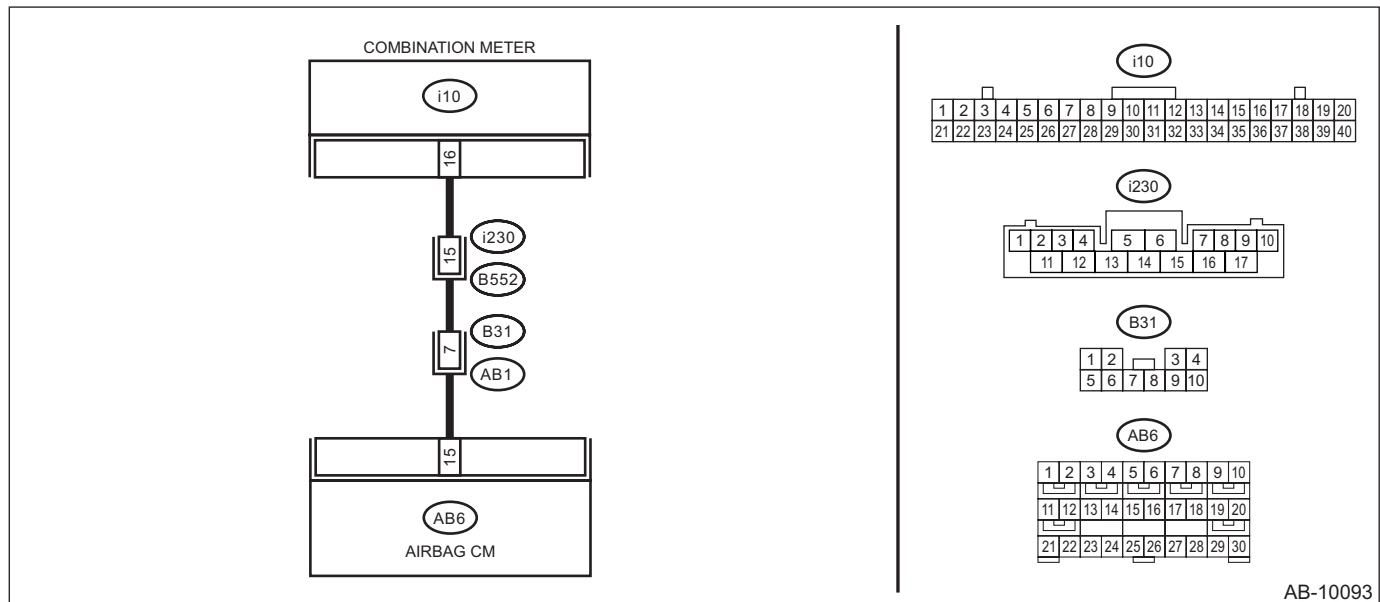

- Airbag control module is faulty.
- Meter is faulty.
- Harness circuits between meter and airbag control module are open, shorted or shorted to ground.

CAUTION:

Before performing diagnosis, refer to "CAUTION" in "General Description". <Ref. to AB(diag)-4, CAUTION, General Description.>

Wiring diagram:

Airbag system <Ref. to WI-39, WIRING DIAGRAM, Airbag System.>

AB-10093

Step	Check	Yes	No
1 CHECK AIRBAG HARNESS. 1) Turn the ignition switch to OFF, disconnect the battery ground cable, and wait for 60 seconds or more. 2) Disconnect the connectors (AB6, AB17, AB18) from airbag control module. 3) Connect the battery ground terminal and turn the ignition switch to ON.	Does the passenger's seat belt warning light blink for 6 seconds and go off?	Go to step 3.	Go to step 2.
2 CHECK AIRBAG HARNESS. 1) Turn the ignition switch to OFF. 2) Connect the connector (1AG) in the test harness AG to the connectors (AB6, AB17, AB18). 3) Measure the resistance between connector (2AG) in the test harness AG and chassis ground. <i>Connector & terminal (2AG) No. 10 — Chassis ground:</i>	Is the resistance 1 MΩ or more?	Replace the meter. <Ref. to IDI-18, REMOVAL, Combination Meter.>	Repair the bulkhead harness and instrument panel harness. Or replace the airbag main harness along with body harness.
3 CHECK AIRBAG HARNESS. 1) Turn the ignition switch to OFF. 2) Connect the connector (1AG) in the test harness AG to the connectors (AB6, AB17, AB18). 3) Connect the connectors (7AG) and (8AG) in the test harness AG. 4) Turn the ignition switch to ON.	Does the passenger's seat belt warning light blink for 6 seconds, then repeatedly light and go off?	Replace the airbag control module. <Ref. to AB-46, Airbag Control Module.>	Go to step 4.

Diagnostic Chart with Trouble Code

AIRBAG SYSTEM (DIAGNOSTICS)

Step	Check	Yes	No
4 CHECK AIRBAG HARNESS. 1) Turn the ignition switch to OFF. 2) Disconnect the connectors (7AG) and (8AG) in the test harness AG in the condition of step 3. 3) Disconnect the connector (i10) from meter. 4) Measure the resistance between connector (2AG) in the test harness AG and connector (i10). <i>Connector & terminal (2AG) No. 10 — (i10) No. 16:</i>	Is the resistance less than 10 Ω?	Replace the meter. <Ref. to IDI-18, REMOVAL, Combination Meter.>	Repair the bulk-head harness and instrument panel harness. Or replace the airbag main harness along with body harness.

AIRBAG SYSTEM (DIAGNOSTICS)

CB:DTC B1800 SHORT IN DRIVER'S AIRBAG

Diagnosis start condition:
Ignition voltage is 10 V to 16 V.

- DTC detecting condition:**
- Airbag main harness circuit is shorted.
 - Airbag module harness (driver's side) circuit is shorted.
 - Roll connector circuit is shorted.
 - Driver's airbag module is faulty.
 - Airbag control module is faulty.

CAUTION:

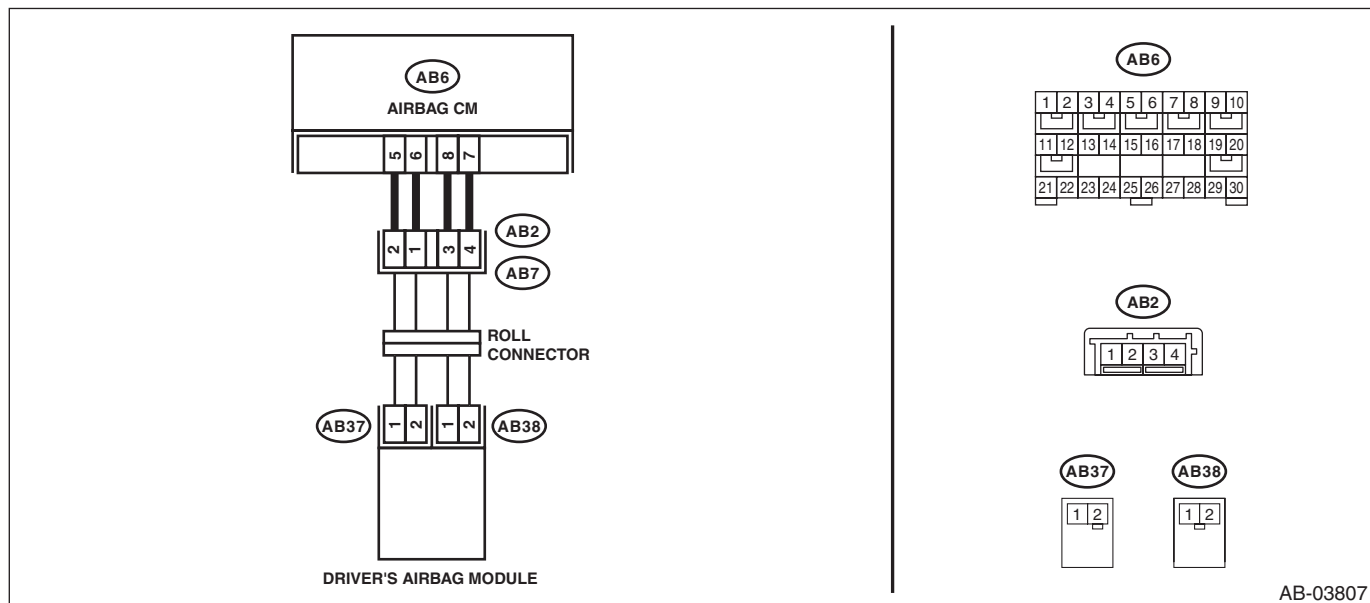

Before performing diagnosis, refer to "CAUTION" in "General Description". <Ref. to AB(diag)-4, CAUTION, General Description.>

NOTE:

Prior to starting work, prepare two AIRBAG RESISTORS (98299PA040).

Wiring diagram:

Airbag system <Ref. to WI-39, WIRING DIAGRAM, Airbag System.>

AB-03807

Step	Check	Yes	No
1 CHECK POOR CONTACT OF CONNECTORS. Check for poor contact of the connectors between the airbag control module and the driver's airbag module.	Is there poor contact?	Replace the airbag harness.	Go to step 2.
2 CHECK DRIVER'S AIRBAG MODULE. 1) Turn the ignition switch to OFF, disconnect the battery ground cable, and wait for 60 seconds or more. 2) Remove the driver's airbag module. 3) Connect the connector (1N) in the test harness N to the connector (AB38). 4) Connect the airbag resistor to the connector (2N) of test harness N. 5) Connect the connector (1Q) in the test harness Q to connector (AB37). 6) Connect the airbag resistor to the connector (2Q) in the test harness Q. 7) Connect the battery ground terminal and turn the ignition switch to ON.	Does the airbag warning light illuminate for six seconds and go off?	Replace the driver's airbag module. <Ref. to AB-32, Driver's Airbag Module.>	Go to step 3.

Diagnostic Chart with Trouble Code

AIRBAG SYSTEM (DIAGNOSTICS)

Step	Check	Yes	No
3 CHECK ROLL CONNECTOR AND AIRBAG MAIN HARNESS (DRIVER'S AIRBAG HARNESS). 1) Turn the ignition switch to OFF, disconnect the battery ground cable, and wait for 60 seconds or more. 2) Remove the console front panel and disconnect the connector (AB9). 3) Disconnect the driver's knee airbag module connector (AB66). 4) Disconnect the airbag resistor from the connector (2N) in test harness N and from the connector (2Q) in test harness Q. 5) Disconnect the connectors (AB6, AB17, AB18) from the airbag control module, and connect the connector (1AG) in the test harness AG. 6) Measure the resistance between connector (2Q) terminals in test harness Q. Connector & terminal (2Q) No. 1 — (2Q) No. 2:	Is the resistance 1 MΩ or more?	Go to step 5.	Go to step 4.
4 CHECK AIRBAG MAIN HARNESS (DRIVER'S AIRBAG HARNESS). 1) Remove the instrument panel lower cover and column cover, and disconnect the connector (AB7) from (AB2). 2) Measure the resistance between connector (3AG) terminals in test harness AG. Connector & terminal (3AG) No. 1 — (3AG) No. 3:	Is the resistance 1 MΩ or more?	Replace the roll connector. <Ref. to AB-59, Roll Connector.>	Replace the airbag main harness along with body harness.
5 CHECK AIRBAG CONTROL MODULE. 1) Connect all connectors. 2) Clear the memory. <Ref. to AB(diag)-23, Clear Memory Mode.> 3) Perform the Inspection Mode. <Ref. to AB(diag)-22, Inspection Mode.> 4) Read the DTC. (Current malfunction) <Ref. to AB(diag)-21, Read Diagnostic Trouble Code (DTC).>	Is DTC B1800 displayed?	Replace the airbag control module. <Ref. to AB-46, Airbag Control Module.>	Go to step 6.
6 CHECK FOR ANY OTHER DTC ON DISPLAY.	Is any other DTC displayed?	Check DTC using "List of Diagnostic Trouble Code (DTC)". <Ref. to AB(diag)-29, List of Diagnostic Trouble Code (DTC).>	Finish the diagnosis.

Diagnostic Chart with Trouble Code

AIRBAG SYSTEM (DIAGNOSTICS)

CC:DTC B1801 OPEN IN DRIVER'S AIRBAG

Diagnosis start condition:

Ignition voltage is 10 V to 16 V.

DTC detecting condition:

- Airbag main harness circuit is open.
- Airbag module harness (driver's side) circuit is open.
- Roll connector is open.
- Driver's airbag module is faulty.
- Airbag control module is faulty.

CAUTION:

Before performing diagnosis, refer to "CAUTION" in "General Description". <Ref. to AB(diag)-4, CAUTION, General Description.>

NOTE:

Prior to starting work, prepare two AIRBAG RESISTORS (98299PA040).

Wiring diagram:

Airbag system <Ref. to WI-39, WIRING DIAGRAM, Airbag System.>

Step	Check	Yes	No
1 CHECK POOR CONTACT OF CONNECTORS. Check for poor contact of the connectors between the airbag control module and the driver's airbag module.	Is there poor contact?	Replace the airbag harness.	Go to step 2.
2 CHECK DRIVER'S AIRBAG MODULE. 1) Turn the ignition switch to OFF, disconnect the battery ground cable, and wait for 60 seconds or more. 2) Remove the driver's airbag module. 3) Connect the connector (1N) in the test harness N to the connector (AB38). 4) Connect the airbag resistor to the connector (2N) of test harness N. 5) Connect the connector (1Q) in the test harness Q to connector (AB37). 6) Connect the airbag resistor to the connector (2Q) in the test harness Q. 7) Connect the battery ground terminal and turn the ignition switch to ON.	Does the airbag warning light illuminate for six seconds and go off?	Replace the driver's airbag module. <Ref. to AB-32, Driver's Airbag Module.>	Go to step 3.

Prior to starting work, prepare two AIRBAG RESISTORS (98299PA040).

Wiring diagram:

Airbag system <Ref. to WI-39, WIRING DIAGRAM, Airbag System.>

	Step	Check	Yes	No
1	<p>CHECK POOR CONTACT OF CONNECTORS. Check for poor contact of the connectors between the airbag control module and the driver's airbag module.</p>	Is there poor contact?	Replace the airbag harness.	Go to step 2.

Diagnostic Chart with Trouble Code

AIRBAG SYSTEM (DIAGNOSTICS)

Step	Check	Yes	No
<p>2 CHECK DRIVER'S AIRBAG MODULE.</p> <ol style="list-style-type: none"> 1) Turn the ignition switch to OFF, disconnect the battery ground cable, and wait for 60 seconds or more. 2) Remove the driver's airbag module. 3) Connect the connector (1N) in the test harness N to the connector (AB38). 4) Connect the airbag resistor to the connector (2N) of test harness N. 5) Connect the connector (1Q) in the test harness Q to connector (AB37). 6) Connect the airbag resistor to the connector (2Q) in the test harness Q. 7) Connect the battery ground terminal and turn the ignition switch to ON. 	Does the airbag warning light illuminate for six seconds and go off?	Replace the driver's airbag module. <Ref. to AB-32, Driver's Airbag Module.>	Go to step 3.
<p>3 CHECK ROLL CONNECTOR.</p> <ol style="list-style-type: none"> 1) Turn the ignition switch to OFF, disconnect the battery ground cable, and wait for 60 seconds or more. 2) Remove the instrument panel lower cover and column cover, and disconnect the connector (AB7) from (AB2). 3) Disconnect the connector (AB66) from the driver's knee airbag module. 4) Disconnect the airbag resistor from the connector (2N) in test harness N and from the connector (2Q) in test harness Q. 5) Measure the voltage between connector (2N) in the test harness N and chassis ground. <p>Connector & terminal (2N) No. 1 (+) — Chassis ground (-): (2N) No. 2 (+) — Chassis ground (-):</p>	Is the voltage less than 1 V?	Go to step 4.	Replace the roll connector. <Ref. to AB-59, Roll Connector.>
<p>4 CHECK AIRBAG MAIN HARNESS (DRIVER'S AIRBAG HARNESS).</p> <ol style="list-style-type: none"> 1) Disconnect the test harness N from connector (AB38). 2) Disconnect the test harness Q from connector (AB37). 3) Remove the console front panel and disconnect the connector (AB9). 4) Disconnect the connectors (AB6, AB17, AB18) from the airbag control module, and connect the connector (1AG) in the test harness AG. 5) Measure the voltage between connector (3AG) in the test harness AG and chassis ground. <p>Connector & terminal (3AG) No. 2 (+) — Chassis ground (-): (3AG) No. 4 (+) — Chassis ground (-):</p>	Is the voltage less than 1 V?	Go to step 5.	Replace the airbag main harness along with body harness.
<p>5 CHECK AIRBAG CONTROL MODULE.</p> <ol style="list-style-type: none"> 1) Connect all connectors. 2) Clear the memory. <Ref. to AB(diag)-23, Clear Memory Mode.> 3) Perform the Inspection Mode. <Ref. to AB(diag)-22, Inspection Mode.> 4) Read the DTC. (Current malfunction) <Ref. to AB(diag)-21, Read Diagnostic Trouble Code (DTC).> 	Is DTC B1813 displayed?	Replace the airbag control module. <Ref. to AB-46, Airbag Control Module.>	Go to step 6.

Diagnostic Chart with Trouble Code

AIRBAG SYSTEM (DIAGNOSTICS)

Step	Check	Yes	No
6 CHECK FOR ANY OTHER DTC ON DISPLAY.	Is any other DTC displayed?	Check DTC using "List of Diagnostic Trouble Code (DTC)". <Ref. to AB(diag)-29, List of Diagnostic Trouble Code (DTC).>	Finish the diagnosis.

Diagnostic Chart with Trouble Code

AIRBAG SYSTEM (DIAGNOSTICS)

CN:DTC B1815 SHORT IN PASSENGER'S AIRBAG DUAL STAGE - 2ND STEP

Diagnosis start condition:

Ignition voltage is 10 V to 16 V.

DTC detecting condition:

- Airbag main harness circuit is shorted.
- Airbag module harness circuit (passenger's side) is shorted.
- Passenger's airbag module is faulty.
- Airbag control module is faulty.

CAUTION:

Before performing diagnosis, refer to "CAUTION" in "General Description". <Ref. to AB(diag)-4, CAUTION, General Description.>

Wiring diagram:

Airbag system <Ref. to WI-39, WIRING DIAGRAM, Airbag System.>

	Step	Check	Yes	No
1	<p>CHECK POOR CONTACT OF CONNECTORS. Check for poor contact of the connectors between the airbag control module and the passenger's airbag module.</p>	Is there poor contact?	Replace the airbag harness.	Go to step 2.

Diagnostic Chart with Trouble Code
