

**GENERAL INFORMATION
SECTION**

This service manual has been prepared to provide SUBARU service personnel with the necessary information and data for the correct maintenance and repair of SUBARU vehicles.

This manual includes the procedures for maintenance, disassembling, reassembling, inspection and adjustment of components and diagnostics for guidance of experienced mechanics.

Please peruse and utilize this manual fully to ensure complete repair work for satisfying our customers by keeping their vehicle in optimum condition. When replacement of parts during repair work is needed, be sure to use SUBARU genuine parts.

All information, illustration and specifications contained in this manual are based on the latest product information available at the time of publication approval.

1. Foreword

A: FOREWORD

These manuals are used when performing maintenance, repair or diagnosis of Subaru CROSSTREK™.

Applicable model:

2017MY GP*****

The manuals contain the latest information at the time of publication. Changes in the specifications, methods, etc. may be made without notice.

HOW TO USE THIS MANUAL

How to Use This Manual

HOW TO USE THIS MANUAL

1. How to Use This Manual

A: HOW TO USE THIS MANUAL

1. STRUCTURE

Each section consists of SCT that are broken down into SC that are divided into sections for each component. The specification, maintenance and other information for the components are included, and the diagnostic information has also been added where necessary.

2. CONTENTS

The first page has an index with tabs.

3. COMPONENT

Illustrations are provided for each component. The information necessary for repair work (tightening torque, grease up points, etc.) is described on these illustrations. Information is described using symbol.

To order parts, refer to parts catalogue.

Example:

HU-00017

How to Use This Manual

HOW TO USE THIS MANUAL

4. DEFINITIONS OF “NOTE”, “CAUTION”, AND “WARNING”

- **NOTE:**

Describes additional information to make works easier.

- **CAUTION:**

Describes prohibited matters to prevent vehicle or parts damage, or matters that requires special attention during work.

- **WARNING:**

Describes matters that may cause serious damage to the operator or other person, or that may cause damage or accident.

5. SPECIFICATIONS

If necessary, specifications are also included.

6. INSPECTION

Inspections to be carried out before and after maintenance are included.

7. MAINTENANCE

- Maintenance instructions for serviceable parts describe work area and detailed step with illustration. It also describes the use of special tool, tightening torque, caution for each procedure.
- If many serviceable parts are included in one service procedure, appropriate reference is provided for each part.

Example:

15.Main Shaft ← (A)

A: REMOVAL ← (B)

1) Remove the manual transmission assembly from vehicle. <Ref. to MT-33, REMOVAL, Manual Transmission Assembly.> ← (C)

11) Tighten the lock nuts to the specified torque using ST1 and ST2.

NOTE: ← (D)

Secure the lock nuts in two places after tightening.

ST1 498937000 TRANSMISSION HOLDER

ST2 499987003 SOCKET WRENCH (35) ← (E) (F)

Tightening torque:

118 N·m (12.0 kgf-m, 86.8 ft-lb) ← (G)

HU-00020

(A) Component

(B) Process

(C) Reference

(D) Cautions

(E) Tool number of special tool

(F) Name of special tool

(G) Tightening torque

(H) Illustration

8. DIAGNOSIS

Step-by-step process is employed for easier diagnosis.

How to Use This Manual

HOW TO USE THIS MANUAL

9. SI UNITS

Measurements in these manuals are according to the SI units. Metric and yard/pound measurements are also included.

Example:

Tightening torque:

44 N·m (4.5 kgf·m, 33 ft·lb)

List of SI unit

Item	SI units	Conventional unit	Remarks
Force	N (Newton)	kgf	1 kgf = 9.807 N
Mass (weight)	kg, g	kg, g	
Capacity	L, mL or cm ³	L or cc	1 cc = 1 cm ³ = 1 mL
Torque	N·m	kgf·m, kgf·cm	1 kgf·m = 9.807 N·m
Rotating speed	r/min	rpm	
Pressure	kPa (Kilopascal)	kgf/cm ²	1 kgf/cm ² = 98.07 kPa
		mmHg	1 mmHg = 0.1333 kPa
Power	W	PS	1 PS = 0.7355 kW
Calorie	W·h	cal	1 kcal = 1.163 W·h
Fuel consumption rate	g/kW·h	g/PS·h	1 g/PS·h = 1.3596 g/kW·h

The figure used in these manuals are described in the SI units and conventional units are described in ().

10. EXPLANATION OF TERMINOLOGY

List

2ndr	Secondary
AAI	Air Assist Injection
AAR	Angular Adjusted Roller
A/B	Airbag
ABS	Anti-lock Brake System
A/C	Air Conditioner
AC	Angular Contact
ACC	Accessory
A/F	Air Fuel Ratio
ALT	Generator
API	American Petroleum Institute
APS	Accessory Power Supply Socket
ASSY	Assembly
AT	Automatic Transmission
ATF	Automatic Transmission Fluid
AUX	Auxiliary Storage Unit (External storage)
AVCS	Active Valve Control System
AWD	All Wheel Drive
BATT	Battery
BCM	Brake Control Module
BECM	Battery Energy Control Module
BJ	Bell Joint
BRKT	Bracket
BSD/RCTA	Blind Spot Detection / Rear Cross Traffic Alert
CAN	Controller Area Network
CCA	Cold Cranking Ampere
CD	Compact Disc
CD-R/RW	CD Recordable/Rewritable
COMPL	Complete
CPC	Canister Purge Control Solenoid Valve
CPU	Central Processing Unit
CTR	Center
CM	Control Module
CVT	Continuously Variable Transmission
CVTF	Continuously Variable Transmission Fluid
CWP	Cold Weather Package
DCCD	Driver's Control Center Differential
DMCM	Drive Motor Control Module
DOHC	Double Overhead Camshaft
DOJ	Double Offset Joint
D/R	Dual-range
DTC	Diagnosis Trouble Code
DU	Drive Unit
DVD	Digital Versatile Disc or Digital Video Disc
EBD	Electronic Brake Distribution
EBJ	High-Efficiency Compact Ball Fixed Joint
ECM	Engine Control Module
ECV	Exhaust Pressure Control Valve

How to Use This Manual

HOW TO USE THIS MANUAL

EDJ	High-Efficiency Compact Double Offset Joint
E/G	Engine
EGI	Electronic Gasoline Injection
EGR	Exhaust Gas Recirculation
ELR	Emergency Locking Retractor
EPB	Electronic Parking Brake
ETC	Electronic Throttle Control
EX	Exhaust
F/B	Fuse & Joint Box
FL	Fusible Link
Ft	Front
FWD	Front Wheel Drive
GPS	Global Positioning System
HBA	High Beam Assist
HI	High
HID	High-Intensity Discharge
H/K	Harman/Kardon Audio
HPCM	Hybrid Powertrain Control Module
H/L	Headlight
H/U	Hydraulic Unit
HVAC	Heater, Ventilator and Air Conditioner
I/F	Interface
IG	Ignition
ILSAC	International Lubricants Standardization and Approval Committee
IN	Intake
INT	Intermittent
I/O	Input/Output
IR	Infrared Ray
ISC	Idle Speed Control
ISG	Integrated Starter Generator
K/A	Keyless Access
LAN	Local Area Network
LCD	Liquid Crystal Display
LED	Light Emitting Diode
LH	LH (Left Hand)
LHD	Left Hand Drive
Lo	Low
LSD	Limited Slip Differential
LWR	Lower
M/B	Main Fuse & Relay Box
MD	Mini Disc
MID	Multi Information Display
MFI	Multi-Point Fuel Injection
MP-T	Multi-Plate Transfer
M/R	Moon Roof
MT	Manual Transmission
NA	Natural Aspiration
NC	Normal Close (Relay)
NO	Normal Open (Relay)
OBD	On-Board Diagnosis
OP	Option Parts

Wheelbase	mm (in)	2,635 (103.7)	
Tread	Front	mm (in)	1,525 (60)
	Rear	mm (in)	1,525 (60)
Minimum road clearance	mm (in)	220 (8.7)	

*1: Curb weight

*2: With sunroof

B: ENGINE

Model		2.0 L DOHC non-turbo	
Engine type		Horizontally opposed, liquid cooled, 4-cylinder, 4-stroke gasoline engine	
Valve arrangement		DOHC	
Bore × stroke	mm (in)	84.0 × 90.0 (3.31 × 3.54)	
Displacement	cm ³ (cu in)	1,995 (121.7)	
Compression ratio		10.5	
Ignition order		1 — 3 — 2 — 4	
Idle speed at parking or neutral position	r/min	650±100	
Maximum output	kW (HP)/[r/min]	110 (147)/6,200	
Maximum torque	N·m (kgf-m, ft-lb)/[r/min]	196 (20.0, 145)/4,200	

C: ELECTRICAL

Model		2.0 L DOHC non-turbo	
Ignition timing (at idling)		BTDC MT: 12°±10° CVT: 16°±10°	
Spark plug	Type and manufacturer	NGK: SILZKAR7B11	
Generator		12 V — 130 A	
Battery	Type	55D23L	75D23L
	Nominal capacity	5 HR: 40 Ah [25°C (77°F)]	5 HR: 53 Ah [25°C (77°F)]
	Nominal voltage	12 V	
	CCA	390 A	470 A

D: TRANSMISSION**1. MT**

Model		2.0 L DOHC non-turbo	
Transmission type		5MT	
Clutch type		DSPD	
Gear ratio	1st	3.545	
	2nd	1.888	
	3rd	1.296	
	4th	0.972	
	5th	0.780	
	Rev.	3.333	
Reduction gear (front)	Type of gear	Hypoid	
	Gear ratio	4.444	
Transfer reduction	Type of gear	Helical	
	Gear ratio	1.000	
Reduction gear (rear)	Final reduction	Type of gear	Hypoid
		Gear ratio	4.444

5MT: 5-forward speeds and 1-reverse with synchromesh

DSPD: Dry Single Plate Diaphragm

2. CVT

Model		2.0 L DOHC non-turbo	
Transmission type		CVT	
Clutch type		TCC	
Gear ratio	Forward	3.581 — 0.570	
	Rev.	3.667	
Reduction gear (front)	Final reduction	Type of gear	Hypoid
		Gear ratio	3.700
Transfer reduction ratio		1.000	
Reduction gear (rear)		Type of gear	Hypoid
		Gear ratio	3.700

CVT: Forward continuously variable speed change, 1-reverse

TCC: Torque Converter Clutch

E: STEERING

Model		2.0 L DOHC non-turbo	
Type	Rack and pinion		
	Electric power steering		
Turns, lock to lock		2.8	
Minimum turning radius	m (ft)	5.3 (17.39)	

F: SUSPENSION

Model		2.0 L DOHC non-turbo	
Front		Macpherson strut type suspension	
Rear		Double-wishbone type suspension

PRECAUTION

PC

	Page
1. Precaution	2

1. Precaution

A: CAUTION

Please clearly understand and adhere to the following general precautions for environmental protection and to avoid minor or serious injury to the person doing the work or people in the area.

1. VEHICLE DYNAMICS CONTROL (VDC)

Handle the VDC as a total system. Do not disassemble or attempt to repair individual parts. Follow the directions in this manual when performing maintenance on the VDCCM&H/U. When parts other than those specified are disassembled, it is possible that the VDC system will not operate when needed or cause it to operate incorrectly and result in injury.

2. BRAKE FLUID

If brake fluid gets in your eyes or on your skin, do the following:

- Wash eyes and seek immediate medical attention.
- Wash your skin with soap and then rinse thoroughly with water.

3. RADIATOR FAN

The radiator fan may rotate without warning, even when the engine is not ON. Do not place your hand, cloth, tools or other items near the fan at any time.

4. ACTIVE GRILLE SHUTTER

The active grille shutter may open and close without warning, even when the engine is not ON. Do not place your hand, cloth, tools or other items nearby at any time.

To prevent unexpected deployment, turn the ignition switch to OFF and disconnect the ground cable from battery, then wait at least 30 seconds before starting work. Also, wait at least 30 seconds before starting work after connecting the battery.

5. ROAD TEST

Always conduct road tests in accordance with traffic rules and regulations to avoid bodily injury and interrupting traffic.

6. AIRBAG

To prevent bodily injury from unexpected deployment of airbags and unnecessary maintenance, follow the instructions in this manual when performing maintenance on the airbag components and nearby, around front of the vehicle (radiator panel, front wheel apron, front side frame, front bumper, front hood panel, front fender panel), around side of the vehicle (front door panel, rear door panel, center pillar, rear fender panel, side sill, rear wheel apron), around rear of the vehicle (the rear seat cushion, rear floor pan, rear sub frame assembly) and the airbag wiring harnesses and nearby.

To prevent unexpected deployment, turn the ignition switch to OFF and disconnect the ground cable from battery, then wait at least 60 seconds to discharge electricity before starting work. Removing or installing the components or the connectors with the ignition switch ON will electrically impair them.

7. AIRBAG AND SEAT BELT PRETENSIONER DISPOSAL

To prevent bodily injury from unexpected airbag deployment, do not dispose the airbag modules or seat belt pretensioner in the same way as other waste. Follow all government regulations concerning disposal of refuse.

8. AIRBAG MODULE

Adhere to the following when handling and storing the airbag module to prevent bodily injury from unexpected deployment:

- Do not hold the harnesses or connectors to carry the module.
- Do not face the bag in the direction that it opens towards yourself or other people.
- Do not face the bag in the direction that it opens towards the floor or walls.

9. AIRBAG SPECIAL TOOL

To prevent unexpected deployment, always use special tools for the area where the operation with special tools are required.

10.WINDOW

Always wear protective goggles when working around any glass to prevent glass fragments from damaging your eyes.

11.WINDOW ADHESIVE

Always use the recommended or equivalent adhesive when attaching glass to prevent it from falling off, resulting in accidents and injury.

12.OIL

When handling oil, adhere to the following to prevent unexpected accident.

- Prepare a container and cloth to prevent scattering of oil when performing work where oil can be spilled. If the oil spills, wipe it off immediately to prevent from penetrating into floor or flowing out for environmental protection.
- Follow all government and local regulations concerning disposal of refuse when disposing.

13.FUEL

When handling and storing fuel, adhere to the following to prevent from unexpected accident.

- Fuel is flammable. Prevent exposure to flames or sparks or any source of ignition.
- Prepare a container and cloth to prevent scattering of fuels when performing work where fuels can be spilled. If the fuel spills, wipe it off immediately to prevent from penetrating into floor or flowing out for environmental protection.
- Follow all government and local regulations concerning disposal of refuse when disposing.

14.ENGINE COOLANT

When handling engine coolant, adhere to the following to prevent from unexpected accident.

- Never remove the radiator cap since engine coolant may blow out when the engine is hot.
- Prepare a container and cloth to prevent scattering of engine coolant when performing work where engine coolant can be spilled. If the coolant spills, wipe it off immediately to prevent from penetrating into floor or flowing out for environmental protection.
- Follow all government and local regulations concerning disposal of refuse when disposing.

15.AIR CONDITIONER REFRIGERANT

In order to prevent from global warming, avoid releasing air conditioner refrigerant into the atmosphere. Using a refrigerant recovery system, discharge and reuse it.

Precaution

PRECAUTION

16.REMOVAL AND INSTALLATION OPERATION OF HOSES, ETC.

1. Before the removal and installation operation of hoses, etc.

- If you keep using the damaged or deformed hose, it results bleeds or leakage of the fat adheres or disconnection of the hose. Be careful not to spill fat adheres on exhaust pipes, etc. during maintenance to prevent emitting smoke or causing fires.
- Perform the operation with the hose removed. If the operation is performed without removing the hose, it may damage inner surface of the hose.

2. Removal and installation operation of hoses, etc. during the inspection

- **Follow the instructions below when removing hose.**
 - When removing the hose, do not use a pointed hose remover (hose plucker). Inner portion of the hose can be damaged.

(1) Hose remover

- When removing the hose using pliers, be sure to cover the hose with cloth and rotate the hose slightly to extract straight.

• If you keep using the hose, perform the inspection below and replace the hose with a new part if faulty.

- Replace the hose with a new part if it rides over the stay or the top of spool.

(1) Hose rides over the stay

(1) Hose rides over the top of spool

- Check if the surface and the inner surface of the hose are damaged, cracked, bend, hardened, softened, swelled, peeled or deformed due to the adherence or the entry of the foreign matter by bending the hose. Replace with the new part if faulty.

• Follow the instructions below during installation.

- Check carefully for assembling position.
- Never use lubricants.
- Insert the hose to the specified position (stopper or spool) securely. (The hose should stop at the position between the spool top and root.)

- (1) Push against the spool. (Insert the hose and prevent it from becoming wrinkled.)
- (2) Fully tighten the hose clamp.

- (A) OK position (bottom of spool)
- (B) OK position (top of spool)

- Check if the position, direction and hose layout of the hose clamp are correct. (Check if the position, direction, length and the gap around are correct, or if it is different from the condition before the work)
- After the installation, check that the hose is installed securely and there is no leakage. (Check if it is fixed securely with the clamp)

Precaution

PRECAUTION

• **For hose clips and hose clamps, perform the inspection below and replace them with a new part if faulty.**

- Check for deformation, rust, damage or foreign matters.
- For hose clip, check if it works and has clamping force.
- For hose clamp, check if it can tighten screw, not ovalized or the screw is not damaged.

• **For hose pipes, perform the inspection below and replace with a new part if faulty.**

Check if the pipe is not damaged, rusted, peeled (peeled plates included), covered with foreign matter, bent, compressed or cracked.

• **For the parts below, replaces with a new part when the hose is removed or the installation position is changed.**

CVTF oil cooler hose, fuel hose (delivery) (except for those with quick connector)

17.HANDLING PRECAUTIONS FOR SILICON-CONTAINING SPRAY

When a silicon-containing lubricant is used, rust inhibitor or glazing agent adheres to the electrical contact of the relay or switch, which may produce silica dioxide (SiO_2). This may cause poor connection.

- Never spray directly to the electrical equipment.
- When using the spray close to the electrical equipment, always put the cover on the component. Special care must be exercised especially when using the spray to the locations shown in the figure below and their surrounding areas.

(1) Audio, heater control switch

(3) Combination switch, steering switch, paddle shift switch

(5) Power window switch

(2) Shift/select lever switch, parking switch

(4) Stop light switch, brake light switch, clutch switch, clutch start switch

• If the residual silicon remains in the vicinity of the electrical equipment after the spray has been used, the vaporized silicon stands around the electrical equipment and it may adhere to electrical contact. After using the spray, be sure to wipe the silicon off with a cloth.

• Even when using the spray to the place away from the electrical equipment, the droplet of the spray may be splashed to the periphery. Use as small amount of spray as possible, and take care not to splash the silicon to the periphery.

NOTE:

The “silicon” used in this section refers to “silicone”, that is, silicon polymer.

18.CHECK WINDSHIELD GLASS INCLUDING PROHIBITED AREA FOR MODEL WITH Eye-Sight

1. Prohibited area for sticker attachment and inspection

Do not attach stickers in the prohibited area on the windshield as follows. In addition, there must be no oil film, dirt or scratch in the prohibited area that obstructs the visibility of each stereo camera. Clean the windshield glass if oil film, dirt or fogging is found on the glass, and repair or replace if the windshield is scratched. The vehicle inspection label that is required to be attached on the windshield should be attached on the specified position. If stickers or windshield-related issues adversely affect the visibility of the camera, the function of EyeSight may not work properly.

NOTE:

- Clean the windshield glass if dirt or fogging is found on the glass. Repair or replace the glass if damage is found.
 - Be careful not to leave scratch or anything else on the lens.
 - Do not attach any foreign matter such as oil and fluid.
 - When cleaning the inner side of the windshield glass, be careful not to touch the lens of the stereo camera. Take care so that the glass cleaner is not applied to the lens. Before starting the operation, cover the camera cover opening with dust-free paper such as copy paper to avoid interference with the camera lens, and attach the paper using tape while being careful not to let the adhesive surface contact the glass surface. Be sure to remove the paper after the procedure. If the lens is touched, replace the stereo camera.
 - When replacing the windshield glass, be sure to replace the part for the EyeSight.
 - If the glass is removed or replaced, always perform the stereo camera adjustment and inspection.
- The illustration below shows from the passenger compartment.

PC-10006

(A) 360 mm (14.2 in)
 (B) Prohibited area

(C) Ceramic line

(D) Vehicle inspection label

Precaution

PRECAUTION

2. Prohibited area of dashboard and inspection

There must be no oil film, dirt, scratch or fogging that obstructs the forward visibility of the stereo camera. Do not stick or attach the aftermarket parts on the prohibited area (E) shown as follows. If abnormality of the function occurs due to light reflection or glass reflection, even though placed outside the prohibited area, change the attachment position or installation position. Attaching a sticker or antenna or installing a wide type mirror will affect the visibility of the stereo camera, causing the function not to operate correctly. In addition, placing a navigation system, ETC device or an object on the dashboard will cause reflection on the windshield glass, affecting the recognition of the stereo camera, thus causing the function not to operate correctly.

- Front view

(A) 360 mm (14.2 in)
 (B) 70 mm (2.8 in)

(C) Ceramic area
 (D) Prohibited area

(E) 230 mm (9.1 in)

- Side view

(A) 70 mm (2.8 in)
 (B) Windshield glass

(C) Stereo camera cover
 (D) Dashboard

(E) Prohibited area
 (F) External monitor etc.

3. Prohibited area for repair and inspection

The illustration below shows from the passenger compartment.

If the damage is found in the glass repair prohibited area, always replace the glass. Damage in the prohibited area can affect the recognition of the stereo camera even if it is repaired, and thereby EyeSight function may not operate properly.

ADA00718

PRECAUTION

NOTE

NT

	Page
1. Note	2

1. Note

A: BASIC REPAIR HINT

This section describes basic points that the service operator must understand before performing the service operation.

1. APPEARANCE

- Always wear clean work clothing.
- Wear a cap and protective shoes.

2. PROTECTION OF VEHICLE UNDER MAINTENANCE AND PREPARATION OF TOOLS/EQUIPMENT

- Before work, cover the vehicle body. (Ex. grille cover, fender cover, seat cover and floor mat cover)
- Before performing the service operation, prepare tools, equipment, container box, grease and cloth etc.

- (1) Fender cover
(2) Tools/equipment case

- (3) Tray
(4) Oil

- (5) Container box
(6) Cloth

3. SAFETY

- Before work, set the wheel stoppers to secure the vehicle.
- When performing work by multiple workers, call to each other to make sure that service operation is performed safely.
- Ventilate the room when starting the engine.
- When performing the service operation of high-temperature parts like muffler, or rotating parts like fan and other movable parts, be careful not to get burned or injured.
- For the jack-up and lift up, set the tool to the proper location to support the vehicle correctly. And use the safety device properly when lifting up.

4. SERVICE OPERATION

- By identifying the vehicle problems thoroughly before work, service operation will be performed effectively.
- Before removing parts, confirm the installation condition or the damage of the parts.
- To reinstall parts properly, leave a note of the condition before work as necessary.
- For a part which needs positioning, take appropriate action such as putting alignment marks.
- For a removed part, clean it as necessary and check for damage and defect before installation. If the part is damaged or defective, replace it with a new part.
- Removing or installing the components or the connectors with the ignition switch ON will electrically impair them.

5. REMOVED PART

- A removed part must be organized to avoid mixing up with similar parts. When same parts are used in multiple locations, such as pistons in engine, manage the parts by using labels with cylinder No. so that the parts are not installed to the wrong location.
- Always replace nonreusable parts such as gasket and O-ring with new parts.
- After work, have a customer confirm the replaced part.

6. WHEN REMOVING BATTERY

When removing battery, power supply is cut off and the information stored in the computer memory is volatilized. Therefore, setting information of some devices is initialized to the factory default. The device and functions initialized by removing battery are as follows.

No.	Item	Job contents when connecting battery
1	Clock (MFD) (settings that the customer set)	Set the clock to the current time.
2	MFD (high grade type)	Set to the contents checked before disconnecting the battery.
3	Audio (settings that the customer set)	Set to the contents checked before disconnecting the battery.
4	Navigation system (settings that the customer set)	<ul style="list-style-type: none"> • Time setting is not necessary because the time information is received via GPS. • Set the sound and other settings (items that were set in the selection) to the contents checked before disconnecting the battery.
5	Temperature setting of fully automatic air conditioner (settings that the customer set)	Set to the contents checked before disconnecting the battery.
6	Power window system	Initialize automatic full open/close of driver's window (power window system). For the initialization procedure, refer to "GW" section. <Ref. to GW-9, OPERATION, Power Window System.>
7	Steering lock system (model with keyless access with push button start)	If the engine does not start, initialize the steering lock system. For the initialization procedure, refer to "KPS" section. <Ref. to KPS(diag)-124, ENGINE DOES NOT START, INSPECTION, Diagnostics with Phenomenon.>
8	EyeSight (model with EyeSight)	Set to the contents checked before disconnecting the battery.
9	Electronic throttle system	Turn the ignition switch to ON, wait for 10 seconds or more, and start the engine.
10	Engine control system	Let the engine run at idle until it fully warms up (the radiator fan turns 2 times or more) under no electrical load condition.
11	Past trouble history (memory code)	—

Note

NOTE

7. OTHER ADJUSTMENT OPERATIONS BEFORE DELIVERING THE VEHICLE TO CUSTOMER

Due to service and parts replacement convenience, perform the following operations before delivering the vehicle to the customer.

No.	Item	Check operation	Adjustment operation	Additional adjustment operations when replacing parts
1	Positions of devices <ul style="list-style-type: none">• Steering• Room mirror• Door mirror• Seat• Air conditioner vent grille	Is the device set to the same position when the vehicle was received from the customer?	Adjust the device to the similar position when the vehicle was received from the customer.	When removing/installing each device <ul style="list-style-type: none">• Meter, instrument panel, steering column, etc.• Room mirror, roof trim, sunroof assembly, etc.• Door mirror, door panel, etc.• Seat, floor carpet, parking brake lever, etc.• Vent grille, instrument panel, console box, etc.
2	Positions of switches <ul style="list-style-type: none">• SI-Drive• Wiper, light (AUTO or OFF)• Headlight beam leveler• Illumination control• Room light• Seat heater, etc.	Is the switch set to the same position when the vehicle was received from the customer?	Set the switch to the same position when the vehicle was received from the customer.	When removing/installing each switch
3	Position of antenna	Is the antenna set to the same position when the vehicle was received from the customer?	Adjust the position of antenna.	When removing/installing the antenna and washing the vehicle

B: NOTE

This information will improve the efficiency of maintenance and assure the sound work.

1. CLEANING

- Perform the operation in a clean location and use extra caution in dust proofing.
- Clean the items (except for assembly components) with steam, etc. before disassembly. During steam cleaning, wrap the air breather, oil level gauge, connectors, etc. with vinyl tape to prevent steam from entering inside the parts.
- Use an appropriate cleaning solvent.
- Do not clean rubber parts such as O-ring, gasket and oil seal with cleaning solution.

2. FASTENERS NOTICE

Tighten the bolts and nuts to the specified torque.

Do not apply paint, lubricant, rust retardant or other substance to the surface around bolts, nuts, etc. It may cause troubles with tightening to the specified torque and result in looseness and other problems of bolts and nuts.

3. ABOUT SCREWS

Use an appropriate sized tool. Insert a screw vertically into the hole. Check for any loose screws after installation.

If improper tools are used or screws are inserted obliquely to the hole, the screws cannot be installed correctly, which may result in insufficient tightening force or damage on the hole.

4. STATIC ELECTRICITY DAMAGE

Do not touch the control modules, connectors, logic boards and other such parts when there is a risk of static electricity. Always use a static electricity prevention cord or touch grounded metal for the elimination of static electricity before conducting work.

5. TROUBLESHOOTING OF ELECTRICAL SYSTEM

- 1) Always refer to "CAUTION" of "General Description" in the same models service manual before starting the diagnostics and repair.
- 2) Always refer to the cautions of each section when diagnosing and repairing each system and component.
- 3) The battery cable must be disconnected from the negative terminal after the ignition switch is set to the OFF position, unless otherwise required by the diagnostics.
- 4) When disconnecting a connector, do not pull the harness, but pull while holding the connector housing.

WI-36088

- 5) Confirm the locking shape completely before disconnecting a connector. In addition, firmly push in the connector until a click sounds when connecting a connector.
- 6) When checking continuity between connector terminals, or measuring voltage across the terminal and ground, always touch tester probe(s) to terminals from the harness side. If the probe is too thick to gain access to the terminal, do not push it in forcibly but use a mini test lead.
- 7) When measuring the voltage or resistance of individual sensor or all electrical control modules, use a tapered pin with a diameter of 0.6 mm (0.024 in) or less and touch it to the tip of terminal. Never insert the tapered pin into the terminal at this time. Doing so may cause internal deformation and a malfunction can occur.

CAUTION:

If a taper pin or the like has been inserted into the connector terminal, replace the connector.

- 8) To check water-proof connectors (which are not measurable from the harness side), touch tester probes on the terminal side and be very careful not to bend or damage the terminals.

WI-36089

- 9) Securely fasten the harness with clamps and clips so that the harness does not interfere with the body end parts, edges, bolts or screws.

Note

NOTE

- 10) When installing a harness and a component, be careful not to catch them on the harness.
- 11) Sensors, relays, units, etc., are sensitive to strong impacts. Handle them with extra care so that they are not dropped or mishandled.
- 12) Because the HID headlight uses high voltage, be sure to confirm that the power supply is turned off before diagnostics and repair. Furthermore, do not perform diagnostics and repair with wet hands because there is a possibility of electrical shock.
- 13) When inspecting the airbag system, in order to avoid malfunction, always refer to "CAUTION" of "General Description" of the airbag system in the same model's service manual.

6. BATTERY

When removing the battery terminal, always be sure to turn the ignition switch to OFF and disconnect the battery ground terminal first.

- Disconnect the ground cable from battery.

- Install in the reverse order.

NOTE:

- Clean the battery cable terminals and apply grease to retard the formation of corrosion.
- Connect the positive (+) terminal, and then connect the negative (-) terminal of the battery.
- After the battery is installed, initial diagnosis of the electronic throttle control is performed. Wait for 10 seconds or more after turning the ignition switch to ON, and then start the engine.

7. BACKUP/POWER SUPPLY FUSE

Backup fuse (20A) remains removed to prevent the battery consumption when vehicles are delivered. Install the backup fuse by following the illustration.

8. IMMOBILIZER RELATED PART

- Do not replace the immobilizer related parts with the parts from other vehicle.
- Registration of the immobilizer is necessary when a immobilizer-related control module has been replaced. For detailed operation procedure, refer to the "REGISTRATION MANUAL FOR IMMOBILIZER" provided as a separate volume.

9. SERVICE PARTS

Use genuine parts for maximum performance and maintenance when conducting repairs. Subaru/FHI will not be responsible for poor performance resulting from the use of parts except for genuine parts.

10. PROTECTING VEHICLE UNDER MAINTENANCE

Make sure to attach the fender cover, seat covers, etc. before work.

11. ENSURING SECURITY DURING WORK

When working in a group of two or more, perform the work with calling each other to ensure mutual safety.

Note

NOTE

12.LIFT AND JACK

When using a lift or shop jack to raise a vehicle or using rigid rack to support a vehicle, always follow instructions concerning jack-up points and weight limits to prevent the vehicle from falling, which could result in injury. Be especially careful that the vehicle is balanced before raising it. Be sure to set the wheel stoppers when jacking-up only the front or rear side of the vehicle.

CAUTION:

Select the lift attachment so that the side sill does not contact the lift arm.

NOTE:

- When using a lift, follow its operation manual.
- When the side sill cover contacts the lift arm, use a lift attachment.
- Do not work or leave unattended while the vehicle is supported with jack, support it with rigid racks.
- Be sure to use the rigid racks with rubber attached to cradle to support the vehicle.
- When using a lift, use an attachment or something similar.
- When using a plate lift, use a rubber attachment. Place the attachment to the specified position of the vehicle, by adjusting front/rear and left/right sides accordingly.

(A) 80 mm (3.1 in) or more

(B) 80 — 100 mm (3.15 — 3.94 in)

(C) 120 — 200 mm (4.72 — 7.87 in)

- Align the cushion rubber center part of plate lift with the center part of rubber attachment.
- Do not use the plate lift whose attachment does not reach the supporting locations.

• Support locations

(1) Jack-up point

• Pantograph jack

NT-00459

(1) Jack-up point

• Lift

NT-00271

CAUTION:

For models with spoiler garnish, use a spacer or an attachment to lift up the vehicle securely at jack up point without the side garnish contacting the lift.

Note

NOTE

- Rigid rack

NT-00242

(A) Attachment

- Plate lift

NT-10018

(1) Jack-up point

(2) Attachment

• Jack-up point (when using a garage jack)

NT-10024

(A) Front

(B) Rear

(1) Front crossmember support

(2) Rear differential

CAUTION:

If jacking up the front side of the vehicle, make sure that the jack is attached at the center of the jack-up plate not at the sides.

13. TIE-DOWNS

Tie-downs are used when transporting vehicles and when using the chassis dynamo. Remove the grommet of the tie-down hole and install the tie-down only to the specified locations on the vehicle.

NT-00486

(1) Grommet

Note

NOTE

- **Tie-down location**

(1) Hook for tie-down

(2) Tie-down hole

- **Chain direction at tie-down condition**

CAUTION:

- Pull the front and rear of the vehicle in the opposite direction, and pull the left and right of the vehicle in the same direction.
- Patterns except for the followings (recommended) are not allowed.

• Tie-down range

For ground transportation

CAUTION:

When the vehicle is tied down from vehicle inside, hook the hooks of tie-down chain on the rear tie-down holes from vehicle inside. When the vehicle is tied down from vehicle outside, hook the hooks of tie-down chain on the rear tie-down hooks from vehicle outside.

(A) Front tie-down hook

(B) Rear tie-down hole

(C) Chain pulling range at tie-down condition

Note

NOTE

For sea transportation

CAUTION:

The eyebolts are exclusively used for towing and sea transportation tie-down, and do not use them for ground and freight transportation.

(A) Front tie-down hook

(C) Chain pulling range at tie-down condition

(E) 1,320 mm (52.0 in)

(B) Eyebolt

(D) 400 mm (15.7 in)

• Vehicle sinking volume at tie-down condition

CAUTION:

The vehicle sinking volume at tie-down condition should be less than 50 mm (1.97 in) and make sure to fix the vehicle securely.

Check to see if the tensions of chains or belts at tie-down condition are appropriate in the following procedures.

- 1) Before tie-down, measure the distance between the highest tire point and highest arch point at the center of wheel.
- 2) After tie-down, measure the distance between the highest tire point and highest arch point at the center of wheel.
- 3) If the distance (A) between the measured value of 1) and 2) above, is less than 50 mm (1.97 in), it is judged as OK. If the distance is 50 mm (1.97 in) or more, it is judged as NG because the tension is too high.

NT-00414

(B) Arch position before tie-down (C) Arch position after tie-down

• Notes for the use of tie-down hook

When the vehicle is tied down from vehicle inside, hook the hooks of tie-down chain from vehicle inside, and when the vehicle is tied down from vehicle outside, hook the hooks of tie-down chain from vehicle outside. For front tie-down hook, use S hook and J hook, and for rear tie-down hole, use S hook, J hook and T hook. T hook can be used only for rear tie-down hole.

Note

NOTE

14.TOWING

Avoid towing vehicles except when the vehicle cannot be driven. For models with AWD, CVT or VTD, use a loader instead of towing. When towing other vehicles, pay attention to the following to prevent hook or vehicle damage resulting from excessive weight.

- Do not tow other vehicles with a front tie-down hook.
- Make sure the vehicle towing is heavier than the vehicle being towed.
- When towing the vehicle equipped with Subaru EyeSight, be sure to hold down the pre-collision brake OFF switch to turn OFF the pre-collision brake function. (Check that the pre-collision brake OFF indicator light in the meter lights up.)
- Front

Remove the hook cover, and install the towing hook (eyebolt).

CAUTION:

Make sure to detach the towing hook (eyebolt) after towing. If the hook remains attached, airbag may not operate properly when receiving a shock from front side. And it may also affect the crash performance of the vehicle.

(A) Hook cover

(B) Towing hook (eyebolt)

(C) Jack handle

- Rear

Remove the hook cover, and install the towing hook (eyebolt).

CAUTION:

Make sure to detach the towing hook (eyebolt) after towing. If the hook remains attached, the fuel leakage control function of the fuel pump may not operate properly when receiving a shock from rear side. And it may also affect the crash performance of the vehicle.

(A) Hook cover

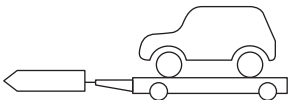

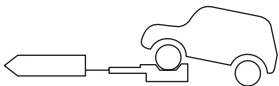

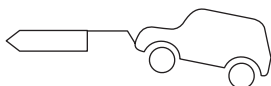

(B) Towing hook (eyebolt)

(C) Jack handle

Note

NOTE

• Precautions

Towing	Precautions	MT	CVT
Lifting up four wheels (on a trailer)  NT-00023	Towing the vehicle after lifting up all four wheels is a basic rule for AWD model.	○	○
Rope  NT-00024	<ul style="list-style-type: none"> • Check if both front and rear wheels are rotated normally. • CVT model driving conditions: Driving speed of 30 km/h (19 MPH) or less Allow driving distance 50 km (31 miles) or less	○	▲
Raising the front wheels  NT-00025	Prohibited for full-time AWD model.	×	×
Lifting up the front wheels  NT-00026	<ul style="list-style-type: none"> • Prohibited, due to damage on bumper, front grille, etc. • Do not raise the vehicle with bumper. 	×	×

Marked ○ : OK, Marked × : Prohibited, Marked ▲ : Conditionally OK

CAUTION:

- Place the shift lever in “N” position during towing.
- Do not lift up the rear wheels to avoid unsteady rotation.
- Turn the ignition key to “ACC”, then check the steering wheel moves freely. (Models without the keyless access with push button start)
- Turn the ignition switch to “ACC” or “ON” position, and check that the steering wheel moves freely. (Model with keyless access with push button start)
- Release the parking brake to avoid tire dragging.
- Since the power steering does not work, be careful for the heavy steering effort. (When engine is stopped)
- Since the servo brake does not work, be careful that the brake is not applied effectively. (When engine is stopped)
- In case of the malfunction of internal transmission or drive system, lift up four wheels (on a trailer) for towing.
- Do not use towing hook (eyebolt) except when towing.
- While being towed with all four wheels on the ground, turn the engine switch to ON but do not start the engine.
- If the vehicle is towed using a rope, the pedestrian alert may sound when the vehicle is towed with the ignition ON. (This is not a malfunction)

15.CARRIER CAR

Before lowering the vehicle from the carrier car, perform the following operations.

CAUTION:

Always perform the following operations before lowering the vehicle from the carrier car. Otherwise, the power unit will rotate reversely, which may cause the damage to the engine, vacuum pump, and transmission.

1) Start the engine.

2) Set the transmission shift position into driving direction of the vehicle. (When the vehicle drives forward, do not set the transmission into R range. When the vehicle drives rearward, do not set the transmission into 1 — 5 speed, or D range.)

CAUTION:

Be sure to perform 2) mentioned above even if the engine cannot be started in some reasons.

Note

NOTE

16.FRONT HOOD STAY

1) Always attach the stay to the normal position when performing works such as inspections and general maintenance.

CAUTION:

- During the inspection and general maintenance, always be sure to turn the ignition switch to OFF.
- At the inspection and general maintenance, do not detach the stay.

NT-00532

(1) Normal attached position

2) When wider front hood opening is necessary, set the stay to the lower position (hood hinge) as shown in the figure.

NT-00533

(1) Normal attached position

(2) Installation position at full open

17.GENERAL SCAN TOOL

Using general scan tools will greatly improve the efficiency of repairing engine electronic throttle controls. Subaru Select Monitor can be used to diagnose the engine, VDC, air conditioner and other parts.

18.AWD CIRCUIT MEASURES

1) Full-time AWD MT model

Since viscous coupling (limited slip differential) is used in the center differential, cut-off of AWD circuit cannot be carried out.

2) Full-time AWD CVT model

Since electronically controlled MP-T hydraulic multi-plate clutch is adapted for center differential, switch to FWD by using Subaru Select Monitor.

19.SPEEDOMETER TEST

1) Rear wheel free roller system

(1) Set the free roller on the floor of rear wheel side securely according to the wheel base and rear tread of the vehicle.

(2) Let the vehicle ride on the tester and free roller gently.

CAUTION:

Fix the vehicle using a pulling metal (chain or wire) to the front and rear towing hooks or tie-down hook to prevent the lateral runout of front wheels and springing out of vehicle.

(A) Free roller

(3) Set the speedometer tester.

(4) Conduct the speedometer test work.

CAUTION:

Do not operate the clutch quickly and do not accelerate or decelerate suddenly during work.

2) Rear wheel jack-up system

(1) Set the vehicle on speedometer tester.

CAUTION:

Fix the vehicle using a pulling metal (chain or wire) to the front and rear towing hooks or tie-down hook to prevent the lateral runout of front wheels and springing out of vehicle.

(2) Jack up the rear wheels and set the rigid racks to the specified locations of side sill.

(A) Rigid rack

(3) Conduct the speedometer test work.

CAUTION:

Do not operate the clutch quickly and do not accelerate or decelerate suddenly during work.

20.BRAKE TEST

1) Full-time AWD MT model

(1) Perform this test after driving the vehicle 2 to 3 km (1.24 to 1.86 miles) on road in order to stabilize the viscous torque of viscous coupling.

(2) Keep the front or rear wheels on the ground for this test.

NOTE:

Effect of the viscous torque on braking force will be added approx. 25 kg compared with FWD model.

(A) Brake tester

(B) Position for measuring front wheel

(C) Position for measuring rear wheel

NOTE

(3) When the brake dragging force is large.

- Check the dragging of brake pad or brake shoe.
- Since it may be affected by the viscosity of viscous coupling, jack up either of the front or rear two wheels to check the each wheel rotation condition with the viscous coupling affection removed.

2) Full-time AWD CVT model

(1) Keep the front or rear wheels on the ground during measurement.

- (A) Brake tester
- (B) Position for measuring front wheel
- (C) Position for measuring rear wheel

(2) When the brake dragging force is large.

- Check the dragging of brake pad or brake shoe.

Specifications:

	Braking force
Rear wheel total	10% or more of load on front or rear wheels
Difference between right and left wheels	8% or less of load on front or rear wheels
Grand total	50% or more of vehicle weight at the time of test

- When measurement is difficult to carry out because both of front wheels are locked, brake force measurement in this condition conforms to standard grand total.

21.ON THE CAR WHEEL BALANCING

CAUTION:

- Carry out the procedures after measuring the balance of each single tire.
- Set the vehicle so that the front and rear wheels are the same height.
- Make sure that the VDC is deactivated.
- Release the parking brake during measurement.
- Rotate each wheel by hands, and make sure it rotates without dragging.
- Do not operate the clutch quickly and do not accelerate or decelerate suddenly during work.
- When an error is indicated during engine drive, do not use the motor drive together.

1) Set the rigid rack to the specified locations of side sill, jack up the front or rear two wheels of non-measuring side and set the pickup stands to two wheels of measuring side.

- (A) Balancer body
- (B) Pickup stand (left and right)

2) For drive wheel, drive the tires with engine for measurement.

3) For non-drive wheel, drive the tires from the on the car wheel balancer for measurement.

IDENTIFICATION

1. Identification

A: IDENTIFICATION

1. IDENTIFICATION NUMBER & LABEL LOCATIONS

The V.I.N. (Vehicle Identification Numbers) is used to classify the vehicle.

- Positioning of the label for identification

(1) Vehicle identification number (V.I.N.) (below the driver's floor carpet)

(3) Tire inflation pressure label

(5) VIN plate

(2) Emission control label

(4) FMVSS label (U.S. model)
CMVSS label (Canada model)

(6) Model number label

- Engine

(1) Engine serial number (punch mark)

(2) Engine type (casting) crankcase upper side

- Manual transmission

5MT

(1) MT type and transmission serial number label

2. MEANING OF V.I.N.

The meaning of the V.I.N. is as follows:

JF2GPAACXHG200001

The starting and ending brackets ([]) are stop marks.

Digits	Code	Meaning	Details
1 — 3	JF2	Manufacturer body area	JF2: Multipurpose passenger car, FHI made (Crosstrek model)
4	G	Car line	G: Crosstrek
5	P	Body type	P: 5 door
6	A	Displacement class	A: 2.0 L non-turbo
7	A	Grade	A: Base B: Premium D: Premium + EyeSight K: Limited L: Limited + Navi N: Limited + Navi + EyeSight
8	C	Restraint	C: Manual belt, dual airbag, side airbag for seat back, curtain airbag for roof, driver's knee airbags, class C (GVWR 4001 — 5000 lb) (Crosstrek model)
9	X	Check digit	0 — 9 & X
10	H	Model year	H: 2017MY
11	G	Transmission type	G: Full-time AWD single range 5 speed MT (Yajima plant, Gunma) H: Full-time AWD CVT (Yajima plant, Gunma) 8: Full-time AWD CVT (main plant, Gunma) 9: Full-time AWD single range 5 speed MT (main plant, Gunma)
12 — 17	200001	Serial number	200001 — 399999: 5 door

3. MODEL NUMBER LABEL

The model number label indicates: the applied model, the option code, the trim code, the engine type, the transmission type, and the exterior color code. This information is helpful when placing orders for parts.

GP7FYJF

Digits	Code	Meaning	Details
1	G	Series	G: Crosstrek
2	P	Body type	P: 5 door
3	7	Total engine displacement / drive system	7: 2.0 L AWD
4	F	Model year	F: 2017MY
5	Y	Destination	Y: U.S., Canada, and Mexico
6	J	Grade	F: 2.0 i-Premium G: 2.0 i-Limited J: 2.0 i R: 2.0 i-Premium EyeSight T: 2.0 i-Limited EyeSight

Refer to “Type B” described in “REGISTRATION MANUAL FOR IMMOBILIZER”.

- **Model with keyless access with push button start**

Refer to “Type D” described in “REGISTRATION MANUAL FOR IMMOBILIZER”.

RECOMMENDED MATERIALS

RM

	Page
1. Recommended Materials	2

Recommended Materials

RECOMMENDED MATERIALS

1. Recommended Materials

A: RECOMMENDED MATERIALS

1. GENERAL

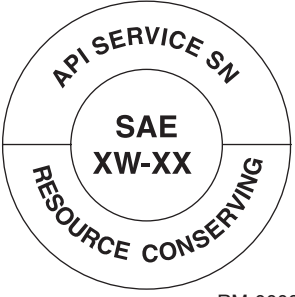

To insure the best performance, always use the specified oil, gasoline, adhesive, sealant, etc. or a substitute of equivalent quality.

2. FUEL

- Use unleaded gasoline because using leaded gasoline will cause a malfunction.
- Do not use the low quality gasoline, or improper fuel such as diesel fuel, fuel alcohol, or gasoline additive because they will adversely affect on engine components and fuel system components.
- Always use gasoline that is equivalent to that prescribed in the owner's manual or that of high octane value. There is the possibility of damaging or improper operation of the engine and fuel injection system if the specifications are not observed. Use the prescribed gasoline type to maintain proper vehicle performance.

3. LUBRICANTS

Use the lubricants shown in the table below, or equivalent. See the table below to choose the correct SAE viscosity.

Lubricant	Recommended materials																
	Engine oil standard																
<p>Engine oil Choose oil suitable for the standard from the right.</p>	<div style="display: flex; justify-content: space-around; align-items: center;"> <div style="text-align: center;">  <p>RM-00081 Those with SN "Resource Conserving" logo in case of API standard.</p> </div> <div style="font-size: 2em;">or</div> <div style="text-align: center;">  <p>RM-00002 Those with GF-5 "starburst mark" displayed on top of the container in case of ILSAC standard.</p> </div> </div>																
SAE viscosity No. and applicable temperature

*

CAUTION:

Do not mix two different kinds or makes of gear oil.

4. FLUID

Use the fluids specified in the table below. Do not mix two different kinds or makes of fluid.

CAUTION:

- Be sure to use the recommended CVTF. Using material except recommended one would cause trouble.
- If an alternative transmission gear oil is used, you may not have expected functionality and performance.

Fluid	Recommended materials	Item number	Alternative
Transmission fluid	SUBARU CVT FLUID LINEARTRONIC II	K0425Y0711	—
Transmission gear oil	SUBARU GEAR OIL EXTRA MT	—	GL-5 (75W-90)
CVT front differential gear oil	SUBARU GEAR OIL EXTRA MT	—	GL-5 (75W-90)
Brake fluid and clutch fluid	FMVSS No. 116 DOT3, or DOT4	—	—

5. ENGINE COOLANT

Use genuine engine coolant to protect the engine.

Engine coolant	Recommended materials	Item number	Alternative
Coolant	SUBARU SUPER COOLANT (Concentrated type)	—	—
	SUBARU SUPER COOLANT (Diluted type)	K0670Y0001	
Water for dilution	Distilled water	—	Soft water or tap water
Cooling system protective agent	Cooling system conditioner	SOA345001	—

6. REFRIGERANT

The standard air conditioner installed on this vehicle uses HFC134a refrigerant. Do not mix it with other refrigerants. Also, do not use any air compressor oil except for DH-PR (ZXL200PG).

Air Conditioner	Recommended materials	Item number	Alternative
Refrigerant	HFC134a	—	—
Compressor oil	DH-PR (ZXL200PG)	—	—

PRE-DELIVERY INSPECTION

PI

	Page
1. Pre-delivery Inspection	2

Pre-delivery Inspection

PRE-DELIVERY INSPECTION

1. Pre-delivery Inspection

A: GENERAL DESCRIPTION

The purposes of the pre-delivery inspection (PDI) are as follows.

- Remove the additional parts used for ensuring the vehicle quality during transportation.
- Check the vehicle or parts before delivery for any damage occurred during transportation or storage.
- Check that the vehicle after repair does not have any problems.
- Make sure to provide a complete vehicle to customer.

For above reasons, SOA service centers must carry out the PDIs before delivery of vehicle.

Besides, all SOA service center and PDI center check the condition of all vehicles to make sure to take responsibility.

B: PRE-DELIVERY INSPECTION (PDI) PROCEDURE

Perform the procedures indicated in the table below.

Static checks just after vehicle receipt

Item	Check point
1. Appearance	<ol style="list-style-type: none">1. If the vehicle is covered with protective coating, visually check the vehicle body for damage and dents. If the protective coating has been removed, visually check the painted body surfaces in detail for damage or rust.2. Visually check the glass and light lenses for any damage, cracks or excessive gaps between body sheet metal.3. Visually check the plated parts for any damage.4. Check the instrument panel, console and trim for stains or dirt.
2. Tire	<ol style="list-style-type: none">1. Check the tires for damage, defective, and dents on wheels.2. Check the tire air pressure.
3. Fuse installation	If the vehicle is about to be delivered to customer, attach a back-up fuse.
4. Door lock/unlock and open/close operations	<ol style="list-style-type: none">1. Using the key, check the door can be locked or unlocked normally.2. Open and close all doors to check that there are no problems.3. Operate the power door lock switch to check that all doors and the rear gate lock and unlock normally.
5. Child safety lock	Check the child safety lock system operates normally.
6. Rear gate lock/unlock and open/close operation	<ol style="list-style-type: none">1. Check if the rear gate can be unlocked normally through the emergency hole.2. Open and close the rear gate to check that there are no problems.3. Operate the power door lock switch to check that all doors and the rear gate lock and unlock normally.
7. Fuel lid opener lock release lever	Operate the fuel lid opener to check that the fuel filler lid can be unlocked normally.
8. Towing hook (eyebolt)	At factory shipment, the towing hook (eyebolt) is installed to the rear bumper. Remove the towing hook (eyebolt), store it in the holder.
9. Accessory	Check that the following accessories are equipped. <ul style="list-style-type: none">• Owner's manual• Warranty booklet• Maintenance note• Spare key• Key No. plate• Jack• Tool set• Spare tire• Towing hook
10. Front hood lock release	Operate the front hood lock release lever to check that the front hood opens normally.
11. Battery	Check the battery for any abnormal conditions such as rust or traces of battery fluid leaks.
12. Brake fluid	Check the brake fluid amount.
13. Engine oil	Check the engine oil amount.
14. Transmission gear oil	Check that the transmission gear oil level is normal.
15. CVTF	Check for leakage of CVTF.
16. CVT front differential oil	Check for leakage of CVT front differential oil.
17. Rear differential gear oil	Check for leakage of gear oil from the rear differential.

Pre-delivery Inspection

PRE-DELIVERY INSPECTION

Item	Check point
18. Engine coolant	Check the engine coolant level.
19. Clutch fluid	Check the clutch fluid amount.
20. Window washer fluid	Check the window washer fluid amount.
21. Front hood latch	Check that the front hood is closed normally and locked securely.
22. Keyless entry system	Check that the keyless entry system operates normally.
23. Keyless access system	Check that the keyless access system operates normally.
24. Alarm system	Check that the alarm system operates normally.
25. Seat	1. Check the seat surfaces for stains or dirt. 2. Check the seat installation conditions and functionality.
26. Seat belt	Check the seat belt installation conditions and functionality.
27. TPMS (U.S. model)	If the display of TPMS warning light does not operate normally, perform the diagnosis by referring to TPMS (Diagnosis).

Checks with the engine running

Item	Check point
28. Grommet installation	Install the grommet on the rear seat to the tie-down hole. (When equipped)
29. Delivery (test) mode	Turn the ignition switch to ON and check that the malfunction indicator light starts blinking.
30. Immobilizer system	1. Check that the engine starts with all keys that are equipped on vehicle. 2. Check that the security indicator light operates normally.
31. Push button start	Using the push button start function of the access key equipped with the vehicle, check that the engine starts and stops.
32. Starting condition	Start the engine and check that the engine starts smoothly.
33. Exhaust system	Check that the exhaust noise is normal and no leaks are found.
34. Indicator and warning lights	Check that all indicator lights and warning lights are operating correctly.
35. Heater & ventilation	Check that the heater & ventilation system operates normally.
36. Air conditioner	Check that the air conditioner operates normally.
37. Multi-function display (MFD)	Check that the Multi-Function Display (MFD) function operates normally.
38. Audio	Check the radio and AUX operate normally.
39. Navigation	Check the navigation and AUX operate normally.
40. Telematics system	Check that the indicator light on the overhead console or on the stereo camera cover assembly goes off.
41. Accessory power supply socket	Check that the accessory power supply socket operates normally.
42. Lighting system	Check that the lighting system operates normally.
43. Illumination control	Check that the illumination control operates normally.
44. Window washer system	Check that the window washer system operates normally.
45. Wiper system	Check that the wiper system operates normally.
46. Wiper deicer	Check that the wiper deicer operates normally.
47. Power window	Check that the power window operates normally.
48. Sunroof	Check that the sunroof operates normally.
49. Rear defogger system	Check that the rear defogger system operates normally.
50. Door mirror	Check that the remote control mirror and heated mirror operate normally.
51. Room mirror	Check that the automatic anti-glare function operates normally.
52. Blind Spot Detection / Rear Cross Traffic Alert (BSD/RCTA)	1. Press the BSD/RCTA OFF switch several times to check that the system is activated and deactivated correctly. 2. Check the rear bumper around the sensor for dirt, scratch, affixed stickers and poor paint coating.
53. Diagnostic trouble code (DTC) check	Check that the diagnostic trouble code (DTC) is not detected.

Pre-delivery Inspection

PRE-DELIVERY INSPECTION

Dynamic test with the vehicle running

Item	Check point
54. Brake test	Check the foot brake for normal operations.
55. Parking brake	Check that the parking brake operates normally.
56. Shift control	Check that the shift patterns are correct.
57. Cruise control	Check that the cruise control system operates normally.
58. Subaru EyeSight	Check that the Subaru EyeSight operates normally.

Checks after dynamic test

Item	Check point
59. Power steering system (electric power steering model)	Check the steering warning light operation.
60. Fluid leakage	Check for fluid/oil leaks.
61. Water leak test	Spray the vehicle with water and check for water leaks.
62. Appearance 2	1. Remove the protective coating (if equipped). 2. Check the body paints for damage and stain. 3. Check the plated parts for damage and rust.

1. APPEARANCE

- If the vehicle is covered with protective coating, visually check the vehicle body for damage and dents.
- When there is no protective coating, check the body paints for damage or stains in detail and repair as necessary.
- Check the window glass, door glass, and lights for any cracks or damage, and replace as necessary.
- Visually check the plated parts, such as the grilles and door knobs, for damage or loss of gloss and replace the parts as necessary.
- Check the instrument panel, console and trim for stains or dirt.
- Check the keyless key or access key for dirt, and wipe off if necessary.

2. TIRE

- Check the tires for damage, defective, and dents on wheels.
- Check the tire size, spare tire and tire air pressure described on the tire air pressure label (driver's side).

3. FUSE INSTALLATION

Fuses for the back-up circuit on initially delivered vehicles are removed to prevent battery discharge. Attach the 20 A fuse as shown in the figure.

4. LOCK/UNLOCK AND OPEN/CLOSE OPERATION CHECKS OF DOORS

1) Using the key, lock and unlock the door several times to check for normal operation. Open and close the door several times for smooth movement.

2) Completely close the driver's door, and then check the smooth movement with operating door lock knob from lock to unlock several times. Set the door lock knob (A) to lock position. Then pull the inner remote (B) to ensure that doors will not open. For other doors, place the door lock knob (A) to lock position and then pull the inner remote (B) to ensure that doors will not open.

- (A) Door lock knob
- (B) Inner remote

3) Close all the doors, and then press the lock on power door lock switch at driver's side. Check that all doors (including the rear gate) lock.

4) Press the driver's side power door lock switch to unlock side. Check that all doors including rear gate are unlocked.

5) Check that the passenger's power door lock switch locks and unlocks normally in the same manner.

- (A) Lock
- (B) Unlock

6) Insert the key to ignition switch, and open the driver's side door. Press lock on power door lock. Check that the door is not locked.

5. CHILD SAFETY LOCK

- 1) Set the child safety lock lever on both rear doors to the lock position.
- 2) Close the rear doors completely.
- 3) Check that the lock levers of the rear doors are in the unlock position. Then, pull inner remote of rear doors to ensure that doors will not open.

Pre-delivery Inspection

PRE-DELIVERY INSPECTION

4) Pull the outer handles to ensure that doors will open.

- (A) Unlock
- (B) Lock

6. REAR GATE LOCK/UNLOCK AND OPEN/CLOSE OPERATIONS

- 1) Open and close the rear gate several times for smooth movement.
- 2) Operate the rear gate emergency release lever to check that the rear gate can be locked and unlocked properly.

(1) Remove the cover inside the rear gate.

(2) Operate the lever using a tool such as a screwdriver to check that the rear gate is unlocked normally.

7. FUEL LID OPENER LOCK RELEASE LEVER

Operate the fuel lid lock release lever to check that the fuel lid is unlocked normally. Check that the filler cap is securely closed.

8. TOWING HOOK (EYEBOLT)

NOTE:

At factory shipment, the towing hook (eyebolt) is installed to the rear bumper for securing the vehicle during transportation. Follow the procedure below to store the towing hook (eyebolt) to the holder in the spare tire.

1) Remove the towing hook (eyebolt) from the rear bumper.

(A) Towing hook (eyebolt)

2) Store the towing hook (eyebolt) to the holder in the spare tire.

(A) Towing hook (eyebolt)

3) Install the supplied rear hook cover to rear bumper.

9. ACCESSORY

Check that the following accessories are provided.

- Owner's manual
- Warranty booklet
- Maintenance note
- Spare key
- Key No. plate
- Jack
- Tool set
- Spare tire
- Towing hook (eyebolt)

- (A) Spare tire
- (B) Jack handle
- (C) Towing hook (eyebolt)
- (D) Jack

10.FRONT HOOD LOCK RELEASE

Operate the front hood release lever to check that the front hood is unlocked normally.

Operate the lever (A) and check that the front hood is opened normally.

11.BATTERY

Check the battery terminals to make sure that there are no rust or corrosion due to fluid leaks. Check that the battery caps are securely tightened.

- (A) Cap
- (B) Upper level
- (C) Lower level

12.BRAKE FLUID

Check the brake fluid amount. If the amount is insufficient, carry out a brake line test to identify brake fluid leaks and check the brake operation. After that, refill the brake fluid tank with the specified type of fluid.

CAUTION:

If the brake fluid is spilt over exhaust pipe, wipe it off with cloth to avoid emitting smoke or causing a fire.

13.ENGINE OIL

- 1) Park the vehicle on a level surface.
- 2) Remove the oil level gauge and wipe away the oil.
- 3) Reinsert the oil level gauge all the way. Be sure that the oil level gauge is correctly inserted and properly orientated.
- 4) Pull out the oil level gauge again, and check both sides of the oil level gauge. Use a lower side to determine the engine oil level. If the engine oil level is below "L" line, add oil to bring the level up to "F" line.
- 5) Start the engine, and spread the oil in engine room.

Pre-delivery Inspection

PRE-DELIVERY INSPECTION

6) After turning off the engine, wait a few minutes for the oil to return to the oil pan before checking the oil level.

NOTE:

To prevent overfilling of engine oil, do not add oil above "F" line when the engine is cold.

- (A) Engine oil level gauge
- (B) Engine oil filler cap
- (C) "F" line
- (D) "L" line
- (E) Approx. 1 L (1.1 US qt, 0.9 Imp qt)

14. TRANSMISSION GEAR OIL

Check the transmission gear oil amount. If the amount of gear oil is insufficient, check for leaks. Then, add the necessary amount of the specified gear oil. Refer to "5MT" section for transmission gear oil inspection. <Ref. to 5MT-21, INSPECTION, Transmission Gear Oil.>

15. CVTF

Check for leakage of CVTF.

CAUTION:

If the CVTF is spilt over exhaust pipe, wipe it off with cloth to avoid emitting smoke or causing a fire.

16. CVT FRONT DIFFERENTIAL OIL

Check for leakage of CVT front differential gear oil.

CAUTION:

If gear oil is spilt over the exhaust pipe, wipe it off with a cloth to avoid emitting smoke or causing a fire.

17. REAR DIFFERENTIAL GEAR OIL

Check for leakage of gear oil from the rear differential.

CAUTION:

If the rear differential gear oil is spilt over exhaust pipe, wipe it off with cloth to avoid emitting smoke or causing a fire.

18. ENGINE COOLANT

Check the coolant amount on the reservoir. If the amount of engine coolant is insufficient, check that no leaks are found. Then, add the necessary amount of coolant with the specified concentration.

CAUTION:

If the coolant is spilt over exhaust pipe, wipe it off with cloth to avoid emitting smoke or causing a fire.

19. CLUTCH FLUID

Check the clutch fluid amount. If the amount of fluid is insufficient, check that no leaks are found. Then, add the necessary amount of specified fluid.

CAUTION:

If any clutch fluid is spilt on the exhaust pipe, wipe it off with a cloth to avoid emitting smoke or causing a fire.

- (A) MAX. level
- (B) MIN. level

20. WINDOW WASHER FLUID

Check the window washer fluid amount. If the amount of washer fluid is insufficient, check that no leaks are found. Then, add the necessary amount of washer fluid.

NOTE:

If there is the vibration, water comes into the layer of air in the washer tank and the water level may drop. This is not a malfunction.

21.FRONT HOOD LATCH

Close the front hood. Check that the front hood is completely latched.

22.KEYLESS ENTRY SYSTEM

Check the keyless entry system operations as follows:

- Fully open all the door windows.
- Remove the key from the ignition switch and close all the doors including rear gate.
- Press the “LOCK” button momentarily on the keyless transmitter. Check that all the doors become locked, the buzzer sounds once, and the hazard lights flash once.

- Press the “UNLOCK” button momentarily on the keyless transmitter. Check that the driver’s door is unlocked, the buzzer sounds twice, and the hazard lights flash twice.
- Within five seconds, briefly press the “UNLOCK” button on the keyless transmitter. Check that all doors (including rear gate) are unlocked, the buzzer sounds twice, and the hazard lights flash twice.

- Lock all the doors including rear gate. Check that the buzzer sounds twice, and the hazard lights flash twice, when the rear gate open button is pressed to unlock the rear gate. Press the rear gate opener button and check that the rear gate opens.

- Press the “PANIC” button of the keyless transmitter. Check that the panic mode (the horn keeps sounding) is initiated. Also, check that this condition continues for 30 seconds or until when any of the buttons on the keyless transmitter are pressed.

- Briefly press the “LOCK” button once on the keyless transmitter with one door (including the rear gate) open. Check that the buzzer sounds 5 times, and the hazard light flashes 5 times to notify the door not being fully closed. Next, close all the doors including rear gate. Check if all doors are locked and buzzer sounds once and the hazard light flashes once.
- With one of the doors open (including the rear gate), press the “LOCK” side of the power door lock switch. Next, close all the doors including rear gate. Check if all doors are locked and buzzer sounds once and the hazard light flashes once.

Pre-delivery Inspection

PRE-DELIVERY INSPECTION

- Passenger's side

Alarm sound operational check

- The system uses the buzzer and sounds the alarm when the door is locked or unlocked. The alarm sound can be turned OFF. To turn the alarm sound from ON to OFF, close all doors, (with the key not inserted in the key cylinder), hold down the "UNLOCK" side of the power door lock switch and insert the key in the key cylinder. Within 10 seconds, insert and take out the key for 5 times or more, and within 10 seconds after that, open and close the driver's door. With the door closed, the hazard light will flash 3 times, indicating that the alarm sound has been turned OFF. To turn the alarm sound from OFF to ON, perform this procedure again. The hazard light will flash 3 times, indicating that the alarm has been turned ON.

23.KEYLESS ACCESS SYSTEM

CAUTION:

- When performing the check, check one access key at a time, separating individual keys.
- Do not leave any separated access keys in the vehicle.

NOTE:

The following inspections show the initial settings. When the settings are different from the initial settings, use Subaru Select Monitor to check the details of each setting for inspections. <Ref. to BC(diag)-12, OPERATION, Read Current Data.>

- While carrying the access key, check that the room light illuminates when you move close to the front door handles of the vehicle whose doors are all locked.
- While carrying the access key, check that all doors and the rear gate are locked, and the hazard lights flash when you touch the touch sensor (lock) of the front door or press the rear lock button of the rear gate.

NOTE:

- The hazard lights flash twice when unlocking.

- The hazard lights flash once when locking.

(A) Touch sensor (lock)

(A) Rear lock button

- Manually operate the access key button to check the lock/unlock of doors and rear gate, and the flashing of hazard lights.
- Check the mechanical key attached to the access key can be used for locking/unlocking.

CAUTION:

The mechanical key is a single groove type. Insert the mechanical key with the groove side facing the front side of the vehicle.

(A) Mechanical key

- Close all doors with the access key in the vehicle, and check that warning buzzer sounds and locking does not occur when you touch the touch sensor (lock) of the door or press the rear lock button.

CAUTION:

Remove the mechanical key from the access key and hold the mechanical key.

24.ALARM SYSTEM

- Model without keyless access with push button start

NOTE:

The following inspections show the initial settings. When the settings are different from the initial settings, use Subaru Select Monitor to check the details of each setting for inspections. <Ref. to BC(diag)-20, OPERATION, Registration Body Integrated Unit.>

- 1) Fully open all the door windows.
- 2) Remove the key from the ignition switch and close all the doors including rear gate.
- 3) Press the “LOCK” button momentarily on the keyless transmitter. All doors are locked, and the security indicator light blinks faster for 30 seconds and blinks slowly twice repeatedly, then the alarm system is in set condition.

- 4) Press the “UNLOCK” button momentarily on the keyless transmitter. When the door of the driver’s seat is unlocked, the security indicator light blinks, and the alarm system enters the release mode.

- 5) Press the “LOCK” button once on the keyless transmitter with one of the doors (including the rear gate) open. Check that the buzzer sounds 5 times to give the door not fully closed warning. The doors are locked when all doors (including the rear gate) are closed, and the security indicator light blinks faster for 30 seconds and blinks slowly twice repeatedly, then the alarm system is in set condition.
- 6) Press the “UNLOCK” button momentarily on the keyless transmitter. When the door of the driver’s seat is unlocked, the security indicator blinks, and the alarm system enters the release mode.
- 7) With one of the doors open (including the rear gate), press the “LOCK” side of the power door lock switch. The doors are locked when all doors (including the rear gate) are closed, and the security indicator light blinks faster for 30 seconds and blinks slowly twice repeatedly, then the alarm system is in set condition.

- Driver’s side

- Passenger’s side

- 8) Unlock a door using the inner lock knob or the key and open the door while the security system is in the set mode. Check if the alarm condition occurs (horn sounds continuously, hazard light blinks, security indicator light illuminates). Check if this condition lasts until any button of the keyless transmitter is pressed or until the ignition switch is turned to IGN ON after inserting the key into the ignition switch.

NOTE:

The alarm sounds for three minutes with the door open.

Pre-delivery Inspection

PRE-DELIVERY INSPECTION

9) On models equipped with an impact sensor, hit the windshield glass with your hand with the alarm system in the monitoring condition, to check that the alarm condition occurs.

10) When none of above is applicable, perform troubleshooting for the security system.

• Model with keyless access with push button start

NOTE:

The following inspections show the initial settings. When the settings are different from the initial settings, use Subaru Select Monitor to check the details of each setting for inspections. <Ref. to BC(diag)-20, OPERATION, Registration Body Integrated Unit.>

1) Fully open all the door windows.

2) Close all the doors and rear gate.

3) Press the “LOCK” button momentarily on the access key. All doors are locked, and the security indicator light blinks faster for 30 seconds and blinks slowly twice repeatedly, then the alarm system is in set condition.

4) Press the “UNLOCK” button momentarily on the access key. When the door of the driver’s seat is unlocked, the security indicator light blinks, and the alarm system enters the release mode.

5) Press the “LOCK” button once on the access key with one of the doors (including the rear gate) open. Check that the buzzer sounds 5 times to give the door not fully closed warning. The doors are locked when all doors (including the rear gate) are closed, and the security indicator light blinks faster for 30 seconds and blinks slowly twice repeatedly, then the alarm system is in set condition.

6) Press the “UNLOCK” button momentarily on the access key. When the door of the driver’s seat is unlocked, the security indicator blinks, and the alarm system enters the release mode.

7) With one of the doors open (including the rear gate), press the “LOCK” side of the power door lock switch. The doors are locked when all doors (including the rear gate) are closed, and the security indicator light blinks faster for 30 seconds and blinks slowly twice repeatedly, then the alarm system is in set condition.

• Driver’s side

• Passenger’s side

8) Unlock a door using the mechanical key and open the door while the security system is in the set mode. Check if the alarm condition occurs (horn sounds continuously, hazard light blinks, security indicator light illuminates). Check if this condition lasts until any button on the access key is pressed or until the ignition switch is turned to ACC.

CAUTION:

The mechanical key is a single groove type. Insert the mechanical key with the groove side facing the front side of the vehicle.

NOTE:

The alarm sounds for three minutes with the door open.

(A) Mechanical key

9) On models equipped with an impact sensor, hit the windshield glass with your hand with the alarm system in the monitoring condition, to check that the alarm condition occurs.

10) When none of above is applicable, perform troubleshooting for the security system.

25. SEAT

- 1) Check the seat surfaces for stains or dirt.
- 2) Check that each seat provides full functionality in sliding, reclining, lifter, and tilting. Check all available functions of the rear seat such as backrest tilt knob.

3) Check the passenger's seat occupant detection system.

(1) Empty the passenger's seat and turn the ignition switch to ON.

(2) Check that the passenger airbag ON/OFF indicator lights both turn on simultaneously for approximately six seconds, and after turning off for two seconds, only the OFF light illuminates.

(A) Airbag ON/OFF indicator light (U.S. (U5) model)

(B) Airbag ON/OFF indicator light (Canada (C5), Mexico (C4) models)

4) With a person weighing approximately 70 kg (155 lb) or more sitting in the passenger's seat, check whether the ON light of the passenger's airbag ON/OFF indicator illuminates or not.

5) Have the passenger get out of the passenger's seat, and check whether the OFF light of the passenger side airbag ON/OFF indicator illuminates.

26. SEAT BELT

1) Pull out the seat belt and then release it. Check that the belt retracts smoothly.

2) Check seat warning system

(1) Turn the ignition switch to ON without driver's and passenger's seat belts on.

(2) Check the seat belt warning lights of the driver's and the passenger's blink for approximately six seconds and the buzzer sounds intermittently.

(3) Then check that the seat belt warning lights illuminate and blink in a cycle of approximately 15 seconds. (If no one is seated on the passenger's seat, the seat belt warning light of the passenger's will not operate.)

Pre-delivery Inspection

PRE-DELIVERY INSPECTION

27. TPMS (U.S. MODEL)

1) Turn the ignition switch to ON, and check TPMS warning light for normal operation.

- Normal operation (IG ON (light check))

2) If the TPMS warning light display does not operate normally, check and repair the system. <Ref. to TPM(diag)-2, Basic Diagnostic Procedure.>

28. GROMMET INSTALLATION

Install the grommet on the rear seat to the tie-down hole.

CAUTION:

Make sure that the tie-down hole is firmly plugged with the grommet. Otherwise, dust, smell, etc. may come into the passenger compartment indirectly from the rear quarter, via the side sill from the tie-down hole.

(1) Grommet

29. DELIVERY (TEST) MODE

1) Install the delivery (test) mode fuse with ignition switch to OFF.

CAUTION:

Do not use any fuses that are installed on the vehicle.

2) Turn the ignition switch to ON and check that the malfunction indicator light starts blinking.

3) If the malfunction indicator light blinks, return the ignition key to LOCK.

4) Remove the delivery (test) mode fuse and attach it to the spare fuse holder provided on the fuse box cover.

5) Then, turn the ignition key to ON again.

6) Make sure that the malfunction indicator light is off. If the malfunction indicator light blinks, carry out an engine diagnosis.

30. IMMOBILIZER SYSTEM

1) Check that the engine starts with all keys that are equipped on vehicle.

2) Check that the security indicator light blinks in 60 seconds after turning the ignition switch from ON to ACC or to OFF, and immediately after removing the key. (Models without the keyless access with push button start)

3) Immediately after turning ignition switch from ON to OFF, and immediately after opening/closing a door while the ignition switch is in ON or ACC with the engine stopped and the access key is outside the vehicle, check that the security indicator light is blinking. (Model with keyless access with push button start)

NOTE:

If malfunctions occur, refer to "IMMOBILIZER (DIAGNOSTICS)". <Ref. to IM(diag)-2, Basic Diagnostic Procedure.>

31. PUSH BUTTON START FUNCTION

1) Get into the vehicle while carrying the access key, with the vehicle in P range and the brake pedal OFF, and check that it cycles through ACC → IGN ON → IGN OFF every time the push button ignition switch is pressed, and that the indicator light for the push button ignition switch is illuminated in orange when the ignition switch is in the ACC and IGN ON positions.

2) Get into the vehicle while carrying the access key, with the vehicle in P range and the brake pedal ON, check that the indicator light for the push button ignition switch is illuminated in green.

NOTE:

While the select lever button is being pressed, the indicator light of the push button ignition switch does not illuminate in green even if the shift position is in the P range.

3) Get into the vehicle while carrying the access key, with the vehicle in P range and the brake pedal ON, check that the engine starts when you press the push button ignition switch.

4) With the vehicle stopped, the engine running and in P range, check that the engine stops when you press the push button ignition switch.

5) With the vehicle stopped, the engine running and in N range, check that the engine stops when you press the push button ignition switch, and cycles through ACC → IGN ON each time you press the push button ignition switch.

32. STARTING CONDITION

Start the engine and check that the engine starts smoothly. If the battery voltage is low, recharge or replace the battery. If any noises are observed, immediately stop the engine and check and repair the abnormal components.

33. EXHAUST

Listen to the exhaust noise to see if no noises are observed. Check that no leaks are found.

34. INDICATOR AND WARNING LIGHTS

Check that all indicator lights and warning lights are operating correctly.

35. HEATER & VENTILATION

Operate the heater & ventilation system to check for normal airflow outlet control, air inlet control, airflow capacity and heating performance.

36. AIR CONDITIONER

Operate the air conditioner. Check that the A/C compressor operates normally and enough cooling is provided.

NOTE:

To prevent the insufficient lubrication of the air conditioner, operate the air conditioner for five minutes at idling.

37. MULTI-FUNCTION DISPLAY (MFD)

Check that the Multi-Function Display (MFD) function operates normally.

38. AUDIO

1) Check the radio, CD player and AUX for normal operation.

2) Check that the AUX is installed into the console without looseness.

3) Check that the rearview camera operates normally.

39. NAVIGATION SYSTEM

1) Check all display functions for normal operation. (Refer to the operation manual.)

2) Check that the navigation system operates normally.

3) Check the radio, CD (DVD) player and AUX for normal operation.

4) Check that the AUX is installed into the console without looseness.

5) Check that the rearview camera operates normally.

40. TELEMATICS SYSTEM

Check the indicator light of overhead console or stereo camera cover assembly goes off.

41. ACCESSORY POWER SUPPLY SOCKET

- Check the operation of the front accessory power supply socket.

- Check operation of the accessory power supply socket in console box.

42. LIGHTING

1) Check the headlight operations. When pulling out the key, check if the headlight illuminates by turning the headlight switch from OFF to ON.

2) Check the stop light operation.

3) Check other lights for normal operations.

43. ILLUMINATION CONTROL

Check that the illumination control operates normally.

Pre-delivery Inspection

PRE-DELIVERY INSPECTION

44. WINDOW WASHER SYSTEM

Check that the window washer system injects washer fluid to the specified area of the windshield and rear window glass. <Ref. to WW-39, NOZZLE - WINDSHIELD WASHER, ADJUSTMENT, Front Washer Nozzle and Hose.> <Ref. to WW-49, INSPECTING THE SPRAY POSITION, INSPECTION, Rear Washer.>

45. WIPER SYSTEM

Check the front and rear wipers for normal operations.

46. WIPER DEICER

Check that the wiper deicer operates normally.

NOTE:

When an ambient temperature is 5°C or more, wiper deicer operation is cancelled. Press the switch for 3 seconds or more to perform the compulsory operation.

47. POWER WINDOW

- Operate the power window switches one by one to check that each of the power windows goes up and down without noises.
- Check AUTO UP/AUTO DOWN operate properly by operating the power window switch on driver's seat side.

CAUTION:

If battery has been removed, AUTO UP does not operate properly because initialized. In this case, perform the initial setting (reset A) and check AUTO UP operates properly.

NOTE:

Check the power window if the door glass of the driver's seat does not open/close automatically. <Ref. to GW-9, INSPECTION, Power Window System.>

48. SUNROOF

Check that the sunroof operates normally.

49. REAR DEFOGGER SYSTEM

Press the rear defogger switch and check that the light inside the switch is activated for approx. 15 minutes and the rear defogger automatically turns to OFF.

50. DOOR MIRROR

- Check that the remote control mirror operates normally.
- Check that the heated mirror operates normally.

51. ROOM MIRROR

Check that the automatic anti-glare function operates normally.

52. BLIND SPOT DETECTION / REAR CROSS TRAFFIC ALERT (BSD/RCTA)

1) Check that the BSD/RCTA system is activated and deactivated correctly.

(1) Press the BSD/RCTA OFF switch to check that "BSD/RCTA OFF" is displayed in the combination meter.

(2) Press the BSD/RCTA OFF switch again to check that the indicators of the right and left side door mirrors illuminate → go off and "BSD/RCTA OFF" is displayed in the combination meter.

(3) Check that the BSD/RCTA error message is not displayed.

2) Check the rear bumper around the radar sensor for dirt, scratch, affixed stickers and poor paint coating.

- If any dirt is found, clean it off so that the rear bumper is not damaged.
- If any stickers are affixed, remove it so that the rear bumper is not damaged.
- If the bumper is damaged or has poor paint coating, refer to "CAUTION" in "Subaru Rear Vehicle Detection (DIAGNOSTICS)". <Ref. to RVD(diag)-4, CAUTION, General Description.>

(A) Radar sensor

53. DIAGNOSTIC TROUBLE CODE (DTC) CHECK

Read the diagnostic trouble code and check that the diagnostic trouble code is not detected.

If any diagnostic trouble code is detected, clear all.

1) Read Diagnostic Trouble Code

NOTE:

For detailed operation procedures, refer to "Application help".

2) Clear Memory Mode

NOTE:

For detailed operation procedures, refer to "Application help".

54. BRAKE TEST

Check the foot brake for normal operations.

55. PARKING BRAKE

Check the parking brake for normal operations. When pulling the parking brake lever with a force of 200 N (20 kgf, 45 lb), check that the lever stroke of parking brake lever is 7 to 8 notches.

56. SHIFT CONTROL

• CVT model

- 1) Turn the ignition switch to ON.
- 2) While brake pedal is not depressed, check if the select lever does not move from "P" range.
- 3) While brake pedal is depressed, check if the select lever moves from "P" range.
- 4) Set the select lever to other than "P" range.
- 5) When the ignition switch is turned to OFF, check if the ignition key switch cannot be removed.
- 6) Set the selector lever to each gear position and check the shifting while driving the vehicle. Operate the paddle shift at manual mode and check the shifting while driving the vehicle.

Selector position	Gear position					
	1st	2nd	3rd	4th	5th	6th
D	Continuously variable speed change					
Manual mode	OK	OK	OK	OK	OK	OK

- 7) Set the select lever to other than "P" range. (Models without the keyless access with push button start)
- 8) When the ignition switch is turned to OFF, check if the ignition key switch cannot be removed. (Models without the keyless access with push button start)

• MT model

Check for smooth operation to each position.

57. CRUISE CONTROL

Operate the cruise control system. Check that the system is activated and deactivated correctly. (In the delivery mode, the cruise control does not operate, even when the cruise control switch is pressed.)

58. SUBARU EyeSight

- Operate the EyeSight system. Check that the system is activated and deactivated correctly.
- Check the stereo camera cover opening for foreign matter.
- Check the glass in front of stereo camera for dirt and stickers.
- Check the lens and filter of the stereo camera for dirt such as fingerprints.
- Check the filter at lens portion of stereo camera for damage.
- According to the "PC" section, check the windshield glass and dashboard in front of stereo camera to make sure that no aftermarket part is adhered or attached in the prohibited area. <Ref. to PC-7, CHECK WINDSHIELD GLASS INCLUDING PROHIBITED AREA FOR MODEL WITH EyeSight, CAUTION, Precaution.>
- When delivering the vehicle, explain to the customer to make sure not to touch the filter at lens portion of the stereo camera.

59. POWER STEERING SYSTEM (ELECTRIC POWER STEERING MODEL)

Check that the electric power steering warning light illuminates after the ignition switch is turned ON, and goes off after the engine is started.

60. FLUID LEAKAGE

Check entire areas of the vehicle for any trace of engine coolant/engine oil/transmission fluid leaks.

Pre-delivery Inspection

PRE-DELIVERY INSPECTION

61. WATER LEAK TEST

Spray the vehicle with water using a hose and check that no water enters the passenger compartment.

- Before performing the water leakage test, remove anything that may obstruct the operation or which must be kept dry.
- Close all the windows and doors securely. Close the front hood and rear gate before starting the test.
- Connect a hose to a tap, and spray water on the vehicle. The rate of water spray must be approx. 20 to 25 L (5.3 — 6.6 US gal, 4.4 — 5.5 Imp gal) per minute.

When spraying water on areas adjacent to the floor and wheel house, increase the pressure. When spraying water on areas other than the floor and wheel house, decrease the pressure. But the force of water must be made strong occasionally by pressing the end of the hose.

NOTE:

Be sure to keep the hose at least 10 cm (3.9 in) away from vehicle.

Check the following areas.

- Front window and body framework mating portion
- Door mating portions
- Glass mating portions
- Rear quarter window mating portions
- Rear window and body framework mating portion
- Around roof drips

If any dampness in the compartments is discovered after the water has been applied, carefully check all the areas that may have possibly contributed to the leak.

62. APPEARANCE 2

1) If protective coating (wrap guard) is applied, remove it.

NOTE:

- When removing the wrap guard, using steam will make it easier to remove.
- Vehicle left for an extended period or at low temperatures, spray the vehicle with water heated 50 — 60°C (122 — 140°F) to raise the surface temperature before peeling off the wrap guard. Do not use the water heated to over 60°C (140°F).
- If the adhesive remains exist on the coated surface, soak a flannel rag, etc. with a small amount of coating wax or solvent such as oil benzene and IPA, put the soaked cloth on the remains lightly, and then wipe them off with a flannel rag etc.

- Keep solvent from touching the resin or rubber parts. Do not use coating wax or solvents while the component surface temperature is hot due to hot weather etc.

- If the coated surface is swollen out due to seams or moisture, expose the vehicle to the sunlight for a few hours or heat the seam and swollen portions using a dryer etc.

- Dispose of the peeled wrap guard as burnable industrial garbage.

2) Check the whole vehicle body for flaking paint, damage by transportation, corrosion, dirt, cracks or blisters.

NOTE:

- It is better to determine an inspection pattern in order to avoid missing an area, since the total inspection area is wide.

- Do not repair the body paint unless absolutely necessary. Also, if the vehicle is in need of repair to remove scratches or corroded paint, the repair area must be limited to the minimum. Re-painting and spray painting must be avoided as much as possible.

3) Check each window glass for scratches carefully. Slight damage may be removed by polishing with cerium oxide. (Fill a cup half with cerium oxide, and add warm water to it. Then agitate the content until it turns to wax. Apply this wax to a soft cloth, and polish the glass with it.)

4) Check each portion of the vehicle body and underside components for the formation of rust. If rust is discovered, remove it with sandpaper of #80 to #180 and treat the surface with rust preventive. After this treatment is completed, flush the portion thoroughly, and prepare the surface for repair painting.

5) Check each portion of body and all of the exterior parts for deformation or distortion. Also, check each light lens for cracks.

6) Peel the protective tape, vinyl wrapping and identification seal attached to the following places.

- Seat
- Door trim
- Floor carpet
- Side sill
- Rear shelf
- Aluminum pedal
- Rear wiper
- Door mirror
- Handle - door outer
- Cover - handle outer
- Fuel opener lever

General Description

PERIODIC MAINTENANCE SERVICES

1. General Description

A: GENERAL DESCRIPTION

Be sure to perform periodic maintenance in order to maintain vehicle performance and find problems before they occur.

Schedule

PERIODIC MAINTENANCE SERVICES

2. Schedule

A: MAINTENANCE SCHEDULE

1. MODEL WITH US SPECIFICATION

Maintenance item	Maintenance interval [Number of months or km (miles), whichever occurs first]													Remarks	
	Months	3	6	12	18	24	30	36	42	48	54	60	66		To be continued to the next table.
	× 1,000 km	4.8	9.6	19.2	28.8	38.4	48	57.6	67.2	76.8	86.4	96	105.6		
	× 1,000 miles	3	6	12	18	24	30	36	42	48	54	60	66		
1	Engine oil		R	R	R	R	R	R	R	R	R	R	R		Note 1.
2	Engine oil filter		R	R	R	R	R	R	R	R	R	R	R		Note 1.
3	Spark plug											R

23	A/C filter	Replace every 12 months or 19,200 km (12,000 miles)												Note 8.

Symbol

R: Replace

I: Inspection

P: Perform

NOTE:

1. When the vehicle is used under severe conditions, replace the engine oil and engine oil filter every 3 months or 4,800 km (3,000 miles).

2. When the vehicle is used under extremely low or high temperature conditions, the fuel filter may become dirty. Therefore, it should be replaced frequently.

3. When the vehicle is used under severe conditions, replace every 15 months or 24,000 km (15,000 miles).

4. When the vehicle is used under severe conditions, replace CVTF every 40,000 km (24,855 miles).

5. When the vehicle is used in high humidity area or mountain area, replace the brake fluid every 15 months or 24,000 km (15,000 miles).

6. When the vehicle is used under severe conditions, replace every 6 months or 9,600 km (6,000 miles).

7. This inspection is not required to maintain emission warranty eligibility and it does not affect the manufacturer's obligations under EPA's in-use compliance program.

8. When the vehicle is used under extremely dusty conditions, the air cleaner element and A/C filter should be replaced more often.

9. A tire should be replaced when the tread wear indicator appears as a solid band across the tread. The indicators appear when the remaining tread has been worn to 1.6 mm (0.063 in) or less.

10. To prevent cooling system leakage, be sure to add SUBARU genuine cooling system conditioner when replacing coolant.

Examples of severe conditions

- a. Drive repeatedly at short distance. (Maintenance items 1 and 2)
- b. Drive repeatedly on bumpy muddy road. (Maintenance items 14, 15 and 17)
- c. Drive repeatedly in dusty conditions. (Maintenance items 7 and 23)
- d. Drive in extremely cold weather. (Maintenance items 1, 2, 16, 18, 20 and 22)
- e. Area where salt or other corrosive used. (Maintenance items 5, 14, 15, 16, 17 and 20)
- f. Coastal area. (Maintenance item 5)
- g. Repeat towing trailer. (Maintenance items 1, 2, 11, 12, 13, 14, 15, 16, 17, 18, 20 and 22)

Engine Oil

PERIODIC MAINTENANCE SERVICES

3. Engine Oil

A: INSPECTION

Refer to “LU” section for engine oil inspection.
<Ref. to LU(H4DO)-10, INSPECTION, Engine Oil.>

B: REPLACEMENT

Refer to “LU” section for engine oil replacement.
<Ref. to LU(H4DO)-11, REPLACEMENT, Engine Oil.>

4. Engine Oil Filter

A: REPLACEMENT

Refer to “LU” section for engine oil filter replacement. <Ref. to LU(H4DO)-25, Engine Oil Filter.>

5. Spark Plug

A: REPLACEMENT

Refer to "IG" section for spark plug replacement.
<Ref. to IG(H4DO)-4, Spark Plug.>

6. V-belt

A: INSPECTION

Refer to "ME" section for V-belt inspection. <Ref. to ME(H4DO)-83, V-belt.>

B: REPLACEMENT

Refer to "ME" section for V-belt replacement. <Ref. to ME(H4DO)-83, V-belt.>

7. Fuel Line

A: INSPECTION

The fuel line is located mostly internally, so check pipes, areas near pipes, and engine compartment piping for rust, hose and tube damage, loose band, etc. If faulty parts are found, repair or replace them. <Ref. to FU(H4DO)-171, INSPECTION, Fuel Delivery and Evaporation Lines.>

8. Fuel Filter

A: REPLACEMENT

For fuel filter replacement procedure, refer to “FU” section. <Ref. to FU(H4DO)-154, Fuel Filter.>

B: INSPECTION

Replace if the filter is clogged, or time for replacement has come.

9. Air Cleaner Element

A: REPLACEMENT

Refer to "IN" section for air cleaner element replacement. <Ref. to IN(H4DO)-4, Air Cleaner Element.>

10. Cooling System

A: INSPECTION

1. RADIATOR

Check that there are no engine coolant leaks from the hose connections. Refer to “CO” section for radiator inspection. <Ref. to CO(H4DO)-59, INSPECTION, Radiator.>

2. RADIATOR CAP

Refer to “CO” section for radiator cap inspection. <Ref. to CO(H4DO)-60, INSPECTION, Radiator Cap.>

3. COOLING FAN

Refer to “CO” section for cooling fan inspection. <Ref. to CO(H4DO)-9, INSPECTION, Radiator Fan System.>

4. COOLING SYSTEM

Start the engine, and then inspect that it does not overheat or it is not cooled excessively. If it overheats or it is cooled excessively, check the cooling system.

11.Engine Coolant

A: INSPECTION

CAUTION:

- Do not use water instead of coolant.
- Refer to “RM” section for the recommended engine coolant. <Ref. to RM-3, ENGINE COOLANT, RECOMMENDED MATERIALS, Recommended Materials.>

- 1) Park the vehicle on a level surface.
- 2) Make sure the engine coolant level in the reservoir tank is between “FULL” and “LOW” when the engine is cold.

NOTE:

If the engine coolant level drops, make sure that there are no engine coolant leakage, and add engine coolant to the “FULL” line.

- 3) Remove the radiator cap and make sure that the radiator is filled with engine coolant up to the filler neck position.

B: REPLACEMENT

Refer to “CO” section for engine coolant replacement. <Ref. to CO(H4DO)-13, REPLACEMENT, Engine Coolant.>

12.Clutch System

A: INSPECTION AND ADJUSTMENT

Refer to “CL” section for inspection and adjustment of clutch system. <Ref. to CL-27, INSPECTION, Clutch Pedal.> <Ref. to CL-28, ADJUSTMENT, Clutch Pedal.>

Transmission Gear Oil

PERIODIC MAINTENANCE SERVICES

13. Transmission Gear Oil

A: INSPECTION

Refer to “5MT” section for transmission gear oil inspection. <Ref. to 5MT-21, INSPECTION, Transmission Gear Oil.>

B: REPLACEMENT

Refer to “5MT” section for transmission gear oil replacement. <Ref. to 5MT-21, REPLACEMENT, Transmission Gear Oil.>

14.CVTF**A: INSPECTION**

Refer to “CVT (TR580)” section for CVTF inspection. <Ref. to CVT(TR580)-37, INSPECTION, CVTF.>

B: REPLACEMENT

Refer to “CVT (TR580)” section for CVTF replacement. <Ref. to CVT(TR580)-38, REPLACEMENT, CVTF.>

Front & Rear Differential Gear Oil

PERIODIC MAINTENANCE SERVICES

15. Front & Rear Differential Gear Oil

A: INSPECTION

1. FRONT DIFFERENTIAL (MT MODEL)

Front differential gear oil of MT model lubricates the transmission and differential together. Refer to “Transmission Gear Oil” for inspection procedures. <Ref. to 5MT-21, INSPECTION, Transmission Gear Oil.>

2. FRONT DIFFERENTIAL (CVT MODEL)

Refer to “CVT (TR580)” section for inspection of CVT model front differential gear oil. <Ref. to CVT(TR580)-41, INSPECTION, Differential Gear Oil.>

3. REAR DIFFERENTIAL

Refer to “DI” section for rear differential gear oil inspection. <Ref. to DI-19, INSPECTION, Differential Gear Oil.>

B: REPLACEMENT

1. FRONT DIFFERENTIAL (MT MODEL)

Front differential gear oil of MT model lubricates the transmission and differential together. Refer to “5MT” section for replacement procedure. <Ref. to 5MT-21, REPLACEMENT, Transmission Gear Oil.>

2. FRONT DIFFERENTIAL (CVT MODEL)

Refer to “CVT (TR580)” section for front differential gear oil replacement. <Ref. to CVT(TR580)-43, REPLACEMENT, Differential Gear Oil.>

3. REAR DIFFERENTIAL

Refer to “DI” section for rear differential gear oil replacement. <Ref. to DI-19, REPLACEMENT, Differential Gear Oil.>

16. Brake Line

A: INSPECTION

1. BRAKE LINE

- 1) Check for scratches, swelling, corrosion, traces of fluid leakage on the brake hoses or pipe joints.
- 2) Make sure that brake pipes/hoses do not interfere with adjacent parts and there is no loose connector/clamp during driving.
- 3) Check any trace of fluid leakage, scratches, etc. on master cylinder, wheel cylinder and hydraulic unit.

NOTE:

- When the brake fluid level in the reservoir tank is lower than specified limit, the brake warning light on the combination meter will illuminate.
- Visually check the brake hose for damage. (Use a mirror where it is difficult to see)

- (1) Front brake hose
- (2) Front brake pipe
- (3) Clamp

- (1) Brake pipe
- (2) Rear brake hose
- (3) Clamp

2. SERVICE BRAKE

Refer to "BR" section for foot brake inspection.
<Ref. to BR-70, INSPECTION, Brake Pedal.>

3. BRAKE SERVO SYSTEM

- 1) With the engine off, depress the brake pedal several times applying the same pedal force. Check that the travel distance should not change.
- 2) With the brake pedal depressed, start the engine. Check that the pedal moves slightly toward the floor.
- 3) With the brake pedal depressed, stop the engine and keep the pedal depressed for 30 seconds. Check that the pedal height does not change.
- 4) A check valve is built into the brake booster nipple. Disconnect the vacuum hose to inspect function of check valve.

Check that check valve ventilates from booster side to engine side. Also, check that there is no ventilation from engine side to booster side.

- (A) Brake booster
- (B) Check valve
- (C) Engine side
- (D) Vacuum hose

- 5) Check the vacuum hose for cracks or other damage.

CAUTION:

When installing the vacuum hose on the engine and brake booster, do not use soapy water or lubricating oil on their connections.

- 6) Check that the vacuum hose is securely tightened.

17.Brake Fluid

A: INSPECTION

Refer to “BR” section for brake fluid inspection.
<Ref. to BR-57, INSPECTION, Brake Fluid.>

B: REPLACEMENT

Refer to “BR” section for brake fluid replacement.
<Ref. to BR-58, REPLACEMENT, Brake Fluid.>

18.Disc Brake Pad and Disc

A: INSPECTION

Refer to “BR” section for disc brake pad and disc inspection. <Ref. to BR-18, INSPECTION, Front Brake Pad.> <Ref. to BR-32, INSPECTION, Rear Brake Pad.> <Ref. to BR-20, INSPECTION, Front Disc Rotor.> <Ref. to BR-36, INSPECTION, Rear Disc Rotor.>

Parking Brake

PERIODIC MAINTENANCE SERVICES

19. Parking Brake

A: INSPECTION

Refer to "PB" section for parking brake inspection.
<Ref. to PB-16, INSPECTION, Parking Brake Assembly (Rear Disc Brake).>

B: ADJUSTMENT

Refer to "PB" section for parking brake adjustment.
<Ref. to PB-16, ADJUSTMENT, Parking Brake Assembly (Rear Disc Brake).>

20. Suspension

A: INSPECTION

1. FRONT SUSPENSION BALL JOINT

- 1) Lift up the vehicle until front wheels are off ground.
- 2) Grasp the bottom of tire and move it in and out in axial direction. If movement (B) is observed between the brake disc cover (A) and end of front arm (D), ball joint (C) may be excessively worn.

- 3) Next, grasp the end of front arm (C) and move it up and down. If movement (A) between the housing (D) and front arm (C) boss is observed, ball joint (B) may be excessively worn.

- 4) If the relative movement is observed in the preceding two steps, remove and inspect the ball joint. If the free play exceeds standard value, replace the ball joint. <Ref. to FS-27, Front Ball Joint.>
- 5) Damage of dust boot
Visually inspect the ball joint dust boot. Replace if ball joint is damaged.

NOTE:

When the front arm ball joint is removed or replaced, check the toe-in of front wheel. If it is not within the specified value, adjust the toe-in. <Ref. to FS-7, Wheel Alignment.>

(A) Dust boot

2. REAR SUSPENSION BALL JOINT

- 1) Lift up the vehicle until rear wheels are off ground.
- 2) Grasp the bottom of tire and move it in and out in axial direction.
- 3) If movement is observed between the brake disc cover (A) and end of front lateral link (B), ball joint may be excessively worn.

- 4) Grasp the end of front lateral link (B) and move it up and down. If movement is observed between the housing (C) and front lateral link (B) boss, ball joint may be excessively worn.

- 5) If the movement related to the previous two steps is observed, replace the front lateral link. <Ref. to RS-24, Front Lateral Link.>

Suspension

PERIODIC MAINTENANCE SERVICES

6) Damage of dust boots

Visually inspect the ball joint dust boots. Replace if front lateral link is damaged.

7) Check the upper arm ball joint (D) and the pillow ball bushing (E) of housing in the same manner.

3. FRONT, REAR SUSPENSION BUSHING

Apply pressure with tire lever etc, and inspect the bushing for excessive wear or damage. If defective, replace the bushing.

- Front suspension bushing

- Rear suspension bushing

4. WHEEL ARCH HEIGHT

Refer to “FS” section for wheel arch height inspection. <Ref. to FS-8, WHEEL ARCH HEIGHT, INSPECTION, Wheel Alignment.>

5. WHEEL ALIGNMENT

Measure and adjust the front and rear wheel alignment at a time. Refer to “FS” section for measurement and adjustment of wheel alignment. <Ref. to FS-7, INSPECTION, Wheel Alignment.>

6. OIL LEAKAGE OF STRUT AND SHOCK ABSORBER

Visually inspect the front strut and rear shock absorber for oil leakage. Replace the front strut and rear shock absorber if oil leaks excessively.

7. TIGHTNESS OF BOLTS AND NUTS

Check the bolts and nuts for looseness. Retighten the bolts and nuts to specified torque. If the self-locking nuts and bolts are removed, replace them with new parts. <Ref. to FS-2, General Description.> <Ref. to RS-2, General Description.>

8. DAMAGE TO SUSPENSION PARTS

Check the following parts and the fastening portion of the vehicle body for deformation or excessive rusting which impairs the suspension. Thoroughly remove the deposits of the lower spring seat of strut where dust or mud are likely piled up. If necessary, replace the damaged parts with new parts. If minor rust formation, pitting, etc. are noted, remove the rust and take rust prevention measure.

- Front suspension
 - Front arm
 - Crossmember
 - Strut
- Rear suspension
 - Sub frame
 - Front lateral link
 - Rear lateral link
 - Upper arm
 - Trailing link
 - Shock absorber
- In the area where salt is sprayed to melt snow on a road in winter, check suspension parts for damage caused by rust every 12 months after lapse of 60 months. Take rust prevention measures as required.

Wheel Bearing

PERIODIC MAINTENANCE SERVICES

21. Wheel Bearing

A: INSPECTION

1. FRONT WHEEL BEARING

NOTE:

Inspect the condition of front wheel bearing grease.

- 1) Jack-up the front side of vehicle.
- 2) While holding the front wheel by hand, swing it in and out to check bearing free play.
- 3) Loosen the wheel nuts, and remove the front wheel.
- 4) If the bearing free play exists in step 2) above, attach a dial gauge to the hub and measure axial play in axial direction.

Service limit:

***Straight-ahead position within 0.05 mm
(0.0020 in)***

- 5) Remove the bolts and self-locking nuts, and extract the front arm from front crossmember.
 - 6) Remove the joint of front drive shaft from transmission. <Ref. to DS-17, Front Axle.>
 - 7) While supporting the front drive shaft horizontally with one hand, turn the hub with the other hand to check for noise or binding.
- If the hub is noisy or binds, replace the front axle.

2. REAR WHEEL BEARING

- 1) Jack-up the rear side of vehicle.
- 2) While holding the rear wheel by hand, swing it in and out to check bearing free play.
- 3) Loosen the wheel nuts, and remove the rear wheel.
- 4) If the bearing free play exists in step 2) above, attach a dial gauge to the hub and measure axial play in axial direction.

Service limit:

***Straight-ahead position within 0.05 mm
(0.0020 in)***

- 5) Remove the joint of rear drive shaft from rear differential. <Ref. to DS-62, Rear Drive Shaft.>
 - 6) While supporting rear drive shaft horizontally with one hand, turn the hub with the other hand to check for noise or binding.
- If the hub is noisy or binds, replace the rear axle.

22. Axle Boots & Joints

A: INSPECTION

1. FRONT AND REAR AXLE BOOTS

Inspect the front axle boots (A) and rear axle boots (B) for deformation, damage or failure. If faulty, replace with new part. <Ref. to DS-52, Front Drive Shaft.> <Ref. to DS-62, Rear Drive Shaft.>

- Front

- Rear

2. PROPELLER SHAFT

Inspect the propeller shaft for damage or failure. If faulty, replace with new part. <Ref. to DS-11, Propeller Shaft.>

Tire Inspection and Rotation

PERIODIC MAINTENANCE SERVICES

23. Tire Inspection and Rotation

A: INSPECTION

Refer to “WT” section for tire inspection and rotation. <Ref. to WT-5, TIRE ROTATION, INSPECTION, Tire and Wheel.>

24. Steering System (Power Steering)

A: INSPECTION

1. STEERING WHEEL

1) Set the steering wheel in a straight-ahead position, and check the wheel spokes to make sure they are correctly set in their specified positions.

2) Lightly turn the steering wheel to the left and right to determine the point where front wheels start to move.

Measure the distance of the movement of steering wheel (periphery).

Steering wheel free play:

0 — 17 mm (0 — 0.67 in)

(1) Steering wheel free play

Move the steering wheel toward the shaft to check if there is play in the direction.

Play limit:

0.5 mm (0.020 in)

3) Drive the vehicle and check the following items.

(1) Steering force:

The effort required for steering should be smooth and even at all points, and should not vary.

(2) Pulled to one side:

Steering wheel should not be pulled to one side while driving on a level surface.

(3) Wheel runout:

Steering wheel should not show any sign of runout.

(4) Return status:

Steering wheel should return to its original position after it has been turned and then released.

2. STEERING SHAFT JOINT

When the steering wheel free play is excessive, disconnect the universal joint of steering shaft and check it for any play and yawing torque (at the point of the crossing direction). Also inspect for any damage to sealing or worn serrations. If the joint is loose, retighten the mounting bolts to the specified torque. <Ref. to PS-13, Universal Joint.>

Tightening torque:

24 N·m (2.4 kgf-m, 17.4 ft-lb)

3. GEARBOX

1) Set the steering wheel in the straight position, then rotate it 90° in both the left and right directions. While steering wheel is being rotated, check the looseness of the gearbox.

Tightening torque:

60 N·m (6.1 kgf-m, 44.3 ft-lb)

2) Check the boot for damage, cracks or deterioration.

3) With the vehicle stopped on a level surface, quickly turn the steering wheel to the left and right. While steering wheel is being rotated, check the gear backlash. If any noise is noticed, adjust the gear backlash. <Ref. to PS-34, GEARBOX BACKLASH ADJUSTMENT, ADJUSTMENT, Electric Power Steering Gearbox.>

Steering System (Power Steering)

PERIODIC MAINTENANCE SERVICES

4. TIE-ROD

1) Check the tie-rod and tie-rod ends for bends, scratches or other damage.

- (A) Tie-rod end
- (B) Tie-rod

2) Confirm that the connections of knuckle ball joints for play, and then check for damage on dust boots and free play of ball studs. If castle nut is loose, retighten it to the specified torque, then tighten further up to a maximum of 60° until the cotter pin hole is aligned.

Tightening torque:

27 N·m (2.75 kgf·m, 19.9 ft·lb)

3) Check the lock nut on the tie-rod end for tightness. If it is loose, retighten it to the specified torque.

Tightening torque:

85 N·m (8.7 kgf·m, 62.7 ft·lb)

5. GEARBOX BOOTS

Inspect both sides of the gearbox boot as follows, and correct the defects if necessary.

1) The (A) and (B) positions of the gearbox boot are fitted in (A) and (C) grooves of gearbox and the rod.

2) Clips are fitted onto the boot grooves to the positions (A) and (B) of the boot.

3) Check that there is no cracks or holes in the boot.

NOTE:

Rotate (B) position of gearbox boot against the torsion produced by the adjustment of toe-in etc. Apply grease to the groove (C).

25.A/C Filter

A: REPLACEMENT

Refer to "AC" section for A/C filter replacement.
<Ref. to AC-91, REPLACEMENT, A/C Filter.>

A/C Filter

PERIODIC MAINTENANCE SERVICES

ENGINE SECTION

This service manual has been prepared to provide SUBARU service personnel with the necessary information and data for the correct maintenance and repair of SUBARU vehicles.

This manual includes the procedures for maintenance, disassembling, reassembling, inspection and adjustment of components and diagnostics for guidance of experienced mechanics.

Please peruse and utilize this manual fully to ensure complete repair work for satisfying our customers by keeping their vehicle in optimum condition. When replacement of parts during repair work is needed, be sure to use SUBARU genuine parts.

All information, illustration and specifications contained in this manual are based on the latest product information available at the time of publication approval.

General Description

FUEL INJECTION (FUEL SYSTEMS)

1. General Description

A: SPECIFICATION

Fuel tank	Capacity	60 L (15.9 US gal, 13.2 Imp gal)
	Location	Under rear seat
Fuel pump	Type	Impeller
	Shutoff discharge pressure	750 kPa (7.7 kg/cm ² , 108.8 psi) or less
	Discharge rate	82 L (21.7 US gal, 18 Imp gal)/h or more [12.5 V at 343 kPa (3.5 kg/cm ² , 49.7 psi)]
Fuel filter		In-tank type

| (4) Back-up ring | (9) Spacer | (14) Fuel level sensor |
| (5) Pressure regulator | (10) Fuel pump | (15) Cushion |

* When removing the cushion from the fuel chamber assembly, replace it with a new part.

C: CAUTION

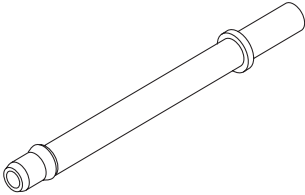

- Prior to starting work, pay special attention to the following:
 1. Always wear work clothes, a work cap, and protective shoes. Additionally, wear a helmet, protective goggles, etc. if necessary.
 2. Protect the vehicle using a seat cover, fender cover, etc.
 3. Prepare the service tools, clean cloth, containers to catch grease and oil, etc.
- Place “NO OPEN FLAMES” signs near the working area.
- Prepare a container and cloth to prevent scattering of fuels when performing work where fuels can be spilled. If the oil spills, wipe it off immediately to prevent from penetrating into floor or flowing out for environmental protection.
- Vehicle components are extremely hot immediately after driving. Be wary of receiving burns from heated parts.
- When performing a repair, identify the cause of trouble and avoid unnecessary removal, disassembly and replacement.
- Before disconnecting connectors of sensors or units, be sure to disconnect the ground cable from battery.
- Always use the jack-up point when the shop jacks or rigid racks are used to support the vehicle.
- Remove contamination including dirt and corrosion before removal, installation, disassembly or assembly.
- Keep the removed parts in order and protect them from dust and dirt.
- All removed parts, if to be reused, should be reinstalled in the original positions with attention to the correct directions, etc.
- Bolts, nuts and washers should be replaced with new parts as required.
- Always inspect for fuel leaks after removing/installing the fuel system components.
- Follow all government and local regulations concerning disposal of refuse when disposing fuel.
- Always use new application oil during work.

General Description

FUEL INJECTION (FUEL SYSTEMS)

D: PREPARATION TOOL

1. SPECIAL TOOL

ILLUSTRATION	TOOL NUMBER	DESCRIPTION	REMARKS
 <p style="text-align: center;">ST18471AA000</p>	18471AA000	FUEL PIPE ADAPTER	Used for draining fuel.
 <p style="text-align: center;">STSSM4</p>	—	SUBARU SELECT MONITOR 4	Used for setting of each function and troubleshooting for electrical system. NOTE: For detailed operation procedures of Subaru Select Monitor 4, refer to "Application help".

2. GENERAL TOOL

TOOL NAME	REMARKS
Circuit tester	Used for measuring resistance, voltage and current.
Oscilloscope	Used for inspecting the waveform of each sensor.
Mighty Vac	Used for inspecting the manifold absolute pressure sensor.
DST-i	Used together with Subaru Select Monitor 4.

2. Throttle Body

A: REMOVAL

- 1) Disconnect the ground cable from battery.

- 2) Lift up the vehicle.
- 3) Remove the under cover. <Ref. to EI-22, REMOVAL, Front Under Cover.>
- 4) Drain approximately 3.0 L (3.2 US qt, 2.6 Imp qt) of coolant. <Ref. to CO(H4DO)-13, DRAINING OF ENGINE COOLANT, REPLACEMENT, Engine Coolant.>
- 5) Remove the clip (A), and loosen the clamps (B) and (C) securing the air intake boot.

Throttle Body

FUEL INJECTION (FUEL SYSTEMS)

6) Remove the air intake boot from the air cleaner case (rear) and throttle body, and move the air intake boot aside so that it does not interfere with the work.

7) Disconnect the connectors (A) from the throttle position sensor.

8) Disconnect the preheater hose (B) from the throttle body.

9) Remove the throttle body from the intake manifold.

B: INSTALLATION

Install in the reverse order of removal.

NOTE:

Use a new gasket.

Tightening torque:

8 N·m (0.8 kgf·m, 5.9 ft·lb)

C: INSPECTION

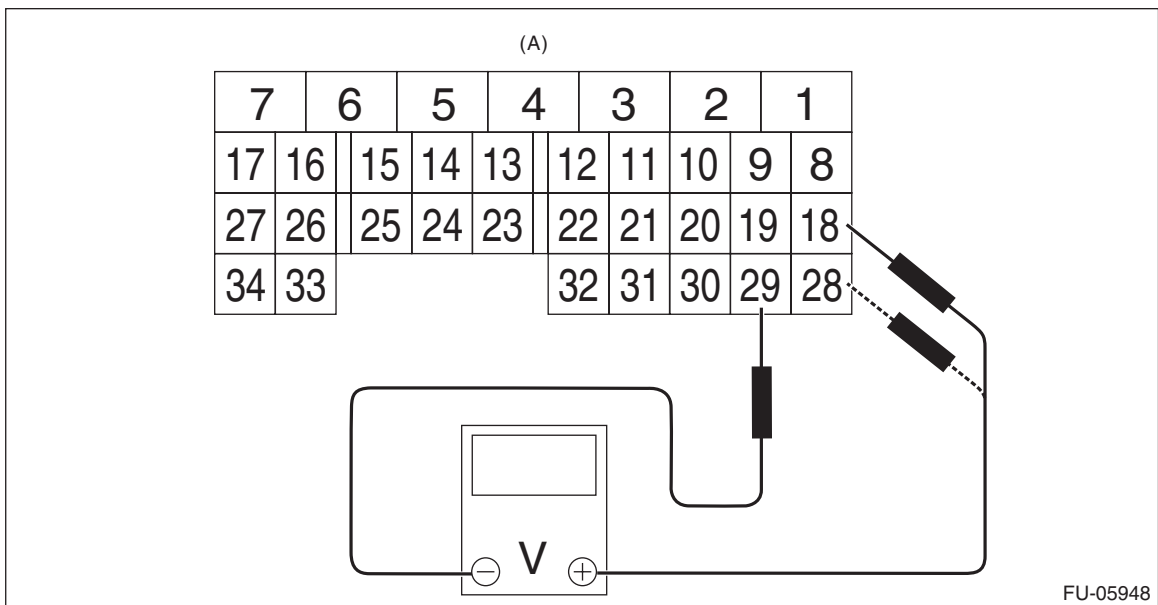

1. THROTTLE SENSOR (METHOD WITH CIRCUIT TESTER)

- 1) Remove the glove box. <Ref. to EI-56, REMOVAL, Glove Box.>
- 2) Turn the ignition switch to ON. (engine OFF)
- 3) Measure the voltage between ECM connector terminals.

Throttle Body

FUEL INJECTION (FUEL SYSTEMS)

(A) To ECM connector

Throttle sensor	Accelerator pedal	Terminal No.	Standard
Main	Not depressed (full closed)	18 (+) and 29 (-)	Approx. 0.6 V
	Depressed (full opened)		Approx. 4.0 V
Sub	Not depressed (full closed)	28 (+) and 29 (-)	Approx. 1.5 V
	Depressed (full opened)		Approx. 4.2 V

4) After inspection, install the related parts in the reverse order of removal.

2. THROTTLE SENSOR (METHOD WITH SUBARU SELECT MONITOR)

1) Turn the ignition switch to ON. (engine OFF)

2) Read the throttle opening angle signal and voltage of throttle sensor using Subaru Select Monitor. <Ref. to EN(H4DO)(diag)-36, DISPLAY ENGINE CURRENT DATA, OPERATION, Subaru Select Monitor.>

Throttle sensor	Throttle opening angle signal	Standard
Main	0.0%	Approx. 0.6 V
	100.0%	Approx. 4.0 V
Sub	0.0%	Approx. 1.5 V
	100.0%	Approx. 4.2 V

3. OTHER INSPECTIONS

- 1) Check that the throttle body has no deformation, cracks or other damages.
- 2) Check that the preheater hose has no cracks, damage or loose part.

3. Intake Manifold

A: REMOVAL

- 1) Release the fuel pressure. <Ref. to FU(H4DO)-107, RELEASING OF FUEL PRESSURE, PROCEDURE, Fuel.>
- 2) Disconnect the ground cable from battery.

- 3) Open the fuel filler lid and remove the fuel filler cap.

NOTE:

This operation is required to release the inner pressure of the fuel tank.

- 4) Lift up the vehicle.
- 5) Remove the under cover. <Ref. to EI-22, REMOVAL, Front Under Cover.>
- 6) Drain approximately 3.0 L (3.2 US qt, 2.6 Imp qt) of coolant. <Ref. to CO(H4DO)-13, DRAINING OF ENGINE COOLANT, REPLACEMENT, Engine Coolant.>
- 7) Remove the clip (A), and loosen the clamps (B) and (C) securing the air intake boot.

Intake Manifold

FUEL INJECTION (FUEL SYSTEMS)

8) Remove the air intake boot from the air cleaner case (rear) and throttle body, and move the air intake boot aside so that it does not interfere with the work.

9) Disconnect the preheater hose from throttle body.

Intake Manifold

FUEL INJECTION (FUEL SYSTEMS)

- 10) Disconnect the connector (A) from the purge control solenoid valve.
- 11) Loosen the bolt (B) which secures the EGR pipe to the intake manifold.
- 12) Remove the nut (C) which holds EGR pipe from the water pipe assembly.

- 13) Disconnect the PCV hose (A) from intake manifold.
- 14) Disconnect the connector (B) from manifold absolute pressure sensor.
- 15) Disconnect the connector (C) from the throttle position sensor.

Intake Manifold

FUEL INJECTION (FUEL SYSTEMS)

16) Disconnect the brake booster vacuum hose from the intake manifold.

17) Disconnect the connector from the mass air flow and intake air temperature sensor, and remove the clip (A) securing the bulkhead wiring harness.

Intake Manifold

- 18) Remove the air cleaner case (rear) together with the air cleaner element.

- 19) Remove the intake manifold protector RH.

Intake Manifold

FUEL INJECTION (FUEL SYSTEMS)

20) Disconnect the fuel delivery pipe from the fuel pipe RH.

CAUTION:

- Be careful not to spill fuel.
- Catch the fuel from the pipes using a container or cloth.

NOTE:

Disconnect the quick connector as shown in the figure.

(a) Slider

21) Remove the intake manifold protector LH.

22) Disconnect the fuel delivery pipe from the fuel pipe LH.

CAUTION:

- Be careful not to spill fuel.
- Catch the fuel from the pipes using a container or cloth.

NOTE:

Disconnect the quick connector as shown in the figure.

(a) Slider

Intake Manifold

FUEL INJECTION (FUEL SYSTEMS)

23) Disconnect the fuel delivery tube and evaporation hose.

CAUTION:

- **Be careful not to spill fuel.**
- **Catch the fuel from the tubes using a container or cloth.**

(1) Disconnect the quick connector on the fuel delivery tube from the fuel pipe assembly, and remove the clip (A) securing the fuel delivery tube.

NOTE:

Disconnect the quick connector as shown in the figure.

(a) Slider

Intake Manifold

(2) Disconnect the evaporation hose from the fuel pipe assembly.

Intake Manifold

FUEL INJECTION (FUEL SYSTEMS)

24) Remove the intake manifold from the tumble generator valve assembly.

25) Remove the engine wiring harness. <Ref. to FU(H4DO)-41, REMOVAL, Engine Wiring Harness.>

B: INSTALLATION

- 1) Install the engine wiring harness. <Ref. to FU(H4DO)-45, INSTALLATION, Engine Wiring Harness.>
- 2) Install the intake manifold to the tumble generator valve assembly.

NOTE:

Use a new gasket.

Tightening torque:

8.3 N·m (0.8 kgf·m, 6.1 ft·lb)

- 3) Connect the fuel delivery tube and evaporation hose.
 (1) Connect the evaporation hose to fuel pipe assembly.

- (2) Connect the quick connector of the fuel delivery tube to the fuel pipe assembly, and secure the fuel delivery tube using clip (A).

CAUTION:

- Check that there is no damage or dust on the quick connector. If necessary, clean the seal surface of the pipe.
- When connecting the quick connector, make sure to insert it all the way in before locking the slider.
- When it is difficult to lock the slider, check that the connector is fully inserted.
- After locking the slider, check again that the quick connector is securely connected.

NOTE:

Connect the quick connector as shown in the figure.

(a) Slider

Intake Manifold

FUEL INJECTION (FUEL SYSTEMS)

4) Connect the fuel delivery pipe to the fuel pipe LH.

CAUTION:

- Check that there is no damage or dust on the quick connector. If necessary, clean the seal surface of the pipe.
- When connecting the quick connector, make sure to insert it all the way in before locking the slider.
- When it is difficult to lock the slider, check that the connector is fully inserted.
- After locking the slider, check again that the quick connector is securely connected.

NOTE:

Connect the quick connector as shown in the figure.

(a) Slider

Intake Manifold

FUEL INJECTION (FUEL SYSTEMS)

5) Install the intake manifold protector LH.

Tightening torque:

6.4 N·m (0.7 kgf-m, 4.7 ft-lb)

Intake Manifold

FUEL INJECTION (FUEL SYSTEMS)

6) Connect the fuel delivery pipe to the fuel pipe RH.

CAUTION:

- Check that there is no damage or dust on the quick connector. If necessary, clean the seal surface of the pipe.
- When connecting the quick connector, make sure to insert it all the way in before locking the slider.
- When it is difficult to lock the slider, check that the connector is fully inserted.
- After locking the slider, check again that the quick connector is securely connected.

NOTE:

Connect the quick connector as shown in the figure.

(a) Slider

Intake Manifold

FUEL INJECTION (FUEL SYSTEMS)

7) Install the intake manifold protector RH.

Tightening torque:

6.4 N·m (0.7 kgf-m, 4.7 ft-lb)

8) Install the air cleaner case (rear) together with the air cleaner element. <Ref. to IN(H4DO)-9, INSTALLATION, Air Cleaner Case.>

9) Secure the bulkhead wiring harness with clip (A) and connect the connector to the mass air flow and intake air temperature sensor.

Intake Manifold

FUEL INJECTION (FUEL SYSTEMS)

10) Connect the brake booster vacuum hose to the intake manifold.

11) Connect the PCV hose (A) to intake manifold.

12) Connect the connector (B) to the manifold absolute pressure sensor.

13) Connect the connector (C) to the throttle position sensor.

Intake Manifold

FUEL INJECTION (FUEL SYSTEMS)

- 14) Connect the connector (A) to the purge control solenoid valve.
- 15) Tighten the nut (C) and bolt (B) which hold EGR pipe to the water pipe assembly.

NOTE:

- Use a new gasket.
- Always tighten the EGR pipe at (C) first, and then (B).

Tightening torque:

6.4 N·m (0.7 kgf·m, 4.7 ft·lb)

- 16) Install the preheater hose to the throttle body.

Intake Manifold

FUEL INJECTION (FUEL SYSTEMS)

- 17) Install the air intake boot. <Ref. to IN(H4DO)-12, INSTALLATION, Air Intake Boot.>
- 18) Lift up the vehicle.
- 19) Install the under cover. <Ref. to EI-22, INSTALLATION, Front Under Cover.>
- 20) Lower the vehicle.
- 21) Connect the battery ground terminal.

- 22) Fill engine coolant. <Ref. to CO(H4DO)-14, FILLING OF ENGINE COOLANT, REPLACEMENT, Engine Coolant.>

C: DISASSEMBLY

- 1) Remove the throttle body. <Ref. to FU(H4DO)-15, REMOVAL, Throttle Body.>
- 2) Remove the purge control solenoid valve. <Ref. to EC(H4DO)-18, REMOVAL, Purge Control Solenoid Valve.>
- 3) Remove the manifold absolute pressure sensor. <Ref. to FU(H4DO)-74, REMOVAL, Manifold Absolute Pressure Sensor.>
- 4) Remove the EGR pipe from intake manifold.

5) Remove the fuel delivery pipe from intake manifold.

NOTE:

Disconnect the quick connector as shown in the figure.

(a) Slider

Intake Manifold

FUEL INJECTION (FUEL SYSTEMS)

6) Remove the fuel pipe and cap from the intake manifold.

D: ASSEMBLY

1) Install the fuel pipe and cap to the intake manifold.

Tightening torque:

6.4 N·m (0.7 kgf-m, 4.7 ft-lb)

2) Install the fuel delivery pipe to the intake manifold.

CAUTION:

- Check that there is no damage or dust on the quick connector. If necessary, clean the seal surface of the pipe.
- When connecting the quick connector, make sure to insert it all the way in before locking the slider.
- When it is difficult to lock the slider, check that the connector is fully inserted.
- After locking the slider, check again that the quick connector is securely connected.

NOTE:

Connect the quick connector as shown in the figure.

(a) Slider

Intake Manifold

FUEL INJECTION (FUEL SYSTEMS)

3) Temporarily install the EGR pipe to the intake manifold.

NOTE:

- Use a new gasket.
- Tighten the EGR pipe when installing the intake manifold.

4) Install the manifold absolute pressure sensor. <Ref. to FU(H4DO)-74, INSTALLATION, Manifold Absolute Pressure Sensor.>

5) Install the purge control solenoid valve. <Ref. to EC(H4DO)-20, INSTALLATION, Purge Control Solenoid Valve.>

6) Install the throttle body. <Ref. to FU(H4DO)-17, INSTALLATION, Throttle Body.>

E: INSPECTION

- 1) Check that the intake manifold and fuel pipe have no deformation, cracks and other damages.
- 2) Check that the hose has no cracks, damage or loose part.

4. Engine Wiring Harness

A: REMOVAL

- 1) Release the fuel pressure. <Ref. to FU(H4DO)-107, RELEASING OF FUEL PRESSURE, PROCEDURE, Fuel.>
- 2) Disconnect the ground cable from battery.

- 3) Remove the intake manifold. <Ref. to FU(H4DO)-19, REMOVAL, Intake Manifold.>

Engine Wiring Harness

FUEL INJECTION (FUEL SYSTEMS)

- 4) Disconnect the connector from the engine.

Engine Wiring Harness

FUEL INJECTION (FUEL SYSTEMS)

2) Install the engine wiring harness.

Tightening torque:

6.4 N·m (0.7 kgf·m, 4.7 ft·lb)

3) Install the intake manifold. <Ref. to FU(H4DO)-28, INSTALLATION, Intake Manifold.>

4) Connect the battery ground terminal.

C: INSPECTION

Check that the engine wiring harness does not have deformation, cracks and any other damage.

5. Engine Coolant Temperature Sensor

A: REMOVAL

1) Disconnect the ground cable from battery.

2) Drain engine coolant. <Ref. to CO(H4DO)-13, DRAINING OF ENGINE COOLANT, REPLACEMENT, Engine Coolant.>

3) Disconnect the connector (A) from the engine coolant temperature sensor, and remove the engine coolant temperature sensor.

B: INSTALLATION

Install in the reverse order of removal.

NOTE:

Use a new gasket.

Tightening torque:

18 N·m (1.8 kgf·m, 13.3 ft·lb)

Engine Coolant Temperature Sensor

FUEL INJECTION (FUEL SYSTEMS)

C: INSPECTION

- 1) Check that the engine coolant temperature sensor has no deformation, cracks or other damages.
- 2) Immerse the engine coolant temperature sensor and a thermometer in water.

CAUTION:

Take care not to allow water to get into the engine coolant temperature sensor connector. Completely remove any water inside.

(A) Thermometer

(B) Engine coolant temperature sensor

(C) Hexagonal part height: To approx. $\frac{1}{3}$

- 3) Raise water temperature gradually, measure the resistance between the engine coolant temperature sensor terminals when the temperature is 20°C (68°F) and 80°C (176°F).

NOTE:

Agitate the water for even temperature distribution.

FU-05950

Water temperature	Terminal No.	Standard
20°C (68°F)	1 and 2	Approx. 2.45±0.2 kΩ
80°C (176°F)		Approx. 0.318±0.013 kΩ

6. Engine Oil Temperature Sensor

A: REMOVAL

CAUTION:

If the engine oil is spilt over exhaust pipe or the under cover, wipe it off with cloth to avoid emission of smoke or causing a fire.

1) Disconnect the ground cable from battery.

2) Disconnect the connector (A) from the engine oil temperature sensor, and remove the engine oil temperature sensor from the chain cover.

B: INSTALLATION

Install in the reverse order of removal.

NOTE:

Use a new gasket.

Tightening torque:

18 N·m (1.8 kgf·m, 13.3 ft·lb)

Engine Oil Temperature Sensor

FUEL INJECTION (FUEL SYSTEMS)

C: INSPECTION

- 1) Check that the engine oil temperature sensor has no deformation, cracks or other damages.
- 2) Immerse the engine oil temperature sensor and a thermometer in water.

CAUTION:

Take care not to allow water to get into the engine oil temperature sensor connector. Completely remove any water inside.

(A) Thermometer

(B) Engine oil temperature sensor

(C) Hexagonal part height: To approx. $\frac{1}{3}$

- 3) Raise water temperature gradually, measure the resistance between the engine oil temperature sensor terminals when the temperature is 20°C (68°F) and 80°C (176°F).

NOTE:

Agitate the water for even temperature distribution.

FU-05950

Water temperature	Terminal No.	Standard
20°C (68°F)	1 and 2	Approx. 2.45±0.2 kΩ
80°C (176°F)		Approx. 0.318±0.013 kΩ

7. Crankshaft Position Sensor

A: REMOVAL

- 1) Disconnect the ground cable from battery.

- 2) Remove the clip (A), and loosen the clamps (B) and (C) securing the air intake boot.

Crankshaft Position Sensor

FUEL INJECTION (FUEL SYSTEMS)

3) Remove the air intake boot from the air cleaner case (rear) and throttle body, and move the air intake boot aside so that it does not interfere with the work.

4) Disconnect the connector (A) from the crankshaft position sensor, and remove the crankshaft position sensor from the cylinder block.

B: INSTALLATION

Install in the reverse order of removal.

Tightening torque:

6.4 N·m (0.7 kgf-m, 4.7 ft-lb)

C: INSPECTION

1. CRANKSHAFT POSITION SENSOR (METHOD WITH OSCILLOSCOPE)

- 1) Prepare an oscilloscope.
- 2) Remove the glove box. <Ref. to EI-56, REMOVAL, Glove Box.>

Crankshaft Position Sensor

3) Connect the probe to ECM connector.

6	5			4	3	2	1			
16	15	14	13	12	11	10	9	8	7	
27	26	25	24	23	22	21	20	19	18	17
35	34	33	32	31				30	29	28

FU-20436

Terminal No.	Probe
16	+
1	-

- 4) Start the engine and let it idle.
- 5) Check the waveforms and voltage.

NOTE:

For waveform and voltage, refer to “Engine Control Module (ECM) I/O Signal”. <Ref. to EN(H4DO)(diag)-20, ELECTRICAL SPECIFICATION, Engine Control Module (ECM) I/O Signal.>

6) After inspection, install the related parts in the reverse order of removal.

2. OTHER INSPECTIONS

Check that the crankshaft position sensor has no deformation, cracks or other damages.

Crankshaft Position Sensor Plate

FUEL INJECTION (FUEL SYSTEMS)

8. Crankshaft Position Sensor Plate

A: REMOVAL

The crankshaft position sensor plate is tightened together with the drive plate or flywheel; therefore, refer to “Drive Plate” or “Flywheel” for removal procedure. <Ref. to CVT(TR580)-164, REMOVAL, Drive Plate.> <Ref. to CL-13, REMOVAL, Flywheel.>

B: INSTALLATION

The crankshaft position sensor plate is tightened together with the drive plate or flywheel; therefore, refer to “Drive Plate” or “Flywheel” for installation procedure. <Ref. to CVT(TR580)-164, INSTALLATION, Drive Plate.> <Ref. to CL-13, INSTALLATION, Flywheel.>

C: INSPECTION

Check that the crankshaft position sensor plate has no deformation, cracks or other damages.

9. Camshaft Position Sensor

A: REMOVAL

1. INTAKE SIDE

1) Disconnect the ground cable from battery.

2) Remove the air intake duct. (RH side only) <Ref. to IN(H4DO)-13, REMOVAL, Air Intake Duct.>

3) Disconnect the connector (A) from the camshaft position sensor, and remove the camshaft position sensor from the chain cover.

- RH side

Camshaft Position Sensor

FUEL INJECTION (FUEL SYSTEMS)

- LH side

2. EXHAUST SIDE

- 1) Disconnect the ground cable from battery.

Camshaft Position Sensor

FUEL INJECTION (FUEL SYSTEMS)

2) Remove the under cover. <Ref. to EI-22, REMOVAL, Front Under Cover.>

3) Disconnect the connector (A) from the camshaft position sensor, and remove the camshaft position sensor from the chain cover.

- RH side

- LH side

B: INSTALLATION

Install in the reverse order of removal.

NOTE:

- Use new O-rings.
- Apply engine oil to O-ring.

Tightening torque:

6.4 N·m (0.7 kgf-m, 4.7 ft-lb)

Camshaft Position Sensor

FUEL INJECTION (FUEL SYSTEMS)

C: INSPECTION

1. CAMSHAFT POSITION SENSOR (METHOD WITH OSCILLOSCOPE)

- 1) Prepare an oscilloscope.
- 2) Remove the glove box. <Ref. to EI-56, REMOVAL, Glove Box.>
- 3) Connect the probe to ECM connector.

FU-07919

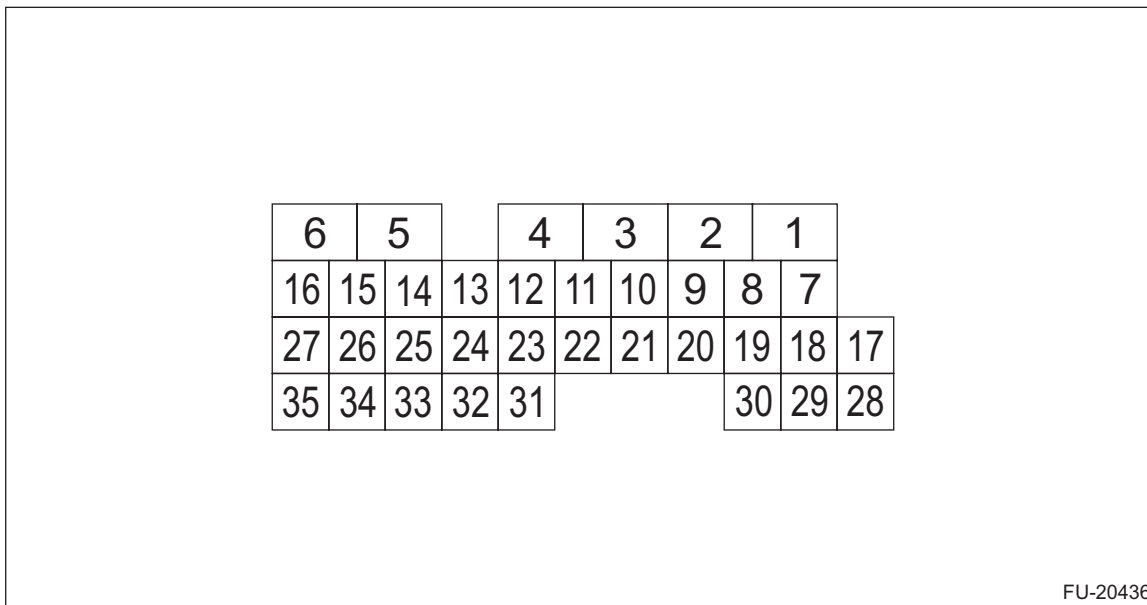

- Intake camshaft position sensor

6	5			4	3	2	1			
16	15	14	13	12	11	10	9	8	7

Intake	RH	26	+
	LH	15	+
Exhaust	RH	14	+
	LH	25	+
RH and LH		3	-

- Start the engine and let it idle.
- Check the waveforms and voltage.

NOTE:

For waveform and voltage, refer to “Engine Control Module (ECM) I/O Signal”. <Ref. to EN(H4DO)(diag)-20, ELECTRICAL SPECIFICATION, Engine Control Module (ECM) I/O Signal.>

- After inspection, install the related parts in the reverse order of removal.

2. OTHER INSPECTIONS

Check that the camshaft position sensor has no deformation, cracks or other damages.

Oil Control Solenoid

FUEL INJECTION (FUEL SYSTEMS)

10.Oil Control Solenoid

A: REMOVAL

CAUTION:

If the engine oil is spilt over exhaust pipe or the under cover, wipe it off with cloth to avoid emission of smoke or causing a fire.

1. INTAKE SIDE

1) Disconnect the ground cable from battery.

2) Remove the air intake duct. (RH side only) <Ref. to IN(H4DO)-13, REMOVAL, Air Intake Duct.>

3) Remove the reservoir tank. (LH side only) <Ref. to CO(H4DO)-67, REMOVAL, Reservoir Tank.>

4) Disconnect the connector (A) from the oil control solenoid, and remove the oil control solenoid from the chain cover.

• RH side

Oil Control Solenoid

FUEL INJECTION (FUEL SYSTEMS)

- LH side

2. EXHAUST SIDE

- 1) Disconnect the ground cable from battery.

Oil Control Solenoid

FUEL INJECTION (FUEL SYSTEMS)

- 2) Remove the air intake duct. (RH side only) <Ref. to IN(H4DO)-13, REMOVAL, Air Intake Duct.>
- 3) Remove the reservoir tank. (LH side only) <Ref. to CO(H4DO)-67, REMOVAL, Reservoir Tank.>
- 4) Disconnect the connector (A) from the oil control solenoid, and remove the oil control solenoid from the chain cover.
 - RH side

FU-06165

- LH side

FU-06667

B: INSTALLATION

Install in the reverse order of removal.

NOTE:

- Use new O-rings.
- Apply engine oil to O-ring.

Tightening torque:

6.4 N·m (0.7 kgf-m, 4.7 ft-lb)

C: INSPECTION

- 1) Check that the oil control solenoid has no deformation, cracks or other damages.
- 2) Measure the resistance between the oil control solenoid terminals.

Terminal No.	Standard
1 and 2	7.25±0.4 Ω (when 20°C (68°F))

Knock Sensor

FUEL INJECTION (FUEL SYSTEMS)

11. Knock Sensor

A: REMOVAL

1) Disconnect the ground cable from battery.

2) Remove the clip (A), and loosen the clamps (B) and (C) securing the air intake boot.

Knock Sensor

FUEL INJECTION (FUEL SYSTEMS)

3) Remove the air intake boot from the air cleaner case (rear) and throttle body, and move the air intake boot aside so that it does not interfere with the work.

4) Disconnect the connector (A) from the knock sensor, and remove the knock sensor from the cylinder block.

Knock Sensor

FUEL INJECTION (FUEL SYSTEMS)

B: INSTALLATION

1) Install the knock sensor to the cylinder block.

NOTE:

The knock sensor should be installed so that the center of the connector is positioned at a $76.5 - 91.5^\circ$ angle relative to the front of engine.

Tightening torque:

24 N·m (2.4 kgf-m, 17.7 ft-lb)

(A) Front of engine

2) Connect the connector to the knock sensor.

Knock Sensor

- 3) Install the air intake boot. <Ref. to IN(H4DO)-12, INSTALLATION, Air Intake Boot.>
- 4) Connect the battery ground terminal.

C: INSPECTION

- 1) Check that the knock sensor has no deformation, cracks or other damages.
- 2) Measure the resistance between knock sensor terminals.

Terminal No.	Standard
1 and 2	560±28 kΩ

Throttle Position Sensor

FUEL INJECTION (FUEL SYSTEMS)

12. Throttle Position Sensor

A: SPECIFICATION

Throttle body is a non-disassembled part, so do not remove the throttle position sensor from throttle body. Refer to "Throttle Body" for removal and installation procedure. <Ref. to FU(H4DO)-15, REMOVAL, Throttle Body.> <Ref. to FU(H4DO)-17, INSTALLATION, Throttle Body.>

13. Mass Air Flow and Intake Air Temperature Sensor

A: REMOVAL

1) Disconnect the ground cable from battery.

2) Disconnect the connector (A) from the mass air flow and intake air temperature sensor, and remove the mass air flow and intake air temperature sensor.

B: INSTALLATION

Install in the reverse order of removal.

Tightening torque:

1 N·m (0.1 kgf·m, 0.7 ft·lb)

Mass Air Flow and Intake Air Temperature Sensor

FUEL INJECTION (FUEL SYSTEMS)

C: INSPECTION

1. CHECK THE MASS AIR FLOW SENSOR UNIT

1) Connect the battery positive terminal to terminal No. 3 and the battery ground terminal to terminal No. 4, the circuit tester positive terminal to terminal No. 5 and the circuit tester ground terminal to terminal No. 4.

2) Check the voltage changes when air is blown to the mass air flow sensor unit in arrow direction.

Mass Air Flow and Intake Air Temperature Sensor

FUEL INJECTION (FUEL SYSTEMS)

2. CHECK THE INTAKE AIR TEMPERATURE SENSOR UNIT

Measure the resistance between intake air temperature sensor terminals.

Temperature	Terminal No.	Standard
-20°C (-4°F)	1 and 2	16.0±2.4 kΩ
20°C (68°F)		2.45±0.24 kΩ
60°C (140°F)		0.58±0.087 kΩ

3. OTHER INSPECTIONS

- 1) Check that the mass air flow and intake air temperature sensor has no deformation, cracks or other damages.
- 2) Check that the mass air flow and intake air temperature sensor has no dirt.

Manifold Absolute Pressure Sensor

FUEL INJECTION (FUEL SYSTEMS)

14. Manifold Absolute Pressure Sensor

A: REMOVAL

1) Disconnect the ground cable from battery.

2) Disconnect the connector (A) from the manifold absolute pressure sensor, and remove the manifold absolute pressure sensor from intake manifold.

B: INSTALLATION

Install in the reverse order of removal.

NOTE:

Use new O-rings.

Tightening torque:

3.4 N·m (0.3 kgf·m, 2.5 ft·lb)

Manifold Absolute Pressure Sensor

FUEL INJECTION (FUEL SYSTEMS)

C: INSPECTION

- 1) Check that the manifold absolute pressure sensor has no deformation, cracks or other damages.
- 2) Connect dry-cell battery positive terminal to terminal No. 3 and dry-cell battery ground terminal to terminal No. 1, circuit tester positive terminal to terminal No. 2 and the circuit tester ground terminal to terminal No. 1.

NOTE:

- Use new dry-cell batteries.
- Using a circuit tester, check that the initial voltage of each dry-cell battery is 1.6 V or more. And also check that the voltage of three batteries in series is between 4.8 V and 5.2 V.
- For power supply, 5 V DC constant voltage power source can also be used.

- 3) Check the voltage at a normal atmospheric pressure.

NOTE:

The atmospheric pressure at higher altitude is lower than normal. Therefore, the voltage is lower than the standard value.

Terminal No.	Standard
2 (+) and 1 (-)	Approx. 4.2 V (when 25°C (77°F))

- 4) Connect the Mighty Vac to the pressure port (A) of manifold absolute pressure sensor.

Manifold Absolute Pressure Sensor

FUEL INJECTION (FUEL SYSTEMS)

5) Check the voltage when generating vacuum using Mighty Vac.

CAUTION:

Do not apply vacuum of less than -88 kPa (-0.9 kg/cm², -12.8 psi). Doing so may damage the manifold absolute pressure sensor.

NOTE:

When vacuum occurs at the pressure port of manifold absolute pressure sensor, the voltage will drop from the value as in step 3).

Pressure	Terminal No.	Standard
-88 kPa (-0.9 kg/cm ² , -12.8 psi)	2 (+) and 1 (-)	Approx. 1 V (when 25°C (77°F))

15. Fuel Injector

A: REMOVAL

- 1) Release the fuel pressure. <Ref. to FU(H4DO)-107, RELEASING OF FUEL PRESSURE, PROCEDURE, Fuel.>
- 2) Disconnect the ground cable from battery.

- 3) Open the fuel filler lid and remove the fuel filler cap.

NOTE:

This operation is required to release the inner pressure of the fuel tank.

- 4) When removing the RH side, also perform the following steps.

- (1) Remove the clip (A), and loosen the clamps (B) and (C) securing the air intake boot.

Fuel Injector

FUEL INJECTION (FUEL SYSTEMS)

(2) Remove the air intake boot from the air cleaner case (rear) and throttle body, and move the air intake boot aside so that it does not interfere with the work.

(3) Disconnect the connector from the mass air flow and intake air temperature sensor, and remove the clip (A) securing the bulkhead wiring harness.

Fuel Injector

- (4) Remove the air cleaner case (rear) together with the air cleaner element.

- 5) Remove the intake manifold protector.

- RH side

Fuel Injector

FUEL INJECTION (FUEL SYSTEMS)

- LH side

6) Disconnect the connectors (A) from fuel injector.

7) Disconnect the quick connector (B) of the fuel delivery pipe from the fuel pipe.

CAUTION:

- Be careful not to spill fuel.
- Catch the fuel from the pipes using a container or cloth.

NOTE:

Disconnect the quick connector as shown in the figure.

(a) Slider

Fuel Injector

FUEL INJECTION (FUEL SYSTEMS)

- 8) Remove the bolts which hold fuel pipe onto the cam carrier, and remove the fuel pipe together with the fuel injector.

- 9) Remove the fuel injector from the fuel pipe.
(1) Remove the fuel injector holder from one side of flange section (A) of the fuel pipe.
(2) While holding one side of fuel injector holder (B) you removed in step (1) by finger, remove the other side of fuel injector holder from the flange section (C) of the fuel pipe.

- (3) Remove the fuel injector holder from the fuel pipe and fuel injector, and remove the fuel injector from the fuel pipe.
(4) Remove the fuel injector on the LH side in the same manner.

Fuel Injector

FUEL INJECTION (FUEL SYSTEMS)

B: INSTALLATION

Install in the reverse order of removal.

NOTE:

- Use new fuel injector holder, O-rings, rubbers and seal rings.
- Install the fuel injector so that the connector joint faces the connector rotation stopper side of the fuel pipe.
- Securely put the flange section of fuel pipe into the groove of fuel injector holder.

FU-08923

- (a) Fuel injector (b) Connector joint (c) Fuel pipe
(d) Connector rotation stopper (e) Flange section (f) Fuel injector holder

Tightening torque:

6.4 N·m (0.7 kgf-m, 4.7 ft-lb)

C: INSPECTION

- 1) Check that the fuel injector has no deformation, cracks or other damages.
- 2) Measure the resistance between fuel injector terminals.

FU-05950

Terminal No.	Standard
1 and 2	Approx. 12.0 Ω (when 20°C (68°F))

16. Tumble Generator Valve Assembly

A: REMOVAL

- 1) Release the fuel pressure. <Ref. to FU(H4DO)-107, RELEASING OF FUEL PRESSURE, PROCEDURE, Fuel.>
- 2) Disconnect the ground cable from battery.

- 3) Remove the intake manifold. <Ref. to FU(H4DO)-19, REMOVAL, Intake Manifold.>
- 4) Disconnect the connector (A) from the tumble generator valve assembly.
- 5) Remove the tumble generator valve assembly from the cylinder head.
 - RH side

Tumble Generator Valve Assembly

FUEL INJECTION (FUEL SYSTEMS)

- LH side

6) Remove the cylinder head plate from cylinder head.

B: INSTALLATION

Install in the reverse order of removal.

NOTE:

Use a new gasket.

Tightening torque:

25 N·m (2.5 kgf·m, 18.4 ft·lb)

Tumble Generator Valve Assembly

FUEL INJECTION (FUEL SYSTEMS)

C: INSPECTION

1. CHECK MOTOR

1) Connect the battery positive terminal to terminal No. 5 and the battery ground terminal to terminal No. 4, and check that the valve is fully opened on LH side and the valve is fully closed on RH side.

CAUTION:

Do not power the motor for more than 10 seconds.

(A) Full open

(B) Full closed

2) Connect the battery positive terminal to terminal No. 4 and the battery ground terminal to terminal No. 5, and check that the valve is fully closed on LH side and the valve is fully opened on RH side.

CAUTION:

Do not power the motor for more than 10 seconds.

(A) Full open

(B) Full closed

Tumble Generator Valve Assembly

FUEL INJECTION (FUEL SYSTEMS)

2. CHECK SENSORS

1) Connect dry-cell battery positive terminal to terminal No. 3 and dry-cell battery ground terminal to terminal No. 2, and connect the resistance (0.5 — 2 k Ω) between dry-cell battery positive terminal and terminal No. 1.

NOTE:

- Use new dry-cell batteries.
- Using circuit tester, check the voltage of a single dry-cell battery is 1.6 V or more. And also check the voltage of three batteries in series is between 4.8 V and 5.2 V.
- For power supply, 5 V DC voltage source can also be used.

2) Connect the circuit tester positive terminal to terminal No. 1, and the circuit tester negative terminal to terminal No. 2.

3) Connect the battery positive terminal to terminal No. 5 and the battery ground terminal to terminal No. 4, and measure the voltages with the valve fully opened on LH side and with the valve fully closed on RH side.

CAUTION:

Do not power the motor for more than 10 seconds.

FU-06075

(A) Full open

(B) Full closed

Terminal No.	Standard
1 (+) and 2 (-)	LH side: Approx. 5 V (when 25°C (77°F)) RH side: Approx. 0 — 0.5 V (when 25°C (77°F))

4) Connect dry-cell battery positive terminal to terminal No. 3 and dry-cell battery ground terminal to terminal No. 2, and connect the resistance (0.5 — 2 k Ω) between dry-cell battery positive terminal and terminal No. 1.

NOTE:

- Use new dry-cell batteries.
- Using circuit tester, check the voltage of a single dry-cell battery is 1.6 V or more. And also check the voltage of three batteries in series is between 4.8 V and 5.2 V.
- For power supply, 5 V DC voltage source can also be used.

Tumble Generator Valve Assembly

FUEL INJECTION (FUEL SYSTEMS)

5) Connect the circuit tester positive terminal to terminal No. 1, and the circuit tester negative terminal to terminal No. 2.

6) Connect the battery positive terminal to terminal No. 4 and the battery ground terminal to terminal No. 5, and measure the voltages with the valve fully closed on LH side and with the valve fully opened on RH side.

CAUTION:

Do not power the motor for more than 10 seconds.

FU-06076

(A) Full open

(B) Full closed

Terminal No.	Standard
1 (+) and 2 (-)	LH side: Approx. 0 — 0.5 V (when 25°C (77°F)) RH side: Approx. 5 V (when 25°C (77°F))

3. OTHER INSPECTIONS

- 1) Check that the tumble generator valve assembly has no deformation, cracks or other damages.
- 2) Check tumble generator valve assembly for contamination or clogging.

Tumble Generator Valve Actuator

FUEL INJECTION (FUEL SYSTEMS)

17. Tumble Generator Valve Actuator

A: REMOVAL

1) Disconnect the ground cable from battery.

2) Disconnect the connector (A) from tumble generator valve assembly, and remove the tumble generator valve actuator.

- RH side

- LH side

B: INSTALLATION

Install in the reverse order of removal.

NOTE:

Use a new gasket.

Tightening torque:

6 N·m (0.6 kgf·m, 4.4 ft·lb)

C: INSPECTION

- 1) Check that the tumble generator valve actuator has no deformation, cracks or other damages.
- 2) Check tumble generator valve actuator for contamination or clogging.

Front Oxygen (A/F) Sensor

FUEL INJECTION (FUEL SYSTEMS)

18. Front Oxygen (A/F) Sensor

A: REMOVAL

1) Disconnect the ground cable from battery.

2) Remove the radiator sub fan and fan motor assembly. <Ref. to CO(H4DO)-64, REMOVAL, Radiator Sub Fan and Fan Motor.>

3) Lift up the vehicle.

4) Remove the under cover. <Ref. to EI-22, REMOVAL, Front Under Cover.>

5) Disconnect the front oxygen (A/F) sensor connector, and remove the clip holding the front oxygen (A/F) sensor harness.

(A) Front oxygen (A/F) sensor connector

(B) Rear oxygen sensor connector

(C) Clip

Front Oxygen (A/F) Sensor

FUEL INJECTION (FUEL SYSTEMS)

- 6) Lower the vehicle.
- 7) Apply spray-type lubricant to the threaded portion of front oxygen (A/F) sensor, and leave it for one minute or more.
- 8) Remove the front oxygen (A/F) sensor.

CAUTION:

When removing the front oxygen (A/F) sensor, wait until exhaust pipe cools, otherwise it will damage the exhaust pipe.

B: INSTALLATION

CAUTION:

If lubricant is spilt over the exhaust pipe, wipe it off with cloth to avoid emission of smoke or causing a fire.

- 1) Before installing front oxygen (A/F) sensor, apply anti-seize compound only to the threaded portion of front oxygen (A/F) sensor to make the next removal easier.

CAUTION:

Never apply anti-seize compound to the protector of front oxygen (A/F) sensor.

Anti-seize compound:

NEVER-SEEZ NSN, JET LUBE SS-30 or equivalent

Front Oxygen (A/F) Sensor

FUEL INJECTION (FUEL SYSTEMS)

2) Install the front oxygen (A/F) sensor.

Tightening torque:

21 N·m (2.1 kgf-m, 15.5 ft-lb)

3) Lift up the vehicle.

4) Connect the front oxygen (A/F) sensor connector, and secure the front oxygen (A/F) sensor harness by using the clip.

(A) Front oxygen (A/F) sensor connector

(B) Rear oxygen sensor connector

(C) Clip

5) Install the under cover. <Ref. to EI-22, INSTALLATION, Front Under Cover.>

6) Lower the vehicle.

7) Install the radiator sub fan and fan motor assembly. <Ref. to CO(H4DO)-65, INSTALLATION, Radiator Sub Fan and Fan Motor.>

Front Oxygen (A/F) Sensor

8) Connect the battery ground terminal.

C: INSPECTION

- 1) Check that the front oxygen (A/F) sensor has no deformation, cracks or other damages.
- 2) Measure the resistance between front oxygen (A/F) sensor terminals.

Terminal No.	Standard
1 and 2	$2.0^{+0.42}_{-0.2} \Omega$ (when 20°C (68°F))

Rear Oxygen Sensor

FUEL INJECTION (FUEL SYSTEMS)

19.Rear Oxygen Sensor

A: REMOVAL

1) Disconnect the ground cable from battery.

2) Lift up the vehicle.

3) Remove the under cover. <Ref. to EI-22, REMOVAL, Front Under Cover.>

4) Disconnect the rear oxygen sensor connector.

(A) Front oxygen (A/F) sensor connector

(B) Rear oxygen sensor connector

(C) Clip

5) Apply spray-type lubricant to the threaded portion of rear oxygen sensor, and leave it for one minute or more.

Rear Oxygen Sensor

FUEL INJECTION (FUEL SYSTEMS)

6) Remove the rear oxygen sensor.

CAUTION:

When removing the rear oxygen sensor, wait until exhaust pipe cools, otherwise it will damage the exhaust pipe.

B: INSTALLATION

CAUTION:

If lubricant is spilt over the exhaust pipe, wipe it off with cloth to avoid emission of smoke or causing a fire.

1) Before installing rear oxygen sensor, apply the anti-seize compound only to the threaded portion of rear oxygen sensor to make the next removal easier.

CAUTION:

Never apply anti-seize compound to the protector of rear oxygen sensor.

Anti-seize compound:

NEVER-SEEZ NSN, JET LUBE SS-30 or equivalent

Rear Oxygen Sensor

FUEL INJECTION (FUEL SYSTEMS)

2) Install the rear oxygen sensor.

Tightening torque:

21 N·m (2.1 kgf-m, 15.5 ft-lb)

3) Connect the rear oxygen sensor connector.

NOTE:

Be careful not to allow the rear oxygen sensor harness to interfere with the sensor unit and the front oxygen (A/F) sensor harness.

(A) Front oxygen (A/F) sensor connector

(B) Rear oxygen sensor connector

(C) Clip

4) Install the under cover. <Ref. to EI-22, INSTALLATION, Front Under Cover.>

5) Lower the vehicle.

Rear Oxygen Sensor

6) Connect the battery ground terminal.

C: INSPECTION

- 1) Check that the rear oxygen sensor has no deformation, cracks or other damages.
- 2) Measure the resistance between rear oxygen sensor terminals.

Terminal No.	Standard
1 and 2	$5.6^{+1.7}_{-0.6} \Omega$ (when 20°C (68°F))

Engine Control Module (ECM)

FUEL INJECTION (FUEL SYSTEMS)

20.Engine Control Module (ECM)

A: REMOVAL

- 1) Disconnect the ground cable from battery.

- 2) Remove the glove box. <Ref. to EI-56, REMOVAL, Glove Box.>
- 3) Disconnect the connector from ECM.

4) Remove the bolts and nuts, and remove the ECM.

B: INSTALLATION

Install in the reverse order of removal.

CAUTION:

- When the ECM of model with immobilizer has been replaced, be sure to perform the registration of immobilizer system.
 - For model without keyless access with push button start, refer to the Type B in “REGISTRATION MANUAL FOR IMMOBILIZER”.
 - For model with keyless access with push button start, refer to the Type D in “REGISTRATION MANUAL FOR IMMOBILIZER”.
- If replacing ECM or the bracket, replace both parts with new parts at a time.
- After installing the bracket to ECM, do not separate the bracket.
- If the bracket has been installed to ECM in the wrong direction, replace both parts to new parts.

NOTE:

When replacing the ECM, be careful not to use the ECM of wrong specification to avoid any damage on the fuel injection system.

Tightening torque:

7.5 N·m (0.8 kgf-m, 5.5 ft-lb)

C: INSPECTION

Check that the ECM has no deformation, cracks or other damages.

Main Relay

FUEL INJECTION (FUEL SYSTEMS)

21.Main Relay

A: REMOVAL

1) Disconnect the ground cable from battery.

2) Remove the glove box. <Ref. to EI-56, REMOVAL, Glove Box.>

3) Remove the main relay from relay block.

B: INSTALLATION

Install in the reverse order of removal.

Main Relay

C: INSPECTION

- 1) Check that the main relay has no deformation, cracks or other damages.
- 2) Measure the resistance between main relay terminals.

Terminal No.	Standard
1 and 2	1 M Ω or more
3 and 4	130.4 — 230.8 Ω (when 20°C (68°F))

- 3) Connect battery positive terminal to terminal No. 3 and battery ground terminal to terminal No. 4, and measure the resistance between the main relay terminals.

Terminal No.	Standard
1 and 2	Less than 1 Ω

Fuel Pump Relay

FUEL INJECTION (FUEL SYSTEMS)

22. Fuel Pump Relay

A: REMOVAL

1) Disconnect the ground cable from battery.

2) Remove the glove box. <Ref. to EI-56, REMOVAL, Glove Box.>

3) Remove the fuel pump relay from relay block.

B: INSTALLATION

Install in the reverse order of removal.

C: INSPECTION

- 1) Check that the fuel pump relay has no deformation, cracks or other damages.
- 2) Measure the resistance between fuel pump relay terminals.

Terminal No.	Standard
1 and 2	1 M Ω or more
3 and 4	93.8 — 136.4 Ω (when 20°C (68°F))

- 3) Connect battery positive terminal to terminal No. 3 and battery ground terminal to terminal No. 4, and measure the resistance between the fuel pump relay terminals.

Terminal No.	Standard
1 and 2	Less than 1 Ω

Electronic Throttle Control Relay

FUEL INJECTION (FUEL SYSTEMS)

23. Electronic Throttle Control Relay

A: REMOVAL

1) Disconnect the ground cable from battery and wait for at least 60 seconds before starting work.

2) Release the lock and remove the fuse holder from the relay & fuse box.

3) Disconnect the connectors from the relay & fuse box.

Electronic Throttle Control Relay

FUEL INJECTION (FUEL SYSTEMS)

- 4) Remove the bolts (A) and nuts (B), and remove the relay & fuse box.

- 5) Remove the electronic throttle control relay from the relay block on the back side of the fuse block.

B: INSTALLATION

Install in the reverse order of removal.

Tightening torque:

7.5 N·m (0.8 kgf-m, 5.5 ft-lb)

Electronic Throttle Control Relay

FUEL INJECTION (FUEL SYSTEMS)

C: INSPECTION

- 1) Check that the electronic throttle control relay has no deformation, cracks or other damages.
- 2) Measure the resistance between electronic throttle control relay terminals.

FU-05961

Terminal No.	Standard
1 and 2	1 M Ω or more
3 and 4	93.8 — 136.4 Ω (when 20°C (68°F))

- 3) Connect battery positive terminal to terminal No. 3 and battery ground terminal to terminal No. 4, and measure the resistance between the electronic throttle control relay terminals.

FU-05963

Terminal No.	Standard
1 and 2	Less than 1 Ω

24. Fuel

A: PROCEDURE

1. RELEASING OF FUEL PRESSURE

WARNING:

Place “NO OPEN FLAMES” signs near the working area.

CAUTION:

Be careful not to spill fuel.

- 1) Remove the fuse of fuel pump from main fuse box.

- 2) Start the engine and run it until it stalls.
- 3) After the engine stalls, crank it for five more seconds.
- 4) Turn the ignition switch to OFF.
- 5) Install the fuse of fuel pump to the main fuse box.

2. DRAINING FUEL (WITH SUBARU SELECT MONITOR)

WARNING:

Place “NO OPEN FLAMES” signs near the working area.

CAUTION:

Be careful not to spill fuel.

NOTE:

- If the fuel pump cannot be driven, refer to the procedures for draining from the fuel filler hose. <Ref. to FU(H4DO)-110, DRAINING FUEL (THROUGH THE FUEL FILLER HOSE), PROCEDURE, Fuel.>
- Be careful not to let the battery run-out.
- Be aware that the fuel may remain in the fuel tank after draining the fuel.

- 1) Release the fuel pressure. <Ref. to FU(H4DO)-107, RELEASING OF FUEL PRESSURE, PROCEDURE, Fuel.>

Fuel

FUEL INJECTION (FUEL SYSTEMS)

2) Disconnect the quick connector on the fuel delivery tube from the fuel pipe assembly, and remove the clip (A) securing the fuel delivery tube to the fuel pipe assembly.

CAUTION:

- Be careful not to spill fuel.
- Catch the fuel from the tubes using a container or cloth.

NOTE:

Disconnect the quick connector as shown in the figure.

(a) Slider

3) Connect ST to the fuel delivery tube.

ST 18471AA000 FUEL PIPE ADAPTER

4) Connect the gasoline proof hose to ST and put the end of the hose in the container.

5) Drive the fuel pump and drain the fuel using Subaru Select Monitor.

CAUTION:

Be careful not to spill fuel.

NOTE:

For detailed operation procedures of Subaru Select Monitor 4, refer to "Application help".

6) Install the related parts in the reverse order after draining the fuel.

CAUTION:

- Be careful not to spill fuel.
- Catch the fuel from the tubes using a container or cloth.
- Check that there is no damage or dust on the quick connector. If necessary, clean the seal surface of the pipe.
- When connecting the quick connector, make sure to insert it all the way in before locking the slider.
- When it is difficult to lock the slider, check that the connector is fully inserted.
- After locking the slider, check again that the quick connector is securely connected.

NOTE:

- Disconnect the quick connector on the fuel delivery tube as shown in the figure.

(a) Slider

- Connect the quick connector on the fuel delivery tube as shown in the figure.

(a) Slider

Fuel

FUEL INJECTION (FUEL SYSTEMS)

3. DRAINING FUEL (THROUGH THE FUEL FILLER HOSE)

WARNING:

Place “NO OPEN FLAMES” signs near the working area.

CAUTION:

- Be careful not to spill fuel.
- Fuel may remain in the fuel filler pipe. Drain the fuel from the fuel filler pipe through the fill opening using the gasoline proof pump and the gasoline proof hose (ø10 or less) before the operation.

NOTE:

Be aware that the fuel may remain in the fuel tank after draining the fuel.

- 1) Lift up the vehicle.
- 2) Remove the rear exhaust pipe and muffler. <Ref. to EX(H4DO)-17, REMOVAL, Rear Exhaust Pipe.>
<Ref. to EX(H4DO)-20, REMOVAL, Muffler.>
- 3) Open the fuel filler lid and remove the fuel filler cap.
- 4) Drain the fuel from the fuel filler pipe through the filler opening using the gasoline proof pump and the gasoline proof hose (ø10 or less).
- 5) Disconnect the fuel filler hose from the fuel filler pipe assembly.

CAUTION:

- Be careful not to spill fuel.
- Catch the fuel from hoses using a container or cloth.

6) Set the container under the vehicle and insert the gasoline proof hose ($\phi 10$ or less) into the fuel filler hose to drain the fuel.

CAUTION:

Be careful not to spill fuel.

7) Install the related parts in the reverse order after draining the fuel.

NOTE:

Correctly insert the fuel filler hose to the spool, and then install the clamp as shown.

Tightening torque:

2.5 N·m (0.3 kgf·m, 1.8 ft·lb)

(1) Fuel filler hose
(2) Clamp

(3) Spool

(4) Fuel filler pipe

Fuel Tank Protector

FUEL INJECTION (FUEL SYSTEMS)

25. Fuel Tank Protector

A: REMOVAL

- 1) Lift up the vehicle.
- 2) Remove the bolt and nuts and remove the fuel tank protector.

B: INSTALLATION

Install in the reverse order of removal.

NOTE:

Use a new self-locking nut.

Tightening torque:

T1: 9 N·m (0.9 kgf·m, 6.6 ft·lb)

T2: 18 N·m (1.8 kgf·m, 13.3 ft·lb)

(A) Self-locking nut

26. Fuel Tank

A: REMOVAL

WARNING:

Place "NO OPEN FLAMES" signs near the working area.

CAUTION:

- Be careful not to spill fuel.

- Catch the fuel from the tubes using a container or cloth.

1) Release the fuel pressure. <Ref. to FU(H4DO)-107, RELEASING OF FUEL PRESSURE, PROCEDURE, Fuel.>

2) Drain fuel. <Ref. to FU(H4DO)-107, DRAINING FUEL (WITH SUBARU SELECT MONITOR), PROCEDURE, Fuel.>

3) Disconnect the ground cable from battery.

4) Remove the rear seat cushion. <Ref. to SE-24, REMOVAL, Rear Seat.>

Fuel Tank

FUEL INJECTION (FUEL SYSTEMS)

5) Remove the service hole cover of fuel pump.

6) Disconnect connectors from the fuel pump, and move aside the service hole cover.

7) Remove the service hole cover of fuel sub level sensor.

8) Disconnect connectors from the fuel sub level sensor, and move aside the service hole cover.

Fuel Tank

FUEL INJECTION (FUEL SYSTEMS)

9) Disconnect the quick connector on the fuel delivery tube.

NOTE:

Disconnect the quick connector as shown in the figure.

(a) Slider

Fuel Tank

FUEL INJECTION (FUEL SYSTEMS)

- 10) Lift up the vehicle.
- 11) Remove the rear exhaust pipe and muffler. <Ref. to EX(H4DO)-17, REMOVAL, Rear Exhaust Pipe.>
<Ref. to EX(H4DO)-20, REMOVAL, Muffler.>
- 12) Remove the rear differential. <Ref. to DI-22, REMOVAL, Rear Differential (T-type).> <Ref. to DI-41, REMOVAL, Rear Differential (VA-type).>
- 13) Disconnect the fuel filler hose (A) and evaporation hose (B) from the fuel filler pipe assembly.

Fuel Tank

FUEL INJECTION (FUEL SYSTEMS)

14) Disconnect the vent tube from canister.

NOTE:

Disconnect the quick connector as shown in the figure.

Fuel Tank

- 15) Remove the fuel tank protector. <Ref. to FU(H4DO)-112, REMOVAL, Fuel Tank Protector.>
- 16) Remove the heat shield cover and stopper.

- 17) Remove the stay - rear frame COMPL.

Fuel Tank

FUEL INJECTION (FUEL SYSTEMS)

18) Support the fuel tank with a transmission jack, remove the bolts from the fuel tank band, and remove the fuel tank from the vehicle.

WARNING:

- A helper is required to perform this work.
- Fuel may remain in the fuel tank. This will cause the left and right sides to be unbalanced. Be careful not to drop the fuel tank.

B: INSTALLATION

1) Support the fuel tank with a transmission jack, set the fuel tank in place, and temporarily tighten the bolts of the fuel tank band.

WARNING:

A helper is required to perform this work.

2) Tighten the bolts of the fuel tank band in the order shown in the figure.

Tightening torque:

33 N·m (3.4 kgf-m, 24.3 ft-lb)

Fuel Tank

FUEL INJECTION (FUEL SYSTEMS)

3) Install the stay - rear frame COMPL.

Tightening torque:

33 N·m (3.4 kgf·m, 24.3 ft·lb)

FU-07698

4) Install the heat shield cover and stopper.

Tightening torque:

18 N·m (1.8 kgf·m, 13.3 ft·lb)

FU-07697

5) Install the fuel tank protector. <Ref. to FU(H4DO)-112, INSTALLATION, Fuel Tank Protector.>

6) Connect the vent tube to the canister.

CAUTION:

- Check that there is no damage or dust on the quick connector. If necessary, clean the seal surface of the pipe.
- Make sure that the quick connector is securely connected.

NOTE:

Connect the quick connector as shown in the figure.

Fuel Tank

FUEL INJECTION (FUEL SYSTEMS)

7) Securely insert the fuel filler hose (A) and evaporation hose (B) until the hose end contacts the spool, then attach the clamp or clip as shown in the figure.

Tightening torque:

2.5 N·m (0.3 kgf·m, 1.8 ft·lb)

- (a) Hose
(b) Clamp or clip
(c) Spool or bump
(d) Pipe

8) Install the rear differential. <Ref. to DI-24, INSTALLATION, Rear Differential (T-type).> <Ref. to DI-41, INSTALLATION, Rear Differential (VA-type).>

9) Install the rear exhaust pipe and muffler. <Ref. to EX(H4DO)-18, INSTALLATION, Rear Exhaust Pipe.> <Ref. to EX(H4DO)-21, INSTALLATION, Muffler.>

10) Connect the quick connector of the fuel delivery tube.

CAUTION:

- Check that there is no damage or dust on the quick connector. If necessary, clean the seal surface of the pipe.
- When connecting the quick connector, make sure to insert it all the way in before locking the slider.
- When it is difficult to lock the slider, check that the connector is fully inserted.
- After locking the slider, check again that the quick connector is securely connected.

NOTE:

Connect the quick connector as shown in the figure.

(a) Slider

Fuel Tank

FUEL INJECTION (FUEL SYSTEMS)

11) Connect the connector to the fuel sub level sensor.

12) Install the service hole cover of fuel sub level sensor.

13) Connect the connector to the fuel pump.

14) Install the service hole cover of fuel pump.

15) Install the rear seat cushion. <Ref. to SE-27, INSTALLATION, Rear Seat.>

Fuel Tank

FUEL INJECTION (FUEL SYSTEMS)

16) Connect the battery ground terminal.

C: INSPECTION

- 1) Check that the fuel tank and fuel pipe have no deformation, cracks and other damages.
- 2) Check that the fuel hose and tube have no cracks, damage or loose part.

27. Fuel Filler Pipe

A: REMOVAL

WARNING:

Place "NO OPEN FLAMES" signs near the working area.

CAUTION:

Be careful not to spill fuel.

- 1) Release the fuel pressure. <Ref. to FU(H4DO)-107, RELEASING OF FUEL PRESSURE, PROCEDURE, Fuel.>
- 2) Drain fuel. <Ref. to FU(H4DO)-107, DRAINING FUEL (WITH SUBARU SELECT MONITOR), PROCEDURE, Fuel.>
- 3) Disconnect the ground cable from battery.

- 4) Open the fuel filler lid and remove the fuel filler cap.
- 5) Turn the fuel filler pipe protector in the direction of the arrow to unlock and remove it.

- 6) Remove the rear sub frame assembly. <Ref. to RS-10, REMOVAL, Rear Sub Frame.>
- 7) Remove the rear mud guard RH. <Ref. to EI-23, REMOVAL, Mud Guard.>

Fuel Filler Pipe

FUEL INJECTION (FUEL SYSTEMS)

8) Disconnect the fuel filler hose (A) and evaporation hose (B) from the fuel filler pipe assembly.

9) Remove the bolts and nuts which secure the fuel filler pipe assembly to the vehicle.

10) Remove the fuel filler pipe assembly from the underside of the vehicle.

B: INSTALLATION

- 1) Open the fuel filler lid.
- 2) Insert the fuel filler pipe assembly into the rubber saucer from inside of the rear fender.
- 3) Install the fuel filler pipe assembly to the vehicle.

Tightening torque:

7.5 N·m (0.8 kgf-m, 5.5 ft-lb)

Fuel Filler Pipe

FUEL INJECTION (FUEL SYSTEMS)

4) Securely insert the fuel filler hose (A) and evaporation hose (B) until the hose end contacts the spool, then attach the clamp or clip as shown in the figure.

Tightening torque:

2.5 N·m (0.3 kgf·m, 1.8 ft·lb)

- (a) Hose
(b) Clamp or clip
(c) Spool or bump
(d) Pipe

5) Install the rear mud guard RH. <Ref. to EI-23, INSTALLATION, Mud Guard.>

6) Install the rear sub frame assembly. <Ref. to RS-15, INSTALLATION, Rear Sub Frame.>

7) Connect the battery ground terminal.

8) Inspect the wheel alignment and adjust if necessary.

9) Perform reinitialization of the auto headlight beam leveler system. (Model with auto headlight beam leveler) <Ref. to LI-18, PROCEDURE, Auto Headlight Beam Leveler System.>

10) Adjust the steering angle sensor. <Ref. to VDC-23, ADJUSTMENT, VDC Control Module and Hydraulic Control Unit (VDCCM&H/U).>

C: INSPECTION

1) Check that the fuel filler pipe assembly has no deformation, cracks or other damages.

2) Check that the fuel hose has no cracks, damage or loose part.

Fuel Pump

FUEL INJECTION (FUEL SYSTEMS)

28. Fuel Pump

A: REMOVAL

WARNING:

Place “NO OPEN FLAMES” signs near the working area.

CAUTION:

- Be careful not to spill fuel.
- Catch the fuel from the tubes using a container or cloth.
- If the fuel gauge indicates that two thirds or more of the fuel is remaining, be sure to drain fuel before starting work to avoid the fuel to spill.

NOTE:

Fuel pump assembly consists of fuel pump, fuel filter and fuel level sensor.

- 1) Release the fuel pressure. <Ref. to FU(H4DO)-107, RELEASING OF FUEL PRESSURE, PROCEDURE, Fuel.>
- 2) Drain fuel. <Ref. to FU(H4DO)-107, DRAINING FUEL (WITH SUBARU SELECT MONITOR), PROCEDURE, Fuel.>
- 3) Disconnect the ground cable from battery.

- 4) Remove the rear seat cushion. <Ref. to SE-24, REMOVAL, Rear Seat.>

Fuel Pump

5) Remove the service hole cover of fuel pump.

6) Disconnect connectors from the fuel pump, and move aside the service hole cover.

Fuel Pump

FUEL INJECTION (FUEL SYSTEMS)

7) Disconnect the quick connector of fuel delivery tube and jet pump tube.

NOTE:

Disconnect the quick connector as shown in the figure.

(a) Slider

8) Remove the nuts which hold the fuel pump upper plate to the fuel tank.

9) Remove the fuel pump assembly from the fuel tank.

CAUTION:

Be careful not to let the arm and float of fuel level sensor contact the fuel tank.

B: INSTALLATION

1) Install the fuel pump assembly to the fuel tank.

(1) Make sure the sealing portion is free from fuel or foreign matter before installation.

(2) Align the protrusion (A) of the gasket to the position shown in the figure, and install the gasket from the lower side of the fuel pump assembly.

NOTE:

Use a new gasket.

(3) Align the protrusion (C) of fuel pump upper plate cushion with the protrusion (C) of the fuel pump assembly as shown in the figure, and install the fuel pump upper plate cushion from the upper side of the fuel pump assembly.

(4) Align the cutout of the fuel pump upper plate with the protrusion (C), and install the fuel pump upper plate from the upper side of the fuel pump assembly so that the protrusions (B) (3 places) of the gasket fit the holes of the fuel pump upper plate.

Fuel Pump

FUEL INJECTION (FUEL SYSTEMS)

(5) Install the fuel pump assembly to the fuel tank in the direction shown in the figure, and tighten the nuts to the specified torque in the order as shown in the figure.

CAUTION:

Set the arm and float of the fuel level sensor while paying attention to prevent them from contacting the fuel tank. If the arm of the fuel level sensor is bent, the fuel gauge may not read correctly.

Tightening torque:

4.4 N·m (0.4 kgf·m, 3.2 ft·lb)

FU-09150

(a) Front side of vehicle
(b) Fuel pump ASSY

(c) Fuel pump upper plate cushion

(e) Gasket

Fuel Pump

FUEL INJECTION (FUEL SYSTEMS)

2) Connect the quick connector of the fuel delivery tube and the jet pump tube.

CAUTION:

- Check that there is no damage or dust on the quick connector. If necessary, clean the seal surface of the pipe.
- When connecting the quick connector, make sure to insert it all the way in before locking the slider.
- When it is difficult to lock the slider, check that the connector is fully inserted.
- After locking the slider, check again that the quick connector is securely connected.

NOTE:

Connect the quick connector as shown in the figure.

(a) Slider

Fuel Pump

FUEL INJECTION (FUEL SYSTEMS)

3) Connect the connector to the fuel pump.

4) Install the service hole cover of fuel pump.

5) Install the rear seat cushion. <Ref. to SE-27, INSTALLATION, Rear Seat.>

6) Connect the battery ground terminal.

C: INSPECTION

- 1) Check that the fuel pump has no deformation, cracks or other damages.
- 2) Connect the battery positive terminal to terminal No. 3 and the battery ground terminal to terminal No. 4, and inspect the fuel pump operation.

WARNING:

- Wipe off fuel completely.
- Keep the battery as far apart from fuel pump as possible.
- Do not run the fuel pump for a long time under non-load condition.

Fuel Level Sensor

FUEL INJECTION (FUEL SYSTEMS)

29. Fuel Level Sensor

A: REMOVAL

WARNING:

Place "NO OPEN FLAMES" signs near the working area.

CAUTION:

- Be careful not to spill fuel.
- If the fuel gauge indicates that two thirds or more of the fuel is remaining, be sure to drain fuel before starting work to avoid the fuel to spill.

NOTE:

The fuel level sensor is built in fuel pump assembly.

1) Remove the fuel pump assembly. <Ref. to FU(H4DO)-134, REMOVAL, Fuel Pump.>

2) Disconnect the fuel level sensor connector (A), and pull out the connector cable and fuel level sensor harness from the clip.

FU-07673

3) While pressing the claw (A) of the fuel level sensor, slide the fuel level sensor in the direction of the arrow, and remove the fuel level sensor.

FU-07674

B: INSTALLATION

Install in the reverse order of removal.

CAUTION:

Be sure to install the fuel level sensor harness to the clip first, then install the connector cable. Otherwise, malfunction may occur.

(A) Fuel level sensor harness

(B) Connector cable

FU-07675

Fuel Level Sensor

FUEL INJECTION (FUEL SYSTEMS)

C: INSPECTION

- 1) Check that the fuel level sensor has no damage.
- 2) Measure the fuel level sensor float position.

NOTE:

When inspecting the fuel level sensor, perform the work with the sensor installed to the fuel pump.

(1) FULL

(2) EMPTY

(3) Fuel tank seating surface

Float position	Standard
FULL to Fuel tank seating surface (A)	133.0±4 mm (5.236±0.157 in)
EMPTY to Fuel tank seating surface (B)	21.6±4 mm (0.850±0.157 in)

- 3) Check the resistance between fuel level sensor terminals by the connector on top of the fuel pump.

Float position	Terminal No.	Standard
FULL (A)	1 and 2	8.7±1.0 Ω
EMPTY (B)		139.1±2.0 Ω

30. Fuel Sub Level Sensor

A: REMOVAL

WARNING:

Place "NO OPEN FLAMES" signs near the working area.

CAUTION:

- Be careful not to spill fuel.
- Catch the fuel from the tubes using a container or cloth.
- If the fuel gauge indicates that two thirds or more of the fuel is remaining, be sure to drain fuel before starting work to avoid the fuel to spill.

1) Release the fuel pressure. <Ref. to FU(H4DO)-107, RELEASING OF FUEL PRESSURE, PROCEDURE, Fuel.>

2) Drain fuel. <Ref. to FU(H4DO)-107, DRAINING FUEL (WITH SUBARU SELECT MONITOR), PROCEDURE, Fuel.>

3) Disconnect the ground cable from battery.

4) Remove the rear seat cushion. <Ref. to SE-24, REMOVAL, Rear Seat.>

5) Remove the service hole cover of fuel sub level sensor.

Fuel Sub Level Sensor

FUEL INJECTION (FUEL SYSTEMS)

6) Disconnect connectors from the fuel sub level sensor, and move aside the service hole cover.

7) Disconnect the quick connector of the jet pump tube.

NOTE:

Disconnect the quick connector as shown in the figure.

(a) Slider

Fuel Sub Level Sensor

FUEL INJECTION (FUEL SYSTEMS)

8) Remove the fuel sub level sensor protector, and remove the rubber cap (A) from nut.

Fuel Sub Level Sensor

FUEL INJECTION (FUEL SYSTEMS)

9) Remove the bolts and nuts which hold fuel sub level sensor protector and fuel sub level sensor upper plate to the fuel tank.

10) Remove the fuel sub level sensor from the fuel tank.

CAUTION:

Be careful not to let the arm and float of the fuel sub level sensor contact the fuel tank.

B: INSTALLATION

1) Install the fuel sub level sensor to the fuel tank.

(1) Make sure the sealing portion is free from fuel or foreign matter before installation.

(2) Align the cutout (B) as shown in the figure, and install the fuel sub level sensor upper plate cushion to the fuel sub level sensor upper plate.

(3) Align the cutout of the fuel sub level sensor upper plate with the protrusion (B) of the fuel sub level sensor as shown in the figure, and install the fuel sub level sensor upper plate from the upper side of the fuel sub level sensor.

(4) Install the gasket from the lower side of the fuel sub level sensor so that the protrusion (B) of the fuel sub level sensor and the protrusion (A) of the gasket are positioned as shown in the figure.

NOTE:

Use a new gasket.

Fuel Sub Level Sensor

(5) Install the fuel sub level sensor to the fuel tank in the direction shown in the figure, and tighten the nuts to the specified torque in the order as shown in the figure.

CAUTION:

Set the arm and float of the fuel sub level sensor while paying attention to prevent them from contacting the fuel tank. If the arm of the fuel sub level sensor is bent, the fuel gauge may not read correctly.

Fuel Filter

FUEL INJECTION (FUEL SYSTEMS)

31. Fuel Filter

A: REMOVAL

WARNING:

Place “NO OPEN FLAMES” signs near the working area.

CAUTION:

- Be careful not to spill fuel.
- If the fuel gauge indicates that two thirds or more of the fuel is remaining, be sure to drain fuel before starting work to avoid the fuel to spill.
- Be careful not to drop or apply any impact to the fuel pump during work. This may deteriorate its performance.

NOTE:

The fuel filter is built in fuel pump assembly.

- 1) Remove the fuel pump assembly. <Ref. to FU(H4DO)-134, REMOVAL, Fuel Pump.>
- 2) Remove the fuel level sensor. <Ref. to FU(H4DO)-142, REMOVAL, Fuel Level Sensor.>
- 3) Remove the connector cable from the clip, and disconnect the connector (A) of the connector cable.

FU-07677

- 4) Push the fuel filter assembly in the direction of the arrow to compress, and detach the connecting clip.

FU-07678

FU(H4DO)-154

Fuel Filter

FUEL INJECTION (FUEL SYSTEMS)

5) Release the claw using a flat tip screwdriver or similar tool wrapped with a protection tape, and remove the tube assembly from the fuel chamber assembly.

FU-07679

6) Release three claws on the fuel pump holder from the fuel chamber assembly, and raise the fuel filter assembly.

FU-07680

Fuel Filter

FUEL INJECTION (FUEL SYSTEMS)

7) Using a flat tip screwdriver or similar tool wrapped with a protection tape, remove the tube assembly from the fuel chamber assembly, and separate the fuel filter assembly and fuel chamber assembly.

8) Using a precision driver or similar tool wrapped with a protection tape, expand the claws on the fuel pump.

9) Release the claws on the fuel pump.

10) Using a flat tip screwdriver or similar tool wrapped with a protection tape, press on the fuel pump and remove the fuel pump together with the fuel pump holder from the fuel filter assembly.

CAUTION:

If O-rings remain on the fuel filter assembly side, carefully remove them with a precision screwdriver or similar tool wrapped with a protection tape.

Fuel Filter

FUEL INJECTION (FUEL SYSTEMS)

11) Remove the spacer (A) and connector cable (B) from the fuel pump.

12) Remove the pressure regulator from the fuel filter assembly.

13) Remove O-ring (A), O-ring (B), and backup ring (C) from the pressure regulator.

B: INSTALLATION

1) Install O-ring (A), O-ring (B), and backup ring (C) to the pressure regulator.

NOTE:

- Use new O-rings.
- Apply gasoline to the O-ring and backup ring.

Fuel Filter

FUEL INJECTION (FUEL SYSTEMS)

2) Install the pressure regulator to the fuel filter assembly.

3) Install O-ring (A), spacer (B), and connector cable (C) to the fuel pump.

NOTE:

- Use new O-rings and the connector cable.
- Apply gasoline to the O-rings and the spacer.

4) Install the fuel pump to the fuel filter assembly.

NOTE:

After installation, make sure five claws are correctly engaged in each position.

5) Check that the cushions of the fuel chamber assembly for dislocation. If any of them is dislocated, install a new cushion.

Fuel Filter

FUEL INJECTION (FUEL SYSTEMS)

- 6) Slowly press in and install the tube assembly to the fuel chamber assembly until a clicking sound is heard.

- 7) Connect the tube assembly to the fuel chamber assembly.

8) Install the fuel filter assembly to the fuel chamber assembly.

NOTE:

- Set the tube (A) and spring (B) for the fuel filter assembly as shown in the figure.

- Check that the claw connecting the fuel chamber assembly and the fuel filter assembly is securely fastened.

Fuel Filter

FUEL INJECTION (FUEL SYSTEMS)

9) Push the fuel filter assembly in the direction of the arrow to compress, and attach the clip.

NOTE:

Use a new clip.

10) Secure the connector cable with the clip, and connect the connector (A) of the connector cable.

11) Install the fuel level sensor. <Ref. to FU(H4DO)-143, INSTALLATION, Fuel Level Sensor.>

12) Inspect the fuel level sensor. <Ref. to FU(H4DO)-144, INSPECTION, Fuel Level Sensor.>

13) Install the fuel pump assembly. <Ref. to FU(H4DO)-137, INSTALLATION, Fuel Pump.>

32. Fuel Delivery and Evaporation Lines

A: REMOVAL

WARNING:

Place “NO OPEN FLAMES” signs near the working area.

CAUTION:

Be careful not to spill fuel.

1) Release the fuel pressure. <Ref. to FU(H4DO)-107, RELEASING OF FUEL PRESSURE, PROCEDURE, Fuel.>

2) Open the fuel filler lid and remove the fuel filler cap.

NOTE:

This operation is required to release the inner pressure of the fuel tank.

3) Remove the floor mat. <Ref. to EI-95, REMOVAL, Floor Mat.>

Fuel Delivery and Evaporation Lines

FUEL INJECTION (FUEL SYSTEMS)

4) In the engine compartment, disconnect the fuel delivery tube (A) and evaporation hose (B).

CAUTION:

- Be careful not to spill fuel.
- Catch the fuel from the tubes using a container or cloth.

NOTE:

Disconnect the quick connector as shown in the figure.

(a) Slider

Fuel Delivery and Evaporation Lines

FUEL INJECTION (FUEL SYSTEMS)

5) Remove the fuel tank. <Ref. to FU(H4DO)-113, REMOVAL, Fuel Tank.>

6) Disconnect the quick connector, and remove the fuel delivery tube and jet pump tube from the fuel tank.

CAUTION:

- Be careful not to spill fuel.
- Catch the fuel from the tubes using a container or cloth.

NOTE:

Disconnect the quick connector as shown in the figure.

(a) Slider

Fuel Delivery and Evaporation Lines

FUEL INJECTION (FUEL SYSTEMS)

7) Disconnect the quick connector and remove the purge pipe.

NOTE:

Disconnect the quick connector as shown in the figure.

8) Remove the fuel pipe assembly from vehicle.

B: INSTALLATION

Install in the reverse order of removal while being careful of the following.

NOTE:

When connecting the fuel delivery tube (a) and evaporation hose (b), let the bushing (c) contact the quick connector (d) of fuel delivery tube to prevent the clip (e) from contacting the quick connector (d).

1. CONNECTING THE EVAPORATION LINE QUICK CONNECTOR

Connect the quick connector as shown in the figure.

CAUTION:

- Check that there is no damage or dust on the quick connector. If necessary, clean the seal surface of the pipe.
- Make sure that the quick connector is securely connected.

Fuel Delivery and Evaporation Lines

FUEL INJECTION (FUEL SYSTEMS)

2. CONNECTING THE FUEL LINE QUICK CONNECTOR

Connect the quick connector as shown in the figure.

CAUTION:

- Check that there is no damage or dust on the quick connector. If necessary, clean the seal surface of the pipe.
- When connecting the quick connector, make sure to insert it all the way in before locking the slider.
- When it is difficult to lock the slider, check that the connector is fully inserted.
- After locking the slider, check again that the quick connector is securely connected.

(a) Slider

3. EVAPORATION HOSE CONNECTION

Connect the evaporation hose by inserting it to the pipe until the hose reaches the spool or bump.

(a) Hose

(c) Spool or bump

(d) Pipe

(b) Clip

C: INSPECTION

- 1) Check that the fuel pipe has no deformation, cracks or other damages.
- 2) Check that the hose and tube have no cracks, damage or loose part.

Fuel System Trouble in General

FUEL INJECTION (FUEL SYSTEMS)

33. Fuel System Trouble in General

A: INSPECTION

Trouble	Possible cause	Corrective action
Insufficient fuel supply to fuel injector	a. Fuel pump does not operate.	
	○ Defective terminal contact	Inspect contact, especially ground, and tighten it securely.
	○ Trouble in electromagnetic or electronic circuit parts	Replace the faulty parts.
	b. Decline of fuel pump function	Replace the fuel pump.
	c. Clogged fuel filter	Replace the fuel filter. Clean or replace the fuel tank if necessary.
	d. Clogged or bent fuel line pipe, hose or tube	Clean, correct or replace the fuel line pipe, hose or tube.
	e. Air is mixed in fuel system.	Check the fuel line connections, correct or replace the defective part.
Leakage or blow out of fuel	f. Damaged diaphragm of pressure regulator	Replace the fuel filter assembly.
	a. Loose connections of fuel line pipe, hose or tube	Check the fuel line connections, correct or replace the defective part.
	b. Cracked fuel line pipe, hose or tube	Replace the fuel line pipe, hose or tube.
	c. Cracked fuel tank or defective welding part	Replace the fuel tank.
Gasoline smell inside of compartment	d. Clogged or bent fuel line pipe, hose or tube	Clean, correct or replace the fuel line pipe, hose or tube.
	a. Loose connections of fuel line pipe, hose or tube	Check the fuel line connections, correct or replace the defective part.
	b. Defective gasket of fuel saucer or fuel filler pipe assembly	Correct or replace the gasket.
Defective fuel gauge	c. Defective canister	Replace the canister.
	a. Defective operation of fuel level sensor	Replace the fuel level sensor.
Noise	b. Defective operation of combination meter <Ref. to IDI(diag)-2, COMBINATION METER, PROCEDURE, Basic Diagnostic Procedure.>	Replace the combination meter.
	a. Large operation noise or vibration of fuel pump	Replace the fuel pump.

NOTE:

- When the vehicle is left unattended for an extended period of time, water may accumulate in the fuel tank. Fill fuel fully to prevent the problem.
- In snow-covered areas, mountainous areas, skiing areas, etc. where ambient temperatures drop to 0°C (32°F) or less throughout the winter season, use a water removing agent in the fuel system to prevent freezing fuel system and accumulating water.
- When water is accumulated in fuel filter, fill the water removing agent in the fuel tank.
- Before using water removing agent, follow the cautions noted on the bottle.

Tightening torque: N·m (kgf·m, ft·lb)
T: 23 (2.3, 17.0)

General Description

EMISSION CONTROL (AUX. EMISSION CONTROL DEVICES)

B: CAUTION

- Prior to starting work, pay special attention to the following:
 1. Always wear work clothes, a work cap, and protective shoes. Additionally, wear a helmet, protective goggles, etc. if necessary.
 2. Protect the vehicle using a seat cover, fender cover, etc.
 3. Prepare the service tools, clean cloth, containers to catch grease and oil, etc.
- Vehicle components are extremely hot immediately after driving. Be wary of receiving burns from heated parts.
- When performing a repair, identify the cause of trouble and avoid unnecessary removal, disassembly and replacement.
- Before disconnecting connectors of sensors or units, be sure to disconnect the ground cable from battery.
- Always use the jack-up point when the shop jacks or rigid racks are used to support the vehicle.
- Remove contamination including dirt and corrosion before removal, installation, disassembly or assembly.
- Keep the removed parts in order and protect them from dust and dirt.
- All removed parts, if to be reused, should be reinstalled in the original positions with attention to the correct directions, etc.
- Bolts, nuts and washers should be replaced with new parts as required.
- Be sure to tighten the fasteners including bolts and nuts to the specified torque.

C: PREPARATION TOOL

1. GENERAL TOOL

TOOL NAME	REMARKS
Circuit tester	Used for measuring resistance, voltage and current.

Front Catalytic Converter

EMISSION CONTROL (AUX. EMISSION CONTROL DEVICES)

2. Front Catalytic Converter

A: REMOVAL

The front catalytic converter is integrated into the front exhaust pipe; therefore, refer to “Front Exhaust Pipe” for the removal procedure. <Ref. to EX(H4DO)-5, REMOVAL, Front Exhaust Pipe.>

B: INSTALLATION

The front catalytic converter is integrated into the front exhaust pipe; therefore, refer to “Front Exhaust Pipe” for the installation procedure. <Ref. to EX(H4DO)-7, INSTALLATION, Front Exhaust Pipe.>

C: INSPECTION

- 1) Check the connections and welded parts for exhaust leaks.
- 2) Make sure there are no holes or rusting.

Rear Catalytic Converter

EMISSION CONTROL (AUX. EMISSION CONTROL DEVICES)

3. Rear Catalytic Converter

A: REMOVAL

The rear catalytic converter is integrated into the center exhaust pipe; therefore, refer to “Center Exhaust Pipe” for the removal procedure. <Ref. to EX(H4DO)-13, REMOVAL, Center Exhaust Pipe.>

B: INSTALLATION

The rear catalytic converter is integrated into the center exhaust pipe; therefore, refer to “Center Exhaust Pipe” for the installation procedure. <Ref. to EX(H4DO)-14, INSTALLATION, Center Exhaust Pipe.>

C: INSPECTION

- 1) Check the connections and welded parts for exhaust leaks.
- 2) Make sure there are no holes or rusting.

Canister

EMISSION CONTROL (AUX. EMISSION CONTROL DEVICES)

4. Canister

A: REMOVAL

- 1) Lift up the vehicle.
- 2) Remove the rear exhaust pipe. <Ref. to EX(H4DO)-17, REMOVAL, Rear Exhaust Pipe.>
- 3) Remove the propeller shaft. <Ref. to DS-11, REMOVAL, Propeller Shaft.>
- 4) Support the rear differential with the transmission jack.
- 5) Remove the self-locking nuts which hold the rear differential to the rear sub frame assembly.

- 6) Remove the rear differential member from the rear sub frame assembly and the rear differential.

Canister

EMISSION CONTROL (AUX. EMISSION CONTROL DEVICES)

7) Lower the transmission jack gradually until the rear differential is at the position shown in the figure.

NOTE:

- When pulling out the stud bolt from the bushing portion of the rear sub frame assembly, adjust the angle and location of transmission jack and jack stand.

- Do not lower the rear differential excessively. Doing so may add extra load to the drive shaft or cause the falling-off of the drive shaft.

Canister

EMISSION CONTROL (AUX. EMISSION CONTROL DEVICES)

8) Disconnect the drain tube (A), vent tube (B) and purge tube (C) from the canister.

NOTE:

Disconnect the quick connector as shown in the figure.

(a) Drain tube and vent tube

(b) Purge tube

Canister

EMISSION CONTROL (AUX. EMISSION CONTROL DEVICES)

- 9) Remove the bolts and nuts securing the canister to the vehicle, and remove the canister.

B: INSTALLATION

- 1) Install the canister to the vehicle using bolts and nuts.

Tightening torque:

7.5 N·m (0.8 kgf-m, 5.5 ft-lb)

Canister

EMISSION CONTROL (AUX. EMISSION CONTROL DEVICES)

2) Install the drain tube (A), vent tube (B) and purge tube (C) to the canister.

CAUTION:

- Check that there is no damage or dust on the quick connector. If necessary, clean the seal surface of the pipe.
- Make sure that the quick connector is securely connected.

NOTE:

Install the quick connector as shown in the figure.

(a) Drain tube and vent tube

(b) Purge tube

Canister

EMISSION CONTROL (AUX. EMISSION CONTROL DEVICES)

3) Lift up the transmission jack gradually, and set the rear differential to the rear sub frame assembly.

NOTE:

When inserting the stud bolt into the bushing portion of the rear sub frame assembly, adjust the angle and location of transmission jack and jack stand.

4) Temporarily tighten the self-locking nuts which hold the rear differential to the rear sub frame assembly.

NOTE:

Use a new self-locking nut.

Canister

EMISSION CONTROL (AUX. EMISSION CONTROL DEVICES)

5) Set the rear differential member to the rear sub frame assembly and rear differential, and temporarily tighten the self-lock nuts which secure the rear differential member to the rear sub frame assembly and rear differential.

NOTE:

Use a new self-locking nut.

6) Remove the transmission jack from the rear differential.

7) Tighten the self-locking nuts which secure the rear differential member to the rear sub frame assembly and rear differential.

Tightening torque:

T1: 50 N·m (5.1 kgf-m, 36.9 ft-lb)

T2: 110 N·m (11.2 kgf-m, 81.1 ft-lb)

Canister

EMISSION CONTROL (AUX. EMISSION CONTROL DEVICES)

8) Tighten the self-locking nuts which secure the rear differential to the rear sub frame assembly.

Tightening torque:

70 N·m (7.1 kgf-m, 51.6 ft-lb)

9) Install the propeller shaft. <Ref. to DS-13, INSTALLATION, Propeller Shaft.>

10) Install the rear exhaust pipe. <Ref. to EX(H4DO)-18, INSTALLATION, Rear Exhaust Pipe.>

11) Lower the vehicle.

C: INSPECTION

- 1) Check that the canister has no deformation, cracks or other damages.
- 2) Check that the tube has no cracks, damage or loose part.

Purge Control Solenoid Valve

EMISSION CONTROL (AUX. EMISSION CONTROL DEVICES)

5. Purge Control Solenoid Valve

A: REMOVAL

- 1) Disconnect the ground cable from battery.

- 2) Remove the bolt which holds the purge control solenoid valve onto intake manifold.

NOTE:

Hold the purge control solenoid valve unit by hand to prevent it from rotating together.

Purge Control Solenoid Valve

EMISSION CONTROL (AUX. EMISSION CONTROL DEVICES)

- 3) Disconnect the vacuum hose from the intake manifold and intake manifold clip (A).

- 4) Disconnect the vacuum hose (A) and connector (B) from the purge control solenoid valve, and remove the purge control solenoid valve.

Purge Control Solenoid Valve

EMISSION CONTROL (AUX. EMISSION CONTROL DEVICES)

5) Remove the vacuum hose from the purge control solenoid valve.

B: INSTALLATION

Install in the reverse order of removal.

NOTE:

- Hold the purge control solenoid valve unit by hand to prevent it from rotating together.
- Connect the vacuum hose as shown in the figure.

(a) To intake manifold

(b) To fuel pipe

Purge Control Solenoid Valve

EMISSION CONTROL (AUX. EMISSION CONTROL DEVICES)

- Check that the vacuum hose is securely held to the intake manifold and intake manifold clip (A).

Tightening torque:

3.4 N·m (0.3 kgf·m, 2.5 ft·lb)

C: INSPECTION

1. PURGE CONTROL SOLENOID VALVE

- 1) Check that the purge control solenoid valve has no deformation, cracks or other damages.
- 2) Measure the resistance between the purge control solenoid valve terminals.

Terminal No.	Standard
1 and 2	24.5±1.5 Ω (20°C (68°F))

Purge Control Solenoid Valve

EMISSION CONTROL (AUX. EMISSION CONTROL DEVICES)

3) Check that air does not come out from (B) when air is blown into (A).

4) Connect the battery positive terminal to the terminal No. 1 and the battery negative terminal to the terminal No. 2. Check that air is discharged from (B), when supplying air to (A).

2. OTHER INSPECTIONS

Check the vacuum hose for cracks, damage or looseness.

EGR Control Valve

EMISSION CONTROL (AUX. EMISSION CONTROL DEVICES)

6. EGR Control Valve

A: REMOVAL

- 1) Disconnect the ground cable from battery.

- 2) Remove the clip (A) from the air intake boot.
- 3) Loosen the clamp (B) connecting the air intake boot and air cleaner case (rear).
- 4) Loosen the clamp (C) which connects the air intake boot and throttle body.

EGR Control Valve

EMISSION CONTROL (AUX. EMISSION CONTROL DEVICES)

5) Remove the air intake boot from the throttle body, and place the air intake boot aside so that it does not interfere with the work.

6) Disconnect the connector from the EGR control valve.

EGR Control Valve

EMISSION CONTROL (AUX. EMISSION CONTROL DEVICES)

7) Remove the EGR control valve from the water pipe assembly.

B: INSTALLATION

Install in the reverse order of removal.

NOTE:

Use new O-rings and gaskets.

Tightening torque:

22 N·m (2.2 kgf·m, 16.2 ft·lb)

EGR Control Valve

EMISSION CONTROL (AUX. EMISSION CONTROL DEVICES)

Tightening torque:

3 N·m (0.3 kgf·m, 2.2 ft·lb)

C: INSPECTION

- 1) Check that the EGR control valve has no deformation, cracks or other damages.
- 2) Measure the resistance between EGR control valve terminals.

Terminal No.	Standard
2 and 1	22±2 Ω
2 and 3	22±2 Ω
5 and 4	22±2 Ω
5 and 6	22±2 Ω

EGR Pipe

EMISSION CONTROL (AUX. EMISSION CONTROL DEVICES)

7. EGR Pipe

A: REMOVAL

1) Disconnect the ground cable from battery.

2) Remove the clip (A), and loosen the clamps (B) and (C) securing the air intake boot.

EGR Pipe

EMISSION CONTROL (AUX. EMISSION CONTROL DEVICES)

3) Remove the air intake boot from the air cleaner case (rear) and throttle body, and move the air intake boot aside so that it does not interfere with the work.

4) Disconnect the connector from the throttle body.

EGR Pipe

EMISSION CONTROL (AUX. EMISSION CONTROL DEVICES)

5) Remove the bolts which secure the throttle body to the intake manifold, and tilt the throttle body to the rear side of vehicle.

6) Remove the bolts and nuts that hold the EGR pipe to the intake manifold and the water pipe assembly, and remove the EGR pipe.

EGR Pipe

EMISSION CONTROL (AUX. EMISSION CONTROL DEVICES)

B: INSTALLATION

1) Temporarily install the EGR pipe to the intake manifold and water pipe assembly, and tighten the EGR pipe in numerical order as shown in the figure.

NOTE:

Use a new gasket.

Tightening torque:

6.4 N·m (0.7 kgf-m, 4.7 ft-lb)

2) Install the throttle body to the intake manifold.

Tightening torque:

8.0 N·m (0.8 kgf-m, 5.9 ft-lb)

EGR Pipe

EMISSION CONTROL (AUX. EMISSION CONTROL DEVICES)

3) Connect the connector to the throttle body.

4) Install the air intake boot. <Ref. to IN(H4DO)-12, INSTALLATION, Air Intake Boot.>

5) Connect the battery ground terminal.

C: INSPECTION

Check that the EGR pipe has no deformation, cracks or other damages.

EGR Cooler

EMISSION CONTROL (AUX. EMISSION CONTROL DEVICES)

8. EGR Cooler

A: REMOVAL

1) Disconnect the ground cable from battery.

2) Drain engine coolant. <Ref. to CO(H4DO)-13, DRAINING OF ENGINE COOLANT, REPLACEMENT, Engine Coolant.>

3) Remove the center exhaust pipe. <Ref. to EX(H4DO)-13, REMOVAL, Center Exhaust Pipe.>

4) Lower the vehicle.

5) Remove the clip (A), and loosen the clamps (B) and (C) securing the air intake boot.

EGR Cooler

EMISSION CONTROL (AUX. EMISSION CONTROL DEVICES)

- 6) Remove the air intake boot from the air cleaner case (rear) and throttle body, and move the air intake boot aside so that it does not interfere with the work.

- 7) Remove the clip holding the air breather hose to the engine rear hanger. (MT model)

EGR Cooler

EMISSION CONTROL (AUX. EMISSION CONTROL DEVICES)

8) Disconnect the engine harness connector.

(1) Remove the bolt (A) securing the bulkhead harness connector bracket.

(2) Disconnect the bulkhead harness connector from the engine harness connector (black) and engine harness connector (brown).

9) Remove the engine rear hanger.

EGR Cooler

EMISSION CONTROL (AUX. EMISSION CONTROL DEVICES)

- 10) Disconnect the engine coolant hose (A), engine coolant hose (B) (CVT model) and engine coolant hose (C) from the EGR cooler.

- 11) Remove the nuts which secure the EGR cooler to the cylinder head RH.
12) Remove the nuts which secure the EGR cooler to the EGR control valve.

EGR Cooler

EMISSION CONTROL (AUX. EMISSION CONTROL DEVICES)

13) Remove the gasket from the stud bolt.

B: INSTALLATION

1) Set the gasket to the stud bolt.

NOTE:

Use a new gasket.

EGR Cooler

EMISSION CONTROL (AUX. EMISSION CONTROL DEVICES)

2) Temporarily tighten the bolts securing the EGR cooler to the EGR control valve and the cylinder head RH, and tighten in numerical order.

NOTE:

Use a new gasket.

Tightening torque:

9 N·m (0.9 kgf·m, 6.6 ft-lb)

3) Connect the engine coolant hose (A), engine coolant hose (B) (CVT model) and engine coolant hose (C) to the EGR cooler.

EGR Cooler

EMISSION CONTROL (AUX. EMISSION CONTROL DEVICES)

4) Install the engine rear hanger.

Tightening torque:

21 N·m (2.1 kgf·m, 15.5 ft·lb)

EC-03530

5) Connect the engine harness connector.

(1) Connect the bulkhead harness connector to the engine harness connector (black) and engine harness connector (brown).

(2) Install the bolt (A) which secures the bulkhead harness connector bracket.

Tightening torque:

7.5 N·m (0.8 kgf·m, 5.5 ft·lb)

EC-03529

EGR Cooler

EMISSION CONTROL (AUX. EMISSION CONTROL DEVICES)

- 6) Secure the air breather hose to the engine rear hanger using clip. (MT model)

- 7) Install the air intake boot. <Ref. to IN(H4DO)-12, INSTALLATION, Air Intake Boot.>
8) Install the center exhaust pipe. <Ref. to EX(H4DO)-14, INSTALLATION, Center Exhaust Pipe.>
9) Lower the vehicle.
10) Connect the battery ground terminal. <Ref. to NT-6, BATTERY, NOTE, Note.>
11) Fill engine coolant. <Ref. to CO(H4DO)-14, FILLING OF ENGINE COOLANT, REPLACEMENT, Engine Coolant.>

C: INSPECTION

- 1) Check that the EGR cooler has no deformation, cracks or other damages.
- 2) Check that the hose has no cracks, damage or loose part.

Fuel Level Sensor

EMISSION CONTROL (AUX. EMISSION CONTROL DEVICES)

9. Fuel Level Sensor

A: REMOVAL

For removal procedures, refer to the "FU (H4DO)" section. <Ref. to FU(H4DO)-142, REMOVAL, Fuel Level Sensor.>

B: INSTALLATION

For installation procedures, refer to the "FU (H4DO)" section. <Ref. to FU(H4DO)-143, INSTALLATION, Fuel Level Sensor.>

C: INSPECTION

For inspection procedures, refer to the "FU (H4DO)" section. <Ref. to FU(H4DO)-144, INSPECTION, Fuel Level Sensor.>

Fuel Sub Level Sensor

EMISSION CONTROL (AUX. EMISSION CONTROL DEVICES)

10. Fuel Sub Level Sensor

A: REMOVAL

For removal procedures, refer to the "FU (H4DO)" section. <Ref. to FU(H4DO)-145, REMOVAL, Fuel Sub Level Sensor.>

B: INSTALLATION

For installation procedures, refer to the "FU (H4DO)" section. <Ref. to FU(H4DO)-148, INSTALLATION, Fuel Sub Level Sensor.>

C: INSPECTION

For inspection procedures, refer to the "FU (H4DO)" section. <Ref. to FU(H4DO)-153, INSPECTION, Fuel Sub Level Sensor.>

Drain Filter

EMISSION CONTROL (AUX. EMISSION CONTROL DEVICES)

11.Drain Filter

A: SPECIFICATION

The leak check valve assembly is a non-disassembled part. Do not remove the drain filter from the leak check valve assembly. Refer to "Leak Check Valve Assembly" for removal and installation procedures. <Ref. to EC(H4DO)-43, REMOVAL, Leak Check Valve Assembly.> <Ref. to EC(H4DO)-49, INSTALLATION, Leak Check Valve Assembly.>

Leak Check Valve Assembly

EMISSION CONTROL (AUX. EMISSION CONTROL DEVICES)

12. Leak Check Valve Assembly

A: REMOVAL

- 1) Disconnect the ground cable from battery.

- 2) Lift up the vehicle.
- 3) Remove the rear exhaust pipe. <Ref. to EX(H4DO)-17, REMOVAL, Rear Exhaust Pipe.>
- 4) Remove the propeller shaft. <Ref. to DS-11, REMOVAL, Propeller Shaft.>
- 5) Support the rear differential with the transmission jack.
- 6) Remove the self-locking nuts which hold the rear differential to the rear sub frame assembly.

Leak Check Valve Assembly

EMISSION CONTROL (AUX. EMISSION CONTROL DEVICES)

7) Remove the rear differential member from the rear sub frame assembly and the rear differential.

8) Lower the transmission jack gradually until the rear differential is at the position shown in the figure.

NOTE:

- When pulling out the stud bolt from the bushing portion of the rear sub frame assembly, adjust the angle and location of transmission jack and jack stand.

Leak Check Valve Assembly

EMISSION CONTROL (AUX. EMISSION CONTROL DEVICES)

- Do not lower the rear differential excessively. Doing so may add extra load to the drive shaft or cause the falling-off of the drive shaft.

EC-03570

Leak Check Valve Assembly

EMISSION CONTROL (AUX. EMISSION CONTROL DEVICES)

9) Disconnect the drain tube from the canister.

NOTE:

Disconnect the quick connector as shown in the figure.

EC-02999

EC-03051

Leak Check Valve Assembly

EMISSION CONTROL (AUX. EMISSION CONTROL DEVICES)

- 10) Disconnect the fuel filler hose (A) and evaporation hose (B).
- 11) Disconnect the intake hose (C) from the connector.

- 12) Disconnect the connector from the leak check valve assembly.

Leak Check Valve Assembly

EMISSION CONTROL (AUX. EMISSION CONTROL DEVICES)

13) Remove the bolt and clip (A) which secure the leak check valve assembly to the vehicle, and remove the leak check valve assembly.

Leak Check Valve Assembly

EMISSION CONTROL (AUX. EMISSION CONTROL DEVICES)

B: INSTALLATION

1) Install the leak check valve assembly to the vehicle with the bolt and clip (A).

Tightening torque:

7.5 N·m (0.8 kgf·m, 5.5 ft·lb)

Leak Check Valve Assembly

EMISSION CONTROL (AUX. EMISSION CONTROL DEVICES)

2) Connect the connector to the leak check valve assembly.

Leak Check Valve Assembly

EMISSION CONTROL (AUX. EMISSION CONTROL DEVICES)

3) Connect the intake hose (C) to the connector.

4) Securely insert the fuel filler hose (A) and evaporation hose (B) until the hose end contacts the spool, then attach the clamp and clip as shown in the figure.

Tightening torque:

2.5 N·m (0.3 kgf·m, 1.8 ft·lb)

(1) Hose

(3) Spool

(4) Pipe

(2) Clamp and clip

Leak Check Valve Assembly

EMISSION CONTROL (AUX. EMISSION CONTROL DEVICES)

5) Connect the drain tube to the canister.

NOTE:

Connect the quick connector as shown in the figure.

Leak Check Valve Assembly

EMISSION CONTROL (AUX. EMISSION CONTROL DEVICES)

6) Lift up the transmission jack gradually, and set the rear differential to the rear sub frame assembly.

NOTE:

When inserting the stud bolt into the bushing portion of the rear sub frame assembly, adjust the angle and location of transmission jack and jack stand.

7) Temporarily tighten the self-locking nuts which hold the rear differential to the rear sub frame assembly.

NOTE:

Use a new self-locking nut.

Leak Check Valve Assembly

EMISSION CONTROL (AUX. EMISSION CONTROL DEVICES)

8) Set the rear differential member to the rear sub frame assembly and rear differential, and temporarily tighten the self-lock nuts which secure the rear differential member to the rear sub frame assembly and rear differential.

NOTE:

Use a new self-locking nut.

9) Remove the transmission jack from the rear differential.

10) Tighten the self-locking nuts which secure the rear differential member to the rear sub frame assembly and rear differential.

Tightening torque:

T1: 50 N·m (5.1 kgf-m, 36.9 ft-lb)

T2: 110 N·m (11.2 kgf-m, 81.1 ft-lb)

Leak Check Valve Assembly

EMISSION CONTROL (AUX. EMISSION CONTROL DEVICES)

11) Tighten the self-locking nuts which secure the rear differential to the rear sub frame assembly.

Tightening torque:

70 N·m (7.1 kgf-m, 51.6 ft-lb)

12) Install the propeller shaft. <Ref. to DS-13, INSTALLATION, Propeller Shaft.>

13) Install the rear exhaust pipe. <Ref. to EX(H4DO)-18, INSTALLATION, Rear Exhaust Pipe.>

14) Lower the vehicle.

15) Connect the battery ground terminal.

Leak Check Valve Assembly

EMISSION CONTROL (AUX. EMISSION CONTROL DEVICES)

C: DISASSEMBLY

- 1) Remove the drain separator from the leak check valve assembly. <Ref. to EC(H4DO)-62, REMOVAL, Drain Separator.>
- 2) Disconnect the drain tube from the leak check valve assembly.

NOTE:

Disconnect the quick connector as shown in the figure.

EC-02999

EC-02948

Leak Check Valve Assembly

EMISSION CONTROL (AUX. EMISSION CONTROL DEVICES)

3) Remove the bracket from the leak check valve assembly.

EC-02949

D: ASSEMBLY

1) Install the bracket to the leak check valve assembly.

Tightening torque:

18 N·m (1.8 kgf·m, 13.3 ft·lb)

EC-02949

Leak Check Valve Assembly

EMISSION CONTROL (AUX. EMISSION CONTROL DEVICES)

2) Install the drain tube to the leak check valve assembly.

CAUTION:

- Check that there is no damage or dust on the quick connector. If necessary, clean the seal surface of the pipe.
- Make sure that the quick connector is securely connected.

NOTE:

Connect the quick connector as shown in the figure.

3) Install the drain separator to the leak check valve assembly. <Ref. to EC(H4DO)-62, INSTALLATION, Drain Separator.>

Leak Check Valve Assembly

EMISSION CONTROL (AUX. EMISSION CONTROL DEVICES)

E: INSPECTION

1. CHECK SWITCHING VALVE

1) Check the resistance between switching valve terminals.

Terminal No.	Standard
1 and 5	$27^{+3}_{-2} \Omega$ (when 20°C (68°F))
	$31 \pm 4 \Omega$ (60°C (140°F))

2) Check that air is discharged from (B) when air is blown into (A).

Leak Check Valve Assembly

EMISSION CONTROL (AUX. EMISSION CONTROL DEVICES)

3) Connect the battery positive terminal to the terminal No. 5 and the battery negative terminal to the terminal No. 1. Check that air does not come out from (B) when air is blown into (A).

NOTE:

The purpose of this inspection is to check the valve movement, and it would be success if a large change of flow can be checked resulting from valve opening/closing. Therefore, it does not indicate a malfunction if a small amount of flow from (B) is detected when the valve is opened.

2. CHECK VACUUM PUMP

1) Connect the battery positive terminal to terminal No. 3 and the battery ground terminal to terminal No. 4, and inspect the vacuum pump operation.

CAUTION:

Do not operate the vacuum pump for 5 minutes or more.

3. CHECK PRESSURE SENSOR

1) Connect dry-cell battery positive terminal to terminal No. 6 and dry-cell battery ground terminal to terminal No. 8, circuit tester positive terminal to terminal No. 7 and the circuit tester negative terminal to terminal No. 8.

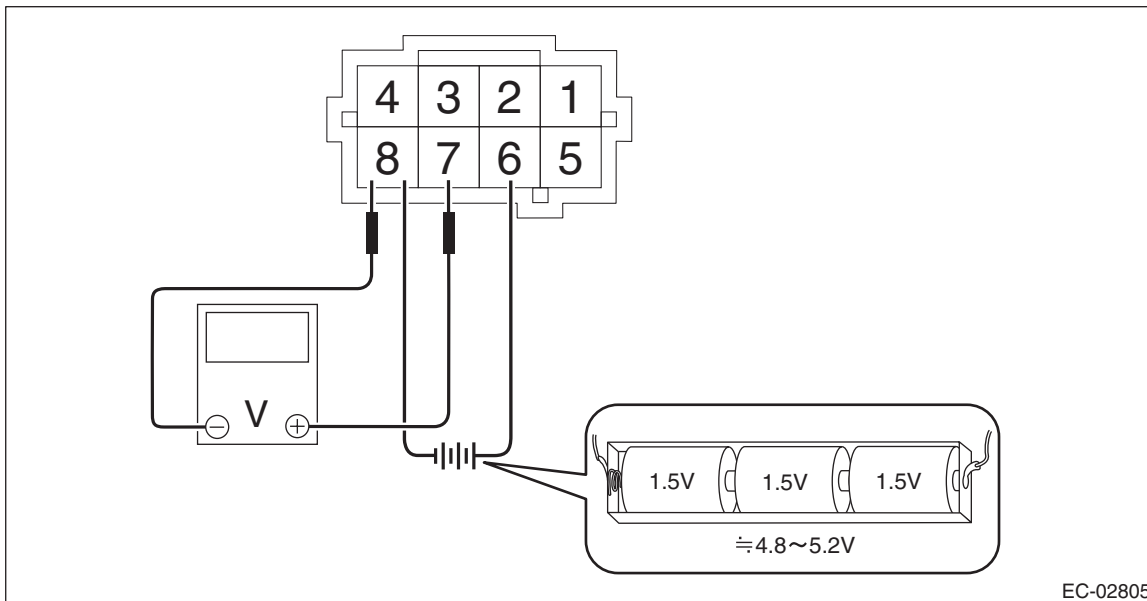

NOTE:

- Use new dry-cell batteries.

Leak Check Valve Assembly

EMISSION CONTROL (AUX. EMISSION CONTROL DEVICES)

- Using circuit tester, check the voltage of a single dry-cell battery is 1.6 V or more. And also check the voltage of three batteries in series is between 4.8 V and 5.2 V.
- For power supply, 5 V DC voltage source can also be used.

2) Check the voltage at a normal atmospheric pressure.

NOTE:

The atmospheric pressure at higher altitude is lower than normal. Therefore, the voltage is lower than the standard value.

Terminal No.	Standard
7 (+) and 8 (-)	Approx. 3.5 V (when 25°C (77°F))

3) Connect the battery positive terminal to terminal No. 3 and the battery ground terminal to terminal No. 4, and check that there is a voltage drop from the voltage measured in step 2) when the vacuum pump is operated.

4. OTHER INSPECTIONS

- 1) Check that the leak check valve assembly has no deformation, cracks or other damages.
- 2) Check that the tube or hose have no cracks, damage or loose part.

Drain Separator

EMISSION CONTROL (AUX. EMISSION CONTROL DEVICES)

13. Drain Separator

A: REMOVAL

The drain separator is installed to the leak check valve assembly. Refer to “Leak Check Valve Assembly” for removal procedure. <Ref. to EC(H4DO)-43, REMOVAL, Leak Check Valve Assembly.>

B: INSTALLATION

The drain separator is installed to the leak check valve assembly. Refer to “Leak Check Valve Assembly” for installation procedure. <Ref. to EC(H4DO)-49, INSTALLATION, Leak Check Valve Assembly.>

C: DISASSEMBLY

1) Disconnect the drain tube (A) from the leak check valve assembly.

NOTE:

Disconnect the quick connector as shown in the figure.

EC-02999

2) Lift up the claw (B) of the drain separator and slide the drain separator in the direction of the arrow (C) to remove the drain separator.

EC-03402

Drain Separator

EMISSION CONTROL (AUX. EMISSION CONTROL DEVICES)

3) Remove the drain hose and drain tube from the drain separator.

D: ASSEMBLY

Assemble in the reverse order of disassembly.

NOTE:

Connect the quick connector as shown in the figure.

E: INSPECTION

- 1) Check that the drain separator and drain separator bracket have no deformation, crack, or other damage.
- 2) Check that the drain hose and drain tube have no crack, damage, or looseness.
- 3) Check that no foreign substances are clogged in the drain separator.

PCV Hose

EMISSION CONTROL (AUX. EMISSION CONTROL DEVICES)

14.PCV Hose

A: REMOVAL

CAUTION:

Do not remove except when the PCV hose is broken.

1) Disconnect the PCV hose A from the intake manifold and the PCV valve, and then remove the PCV hose A.

2) Remove the intake manifold. <Ref. to FU(H4DO)-19, REMOVAL, Intake Manifold.>

3) Remove the PCV hose B from the PCV connector.

B: INSTALLATION

Install in the reverse order of removal.

C: INSPECTION

Check that the PCV hose has no cracks, damage or loose part.

PCV Valve

EMISSION CONTROL (AUX. EMISSION CONTROL DEVICES)

15.PCV Valve

A: REMOVAL

CAUTION:

Do not remove unless the PCV valve is broken.

- 1) Disconnect the PCV hose from the intake manifold and the PCV valve, and then remove the PCV hose.

EC-02954

- 2) Remove the clip (A) holding the air breather hose from the engine hanger. (MT model)
- 3) Disconnect the connector (B) from manifold absolute pressure sensor. (MT model)
- 4) Disconnect the connector (C) from the throttle position sensor. (MT model)
- 5) Disconnect the connector (D) from the EGR control valve. (MT model)

EC-03416

PCV Valve

EMISSION CONTROL (AUX. EMISSION CONTROL DEVICES)

6) Remove the PCV valve from the cylinder block RH.

B: INSTALLATION

Install in the reverse order of removal.

NOTE:

Apply liquid gasket to the bolt threads of PCV valve.

Liquid gasket:

THREE BOND 1324 (Part No. 004403042) or equivalent

Tightening torque:

23 N·m (2.3 kgf·m, 17.0 ft·lb)

C: INSPECTION

1. PCV VALVE

- 1) Check that the PCV valve has no deformation, cracks or other damages.
- 2) Check that air is discharged from (B) when air is blown into (A).

PCV Valve

EMISSION CONTROL (AUX. EMISSION CONTROL DEVICES)

3) Check that air does not come out from (B) when air is blown into (A).

2. OTHER INSPECTIONS

Check that the PCV hose has no cracks, damage or loose part.

PCV Valve

EMISSION CONTROL (AUX. EMISSION CONTROL DEVICES)

INTAKE (INDUCTION)

1. General Description

A: COMPONENT

IN-03526

IN(H4DO)-2

General Description

INTAKE (INDUCTION)

(1) Air intake duct	(8) Air cleaner case (rear)	Tightening torque: N·m (kgf-m, ft-lb) T1: 1 (0.1, 0.7) T2: 3 (0.3, 2.2) T3: 6 (0.6, 4.4) T4: 7.5 (0.8, 5.5)
(2) Clip	(9) Clip	
(3) Cushion	(10) Mass air flow and intake air temperature sensor	
(4) Air cleaner case (front)	(11) Clamp	
(5) Spacer	(12) Clamp	
(6) Cushion	(13) Clip	
(7) Air cleaner element	(14) Air intake boot	

B: CAUTION

- Prior to starting work, pay special attention to the following:
 1. Always wear work clothes, a work cap, and protective shoes. Additionally, wear a helmet, protective goggles, etc. if necessary.
 2. Protect the vehicle using a seat cover, fender cover, etc.
 3. Prepare the service tools, clean cloth, containers to catch grease and oil, etc.
- Vehicle components are extremely hot immediately after driving. Be wary of receiving burns from heated parts.
- When performing a repair, identify the cause of trouble and avoid unnecessary removal, disassembly and replacement.
- Before disconnecting connectors of sensors or units, be sure to disconnect the ground cable from battery.
- Always use the jack-up point when the shop jacks or rigid racks are used to support the vehicle.
- Remove contamination including dirt and corrosion before removal, installation, disassembly or assembly.
- Keep the removed parts in order and protect them from dust and dirt.
- All removed parts, if to be reused, should be reinstalled in the original positions with attention to the correct directions, etc.
- Bolts, nuts and washers should be replaced with new parts as required.
- Be sure to tighten the fasteners including bolts and nuts to the specified torque.

Air Cleaner Element

INTAKE (INDUCTION)

2. Air Cleaner Element

A: REMOVAL

- 1) Disconnect the ground cable from battery. <Ref. to NT-6, BATTERY, NOTE, Note.>
- 2) Remove the air intake duct. <Ref. to IN(H4DO)-13, REMOVAL, Air Intake Duct.>
- 3) Disconnect the connector (A) from the mass air flow and intake air temperature sensor, and remove the clip (B).

- 4) Loosen the clamp (A) which secures the air intake boot to the air cleaner case (rear), and then remove the clip (B) from the air cleaner case (front).

5) Remove the air cleaner case (rear) and air cleaner element.

B: INSTALLATION

Install in the reverse order of removal.

CAUTION:

Be sure to use **SUBARU** genuine air cleaner element depending on the engine type when replacing the air cleaner elements. Using other air cleaner element may affect the engine performance.

NOTE:

- Check that there is no dirt or dust within the air cleaner case. If any dirt or dust is found, clean it.
- Install the air cleaner element as shown in the figure.

(a) Upside

(b) Downside

(c) Air cleaner case (front) side

(d) Air cleaner case (rear) side

Air Cleaner Element

INTAKE (INDUCTION)

- When installing the air cleaner case (rear), align the protrusion of the air cleaner case (rear) to the hole on the air cleaner case (front) to install.

Tightening torque:

3 N·m (0.3 kgf·m, 2.2 ft·lb)

C: INSPECTION

- 1) Check that the air cleaner element has no deformation, cracks or other damages.
- 2) Check the air cleaner element for excessive dirt.
- 3) Replace the air cleaner case (rear) if the HC absorption filter is damaged.

3. Air Cleaner Case

A: REMOVAL

- 1) Disconnect the ground cable from battery. <Ref. to NT-6, BATTERY, NOTE, Note.>
- 2) Remove the air intake duct. <Ref. to IN(H4DO)-13, REMOVAL, Air Intake Duct.>
- 3) Disconnect the connector (A) from the mass air flow and intake air temperature sensor, and remove the clip (B).

- 4) Loosen the clamp (A) which secures the air intake boot to the air cleaner case (rear), and then remove the clip (B) from the air cleaner case (front).

Air Cleaner Case

INTAKE (INDUCTION)

5) Remove the air cleaner case (rear) and air cleaner element.

6) Remove the bolt (A) and nut (B) which secure the air cleaner case (front) to the body.

7) Remove the air cleaner case (front).

B: INSTALLATION

1) Install the bolt (A) and nut (B) which secure the air cleaner case (front) to the body.

Tightening torque:

Bolt (A)

6 N·m (0.6 kgf·m, 4.4 ft·lb)

Nut (B)

7.5 N·m (0.8 kgf·m, 5.5 ft·lb)

2) Install the air cleaner case (rear) and air cleaner element.

NOTE:

- Check that there is no dirt or dust within the air cleaner case. If any dirt or dust is found, clean it.
- Install the air cleaner element as shown in the figure.

(a) Upside

(b) Downside

(c) Air cleaner case (front) side

(d) Air cleaner case (rear) side

Air Cleaner Case

INTAKE (INDUCTION)

- When installing the air cleaner case (rear), align the protrusion of the air cleaner case (rear) to the hole on the air cleaner case (front) to install.

- 3) Install the clips (B) to the air cleaner case (front), then tighten the clamp (A) that secures the air intake boot to the air cleaner case (rear).

Tightening torque:

Clamp (A)

3 N·m (0.3 kgf·m, 2.2 ft·lb)

- 4) Connect the connector (A) to the mass air flow and intake air temperature sensor and secure the harness with clip (B).

- 5) Install the air intake duct. <Ref. to IN(H4DO)-13, INSTALLATION, Air Intake Duct.>
- 6) Connect the battery ground terminal. <Ref. to NT-6, BATTERY, NOTE, Note.>

C: INSPECTION

- 1) Check that the air cleaner case has no deformation, cracks or other damages.
- 2) Check that the air intake boot has no cracks, damage or loose part.

Air Intake Boot

INTAKE (INDUCTION)

4. Air Intake Boot

A: REMOVAL

- 1) Remove the clip (A) from the air intake boot.
- 2) Loosen the clamp (B) securing the air cleaner case (rear) to the air intake boot.
- 3) Loosen the clamp (C) which secures the throttle body to the air intake boot.

- 4) Disconnect the PCV hose and remove the air intake boot.

B: INSTALLATION

Install in the reverse order of removal.

Tightening torque:

3 N·m (0.3 kgf-m, 2.2 ft-lb)

C: INSPECTION

- 1) Check that the air intake boot has no deformation, cracks or other damages.
- 2) Inspect that no foreign objects are mixed in the air intake boot.

5. Air Intake Duct

A: REMOVAL

- 1) Remove the clip which secures the air intake duct, and remove the air intake duct.

IN-03708

B: INSTALLATION

Install in the reverse order of removal.

C: INSPECTION

- 1) Check that the air intake duct has no deformation, cracks or other damages.
- 2) Inspect that no foreign objects are mixed in the air intake duct.

Air Intake Duct

C: CAUTION

- Prior to starting work, pay special attention to the following:
 1. Always wear work clothes, a work cap, and protective shoes. Additionally, wear a helmet, protective goggles, etc. if necessary.
 2. Protect the vehicle using a seat cover, fender cover, etc.
 3. Prepare the service tools, clean cloth, containers to catch grease and oil, etc.
- Vehicle components are extremely hot immediately after driving. Be wary of receiving burns from heated parts.
- When performing a repair, identify the cause of trouble and avoid unnecessary removal, disassembly and replacement.
- Before disconnecting connectors of sensors or units, be sure to disconnect the ground cable from battery.
- Always use the jack-up point when the shop jacks or rigid racks are used to support the vehicle.
- Remove or install the engine in an area where chain hoists, lifting devices, etc. are available for ready use. When lifting up the vehicle, make sure to support the vehicle at the jack-up points.
- Be careful not to let any oil or grease contact the clutch disc or flywheel.
- Remove contamination including dirt and corrosion before removal, installation, disassembly or assembly.
- Keep the removed parts in order and protect them from dust and dirt.
- All removed parts, if to be reused, should be reinstalled in the original positions with attention to the correct directions, etc.
- Rotating parts and sliding parts such as piston, bearing and gear should be coated with oil when being assembled.
- Bolts, nuts and washers should be replaced with new parts as required.
- Be sure to tighten the fasteners including bolts and nuts to the specified torque.
- Always use new application oil during work.

General Description

MECHANICAL

ILLUSTRATION	TOOL NUMBER	DESCRIPTION	REMARKS
 <p>STSSM4</p>	—	SUBARU SELECT MONITOR 4	Used for setting of each function and troubleshooting for electrical system. NOTE: For detailed operation procedures of Subaru Select Monitor 4, refer to "Application help".

2. GENERAL TOOL

TOOL NAME	REMARKS
Compression gauge	Used for measuring compression.
Vacuum gauge	Used for measuring intake manifold vacuum.
Oil pressure gauge	Used for measuring engine oil pressure.
Fuel pressure gauge	Used for measuring fuel pressure.
Thickness gauge	Used for various inspections.
Angle gauge	Used for angle tightening.
Piston ring compressor	Used for installing the piston into the cylinder block.
DST-i	Used together with Subaru Select Monitor 4.

Compression

MECHANICAL

2. Compression

A: INSPECTION

CAUTION:

After warming-up, engine becomes very hot. Be careful not to burn yourself during measurement.

- 1) Turn the ignition switch to OFF.
- 2) After warming-up the engine, turn the ignition switch to OFF.
- 3) Make sure that the battery is fully charged.
- 4) Check the starter motor for satisfactory performance and operation.
- 5) Remove the fuse of fuel pump from main fuse box.

- 6) Start the engine and run it until it stalls.
- 7) After the engine stalls, crank it for five more seconds.
- 8) Turn the ignition switch to OFF.
- 9) Remove all spark plugs. <Ref. to IG(H4DO)-4, REMOVAL, Spark Plug.>
- 10) Install the compression gauge to the spark plug hole.

NOTE:

When using a screw-in type compression gauge, the screw should be less than 25 mm (0.98 in) long.

- 11) Connect the battery ground terminal. <Ref. to NT-6, BATTERY, NOTE, Note.>
- 12) Turn the ignition switch to ON.
- 13) Depress the accelerator pedal to full throttle.
- 14) Crank the engine by starter motor and read the value when the needle of the compression gauge becomes stable.

NOTE:

- Perform at least two measurements per cylinder, and make sure that the values are correct.
- If the compression pressure is out of standard, check or adjust the pistons, valves and cylinders.

Compression pressure (at 200 — 300 r/min):

Standard

1,050 — 1,400 kPa (11 — 14 kg/cm², 152 — 203 psi)

Difference between cylinders

100 kPa (1 kg/cm², 14 psi) or less

- 15) After inspection, install the related parts in the reverse order of removal.

3. Idle Speed

A: INSPECTION

- 1) Before checking the idle speed, check the following item:
 - (1) Check the air cleaner element is free from clogging, ignition timing is correct, spark plugs are in good condition, and hoses are connected properly.
 - (2) Check the malfunction indicator light does not illuminate.
- 2) Warm up the engine.
- 3) Read the engine idle speed using Subaru Select Monitor. <Ref. to EN(H4DO)(diag)-36, DISPLAY ENGINE CURRENT DATA, OPERATION, Subaru Select Monitor.>

NOTE:

- Idle speed cannot be adjusted manually, because the idle speed is automatically adjusted.
- If idle speed is out of standard, refer to the General Diagnosis Table under “Engine Control System”. <Ref. to EN(H4DO)(diag)-2, Basic Diagnostic Procedure.>
 - (1) Check the idle speed when no-loaded. (Headlight, blower fan, rear defroster, radiator fan, A/C and etc. are OFF)

Idle speed (No load, and for CVT model, select lever in “P” or “N” range, for MT model, gear shift lever in neutral position.):

Standard

650±100 r/min

- (2) Check the idle speed when loaded. (Turn the A/C switch to ON and operate the compressor for at least one minute before measurement.)

Idle speed (A/C on, and for CVT model, select lever in “P” or “N” range, for MT model, gear shift lever in neutral position.):

Standard

800 — 900±50 r/min

4. Ignition Timing

A: INSPECTION

CAUTION:

After warming-up, engine becomes very hot. Be careful not to burn yourself at measurement.

- 1) Before checking the ignition timing, check the following item:
 - (1) Check the air cleaner element is free from clogging, spark plugs are in good condition, and hoses are connected properly.
 - (2) Check the malfunction indicator light does not illuminate.
- 2) Warm up the engine.
- 3) Read the ignition timing using Subaru Select Monitor. <Ref. to EN(H4DO)(diag)-36, DISPLAY ENGINE CURRENT DATA, OPERATION, Subaru Select Monitor.>

NOTE:

If ignition timing is out of standard, check the ignition control system. Refer to “Engine Control System”. <Ref. to EN(H4DO)(diag)-2, Basic Diagnostic Procedure.>

Ignition timing [BTDC/{r/min}]:

Standard

$16^{\circ} \pm 10^{\circ} / 650$ (CVT model)

$12^{\circ} \pm 10^{\circ} / 650$ (MT model)

Intake Manifold Vacuum

MECHANICAL

5. Intake Manifold Vacuum

A: INSPECTION

- 1) Turn the ignition switch to OFF.
- 2) Warm up the engine.
- 3) Install the vacuum gauge.
 - (1) Remove the brake booster vacuum hose from the intake manifold.

- (2) Connect the vacuum gauge to the intake manifold.

4) Keep the engine at idle speed and read the vacuum gauge indication.

NOTE:

Condition of engine inside can be diagnosed by observing the behavior of the vacuum gauge needle as described in table below.

Intake manifold vacuum (at idling, A/C OFF):

Standard

-60.0 kPa (-450 mmHg, -17.72 inHg) or more

Diagnosis of engine condition by inspection of intake manifold vacuum	
Vacuum gauge needle behavior	Possible engine condition
1. Needle is steady but lower than standard value. This tendency becomes more evident as engine temperature rises.	Leakage around intake manifold gasket, disconnection or damage of vacuum hose
2. Needle intermittently drops to position lower than standard value.	Leakage around cylinder
3. Needle drops suddenly and intermittently from standard value.	Sticky valve
4. When engine speed is gradually increased, needle begins to vibrate rapidly at certain speed, and then vibration increases as engine speed increases.	Weak or broken valve springs
5. Needle vibrates above and below standard value in narrow range.	Defective ignition system

5) After inspection, install the related parts in the reverse order of removal.

6. Engine Oil Pressure

A: INSPECTION

- 1) Disconnect the ground cable from battery. <Ref. to NT-6, BATTERY, NOTE, Note.>
- 2) Remove the oil pressure switch. <Ref. to LU(H4DO)-21, REMOVAL, Oil Pressure Switch.>
- 3) Install the oil pressure gauge to the chain cover.

- 4) Connect the battery ground terminal. <Ref. to NT-6, BATTERY, NOTE, Note.>
- 5) Start the engine, and check the oil pressure.

NOTE:

- Standard value is based on an engine oil temperature of 80°C (176°F).
- If the oil pressure is out of specification, check oil pump, oil filter and lubrication line. <Ref. to LU(H4DO)-51, INSPECTION, Engine Lubrication System Trouble in General.>
- If the oil pressure warning light is ON and oil pressure is within standard, check the oil pressure switch. <Ref. to LU(H4DO)-51, INSPECTION, Engine Lubrication System Trouble in General.>

Engine oil pressure:

Standard

50 kPa (0.5 kg/cm², 7 psi) or more (at 600 r/min)

350 kPa (3.6 kg/cm², 51 psi) or more (at 6,000 r/min)

- 6) After inspection, install the related parts in the reverse order of removal.

7. Fuel Pressure

A: INSPECTION

1) Release the fuel pressure. <Ref. to FU(H4DO)-107, RELEASING OF FUEL PRESSURE, PROCEDURE, Fuel.>

2) Open the fuel filler lid and remove the fuel filler cap.

NOTE:

This operation is required to release the inner pressure of the fuel tank.

3) Disconnect the fuel delivery tube from the fuel delivery pipe, and connect the fuel pressure gauge.

CAUTION:

- **Be careful not to spill fuel.**
- **Catch the fuel from the tubes using a container or cloth.**
 - (1) Disconnect the quick connector on the fuel delivery tube from the fuel pipe assembly, and remove the clip (A) securing the fuel delivery tube to the fuel pipe assembly.

Fuel Pressure

MECHANICAL

NOTE:

Disconnect the quick connector as shown in the figure.

FU-07796

(a) Slider

FU-08237

(2) Connect the fuel pressure gauge with ST1 and ST2.

CAUTION:

- Check that there is no damage or dust on the quick connector. If necessary, clean the seal surface of the pipe.
- When connecting the quick connector with slider, make sure to insert it all the way in before locking the slider.
- When it is difficult to lock the slider, check that the connector is fully inserted.
- After locking the slider, check that the quick connector is securely connected.

NOTE:

- ST1 is a SUBARU genuine part.
- When connecting the ST2 to the quick connector on the fuel delivery tube, connect as shown in the figure.

FU-07797

(a) Slider

ST1 42075AG690 FUEL HOSE

ST2 18471AA000 FUEL PIPE ADAPTER

ME-07715

Fuel Pressure

MECHANICAL

- 4) Start the engine.
- 5) Check the fuel pressure after warming up the engine.

NOTE:

- The fuel pressure gauge registers 10 to 20 kPa (0.1 to 0.2 kg/cm², 1 to 3 psi) higher than standard values during high-altitude operations.
- Check or replace the fuel pump and fuel delivery line if the fuel pressure is out of the standard.

Fuel pressure:

Standard

340 — 400 kPa (3.5 — 4.1 kg/cm², 49 — 58 psi)

- 6) After inspection, install the related parts in the reverse order of removal.

CAUTION:

- Before removing the fuel pressure gauge, release the fuel pressure.
- Be careful not to spill fuel.
- Catch the fuel from hoses and tubes using a container or cloth.
- Check that there is no damage or dust on the quick connector. If necessary, clean the seal surface of the pipe.
- When connecting the quick connector with slider, make sure to insert it all the way in before locking the slider.
- When it is difficult to lock the slider, check that the connector is fully inserted.
- After locking the slider, check that the quick connector is securely connected.

NOTE:

- When disconnecting the ST1, install the ST2 to the fuel pipe assembly, and press the ST2 in the direction of arrow to disconnect the quick connector on the ST1.

ST1 42075AG690 FUEL HOSE

ST2 42099AE000 QUICK CONNECTOR RELEASE

- Disconnect the quick connector on the fuel delivery tube as shown in the figure.

(a) Slider

- Connect the quick connector on the fuel delivery tube as shown in the figure.

(a) Slider

Cam Clearance

MECHANICAL

8. Cam Clearance

A: INSPECTION

1. WHEN TIMING CHAIN ASSEMBLY IS NOT REMOVED

CAUTION:

When working on the vehicle, if engine oil is spilt onto the exhaust pipe, wipe it off with cloth to avoid emission of smoke or causing a fire.

NOTE:

- Inspection of cam clearance should be performed while engine is cold.
 - If the engine is removed from vehicle, performing the steps 1) to 2) is not necessary.
- 1) Disconnect the ground cable from battery. <Ref. to NT-6, BATTERY, NOTE, Note.>
 - 2) Remove the V-belts. <Ref. to ME(H4DO)-83, V-BELT, REMOVAL, V-belt.>
 - 3) When inspecting #1 and #3 cylinders
 - (1) Remove the rocker cover RH. <Ref. to ME(H4DO)-149, ROCKER COVER RH, REMOVAL, Rocker Cover.>

NOTE:

When working on the vehicle, place a suitable container under the vehicle.

- (2) Set #1 cylinder piston to top dead center of compression stroke by rotating the crank pulley clockwise using the socket wrench.

NOTE:

When the timing mark (B) on crank pulley is aligned to the 0° in timing gauge (A) on chain cover as shown in the figure, the #1 cylinder piston is located at TDC of compression stroke if the intake camshaft and exhaust camshaft does not depress the #1 cylinder intake side roller rocker arm (intake valve) and exhaust side roller rocker arm (exhaust valve). If roller rocker arm (valve) is depressed, turn the crank pulley by 360° in order to make #1 cylinder piston at TDC of compression stroke.

(3) Check the cam clearance for #1 cylinder intake, #1 cylinder exhaust and #3 cylinder exhaust.

NOTE:

- Measure the roller surface of cam base circle and roller rocker arm using thickness gauge (A).
- If the measured value is out of standard, take notes of the value in order to adjust the cam clearance later on.

Cam clearance:

Intake

Standard

$0.13^{+0.02}_{-0.03}$ mm ($0.0051^{+0.0008}_{-0.0012}$ in)

Exhaust

Standard

0.22 ± 0.02 mm (0.0087 ± 0.0008 in)

(4) Turn the crank pulley by 360°.

Cam Clearance

MECHANICAL

(5) Check the cam clearance of #3 cylinder intake.

NOTE:

- Measure the roller surface of cam base circle and roller rocker arm using thickness gauge (A).
- If the measured value is out of standard, take notes of the value in order to adjust the cam clearance later on.

Cam clearance:

Standard

$0.13^{+0.02}_{-0.03}$ mm ($0.0051^{+0.0008}_{-0.0012}$ in)

4) When inspecting #2 and #4 cylinders

- (1) Remove the rocker cover LH. <Ref. to ME(H4DO)-152, ROCKER COVER LH, REMOVAL, Rocker Cover.>

NOTE:

When working on the vehicle, place a suitable container under the vehicle.

- (2) Set #2 cylinder piston to top dead center of compression stroke by rotating the crank pulley clockwise using the socket wrench.

NOTE:

When the timing mark (B) on crank pulley is aligned to the 0° in timing gauge (A) on chain cover as shown in the figure, the #2 cylinder piston is located at TDC of compression stroke if the intake camshaft and exhaust camshaft does not depress the #2 cylinder intake side roller rocker arm (intake valve) and exhaust side roller rocker arm (exhaust valve). If roller rocker arm (valve) is depressed, turn the crank pulley by 360° in order to make #2 cylinder piston at TDC of compression stroke.

Cam Clearance

MECHANICAL

(3) Check the cam clearance for #2 cylinder intake, #2 cylinder exhaust and #4 cylinder exhaust.

NOTE:

- Measure the roller surface of cam base circle and roller rocker arm using thickness gauge (A).
- If the measured value is out of standard, take notes of the value in order to adjust the cam clearance later on.

Cam clearance:

Intake

Standard

$0.13^{+0.02}_{-0.03}$ mm ($0.0051^{+0.0008}_{-0.0012}$ in)

Exhaust

Standard

0.22 ± 0.02 mm (0.0087 ± 0.0008 in)

(4) Turn the crank pulley by 360°.

(5) Check the cam clearance of #4 cylinder intake.

NOTE:

- Measure the roller surface of cam base circle and roller rocker arm using thickness gauge (A).
- If the measured value is out of standard, take notes of the value in order to adjust the cam clearance later on.

Cam clearance:

Standard

$0.13^{+0.02}_{-0.03}$ mm ($0.0051^{+0.0008}_{-0.0012}$ in)

5) If necessary, adjust the cam clearance. <Ref. to ME(H4DO)-44, ADJUSTMENT, Cam Clearance.>

6) After inspection, install the related parts in the reverse order of removal.

Cam Clearance

MECHANICAL

2. WHEN TIMING CHAIN ASSEMBLY IS REMOVED

NOTE:

Inspection of cam clearance should be performed while engine is cold.

1) When inspecting #1 and #3 cylinders

(1) Remove the rocker cover RH. <Ref. to ME(H4DO)-149, ROCKER COVER RH, REMOVAL, Rocker Cover.>

NOTE:

When working on the vehicle, place a suitable container under the vehicle.

(2) Check the #1 and #3 cylinder cam clearance.

CAUTION:

Intake and exhaust camshafts can be independently rotated with the timing chain removed. When the intake valve and exhaust valve lift at the same time, the valve heads contact each other and valve stem may bend. Do not turn it to the outside of range of zero lift (cam base circle position) (in range where it can be turned lightly by hand).

NOTE:

- For cam clearance inspection, adjust the cam base circle position so that the thickness gauge (A) can be inserted easily by hand turning the camshaft (cam sprocket) to be measured.
- Measure the roller surface of cam base circle and roller rocker arm using thickness gauge (A).
- If the measured value is out of standard, take notes of the value in order to adjust the cam clearance later on.

Cam clearance:

Intake

Standard

$0.13^{+0.02}_{-0.03}$ mm ($0.0051^{+0.0008}_{-0.0012}$ in)

Exhaust

Standard

0.22 ± 0.02 mm (0.0087 ± 0.0008 in)

2) When inspecting #2 and #4 cylinders

(1) Remove the rocker cover LH. <Ref. to ME(H4DO)-152, ROCKER COVER LH, REMOVAL, Rocker Cover.>

NOTE:

When working on the vehicle, place a suitable container under the vehicle.

(2) Check the #2 and #4 cylinder cam clearance.

CAUTION:

Intake and exhaust camshafts can be independently rotated with the timing chain removed. When the intake valve and exhaust valve lift at the same time, the valve heads contact each other and valve stem may bend. Do not turn it to the outside of range of zero lift (cam base circle position) (in range where it can be turned lightly by hand).

NOTE:

- For cam clearance inspection, adjust the cam base circle position so that the thickness gauge (A) can be inserted easily by hand turning the camshaft (cam sprocket) to be measured.
- Measure the roller surface of cam base circle and roller rocker arm using thickness gauge (A).
- If the measured value is out of standard, take notes of the value in order to adjust the cam clearance later on.

Cam clearance:

Intake

Standard

$0.13^{+0.02}_{-0.03}$ mm ($0.0051^{+0.0008}_{-0.0012}$ in)

Exhaust

Standard

0.22 ± 0.02 mm (0.0087 ± 0.0008 in)

3) If necessary, adjust the cam clearance. <Ref. to ME(H4DO)-44, ADJUSTMENT, Cam Clearance.>

4) After inspection, install the related parts in the reverse order of removal.

Cam Clearance

MECHANICAL

B: ADJUSTMENT

- 1) Remove the engine from the vehicle. <Ref. to ME(H4DO)-47, REMOVAL, Engine Assembly.>
- 2) Remove the chain cover. <Ref. to ME(H4DO)-98, REMOVAL, Chain Cover.>
- 3) When adjusting #1 and #3 cylinders
 - (1) Remove the timing chain RH. <Ref. to ME(H4DO)-115, TIMING CHAIN RH, REMOVAL, Timing Chain Assembly.>
 - (2) Remove the cam carrier RH. <Ref. to ME(H4DO)-163, CAM CARRIER RH, REMOVAL, Cam Carrier.>
 - (3) Measure the thickness of valve shim using micrometer.

NOTE:

Measurement should be performed at a temperature of 20°C (68°F).

- (4) Select a valve shim of suitable thickness using the measured cam clearance and valve shim thickness.

NOTE:

Use a new valve shim.

Intake side: $S = T + 1.69 \times (V - 0.13 \text{ mm (0.0051 in)})$ Exhaust side: $S = T + 1.87 \times (V - 0.22 \text{ mm (0.0087 in)})$
S: Valve shim thickness required V: Measured cam clearance T: Current valve shim thickness

- (5) Install the cam carrier RH. <Ref. to ME(H4DO)-173, CAM CARRIER RH, INSTALLATION, Cam Carrier.>
- (6) Check all the cam clearance of RH side at this time. If the cam clearance is not within the standard value, repeat the procedure over again from step 2).

NOTE:

When the removing/installing of cam carrier RH has been performed, cam clearance may be outside the standard value. Checking of all cam clearance of RH side is necessary. Refer to INSPECTION of “Cam Clearance” for the cam clearance inspection. <Ref. to ME(H4DO)-42, WHEN TIMING CHAIN ASSEMBLY IS REMOVED, INSPECTION, Cam Clearance.>

Cam clearance:

Intake

Standard

$0.13^{+0.02}_{-0.03}$ mm ($0.0051^{+0.0008}_{-0.0012}$ in)

Exhaust

Standard

0.22 ± 0.02 mm (0.0087 ± 0.0008 in)

- 4) When adjusting #2 and #4 cylinders

- (1) Remove the timing chain LH. <Ref. to ME(H4DO)-118, TIMING CHAIN LH, REMOVAL, Timing Chain Assembly.>
- (2) Remove the cam carrier LH. <Ref. to ME(H4DO)-169, CAM CARRIER LH, REMOVAL, Cam Carrier.>
- (3) Measure the thickness of valve shim using micrometer.

NOTE:

Measurement should be performed at a temperature of 20°C (68°F).

- (4) Select a valve shim of suitable thickness using the measured cam clearance and valve shim thickness.

NOTE:

Use a new valve shim.

Intake side: $S = T + 1.69 \times (V - 0.13 \text{ mm } (0.0051 \text{ in}))$ Exhaust side: $S = T + 1.87 \times (V - 0.22 \text{ mm } (0.0087 \text{ in}))$
S: Valve shim thickness required V: Measured cam clearance T: Current valve shim thickness

Cam Clearance

MECHANICAL

(5) Install the cam carrier LH. <Ref. to ME(H4DO)-183, CAM CARRIER LH, INSTALLATION, Cam Carrier.>

(6) Check all the cam clearance of LH side at this time. If the cam clearance is not within the standard value, repeat the procedure over again from step 2).

NOTE:

When the removing/installing of cam carrier LH has been performed, cam clearance may be outside the standard value. Checking of all cam clearance of LH side is necessary. Refer to INSPECTION of "Cam Clearance" for the cam clearance inspection. <Ref. to ME(H4DO)-42, WHEN TIMING CHAIN ASSEMBLY IS REMOVED, INSPECTION, Cam Clearance.>

Cam clearance:

Intake

Standard

$0.13^{+0.02}_{-0.03}$ mm ($0.0051^{+0.0008}_{-0.0012}$ in)

Exhaust

Standard

0.22 ± 0.02 mm (0.0087 ± 0.0008 in)

5) After adjustment, install the related parts in the reverse order of removal.

9. Engine Assembly

A: REMOVAL

1) Open the front hood, and make alignment marks (A) on both the front hood and the front hood striker by using a marker pen.

2) Remove the front hood striker from the front hood.

Engine Assembly

MECHANICAL

- 3) Change the front hood stay position from (A) to (B), and completely open the front hood.

- 4) Remove the V-belt covers.

- 5) Collect the refrigerant from A/C system. <Ref. to AC-27, Refrigerant Recovery Procedure.>
- 6) Release the fuel pressure. <Ref. to FU(H4DO)-107, RELEASING OF FUEL PRESSURE, PROCEDURE, Fuel.>
- 7) Open the fuel filler lid and remove the fuel filler cap.

NOTE:

This operation is required to release the inner pressure of the fuel tank.

- 8) Disconnect the ground cable from battery.

- 9) Remove the air intake duct. <Ref. to IN(H4DO)-13, REMOVAL, Air Intake Duct.>
- 10) Remove the air intake boot. <Ref. to IN(H4DO)-12, REMOVAL, Air Intake Boot.>
- 11) Disconnect the connector from the mass air flow and intake air temperature sensor, and remove the clip (A) securing the bulkhead wiring harness.

Engine Assembly

MECHANICAL

- 12) Remove the air cleaner case (rear) together with the air cleaner element.

- 13) Remove the radiator. <Ref. to CO(H4DO)-51, REMOVAL, Radiator.>
14) Disconnect the brake booster vacuum hose from the intake manifold.

- 15) Remove the clip holding the air breather hose to the engine rear hanger. (MT model)

- 16) Disconnect the engine harness connector.
(1) Remove the bolt securing the bulkhead harness connector bracket.

Engine Assembly

MECHANICAL

- (2) Disconnect the bulkhead harness connector from the engine harness connector (black) and engine harness connector (brown).

- 17) Remove the bolts which secure the generator cord stay to the chain cover.

Engine Assembly

MECHANICAL

18) Disconnect connector (A) and terminal (B) from the generator, and disconnect connector (C) from A/C compressor.

19) Remove the generator cord from the clip (D) and clip (E), and move the generator cord to the left side wheel apron.

20) Disconnect the A/C pressure hoses from A/C compressor. <Ref. to AC-62, REMOVAL, Hose and Pipe.>

21) Disconnect the heater inlet hose and heater outlet hose.

Engine Assembly

MECHANICAL

22) Disconnect the water hose from CVTF cooler (with warmer feature). (CVT model)

23) Remove the bolt which secures the CVTF cooler (with warmer feature) to the transmission, and move the CVTF cooler (with warmer feature) to the right side of the transmission. (CVT model)

- 24) Lift up the vehicle.
- 25) Remove the front exhaust pipe. <Ref. to EX(H4DO)-5, REMOVAL, Front Exhaust Pipe.>
- 26) Disconnect the ground cable on the engine side.

- 27) Remove the bolts and nuts which hold the lower side of transmission to the engine.
 - CVT model

Engine Assembly

MECHANICAL

- MT model

ME-05099

- 28) Remove the nuts which secure the engine mounting to the front crossmember. (CVT model)

ME-05853

29) Remove the nuts which secure the engine mounting to the front crossmember. (MT model)

30) Lower the vehicle.

31) Separate the torque converter clutch from the drive plate. (CVT model)

(1) Remove the throttle body. <Ref. to FU(H4DO)-15, REMOVAL, Throttle Body.>

(2) Remove the service hole plug.

(3) Insert the wrench into the crank pulley bolt, and rotate the crank pulley to remove the four bolts securing the torque converter clutch to the drive plate.

Engine Assembly

MECHANICAL

32) Disconnect the bulkhead harness connector from the transmission harness connector (A) and the inhibitor harness connector (B), and disconnect the transmission radio ground terminal (C) from the vehicle body. (CVT model)

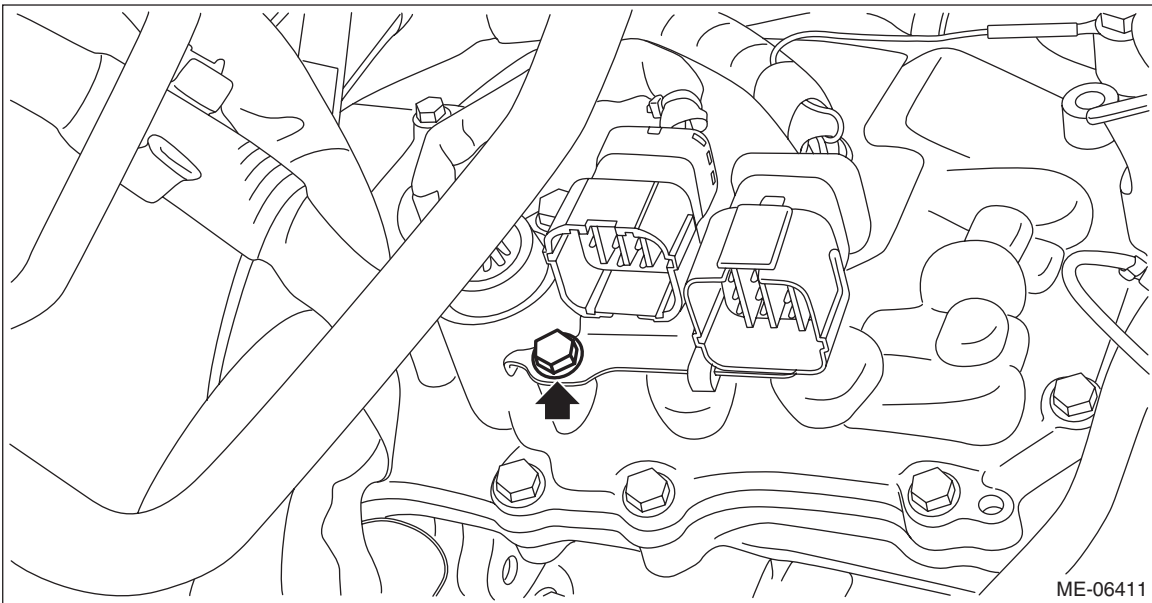

33) Remove the pitching stopper.

34) Remove the transmission case cover. (CVT model)

35) Remove the bolt which holds the transmission harness stay. (CVT model)

Engine Assembly

MECHANICAL

36) Remove the bolt which holds the transmission harness to the control valve body, and turn the transmission harness clockwise till the bolt hole can be seen as shown in the figure, and tighten the bolt to temporary lock the harness. (CVT model)

NOTE:

This procedure is required to prevent the transmission harness from touching the vehicle body during engine removal/installation.

37) Disconnect the fuel delivery tube and evaporation hose.

CAUTION:

- **Be careful not to spill fuel.**
- **Catch the fuel from the tubes using a container or cloth.**

(1) Disconnect the quick connector on the fuel delivery tube from the fuel pipe assembly, and remove the clip (A) securing the fuel delivery tube.

NOTE:

Disconnect the quick connector as shown in the figure.

(a) Slider

(2) Disconnect the evaporation hose from the fuel pipe assembly.

Engine Assembly

MECHANICAL

38) Support the engine with a lifting device and wire ropes.

39) Support the transmission with a garage jack.

CAUTION:

Be sure to perform this procedure to prevent the transmission from lowering by its own weight.

(A) Transmission

(B) Garage jack

40) Separate the engine and transmission.

CAUTION:

Before removing the engine away from transmission, check to be sure no work has been overlooked.

(1) Remove the starter. <Ref. to SC(H4DO)-8, REMOVAL, Starter.>

(2) Attach the ST to the torque converter clutch case. (CVT model)

ST 498277200 STOPPER SET

(3) Remove the bolts which hold the upper side of the transmission to the engine.

- CVT model

Engine Assembly

MECHANICAL

- MT model

ME-05109

41) Remove the engine from the vehicle.

NOTE:

Be careful not to damage adjacent parts or body panels with crank pulley, oil level gauge, etc.

- (1) Slightly raise the engine.
 - (2) Raise the transmission with garage jack.
 - (3) Move the engine horizontally until main shaft is withdrawn from clutch cover. (MT model)
 - (4) Slowly move the engine away from engine compartment.
- 42) Remove the engine mounting from the engine.

B: INSTALLATION

1) Install the engine mounting onto the engine.

Tightening torque:

35 N·m (3.6 kgf·m, 25.8 ft·lb)

2) Apply a small amount of grease to splines of main shaft. (MT model)

Grease:

NICHIMOLY N-130 or equivalent

3) Position the engine in engine compartment and align it with transmission.

NOTE:

Be careful not to damage adjacent parts or body panels with crank pulley, oil level gauge, etc.

4) Install the bolts which hold upper side of transmission to engine.

Tightening torque:

50 N·m (5.1 kgf-m, 36.9 ft-lb)

- CVT model

ME-05858

- MT model

ME-05109

Engine Assembly

MECHANICAL

- 5) Remove the lifting device and wire ropes.

- 6) Remove the garage jack.
7) Remove the bolt and turn the transmission harness counterclockwise to install the transmission harness to the control valve body. (CVT model)

Tightening torque:
7 N·m (0.7 kgf·m, 5.2 ft·lb)

8) Install the bolt which holds the transmission harness stay. (CVT model)

Tightening torque:

7 N·m (0.7 kgf·m, 5.2 ft-lb)

ME-06411

9) Install the transmission case cover. (CVT model)

Tightening torque:

8 N·m (0.8 kgf·m, 5.9 ft-lb)

ME-07883

Engine Assembly

MECHANICAL

10) Install the pitching stopper.

Tightening torque:

T1: 50 N·m (5.1 kgf·m, 36.9 ft·lb)

T2: 58 N·m (5.9 kgf·m, 42.8 ft·lb)

11) Connect the transmission radio ground terminal (C) to the vehicle body, and connect the bulkhead harness connector (A) and the inhibitor harness connector (B). (CVT model)

Tightening torque:

13 N·m (1.3 kgf·m, 9.6 ft·lb)

12) Remove the ST from torque converter clutch case. (CVT model)

NOTE:

Be careful not to drop the ST into the torque converter clutch case when removing the ST.

ST 498277200 STOPPER SET

13) Install the torque converter clutch to drive plate. (CVT model)

(1) Insert the wrench into the crank pulley bolt, and rotate the crank pulley to attach the four bolts securing the torque converter clutch to the drive plate.

NOTE:

Be careful not to drop bolts into the torque converter clutch case.

Tightening torque:

25 N·m (2.5 kgf·m, 18.4 ft·lb)

(2) Fit the plug to service hole.

(3) Install the throttle body. <Ref. to FU(H4DO)-17, INSTALLATION, Throttle Body.>

Engine Assembly

MECHANICAL

- 14) Install the starter. <Ref. to SC(H4DO)-10, INSTALLATION, Starter.>
- 15) Lift up the vehicle.
- 16) Install the bolts and nuts which hold lower side of the transmission to engine.

Tightening torque:

50 N·m (5.1 kgf·m, 36.9 ft·lb)

- CVT model

- MT model

17) Install the nuts which hold the engine mounting to the crossmember. (CVT model)

NOTE:

- Make sure that locators (A) of the engine mounting are securely inserted.
- Use a new nut.

Tightening torque:

60 N·m (6.1 kgf-m, 44.3 ft-lb)

18) Install the nuts which hold the engine mounting to the crossmember. (MT model)

NOTE:

Use a new nut.

Tightening torque:

60 N·m (6.1 kgf-m, 44.3 ft-lb)

Engine Assembly

MECHANICAL

19) Connect the ground cable.

Tightening torque:

7.5 N·m (0.8 kgf·m, 5.5 ft·lb)

20) Install the front exhaust pipe. <Ref. to EX(H4DO)-7, INSTALLATION, Front Exhaust Pipe.>

21) Lower the vehicle.

22) Install the CVTF cooler (with warmer feature) to the transmission. (CVT model)

Tightening torque:

23 N·m (2.3 kgf·m, 17.0 ft·lb)

23) Connect the water hose to the CVTF cooler (with warmer feature). (CVT model)

24) Connect the fuel delivery tube and evaporation hose.
(1) Connect the evaporation hose to fuel pipe assembly.

Engine Assembly

MECHANICAL

(2) Connect the quick connector on the fuel delivery tube to the fuel pipe assembly, and fix the fuel delivery tube using clip (A).

CAUTION:

- Check that there is no damage or dust on the quick connector. If necessary, clean the seal surface of the pipe.
- When connecting the quick connector, make sure to insert it all the way in before locking the slider.
- When it is difficult to lock the slider, check that the connector is fully inserted.
- After locking the slider, check that the quick connector is securely connected.

NOTE:

Connect the quick connector as shown in the figure.

(a) Slider

25) Connect the heater inlet hose and heater outlet hose.

NOTE:

Be careful not to mix up the heater inlet hose and the heater outlet hose when connecting them.

- | | | |
|------------------------|------------------------|-------------------------|
| (a) Heater inlet hose | (c) To water pipe ASSY | (e) To heater core ASSY |
| (b) Heater outlet hose | (d) To water pipe LH | (f) Engine coolant flow |

26) Connect the A/C pressure hose to A/C compressor. <Ref. to AC-65, INSTALLATION, Hose and Pipe.>

27) Place the generator code and install the generator cord to the clip (D) and clip (E).

28) Connect connector (A) and terminal (B) to the generator, and connect connector (C) to A/C compressor.

Tightening torque:

15.5 N·m (1.6 kgf-m, 11.4 ft-lb)

Engine Assembly

MECHANICAL

29) Install the generator cord stay to the chain cover.

NOTE:

Install the generator cord stay so that the folded end (a) touches the chain cover boss.

Tightening torque:

8 N·m (0.8 kgf·m, 5.9 ft·lb)

30) Connect the engine harness connector.

(1) Connect the bulkhead harness connector to the engine harness connector (black) and engine harness connector (brown).

(2) Install the bolt which secures the bulkhead harness connector bracket.

Tightening torque:

7.5 N·m (0.8 kgf·m, 5.5 ft·lb)

31) Secure the air breather hose to the engine rear hanger using clip. (MT model)

Engine Assembly

MECHANICAL

32) Connect the brake booster vacuum hose to the intake manifold.

33) Install the radiator. <Ref. to CO(H4DO)-55, INSTALLATION, Radiator.>

34) Install the air cleaner case (rear) together with the air cleaner element. <Ref. to IN(H4DO)-9, INSTALLATION, Air Cleaner Case.>

35) Secure the bulkhead wiring harness with clip (A) and connect the connector to the mass air flow and intake air temperature sensor.

- 36) Install the air intake boot. <Ref. to IN(H4DO)-12, INSTALLATION, Air Intake Boot.>
- 37) Install the air intake duct. <Ref. to IN(H4DO)-13, INSTALLATION, Air Intake Duct.>
- 38) Connect the battery ground terminal.

- 39) Charge the A/C system with refrigerant. <Ref. to AC-28, PROCEDURE, Refrigerant Charging Procedure.>
- 40) Fill engine coolant. <Ref. to CO(H4DO)-14, FILLING OF ENGINE COOLANT, REPLACEMENT, Engine Coolant.>
- 41) Install the V-belt cover.

Tightening torque:

7 N·m (0.7 kgf·m, 5.2 ft·lb)

Engine Assembly

MECHANICAL

42) Change the front hood stay position from (B) to (A).

43) Install the front hood striker to the front hood by aligning the alignment marks (A), and close the front hood.

Tightening torque:

33 N·m (3.4 kgf·m, 24.3 ft·lb)

C: INSPECTION

- 1) Check that pipes, hoses, connectors and clamps are installed firmly.
- 2) Check the engine coolant is at specified level.
- 3) Start the engine and check for exhaust gas, engine coolant, leaks of fuel, etc. Also check for noise and vibrations.

10.Engine Mounting

A: REMOVAL

- 1) Remove the front crossmember. <Ref. to FS-18, REMOVAL, Front Crossmember.>
- 2) Remove the engine mounting from the engine.

B: INSTALLATION

Install in the reverse order of removal.

Tightening torque:

35 N·m (3.6 kgf-m, 25.8 ft-lb)

C: INSPECTION

Make sure that there are no cracks or other damages.

Preparation for Overhaul

MECHANICAL

11. Preparation for Overhaul

A: PROCEDURE

1) After removing the engine from the vehicle body, attach the ST to the engine as shown in the figure.

NOTE:

When using a commercially sold engine stand, follow the instructions of engine stand used.

Tightening torque:

35 N·m (3.6 kgf-m, 25.8 ft-lb)

ST1	498457000	ENGINE STAND ADAPTER RH
ST2	498457100	ENGINE STAND ADAPTER LH
ST3	18362AA020	ADAPTER
ST4	499817100	ENGINE STAND

2) In this section the procedures described under each index are all connected and stated in order. The procedure for overhauling of the engine will be completed when you go through all steps in the process. Therefore, in this section, to conduct the particular procedure within the flow of a section, you need to go back and conduct the procedure described previously in order to do that particular procedure.

12.V-belt

A: REMOVAL

NOTE:

When replacing a single part, perform the work with the engine assembly installed to body.

1. V-BELT

1) When working on the vehicle

NOTE:

When working on the vehicle, perform the following steps also.

(1) Remove the V-belt covers.

(2) Remove the air intake duct. <Ref. to IN(H4DO)-13, REMOVAL, Air Intake Duct.>

2) Attach the tool to the V-belt tensioner assembly, and rotate the tool clockwise to loosen and remove the V-belt.

V-belt

MECHANICAL

2. V-BELT TENSIONER ASSEMBLY AND IDLER PULLEY

- 1) Remove the V-belts.
- 2) Remove the cap from V-belt tensioner assembly.

- 3) Remove the bolt securing the V-belt tensioner assembly to the generator bracket, and remove the V-belt tensioner assembly.

- 4) Remove the bolts which secure the idler pulley to the chain cover, and remove the idler pulley.

V-belt

MECHANICAL

B: INSTALLATION

1. V-BELT

Install in the reverse order of removal.

CAUTION:

- When reusing the V-belt, wipe off dust and water with cloth.
- Do not use the V-belt if there is any oil, grease or coolant on the belt.
- Be careful not to rub the V-belt end surface with bare hands; exposed core may cause injury.
- Wipe off any dust, oil and water on the groove of each pulley with cloth.

- (A) V-belt
- (B) Water pump pulley
- (C) Crank pulley

- (D) V-belt tensioner ASSY
- (E) Generator pulley
- (F) Idler pulley

- (G) A/C compressor pulley

Tightening torque:
7 N·m (0.7 kgf·m, 5.2 ft·lb)

2. V-BELT TENSIONER ASSEMBLY AND IDLER PULLEY

1) Install the idler pulley to the chain cover.

NOTE:

When installing the idler pulley, be careful of the idler pulley cover direction.

(a) Idler pulley cover

(b) Protrusion (3 places)

V-belt

MECHANICAL

Tightening torque:
36 N·m (3.7 kgf·m, 26.6 ft·lb)

2) Install the V-belt tensioner assembly onto the generator bracket.

NOTE:

When installing the V-belt tensioner assembly, insert the protrusion of V-belt tensioner assembly into the hole for preventing rotation at the generator bracket.

(A) V-belt tensioner ASSY
(B) Generator bracket

(C) Hole to prevent rotation

(D) Protrusion portion

Tightening torque:
25 N·m (2.5 kgf·m, 18.4 ft·lb)

3) Install the cap to the V-belt tensioner assembly.

4) Install the V-belts.

V-belt

MECHANICAL

C: INSPECTION

- 1) Check the V-belt for cracks, tear or wear.
- 2) Check the V-belt tensioner assembly and idler pulley for deformation, cracks or other damages.
- 3) Check that the V-belt ribs are securely placed on the rib grooves for each pulley.

- 4) Check that the V-belt tensioner assembly (C) moves in the direction of arrow (D), when the V-belt (A) is pushed and released by the area indicated by the arrow (B).

- 5) Start the engine and confirm that the V-belt rotates smoothly and no abnormal noise is emitted.

13.Crank Pulley

A: REMOVAL

NOTE:

When replacing a single part, perform the work with the engine assembly installed to body.

1) When working on the vehicle

NOTE:

When working on the vehicle, perform the following steps also.

(1) Remove the radiator main fan & fan motor assembly and radiator sub fan & fan motor assembly. <Ref. to CO(H4DO)-61, REMOVAL, Radiator Main Fan and Fan Motor.> <Ref. to CO(H4DO)-64, REMOVAL, Radiator Sub Fan and Fan Motor.>

2) Remove the V-belts. <Ref. to ME(H4DO)-83, REMOVAL, V-belt.>

3) Use the ST to lock the crank pulley, and remove the crank pulley bolt.

NOTE:

To prevent damaging ST1, attach the ST2 onto the ST1 as shown.

ST1 18355AA000 PULLEY WRENCH

ST2 18334AA000 PULLEY WRENCH PIN SET

Crank Pulley

MECHANICAL

- ST1 18355AA000 PULLEY WRENCH
- ST2 18334AA000 PULLEY WRENCH PIN SET

- 4) Remove the crank pulley.
- 5) Remove the front oil seal.

B: INSTALLATION

1) Degrease the press-fit section for the chain cover front oil seal, and install the front oil seal to the chain cover using ST.

CAUTION:

Do not apply fluid such as engine oil to the front oil seal and the chain cover; otherwise engine oil leakage may occur.

NOTE:

- Use a new front oil seal.
- When tapping the front oil seal in, protect the radiator fin with cardboards etc. so as not to damage the radiator fin by the plastic hammer.

- 2) Clean the crankshaft thread using compressed air.
- 3) Apply engine oil to the crank pulley bolt seat and thread.

Crank Pulley

MECHANICAL

4) Install the crank pulley.

(1) Set the crank pulley to the chain cover.

NOTE:

- Use new O-rings.
- Install the crank pulley by aligning the crank pulley knock hole (A) and crank pulley boss knock pin (B).

(2) Use the ST to lock the crank pulley, and temporarily tighten the crank pulley bolt.

NOTE:

To prevent damaging ST1, attach the ST2 onto the ST1 as shown.

MECHANICAL

14.Chain Cover

A: REMOVAL

NOTE:

When replacing a single part, perform the work with the engine assembly installed to body.

1) When working on the vehicle

NOTE:

When working on the vehicle, perform the following steps also.

- (1) Remove the radiator. <Ref. to CO(H4DO)-51, REMOVAL, Radiator.>
- (2) Remove the front exhaust pipe. <Ref. to EX(H4DO)-5, REMOVAL, Front Exhaust Pipe.>
- (3) Remove the bolts which secure the generator cord stay to the chain cover.

2) Drain the engine oil. <Ref. to LU(H4DO)-11, REPLACEMENT, Engine Oil.>

3) Remove the generator. <Ref. to SC(H4DO)-32, REMOVAL, Generator.>

4) Remove the water pump pulley. <Ref. to CO(H4DO)-17, WATER PUMP, REMOVAL, Water Pump.>

5) Remove the crank pulley. <Ref. to ME(H4DO)-91, REMOVAL, Crank Pulley.>

6) Disconnect the connector (A) from the exhaust camshaft position sensor RH, and remove the engine harness stay from the chain cover.

Chain Cover

MECHANICAL

7) Disconnect the connector (A) from the intake oil control solenoid RH, connector (B) from the exhaust oil control solenoid RH, and the connector (C) from the intake camshaft position sensor RH, and then remove the clips (D) and (E) which secure the engine harness.

8) Disconnect the connectors from the oil level switch, and remove the clip (A) which secure the oil level switch harness.

Chain Cover

MECHANICAL

9) Remove the rubber cap from the oil pressure switch.

10) Disconnect the terminal (A) from the oil pressure switch, connector (B) from the engine oil temperature sensor, connector (C) from the intake oil control solenoid LH, connector (D) from the exhaust oil control solenoid LH, connector (E) from the intake camshaft position sensor LH, and connector (F) from the exhaust camshaft position sensor LH, and remove the clips (G) and (H) which secure the engine harness.

Chain Cover

MECHANICAL

- 11) Pull out the oil level gauge (A), and remove the oil level gauge guide (B) and idler pulley (C).

- 12) Remove the bolts securing the chain cover to the engine.

- 13) Expand the area shown in the figure using a crowbar or a similar tool wrapped in tape for protection, and remove the chain cover from the engine.

Chain Cover

MECHANICAL

CAUTION:

The chain cover may contact the protrusion (a) of cam sprocket sensor plate and cause damage. When removing the chain cover, move the chain cover horizontally until it cannot contact with the cam sprocket, and then remove it carefully.

ME-08689

ME-08657

Chain Cover

MECHANICAL

- 14) Remove the O-rings from cylinder head RH, cylinder head LH, cylinder block LH and oil pan upper.

- 15) Remove the liquid gasket from the chain cover and engine unit.

Chain Cover

MECHANICAL

B: INSTALLATION

1) Install the O-rings to cylinder head RH, cylinder head LH, cylinder block LH and oil pan upper.

NOTE:

- Use new O-rings.
- Apply a coat of engine oil to the O-rings.

ME-20134

Chain Cover

MECHANICAL

2) Apply liquid gasket if there are gaps between front camshaft cap and cam carrier (A), cam carrier and cylinder head (B), and cylinder head and cylinder block (C) as shown in the figure.

Liquid gasket:

THREE BOND 1217G (Part No. K0877Y0100), THREE BOND 1217H or equivalent

Chain Cover

MECHANICAL

3) Apply liquid gasket to the chain cover mating surface and center boss (5 places) as shown in the figure.

NOTE:

- Before applying liquid gasket, degrease the old liquid gasket seal surface of the engine and chain cover.
- Install within 5 min. after applying liquid gasket.

Liquid gasket:

THREE BOND 1217G (Part No. K0877Y0100), THREE BOND 1217H or equivalent

Liquid gasket applying diameter:

4 ± 0.5 mm (0.1575 ± 0.0197 in)

14) Fill engine oil. <Ref. to LU(H4DO)-11, REPLACEMENT, Engine Oil.>

15) When working on the vehicle

NOTE:

When working on the vehicle, perform the following steps also.

- (1) Install the generator cord stay to the chain cover.

NOTE:

Install the generator cord stay so that the folded end (a) touches the chain cover boss.

Tightening torque:

8 N·m (0.8 kgf·m, 5.9 ft·lb)

- (2) Install the front exhaust pipe. <Ref. to EX(H4DO)-7, INSTALLATION, Front Exhaust Pipe.>

- (3) Install the radiator. <Ref. to CO(H4DO)-55, INSTALLATION, Radiator.>

C: DISASSEMBLY

- 1) Remove the oil filler cap.

- 2) Remove the engine oil filter and the oil pump union. <Ref. to LU(H4DO)-25, REMOVAL, Engine Oil Filter.>

- 3) Remove the oil pressure switch. <Ref. to LU(H4DO)-21, REMOVAL, Oil Pressure Switch.>

- 4) Remove the engine oil temperature sensor. <Ref. to FU(H4DO)-51, REMOVAL, Engine Oil Temperature Sensor.>

Chain Cover

MECHANICAL

- 5) Remove the oil control solenoid. <Ref. to FU(H4DO)-62, REMOVAL, Oil Control Solenoid.>
- 6) Remove the camshaft position sensor. <Ref. to FU(H4DO)-57, REMOVAL, Camshaft Position Sensor.>

D: ASSEMBLY

- 1) Install the camshaft position sensor. <Ref. to FU(H4DO)-59, INSTALLATION, Camshaft Position Sensor.>
- 2) Install the oil control solenoid. <Ref. to FU(H4DO)-65, INSTALLATION, Oil Control Solenoid.>
- 3) Install the engine oil temperature sensor. <Ref. to FU(H4DO)-51, INSTALLATION, Engine Oil Temperature Sensor.>
- 4) Install the oil pressure switch. <Ref. to LU(H4DO)-22, INSTALLATION, Oil Pressure Switch.>
- 5) Install the engine oil filter and the oil pump union. <Ref. to LU(H4DO)-26, INSTALLATION, Engine Oil Filter.>
- 6) Install the oil filler cap.

E: INSPECTION

Check that the chain cover does not have deformation, cracks and any other damage.

15. Timing Chain Assembly

A: REMOVAL

1. TIMING CHAIN RH

NOTE:

When replacing a single part, perform the work with the engine assembly installed to body.

1) Remove the chain cover. <Ref. to ME(H4DO)-98, REMOVAL, Chain Cover.>

2) Using ST and by turning the crankshaft, align the alignment marks of crank sprocket, intake cam sprocket RH and exhaust cam sprocket RH to the positions as shown in the figure.

NOTE:

If the alignment marks are aligned to the positions as shown in the figure, the crankshaft key is located at six o'clock position.

ST 18252AA000 CRANKSHAFT SOCKET

Timing Chain Assembly

MECHANICAL

3) Push down the chain lever tensioner RH, and with a 2.5 mm (0.098 in) dia. stopper pin or a 2.5 mm dia. hex wrench inserted into the stopper pin hole in the chain tensioner RH, secure the plunger (A).

4) Remove the chain tensioner RH, and remove the chain tensioner lever RH (A).

Timing Chain Assembly

MECHANICAL

5) Remove the chain guide RH, and remove the timing chain RH (A).

CAUTION:

- If the timing chain RH is not installed, the intake camshaft RH and exhaust camshaft RH are kept at zero-lift position. All cams on the camshaft are not pressing down the roller rocker arm (intake valve and exhaust valve). (Under this condition, all valves remain unlifted.)
- Intake camshaft RH and exhaust camshaft RH can be independently rotated with the timing chain RH removed. When the intake valve and exhaust valve lift at the same time, the valve heads contact each other and valve stem may bend. Do not turn it to the outside of range of zero-lift (in range where it can be turned lightly by hand).

NOTE:

To avoid mixing with LH side, keep the removed part in order.

Timing Chain Assembly

MECHANICAL

2. TIMING CHAIN LH

1) Remove the timing chain RH. <Ref. to ME(H4DO)-115, TIMING CHAIN RH, REMOVAL, Timing Chain Assembly.>

2) Using ST and by turning the crankshaft, align the alignment marks of crankshaft key, intake cam sprocket LH and exhaust cam sprocket LH to the positions as shown in the figure.

ST 18252AA000 CRANKSHAFT SOCKET

3) Push down the chain lever tensioner LH, and with a 1.3 mm (0.05 in) dia. stopper pin or a 1.3 mm dia. hex wrench inserted into the stopper pin hole in the chain tensioner LH, secure the plunger (A).

Timing Chain Assembly

MECHANICAL

- 4) Remove the chain tensioner LH, and remove the chain tensioner lever LH (A).

- 5) Remove the O-ring from the cylinder block LH.

Timing Chain Assembly

MECHANICAL

6) Remove the chain guide LH, and remove the timing chain LH (A).

CAUTION:

- If the timing chain LH is not installed, the exhaust camshaft LH is kept at zero-lift position. All cams on the exhaust camshaft LH are not pressing down the roller rocker arm (exhaust valve). (Under this condition, exhaust valves remain unlifted.)
- Intake camshaft LH is kept at lift position. All cams on the intake camshaft LH are pressing down the roller rocker arm (intake valve). (Under this condition, intake valves remain lifted.)
- Intake camshaft LH and exhaust camshaft RH can be independently rotated with the timing chain LH removed. When the exhaust camshaft LH is turned, the valve heads contact each other and valve stem may bend as described in above. Do not turn the exhaust camshaft LH to the outside of range of zero-lift (in range where it can be turned lightly by hand).
- #1 piston and #4 piston are located near TDC. If the intake camshaft LH is turned, the valve and the piston may contact and valve stem may bend. Do not turn the intake camshaft LH at this time.

NOTE:

To avoid mixing with RH side, keep the removed part in order.

Timing Chain Assembly

MECHANICAL

7) Using ST and by turning the crankshaft approximately 200° clockwise, align the alignment marks of crank sprocket to the positions as shown in the figure.

CAUTION:

- This procedure is required to prevent the valve and piston contacting with each other, by moving the all pistons to the middle of the cylinders.
- Never turn counterclockwise because the valve and piston may contact. Counterclockwise turn is allowed only when adjusting precisely the alignment marks, after turning the crank sprocket alignment mark clockwise near the position as shown in the figure.

ST 18252AA000 CRANKSHAFT SOCKET

Timing Chain Assembly

MECHANICAL

8) Using ST and by turning the intake cam sprocket LH approximately 180°, align the alignment marks of intake cam sprocket LH to the positions (zero-lift position) as shown in the figure.

CAUTION:

- After this work, when the intake valve and exhaust valve lift at the same time, the valve heads contact each other and valve stem may bend. Do not turn the intake camshaft LH and exhaust camshaft LH to the outside of range of zero-lift (in range where it can be turned lightly by hand).
- Perform the operation carefully since the ST comes off easily.

ST1 18355AA000 PULLEY WRENCH

ST2 18334AA020 PULLEY WRENCH PIN SET

B: INSTALLATION

1. TIMING CHAIN LH

NOTE:

- Be careful that the foreign matter is not into or onto the assembled component during installation.
- Apply engine oil to all component parts of the timing chain.

1) Prepare to attach the chain tensioner LH.

(1) Move the link plate (A) in the direction of arrow to press in the plunger (B).

(2) With a 1.3 mm (0.05 in) dia. stopper pin or a 1.3 mm dia. hex wrench inserted into the stopper pin hole, secure the plunger.

NOTE:

If the stopper pin hole on the link plate and the stopper pin hole on the chain tensioner are not aligned, check that the first notch of plunger rack (A) is engaged with the stopper tooth (B). If not engaged, retract the plunger a little so that the first notch of plunger rack (A) is engaged with the stopper tooth (B).

Timing Chain Assembly

MECHANICAL

2) Check that the crank sprocket is located at the position shown in the figure. If not aligned, using ST turn the crankshaft to align the crank sprocket alignment mark to the position shown in the figure.

NOTE:

This procedure is required to prevent the valve and piston contacting with each other in the next step.

ST 18252AA000 CRANKSHAFT SOCKET

Timing Chain Assembly

MECHANICAL

3) Using ST and by turning the intake cam sprocket LH, align the alignment marks to the positions as shown in the figure.

CAUTION:

- When the intake valve and exhaust valve lift at the same time, the valve heads contact each other and valve stem may bend. Do not turn the exhaust camshaft LH.
- Perform the operation carefully since the ST comes off easily.

C: INSPECTION

Check the cam sprocket teeth for abnormal wear and scratches.

17.Crank Sprocket

A: REMOVAL

NOTE:

When replacing a single part, perform the work with the engine assembly installed to body.

- 1) Remove the chain cover. <Ref. to ME(H4DO)-98, REMOVAL, Chain Cover.>
- 2) Remove the timing chain. <Ref. to ME(H4DO)-115, REMOVAL, Timing Chain Assembly.>
- 3) Remove the crank sprocket.

B: INSTALLATION

- 1) Install the crank sprocket.

NOTE:

The direction of installation is not specified for the crank sprocket.

- 2) Install the timing chain. <Ref. to ME(H4DO)-123, INSTALLATION, Timing Chain Assembly.>
- 3) Install the chain cover. <Ref. to ME(H4DO)-104, INSTALLATION, Chain Cover.>

Crank Sprocket

MECHANICAL

C: INSPECTION

- 1) Check the crank sprocket teeth for abnormal wear and scratches.
- 2) Make sure there is no free play between crank sprocket and key.

18.Rocker Cover

A: REMOVAL

1. ROCKER COVER RH

NOTE:

When replacing a single part, perform the work with the engine assembly installed to body.

1) When working on the vehicle

NOTE:

When working on the vehicle, perform the following steps also.

(1) Remove the air cleaner case. <Ref. to IN(H4DO)-7, REMOVAL, Air Cleaner Case.>

(2) Remove the clip (A) from the air intake boot, and loosen the clamp (B) securing the air intake boot to the throttle body.

(3) Remove the air intake boot from the throttle body, and move it to the left side wheel apron.

(4) Remove the front exhaust pipe. <Ref. to EX(H4DO)-5, REMOVAL, Front Exhaust Pipe.>

Rocker Cover

MECHANICAL

- 2) Remove the #1 ignition coil and the #3 ignition coil. <Ref. to IG(H4DO)-10, REMOVAL, Ignition Coil.>
- 3) Remove the intake manifold protector RH.

- 4) Remove the rocker cover RH.

Rocker Cover

MECHANICAL

5) Remove the rocker cover gasket RH, #1 spark plug pipe gasket and #3 spark plug pipe gasket, and remove the liquid gasket.

CAUTION:

- When removing the liquid gasket from engine unit using scraper, use special care not to damage the cam lobe of camshaft RH.
- If the cam lobe of camshaft RH interferes, turn the crankshaft to the position where the scraper does not touch.

Rocker Cover

MECHANICAL

2. ROCKER COVER LH

NOTE:

When replacing a single part, perform the work with the engine assembly installed to body.

1) When working on the vehicle

NOTE:

When working on the vehicle, perform the following steps also.

(1) Remove the V-belt covers.

(2) Remove the V-belts. <Ref. to ME(H4DO)-83, REMOVAL, V-belt.>

(3) Remove the battery. <Ref. to SC(H4DO)-51, REMOVAL, Battery.>

(4) Remove the air intake duct. <Ref. to IN(H4DO)-13, REMOVAL, Air Intake Duct.>

(5) Align the timing mark (B) on crank pulley to the 0° in timing gauge (A) on chain cover as shown in the figure, and turn the crankshaft by 180° clockwise from that position.

NOTE:

This procedure is required to prevent the rocker cover LH and the cam lobe of camshaft LH contacting with each other when removing the rocker cover LH.

Rocker Cover

MECHANICAL

- 2) Remove the #2 ignition coil and the #4 ignition coil. <Ref. to IG(H4DO)-10, REMOVAL, Ignition Coil.>
- 3) Remove the intake manifold protector LH.

- 4) Remove the rocker cover LH.

Rocker Cover

MECHANICAL

5) Remove the rocker cover gasket LH, #2 spark plug pipe gasket and #4 spark plug pipe gasket, and remove the liquid gasket.

CAUTION:

- When removing the liquid gasket from engine unit using scraper, use special care not to damage the cam lobe of camshaft LH.
- If the cam lobe of camshaft LH interferes, turn the crankshaft to the position where the scraper does not touch.

B: INSTALLATION

1. ROCKER COVER RH

1) Install the #1 spark plug pipe gasket and #3 spark plug pipe gasket to the #1 spark plug pipe and #3 spark plug pipe.

NOTE:

- Use a new #1 spark plug pipe gasket and #3 spark plug pipe gasket.
- Apply a light coat of engine oil to the #1 spark plug pipe gasket and #3 spark plug pipe gasket, and insert them onto the spark plug pipe edge (A).

2) Install the rocker cover gasket RH to the rocker cover RH.

NOTE:

Use a new rocker cover gasket RH.

Rocker Cover

MECHANICAL

3) Apply liquid gasket to the mating surface of rocker cover RH as shown in the figure.

NOTE:

- Before applying liquid gasket, degrease the old liquid gasket seal surface of the engine.
- Be careful not to allow liquid gasket to be squeezed out from rocker cover RH.
- Install within 5 min. after applying liquid gasket.

Liquid gasket:

THREE BOND 1217G (Part No. K0877Y0100), THREE BOND 1217H or equivalent

Liquid gasket applying diameter:

3.5 ± 0.5 mm (0.1378 ± 0.0197 in)

(A) 10 mm (0.394 in) or more

(C) 89 mm (3.504 in) or more

(D) Arch starting point

(B) 68 mm (2.677 in) or more

4) Set the rocker cover RH, and tighten the bolts in numerical order as shown in the figure.

Tightening torque:

6.4 N·m (0.7 kgf-m, 4.7 ft-lb)

5) Install the intake manifold protector RH.

Tightening torque:

6.4 N·m (0.7 kgf-m, 4.7 ft-lb)

6) Install the #1 ignition coil and the #3 ignition coil. <Ref. to IG(H4DO)-10, INSTALLATION, Ignition Coil.>

7) When working on the vehicle

NOTE:

When working on the vehicle, perform the following steps also.

- (1) Install the front exhaust pipe. <Ref. to EX(H4DO)-7, INSTALLATION, Front Exhaust Pipe.>
- (2) Install the air intake boot. <Ref. to IN(H4DO)-12, INSTALLATION, Air Intake Boot.>
- (3) Install the air cleaner case. <Ref. to IN(H4DO)-9, INSTALLATION, Air Cleaner Case.>

Rocker Cover

MECHANICAL

2. ROCKER COVER LH

1) When working on the vehicle

NOTE:

When working on the vehicle, perform the following steps also.

(1) Align the timing mark (B) on crank pulley to the 0° in timing gauge (A) on chain cover as shown in the figure, and turn the crankshaft by 180° clockwise from that position.

NOTE:

This procedure is required to prevent the rocker cover LH and the cam lobe of camshaft LH contacting with each other when installing the rocker cover LH.

2) Install the #2 spark plug pipe gasket and #4 spark plug pipe gasket to the #2 spark plug pipe and #4 spark plug pipe.

NOTE:

- Use a new #2 spark plug pipe gasket and #4 spark plug pipe gasket.
- Apply a light coat of engine oil to the #2 spark plug pipe gasket and #4 spark plug pipe gasket, and insert them onto the spark plug pipe edge (A).

3) Install the rocker cover gasket LH to the rocker cover LH.

NOTE:

Use a new rocker cover gasket LH.

4) Apply liquid gasket to the mating surface of rocker cover LH as shown in the figure.

NOTE:

- Before applying liquid gasket, degrease the old liquid gasket seal surface of the engine.
- Be careful not to allow liquid gasket to be squeezed out from rocker cover LH.
- Install within 5 min. after applying liquid gasket.

Liquid gasket:

THREE BOND 1217G (Part No. K0877Y0100), THREE BOND 1217H or equivalent

Liquid gasket applying diameter:

3.5 ± 0.5 mm (0.1378 ± 0.0197 in)

(A) 10 mm (0.394 in) or more

(C) 73 mm (2.874 in) or more

(D) Arch starting point

(B) 51 mm (2.008 in) or more

Rocker Cover

MECHANICAL

5) Set the rocker cover LH, and tighten the bolts in numerical order as shown in the figure.

Tightening torque:

6.4 N·m (0.7 kgf-m, 4.7 ft-lb)

ME-07007

6) Install the intake manifold protector LH.

Tightening torque:

6.4 N·m (0.7 kgf-m, 4.7 ft-lb)

ME-07681

- 7) Install the #2 ignition coil and the #4 ignition coil. <Ref. to IG(H4DO)-10, INSTALLATION, Ignition Coil.>
- 8) When working on the vehicle

NOTE:

When working on the vehicle, perform the following steps also.

- (1) Install the air intake duct. <Ref. to IN(H4DO)-13, INSTALLATION, Air Intake Duct.>
- (2) Install the battery. <Ref. to SC(H4DO)-51, INSTALLATION, Battery.>
- (3) Install the V-belt cover.

Tightening torque:

7 N·m (0.7 kgf·m, 5.2 ft·lb)

C: INSPECTION

Check that the rocker cover does not have deformation, cracks and any other damage.

19. Camshaft

A: REMOVAL

1. CAMSHAFT RH

The camshaft RH and cam carrier are designed as removing as a unit. Refer to “Cam Carrier” for removal procedures of camshaft RH. <Ref. to ME(H4DO)-163, CAM CARRIER RH, REMOVAL, Cam Carrier.> <Ref. to ME(H4DO)-192, CAM CARRIER RH, DISASSEMBLY, Cam Carrier.>

2. CAMSHAFT LH

The camshaft LH and cam carrier are designed as removing as a unit. Refer to “Cam Carrier” for removal procedures of camshaft LH. <Ref. to ME(H4DO)-169, CAM CARRIER LH, REMOVAL, Cam Carrier.> <Ref. to ME(H4DO)-193, CAM CARRIER LH, DISASSEMBLY, Cam Carrier.>

B: INSTALLATION

1. CAMSHAFT RH

The camshaft RH and cam carrier are designed as installing as a unit. Refer to “Cam Carrier” for installation procedures of camshaft RH. <Ref. to ME(H4DO)-195, CAM CARRIER RH, ASSEMBLY, Cam Carrier.> <Ref. to ME(H4DO)-173, CAM CARRIER RH, INSTALLATION, Cam Carrier.>

2. CAMSHAFT LH

The camshaft LH and cam carrier are designed as installing as a unit. Refer to “Cam Carrier” for installation procedures of camshaft LH. <Ref. to ME(H4DO)-198, CAM CARRIER LH, ASSEMBLY, Cam Carrier.> <Ref. to ME(H4DO)-183, CAM CARRIER LH, INSTALLATION, Cam Carrier.>

20. Cam Carrier

A: REMOVAL

1. CAM CARRIER RH

- 1) Remove the engine from the vehicle. <Ref. to ME(H4DO)-47, REMOVAL, Engine Assembly.>
- 2) Remove the chain cover. <Ref. to ME(H4DO)-98, REMOVAL, Chain Cover.>
- 3) Remove the timing chain RH. <Ref. to ME(H4DO)-115, TIMING CHAIN RH, REMOVAL, Timing Chain Assembly.>
- 4) Remove the cam sprocket RH. <Ref. to ME(H4DO)-138, CAM SPROCKET RH, REMOVAL, Cam Sprocket.>

NOTE:

This operation is required only when disassembling the cam carrier RH.

- 5) Remove the rocker cover RH. <Ref. to ME(H4DO)-149, ROCKER COVER RH, REMOVAL, Rocker Cover.>
- 6) Remove the clip holding the engine harness from cam carrier RH.

Cam Carrier

MECHANICAL

- 7) Remove the water pipe assembly RH. <Ref. to CO(H4DO)-20, WATER PIPE ASSEMBLY RH, REMOVAL, Water Pipe Assembly.>
- 8) Remove the fuel pipe RH and the fuel injector RH.
 - (1) Disconnect the connector from fuel injector RH.

(2) Disconnect the quick connector from fuel pipe RH.

NOTE:

Disconnect the quick connector as shown in the figure.

(a) Slider

Cam Carrier

MECHANICAL

- (3) Remove the bolts securing the fuel pipe RH, and remove the fuel pipe RH and the fuel injector RH.

- 9) Insert the steel rods into ST, and set the engine so that the camshaft RH is facing up.

CAUTION:

- If the engine is standing on one side without inserting the steel rod into ST, engine may lose balance and fall down. Be sure to insert the steel rod into ST to extend the length.
- Use the steel rod with enough strength.
- Be careful not to pinch the engine harness with ST.

ST 499817100 ENGINE STAND

10) Loosen the bolts holding the cam carrier RH equally, a little at a time in numerical sequence as shown in the figure and remove the cam carrier RH.

11) Remove the O-ring and the roller rocker arm from cylinder head RH.

NOTE:

Be careful not to confuse the roller rocker arms.

Cam Carrier

MECHANICAL

12) Remove the valve shim and the roller rocker arm pivot from cylinder head RH.

NOTE:

Be careful not to confuse the valve shim and the roller rocker arm pivot.

13) Remove the liquid gasket from cam carrier RH and cylinder head RH.

2. CAM CARRIER LH

- 1) Remove the engine from the vehicle. <Ref. to ME(H4DO)-47, REMOVAL, Engine Assembly.>
- 2) Remove the chain cover. <Ref. to ME(H4DO)-98, REMOVAL, Chain Cover.>

C: DISASSEMBLY

1. CAM CARRIER RH

1) Loosen the bolts (front camshaft cap RH, intake center camshaft cap RH, intake rear camshaft cap RH, exhaust center camshaft cap RH, and exhaust rear camshaft cap RH) equally, a little at a time in numerical sequence as shown in the figure, and remove each camshaft cap.

NOTE:

Arrange camshaft caps in order so that they can be installed in their original positions.

2) Remove the intake camshaft RH and the exhaust camshaft RH from cam carrier RH.

3) Remove the filter from cam carrier RH.

ME-05622

4) Remove the liquid gasket from cam carrier RH and front camshaft cap RH, intake rear camshaft cap RH and exhaust rear camshaft cap RH.

2. CAM CARRIER LH

1) Loosen the bolts (front camshaft cap LH, intake center camshaft cap LH, intake rear camshaft cap LH, exhaust center camshaft cap LH and exhaust rear camshaft cap LH) equally, a little at a time in numerical sequence as shown in the figure, and remove each camshaft cap.

NOTE:

Arrange camshaft caps in order so that they can be installed in their original positions.

ME-05227

Cam Carrier

MECHANICAL

2) Remove the intake camshaft LH and the exhaust camshaft LH from cam carrier LH.

3) Remove the filter from cam carrier LH.

4) Remove the liquid gasket from cam carrier LH and front camshaft cap LH, intake rear camshaft cap LH and exhaust rear camshaft cap LH.

D: ASSEMBLY

1. CAM CARRIER RH

1) Install the filter to the cam carrier RH.

NOTE:

Use a new filter.

Filter insert position:

Cam carrier RH end face $0^{+0} -0.5 \text{ mm}$ ($+0 -0.0197 \text{ in}$) position

(A) 0 — 0.5 mm (0 — 0.0197 in)

Cam Carrier

MECHANICAL

2) Set the intake camshaft RH and the exhaust camshaft RH to the cam carrier RH.

NOTE:

Apply engine oil to the journals of cam carrier RH before setting the intake camshaft RH and exhaust camshaft RH.

3) Install the front camshaft cap RH, intake center camshaft cap RH, intake rear camshaft cap RH, exhaust center camshaft cap RH and exhaust rear camshaft cap RH.

(1) Apply liquid gasket to the mating surface of front camshaft cap RH, intake rear camshaft cap RH and exhaust rear camshaft cap RH as shown in the figure.

CAUTION:

- Do not apply liquid gasket excessively. Applying excessively may cause excess gasket to flow toward camshaft journal, resulting in engine seizure.
- Do not apply liquid gasket excessively to the intake center camshaft cap RH and exhaust center camshaft cap RH.

NOTE:

- Before applying liquid gasket, degrease the old liquid gasket seal surface of the front camshaft cap RH, intake rear camshaft cap RH, exhaust rear camshaft cap RH, and cam carrier RH.
- Install within 5 min. after applying liquid gasket.

Liquid gasket:

THREE BOND 1217G (Part No. K0877Y0100), THREE BOND 1217H or equivalent

Liquid gasket applying diameter:

Mating surfaces other than range A

2 ± 0.5 mm (0.0787 ± 0.0197 in)

Mating surfaces of range A

3.5 ± 0.5 mm (0.1378 ± 0.0197 in)

ME-06988

(A) 28.5 mm (1.122 in)

(D) Liquid gasket applying position of mating surfaces other than range A

(G) Chamfer edge

(B) Range A

(E) 1 mm (0.0394 in) or less

(H) $\phi 2 \pm 0.5$ mm (0.0787 ± 0.0197 in)

(C) Liquid gasket applying position of mating surfaces of range A

(F) $\phi 3.5 \pm 0.5$ mm (0.1378 ± 0.0197 in)

Cam Carrier

MECHANICAL

- (2) Apply engine oil to the journals of each camshaft cap before setting the camshaft cap.
- (3) Tighten the bolts which secure front camshaft cap RH, intake center camshaft cap RH, intake rear camshaft cap RH, exhaust center camshaft cap RH and exhaust rear camshaft cap RH in numerical order as shown in the figure.

Tightening torque:

18 N·m (1.8 kgf-m, 13.3 ft-lb)

ME-05231

Cam Carrier

MECHANICAL

2. CAM CARRIER LH

1) Install the filter to the cam carrier LH.

NOTE:

Use a new filter.

Filter insert position:

Cam carrier LH end face $0^{+0} -0.5 \text{ mm}$ ($^{+0} -0.0197 \text{ in}$) position

(A) 0 — 0.5 mm (0 — 0.0197 in)

2) Set the intake camshaft LH and the exhaust camshaft LH to the cam carrier LH.

NOTE:

Apply engine oil to the journals of cam carrier LH before setting the intake camshaft LH and exhaust camshaft LH.

3) Install the front camshaft cap LH, intake center camshaft cap LH, intake rear camshaft cap LH, exhaust center camshaft cap LH and exhaust rear camshaft cap LH.

(1) Apply liquid gasket to the mating surface of front camshaft cap LH, intake rear camshaft cap LH and exhaust rear camshaft cap LH as shown in the figure.

CAUTION:

- Do not apply liquid gasket excessively. Applying excessively may cause excess gasket to flow toward camshaft journal, resulting in engine seizure.
- Do not apply liquid gasket excessively to the intake center camshaft cap LH and exhaust center camshaft cap LH.

NOTE:

- Before applying liquid gasket, degrease the old liquid gasket seal surface of the front camshaft cap LH, intake rear camshaft cap LH, exhaust rear camshaft cap LH, and cam carrier LH.
- Install within 5 min. after applying liquid gasket.

Liquid gasket:

THREE BOND 1217G (Part No. K0877Y0100), THREE BOND 1217H or equivalent

Liquid gasket applying diameter:

Mating surfaces other than ranges A, B and C

2 ± 0.5 mm (0.0787 \pm 0.0197 in)

Mating surfaces of ranges A and C

3.5 ± 0.5 mm (0.1378 \pm 0.0197 in)

Mating surfaces of range B

$3^{+0.5}_{-0}$ mm (0.1181 $^{+0.0197}_{-0}$ in)

ME-07100

(A) 28.5 mm (1.122 in)

(B) 11.6 mm (0.4567 in)

(C) 5.1 mm (0.2008 in)

(D) Range A

(E) Range B

(F) Range C

(G) Liquid gasket applying position of mating surfaces of range A

(H) Liquid gasket applying position of mating surfaces of range B

(I) Liquid gasket applying position of mating surfaces of range C

(J) Liquid gasket applying position of mating surfaces other than range A, range B and range C

(K) 0.5 mm (0.0197 in)

(L) $\phi 3.5 \pm 0.5$ mm (0.1378 \pm 0.0197 in)

(M) Chamfer edge

(N) $\phi 3^{+0.5}_{-0}$ mm ($^{+0.0197}_{-0}$ in)

(O) 1 mm (0.0394 in) or less

(P) $\phi 2 \pm 0.5$ mm (0.0787 \pm 0.0197 in)

Cam Carrier

MECHANICAL

- (2) Apply engine oil to the journals of each camshaft cap before setting the camshaft cap.
- (3) Tighten the bolts which secure front camshaft cap LH, intake center camshaft cap LH, intake rear camshaft cap LH, exhaust center camshaft cap LH and exhaust rear camshaft cap LH in numerical order as shown in the figure.

Tightening torque:

18 N·m (1.8 kgf·m, 13.3 ft·lb)

ME-05233

E: INSPECTION

1) Visually check the cam carrier filter, and if clogging is found, replace with a new part.

ME-20183

2) Check the camshaft journals for damage and wear. Replace the camshaft if faulty.

3) Check the cam face condition of camshaft, and remove the minor faults by grinding with oil stone. Replace the camshaft if uneven wear is found.

4) Using a dial gauge, check the camshaft bend. If it exceeds the limit, replace the camshaft.

NOTE:

Measurement should be performed at a temperature of 20°C (68°F).

Camshaft bend:

Limit

0.020 mm (0.0008 in)

ME-05235

Cam Carrier

MECHANICAL

5) Check the cam lobe height "H" and cam base circle diameter "A" of camshaft as shown in the figure, using micrometer. If it is not within the standard, replace the camshaft.

NOTE:

Measurement should be performed at a temperature of 20°C (68°F).

Camshaft cam lobe overall height H:

Intake

Standard

40.34 — 40.44 mm (1.588 — 1.592 in)

Exhaust

Standard

39.66 — 39.76 mm (1.561 — 1.565 in)

Camshaft cam base circle diameter A:

Standard

34.0 mm (1.339 in)

6) Check the camshaft journal outer diameter using micrometer. If it is not within the standard, replace the camshaft.

NOTE:

- Measurement should be performed at a temperature of 20°C (68°F).
- Measure outer diameter of each journal at several points, and read the value of most worn location.

Camshaft journal outer diameter:

Standard

25.946 — 25.963 mm (1.0215 — 1.0222 in)

7) Using a dial gauge, check the thrust clearance of the camshaft. If it is not within the standard or if uneven wear is found, replace each camshaft cap and cam carrier as a set. If necessary replace the camshaft.

NOTE:

- Measurement should be performed at a temperature of 20°C (68°F).
- Set the dial gauge at end surface of camshaft.

Camshaft thrust clearance:

Standard

0.068 — 0.116 mm (0.0027 — 0.0047 in)

Cam Carrier

MECHANICAL

8) Check the oil clearance on the camshaft using a plastigauge.

NOTE:

Measurement should be performed at a temperature of 20°C (68°F).

- (1) Remove the liquid gasket from cam carrier and front camshaft cap, intake rear camshaft cap and exhaust rear camshaft cap.
- (2) Clean each camshaft cap and cam carrier journals.
- (3) Set the camshaft to the cam carrier.
- (4) Place a plastigauge across the camshaft journals of each camshaft and set the camshaft caps.
- (5) Tighten the bolts which secure front camshaft cap, intake center camshaft cap, intake rear camshaft cap, exhaust center camshaft cap and exhaust rear camshaft cap in numerical order as shown in the figure.

Tightening torque:

18 N·m (1.8 kgf-m, 13.3 ft-lb)

- (6) Loosen the bolts (front camshaft cap, intake center camshaft cap, intake rear camshaft cap, exhaust center camshaft cap and exhaust rear camshaft cap) equally, a little at a time in numerical sequence as shown in the figure, and remove each camshaft cap.

(7) Determine camshaft oil clearance by matching the widest point of plastigauge on each journal against scale printed on a package of plastigauge. If it is not within the standard, replace each camshaft cap and cam carrier as a set. If necessary replace the camshaft.

Camshaft oil clearance:

Standard

0.037 — 0.072 mm (0.0015 — 0.0028 in)

(8) Completely remove the plastigauge.

21. Cylinder Head

A: REMOVAL

1. CYLINDER HEAD RH

- 1) Remove the engine from the vehicle. <Ref. to ME(H4DO)-47, REMOVAL, Engine Assembly.>
- 2) Remove the intake manifold. <Ref. to FU(H4DO)-19, REMOVAL, Intake Manifold.>
- 3) Remove the engine wiring harness. <Ref. to FU(H4DO)-41, REMOVAL, Engine Wiring Harness.>
- 4) Remove the tumble generator valve assembly RH. <Ref. to FU(H4DO)-83, REMOVAL, Tumble Generator Valve Assembly.>
- 5) Remove the chain cover. <Ref. to ME(H4DO)-98, REMOVAL, Chain Cover.>
- 6) Remove the rocker cover RH. <Ref. to ME(H4DO)-149, ROCKER COVER RH, REMOVAL, Rocker Cover.>
- 7) Remove the cam carrier RH. <Ref. to ME(H4DO)-163, CAM CARRIER RH, REMOVAL, Cam Carrier.>
- 8) Remove the EGR cooler. <Ref. to EC(H4DO)-32, REMOVAL, EGR Cooler.>
- 9) Loosen the bolts holding the cylinder head RH equally, a little at a time in numerical sequence as shown in the figure, and while leaving the cylinder head bolts (1) and (4) engaged by three or four threads, remove the other cylinder head bolts.

NOTE:

Leaving the cylinder head bolts (1) and (4) engaged by three or four threads prevents the cylinder head RH from falling.

- 10) While tapping the cylinder head RH with a plastic hammer, separate it from cylinder block RH.
- 11) Remove the bolts (1) and (4) to remove cylinder head RH.
- 12) Remove the cylinder head gasket RH.

CAUTION:

Be careful not to scratch the mating surface of cylinder head and cylinder block.

- 13) Remove the liquid gasket from cylinder head RH and cam carrier RH.

2. CYLINDER HEAD LH

- 1) Remove the engine from the vehicle. <Ref. to ME(H4DO)-47, REMOVAL, Engine Assembly.>
- 2) Remove the intake manifold. <Ref. to FU(H4DO)-19, REMOVAL, Intake Manifold.>
- 3) Remove the engine wiring harness. <Ref. to FU(H4DO)-41, REMOVAL, Engine Wiring Harness.>
- 4) Remove the tumble generator valve assembly LH. <Ref. to FU(H4DO)-83, REMOVAL, Tumble Generator Valve Assembly.>
- 5) Remove the chain cover. <Ref. to ME(H4DO)-98, REMOVAL, Chain Cover.>
- 6) Remove the rocker cover LH. <Ref. to ME(H4DO)-152, ROCKER COVER LH, REMOVAL, Rocker Cover.>
- 7) Remove the cam carrier LH. <Ref. to ME(H4DO)-169, CAM CARRIER LH, REMOVAL, Cam Carrier.>
- 8) Remove the A/C compressor. <Ref. to AC-48, REMOVAL, Compressor.>
- 9) Loosen the bolts holding the cylinder head LH equally, a little at a time in numerical sequence as shown in the figure, and while leaving the cylinder head bolts (1) and (4) engaged by three or four threads, remove the other cylinder head bolts.

NOTE:

Leaving the cylinder head bolts (1) and (4) engaged by three or four threads prevents the cylinder head LH from falling.

ME-05248

- 10) While tapping the cylinder head LH with a plastic hammer, separate it from cylinder block LH.
- 11) Remove the cylinder head bolts (1) and (4) to remove cylinder head LH.
- 12) Remove the cylinder head gasket LH.

CAUTION:

Be careful not to scratch the mating surface of cylinder head and cylinder block.

- 13) Remove the liquid gasket from cylinder head LH and cam carrier LH.

Cylinder Head

MECHANICAL

B: INSTALLATION

1. CYLINDER HEAD RH

1) Clean the bolt holes in the cylinder block RH.

CAUTION:

To avoid erroneous tightening of the bolts, clean out the bolt holes sufficiently by blowing with compressed air to eliminate engine coolant etc.

2) Apply liquid gasket to both sides of the cylinder head gasket RH as shown in the figure.

NOTE:

- Use a new cylinder head gasket RH.
- Before applying liquid gasket, degrease the mating surface of cylinder blocks RH and cylinder head RH.
- Install within 5 min. after applying liquid gasket.

Liquid gasket:

THREE BOND 1217G (Part No. K0877Y0100), THREE BOND 1217H or equivalent

Liquid gasket applying diameter:

3 ± 1 mm (0.1181 ± 0.0394 in)

(A) Liquid gasket applying position to the cylinder head side

(B) Liquid gasket applying position to the cylinder block side

(C) 1 mm (0.0394 in) or less

(D) $\phi 3\pm 1$ mm (0.1181 ± 0.0394 in)

(E) Cylinder head gasket edge

(F) Overlap margin of bead end and liquid gasket: 3 — 10 mm (0.1181 — 0.3937 in)

3) Attach the cylinder head gasket RH.

NOTE:

Check that liquid gasket RH is squeezed out from the cylinder head gasket.

4) Install the cylinder head RH to the cylinder block RH.

CAUTION:

Be careful not to scratch the mating surface of cylinder head RH and cylinder block RH.

(1) Clean the cylinder head bolt threads and apply sufficient engine oil to the washer and cylinder head bolts threads.

(2) Mount the cylinder head RH onto the cylinder block RH, and tighten all bolts with a torque of 29 N·m (3.0 kgf·m, 21.4 ft·lb) in numerical order as shown in the figure.

(3) Tighten all cylinder head bolts further with a torque of 100 N·m (10.2 kgf·m, 73.8 ft·lb) in numerical order as shown in the figure.

CAUTION:

If the bolt makes stick-slip sound during tightening, repeat the procedure from step 1). In that case, the cylinder head gasket RH can be reused. But it is necessary to remove liquid gasket completely from cylinder block RH, cylinder head RH and cylinder head gasket RH and re-apply to them.

Cylinder Head

MECHANICAL

(4) Loosen all cylinder head bolts 180° in numerical order as shown in the figure, and then loosen all cylinder head bolts 180° further in numerical order as shown in the figure.

(5) Tighten all cylinder head bolts with a torque of 42 N·m (4.3 kgf·m, 31.0 ft·lb) in numerical order as shown in the figure.

Cylinder Head

MECHANICAL

(6) Using angle gauge, tighten all cylinder head bolts with specified angle in numerical order as shown in the figure.

ST 499817100 ENGINE STAND

Tightening angle:

$80^{\circ} \pm 2^{\circ}$

ME-07168

Cylinder Head

MECHANICAL

(7) Using angle gauge, tighten the cylinder head bolts (2 places) with specified angle in numerical order as shown in the figure.

ST 499817100 ENGINE STAND

Cylinder Head

MECHANICAL

C: DISASSEMBLY

- 1) Remove the chain cover securing bolt from the cylinder head LH.

- 2) Remove the stud bolts from the cylinder head.

Cylinder Head

MECHANICAL

3) Remove the valve collet, valve, valve spring retainer, valve spring and valve spring seat from the cylinder head RH.

CAUTION:

During work, place a waste cloth, etc. to avoid scratching the mating surface of the cylinder head RH.

NOTE:

- Mark each part to prevent confusion.
- Keep all the removed parts in order for re-installing in their original positions.

(1) Compress the valve spring and remove the valve collet using ST.

ST 0920287002000 REMOVER AND REPLACER

(2) Remove valve, valve spring retainer, valve spring and valve spring seat.

Cylinder Head

MECHANICAL

4) Remove the valve collet, valve, valve spring retainer, valve spring and valve spring seat from the cylinder head LH.

5) Remove the valve oil seals from valve guides of cylinder head RH.

CAUTION:

- During work, place a waste cloth, etc. to avoid scratching the mating surface of the cylinder head RH.
- Use special care not to damage the cylinder head RH and guide during work.

NOTE:

For removal of valve guide, refer to INSPECTION. <Ref. to ME(H4DO)-228, VALVE & VALVE GUIDE, INSPECTION, Cylinder Head.>

ME-06078

6) For cylinder head LH, remove the valve oil seal in the same manner.

D: ASSEMBLY

ME-07800

- | | | |
|---------------------------|-----------------------------|------------------------------|
| (1) Exhaust valve | (6) Valve spring | (11) Intake valve guide |
| (2) Intake valve | (7) Valve spring retainer | (12) Exhaust valve guide |

| (5) Intake valve oil seal | (10) Exhaust valve oil seal | |

Cylinder Head

MECHANICAL

1) Using the ST, install the valve oil seals to valve guides of cylinder head RH.

CAUTION:

- During work, place a waste cloth, etc. to avoid scratching the mating surface of the cylinder head RH.
- Use special care not to damage the cylinder head RH and guide during work.
- When installing the valve oil seal, press the ST with hands to install it and never drive the ST with a plastic hammer, otherwise the valve oil seal can be damaged.

NOTE:

- Use a new valve oil seal.
- Apply engine oil to valve oil seal before installing.
- The intake valve oil seals and exhaust valve oil seals are distinguished by their colors.

Identification colors:

Intake [Gray]

Exhaust [Green]

- For installation of valve guide, refer to INSPECTION. <Ref. to ME(H4DO)-228, VALVE & VALVE GUIDE, INSPECTION, Cylinder Head.>

ST 18261AA010 VALVE OIL SEAL GUIDE

2) For cylinder head LH, install the valve oil seal in the same manner.

3) Install the valve spring seat, valve spring, valve spring retainer, valve and valve collet to the cylinder head RH.

CAUTION:

During work, place a waste cloth, etc. to avoid scratching the mating surface of the cylinder head RH.

- (1) Set the valve spring seat, valve spring and valve spring retainer onto the cylinder head RH.

NOTE:

Be sure to install the valve spring with its close-coiled end facing the cylinder head side.

- (2) Coat the valve stem of each valve with engine oil and insert the valve into valve guide.

NOTE:

When inserting the valve into valve guide, use special care not to damage the oil seal lip.

Cylinder Head

MECHANICAL

- (3) Compress the valve spring and install the valve collet using ST.
ST 0920287002000 REMOVER AND REPLACER

- 4) Install the valve spring seat, valve spring, valve spring retainer, valve and valve collet to the cylinder head LH.
5) Lightly tap the valve spring retainer with a plastic hammer, and make sure that the valve collet is securely attached.
6) Install the stud bolts onto cylinder heads.

Tightening torque:

T1: 6.4 N·m (0.7 kgf-m, 4.7 ft-lb)

T2: 18 N·m (1.8 kgf-m, 13.3 ft-lb)

Cylinder Head

MECHANICAL

7) Install the chain cover securing bolt to the cylinder head LH.

Tightening torque:

6.4 N·m (0.7 kgf-m, 4.7 ft-lb)

E: INSPECTION

1. CYLINDER HEAD

- 1) Visually inspect to make sure that there are no cracks, scratches or other damage.
- 2) Use liquid penetrant tester on the important sections to check for fissures.
- 3) Check that there are no marks of gas leaking or water leaking on gasket attachment surface.
- 4) Check the warpage of the cylinder head mating surface that mates with cylinder block at the locations shown in the figure using a straight edge (A) and thickness gauge (B). If it exceeds the limit, correct the surface by grinding it with a surface grinder or replace the cylinder head.

NOTE:

- Measurement should be performed at a temperature of 20°C (68°F).
- If there is warpage on the cylinder head mating surface, the cylinder head bolt tightening torque and angle tightening may be improper. When installing the cylinder head, make sure that tightening torque and angle tightening work is performed precisely according to the operation procedures.
- When the cylinder head is replaced, lap each valve. Refer to “VALVE SEAT” for lapping. <Ref. to ME(H4DO)-238, VALVE SEAT, INSPECTION, Cylinder Head.>

Cylinder head warpage:

Limit

0.020 mm (0.0008 in)

2. VALVE & VALVE GUIDE

- 1) Check the valve flange and stem for damage, wear or deformation.
- 2) Measure the thickness "H" of valve head edge as shown in the figure using a caliper gauge. If it is not within the standard, replace the valve.

NOTE:

- It is possible to differentiate between the intake valve and the exhaust valve by their overall length.

Valve overall length:

Intake

104.95 mm (4.132 in)

Exhaust

96.5 mm (3.799 in)

- When the valve is replaced, lap the valve. Refer to "VALVE SEAT" for lapping. <Ref. to ME(H4DO)-238, VALVE SEAT, INSPECTION, Cylinder Head.>

Valve head edge thickness H:

Intake (A)

Standard

0.8 — 1.2 mm (0.031 — 0.047 in)

Exhaust (B)

Standard

1.0 — 1.4 mm (0.039 — 0.055 in)

3) Check the clearance between valve and valve guide. Check the clearance between valve and valve guide by measuring the outer diameter of valve stem and the inner diameter of valve guide respectively.

(1) Measure the outer diameter of valve stem with a micrometer. If it is not within the standard, replace the valve.

NOTE:

- Measurement should be performed at a temperature of 20°C (68°F).
- Measure the outer diameter of the valve stem at the six locations as shown in the figure, and read the value of most worn location.
- When the valve is replaced, lap the valve. Refer to “VALVE SEAT” for lapping. <Ref. to ME(H4DO)-238, VALVE SEAT, INSPECTION, Cylinder Head.>

Valve stem outer diameter:

Intake

Standard

5.455 — 5.470 mm (0.2148 — 0.2154 in)

Exhaust

Standard

5.445 — 5.460 mm (0.2144 — 0.2150 in)

Cylinder Head

MECHANICAL

(2) Using a caliper gauge, measure the inner diameter of valve guide. If it is not within the standard, replace the valve guide. For replacement procedure, refer to step 4).

NOTE:

- Measurement should be performed at a temperature of 20°C (68°F).
- Measure the inner diameter of the valve guide at the six locations as shown in the figure, and read the value of most worn location.

Valve guide inner diameter:

Standard

5.500 — 5.512 mm (0.2165 — 0.2170 in)

ME-06080

(3) Calculate the clearance between valve and valve guide.

Clearance between valve and valve guide:

Intake

Standard

0.030 — 0.057 mm (0.0012 — 0.0022 in)

Exhaust

Standard

0.040 — 0.067 mm (0.0016 — 0.0026 in)

4) If the clearance between valve and valve guide exceeds the standard, replace the valve or valve guide, whichever shows the greater amount of wear or damage. For replacement procedure of valve guide, refer to the following.

NOTE:

When the valve is replaced, lap the valve. Refer to "VALVE SEAT" for lapping. <Ref. to ME(H4DO)-238, VALVE SEAT, INSPECTION, Cylinder Head.>

(1) Insert ST into the valve guide with the combustion chamber upward and remove the valve guide using plastic hammer.

CAUTION:

- Place a wood board wrapped with a waste cloth to stabilize the cylinder head before work.
- Use special care not to damage the cylinder head during work.
- Always strike the ST vertically with a plastic hammer. Otherwise, the ST can be damaged.

ST 499765700 VALVE GUIDE REMOVER AND INSTALLER

(2) Before installing the valve guide, make sure that neither scratches nor damages exist on the inner surface of valve guide installation holes of cylinder head.

Cylinder Head

MECHANICAL

(3) Draw a reference line (A) for insert on the valve guide using a marker as shown in the figure.

NOTE:

- Use a new valve guide.
- A reference line for insert is used as a guide when tapping-in the valve guide.

**Valve guide inserting reference line position L:
15 mm (0.5906 in)**

ME-05271

(4) Apply a enough coat of engine oil to the valve guide, and set the valve guide on the cylinder head with the combustion chamber downward.

(5) Insert the ST into the valve guide, and tap-in the valve guide to the reference line (A) for insert using plastic hammer.

CAUTION:

- During work, place a waste cloth, etc. to avoid scratching the mating surface of the cylinder head.
- Use special care not to damage the cylinder head during work.
- Always strike the ST vertically with a plastic hammer. Otherwise, the ST can be damaged.

ST 499765700 VALVE GUIDE REMOVER AND INSTALLER

(6) Measure the valve guide protrusion amount “L” as shown in the figure using a caliper gauge. Insert the ST into the valve guide again, and tap-in the valve guide so that it is positioned within standard by referring to the measured value using plastic hammer.

CAUTION:

- During work, place a waste cloth, etc. to avoid scratching the mating surface of the cylinder head.
- Use special care not to damage the cylinder head during work.
- Always strike the ST vertically with a plastic hammer. Otherwise, the ST can be damaged.

Cylinder Head

MECHANICAL

NOTE:

Be careful not to tap-in excessively by repeating the steps of Tapping-in → Measurement → Tapping-in → Measurement ... when installing the valve guide.

ST 499765700 VALVE GUIDE REMOVER AND INSTALLER

Valve guide protrusion amount L:

Standard

11.4 — 11.8 mm (0.449 — 0.465 in)

Cylinder Head

MECHANICAL

(7) Ream the inside of valve guide with the combustion chamber upward using the ST. Put the ST in valve guide, and rotate the ST slowly clockwise while pushing it lightly. Bring the ST back while rotating it clockwise.

CAUTION:

- Place a wood board wrapped with a waste cloth to stabilize the cylinder head before work.
- Use special care not to damage the cylinder head during work.

NOTE:

- Apply engine oil to the ST.
- If the inner surface of valve guide is damaged, the edge of ST should be slightly ground with oil stone.
- If the inner surface of valve guide becomes lustrous and the ST does not chip, use a new ST or remedy the ST.

ST 499765900 VALVE GUIDE REAMER

(8) After reaming, clean the valve guide to remove chips.

(9) Check the seating width between valve and valve seat. <Ref. to ME(H4DO)-238, VALVE SEAT, INSPECTION, Cylinder Head.>

Cylinder Head

MECHANICAL

3. VALVE & VALVE SHIM

- 1) Visually check the valve shim for damage.
- 2) Check the clearance between valve and valve shim. Check the clearance between valve and valve shim by measuring the outer diameter of valve stem end and the inner diameter of valve shim respectively.
 - (1) Measure the outer diameter of valve stem end with a micrometer. If it is not within the standard, replace the valve.

NOTE:

- Measurement should be performed at a temperature of 20°C (68°F).
- Measure the outer diameter of the valve stem end at the two locations as shown in the figure, and read the value of most worn location.
- When the valve is replaced, lap the valve. Refer to “VALVE SEAT” for lapping. <Ref. to ME(H4DO)-238, VALVE SEAT, INSPECTION, Cylinder Head.>

Valve stem end outer diameter:

Intake

Standard

5.455 — 5.470 mm (0.2148 — 0.2154 in)

Exhaust

Standard

5.445 — 5.460 mm (0.2144 — 0.2150 in)

(2) Using a caliper gauge, measure the inner diameter of valve shim. If it is not within the standard, replace the valve shim.

NOTE:

- Measurement should be performed at a temperature of 20°C (68°F).
- Measure the inner diameter of the valve shim at the two locations as shown in the figure, and read the value of most worn location.
- If the valve shim has to be replaced, check the cam clearance and replace with the suitable valve shim. <Ref. to ME(H4DO)-42, WHEN TIMING CHAIN ASSEMBLY IS REMOVED, INSPECTION, Cam Clearance.>

Valve shim inner diameter:

Standard

5.500 — 5.560 mm (0.2165 — 0.2189 in)

ME-06095

(3) Calculate the clearance between valve and valve shim. If the clearance exceeds the standard, replace the valve or valve shim, whichever shows the greater amount of wear or damage.

NOTE:

- When the valve is replaced, lap the valve. Refer to “VALVE SEAT” for lapping. <Ref. to ME(H4DO)-238, VALVE SEAT, INSPECTION, Cylinder Head.>
- If the valve shim has to be replaced, check the cam clearance and replace with the suitable valve shim. <Ref. to ME(H4DO)-42, WHEN TIMING CHAIN ASSEMBLY IS REMOVED, INSPECTION, Cam Clearance.>

Clearance between valve and valve shim:

Intake

Standard

0.030 — 0.105 mm (0.0012 — 0.0041 in)

Exhaust

Standard

0.040 — 0.115 mm (0.0016 — 0.0045 in)

Cylinder Head

MECHANICAL

4. VALVE SEAT

- 1) Check the valve seat for damage and deformation.
- 2) Check the seating width and seating position between valve and valve seat for the intake valve seat and exhaust valve seat.
 - (1) Clean the valve and valve seat.
 - (2) Coat the stem (A) of the valve lightly with engine oil and apply red dye evenly on the valve face (B).

- (3) Using the valve lapper, slowly insert the valve with red dye applied into the valve guide. Lightly press the valve against the valve seat without turning the valve, and then slowly pull out the valve.

(4) Check the seating width “W” of valve seat as shown in the figure, using a caliper gauge. Check the seating width “W” between valve and valve seat by measuring the width of red dye on the seating surface of valve seat. If the seating width “W” between valve and valve seat is out of the standard, correct the seating surface of valve seat using the valve seat cutter. For correcting procedures of the valve seat seating surface, refer to step 3).

NOTE:

- When the red dye does not appear seamlessly on the valve seat seating surface, lap the valve. For lapping procedure, refer to step 4).
- When the red dye does not appear seamlessly on the valve seat seating surface even after lapping the valve, correct the valve seat seating surface using the valve seat cutter. For correcting procedures of the valve seat seating surface, refer to step 3).

Seating width W between valve and valve seat:

Intake

Standard

0.8 — 1.6 mm (0.031 — 0.063 in)

Exhaust

Standard

1.1 — 1.7 mm (0.043 — 0.067 in)

ME-07101

Cylinder Head

MECHANICAL

- (5) Wipe off the red dye on the valve and valve seat completely.
- (6) Coat the stem (A) of the valve lightly with engine oil and apply red dye evenly on the seating surface (B) between valve and valve seat.

IN

EX

ME-06084

(7) Using the valve lapper, slowly insert the valve into the valve guide. Lightly press the valve against the valve seat without turning the valve, and then slowly pull out the valve.

(8) Check the seating position between valve and valve seat. Check the seating position between valve and valve seat by checking the position of red dye on the valve face. If the seating position between valve and valve seat is not at the center of valve face, correct the seating surface of valve seat using the valve seat cutter. For correcting procedures of the valve seat seating surface, refer to step 3).

Seating position between valve and valve seat:

Valve face center

ME-06085

(9) After inspection, wipe off the red dye completely.

Cylinder Head

MECHANICAL

3) When correcting the seating surfaces of valve seat

(1) Correct the seating angle between valve and valve seat using the 45° valve seat cutter.

NOTE:

- Grind the seating surface so that the seating width between valve and valve seat becomes slightly larger than the standard value.
- Gradually reduce pressure at the end of grinding process in order to avoid creating a gap on the valve seat correcting surface.

Seating angle between valve and valve seat:

45°

(2) Lap the valve. For lapping procedure of the valve, refer to step 4).

(3) Check the seating position between valve and valve seat. For inspection of the seating position between valve and valve seat, refer to step 2).

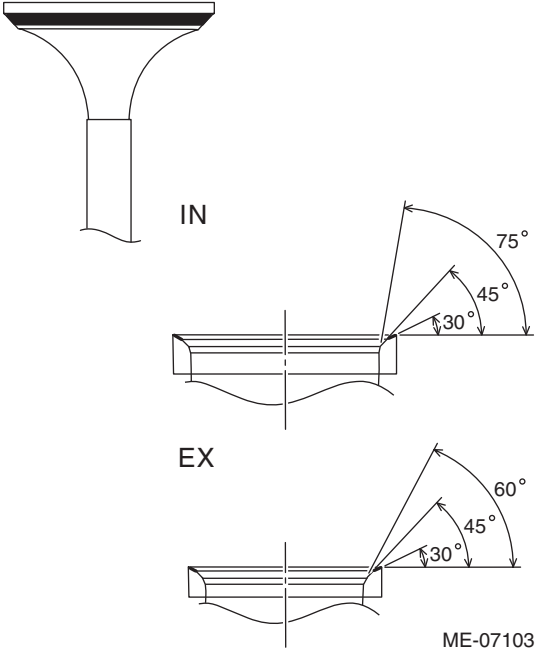

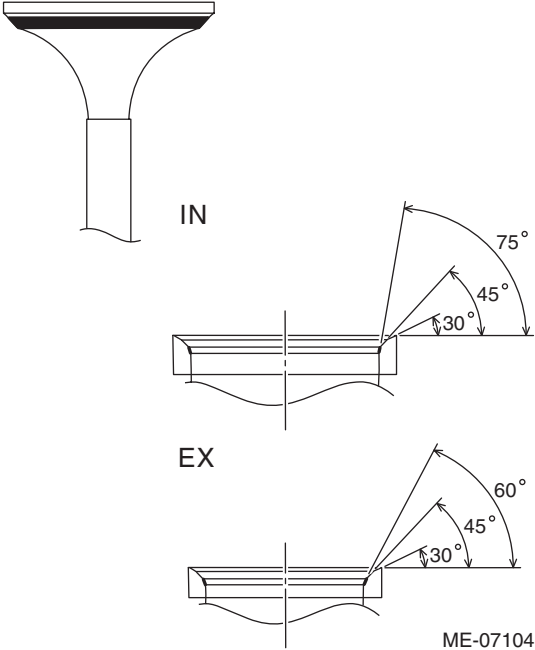

NOTE:

This procedure is necessary to select a seat cutter to be used in step (4).

(4) Using a seat cutter, correct the valve seat so that the seating width between valve and valve seat becomes the standard value.

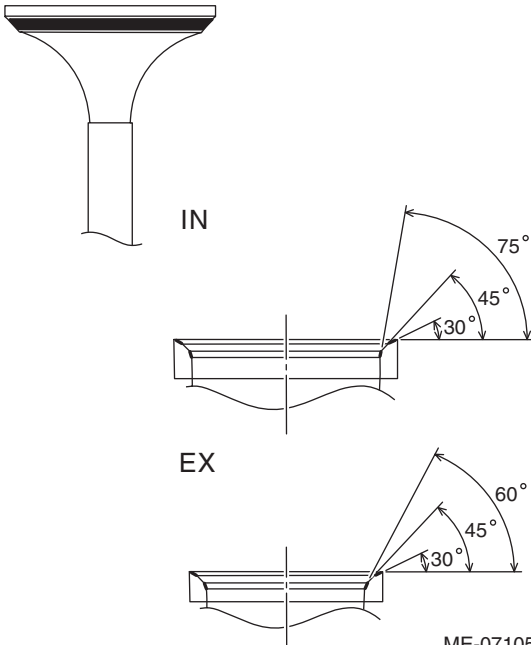

NOTE:

- Select a proper valve seat cutter according to the following table.

Seating position between valve and valve seat	Seat cutter selection
 <p>IN</p> <p>EX</p> <p>ME-07103</p>	<p>When the seating position of valve face is high, grind the surface using the 30° seat cutter until seating width between valve and valve seat becomes the standard value.</p>
 <p>IN</p> <p>EX</p> <p>ME-07104</p>	<p>When the seating position of valve face is low, grind the surface using the 75° (IN) or 60° (EX) seat cutter until seating width between valve and valve seat becomes the standard value.</p>

Cylinder Head

MECHANICAL

Seating position between valve and valve seat	Seat cutter selection
 <p>IN</p> <p>EX</p> <p>ME-07105</p>	<p>When the seating position of valve face is at center, grind the surface evenly using the 30° and 75° (IN) or 60° (EX) seat cutters until seating width between valve and valve seat becomes the standard value.</p>

- Gradually reduce pressure at the end of grinding process in order to avoid creating a gap on the valve seat correcting surface.

(5) Lap the valve. For lapping procedure of the valve, refer to step 4).

4) When lapping the valve

- (1) Coat the stem (A) of the valve lightly with engine oil and put a small amount of valve compound evenly on the valve face (B).

NOTE:

- Be careful not to put the valve compound more than necessary.
- To avoid damaging the valve guide and valve stem, be careful not to let the valve compound contact the valve stem.

- (2) Using the valve lapper, slowly insert the valve with the valve compound applied into the valve guide, and lap the seating surface between valve and valve seat. First, lift the valve and strike it against the valve seat twice, and then slightly turn the valve once. Repeat these steps as one set.

NOTE:

- To prevent the seating width between valve and valve seat from exceeding the standard value, be careful not to keep turning the valve while pressing it against the valve seat during lapping.
- Be careful not to lift the valve too far during lapping in order to prevent the valve from coming off the valve guide.

- (3) Wipe off the valve compound on the valve and valve seat completely after lapping.

NOTE:

Be careful not to leave any valve compound in order to avoid malfunction.

- (4) Check the seating width and seating position between valve and valve seat.

Cylinder Head

MECHANICAL

5. VALVE SPRING

- 1) Check the valve spring for damage and deformation.
- 2) Using a caliper gauge, valve spring tester, surface plate and try square, check the valve spring free length, tension/spring height and squareness. If it is not within the standard, replace the valve spring.

NOTE:

- Measurement should be performed at a temperature of 20°C (68°F).
- To check the squareness of the valve spring, stand the valve spring on a surface plate and check its deflection at the top of the valve spring using a try square.

Valve spring free length:

MT model

Standard

41.06 mm (1.617 in)

CVT model

Standard

41.68 mm (1.641 in)

Valve spring tension/spring height:

MT model

Set

Standard

182 — 210 N (18.56 — 21.41 kgf, 40.92 — 47.22 lbf)/33.0 mm (1.299 in)

Lift

Standard

552 — 610 N (56.29 — 62.20 kgf, 124.11 — 137.15 lbf)/22.0 mm (0.866 in)

CVT model

Set

Standard

182 — 210 N (18.56 — 21.41 kgf, 40.92 — 47.22 lbf)/33.0 mm (1.299 in)

Lift

Standard

502 — 554 N (51.19 — 56.49 kgf, 112.87 — 124.56 lbf)/22.0 mm (0.866 in)

Valve spring squareness:

Standard

2.5°, 1.8 mm (0.071 in) or less

22. Cylinder Block

A: REMOVAL

- 1) Remove the engine from the vehicle. <Ref. to ME(H4DO)-47, REMOVAL, Engine Assembly.>
- 2) Remove the intake manifold. <Ref. to FU(H4DO)-19, REMOVAL, Intake Manifold.>
- 3) Remove the engine wiring harness. <Ref. to FU(H4DO)-41, REMOVAL, Engine Wiring Harness.>
- 4) Remove the tumble generator valve assembly. <Ref. to FU(H4DO)-83, REMOVAL, Tumble Generator Valve Assembly.>
- 5) Remove the chain cover. <Ref. to ME(H4DO)-98, REMOVAL, Chain Cover.>
- 6) Remove the rocker cover. <Ref. to ME(H4DO)-149, REMOVAL, Rocker Cover.>
- 7) Remove the cam carrier. <Ref. to ME(H4DO)-163, REMOVAL, Cam Carrier.>
- 8) Remove the cylinder head. <Ref. to ME(H4DO)-206, REMOVAL, Cylinder Head.>
- 9) Remove the crank sprocket. <Ref. to ME(H4DO)-147, REMOVAL, Crank Sprocket.>
- 10) Remove the engine rear hanger from cylinder block RH.

27) Set the cylinder block so that the oil pan side faces upward, and remove the mounting bolts attached to the locations shown in the figure.

ME-06167

Cylinder Block

MECHANICAL

28) Set the part so that the cylinder block RH is on the upper side, and separate the cylinder block.

CAUTION:

- Place a wood board wrapped with a waste cloth to prevent the knock pin damage and to stabilize the cylinder block before work.
- Be careful not to scratch the mating surface of cylinder block during work.

(1) Remove the bolt shown in the figure.

Cylinder Block

MECHANICAL

(2) Loosen the cylinder block mounting bolts in numerical order as shown in the figure, and separate the cylinder block RH and LH.

NOTE:

Lift the cylinder block RH slightly, and confirm that the crankshaft is remaining in the cylinder block LH. If the cylinder block RH is lifted carelessly when separating, the crankshaft may stick to cylinder block RH, then fall off.

Cylinder Block

MECHANICAL

- 29) Remove the crankshaft from cylinder block LH, and remove the rear oil seal.
- 30) Remove the O-ring from the cylinder block LH.

- 31) Remove the crankshaft bearings from the cylinder block.

NOTE:

- Be careful not to confuse the crankshaft bearing combination.
- Press the bearing at the end opposite to locking lip (A).

- 32) Remove the liquid gasket from cylinder block.

Cylinder Block

MECHANICAL

B: INSTALLATION

1) Apply engine oil to the crankshaft bearing, and install the crankshaft bearing to the cylinder block.

CAUTION:

- Place a wood board wrapped with a waste cloth to prevent the knock pin damage and to stabilize the cylinder block before work.
- Be careful not to scratch the mating surface of cylinder block during work.

2) Install O-rings to the cylinder block LH.

NOTE:

Use new O-rings.

Cylinder Block

MECHANICAL

3) Apply engine oil to the crankshaft journal, and set the crankshaft to cylinder block LH.

Cylinder Block

MECHANICAL

4) Apply liquid gasket to the mating surface of cylinder block RH as shown in the figure.

CAUTION:

Do not let the liquid gasket overflow to the oil passage and crankshaft bearing portions, because the engine seizure may result.

NOTE:

- Before applying liquid gasket, degrease the old liquid gasket seal surface of the cylinder block RH and cylinder block LH.
- Install within 5 min. after applying liquid gasket.

Liquid gasket:

THREE BOND 1217G (Part No. K0877Y0100), THREE BOND 1217H or equivalent

Liquid gasket applying diameter:

Mating surfaces other than ranges A and B

1±0.5 mm (0.0394±0.0197 in)

Mating surfaces of ranges A and B

4±0.5 mm (0.1575±0.0197 in)

- | | | |
|---|--|------------------------|
| (A) Range A | (E) 1 mm (0.0394 in) or less | (I) 36 mm (1.4173 in) |

| (C) Liquid gasket applying position of mating surfaces (other than the edge) of range B | (G) $\phi 4 \pm 0.5$ mm (0.1575±0.0197 in) | |
| (D) Liquid gasket applying position of mating surfaces (the edge) of range B | (H) 2 mm (0.0787 in) | |

Cylinder Block

MECHANICAL

- 5) Install the cylinder block RH to the cylinder block LH.
- 6) Join the cylinder blocks.
 - (1) Apply a coat of engine oil to the washers and cylinder block mounting bolt threads.

NOTE:

To prevent mixture of engine oil into the water jacket, do not apply a large amount.

- (2) Install the cylinder head bolt at the locations shown in the figure.

NOTE:

This procedure is required to tighten the cylinder block mounting bolts with specified angle using ST.

Cylinder Block

MECHANICAL

(3) Tighten all mounting bolts with a torque of 35 N·m (3.6 kgf-m, 25.8 ft-lb) in numerical order as shown in the figure.

CAUTION:

When tightening the mounting bolts with specified torque, hold the cylinder block LH while not holding the cylinder block RH to ensure the joint accuracy of the cylinder block.

Cylinder Block

MECHANICAL

(4) Loosen all mounting bolts by 180° in numerical order as shown in the figure.

CAUTION:

When loosening the mounting bolts, hold the cylinder block LH while not holding the cylinder block RH to ensure the joint accuracy of the cylinder block.

Cylinder Block

MECHANICAL

(5) Tighten all mounting bolts with a torque of 35 N·m (3.6 kgf-m, 25.8 ft-lb) in numerical order as shown in the figure.

CAUTION:

When tightening the mounting bolts with specified torque, hold the cylinder block LH while not holding the cylinder block RH to ensure the joint accuracy of the cylinder block.

Cylinder Block

MECHANICAL

(6) Loosen the mounting bolts (4 places) by 180° in numerical order as shown in the figure.

CAUTION:

When loosening the mounting bolts, hold the cylinder block LH while not holding the cylinder block RH to ensure the joint accuracy of the cylinder block.

Cylinder Block

MECHANICAL

(7) Tighten the mounting bolts (4 places) with a torque of 17 N·m (1.7 kgf·m, 12.5 ft·lb) in numerical order as shown in the figure.

CAUTION:

When tightening the mounting bolts with specified torque, hold the cylinder block LH while not holding the cylinder block RH to ensure the joint accuracy of the cylinder block.

Cylinder Block

MECHANICAL

(8) Using angle gauge, tighten the mounting bolts (4 places) with specified angle in numerical order as shown in the figure.

CAUTION:

When tightening the mounting bolts with specified angle, hold the cylinder block LH while not holding the cylinder block RH to ensure the joint accuracy of the cylinder block.

Tightening angle:

$60^{\circ} \pm 2^{\circ}$

Cylinder Block

MECHANICAL

(9) Loosen the mounting bolts (6 places) by 180° in numerical order as shown in the figure.

CAUTION:

When loosening the mounting bolts, hold the cylinder block LH while not holding the cylinder block RH to ensure the joint accuracy of the cylinder block.

Cylinder Block

MECHANICAL

(10) Tighten the mounting bolts (6 places) with a torque of 17 N·m (1.7 kgf·m, 12.5 ft·lb) in numerical order as shown in the figure.

CAUTION:

When tightening the mounting bolts with specified torque, hold the cylinder block LH while not holding the cylinder block RH to ensure the joint accuracy of the cylinder block.

(11) Using angle gauge, tighten the mounting bolts (6 places) with specified angle in numerical order as shown in the figure.

CAUTION:

When tightening the mounting bolts with specified angle, hold the cylinder block LH while not holding the cylinder block RH to ensure the joint accuracy of the cylinder block.

Cylinder Block

MECHANICAL

Tightening angle:
 $60^{\circ} \pm 2^{\circ}$

(12) Remove the cylinder head bolt attached at the locations shown in the figure.

(13) Install the bolt shown in the figure.

NOTE:

After tightening, if the liquid gasket is squeezed out in the seal surface area of the chain cover and oil pan upper, completely remove any liquid gasket that is squeezed out. Any liquid gasket on the chamfer area, however, should not be removed.

Tightening torque:

25 N·m (2.5 kgf·m, 18.4 ft-lb)

7) Set the part so that the oil pan side of cylinder block is on the upper side.

Cylinder Block

MECHANICAL

8) Apply a coat of engine oil to the oil seal inner periphery and outer periphery, and install the rear oil seal using ST1 and ST2.

NOTE:

Use a new rear oil seal.

ST1 18671AA020 OIL SEAL GUIDE

ST2 18657AA030 OIL SEAL INSTALLER

(A) Rear oil seal

(B) Drive plate or flywheel mounting bolt

ME-05925

Cylinder Block

MECHANICAL

9) Install a bolt of suitable length (M10 × P1.25) at the locations shown in the figure.

NOTE:

- This procedure is required to prevent the knock pin damage when the cylinder block is raised in the next step.
- Use the same length of bolt for the four bolts.

ME-06167

10) Raise the cylinder block so that the rear oil seal is on the lower side.

11) Adjust the positions of piston ring gap for each piston.

NOTE:

Check that the piston ring mark of compression ring faces the top side of the piston.

(1) Set the ring gap of the top ring to the position (A) in the figure.

ME-05643

Cylinder Block

MECHANICAL

(2) Position the ring gap of second ring at (B) in the figure on the 180° opposite direction of (A).

(3) Set the ring gap of the upper rail to the position (C) in the figure.

Cylinder Block

MECHANICAL

(4) Align the upper rail spin stopper (E) to the side hole (D) on the piston.

ME-06133

(5) Position the ring gap of expander at (F) in the figure on the 180° opposite direction of (C).

ME-05646

Cylinder Block

MECHANICAL

(6) Set the ring gap of lower rail at position (G), located 120° clockwise from (C) in the figure.

(7) Check that the positions of piston ring gap are properly adjusted.

NOTE:

When checking the positions of piston ring gap, also check that the piston ring gaps are not positioned within the range of piston skirt extended line.

12) Install the piston and connecting rod to the cylinder block.

(1) Apply engine oil to the outer circumference of each piston, crankshaft pin, and in the cylinder block.

(2) Turn the crankshaft so that the #1 pin (A) of crankshaft is positioned at TDC using ST.

ST 18252AA000 CRANKSHAFT SOCKET

ME-05326

Cylinder Block

MECHANICAL

(3) Compress the piston ring using piston ring compressor, and insert the #1 connecting rod with #1 piston into cylinder block.

CAUTION:

- Be careful not to damage the cylinder liner and #1 pin of crankshaft by the #1 connecting rod large end.
- Be careful not to apply strong impact when inserting to prevent connecting rod bearing from falling off.

NOTE:

- Face the piston front mark (round mark) towards the front of the engine.

(a) Front mark

Cylinder Block

MECHANICAL

- Insert while lightly tapping the crown of the piston with the handle of a plastic hammer.

(4) Turn the crankshaft counterclockwise so that the #1 pin of crankshaft and the large end (A) of #1 connecting rod are positioned as shown in the figure using ST, while pressing the #1 piston crown, and then set the #1 connecting rod cap and #1 connecting rod cap bolt.

NOTE:

- Each connecting rod has its own mating cap. Make sure that they are assembled correctly by checking their matching symbol.
- Use a new connecting rod cap bolt.
- Apply a coat of engine oil to the #1 connecting rod cap seat and the connecting rod cap bolt threads.

ST 18252AA000 CRANKSHAFT SOCKET

Cylinder Block

MECHANICAL

(5) Using ST, tighten the #1 connecting rod cap bolts to 10 N·m (1.0 kgf·m, 7.4 ft·lb) in numerical order as shown in the figure, then retighten the bolts to 22 N·m (2.2 kgf·m, 16.2 ft·lb) in numerical order as shown in the figure.

ST 18270AA020 SOCKET

ME-05651

(6) Turn the crankshaft clockwise so that the #2 pin (A) of crankshaft is positioned at TDC using ST.
ST 18252AA000 CRANKSHAFT SOCKET

ME-05929

(7) Compress the piston ring using piston ring compressor, and insert the #2 connecting rod with #2 piston into cylinder block.

Cylinder Block

MECHANICAL

CAUTION:

- Be careful not to damage the cylinder liner and #2 pin of crankshaft by the #2 connecting rod large end.
- Be careful not to apply strong impact when inserting to prevent connecting rod bearing from falling off.

NOTE:

- Face the piston front mark (round mark) towards the front of the engine.

ME-20847

(a) Front mark

- Insert while lightly tapping the crown of the piston with the handle of a plastic hammer.

C: DISASSEMBLY

1. CYLINDER BLOCK

- 1) Remove the oil separator cover from cylinder block RH.

- 2) Remove the liquid gasket from cylinder block RH.
- 3) Remove the cylinder block plug (A) and the main gallery plug (B) from cylinder block RH.

Cylinder Block

MECHANICAL

- 4) Remove the liquid gasket from the thread holes of the cylinder block RH, and from the threaded portions of cylinder block plug and main gallery plug.
- 5) Remove the cylinder block plate from cylinder block LH.

- 6) Remove the main gallery plug from cylinder block LH.

- 7) Remove the liquid gasket from the thread holes of the cylinder block LH and main gallery plug.

2. PISTON AND CONNECTING ROD

ME-05721

- | | | |
|----------------------------|----------------|-----------------|
| (1) Connecting rod | (4) Piston | (7) Oil ring |
| (2) Connecting rod bearing | (5) Piston pin | (8) Second ring |
| (3) Connecting rod cap | (6) Circlip | (9) Top ring |

NOTE:

To prevent confusion of various parts, mark each part.

- 1) Remove the connecting rod bearing from connecting rod and connecting rod cap.
- 2) Remove the piston rings from the piston.

NOTE:

Arrange the piston rings in order so that they can be installed in their original positions without confusion.

- (1) Remove the compression rings in the order of top ring and second ring, using piston ring expander.
- (2) Remove the oil rings in the order of upper rail, lower rail and expander by hand.
- 3) Remove the circlip on one end from the piston using a flat tip screwdriver.

NOTE:

Be careful not damage the piston and piston pin, by wrapping the tip of flat tip screwdriver with tape.

- 4) Remove the piston pin from piston, and remove the connecting rod from piston.
- 5) Remove the circlip on other end from the piston using a flat tip screwdriver.

NOTE:

Be careful not damage the piston and piston pin, by wrapping the tip of flat tip screwdriver with tape.

Cylinder Block

MECHANICAL

D: ASSEMBLY

1. CYLINDER BLOCK

1) Apply liquid gasket to the threaded portion of the main gallery plug, and install the main gallery plug to the cylinder block LH.

NOTE:

Before applying liquid gasket, degrease the thread holes of the cylinder block LH and main gallery plug.

Liquid gasket:

THREE BOND 1105 (Part No. 004403010) or equivalent

Tightening torque:

37 N·m (3.8 kgf·m, 27.3 ft·lb)

2) Install the cylinder block plate onto cylinder block LH.

Tightening torque:

6.4 N·m (0.7 kgf·m, 4.7 ft·lb)

ME-05939

Cylinder Block

MECHANICAL

3) Apply liquid gasket to the threaded portions of cylinder block plug and main gallery plug, and install the cylinder block plug (A) and main gallery plug (B) to cylinder block RH.

NOTE:

Before applying liquid gasket, degrease the thread holes of the cylinder block RH, and the threaded portions of cylinder block plug and main gallery plug.

Liquid gasket:

THREE BOND 1105 (Part No. 004403010) or equivalent

Tightening torque:

T1: 16 N·m (1.6 kgf-m, 11.8 ft-lb)

T2: 37 N·m (3.8 kgf-m, 27.3 ft-lb)

- 4) Install the oil separator cover to the cylinder block RH.
(1) Apply liquid gasket to the mating surfaces of oil separator cover.

NOTE:

- Use new oil separator cover.
- Before applying liquid gasket, decrease the old liquid gasket seal surface of cylinder block RH.
- Install within 5 min. after applying liquid gasket.

Liquid gasket:

Mating surface

THREE BOND 1217G (Part No. K0877Y0100), THREE BOND 1217H or equivalent

Liquid gasket applying diameter:

4±1 mm (0.1772±0.0197 in)

- (2) Install the oil separator cover to the cylinder block RH, and tighten the oil separator cover bolts in numerical order as shown in the figure.

Tightening torque:

6.4 N·m (0.7 kgf·m, 4.7 ft·lb)

Cylinder Block

MECHANICAL

2. PISTON AND CONNECTING ROD

- | | | |
|----------------------------|----------------|-----------------|
| (1) Connecting rod | (4) Piston | (7) Oil ring |
| (2) Connecting rod bearing | (5) Piston pin | (8) Second ring |
| (3) Connecting rod cap | (6) Circlip | (9) Top ring |

- 1) Install the connecting rod bearing to the connecting rod and connecting rod cap.
- 2) Install the circlip on one end of the piston using a flat tip screwdriver.

NOTE:

- Be careful not damage the piston, by wrapping the tip of flat tip screwdriver with tape.
- Make sure the circlip is firmly inserted into the circlip groove.
- After installing the circlip, rotate the circlip so that its end part (a) and the cutout portion of circlip groove (b) do not match.

3) Set the piston to the connecting rod.

NOTE:

Align the front mark of piston and the connecting rod direction correctly as shown in the figure.

(a) RH side (#1 and #3)

(b) LH side (#2 and #4)

(c) Front mark

4) Apply engine oil to the piston pin, and attach the piston pin.

Cylinder Block

MECHANICAL

5) Install the circlip on the piston using a flat tip screwdriver.

NOTE:

- Be careful not damage the piston and piston pin, by wrapping the tip of flat tip screwdriver with tape.
- Make sure the circlip is firmly inserted into the circlip groove.
- After installing the circlip, rotate the circlip so that its end part (a) and the cutout portion of circlip groove (b) do not match.

6) Install the piston rings onto the piston.

(1) Install the oil rings in the order of expander, lower rail and upper rail by hand.

NOTE:

Oil ring consists of the upper rail, expander and lower rail.

(a) Upper rail

(b) Expander

(c) Lower rail

(2) Install the compression rings in the order of second ring and top ring, using piston ring expander.

NOTE:

Install so that the compression ring mark faces the top side of the piston.

E: INSPECTION

1. CYLINDER BLOCK & PISTON

- 1) Visually inspect to make sure that there are no cracks, scratches or other damage.
- 2) Use liquid penetrant tester on the important sections to check for fissures.
- 3) Check that there are no traces of gas leaking or water leaking on the gasket attachment surface.
- 4) Check the oil passages for clogging.
- 5) Check for warpage of mating surfaces of the cylinder block that contacts cylinder head using a straight edge and thickness gauge. If it exceeds the limit, correct the surface by grinding it with a surface grinder or replace the cylinder block.

NOTE:

Measurement should be performed at a temperature of 20°C (68°F).

Cylinder block warpage:

Limit

0.025 mm (0.0010 in)

Grinding limit of cylinder block :

To 204.9 mm (8.067 in)

Height of cylinder block:

Standard

205.0 mm (8.071 in)

- 6) Using a cylinder bore gauge, check the cylindricality and out-of-roundness of cylinder liner. If it is not within the standard, perform re-boring (including honing), or replace the cylinder block and piston as a set. For re-boring and honing procedure, refer to step 8).

NOTE:

- Measure the cylinder liner with cylinder blocks separated (into cylinder block RH and cylinder block LH).
- Measurement should be performed at a temperature of 20°C (68°F).
- Write down all measurement values as the values are used in the next procedure.
- Measure the inner diameter of each cylinder liner in both the thrust and piston pin directions at the heights as shown in the figure.

ME-05667

(A) Piston pin direction

(B) Thrust direction

H1: 10 mm (0.3937 in)

H2: 45 mm (1.7717 in)

H3: 80 mm (3.1496 in)

H4: 105 mm (4.1339 in)

Cylinder Block

MECHANICAL

- Calculate the cylindricity of cylinder liner by using the following formula.

Calculation formula
C = The larger value between the calculation values C' and C'' $C' = (D(a) - D(b)) / 2$ $C'' = (D(c) - D(d)) / 2$
C: Cylindricity of cylinder liner D(a): The largest value of all the values obtained by measuring the cylinder liner inner diameter in the direction of the piston pin D(b): The smallest value of all the values obtained by measuring the cylinder liner inner diameter in the direction of the piston pin D(c): The largest value of all the values obtained by measuring the cylinder liner inner diameter in the thrust direction D(d): The smallest value of all the values obtained by measuring the cylinder liner inner diameter in the thrust direction

- Calculate the out-of-roundness of cylinder liner at each measurement height by using the following formula.

Calculation formula
$R = (D(e) - D(f)) / 2$
R: Out-of-roundness of cylinder liner D(e): The larger value between the measurement values in the piston pin direction and in the thrust direction of cylinder liner inner diameter D(f): The smaller value between the measurement values in the piston pin direction and in the thrust direction of cylinder liner inner diameter

Cylindricity of cylinder liner:

Limit

0.030 mm (0.0012 in)

Out-of-roundness of cylinder liner:

Limit

0.030 mm (0.0012 in)

Cylinder Block

MECHANICAL

7) Check the clearance between cylinder liner and piston. Check the clearance between cylinder liner and piston by measuring the inner diameter of cylinder liner and the outer diameter of piston respectively.

(1) Measure the inner diameter of cylinder liner. If it is not within the standard, perform reboring (including honing), or replace the cylinder block and piston as a set. For reboring and honing procedure, refer to step 8).

NOTE:

- Measure the cylinder liner with cylinder blocks separated (into cylinder block RH and cylinder block LH).
- Measurement should be performed at a temperature of 20°C (68°F).
- The cylinder bore size mark is stamped on the upper face of the cylinder block.

(A) Main journal size mark

(C) #1 cylinder bore size mark

(E) #3 cylinder bore size mark

(B) Cylinder block (RH) – (LH) combination mark

(D) #2 cylinder bore size mark

(F) #4 cylinder bore size mark

Cylinder Block

MECHANICAL

- Measure the inner diameter of each cylinder liner in both the thrust and piston pin directions at the heights as shown in the figure and read the value of the most worn location.

ME-05667

(A) Piston pin direction

(B) Thrust direction

H1: 10 mm (0.3937 in)

H2: 45 mm (1.7717 in)

H3: 80 mm (3.1496 in)

H4: 105 mm (4.1339 in)

Inner diameter of cylinder liner:

Cylinder bore size mark A

Standard

84.005 — 84.015 mm (3.3073 — 3.3077 in)

Cylinder bore size mark B

Standard

83.995 — 84.005 mm (3.3069 — 3.3073 in)

Cylinder Block

(2) Check the outer diameter of piston with a micrometer. If it is not within the standard, replace the piston.

NOTE:

- Measurement should be performed at a temperature of 20°C (68°F).
- Measure the outer diameter of each piston in thrust direction at the height as shown in the figure.
- Standard sized pistons are classified into two grades, “A” and “B”. These grades should be used as guide lines in selecting a standard piston.
- The grade can be judged by the stamp of cylinder bore size mark on the upper face of the cylinder block.

- | | | |
|---|--------------------------------|--------------------------------|
| (A) Main journal size mark | (C) #1 cylinder bore size mark | (E) #3 cylinder bore size mark |
| (B) Cylinder block (RH) – (LH) combination mark | (D) #2 cylinder bore size mark | (F) #4 cylinder bore size mark |

Cylinder Block

MECHANICAL

- If the piston is replaced, check the clearance between cylinder liner and piston in the step (3), and select a suitable sized piston.

Piston grade point H:

38.0 mm (1.50 in)

Piston outer diameter:

Standard size (grade A = cylinder bore size mark A)

Standard

83.975 — 83.985 mm (3.3061 — 3.3065 in)

Standard size (grade B = cylinder bore size mark B)

Standard

83.965 — 83.975 mm (3.3057 — 3.3061 in)

(3) Calculate the clearance between cylinder liner and piston. If it is not within the standard, perform re-boring (including honing), or replace the cylinder block and piston as a set. For re-boring and honing procedure, refer to step 8).

NOTE:

The clearance between cylinder liner and piston is decided by matching the cylinder block bore size mark and the grade of piston outer diameter (grade A or B).

Clearance between cylinder liner and piston:

Standard

0.020 — 0.040 mm (0.0008 — 0.0016 in)

8) Reboring and honing

(1) If any of the cylindricality, out-of-roundness, inner diameter or clearance between cylinder liner and piston is out of standard or if there is any damage on the cylinder liner, perform reboring (including honing).

CAUTION:

When any of the cylinder liner needs reboring, all other cylinder liners must be rebored at the same time, and replaced with proper size pistons.

Oversize piston outer diameter:

0.25 mm (0.0098 in) oversize

Standard

84.215 — 84.235 mm (3.3155 — 3.3163 in)

0.50 mm (0.0197 in) oversize

Standard

84.465 — 84.485 mm (3.3254 — 3.3262 in)

(2) If the inner diameter of cylinder liner exceeds the limit after reboring (including honing), replace the cylinder block and piston as a set.

NOTE:

- Immediately after reboring (including honing), the inner diameter of cylinder liner may differ from its real diameter due to temperature rise. Thus, when measuring the inner diameter of cylinder liner, wait until the temperature has cooled to 20°C (68°F).
- For the measurement of the inner diameter of cylinder liner, refer to step 7).

Inner diameter of cylinder liner boring limit (diameter):

To 84.505 mm (3.3270 in)

2. PISTON AND PISTON PIN

- 1) Check the piston and piston pin for wear or crack.
- 2) Check the snap ring for distortion or wear.
- 3) Check the piston ring groove for damage.
- 4) Check the circlip groove (A) for burr.

NOTE:

If the burr is found, remove the burr from groove.

ME-05670

- 5) Check that the piston pin can be inserted into the piston with a thumb at 20°C (68°F).

Cylinder Block

MECHANICAL

6) Check the clearance between piston and piston pin. Check the clearance between piston and piston pin by measuring the inner diameter of piston pin hole and the outer diameter of piston pin respectively.

(1) Using a caliper gauge, measure the inner diameter of piston pin hole.

NOTE:

- Measurement should be performed at a temperature of 20°C (68°F).
- Measure the inner diameter of the piston pin hole at the four locations as shown in the figure, and read the value of most worn location.
- Record the measured value.

(2) Measure the outer diameter of piston pin with a micrometer.

NOTE:

- Measurement should be performed at a temperature of 20°C (68°F).
- Measure the outer diameter of the piston pin at the four locations as shown in the figure, and read the value of most worn location.
- Record the measured value.

(A) 10 mm (0.394 in)

(3) Calculate the clearance between piston and piston pin. If it is not within the standard, replace the piston and piston pin as a set.

Clearance between piston and piston pin:

Standard

0.004 — 0.008 mm (0.0002 — 0.0003 in)

3. PISTON RING

- 1) Make sure the piston ring is not broken or damaged.
- 2) Using a cylindrical guide, insert the piston ring into the cylinder liner so that they are perpendicular to the cylinder wall, and check the piston ring gap using a thickness gauge. If it is not within the standard, replace the piston ring.

NOTE:

- Measurement should be performed at a temperature of 20°C (68°F).
- Use piston ring with same size as piston when replacing piston ring.

Piston ring gap:

Compression ring (top ring)

Standard

0.20 — 0.35 mm (0.0079 — 0.0138 in)

Compression ring (second ring)

Standard

0.40 — 0.50 mm (0.0157 — 0.0197 in)

Oil ring (upper rail and lower rail)

Standard

0.10 — 0.35 mm (0.0039 — 0.0138 in)

ME-05671

Cylinder Block

MECHANICAL

3) Fit the compression ring straight into the piston ring groove, then check the clearance between compression ring and piston with a thickness gauge. If it is not within the standard, replace the compression ring.

NOTE:

- Measurement should be performed at a temperature of 20°C (68°F).
- Before inspecting the clearance, clean the piston ring groove and compression ring.
- Use compression ring with same size as piston when replacing compression ring.

Clearance between compression ring and piston:

Top ring

Standard

0.040 — 0.080 mm (0.0016 — 0.0031 in)

Second ring

Standard

0.030 — 0.070 mm (0.0012 — 0.0028 in)

ME-05372

4. CONNECTING ROD AND CONNECTING ROD BEARING

1) Check for bend or twist using a connecting rod aligner. If it exceeds the limit, replace the connecting rod.

NOTE:

Measurement should be performed at a temperature of 20°C (68°F).

Bend or twist per 100 mm (3.94 in) in length:

Limit

0.10 mm (0.0039 in)

(A) Thickness gauge

(B) Connecting rod

ME-06142

2) Check that the large or small end thrust surface of each connecting rod is not damaged.

3) Check each connecting rod bearing for scar, peeling, seizure, melting or wear, etc.

4) Check the thrust clearance of each connecting rod using a thickness gauge.

NOTE:

Measurement should be performed at a temperature of 20°C (68°F).

(1) Clean the #1 connecting rod bearing and the #1 pin of crankshaft, and apply engine oil to the #1 pin of crankshaft.

(2) Set the #1 connecting rod bearing to the #1 connecting rod and #1 connecting rod cap.

(3) Set the #1 connecting rod, #1 connecting rod cap and #1 connecting rod cap bolt to the #1 pin of crankshaft.

NOTE:

- Each connecting rod has its own mating cap. Make sure that they are assembled correctly by checking their matching symbol.
- Use a new connecting rod cap bolt.
- Apply a coat of engine oil to the #1 connecting rod cap bolt thread.

Cylinder Block

MECHANICAL

(4) Using ST, tighten the #1 connecting rod cap bolts to 10 N·m (1.0 kgf·m, 7.4 ft·lb) in numerical order as shown in the figure, then retighten the bolts to 22 N·m (2.2 kgf·m, 16.2 ft·lb) in numerical order as shown in the figure.

CAUTION:

- Make sure to hold the crankshaft securely during work.
- When holding the crankshaft, be careful not to damage the crankshaft.

ST 18270AA020 SOCKET

(5) Using ST and angle gauge, tighten the #1 connecting rod cap bolts with specified angle in numerical order as shown in the figure.

CAUTION:

- Make sure to hold the crankshaft securely during work.
- When holding the crankshaft, be careful not to damage the crankshaft.

ST 18270AA020 SOCKET

Tightening angle:

$$137^{+3^{\circ}}_{-2^{\circ}}$$

(6) In the same manner, install the #2, #3 and #4 connecting rods.

(7) Check the thrust clearance of each connecting rod using a thickness gauge. If it is not within the standard, replace the connecting rod.

NOTE:

Measure the thrust clearance of each connecting rod at several points, and replace the connecting rod if there is uneven wear.

Connecting rod thrust clearance:

Standard

0.070 — 0.330 mm (0.0028 — 0.0130 in)

5) Check the oil clearance on each connecting rod bearing using plastigauge.

NOTE:

Measurement should be performed at a temperature of 20°C (68°F).

- (1) Clean the #1 connecting rod bearing and the #1 pin of crankshaft.
- (2) Set the #1 connecting rod bearing to the #1 connecting rod and #1 connecting rod cap.
- (3) Place a plastigauge across the #1 pin of crankshaft, and set the #1 connecting rod, #1 connecting rod cap and #1 connecting rod cap bolt to the #1 pin of crankshaft.

NOTE:

- Each connecting rod has its own mating cap. Make sure that they are assembled correctly by checking their matching symbol.
- Use a new connecting rod cap bolt.
- Apply a coat of engine oil to the #1 connecting rod cap bolt thread.

Cylinder Block

MECHANICAL

(4) Using ST, tighten the #1 connecting rod cap bolts to 10 N·m (1.0 kgf·m, 7.4 ft·lb) in numerical order as shown in the figure, then retighten the bolts to 22 N·m (2.2 kgf·m, 16.2 ft·lb) in numerical order as shown in the figure.

CAUTION:

- Make sure to hold the crankshaft securely during work.
- When holding the crankshaft, be careful not to damage the crankshaft.
- During tightening, be careful not to move the #1 connecting rod and the #1 connecting rod cap.

ST 18270AA020 SOCKET

(5) Using ST and angle gauge, tighten the #1 connecting rod cap bolts with specified angle in numerical order as shown in the figure.

CAUTION:

- Make sure to hold the crankshaft securely during work.
- When holding the crankshaft, be careful not to damage the crankshaft.
- During tightening, be careful not to move the #1 connecting rod and the #1 connecting rod cap.

ST 18270AA020 SOCKET

Tightening angle:

137^{+3}_{-2} °

Cylinder Block

MECHANICAL

(6) Using ST, loosen the #1 connecting rod cap bolt, and remove the #1 connecting rod cap bolt and #1 connecting rod cap.

CAUTION:

- Make sure to hold the crankshaft securely during work.
- When holding the crankshaft, be careful not to damage the crankshaft.
- During removal, be careful not to move the #1 connecting rod and the #1 connecting rod cap.

ST 18270AA020 SOCKET

ME-06111

(7) Determine oil clearance of the #1 connecting rod bearing by matching the widest point of the plastigauge on #1 pin of crankshaft against scale printed on a package of the plastigauge. If it is not within the standard, replace the #1 connecting rod bearing.

NOTE:

Measure the outer diameter of crankshaft pin using micrometer, and select the suitable size connecting rod bearing when replacing the connecting rod bearing.

Unit: mm (in)		
Bearing	Connecting rod bearing thickness (at center)	Crankshaft pin outer diameter
	Standard	Standard
Standard size	1.492 — 1.508 (0.0587 — 0.0594)	47.976 — 48.000 (1.8888 — 1.8898)
0.03 (0.0012) Undersize	1.511 — 1.515 (0.0595 — 0.0596)	47.946 — 47.970 (1.8876 — 1.8886)
0.05 (0.0020) Undersize	1.521 — 1.525 (0.0599 — 0.0600)	47.926 — 47.950 (1.8868 — 1.8878)
0.25 (0.0098) Undersize	1.621 — 1.625 (0.0638 — 0.0640)	47.726 — 47.750 (1.8790 — 1.8799)

Cylinder Block

MECHANICAL

Connecting rod bearing oil clearance:

Standard

0.017 — 0.047 mm (0.0007 — 0.0019 in)

(8) Completely remove the plastigauge.

(9) In the same manner, check oil clearance of the #2, #3 and #4 connecting rod bearings.

5. PISTON PIN & CONNECTING ROD BUSHING

1) Check that the connecting rod bushing is not damaged.

2) Check the clearance between piston pin and connecting rod bushing. Check the clearance between piston pin and connecting rod bushing by measuring the outer diameter of piston pin and the inner diameter of connecting rod bushing respectively.

(1) Measure the outer diameter of piston pin with a micrometer.

NOTE:

- Measurement should be performed at a temperature of 20°C (68°F).
- Measure the outer diameter of the piston pin at the two locations as shown in the figure, and read the value of most worn location.
- Record the measured value.

(2) Using a caliper gauge, measure the inner diameter of connecting rod bushing.

NOTE:

- Measurement should be performed at a temperature of 20°C (68°F).
- Measure the inner diameter of the connecting rod bushing at the two locations as shown in the figure, and read the value of most worn location.
- Record the measured value.

(3) Calculate the clearance between piston pin and connecting rod bushing.

Clearance between piston pin and connecting rod bushing:

Standard

0.004 — 0.026 mm (0.0002 — 0.0010 in)

Cylinder Block

MECHANICAL

3) If the clearance between piston pin and connecting rod bushing is not within the standard, replace the connecting rod bushing and piston pin as a set. For replacement procedure of connecting rod bushing, refer to the following.

(1) Using the ST and a press, pull out the connecting rod bushing from the small end of the connecting rod.

NOTE:

The direction of ST for pulling out and for press fitting is different. Therefore, attention must be paid to the direction of usage for ST.

ST 18350AA000 CONNECTING ROD BUSHING REMOVER AND INSTALLER

(2) Press the connecting rod bushing with ST and the press, after applying engine oil on the periphery of connecting rod bushing.

NOTE:

- Clinch area of the connecting rod bushing is as shown in the figure.

- (a) Clinch area of connecting rod bushing

- The direction of ST for pulling out and for press fitting is different. Therefore, attention must be paid to the direction of usage for ST.

ST 18350AA000 CONNECTING ROD BUSHING REMOVER AND INSTALLER

(3) Make two 3 mm (0.12 in) holes in the pressed connecting rod bushing by aligning with the pre-manufactured holes provided on the small end of the connecting rod.

(4) Using a reamer, ream the inside surface of the connecting rod bushing. Insert the reamer in the connecting rod bushing, and turn slowly clockwise while pushing lightly. Bring the reamer back while rotating it clockwise.

NOTE:

- Use a reamer with a diameter of $\phi 22$.
- Apply engine oil to the reamer.
- If the inner surface of connecting rod bushing is damaged, the edge of reamer should be slightly ground with oil stone.
- If the inner surface of connecting rod bushing becomes lustrous and the reamer does not chip, use a new reamer or remedy the reamer.

(5) After completion of reaming, clean the connecting rod bushing to remove chips.

6. CRANKSHAFT AND CRANKSHAFT BEARING

- 1) Clean the crankshaft completely, and check it for cracks using liquid penetrant tester.
- 2) Using a dial gauge, check the crankshaft bend. If it exceeds the limit, grind to correct the crankshaft journal or replace the crankshaft.

NOTE:

- Measurement should be performed at a temperature of 20°C (68°F).
- If a suitable V-block is not available, using just the #1 and #5 crankshaft bearings on cylinder block, position the crankshaft on cylinder block. Then, measure the crankshaft bend using a dial gauge.
- When grinding to correct the crankshaft journal, refer to step 3).

Cylinder Block

MECHANICAL

Crankshaft bend:

Limit

0.035 mm (0.0014 in)

3) Using a micrometer, check the outer diameter of crankshaft pin, outer diameter of journal, cylindricity, and out-of-roundness. If it is not within the standard, replace the connecting rod bearing or crankshaft bearing, and grind to correct the crankshaft pin or journal or replace the crankshaft as required.

NOTE:

- Measurement should be performed at a temperature of 20°C (68°F).
- Select the suitable size connecting rod bearing or crankshaft bearing when replacing the connecting rod bearing or crankshaft bearing.
- When grinding to correct the crankshaft pin or journal, finish them to the suitable outer diameter as shown in the table below according to the undersize bearing to be used.

Unit: mm (in)						
Bearing	Connecting rod bearing thickness (at center)	Crankshaft pin outer diameter	Crankshaft bearing thickness (at center)		Crankshaft journal outer diameter	
			#1, #2, #3, #4	#5	#1, #2, #3, #4	#5

Cylinder Block

MECHANICAL

- 4) Inspect the crankshaft bearing for scar, peeling, seizure, melting or wear, etc.
- 5) Use a thickness gauge to check the thrust clearance of crankshaft at thrust of #5 crankshaft bearing. If it is not within the standard, replace the #5 crankshaft bearing.

NOTE:

- Measurement should be performed at a temperature of 20°C (68°F).
- Set all the crankshaft bearings onto the cylinder block, then mount the crankshaft on the cylinder block, and use a thickness gauge to measure the thrust clearance of crankshaft.
- Select the #5 crankshaft bearing of suitable size by referring to step 3) when replacing #5 crankshaft bearing.

Crankshaft thrust clearance:

Standard

0.130 — 0.308 mm (0.00512 — 0.01213 in)

Cylinder Block

MECHANICAL

6) Check the oil clearance on each crankshaft bearing using plastigauge.

NOTE:

Measurement should be performed at a temperature of 20°C (68°F).

- (1) Remove the liquid gasket from cylinder block.
- (2) Clean each crankshaft bearing and crankshaft journal.
- (3) Set each crankshaft bearing to the cylinder block.

CAUTION:

- Place a wood board wrapped with a waste cloth to prevent the knock pin damage and to stabilize the cylinder block before work.
- Be careful not to scratch the mating surface of cylinder block during work.

(4) Set the crankshaft to the cylinder block LH.

ME(H4DO)-335

Cylinder Block

MECHANICAL

(5) Place a plastigauge across the crankshaft journals and set the cylinder block RH to the cylinder block LH.

(6) Apply a coat of engine oil to the washers and cylinder block mounting bolt threads.

NOTE:

To prevent mixture of engine oil into the water jacket, do not apply a large amount.

(7) Install the cylinder head bolt at the locations shown in the figure.

NOTE:

This procedure is required to tighten the cylinder block mounting bolts with specified angle using ST.

Cylinder Block

MECHANICAL

(8) Tighten all mounting bolts with a torque of 35 N·m (3.6 kgf-m, 25.8 ft-lb) in numerical order as shown in the figure.

CAUTION:

When tightening the mounting bolts with specified torque, hold the cylinder block LH while not holding the cylinder block RH to ensure the joint accuracy of the cylinder block.

Cylinder Block

MECHANICAL

(9) Loosen all mounting bolts by 180° in numerical order as shown in the figure.

CAUTION:

When loosening the mounting bolts, hold the cylinder block LH while not holding the cylinder block RH to ensure the joint accuracy of the cylinder block.

Cylinder Block

MECHANICAL

(10) Tighten all mounting bolts with a torque of 35 N·m (3.6 kgf-m, 25.8 ft-lb) in numerical order as shown in the figure.

CAUTION:

When tightening the mounting bolts with specified torque, hold the cylinder block LH while not holding the cylinder block RH to ensure the joint accuracy of the cylinder block.

Cylinder Block

MECHANICAL

(11) Loosen the mounting bolts (4 places) by 180° in numerical order as shown in the figure.

CAUTION:

When loosening the mounting bolts, hold the cylinder block LH while not holding the cylinder block RH to ensure the joint accuracy of the cylinder block.

Cylinder Block

MECHANICAL

(12) Tighten the mounting bolts (4 places) with a torque of 17 N·m (1.7 kgf·m, 12.5 ft·lb) in numerical order as shown in the figure.

CAUTION:

When tightening the mounting bolts with specified torque, hold the cylinder block LH while not holding the cylinder block RH to ensure the joint accuracy of the cylinder block.

Cylinder Block

MECHANICAL

(13) Using angle gauge, tighten the mounting bolts (4 places) with specified angle in numerical order as shown in the figure.

CAUTION:

When tightening the mounting bolts with specified angle, hold the cylinder block LH while not holding the cylinder block RH to ensure the joint accuracy of the cylinder block.

Tightening angle:

$60^{\circ} \pm 2^{\circ}$

ME-07174

Cylinder Block

MECHANICAL

(14) Loosen the mounting bolts (6 places) by 180° in numerical order as shown in the figure.

CAUTION:

When loosening the mounting bolts, hold the cylinder block LH while not holding the cylinder block RH to ensure the joint accuracy of the cylinder block.

Cylinder Block

MECHANICAL

(15) Tighten the mounting bolts (6 places) with a torque of 17 N·m (1.7 kgf·m, 12.5 ft·lb) in numerical order as shown in the figure.

CAUTION:

When tightening the mounting bolts with specified torque, hold the cylinder block LH while not holding the cylinder block RH to ensure the joint accuracy of the cylinder block.

Cylinder Block

MECHANICAL

(16) Using angle gauge, tighten the mounting bolts (6 places) with specified angle in numerical order as shown in the figure.

CAUTION:

When tightening the mounting bolts with specified angle, hold the cylinder block LH while not holding the cylinder block RH to ensure the joint accuracy of the cylinder block.

Tightening angle:

$60^{\circ} \pm 2^{\circ}$

ME-07175

Cylinder Block

MECHANICAL

(17) Remove the cylinder head bolt attached at the locations shown in the figure.

Cylinder Block

MECHANICAL

(18) Loosen the cylinder block mounting bolts in numerical order as shown in the figure, and separate the cylinder block RH and LH.

NOTE:

Lift the cylinder block RH slightly, and confirm that the crankshaft is remaining in the cylinder block LH. If the cylinder block RH is lifted carelessly when separating, the crankshaft may stick to cylinder block RH, then fall off.

Cylinder Block

MECHANICAL

(19) Determine the crankshaft oil clearance by matching the widest point of the plastigauge on each journal against scale printed on a package of the plastigauge. If it is not within the standard, replace the crankshaft bearing, and grind to correct the crankshaft journal or replace the crankshaft as required.

NOTE:

- Select the crankshaft bearing of suitable size by referring to step 3) when replacing crankshaft bearing.
- When grinding to correct the crankshaft journal, finish it to the suitable outer diameter by referring to step 3) according to the undersize bearing to be used.

Crankshaft oil clearance:

Standard

0.013 — 0.031 mm (0.00051 — 0.00122 in)

(20) Completely remove the plastigauge.

23.Intake and Exhaust Valve

A: SPECIFICATION

27.Engine Trouble in General

A: INSPECTION

NOTE:

The “RANK” shown in the chart shows the possibilities of the cause of trouble in order from “Very often” to “Rarely”.

A — Very often

B — Sometimes

C — Rarely

Symptoms	Problem parts etc.	Possible cause	RANK
1. Engine does not start.			
1) Starter does not turn.	Starter	Defective battery-to-starter harness	B
		Defective starter switch	C
		Defective inhibitor switch	C
		Defective starter	B
	Battery	Improper connection of terminal	A
		Run-down battery	A
		Defective charging system	B
	Friction	Seizure of crankshaft and connecting rod bearing	C
		Seized camshaft	C
		Seized or stuck piston and cylinder	C
	Immobilizer system <Ref. to IM(diag)-2, Basic Diagnostic Procedure.>	A	
2) Initial combustion does not occur.	Starter	Defective starter	C
		Engine control system <Ref. to EN(H4DO)(diag)-2, Basic Diagnostic Procedure.>	A
	Fuel line	Defective fuel pump and relay	A
		Clogged fuel line	C
		Lack of fuel or insufficient fuel	B
	Timing chain	Trouble	B
		Defective timing	B
	Compression	Incorrect cam clearance	C
		Loosened spark plug or defective gasket	C
		Loosened cylinder head bolt or defective cylinder head gasket	C
		Improper valve sealing	C
		Defective valve stem	C
		Worn or broken valve spring	B
		Worn or stuck piston rings, cylinder liner and piston	C
Incorrect valve timing		B	
Improper engine oil (low viscosity)	B

28.Engine Noise

A: INSPECTION

Type of sound	Condition	Possible cause
Regular clicking sound	Sound increases as engine speed increases.	<ul style="list-style-type: none"> • Valve mechanism is defective • Incorrect cam clearance • Worn camshaft • Broken valve spring • Defective valve shim
Heavy and dull clank	Oil pressure is low.	<ul style="list-style-type: none"> • Worn crankshaft bearing • Worn connecting rod bearing
	Oil pressure is normal.	<ul style="list-style-type: none"> • Loosened flywheel mounting bolt • Damaged engine mounting
High-pitched clank	Sound is noticeable when accelerating with an overload condition.	<ul style="list-style-type: none"> • Ignition timing advanced • Accumulation of carbon inside combustion chamber • Wrong heat range of spark plug • Improper octane value gasoline
Clank noise when engine speed is between 1,000 and 2,000 r/min	Sound is reduced when the fuel injector connector of the noisy cylinder is disconnected.*	<ul style="list-style-type: none"> • Worn crankshaft bearing • Worn connecting rod bearing
Knocking sound when engine is operating under idling speed and engine is warm	Sound is reduced when the fuel injector connector of the noisy cylinder is disconnected.*	<ul style="list-style-type: none"> • Worn cylinder liner and piston ring • Broken or stuck piston ring • Worn piston pin and piston pin hole of piston
	Sound is not reduced if each fuel injector connector is disconnected in turn.*	<ul style="list-style-type: none"> • Unusually worn valve rocker • Unusually worn valve shim • Worn cam sprocket • Worn journal of cam carrier and camshaft cap
Squeaky sound	—	<ul style="list-style-type: none"> • Insufficient generator lubrication
Rubbing sound	—	<ul style="list-style-type: none"> • Poor contact of generator brush and rotor
Gear scream when starting engine	—	<ul style="list-style-type: none"> • Defective ignition starter switch • Worn gear and starter pinion
Sound like polishing glass with a dry cloth	—	<ul style="list-style-type: none"> • Defective V-belt tensioner assembly (loose V-belt) • Defective water pump shaft
Hissing sound	—	<ul style="list-style-type: none"> • Insufficient compression • Air leakage in air intake system, hose, connection or manifold
Timing chain noise	—	<ul style="list-style-type: none"> • Loose timing chain • Timing chain contacting with adjacent part
Valve noise	—	<ul style="list-style-type: none"> • Incorrect cam clearance

* When disconnecting the fuel injector connector, the malfunction indicator light illuminates and DTC is stored in ECM memory. Therefore, perform the Clear Memory Mode <Ref. to EN(H4DO)(diag)-66, OPERATION, Clear Memory Mode.> and Inspection Mode <Ref. to EN(H4DO)(diag)-50, PROCEDURE, Inspection Mode.> after connecting the fuel injector connector.

General Description

EXHAUST

3. HEAT SHIELD COVER

(1) Center exhaust cover

(2) Rear exhaust cover

Tightening torque: N·m (kgf·m, ft·lb)

T1: 10 (1.0, 7.4)

T2: 18 (1.8, 13.3)

B: CAUTION

- Prior to starting work, pay special attention to the following:
 1. Always wear work clothes, a work cap, and protective shoes. Additionally, wear a helmet, protective goggles, etc. if necessary.
 2. Protect the vehicle using a seat cover, fender cover, etc.
 3. Prepare the service tools, clean cloth, containers to catch grease and oil, etc.
- Vehicle components are extremely hot immediately after driving. Be wary of receiving burns from heated parts.
- When performing a repair, identify the cause of trouble and avoid unnecessary removal, disassembly and replacement.
- Before disconnecting connectors of sensors or units, be sure to disconnect the ground cable from battery.
- Always use the jack-up point when the shop jacks or rigid racks are used to support the vehicle.
- Remove contamination including dirt and corrosion before removal, installation, disassembly or assembly.
- Keep the removed parts in order and protect them from dust and dirt.
- All removed parts, if to be reused, should be reinstalled in the original positions with attention to the correct directions, etc.
- Bolts, nuts and washers should be replaced with new parts as required.
- Be sure to tighten the fasteners including bolts and nuts to the specified torque.
- If any grease adheres to the exhaust pipe, wipe it off. Otherwise a fire may happen.

2. Front Exhaust Pipe

A: REMOVAL

CAUTION:

Vehicle components are extremely hot after driving. Be wary of receiving burns from heated parts.

- 1) Disconnect the ground cable from battery. <Ref. to NT-6, BATTERY, NOTE, Note.>
- 2) Lift up the vehicle.
- 3) Remove the under cover. <Ref. to EI-22, REMOVAL, Front Under Cover.>
- 4) Disconnect the front oxygen (A/F) sensor connector (A) and rear oxygen sensor connector (B) and remove the clip (C) fastening the harness.

- 5) Remove the bolts, springs, and nuts securing the rear exhaust pipe to the center exhaust pipe.

Front Exhaust Pipe

EXHAUST

6) Remove the bolt which holds center exhaust pipe to hanger bracket.

7) Remove the front exhaust pipe and center exhaust pipe from vehicle as a unit.

CAUTION:

- The front exhaust pipe and center exhaust pipe are very heavy. Be careful not to drop the exhaust pipes when removing.
- After removing the front exhaust pipe and center exhaust pipe, do not apply excessive pulling force on the rear exhaust pipe.

B: INSTALLATION

1) Set the front exhaust pipe and center exhaust pipe to the vehicle, and temporarily tighten the nuts which secure the front exhaust pipe to cylinder head.

NOTE:

Use a new gasket.

2) Install the bolts, springs, and nuts which secure the rear exhaust pipe to the center exhaust pipe.

NOTE:

Use a new gasket.

Tightening torque:

18 N·m (1.8 kgf-m, 13.3 ft-lb)

Front Exhaust Pipe

EXHAUST

3) Tighten the bolts which secure the center exhaust pipe to the hanger bracket.

Tightening torque:

35 N·m (3.6 kgf·m, 25.8 ft·lb)

EX-02753

4) Tighten the nuts which hold front exhaust pipe to cylinder heads.

Tightening torque:

30 N·m (3.1 kgf·m, 22.1 ft·lb)

EX-02773

5) Connect the front oxygen (A/F) sensor connector (A) and rear oxygen sensor connector (B), and fasten the harness with the clip (C).

6) Install the under cover. <Ref. to EI-22, INSTALLATION, Front Under Cover.>

7) Lower the vehicle.

8) Connect the battery ground terminal. <Ref. to NT-6, BATTERY, NOTE, Note.>

C: DISASSEMBLY

1) Remove the front oxygen (A/F) sensor and rear oxygen sensor from front exhaust pipe. <Ref. to FU(H4DO)-90, REMOVAL, Front Oxygen (A/F) Sensor.> <Ref. to FU(H4DO)-94, REMOVAL, Rear Oxygen Sensor.>

2) Remove the center exhaust pipe from the front exhaust pipe.

Front Exhaust Pipe

EXHAUST

3) Remove each cover from the front exhaust pipe.

EX-03069

Front Exhaust Pipe

EXHAUST

2) Install the center exhaust pipe to front exhaust pipe.

NOTE:

Use a new gasket.

Tightening torque:

42.5 N·m (4.3 kgf-m, 31.3 ft-lb)

3) Install the front oxygen (A/F) sensor and rear oxygen sensor to the front exhaust pipe. <Ref. to FU(H4DO)-91, INSTALLATION, Front Oxygen (A/F) Sensor.> <Ref. to FU(H4DO)-95, INSTALLATION, Rear Oxygen Sensor.>

E: INSPECTION

- 1) Check the connections and welded parts for exhaust leaks.
- 2) Make sure there are no holes or rusting.

3. Center Exhaust Pipe

A: REMOVAL

CAUTION:

Vehicle components are extremely hot after driving. Be wary of receiving burns from heated parts.

- 1) Turn the ignition switch to OFF.
- 2) Lift up the vehicle.
- 3) Remove the bolts, springs, and nuts securing the rear exhaust pipe to the center exhaust pipe.

- 4) Remove the bolt which holds center exhaust pipe to hanger bracket.

Center Exhaust Pipe

EXHAUST

- 5) Remove the center exhaust pipe from the front exhaust pipe.

- 6) Remove the center exhaust pipe upper cover from the center exhaust pipe.

B: INSTALLATION

- 1) Install the center exhaust pipe upper cover to the center exhaust pipe.

Tightening torque:

13 N·m (1.3 kgf-m, 9.6 ft-lb)

- 2) Temporarily tighten the nuts which secure the center exhaust pipe to the front exhaust pipe.

NOTE:

Use a new gasket.

Center Exhaust Pipe

EXHAUST

3) Install the bolts, springs, and nuts which secure the rear exhaust pipe to the center exhaust pipe.

NOTE:

Use a new gasket.

Tightening torque:

18 N·m (1.8 kgf·m, 13.3 ft·lb)

4) Tighten the bolts which secure the center exhaust pipe to the hanger bracket.

Tightening torque:

35 N·m (3.6 kgf·m, 25.8 ft·lb)

Center Exhaust Pipe

EXHAUST

5) Tighten the nuts which secure the center exhaust pipe to the front exhaust pipe.

Tightening torque:

42.5 N·m (4.3 kgf·m, 31.3 ft·lb)

C: INSPECTION

- 1) Check the connections and welded parts for exhaust leaks.
- 2) Make sure there are no holes or rusting.

4. Rear Exhaust Pipe

A: REMOVAL

CAUTION:

Vehicle components are extremely hot after driving. Be wary of receiving burns from heated parts.

- 1) Turn the ignition switch to OFF.
- 2) Lift up the vehicle.
- 3) Remove the bolts, springs, and nuts securing the center exhaust pipe to the rear exhaust pipe.

- 4) Remove the bolts and self-locking nuts securing the mufflers to the rear exhaust pipes.

CAUTION:

Be careful not to drop the rear exhaust pipe.

Rear Exhaust Pipe

EXHAUST

- 5) Apply a coat of spray type lubricant to the mating area of cushion rubber.
- 6) Remove the rear exhaust pipe from the cushion rubber.

CAUTION:

Be careful not to let the muffler contact the rear bumper.

B: INSTALLATION

- 1) Apply a coat of spray type lubricant to the mating area of cushion rubber.
- 2) Install the rear exhaust pipe to cushion rubber.

NOTE:

After assembling, degrease the lubricant which was applied to the cushion rubber while removing/installing.

3) Install the bolts and self-locking nuts which secure the muffler to the rear exhaust pipe.

NOTE:

Use a new gasket and self-locking nut.

Tightening torque:

48 N·m (4.9 kgf·m, 35.4 ft·lb)

4) Install the bolts, springs, and nuts which secure the center exhaust pipe to the rear exhaust pipe.

NOTE:

Use a new gasket.

Tightening torque:

18 N·m (1.8 kgf·m, 13.3 ft·lb)

5) Lower the vehicle.

C: INSPECTION

- 1) Check the connections and welded parts for exhaust leaks.
- 2) Make sure there are no holes or rusting.
- 3) Check the cushion rubber for wear or crack.

Muffler

EXHAUST

5. Muffler

A: REMOVAL

CAUTION:

Vehicle components are extremely hot after driving. Be wary of receiving burns from heated parts.

- 1) Turn the ignition switch to OFF.
- 2) Lift up the vehicle.
- 3) Remove the bolts and self-locking nuts which secure the rear exhaust pipe to the muffler.

- 4) Apply a coat of spray type lubricant to the mating area of cushion rubber.
- 5) Remove the muffler from the cushion rubber.

CAUTION:

Be careful not to drop the muffler during removal.

6) Remove the heat shield cover from the vehicle.

B: INSTALLATION

Install in the reverse order of removal.

NOTE:

- Use a new gasket and self-locking nut.
- After assembling, degrease the lubricant which was applied to the cushion rubber while removing/installing.

Tightening torque:

10 N·m (1.0 kgf-m, 7.4 ft-lb)

Muffler

EXHAUST

Tightening torque:

48 N·m (4.9 kgf·m, 35.4 ft·lb)

C: INSPECTION

- 1) Check the connections and welded parts for exhaust leaks.
- 2) Make sure there are no holes or rusting.
- 3) Check the cushion rubber for wear or crack.

General Description

COOLING

C: CAUTION

- Prior to starting work, pay special attention to the following:
 1. Always wear work clothes, a work cap, and protective shoes. Additionally, wear a helmet, protective goggles, etc. if necessary.
 2. Protect the vehicle using a seat cover, fender cover, etc.
 3. Prepare the service tools, clean cloth, containers to catch grease and oil, etc.
- Prepare a container and cloth to prevent scattering of engine coolant when performing work where engine coolant can be spilled. If the oil spills, wipe it off immediately to prevent from penetrating into floor or flowing out for environmental protection.
- Vehicle components are extremely hot immediately after driving. Be wary of receiving burns from heated parts.
- When performing a repair, identify the cause of trouble and avoid unnecessary removal, disassembly and replacement.
- Before disconnecting connectors of sensors or units, be sure to disconnect the ground cable from battery.
- Always use the jack-up point when the shop jacks or rigid racks are used to support the vehicle.
- Remove contamination including dirt and corrosion before removal, installation, disassembly or assembly.
- Keep the removed parts in order and protect them from dust and dirt.
- All removed parts, if to be reused, should be reinstalled in the original positions with attention to the correct directions, etc.
- Bolts, nuts and washers should be replaced with new parts as required.
- Be sure to tighten the fasteners including bolts and nuts to the specified torque.
- Follow all government and local regulations concerning disposal of refuse when disposing engine coolant.

 <p style="text-align: center;">STSSM4</p>	—	SUBARU SELECT MONITOR 4	<p>Used for setting of each function and trouble-shooting for electrical system.</p> <p>NOTE: For detailed operation procedures of Subaru Select Monitor 4, refer to "Application help".</p>

2. GENERAL TOOL

TOOL NAME	REMARKS
Circuit tester	Used for measuring resistance, voltage and current.
Radiator cap tester	Used for checking radiator and radiator cap.
DST-i	Used together with Subaru Select Monitor 4.

Radiator Fan System

COOLING

2. Radiator Fan System

A: WIRING DIAGRAM

Radiator fan system <Ref. to WI-190, WIRING DIAGRAM, Radiator Fan System.>

CO-10136

B: INSPECTION

Operating condition:

Vehicle speed	A/C compressor load	Engine coolant temperature		
		Increase: 98°C (208°F) or less Decrease: 96°C (205°F) or less	Increase: 99 — 101°C (210 — 214°F) Decrease: 97 — 98°C (207 — 208°F)	Increase: 102°C (216°F) or more Decrease: 99°C (210°F) or more
		Radiator fan operation	Radiator fan operation	Radiator fan operation
During acceleration: 19 km/h (12 MPH) or less During deceleration: 10 km/h (6 MPH) or less	OFF	OFF	Low-Speed	High-Speed
	Low	Low-Speed	Low-Speed	High-Speed
	High	High-Speed	High-Speed	High-Speed
During acceleration: 20 — 69 km/h (12 — 43 MPH) During deceleration: 11 — 64 km/h (7 — 40 MPH)	OFF	OFF	Low-Speed	High-Speed
	Low	High-Speed	High-Speed	High-Speed
	High	High-Speed	High-Speed	High-Speed
During acceleration: 70 — 134 km/h (43 — 83 MPH) During deceleration: 65 — 129 km/h (40 — 80 MPH)	OFF	OFF	Low-Speed	High-Speed
	Low	OFF	Low-Speed	High-Speed
	High	Low-Speed	High-Speed	High-Speed
During acceleration: 135 km/h (84 MPH) or more During deceleration: 130 km/h (81 MPH) or more	OFF	OFF	OFF	High-Speed
	Low	OFF	Low-Speed	High-Speed
	High	OFF	Low-Speed	High-Speed

Diagnosis:

Radiator main fan and radiator sub fan do not rotate under the above operating conditions.

Step	Check	Yes	No
1 CHECK OPERATION OF RADIATOR FAN. 1) Install the delivery mode fuse. 2) Turn the ignition switch to ON. 3) Using the Subaru Select Monitor, perform the active test for the radiator fan relay. NOTE: • When performing the active test for the radiator fan relay using the Subaru Select Monitor, the radiator main fan and radiator sub fan will repeat low speed revolution → high speed revolution → OFF in this order. • For detailed operation procedures of Subaru Select Monitor 4, refer to “Application help”.	Do the radiator main fans and radiator sub fans rotate at low speed?	Go to step 2.	Go to step 3.
2 CHECK OPERATION OF RADIATOR FAN. Using the Subaru Select Monitor, perform the active test for the radiator fan relay. NOTE: • When performing the active test for the radiator fan relay using the Subaru Select Monitor, the radiator main fan and radiator sub fan will repeat low speed revolution → high speed revolution → OFF in this order. • For detailed operation procedures of Subaru Select Monitor 4, refer to “Application help”.	Do the radiator main fans and radiator sub fans rotate at high speed?	Radiator main fan system is normal.	Go to step 27.

Radiator Fan System

COOLING

Step	Check	Yes	No
3 CHECK POWER SUPPLY TO SUB FAN RELAY. 1) Turn the ignition switch to OFF. 2) Remove the sub fan relay. 3) Measure the voltage between the sub fan relay terminal and chassis ground. Connector & terminal (F27) No. 17 (+) — Chassis ground (-):	Is the voltage 10 V or more?	Go to step 4.	Go to step 5.
4 CHECK POWER SUPPLY TO SUB FAN RELAY. 1) Turn the ignition switch to ON. 2) Measure the voltage between the sub fan relay terminal and chassis ground. Connector & terminal (F27) No. 20 (+) — Chassis ground (-):	Is the voltage 10 V or more?	Go to step 7.	Go to step 6.
5 CHECK FUSE. 1) Remove the fuse No. 3. 2) Check the condition of fuse.	Is the fuse blown out?	Replace the fuse.	Repair the power supply line.
6 CHECK FUSE. 1) Turn the ignition switch to OFF. 2) Remove the fuse No. 22. 3) Check the condition of fuse.	Is the fuse blown out?	Replace the fuse.	Repair the power supply line.
7 CHECK SUB FAN RELAY. Measure the resistance between sub fan relay switch terminals.	Is the resistance 1 M Ω or more?	Go to step 8.	Replace the sub fan relay. <Ref. to AC-33, Relay and Fuse.>
8 CHECK SUB FAN RELAY. 1) Connect the battery to the terminal on the sub fan relay coil side. 2) Measure the resistance between sub fan relay switch terminals.	Is the resistance less than 1 Ω ?	Go to step 9.	Replace the sub fan relay. <Ref. to AC-33, Relay and Fuse.>
9 CHECK HARNESS BETWEEN SUB FAN RELAY TERMINAL AND SUB FAN MOTOR CONNECTOR. 1) Turn the ignition switch to OFF. 2) Disconnect the connector from the sub fan motor. 3) Measure the resistance of harness between the sub fan relay terminal and sub fan motor connector. Connector & terminal (F16) No. 1 — (F27) No. 18:	Is the resistance less than 1 Ω ?	Go to step 10.	Repair the open circuit of harness between sub fan relay terminal and sub fan motor connector.
10 CHECK HARNESS BETWEEN SUB FAN MOTOR CONNECTOR AND MAIN FAN RELAY 2 CONNECTOR. 1) Remove the main fan relay 2. 2) Measure the resistance of harness between sub fan motor connector and main fan relay 2 connector. Connector & terminal (F16) No. 2 — (F27) No. 12:	Is the resistance less than 1 Ω ?	Go to step 11.	Repair the open circuit of the harness between sub fan motor connector and main fan relay 2 connector.
11 CHECK FOR POOR CONTACT. Check poor contact of sub fan motor connector.	Is there poor contact of the sub fan motor connector?	Repair the poor contact of sub fan motor connector.	Go to step 12.
12 CHECK SUB FAN MOTOR. Connect the battery positive (+) terminal to terminal No. 1 of the sub fan motor, and the ground (-) terminal to terminal No. 2.	Does the radiator sub fan rotate?	Go to step 13.	Replace the sub fan motor. <Ref. to CO(H4DO)-64, Radiator Sub Fan and Fan Motor.>

Radiator Fan System

COOLING

Step	Check	Yes	No
13 CHECK MAIN FAN RELAY 2. Measure the resistance between terminals of main fan relay 2 switch (always ON side).	Is the resistance less than 1 Ω ?	Go to step 14.	Replace the main fan relay 2. <Ref. to AC-33, Relay and Fuse.>
14 CHECK HARNESS BETWEEN MAIN FAN RELAY 2 AND MAIN FAN MOTOR CONNECTOR. 1) Disconnect the connector from the main fan motor. 2) Measure the resistance of the harness between main fan relay 2 terminal and main fan motor connector. <i>Connector & terminal</i> <i>(F17) No. 1 — (F27) No. 14:</i>	Is the resistance less than 1 Ω ?	Go to step 15.	Repair the open circuit of the harness between main fan relay 2 terminal and main fan motor connector.
15 CHECK GROUND CIRCUIT OF MAIN FAN MOTOR. Measure the resistance between main fan motor connector and chassis ground. <i>Connector & terminal</i> <i>(F17) No. 2 — Chassis ground:</i>	Is the resistance less than 5 Ω ?	Go to step 16.	Repair the open circuit of the harness between main fan motor connector and chassis ground.
16 CHECK FOR POOR CONTACT. Check poor contact of main fan motor connector.	Is there poor contact of the main fan motor connector?	Repair the poor contact of main fan motor connector.	Go to step 17.
17 CHECK MAIN FAN MOTOR. Connect the battery positive (+) terminal to terminal No. 1 of the main fan motor, and the ground (-) terminal to terminal No. 2.	Does the radiator main fan rotate?	Go to step 18.	Replace the main fan motor. <Ref. to CO(H4DO)-61, Radiator Main Fan and Fan Motor.>
18 CHECK HARNESS BETWEEN SUB FAN RELAY AND ECM. 1) Disconnect the connector from ECM. 2) Measure the resistance between the sub fan relay terminal and ECM connector. <i>Connector & terminal</i> <i>(B135) No. 11 — (F27) No. 19:</i>	Is the resistance less than 1 Ω ?	Go to step 19.	Repair the open circuit of harness between sub fan relay terminal and ECM.
19 CHECK FOR POOR CONTACT. Check for poor contact of ECM connector.	Is there poor contact of ECM connector?	Repair the poor contact of ECM connector.	Check the DTC. Repair the trouble cause. <Ref. to EN(H4DO)(diag)-49, Read Diagnostic Trouble Code (DTC).>
20 CHECK MAIN FAN RELAY 1. 1) Turn the ignition switch to OFF. 2) Remove the main fan relay 1. 3) Measure the resistance between terminals of main fan relay 1 switch.	Is the resistance 1 M Ω or more?	Go to step 21.	Replace the main fan relay 1. <Ref. to AC-33, Relay and Fuse.>
21 CHECK MAIN FAN RELAY 1. 1) Connect the main fan relay 1 coil side terminal to the battery. 2) Measure the resistance between terminals of main fan relay 1 switch.	Is the resistance less than 1 Ω ?	Go to step 22.	Replace the main fan relay 1. <Ref. to AC-33, Relay and Fuse.>

Radiator Fan System

COOLING

Step	Check	Yes	No
22 CHECK HARNESS BETWEEN MAIN FAN RELAY 1 AND MAIN FAN MOTOR CONNECTOR. 1) Disconnect the connector from the main fan motor. 2) Measure the resistance of the harness between main fan relay 1 terminal and main fan motor connector. Connector & terminal (F17) No. 1 — (F36) No. 6:	Is the resistance less than 1 Ω ?	Go to step 23.	Repair the open circuit of the harness between main fan relay 1 terminal and main fan motor connector.
23 CHECK HARNESS BETWEEN MAIN FAN RELAY 1 AND ECM. 1) Disconnect the connector from ECM. 2) Measure the resistance between main fan relay 1 terminal and ECM connector. Connector & terminal (B135) No. 12 — (B143) No. 7:	Is the resistance less than 1 Ω ?	Go to step 24.	Repair the open circuit of the harness between main fan relay 1 terminal and ECM.
24 CHECK HARNESS BETWEEN MAIN FAN RELAY 2 AND ECM. Measure the resistance between main fan relay 2 terminal and ECM connector. Connector & terminal (B135) No. 12 — (F27) No. 15:	Is the resistance less than 1 Ω ?	Go to step 25.	Repair the open circuit of the harness between main fan relay 2 terminal and ECM.
25 CHECK FUSE. 1) Remove the fuse No. 2 and No. 19. 2) Check the condition of fuse.	Is the fuse blown out?	Replace the fuse.	Go to step 26.
26 CHECK FOR POOR CONTACT. Check for poor contact of ECM connector.	Is there poor contact of ECM connector?	Repair the poor contact of ECM connector.	Repair the power supply circuit to the main fuse box.
27 CHECK OPERATION OF RADIATOR FAN. If the both fans do not rotate at high speed in the condition of step 2, check whether the radiator sub fan is rotating.	Does the radiator sub fan rotate?	Go to step 20.	Go to step 28.
28 CHECK GROUND CIRCUIT OF MAIN FAN RELAY 2. 1) Turn the ignition switch to OFF. 2) Remove the main fan relay 2. 3) Measure the resistance between main fan relay 2 terminal and chassis ground. Connector & terminal (F27) No. 13 — Chassis ground:	Is the resistance less than 1 Ω ?	Go to step 29.	Repair the open circuit of harness between main fan relay 2 and chassis ground.
29 CHECK POWER SUPPLY TO MAIN FAN RELAY 2. 1) Turn the ignition switch to ON. 2) Measure the voltage between main fan relay 2 terminal and chassis ground. Connector & terminal (F27) No. 16 (+) — Chassis ground (-):	Is the voltage 10 V or more?	Go to step 30.	Repair the power supply line.
30 CHECK MAIN FAN RELAY 2. Measure the resistance between terminals of main fan relay 2 switch (always OFF side).	Is the resistance 1 M Ω or more?	Go to step 31.	Replace the main fan relay 2. <Ref. to AC-33, Relay and Fuse.>
31 CHECK MAIN FAN RELAY 2. 1) Connect the main fan relay 2 coil side terminal to the battery. 2) Measure the resistance between terminals of main fan relay 2 switch (always OFF side).	Is the resistance less than 1 Ω ?	Go to step 23.	Replace the main fan relay 2. <Ref. to AC-33, Relay and Fuse.>

3. Engine Coolant

A: INSPECTION

NOTE:

When adding the engine coolant, always use SUBARU Super Coolant.

- 1) Park the vehicle on a level surface.
- 2) Turn the ignition switch to OFF.
- 3) Check the engine coolant amount, and if the coolant level is low, check for the coolant leakage, and then add the engine coolant.
 - (1) Make sure the engine coolant level in the reservoir tank is between “FULL” and “LOW” with the engine in a cold condition.
 - (2) Open the radiator cap and make sure that the radiator is filled with the engine coolant up to its filler neck position.

B: REPLACEMENT

1. DRAINING OF ENGINE COOLANT

- 1) Turn the ignition switch to OFF.
- 2) Lift up the vehicle.
- 3) Remove the under cover. <Ref. to EI-22, REMOVAL, Front Under Cover.>
- 4) Remove the drain plug to drain engine coolant into container.

NOTE:

Remove the radiator cap so that engine coolant will drain faster.

- 5) Install the drain plug.

NOTE:

Use new O-rings.

- 6) Install the under cover. <Ref. to EI-22, INSTALLATION, Front Under Cover.>

Engine Coolant

COOLING

2. FILLING OF ENGINE COOLANT

CAUTION:

For CVT models, set the select lever to “P” or “N” range (for MT models, the shift lever in neutral) during work, and do not shift the lever.

1) Pour cooling system conditioner through the filler neck.

Cooling system protective agent:

Refer to “SPECIFICATION” for cooling system protective agent. <Ref. to CO(H4DO)-2, SPECIFICATION, General Description.>

2) Pour engine coolant into the radiator up to the filler neck position.

Recommended engine coolant:

Refer to “SPECIFICATION” for recommended engine coolant. <Ref. to CO(H4DO)-2, SPECIFICATION, General Description.>

Engine coolant level:

Refer to “SPECIFICATION” for engine coolant level. <Ref. to CO(H4DO)-2, SPECIFICATION, General Description.>

Engine coolant concentration:

Refer to “ADJUSTMENT” for the recommended engine coolant concentration. <Ref. to CO(H4DO)-15, ADJUSTMENT, Engine Coolant.>

NOTE:

The SUBARU Super Coolant contains anti-freeze and anti-rust agents, and is especially made for Subaru engines with an aluminum cylinder block. Be sure to use SUBARU Super Coolant, since other coolant may cause corrosion.

3) Fill engine coolant into the reservoir tank up to “FULL” level.

CO-03544

4) Close the radiator cap and start the engine. Race 5 to 6 times at 3,000 r/min or less, then stop the engine. (Complete this operation within 40 seconds.)

5) Wait for one minute after the engine stops (ignition OFF), and open the radiator cap. If the engine coolant level drops, add engine coolant into radiator up to the filler neck position.

6) Perform the procedures 4) and 5) again.

7) Attach the radiator cap and reservoir tank cap properly.

8) Start the engine and operate the heater at maximum hot position and the blower speed setting to “LO”. (A/C OFF)

9) Run the engine at 3,000 r/min or less until radiator fan starts and stops.

NOTE:

Be careful with the engine coolant temperature to prevent overheating.

- 10) Stop the engine (ignition OFF) and wait until the engine coolant temperature lowers to 30°C (86°F) or less.
- 11) Open the radiator cap. If the engine coolant level drops, add engine coolant into the radiator up to the filler neck position and the reservoir tank to “FULL” level.
- 12) Attach the radiator cap and reservoir tank cap properly.
- 13) Set the heater setting to maximum hot position and the blower speed setting to “LO” and start the engine. Perform racing at 3,000 r/min or less. If the flowing sound is heard from the heater core, repeat the procedures from step 9).

C: ADJUSTMENT

1. PROCEDURE TO ADJUST THE SUBARU SUPER COOLANT CONCENTRATION

CAUTION:

Use the SUBARU Super Coolant with a 50 — 60% concentration in order to obtain maximum anti-freeze and anti-rust performance.

To adjust the concentration of SUBARU Super Coolant according to temperature, find the proper SUBARU Super Coolant concentration in the table, and add dilution water to the SUBARU Super Coolant (concentrated type) until it reaches the proper dilution.

Relationship of SUBARU Super Coolant concentration and freezing temperature			
SUBARU Super Coolant concentration	50%	55%	60%
Freezing temperature	-36°C (-33°F)	-41°C (-42°F)	-50°C (-58°F)

Engine coolant and diluting water:

Refer to “SPECIFICATION” for recommended engine coolant and diluting water. <Ref. to CO(H4DO)-2, SPECIFICATION, General Description.>

Water Pump

COOLING

4. Water Pump

A: REMOVAL

1. WATER PUMP PULLEY

- 1) Disconnect the ground cable from battery. <Ref. to NT-6, BATTERY, NOTE, Note.>
- 2) Remove the V-belt covers.

- 3) Remove the V-belts. <Ref. to ME(H4DO)-83, V-BELT, REMOVAL, V-belt.>
 - 4) Remove the radiator main fan & fan motor assembly. <Ref. to CO(H4DO)-61, REMOVAL, Radiator Main Fan and Fan Motor.>
 - 5) Lift up the vehicle.
 - 6) Remove the under cover. <Ref. to EI-22, REMOVAL, Front Under Cover.>
 - 7) Remove the water pump pulley using the ST.
- ST1 18355AA000 PULLEY WRENCH
ST2 18334AA030 PULLEY WRENCH PIN SET

2. WATER PUMP

- 1) Drain engine coolant. <Ref. to CO(H4DO)-13, DRAINING OF ENGINE COOLANT, REPLACEMENT, Engine Coolant.>
- 2) Remove the water pump pulley. <Ref. to CO(H4DO)-16, WATER PUMP PULLEY, REMOVAL, Water Pump.>
- 3) Remove the front exhaust pipe. <Ref. to EX(H4DO)-5, REMOVAL, Front Exhaust Pipe.>
- 4) Remove the water pump from the oil pan upper.

Water Pump

COOLING

B: INSTALLATION

1. WATER PUMP PULLEY

1) Using the ST, install the water pump pulley.

ST1 18355AA000 PULLEY WRENCH

ST2 18334AA030 PULLEY WRENCH PIN SET

Tightening torque:

14 N·m (1.4 kgf·m, 10.3 ft·lb)

2) Install the under cover. <Ref. to EI-22, INSTALLATION, Front Under Cover.>

3) Lower the vehicle.

4) Install the radiator main fan & fan motor assembly. <Ref. to CO(H4DO)-62, INSTALLATION, Radiator Main Fan and Fan Motor.>

5) Install the V-belts. <Ref. to ME(H4DO)-86, V-BELT, INSTALLATION, V-belt.>

6) Install the V-belt cover.

Tightening torque:

7 N·m (0.7 kgf·m, 9.6 ft·lb)

7) Connect the battery ground terminal. <Ref. to NT-6, BATTERY, NOTE, Note.>

2. WATER PUMP

1) Install the water pump to oil pan upper.

NOTE:

Use a new gasket.

Tightening torque:

6.4 N·m (0.7 kgf-m, 4.7 ft-lb)

2) Install the front exhaust pipe. <Ref. to EX(H4DO)-7, INSTALLATION, Front Exhaust Pipe.>

3) Install the water pump pulley. <Ref. to CO(H4DO)-18, WATER PUMP PULLEY, INSTALLATION, Water Pump.>

4) Fill engine coolant. <Ref. to CO(H4DO)-14, FILLING OF ENGINE COOLANT, REPLACEMENT, Engine Coolant.>

C: INSPECTION

- 1) Check the water pump bearing for smooth rotation.
- 2) Check the water pump pulley for abnormalities.
- 3) Make sure the impeller is not abnormally deformed or damaged.

Water Pipe Assembly

COOLING

5. Water Pipe Assembly

A: REMOVAL

1. WATER PIPE ASSEMBLY RH

- 1) Disconnect the ground cable from battery. <Ref. to NT-6, BATTERY, NOTE, Note.>
- 2) Drain engine coolant. <Ref. to CO(H4DO)-13, DRAINING OF ENGINE COOLANT, REPLACEMENT, Engine Coolant.>
- 3) Remove the front exhaust pipe. <Ref. to EX(H4DO)-5, REMOVAL, Front Exhaust Pipe.>
- 4) Disconnect the water hose (A) from the water pipe assembly RH, and remove the bolt (B) securing the water pipe assembly RH to the cam carrier RH.

- 5) Remove the bolt (A) which secures the water pipe assembly RH to the cylinder head RH.
- 6) Disconnect the water pipe hose RH (B) from oil pan upper, and remove the water pipe assembly RH.

2. WATER PIPE ASSEMBLY LH

1) Open the front hood, and make alignment marks (A) on both the front hood and the front hood striker by using a marker pen.

2) Remove the front hood striker from the front hood.

Water Pipe Assembly

COOLING

- 3) Change the front hood stay position from (A) to (B), and completely open the front hood.

- 4) Disconnect the ground cable from battery. <Ref. to NT-6, BATTERY, NOTE, Note.>
- 5) Remove the V-belt covers.

- 6) Remove the air intake duct. <Ref. to IN(H4DO)-13, REMOVAL, Air Intake Duct.>

- 7) Remove the clip (A) from the air intake boot.
- 8) Loosen the clamp (B) securing the air cleaner case (rear) to the air intake boot.
- 9) Loosen the clamp (C) which secures the throttle body to the air intake boot.

- 10) Remove the air intake boot from the throttle body, and place the air intake boot aside so that it does not interfere with the work.

Water Pipe Assembly

COOLING

- 11) Disconnect the connector from the mass air flow and intake air temperature sensor, and remove the clip (A) which holds the mass air flow and intake air temperature sensor harness.

- 12) Remove the air cleaner case (rear).

Water Pipe Assembly

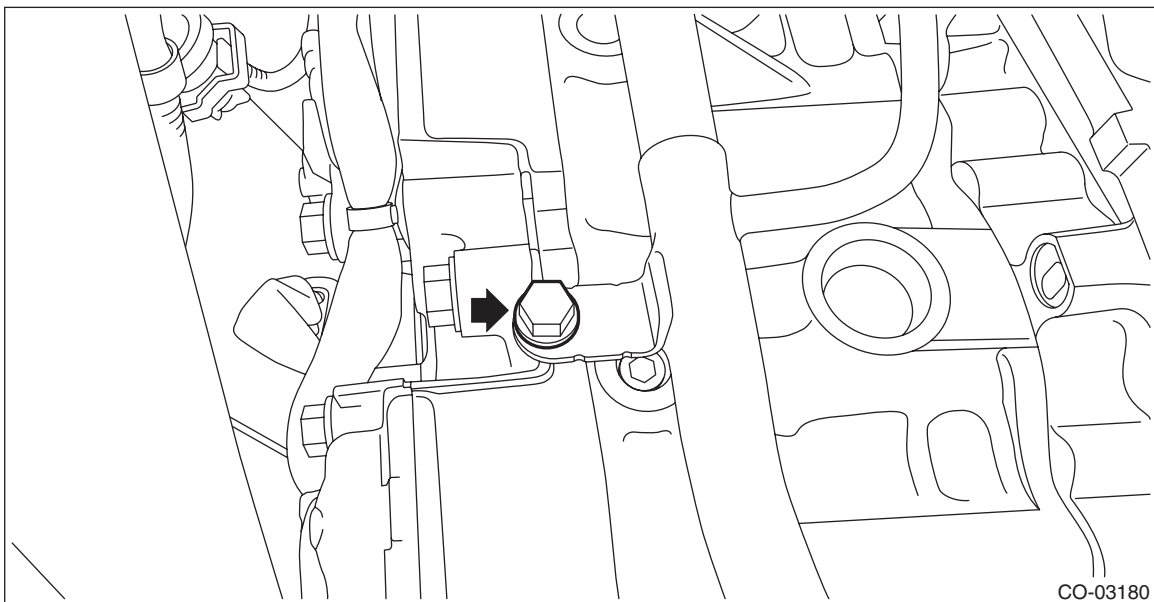

COOLING

13) Drain engine coolant. <Ref. to CO(H4DO)-13, DRAINING OF ENGINE COOLANT, REPLACEMENT, Engine Coolant.>

14) Disconnect the preheater hose (A) and the heater outlet hose (B) from the water pipe assembly LH.

15) Remove the bolt which holds the water pipe assembly LH from the cylinder head LH.

Water Pipe Assembly

COOLING

- 16) Remove the clip holding the air breather hose to the engine rear hanger. (MT model)

- 17) Lift up the vehicle.

- 18) Remove the front exhaust pipe. <Ref. to EX(H4DO)-5, REMOVAL, Front Exhaust Pipe.>

- 19) Remove the nuts which secure the engine mounting to the front crossmember. (CVT model)

20) Remove the nuts which secure the engine mounting to the front crossmember. (MT model)

21) Lower the vehicle.

22) Disconnect the bulkhead harness connector from the transmission harness connector (A) and the inhibitor harness connector (B), and disconnect the transmission radio ground terminal (C) from the vehicle body. (CVT model)

Water Pipe Assembly

COOLING

23) Remove the pitching stopper.

24) Remove the transmission case cover. (CVT model)

25) Remove the bolt which holds the transmission harness stay. (CVT model)

26) Remove the bolt which holds the transmission harness to the control valve body, and turn the transmission harness clockwise till the bolt hole can be seen as shown in the figure, and tighten the bolt to temporary lock the harness. (CVT model)

NOTE:

This procedure is required to prevent the transmission harness from touching the vehicle body during engine lift-up.

Water Pipe Assembly

COOLING

27) Lift up the engine with a lifting device and wire ropes.

CAUTION:

When lifting up the engine, pay attention to the clearance of each part and be careful not to lift the engine too much, in order to prevent damaging the vehicle.

28) Remove the bolt (A) which secures the water pipe assembly LH to the cylinder head LH.

29) Disconnect the water pipe hose LH (B) from oil pan upper, and remove the water pipe assembly LH.

B: INSTALLATION

1. WATER PIPE ASSEMBLY RH

- 1) Set the water pipe assembly RH on the engine, and connect the water pipe hose RH (B) to the oil pan upper.
- 2) Secure the water pipe assembly RH to the cylinder head RH with bolt (A).

Tightening torque:

6.4 N·m (0.7 kgf-m, 4.7 ft-lb)

- 3) Install the bolt (B) which secures the water pipe assembly RH to the cam carrier RH.

Tightening torque:

6.4 N·m (0.7 kgf-m, 4.7 ft-lb)

- 4) Connect the water hose (A) to the water pipe assembly RH.

- 5) Install the front exhaust pipe. <Ref. to EX(H4DO)-7, INSTALLATION, Front Exhaust Pipe.>
- 6) Connect the battery ground terminal. <Ref. to NT-6, BATTERY, NOTE, Note.>
- 7) Fill engine coolant. <Ref. to CO(H4DO)-14, FILLING OF ENGINE COOLANT, REPLACEMENT, Engine Coolant.>

Water Pipe Assembly

COOLING

2. WATER PIPE ASSEMBLY LH

- 1) Set the water pipe assembly LH on the engine, and connect the water pipe hose LH (B) to the oil pan upper.
- 2) Secure the water pipe assembly LH to the cylinder head LH with bolt (A).

Tightening torque:

6.4 N·m (0.7 kgf-m, 4.7 ft-lb)

CO-03179

- 3) Lower the engine and remove the lifting device and wire ropes.

ME-05105

- 4) Remove the bolt and turn the transmission harness counterclockwise to install the transmission harness to the control valve body. (CVT model)

Tightening torque:

7 N·m (0.7 kgf·m, 5.2 ft·lb)

- 5) Install the bolt which holds the transmission harness stay. (CVT model)

Tightening torque:

7 N·m (0.7 kgf·m, 5.2 ft·lb)

Water Pipe Assembly

COOLING

6) Install the transmission case cover. (CVT model)

Tightening torque:

8 N·m (0.8 kgf-m, 5.9 ft-lb)

7) Install the pitching stopper.

Tightening torque:

T1: 50 N·m (5.1 kgf-m, 36.9 ft-lb)

T2: 58 N·m (5.9 kgf-m, 42.8 ft-lb)

8) Connect the transmission radio ground terminal (C) to the vehicle body, and connect the bulkhead harness connector to the transmission harness connector (A) and the inhibitor harness connector (B). (CVT model)

Tightening torque:

13 N·m (1.3 kgf·m, 9.6 ft·lb)

9) Lift up the vehicle.

10) Install the nuts which hold the engine mounting to the front crossmember. (CVT model)

NOTE:

- Make sure that locators (A) of the engine mounting are securely inserted.
- Use a new nut.

Tightening torque:

60 N·m (6.1 kgf·m, 44.3 ft·lb)

Water Pipe Assembly

COOLING

11) Install the nuts which hold the engine mounting to the front crossmember. (MT model)

NOTE:

Use a new nut.

Tightening torque:

60 N·m (6.1 kgf-m, 44.3 ft-lb)

12) Install the front exhaust pipe. <Ref. to EX(H4DO)-5, REMOVAL, Front Exhaust Pipe.>

13) Lower the vehicle.

14) Secure the air breather hose to the engine rear hanger using clip. (MT model)

15) Install the bolt which secures the water pipe assembly LH to the cylinder head LH.

Tightening torque:

6.4 N·m (0.7 kgf·m, 4.7 ft·lb)

16) Connect the preheater hose (A) and the heater outlet hose (B) to the water pipe assembly LH.

Water Pipe Assembly

COOLING

17) Install the air intake case (rear).

18) Install the clip (A) which secures the air flow and intake air temperature sensor harness, and connect the connector to the air flow and intake air temperature sensor.

19) Install the air intake boot. <Ref. to IN(H4DO)-12, INSTALLATION, Air Intake Boot.>

20) Install the air intake duct. <Ref. to IN(H4DO)-13, INSTALLATION, Air Intake Duct.>

21) Install the V-belt cover.

Tightening torque:

7 N·m (0.7 kgf·m, 5.2 ft·lb)

22) Connect the battery ground terminal. <Ref. to NT-6, BATTERY, NOTE, Note.>

23) Fill engine coolant. <Ref. to CO(H4DO)-14, FILLING OF ENGINE COOLANT, REPLACEMENT, Engine Coolant.>

24) Change the front hood stay position from (B) to (A).

Water Pipe Assembly

COOLING

25) Install the front hood striker to the front hood by aligning the alignment marks (A), and close the front hood.

Tightening torque:

33 N·m (3.4 kgf·m, 24.3 ft·lb)

C: INSPECTION

- 1) Check that the water pipe assembly has no deformation, cracks or other damages.
- 2) Check that the hose has no cracks, damage or loose part.

6. Thermostat

A: REMOVAL

1. ENGINE SIDE

- 1) Disconnect the ground cable from battery. <Ref. to NT-6, BATTERY, NOTE, Note.>
- 2) Lift up the vehicle.
- 3) Remove the under cover. <Ref. to EI-22, REMOVAL, Front Under Cover.>
- 4) Drain engine coolant. <Ref. to CO(H4DO)-13, DRAINING OF ENGINE COOLANT, REPLACEMENT, Engine Coolant.>
- 5) Remove the front exhaust pipe. <Ref. to EX(H4DO)-5, REMOVAL, Front Exhaust Pipe.>
- 6) Disconnect the radiator outlet hose from thermostat cover.

- 7) Remove the thermostat cover, and then remove the thermostat.

(A) Thermostat cover

(B) Gasket

(C) Thermostat

- 8) Remove the gasket from thermostat.

Thermostat

COOLING

2. CVTF COOLER (WITH WARMER FEATURE) SIDE

- 1) Disconnect the ground cable from battery. <Ref. to NT-6, BATTERY, NOTE, Note.>
- 2) Lift up the vehicle.
- 3) Remove the under cover. <Ref. to EI-22, REMOVAL, Front Under Cover.>
- 4) Drain engine coolant. <Ref. to CO(H4DO)-13, DRAINING OF ENGINE COOLANT, REPLACEMENT, Engine Coolant.>
- 5) Lower the vehicle.
- 6) Remove the clip (A) from the air intake boot.
- 7) Loosen the clamp (B) securing the air cleaner case (rear) to the air intake boot.
- 8) Loosen the clamp (C) which secures the throttle body to the air intake boot.

- 9) Remove the air intake boot from the throttle body, and place the air intake boot aside so that it does not interfere with the work.

10) Disconnect the engine harness connector.

(1) Remove the bolt securing the bulkhead harness connector bracket.

(2) Disconnect the bulkhead harness connector from the engine harness connector (black) and engine harness connector (brown).

Thermostat

COOLING

- 11) Disconnect the connector (A) from manifold absolute pressure sensor.
- 12) Disconnect the connector (B) from the throttle position sensor.
- 13) Disconnect the connector (C) from the EGR control valve.

- 14) Remove the bolt securing the engine hanger from the cylinder block RH, and place it aside so that it does not interfere with the work.

Thermostat

COOLING

15) Disconnect the engine coolant hose from the thermostat cover.

16) Remove the thermostat cover, and then remove the thermostat.

(A) Thermostat cover

(B) Gasket

(C) Thermostat

17) Remove the gasket from thermostat.

Thermostat

COOLING

B: INSTALLATION

1. ENGINE SIDE

1) Install a gasket to thermostat.

NOTE:

Use a new gasket.

2) Install the thermostat and thermostat cover.

Tightening torque:

6.4 N·m (0.7 kgf-m, 4.7 ft-lb)

(A) Thermostat cover

(B) Gasket

(C) Thermostat

3) Connect the radiator outlet hose to thermostat cover.

4) Install the front exhaust pipe. <Ref. to EX(H4DO)-7, INSTALLATION, Front Exhaust Pipe.>

5) Install the under cover. <Ref. to EI-22, INSTALLATION, Front Under Cover.>

6) Lower the vehicle.

7) Connect the battery ground terminal. <Ref. to NT-6, BATTERY, NOTE, Note.>

8) Fill engine coolant. <Ref. to CO(H4DO)-14, FILLING OF ENGINE COOLANT, REPLACEMENT, Engine Coolant.>

2. CVTF COOLER (WITH WARMER FEATURE) SIDE

1) Install a gasket to thermostat.

NOTE:

Use a new gasket.

2) Install the thermostat and thermostat cover.

NOTE:

Install the parts with the air vent hole facing upward.

Tightening torque:

6.4 N·m (0.7 kgf-m, 4.7 ft-lb)

CO-02936

(A) Thermostat cover

(B) Gasket

(C) Thermostat

(D) Air vent hole

3) Connect the engine coolant hose to the thermostat cover.

CO-02919

Thermostat

COOLING

4) Install the engine hanger to the cylinder block RH.

Tightening torque:

21 N·m (2.1 kgf-m, 15.5 ft-lb)

5) Connect the connector (A) to the manifold absolute pressure sensor.

6) Connect the connector (B) to the throttle position sensor.

7) Connect the connector (C) to the EGR control valve.

8) Connect the engine harness connector.

(1) Connect the bulkhead harness connector to the engine harness connector (black) and engine harness connector (brown).

(2) Install the bolt which secures the bulkhead harness connector bracket.

Tightening torque:

7.5 N·m (0.8 kgf-m, 5.5 ft-lb)

9) Install the air intake boot. <Ref. to IN(H4DO)-12, INSTALLATION, Air Intake Boot.>

10) Lift up the vehicle.

11) Install the under cover. <Ref. to EI-22, INSTALLATION, Front Under Cover.>

12) Lower the vehicle.

13) Connect the battery ground terminal. <Ref. to NT-6, BATTERY, NOTE, Note.>

14) Fill engine coolant. <Ref. to CO(H4DO)-14, FILLING OF ENGINE COOLANT, REPLACEMENT, Engine Coolant.>

Thermostat

COOLING

C: INSPECTION

- 1) Check that the thermostat does not have deformation, cracks or damage.
- 2) Check that the thermostat valve closes completely at an ambient temperature.
- 3) Immerse the thermostat and a thermometer in water. Raise water temperature gradually, and check the temperature and valve lift when the valve begins to open and when the valve is fully opened. Replace the thermostat if faulty.

NOTE:

- During the test, agitate the water for even temperature distribution.
- Leave the thermostat in the boiling water for five minutes or more before measuring the valve lift.
- Hold the thermostat with a wire or the like to avoid contacting with container bottom.

Starting temperature to open:

Engine side

90 — 94°C (194 — 201°F)

CVTF cooler (with warmer feature) side

48 — 52°C (118 — 126°F)

Full open temperature:

Engine side

100°C (212°F)

CVTF cooler (with warmer feature) side

63°C (145°F)

Total valve lift:

Engine side

8.0 mm (0.315 in) or more

CVTF cooler (with warmer feature) side

6.0 mm (0.236 in) or more

CO-02795

(A) Thermometer

(B) Thermostat

7. Radiator

A: REMOVAL

CAUTION:

The radiator is pressurized when the engine and radiator are hot. Wait until engine and radiator cool down before working on the radiator.

- 1) Disconnect the ground cable from battery. <Ref. to NT-6, BATTERY, NOTE, Note.>
- 2) Remove the V-belt covers.

- 3) Remove the grille bracket.

NOTE:

Remove the ten clips.

- 4) Remove the bolts, and remove the bracket - plate (A).

Radiator

COOLING

- 5) Lift up the vehicle.
- 6) Remove the under cover. <Ref. to EI-22, REMOVAL, Front Under Cover.>
- 7) Drain engine coolant. <Ref. to CO(H4DO)-13, DRAINING OF ENGINE COOLANT, REPLACEMENT, Engine Coolant.>
- 8) Disconnect the radiator outlet hose from thermostat cover.

- 9) Lower the vehicle.
- 10) Remove the air intake duct. <Ref. to IN(H4DO)-13, REMOVAL, Air Intake Duct.>
- 11) Remove the reservoir tank. <Ref. to CO(H4DO)-67, REMOVAL, Reservoir Tank.>
- 12) Disconnect the connector (A) from the main fan motor assembly and the connector (B) from the sub fan motor assembly.

13) Disconnect the radiator inlet hose from the water pipe assembly.

Radiator

COOLING

14) Remove the radiator upper brackets.

15) Remove the radiator from vehicle.

16) Remove the radiator lower cushion from the radiator lower bracket.

B: INSTALLATION

- 1) Attach the radiator lower cushion to the radiator lower bracket.

- 2) Install the radiator to vehicle.

NOTE:

Make pins on the lower side of radiator be fitted into the radiator lower cushions.

- 3) Install the radiator upper brackets.

Tightening torque:

12 N·m (1.2 kgf·m, 8.9 ft·lb)

Radiator

COOLING

4) Connect the radiator inlet hose to the water pipe assembly.

5) Connect the connector (A) to the main fan motor assembly and the connector (B) to the sub fan motor assembly.

- 6) Install the reservoir tank. <Ref. to CO(H4DO)-67, INSTALLATION, Reservoir Tank.>
- 7) Install the air intake duct. <Ref. to IN(H4DO)-13, INSTALLATION, Air Intake Duct.>
- 8) Lift up the vehicle.
- 9) Connect the radiator outlet hose to thermostat cover.

- 10) Install the under cover. <Ref. to EI-22, INSTALLATION, Front Under Cover.>
- 11) Lower the vehicle.
- 12) Attach the bracket - plate (A).

Tightening torque:

7.5 N·m (0.8 kgf-m, 5.5 ft-lb)

Radiator

COOLING

13) Attach the grille bracket.

14) Install the V-belt cover.

Tightening torque:

7 N·m (0.7 kgf·m, 5.2 ft·lb)

15) Connect the battery ground terminal. <Ref. to NT-6, BATTERY, NOTE, Note.>

16) Fill engine coolant. <Ref. to CO(H4DO)-14, FILLING OF ENGINE COOLANT, REPLACEMENT, Engine Coolant.>

C: INSPECTION

- 1) Check that the radiator does not have deformation, cracks or damage.
- 2) Check that the hose has no cracks, damage or loose part.
- 3) Remove the radiator cap, fill the radiator with engine coolant, and then install the radiator cap tester to the filler neck of radiator.

- 4) Apply a pressure of 157 kPa (1.6 kg/cm², 23 psi) to the radiator and check the following points:
 - Leakage from the radiator or its vicinity
 - Leakage from the hose or its connections

CAUTION:

- **Engine should be turned off.**
- **Wipe engine coolant from check points in advance.**
- **Be careful not to deform the filler neck of radiator when installing and removing the radiator cap tester.**
- **Be careful of engine coolant from spurting out when removing the radiator cap tester.**

Radiator Cap

COOLING

8. Radiator Cap

A: INSPECTION

- 1) Check that the radiator cap does not have deformation, cracks or damage.
- 2) Attach the radiator cap tester to radiator cap.

- 3) Increase pressure until the radiator cap tester gauge needle stops. Radiator cap is functioning properly if it holds the service limit pressure for 5 — 6 seconds. Replace the radiator cap if its valve opens at less than the service limit.

CAUTION:

Be sure to remove foreign matter and rust from the cap in advance. Otherwise, results of pressure test will be incorrect.

Standard:

93 — 123 kPa (0.95 — 1.25 kg/cm², 14 — 18 psi)

Service limit:

83 kPa (0.85 kg/cm², 12 psi)

9. Radiator Main Fan and Fan Motor

A: REMOVAL

- 1) Disconnect the ground cable from battery. <Ref. to NT-6, BATTERY, NOTE, Note.>
- 2) Remove the reservoir tank. <Ref. to CO(H4DO)-67, REMOVAL, Reservoir Tank.>
- 3) Disconnect the connector from the main fan motor assembly.

- 4) Remove the bolts which hold the radiator main fan shroud onto the radiator.

- 5) Remove the radiator main fan and fan motor from the vehicle.

Radiator Main Fan and Fan Motor

COOLING

B: INSTALLATION

Install in the reverse order of removal.

CAUTION:

Confirm that the radiator hose is securely connected.

NOTE:

If the installation of the radiator main fan and fan motor is difficult, attempt installation after loosening the bolts which hold the radiator sub fan shroud to the radiator.

Tightening torque:

7.5 N·m (0.8 kgf-m, 5.5 ft-lb)

C: DISASSEMBLY

- 1) Remove the clip which holds the main fan motor connector onto the radiator main fan shroud.
- 2) Disconnect the radiator main fan from the main fan motor.

- 3) Disconnect the main fan motor from the radiator main fan shroud.

D: ASSEMBLY

Assemble in the reverse order of disassembly.

Tightening torque:

4.41 N·m (0.45 kgf-m, 3.25 ft-lb)

CO-02871

Tightening torque:

3.4 N·m (0.3 kgf-m, 2.5 ft-lb)

CO-02870

E: INSPECTION

Check that the radiator main fan, radiator main fan shroud and main fan motor assembly do not have deformation, cracks or damage.

Radiator Sub Fan and Fan Motor

COOLING

10. Radiator Sub Fan and Fan Motor

A: REMOVAL

- 1) Disconnect the ground cable from battery. <Ref. to NT-6, BATTERY, NOTE, Note.>
- 2) Remove the air intake duct. <Ref. to IN(H4DO)-13, REMOVAL, Air Intake Duct.>
- 3) Disconnect the connector from the sub fan motor assembly.

- 4) Remove the bolts which hold the radiator sub fan shroud onto the radiator.

- 5) Remove the radiator sub fan and fan motor from vehicle.

B: INSTALLATION

CAUTION:

Confirm that the radiator hose is securely connected.

Install in the reverse order of removal.

Tightening torque:

7.5 N·m (0.8 kgf-m, 5.5 ft-lb)

C: DISASSEMBLY

- 1) Remove the clip which holds the sub fan motor connector onto the radiator sub fan shroud.
- 2) Disconnect the radiator sub fan from the sub fan motor.

CO-03079

- 3) Disconnect the sub fan motor from the radiator sub fan shroud.

CO-02871

Radiator Sub Fan and Fan Motor

COOLING

D: ASSEMBLY

Assemble in the reverse order of disassembly.

Tightening torque:

4.41 N·m (0.45 kgf·m, 3.25 ft·lb)

Tightening torque:

3.4 N·m (0.3 kgf·m, 2.5 ft·lb)

E: INSPECTION

Check that the radiator sub fan, radiator sub fan shroud and sub fan motor assembly do not have deformation, cracks or damage.

11. Reservoir Tank

A: REMOVAL

- 1) Disconnect the over flow hose (A) connected to the radiator filler neck from the reservoir tank.
- 2) Pull out the reservoir tank to the arrow direction while pushing the claw (B).

CO-03627

B: INSTALLATION

Install in the reverse order of removal.

C: INSPECTION

- 1) Check that the reservoir tank does not have deformation, cracks or damage.
- 2) Make sure the over flow hoses are not cracked, damaged or loose.
- 3) Make sure the engine coolant level is between "FULL" and "LOW".

Engine Cooling System Trouble in General

COOLING

12.Engine Cooling System Trouble in General

A: INSPECTION

Trouble	Possible cause	Corrective action
Over-heating	a. Insufficient engine coolant	Replenish engine coolant, inspect for leakage, and repair it if necessary.
	b. Defective thermostat	Replace.
	c. Malfunction of water pump	Replace.
	d. Clogged engine coolant passage	Clean.
	e. Improper ignition timing	Inspect and repair ignition control system. <Ref. to EN(H4DO)(diag)-2, Basic Diagnostic Procedure.>
	f. Clogged or leaking radiator	Clean, repair or replace.
	g. Defective radiator cap	Replace.
	h. Improper engine oil in engine coolant	Replace the engine coolant. If ineffective, check, repair or replace engine components.
	i. Air/fuel mixture ratio too lean	Inspect and repair the fuel injection system. <Ref. to EN(H4DO)(diag)-2, Basic Diagnostic Procedure.>
	j. Excessive back pressure in exhaust system	Clean or replace.
	k. Insufficient clearance between piston and cylinder	Adjust or replace.
	l. Slipping clutch	Repair or replace.
	m. Dragging brake	Adjust.
	n. Malfunction of radiator fan	Inspect the radiator fan relay, engine coolant temperature sensor or fan motor and replace them.
Over-cooling	a. Ambient temperature extremely low	Partly cover radiator front area.
	b. Defective thermostat	Replace.
Engine coolant leaks	a. Loosened or damaged connecting units on hoses	Repair or replace.
	b. Leakage from water pump	Replace.
	c. Leakage from water pipe	Repair or replace.
	d. Leakage around cylinder head gasket	Retighten cylinder head bolts or replace cylinder head gasket.
	e. Damaged or cracked cylinder head and cylinder block	Repair or replace.
	f. Damaged or cracked thermostat cover	Repair or replace.
	g. Leakage from radiator	Repair or replace.
Noise	a. Defective radiator fan	Replace.
	b. Defective water pump bearing	Replace water pump.
	c. Defective water pump mechanical seal	Replace water pump.

	Operating voltage		12 V		
	Warning light operating pressure		kPa (kg/cm ² , psi)	14.7 (0.1, 2.1)	
	Proof pressure		kPa (kg/cm ² , psi)	981 (10, 142.2)	
Engine oil	Total capacity (at overhaul)		L (US qt, Imp qt)	5.7 (6.0, 5.0)	
	When replacing engine oil and oil filter		L (US qt, Imp qt)	4.8 (5.1, 4.2)	
	When replacing engine oil only		L (US qt, Imp qt)	4.6 (4.9, 4.0)	

General Description

LUBRICATION

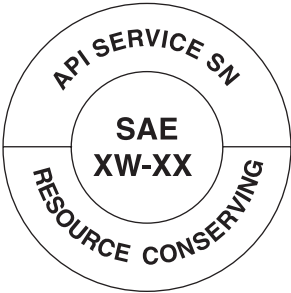

Specified oil:

CAUTION:

- Use 0W-20 (synthetic oil).
- It is acceptable to fill an engine with oil of another brand when replacing the oil, but make sure to use the following engine oil specified by Subaru.

NOTE:

The proper viscosity oil helps the engine maintain its ideal temperature, and cranking speed increased by reducing viscosity friction in hot condition.

Engine oil standard	SAE viscosity No.
<div style="display: flex; align-items: center; justify-content: center;"> <div style="text-align: center;">  <p>RM-00081</p> <p>Those with SN “Resource Conserving” logo in case of API standard.</p> </div> <div style="margin: 0 20px;">or</div> <div style="text-align: center;">  <p>RM-00002</p> <p>Those with GF-5 “starburst mark” displayed on top of the container in case of ILSAC standard.</p> </div> </div>	<p>0W-20 (synthetic oil)</p>

General Description

LUBRICATION

C: CAUTION

- Prior to starting work, pay special attention to the following:
 1. Always wear work clothes, a work cap, and protective shoes. Additionally, wear a helmet, protective goggles, etc. if necessary.
 2. Protect the vehicle using a seat cover, fender cover, etc.
 3. Prepare the service tools, clean cloth, containers to catch grease and oil, etc.
- Prepare a container and cloth when performing work which oil possibly spills. If oil spills, wipe it off immediately to prevent from penetrating into floor or flowing out for environmental protection.
- Vehicle components are extremely hot immediately after driving. Be wary of receiving burns from heated parts.
- When performing a repair, identify the cause of trouble and avoid unnecessary removal, disassembly and replacement.
- Before disconnecting connectors of sensors or units, be sure to disconnect the ground cable from battery.
- Always use the jack-up point when the shop jacks or rigid racks are used to support the vehicle.
- Remove contamination including dirt and corrosion before removal, installation, disassembly or assembly.
- Keep the removed parts in order and protect them from dust and dirt.
- All removed parts, if to be reused, should be reinstalled in the original positions with attention to the correct directions, etc.
- Bolts, nuts and washers should be replaced with new parts as required.
- Be sure to tighten the fasteners including bolts and nuts to the specified torque.
- If the engine oil is spilt over exhaust pipe or the under cover, wipe it off with cloth to avoid emitting smoke or causing a fire.
- Follow all government and local regulations concerning disposal of refuse when disposing of oil.
- Always use new application oil during work.

D: PREPARATION TOOL

1. SPECIAL TOOL

ILLUSTRATION	TOOL NUMBER	DESCRIPTION	REMARKS
 <p style="text-align: center;">ST18332AA000</p>	18332AA000	OIL FILTER WRENCH	Used for removing and installing oil filter (black). (Outer diameter: 68 mm (2.68 in))
 <p style="text-align: center;">STSSM4</p>	—	SUBARU SELECT MONITOR 4	Used for setting of each function and troubleshooting for electrical system. NOTE: For detailed operation procedures of Subaru Select Monitor 4, refer to "Application help".

2. GENERAL TOOL

TOOL NAME	REMARKS
Oil filter wrench (65/67 mm 14 Flutes)	Used for removing and installing oil filter (blue). (Outer diameter: 67.4 mm (2.65 in))
Circuit tester	Used for measuring resistance, voltage and current.
DST-i	Used together with Subaru Select Monitor 4.
TORX® bit T45	Used for removing and installing oil pan upper.

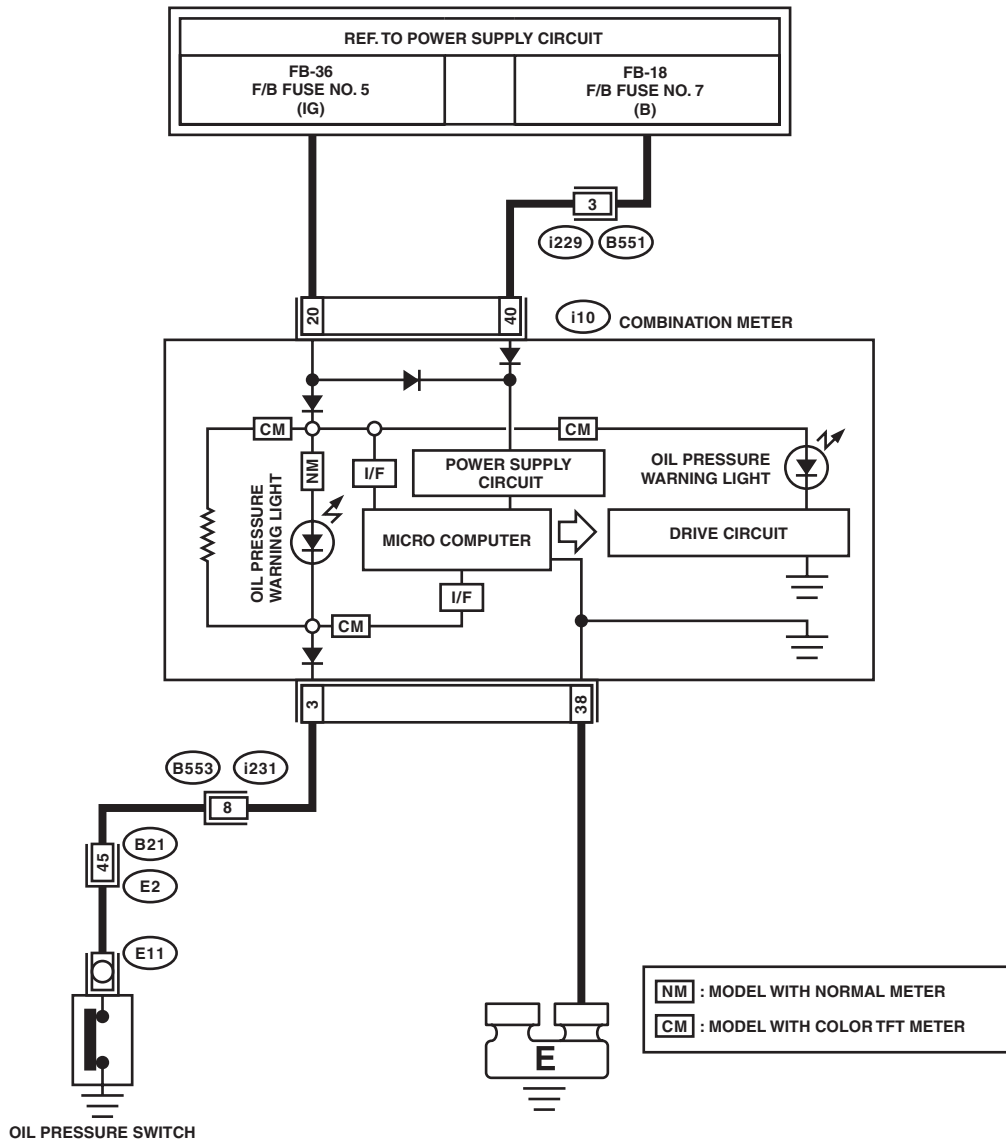

Oil Pressure System

LUBRICATION

2. Oil Pressure System

A: WIRING DIAGRAM

Oil pressure warning system <Ref. to WI-180, WIRING DIAGRAM, Oil Pressure Warning Light System.>

LU-03372

B: INSPECTION

Step	Check	Yes	No
1 CHECK ENGINE OIL AMOUNT.	Is the engine oil amount normal? <Ref. to LU(H4DO)-10, INSPECTION, Engine Oil.>	Go to step 2.	Adjust the engine oil amount. <Ref. to LU(H4DO)-10, INSPECTION, Engine Oil.> After the operation is complete, go to the next step. Go to step 2.
2 CHECK DTC.	Is DTC for engine displayed? <Ref. to EN(H4DO)(diag)-49, Read Diagnostic Trouble Code (DTC).>	Check the appropriate DTC using the "List of Diagnostic Trouble Code (DTC)". <Ref. to EN(H4DO)(diag)-96, List of Diagnostic Trouble Code (DTC).>	Go to step 3.
3 CHECK POWER SUPPLY TO OIL PRESSURE SWITCH. 1) Turn the ignition switch to OFF. 2) Disconnect the terminal from oil pressure switch. 3) Turn the ignition switch to ON (engine OFF). 4) Measure the voltage of harness between oil pressure switch harness terminal and chassis ground. Terminals (E11) No. 1 (+) — Chassis ground (-):	Is the voltage 10 V or more?	Replace the oil pressure switch. <Ref. to LU(H4DO)-21, Oil Pressure Switch.>	Go to step 4.
4 CHECK COMBINATION METER. Perform the self-diagnosis of combination meter to check if there are any faults in the combination meter. <Ref. to IDI-7, OPERATION, Combination Meter System.>	Is combination meter OK?	Repair the harness and connector. NOTE: In this case, repair the following item: <ul style="list-style-type: none"> • Open circuit or short circuit of harness between combination meter and oil pressure switch • Poor contact of combination meter connector • Poor contact of coupling connector 	Repair or replace the combination meter. <Ref. to IDI-11, INSPECTION, Combination Meter System.>

Engine Oil

LUBRICATION

3. Engine Oil

A: INSPECTION

CAUTION:

If the engine oil is spilt over exhaust pipe or the under cover, wipe it off with cloth to avoid emitting smoke or causing a fire.

- 1) Park the vehicle on a level surface.
- 2) Turn the ignition switch to OFF.
- 3) Remove the oil level gauge and wipe away the oil.
- 4) Reinsert the oil level gauge all the way. Be sure that the oil level gauge is correctly inserted and properly orientated.
- 5) Pull out the oil level gauge again, and check both sides of the oil level gauge. Use a lower side to determine the engine oil level. If the engine oil level is below "L" line, check for oil leakage from engine and add oil to bring the level up to "F" line.
- 6) Start the engine to circulate the oil in engine.
- 7) After turning off the engine (ignition OFF), wait a few minutes for the oil to return to the oil pan before checking the level.

NOTE:

- To prevent overfilling of engine oil, do not add oil above "F" line when the engine is cold.
- As the oil level gauge is used for daily maintenance, "F" line and "L" line is set assuming that the engine is cold.

(A) Oil level gauge
(D) "L" line

(B) Oil filler cap
(E) Approx. 1.0 L (1.1 US qt, 0.9 Imp qt)

(C) "F" line

B: REPLACEMENT

CAUTION:

If the engine oil is spilled over exhaust pipe or the under cover, wipe it off with cloth to avoid emitting smoke or causing a fire.

- 1) Turn the ignition switch to OFF.
- 2) Open the oil filler cap for quick draining of engine oil.
- 3) Lift up the vehicle.
- 4) Drain engine oil by loosening the drain plug.

NOTE:

Prepare the container for draining of engine oil.

- 5) After draining the engine oil, tighten the engine oil drain plug.

NOTE:

Use a new drain plug gasket.

Tightening torque:

41.7 N·m (4.3 kgf·m, 30.8 ft·lb)

- 6) Lower the vehicle.

Engine Oil

LUBRICATION

7) Select engine oil of adequate quality and viscosity and fill it through the chain cover to the “F” line on the oil level gauge. Make sure that the vehicle is parked on a level surface when checking oil level.

Recommended oil:

Refer to “SPECIFICATION” for recommended oil. <Ref. to LU(H4DO)-2, SPECIFICATION, General Description.>

Engine oil capacity:

Refer to “SPECIFICATION” for engine oil capacity. <Ref. to LU(H4DO)-2, SPECIFICATION, General Description.>

8) Close the oil filler cap.

9) Start the engine to circulate the oil in engine.

10) Stop the engine (ignition OFF) and pull out the oil level gauge again, and check both sides of the oil level gauge. Use a lower side to check the engine oil level. If necessary, add engine oil up to the “F” line on oil level gauge.

(A) Oil level gauge
(D) “L” line

(B) Oil filler cap
(E) Approx. 1.0 L (1.1 US qt, 0.9 Imp qt)

(C) “F” line

4. Oil Pump

A: SPECIFICATION

The oil pump cannot be disassembled.

Refer to "Chain Cover" for removal and installation procedures. <Ref. to ME(H4DO)-98, REMOVAL, Chain Cover.> <Ref. to ME(H4DO)-104, INSTALLATION, Chain Cover.>

Oil Pan

LUBRICATION

5. Oil Pan

A: REMOVAL

1. OIL PAN

- 1) Disconnect the ground cable from battery. <Ref. to NT-6, BATTERY, NOTE, Note.>
- 2) Lift up the vehicle.
- 3) Remove the under cover. <Ref. to EI-22, REMOVAL, Front Under Cover.>
- 4) Drain the engine oil. <Ref. to LU(H4DO)-11, REPLACEMENT, Engine Oil.>
- 5) Remove the front exhaust pipe. <Ref. to EX(H4DO)-5, REMOVAL, Front Exhaust Pipe.>
- 6) Remove the bolts which secure oil pan to oil pan upper.

- 7) Insert an oil pan cutter blade into the gap between oil pan upper and oil pan, and remove the oil pan.

CAUTION:

Do not use a screwdriver or similar tool in place of oil pan cutter.

- 8) Remove the liquid gasket from the oil pan and the oil pan upper.

2. OIL PAN UPPER

- 1) Remove the engine from the vehicle. <Ref. to ME(H4DO)-47, REMOVAL, Engine Assembly.>
- 2) Remove the water pump. <Ref. to CO(H4DO)-16, REMOVAL, Water Pump.>
- 3) Remove the thermostat cover. <Ref. to CO(H4DO)-41, REMOVAL, Thermostat.>
- 4) Remove the water pipe assembly. <Ref. to CO(H4DO)-20, REMOVAL, Water Pipe Assembly.>
- 5) Remove the chain cover. <Ref. to ME(H4DO)-98, REMOVAL, Chain Cover.>
- 6) Remove the oil pan. <Ref. to LU(H4DO)-14, OIL PAN, REMOVAL, Oil Pan.>
- 7) Remove the oil level switch. <Ref. to LU(H4DO)-27, REMOVAL, Oil Level Switch.>
- 8) Remove the bolts which secure oil pan upper to cylinder block, and remove the oil pan upper.

NOTE:

Remove the bolt (a) shown in the figure using TORX® bit T45.

LU-10114

- 9) Remove the baffle plate from the oil pan upper.
- 10) Remove the oil strainer from the oil pan upper.
- 11) Remove stud bolts from the oil pan upper.
- 12) Remove the O-ring from the cylinder block.
- 13) Remove the clutch housing cover from the oil pan upper. (MT model)

LU-10091

- | | | |
|-------------------------------------|------------------|------------------|
| (A) Oil pan upper | (B) O-ring | (C) Baffle plate |
| (D) Stud bolt | (E) Oil strainer | (F) O-ring |
| (G) Clutch housing cover (MT model) | | |

- 14) Remove the liquid gasket from oil pan upper and cylinder block.

Oil Pan

LUBRICATION

B: INSTALLATION

1. OIL PAN

1) Apply liquid gasket to the mating surface of the oil pan upper as shown in the figure, and install the oil pan.

NOTE:

- Before applying liquid gasket, degrease the old liquid gasket seal surface of the oil pan and the oil pan upper.
- Use a new oil pan seal ring.
- Install within 5 min. after applying liquid gasket.

Liquid gasket:

THREE BOND 1217G (Part No. K0877Y0100), THREE BOND 1217H or equivalent

Liquid gasket applying diameter:

5 ± 1 mm (0.1969 \pm 0.0394 in)

(A) 7.5 mm (0.295 in)

2) Tighten the bolts to install the oil pan to the oil pan upper in the numerical order.

Tightening torque:

6.4 N·m (0.7 kgf·m, 4.7 ft·lb)

- 3) Install the front exhaust pipe. <Ref. to EX(H4DO)-7, INSTALLATION, Front Exhaust Pipe.>
- 4) Install the under cover. <Ref. to EI-22, INSTALLATION, Front Under Cover.>
- 5) Lower the vehicle.
- 6) Connect the battery ground terminal. <Ref. to NT-6, BATTERY, NOTE, Note.>
- 7) Refill the engine oil. <Ref. to LU(H4DO)-11, REPLACEMENT, Engine Oil.>

Oil Pan

LUBRICATION

2. OIL PAN UPPER

- 1) Attach the clutch housing cover to the oil pan upper. (MT model)
- 2) Install the O-ring to the cylinder block.

NOTE:

Use new O-rings.

- 3) Attach the stud bolts to the oil pan upper.
- 4) Attach the oil strainer to the oil pan upper.

NOTE:

Use new O-rings.

- 5) Attach the baffle plate to the oil pan upper.

Tightening torque:

T1: 5 N·m (0.5 kgf-m, 3.7 ft-lb)

T2: 6.4 N·m (0.7 kgf-m, 4.7 ft-lb)

T3: 10 N·m (1.0 kgf-m, 7.4 ft-lb)

- | | | |
|-------------------------------------|------------------|------------------|
| (A) Oil pan upper | (B) O-ring | (C) Baffle plate |
| (D) Stud bolt | (E) Oil strainer | (F) O-ring |
| (G) Clutch housing cover (MT model) | | |

6) Apply liquid gasket to the mating surface of the oil pan upper as shown in the figure, and install the oil pan upper to the cylinder block.

NOTE:

- Before applying liquid gasket, degrease the old liquid gasket seal surface of the oil pan upper and the cylinder block.
- Install within 5 min. after applying liquid gasket.
- Apply liquid gasket 1.5 mm (0.0591 in) outside from the chamfer surface. However, application of liquid gasket on the chamfer surface around the bolt hole is allowed.

Liquid gasket:

THREE BOND 1217G (Part No. K0877Y0100), THREE BOND 1217H or equivalent

Liquid gasket applying diameter:

5±1 mm (0.1969±0.0394 in)

(A) Chamfer surface

(B) 1.5 mm (0.0591 in)

Oil Pan

LUBRICATION

7) Tighten the bolts to secure the oil pan upper to the cylinder block in the numerical order.

NOTE:

- Install the bolt (a) shown in the figure using TORX® bit T45.
- After tightening, if the liquid gasket is squeezed out onto the seal surface of the chain cover, completely remove any squeezed-out liquid gasket.

Tightening torque:

18 N·m (1.8 kgf·m, 13.3 ft·lb)

8) Install the oil level switch. <Ref. to LU(H4DO)-37, INSTALLATION, Oil Level Switch.>

9) Install the oil pan. <Ref. to LU(H4DO)-16, OIL PAN, INSTALLATION, Oil Pan.>

10) Install the chain cover. <Ref. to ME(H4DO)-104, INSTALLATION, Chain Cover.>

11) Install the water pipe assembly. <Ref. to CO(H4DO)-31, INSTALLATION, Water Pipe Assembly.>

12) Install the thermostat cover. <Ref. to CO(H4DO)-46, INSTALLATION, Thermostat.>

13) Install the water pump. <Ref. to CO(H4DO)-18, INSTALLATION, Water Pump.>

14) Install the engine to the vehicle. <Ref. to ME(H4DO)-64, INSTALLATION, Engine Assembly.>

15) Refill the engine oil. <Ref. to LU(H4DO)-11, REPLACEMENT, Engine Oil.>

C: INSPECTION

Check that the oil pan, oil pan upper, oil strainer and baffle plate do not have deformation, cracks or damage.

6. Oil Pressure Switch

A: REMOVAL

CAUTION:

If the engine oil is spilt over exhaust pipe or the under cover, wipe it off with cloth to avoid emitting smoke or causing a fire.

- 1) Disconnect the ground cable from battery. <Ref. to NT-6, BATTERY, NOTE, Note.>
- 2) Remove the rubber cap.

- 3) Disconnect the terminal from oil pressure switch.

Oil Pressure Switch

LUBRICATION

4) Remove the oil pressure switch.

CAUTION:

Catch the engine oil using cloth to prevent it from splashing.

B: INSTALLATION

1) Apply liquid gasket to the oil pressure switch threads.

Liquid gasket:

THREE BOND 1324 (Part No. 004403042) or equivalent

2) Install the oil pressure switch to the chain cover.

Tightening torque:

18 N·m (1.8 kgf-m, 13.3 ft-lb)

LU-03235

3) Connect the terminal to the oil pressure switch.

NOTE:

The oil pressure switch harness must be tightened within the range of a 90° angle as shown below.

Tightening torque:

1.5 N·m (0.2 kgf-m, 1.1 ft-lb)

LU-03137

(A) Upper side of the engine

Oil Pressure Switch

LUBRICATION

4) Attach the rubber cap.

5) Connect the battery ground terminal. <Ref. to NT-6, BATTERY, NOTE, Note.>

C: INSPECTION

- 1) Check that the oil pressure switch does not have deformation, cracks or damage.
- 2) Check that there are no oil leaks or oil oozing from the oil pressure switch installation portion.

7. Engine Oil Filter

A: REMOVAL

CAUTION:

If the engine oil is spilt over exhaust pipe or the under cover, wipe it off with cloth to avoid emitting smoke or causing a fire.

1. OIL FILTER

- 1) Turn the ignition switch to OFF.
- 2) Remove the oil filter.

NOTE:

Clean off water or dust from the oil element mating surface using air.

- Oil filter (black)

Remove the oil filter using ST.

ST 18332AA000 OIL FILTER WRENCH (outer diameter: 68 mm (2.68 in) for oil filter)

- Oil filter (blue)

Remove using a general tool (65/67 mm 14 Flutes).

LU-03290

Engine Oil Filter

LUBRICATION

2. OIL PUMP UNION

- 1) Remove the oil filter. <Ref. to LU(H4DO)-25, OIL FILTER, REMOVAL, Engine Oil Filter.>
- 2) Remove the oil pump union from the chain cover.

B: INSTALLATION

1. OIL FILTER

CAUTION:

Do not tighten excessively, or oil may leak.

- 1) Clean the oil filter installation surface.
- 2) Obtain a new oil filter and apply a thin coat of engine oil to the seal rubber.
- 3) Install the oil filter by turning it by hand, being careful not to damage the seal rubber of the oil filter.
 - Tighten the oil filter (black) with an outer diameter of 68 mm (2.68 in) (approx. 1 rotation) after the seal rubber of the oil filter comes in contact with chain cover. When using a torque wrench, tighten to 14 N·m (1.4 kgf·m, 10.3 ft·lb).
 - Tighten the oil filter (blue) with an outer diameter of 67.4 mm (2.65 in) (approx. 7/8 rotation) after the seal rubber of the oil filter comes in contact with chain cover. When using a torque wrench, tighten to 12 N·m (1.2 kgf·m, 8.9 ft·lb).
- 4) After installing, check the engine oil level and replenish it if necessary. <Ref. to LU(H4DO)-10, INSPECTION, Engine Oil.>

2. OIL PUMP UNION

Install in the reverse order of removal.

Tightening torque:

45 N·m (4.6 kgf·m, 33.2 ft·lb)

C: INSPECTION

- 1) After installing the oil filter, run the engine and check for oil leakage.

NOTE:

The filter element and filter case are permanently jointed; therefore, interior cleaning is not necessary.

- 2) Check the engine oil level. <Ref. to LU(H4DO)-10, INSPECTION, Engine Oil.>

8. Oil Level Switch

A: REMOVAL

1) Open the front hood, and make alignment marks (A) on the front hood striker and the front hood using a marker pen.

2) Remove the front hood striker from the front hood.

Oil Level Switch

LUBRICATION

3) Change the front hood stay position from (A) to (B), and completely open the front hood.

4) Disconnect the ground cable from battery. <Ref. to NT-6, BATTERY, NOTE, Note.>

5) Remove the V-belt covers.

Oil Level Switch

LUBRICATION

- 6) Remove the air intake duct. <Ref. to IN(H4DO)-13, REMOVAL, Air Intake Duct.>
- 7) Remove the clip (A) from the air intake boot.
- 8) Loosen the clamp (B) securing the air cleaner case (rear) to the air intake boot.
- 9) Loosen the clamp (C) which secures the throttle body to the air intake boot.

- 10) Remove the air intake boot from the throttle body, and place the air intake boot aside so that it does not interfere with the work.

Oil Level Switch

LUBRICATION

- 11) Disconnect the connector from the mass air flow and intake air temperature sensor, and remove the clip (A) which holds the mass air flow and intake air temperature sensor harness.

- 12) Remove the air cleaner case (rear).

- 13) Remove the clip holding the air breather hose to the engine rear hanger. (MT model)

- 14) Lift up the vehicle.
15) Remove the under cover. <Ref. to EI-22, REMOVAL, Front Under Cover.>
16) Drain the engine oil. <Ref. to LU(H4DO)-11, REPLACEMENT, Engine Oil.>
17) Remove the front exhaust pipe. <Ref. to EX(H4DO)-5, REMOVAL, Front Exhaust Pipe.>
18) Disconnect the oil level switch connector from the engine harness, and remove the clip (A) securing the harness.

Oil Level Switch

LUBRICATION

19) Remove the nuts which secure the engine mounting to the front crossmember. (CVT model)

20) Remove the nuts which secure the engine mounting to the front crossmember. (MT model)

Oil Level Switch

LUBRICATION

- 21) Remove the electric power steering gearbox. <Ref. to PS-22, REMOVAL, Electric Power Steering Gearbox.>
- 22) Remove the front drive shaft LH. <Ref. to DS-52, REMOVAL, Front Drive Shaft.>
- 23) Lower the vehicle.
- 24) Disconnect the bulkhead harness connector from the transmission harness connector (A) and the inhibitor harness connector (B), and disconnect the transmission radio ground terminal (C) from the vehicle body. (CVT model)

- 25) Remove the pitching stopper.

Oil Level Switch

LUBRICATION

26) Remove the transmission cover. (CVT model)

27) Remove the bolt which holds the transmission harness stay. (CVT model)

28) Remove the bolt which holds the transmission harness to the control valve body, and turn the transmission harness clockwise till the bolt hole can be seen as shown in the figure, and tighten the bolt to temporary lock the harness. (CVT model)

NOTE:

This procedure is required to prevent the transmission harness from touching the vehicle body during engine removal/installation.

29) Lift up the engine with a lifting device and wire ropes.

CAUTION:

When lifting up the engine, pay attention to the clearance of each part and be careful not to lift the engine too much, in order to prevent damaging the vehicle.

Oil Level Switch

LUBRICATION

30) Remove the engine mounting LH from the engine.

(A) Front side

(B) Rear side

31) Remove clip (A) from the oil pan upper, and remove the oil level switch.

B: INSTALLATION

1) Install the oil level switch and the clip (A) to the oil pan upper.

NOTE:

- Use new O-rings.
- Apply a coat of engine oil to the O-rings.

Tightening torque:

6.4 N·m (0.7 kgf·m, 4.7 ft·lb)

2) Install the engine mounting LH onto the engine.

Tightening torque:

35 N·m (3.6 kgf·m, 25.8 ft·lb)

(A) Front side

(B) Rear side

Oil Level Switch

LUBRICATION

- 3) Lower the engine and remove the lifting device and wire ropes.

- 4) Remove the bolt and turn the transmission harness counterclockwise to install the transmission harness to the control valve body. (CVT model)

Tightening torque:

7 N·m (0.7 kgf-m, 5.2 ft-lb)

5) Install the bolt which holds the transmission harness stay. (CVT model)

Tightening torque:

7 N·m (0.7 kgf·m, 5.2 ft·lb)

6) Install the transmission case cover. (CVT model)

Tightening torque:

8 N·m (0.8 kgf·m, 5.9 ft·lb)

Oil Level Switch

LUBRICATION

7) Install the pitching stopper.

Tightening torque:

T1: 50 N·m (5.1 kgf·m, 36.9 ft·lb)

T2: 58 N·m (5.9 kgf·m, 42.8 ft·lb)

8) Connect the transmission radio ground terminal (C) to the vehicle body, and connect the bulkhead harness connector (A) and the inhibitor harness connector (B). (CVT model)

Tightening torque:

13 N·m (1.3 kgf·m, 9.6 ft·lb)

9) Install the electric power steering gearbox. <Ref. to PS-25, INSTALLATION, Electric Power Steering Gearbox.>

10) Install the front drive shaft LH. <Ref. to DS-53, INSTALLATION, Front Drive Shaft.>

11) Install the nuts which hold the engine mounting to the front crossmember. (CVT model)

NOTE:

- Make sure that locators (A) of the engine mounting are securely inserted.
- Use a new nut.

Tightening torque:

60 N·m (6.1 kgf-m, 44.3 ft-lb)

12) Install the nuts which hold the engine mounting to the front crossmember. (MT model)

NOTE:

Use a new nut.

Tightening torque:

60 N·m (6.1 kgf-m, 44.3 ft-lb)

Oil Level Switch

LUBRICATION

- 13) Connect the connector of oil level switch to the engine harness, and install the clip (A) securing the harness.

- 14) Install the front exhaust pipe. <Ref. to EX(H4DO)-7, INSTALLATION, Front Exhaust Pipe.>
- 15) Install the under cover.
- 16) Lower the vehicle.
- 17) Secure the air breather hose to the engine rear hanger using clip. (MT model)

18) Install the air intake case (rear).

ME-05843

19) Install the clip (A) which secures the air flow and intake air temperature sensor harness, and connect the connector to the air flow and intake air temperature sensor.

ME-05842

Oil Level Switch

LUBRICATION

- 20) Install the air intake boot. <Ref. to IN(H4DO)-12, INSTALLATION, Air Intake Boot.>
- 21) Install the air intake duct. <Ref. to IN(H4DO)-13, INSTALLATION, Air Intake Duct.>
- 22) Install the V-belt cover.

Tightening torque:

7 N·m (0.7 kgf·m, 5.2 ft·lb)

- 23) Refill the engine oil. <Ref. to LU(H4DO)-11, REPLACEMENT, Engine Oil.>
- 24) Connect the battery ground terminal. <Ref. to NT-6, BATTERY, NOTE, Note.>
- 25) Change the front hood stay position from (B) to (A).

Oil Level Switch

LUBRICATION

26) Install the front hood striker to the front hood by aligning the alignment marks (A), and close the front hood.

Tightening torque:

33 N·m (3.4 kgf·m, 24.3 ft·lb)

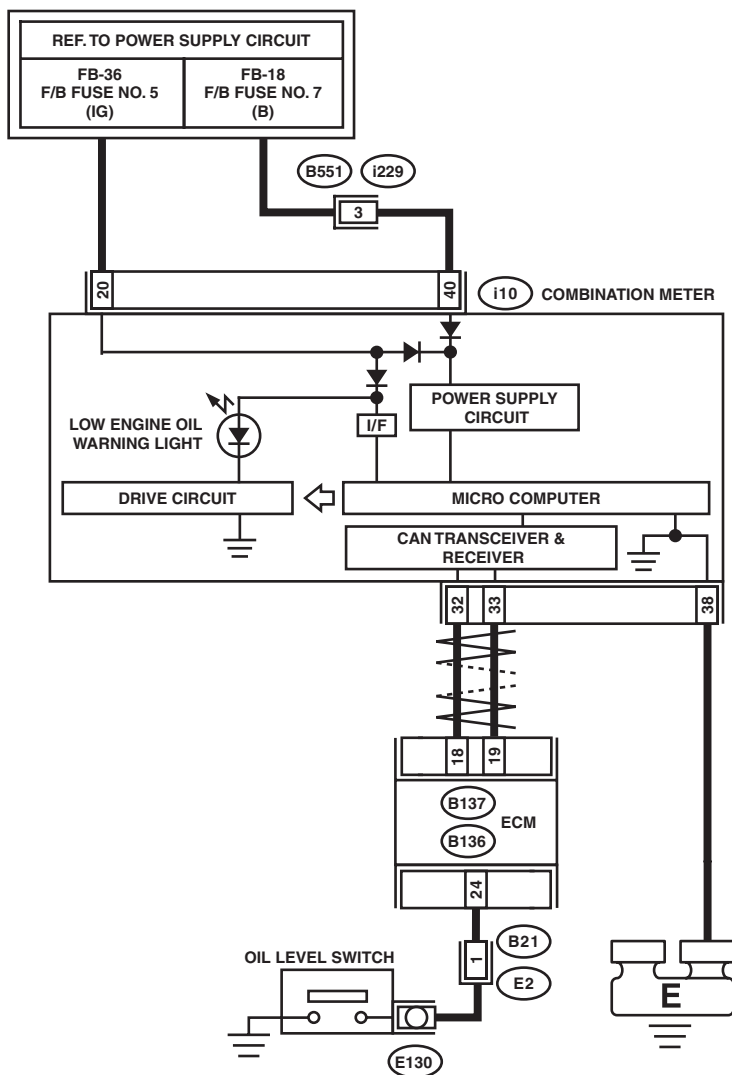

Oil Level Switch

LUBRICATION

LU-03374

D: INSPECTION

1. INSPECTION WHEN LOW ENGINE OIL WARNING LIGHT IS ILLUMINATED

Step	Check	Yes	No
1	CHECK ENGINE OIL LEVEL.	Go to step 2.	Replace engine oil or refill, and check again while the oil level is normal condition. <Ref. to LU(H4DO)-11, REPLACEMENT, Engine Oil.> To turn off the low engine oil warning light, install the spare fuse at the delivery (test) mode fuse in the main fuse box. Then turn the ignition switch to ON (engine off) again, to confirm the low engine oil warning light turns off. Remove the spare fuse installed to finish. NOTE: The engine oil level switch is normal if the low engine oil warning light turns off with the delivery (test) mode fuse inserted.
2	CHECK LAN SYSTEM.	Perform the diagnosis according to DTC.	Go to step 3.

Oil Level Switch

LUBRICATION

Step	Check	Yes	No
3 CHECK OIL LEVEL SWITCH CIRCUIT. 1) Turn the ignition switch to ON (engine OFF). 2) Read the current data for engine in the Subaru Select Monitor to confirm the item for "Oil level switch". <Ref. to EN(H4DO)(diag)-36, DISPLAY ENGINE CURRENT DATA, OPERATION, Subaru Select Monitor.>	Is the "Oil level switch" signal displayed in Subaru Select Monitor HIGH?	To turn off the low engine oil warning light, install the spare fuse at the delivery (test) mode fuse in the main fuse box. Then turn the ignition switch to ON (engine off) again, to confirm the low engine oil warning light turns off. Remove the spare fuse installed to finish. NOTE: The engine oil level switch is normal if the low engine oil warning light turns off with the delivery (test) mode fuse inserted.	Go to step 4.
4 CHECK COMBINATION METER. Perform the self-diagnosis of combination meter to check if there are any faults in the combination meter. <Ref. to IDI-7, OPERATION, Combination Meter System.>	Is combination meter OK?	Go to step 5.	Replace the combination meter. <Ref. to IDI-18, REMOVAL, Combination Meter.>
5 CHECK SECURE CONNECTION OF CONNECTOR BETWEEN ENGINE HARNESS AND OIL LEVEL SWITCH.	Is there any insecure connection?	Remedy the connection condition. Then, to turn off the low engine oil warning light, install the spare fuse at the delivery (test) mode fuse in the main fuse box. Then turn the ignition switch to ON (engine off) again, to confirm the low engine oil warning light turns off. Remove the spare fuse installed to finish. NOTE: The engine oil level switch is normal if the low engine oil warning light turns off with the delivery (test) mode fuse inserted.	Go to step 6.

Oil Level Switch

LUBRICATION

Step	Check	Yes	No
<p>6</p> <p>CHECK OIL LEVEL SWITCH.</p> <p>1) Deliberately short circuits by connecting the engine harness connector terminal and chassis ground.</p> <p>2) Turn the ignition switch to ON (engine OFF).</p> <p>3) Read the current data for engine in the Subaru Select Monitor to confirm the item for "Oil level switch". <Ref. to EN(H4DO)(diag)-36, DISPLAY ENGINE CURRENT DATA, OPERATION, Subaru Select Monitor.></p> <p>Connector & terminal (E130) No. 1 — Chassis ground:</p>	<p>Is the "Oil level switch" signal displayed in Subaru Select Monitor HIGH?</p>	<p>Replace the oil level switch. <Ref. to LU(H4DO)-27, REMOVAL, Oil Level Switch.></p>	<p>Go to step 7.</p>
<p>7</p> <p>CHECK SECURE CONNECTION OF CONNECTOR BETWEEN BULKHEAD HARNESS AND ENGINE HARNESS.</p>	<p>Is there any insecure connection?</p>	<p>Remedy the connection condition. Then, to turn off the low engine oil warning light, install the spare fuse at the delivery (test) mode fuse in the main fuse box. Then turn the ignition switch to ON (engine off) again, to confirm the low engine oil warning light turns off. Remove the spare fuse installed to finish.</p> <p>NOTE: The engine oil level switch is normal if the low engine oil warning light turns off with the delivery (test) mode fuse inserted.</p>	<p>Go to step 8.</p>
<p>8</p> <p>CHECK ENGINE HARNESS.</p> <p>1) Disconnect the connector on the oil level switch side for the engine harness.</p> <p>2) Disconnect the connector on the bulkhead harness side for the engine harness.</p> <p>3) Measure the resistance between connector terminals.</p> <p>Connector & terminal (E2) No. 1 — (E130) No. 1:</p>	<p>Is the resistance less than 1 Ω?</p>	<p>Go to step 9.</p>	<p>Repair or replace the open circuit of engine harness.</p>

Oil Level Switch

LUBRICATION

Step	Check	Yes	No
<p>9</p> <p>CHECK SECURE CONNECTION OF CONNECTOR BETWEEN ENGINE CONTROL MODULE (ECM) AND BULKHEAD HARNESS.</p> <p>Remove the glove box lid assembly. <Ref. to EI-56, REMOVAL, Glove Box.></p>	<p>Is there any insecure connection?</p>	<p>Remedy the connection condition. Then, to turn off the low engine oil warning light, install the spare fuse at the delivery (test) mode fuse in the main fuse box. Remove the spare fuse installed to finish.</p> <p>NOTE: The engine oil level switch is normal if the low engine oil warning light turns off with the delivery (test) mode fuse inserted.</p>	<p>Go to step 10.</p>
<p>10</p> <p>CHECK BULKHEAD HARNESS.</p> <p>1) Remove the glove box lid assembly. <Ref. to EI-56, REMOVAL, Glove Box.></p> <p>2) Disconnect the engine control module (ECM) side connector for the bulkhead harness.</p> <p>3) Disconnect the engine harness connectors from the bulkhead harness.</p> <p>4) Measure the resistance between connector terminals.</p> <p>Connector & terminal (B136) No. 24 — (B21) No. 1:</p>	<p>Is the resistance less than 1 Ω?</p>	<p>Replace the engine control module (ECM). <Ref. to FU(H4DO)-98, REMOVAL, Engine Control Module (ECM).></p>	<p>Repair or replace the open circuit of the bulkhead harness.</p>

2. OTHER INSPECTIONS

- 1) Check that the oil level switch does not have deformation, cracks, or damage.
- 2) Check the oil level switch installation part for oil leakage and oil seepage.

9. Engine Lubrication System Trouble in General

A: INSPECTION

Before performing diagnostics, make sure that the engine oil level is correct and no oil leakage exists.

Trouble	Possible cause	Corrective action
Warning light remains ON.	a. Oil pressure switch failure	
	○ Cracked diaphragm or oil leakage within switch	Replace.
	○ Broken spring or seized contacts	Replace.
	b. Low oil pressure	
	○ Clogging of oil filter	Replace.
	○ Malfunction of oil by-pass valve in oil filter	Replace.
	○ Clogged oil passage	Clean.
	○ Excessive tip clearance and side clearance of oil pump rotor	Replace.
	○ Clogged oil strainer or broken pipe	Clean or replace.
	c. No oil pressure	
	○ Insufficient engine oil (degradation, etc.)	Replace.
	○ Broken pipe of oil strainer	Replace.
○ Stuck oil pump rotor	Replace.	
Warning light does not illuminate.	a. Malfunction of combination meter	Replace.
	b. Poor contact of switch contact points	Replace.
	c. Disconnection of wiring	Repair.
Warning light flickers momentarily.	a. Defective terminal contact	Repair.
	b. Defective wiring harness	Repair.
	c. Oil pressure switch failure	
	○ Cracked diaphragm or oil leakage within switch	Replace.
	○ Broken spring or seized contacts	Replace.
	d. Low oil pressure	
	○ Clogging of oil filter	Replace.
	○ Malfunction of oil by-pass valve in oil filter	Replace.
	○ Clogged oil passage	Clean.
	○ Excessive tip clearance and side clearance of oil pump rotor	Replace.
○ Clogged oil strainer or broken pipe	Clean or replace.

| (3) Clip | |

Tightening torque: N·m (kgf·m, ft·lb)

T: 7.5 (0.8, 5.5)

C: CAUTION

- Prior to starting work, pay special attention to the following:
 1. Always wear work clothes, a work cap, and protective shoes. Additionally, wear a helmet, protective goggles, etc. if necessary.
 2. Protect the vehicle using a seat cover, fender cover, etc.
 3. Prepare the service tools, clean cloth, containers to catch grease and oil, etc.
- Vehicle components are extremely hot immediately after driving. Be wary of receiving burns from heated parts.
- When performing a repair, identify the cause of trouble and avoid unnecessary removal, disassembly and replacement.
- Before disconnecting connectors of sensors or units, be sure to disconnect the ground cable from battery.
- Always use the jack-up point when the shop jacks or rigid racks are used to support the vehicle.
- Remove contamination including dirt and corrosion before removal, installation, disassembly or assembly.
- Keep the removed parts in order and protect them from dust and dirt.
- All removed parts, if to be reused, should be reinstalled in the original positions with attention to the correct directions, etc.
- Bolts, nuts and washers should be replaced with new parts as required.
- Be sure to tighten the fasteners including bolts and nuts to the specified torque.

Accelerator Pedal

SPEED CONTROL SYSTEMS

2. Accelerator Pedal

A: REMOVAL

- 1) Disconnect the ground cable from battery. <Ref. to NT-6, BATTERY, NOTE, Note.>
- 2) Disconnect the connector (A).
- 3) Remove the nut (B) securing accelerator pedal assembly, and remove the accelerator pedal assembly.

SP-02106

B: INSTALLATION

Install in the reverse order of removal.

Tightening torque:

7.5 N·m (0.8 kgf-m, 5.5 ft-lb)

C: DISASSEMBLY

NOTE:

The accelerator pedal cannot be disassembled.

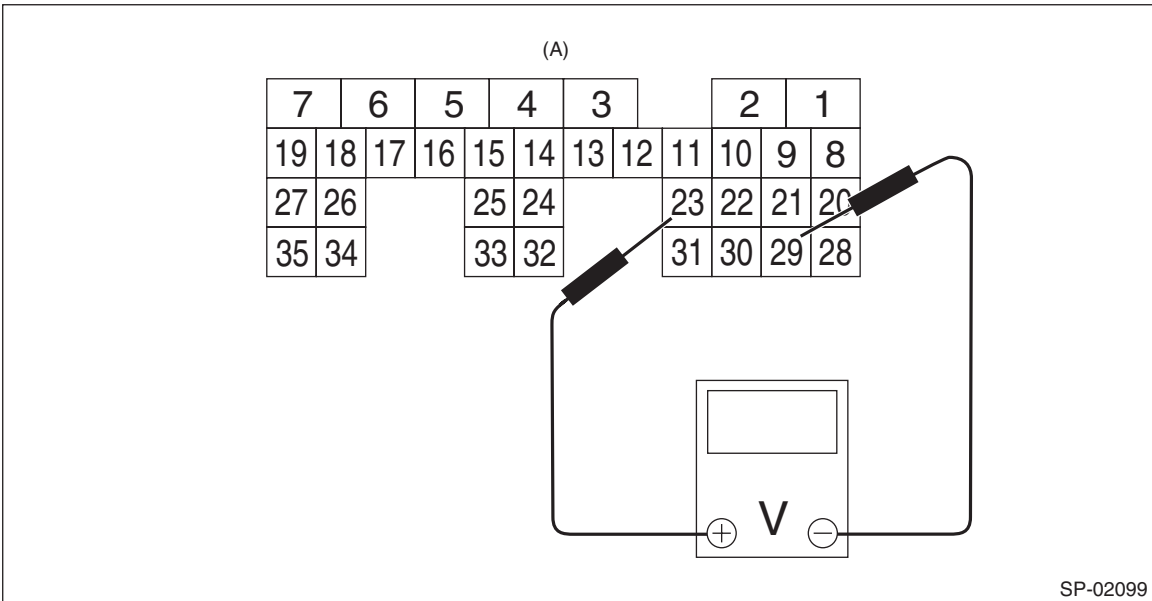

D: INSPECTION

1. CHECK ACCELERATOR PEDAL SENSOR AREA (METHOD WITH CIRCUIT TESTER)

- 1) Remove the glove box. <Ref. to EI-56, REMOVAL, Glove Box.>
- 2) Turn the ignition switch to ON. (Engine OFF)
- 3) Measure the voltage between ECM connector terminals.

- Main sensor side

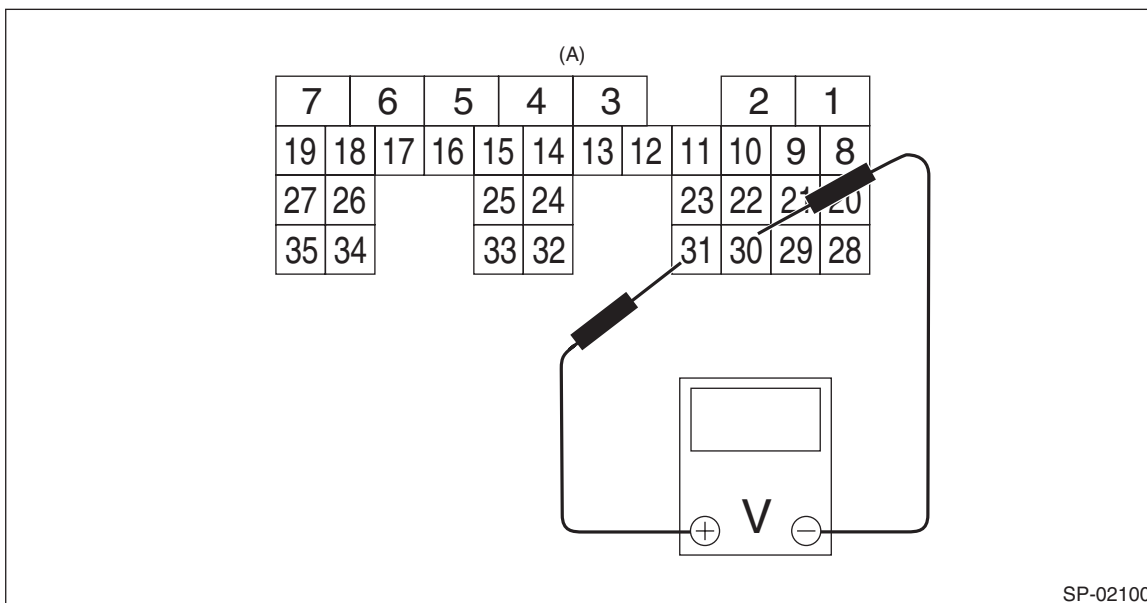

(A) To ECM connector

Accelerator Pedal

SPEED CONTROL SYSTEMS

- Sub sensor side

(A) To ECM connector

Accelerator pedal sensor	Accelerator pedal	Terminal No.	Standard
Main	Not depressed (full closed)	23 (+) and 29 (-)	0.4 — 1.0 V
	Depressed (full opened)		2.4 — 3.7 V
Sub	Not depressed (full closed)	31 (+) and 30 (-)	0.3 — 1.1 V
	Depressed (full opened)		2.3 — 3.8 V

4) After inspection, install the related parts in the reverse order of removal.

2. CHECK ACCELERATOR PEDAL SENSOR AREA (METHOD WITH SUBARU SELECT MONITOR)

1) Turn the ignition switch to ON. (Engine OFF)

2) Read the accelerator pedal opening angle signal and voltage of accelerator pedal sensor using Subaru Select Monitor. <Ref. to EN(H4DO)(diag)-36, DISPLAY ENGINE CURRENT DATA, OPERATION, Subaru Select Monitor.>

Accelerator pedal sensor	Accelerator pedal opening angle signal	Standard
Main	0.0%	0.4 — 1.0 V
	100.0%	2.4 — 3.7 V
Sub	0.0%	0.3 — 1.1 V
	100.0%	2.3 — 3.8 V

3. OTHER INSPECTIONS

- 1) Check that the accelerator pedal does not have deformation, cracks or damage.
- 2) Check for smooth operation when the accelerator pedal is depressed.
- 3) Check if the accelerator pedal returns to its original position smoothly when the pedal is released.

Spark plug	Manufacturer and type	NGK: SILZKAR7B11
	Thread size (diameter, pitch, length)	mm 12, 1.25, 26.5
	Spark plug gap	mm (in) Standard 1.0 — 1.1 (0.039 — 0.043)
	Electrode	Center electrode: Iridium Ground electrode: Platinum

B: COMPONENT

(1) Spark plug

(2) Ignition coil

Tightening torque: N·m (kgf·m, ft·lb)

T1: 8.5 (0.9, 6.3)

T2: 17.5 (1.8, 12.9)

C: CAUTION

- Prior to starting work, pay special attention to the following:
 1. Always wear work clothes, a work cap, and protective shoes. Additionally, wear a helmet, protective goggles, etc. if necessary.
 2. Protect the vehicle using a seat cover, fender cover, etc.
 3. Prepare the service tools, clean cloth, containers to catch grease and oil, etc.
- Vehicle components are extremely hot immediately after driving. Be wary of receiving burns from heated parts.
- When performing a repair, identify the cause of trouble and avoid unnecessary removal, disassembly and replacement.
- Before disconnecting connectors of sensors or units, be sure to disconnect the ground cable from battery.
- Always use the jack-up point when the shop jacks or rigid racks are used to support the vehicle.
- Remove contamination including dirt and corrosion before removal, installation, disassembly or assembly.
- Keep the removed parts in order and protect them from dust and dirt.
- All removed parts, if to be reused, should be reinstalled in the original positions with attention to the correct directions, etc.
- Bolts, nuts and washers should be replaced with new parts as required.
- Be sure to tighten the fasteners including bolts and nuts to the specified torque.

Spark Plug

IGNITION

2. Spark Plug

A: REMOVAL

Spark plug:

Refer to "SPECIFICATION" for spark plug. <Ref. to IG(H4DO)-2, SPECIFICATION, General Description.>

1. RH SIDE

- 1) Disconnect the ground cable from battery. <Ref. to NT-6, BATTERY, NOTE, Note.>
- 2) Remove the air cleaner case. <Ref. to IN(H4DO)-7, REMOVAL, Air Cleaner Case.>
- 3) Disconnect the connector from ignition coil.

NOTE:

While pressing the spring (a) shown in the figure, slide it in the direction of the arrow with a clip remover.

- 4) Remove the ignition coil.

- 5) Remove the spark plug with a spark plug socket.

2. LH SIDE

- 1) Disconnect the ground cable from battery. <Ref. to NT-6, BATTERY, NOTE, Note.>
- 2) Disconnect the connector from ignition coil.

NOTE:

While pressing the spring (a) shown in the figure, slide it in the direction of the arrow with a clip remover.

- 3) Remove the ignition coil.

- 4) Remove the spark plug with a spark plug socket.

Spark Plug

IGNITION

B: INSTALLATION

1. RH SIDE

Install in the reverse order of removal.

CAUTION:

Degrease the ignition coil installation portion and the mounting bolts.

Tightening torque:

Spark plug

17.5 N·m (1.8 kgf-m, 12.9 ft-lb)

Ignition coil

8.5 N·m (0.9 kgf-m, 6.3 ft-lb)

2. LH SIDE

Install in the reverse order of removal.

CAUTION:

Degrease the ignition coil installation portion and the mounting bolts.

Tightening torque:

Spark plug

17.5 N·m (1.8 kgf-m, 12.9 ft-lb)

Ignition coil

8.5 N·m (0.9 kgf-m, 6.3 ft-lb)

C: INSPECTION

1) Check the spark plug for abnormalities. If defective, replace the spark plug.

(A) Terminal damage

(B) Crack or damage in insulator

(C) Damaged gasket

Spark Plug

2) Check the spark plug electrode and condition of the insulator. If abnormal, check and repair the cause and replace the spark plug.

(1) Normal:

Brown to grayish-tan deposits and slight electrode wear indicate correct spark plug heat range.

IG-02135

(2) Carbon fouled:

Dry fluffy carbon deposits on the insulator and electrode are mostly caused by slow-speed driving in town, weak ignition, too rich fuel mixture, etc.

IG-02136

Spark Plug

IGNITION

(3) Oil fouled:

Wet black deposits show oil entrance into combustion chamber through worn piston rings or increased clearance between valve guides and valve stems.

IG-02137

(4) Overheating:

A white or light gray insulator with black or brown spots and bluish burnt electrodes indicate engine overheating, wrong selection of fuel, or loose spark plugs.

IG-02138

Spark Plug

IGNITION

3) Using a nylon brush, etc., clean and remove the carbon or oxide deposits from the spark plug. If deposits are too stubborn, replace the spark plugs. After cleaning the spark plugs, check the spark plug gap "L" using a gap gauge. If it is not within the standard, replace the spark plug.

NOTE:

- Never use a plug cleaner.
- Do not use a metal brush as it may damage the electrode area.

Spark plug gap L:

Standard

1.0 — 1.1 mm (0.039 — 0.043 in)

3. Ignition Coil

A: REMOVAL

Direct ignition type is adopted. Refer to “Spark Plug” for removal procedure. <Ref. to IG(H4DO)-4, REMOVAL, Spark Plug.>

B: INSTALLATION

Direct ignition type is adopted. Refer to “Spark Plug” for the installation procedure. <Ref. to IG(H4DO)-6, INSTALLATION, Spark Plug.>

C: INSPECTION

For inspection procedure, refer to “Diagnostics for Engine Starting Failure”. <Ref. to EN(H4DO)(diag)-88, IGNITION CONTROL SYSTEM, Diagnostics for Engine Starting Failure.>

A: SPECIFICATION

Item		Specifications		
Vehicle model		CVT	MT	
Starter	Type	Reduction type		
	Model	M000T38571	M000T33176	
	Manufacturer	Mitsubishi Electric		
	Voltage and output	12 V — 1.2 kW	12 V — 1.0 kW	
	Direction of rotation	Counterclockwise (when observed from pinion)		
	Number of pinion teeth	9	8	
	Armature commutator runout	Standard	0.05 mm (0.0020 in)	
		Limit	0.10 mm (0.0039 in)	
	Armature depth of segment mold	Standard	0.50 mm (0.020 in)	
	Brush length	Standard	12.3 mm (0.484 in)	
		Limit	7.0 mm (0.276 in)	
	Brush spring force	Standard	15.9 — 19.5 N (1.62 — 1.99 kgf, 3.57 — 4.38 lbf)	
		Limit	2.5 N (0.25 kgf, 0.56 lbf)	
	No-load characteristics	Voltage	11 V	
Current		90 A or less	95 A or less	
Generator	Type	Rotating-field three-phase type, voltage regulator built-in type, each with load response control system		
	Model	A2TX5081		
	Manufacturer	Mitsubishi Electric		
	Voltage and output	12 V — 130 A		
	Polarity on ground side	Negative		
	Direction of rotation	Clockwise (when observed from pulley side)		
	Stator connection	3-phase Δ type		
	Output current	1,500 r/min — 50 A or more 2,500 r/min — 111 A or more 5,000 r/min — 133 A or more		
	Regulated voltage	14.1 — 14.8 V [20°C (68°F)]		
	Rotor slip ring outer diameter	Standard	22.7 mm (0.894 in)	
		Limit	22.1 mm (0.870 in)	
Brush length	Standard	22.5 mm (0.886 in)		
	Limit	5.0 mm (0.197 in)		
Battery	Type	55D23L/75D23L		
	Nominal capacity	5 HR: 40 Ah [25°C (77°F)] (55D23L) / 5 HR: 53 Ah [25°C (77°F)] (75D23L)		
	Nominal voltage	12 V		
	CCA	390 A (55D23L) / 470 A (75D23L)

C: CAUTION

- Prior to starting work, pay special attention to the following:
 1. Always wear work clothes, a work cap, and protective shoes. Additionally, wear a helmet, protective goggles, etc. if necessary.
 2. Protect the vehicle using a seat cover, fender cover, etc.
 3. Prepare the service tools, clean cloth, containers to catch grease and oil, etc.
- Vehicle components are extremely hot immediately after driving. Be wary of receiving burns from heated parts.
- When performing a repair, identify the cause of trouble and avoid unnecessary removal, disassembly and replacement.
- Before disconnecting connectors of sensors or units, be sure to disconnect the ground cable from battery.
- Always use the jack-up point when the shop jacks or rigid racks are used to support the vehicle.
- Remove contamination including dirt and corrosion before removal, installation, disassembly or assembly.
- Keep the removed parts in order and protect them from dust and dirt.
- All removed parts, if to be reused, should be reinstalled in the original positions with attention to the correct directions, etc.
- Bolts, nuts and washers should be replaced with new parts as required.
- Be sure to tighten the fasteners including bolts and nuts to the specified torque.

D: PREPARATION TOOL

1. GENERAL TOOL

TOOL NAME	REMARKS
Circuit tester	Used for measuring resistance, voltage and current. NOTE: <ul style="list-style-type: none"> • For measuring standby current, prepare a circuit tester that can measure by 1 mA unit. • For measuring standby current in the models with keyless access, prepare an analog type circuit tester.

Starter

STARTING/CHARGING SYSTEMS

2. Starter

A: REMOVAL

- 1) Disconnect the ground cable from battery. <Ref. to NT-6, BATTERY, NOTE, Note.>
- 2) Remove the clip (A) from the air intake boot.
- 3) Loosen the clamp (B) securing the air cleaner case (rear) to the air intake boot.
- 4) Loosen the clamp (C) which secures the throttle body to the air intake boot.

- 5) Remove the air intake boot from the throttle body, and place the air intake boot aside so that it does not interfere with the work.

6) Disconnect the connector (B) and terminal (A) from starter.

7) Disconnect the terminal (A) from the cable stay and remove the cable stay and starter from the transmission.

CAUTION:

In order to prevent damaging the terminal (A), fix the terminal (A) when loosening the bolt, and avoid the part from rotating together while loosening the bolt.

NOTE:

For CVT model, a nut is used at (a).

Starter

STARTING/CHARGING SYSTEMS

B: INSTALLATION

Install in the reverse order of removal.

NOTE:

- For CVT model, a nut is used at (a).
- Tighten the starter and cable stay (b) together using the upper bolt securing the starter.

Tightening torque:

T1: 14 N·m (1.4 kgf-m, 10.3 ft-lb)

T2: 50 N·m (5.1 kgf-m, 36.9 ft-lb)

Tightening torque:

10 N·m (1.0 kgf-m, 7.4 ft-lb)

Tightening torque:
3 N·m (0.3 kgf·m, 2.2 ft·lb)

IN-03749

C: DISASSEMBLY

CAUTION:

The starter should be placed through a no-load test whenever it has been overhauled.

1) Disconnect the cable from the magnet switch assembly.

SC-02449

Starter

STARTING/CHARGING SYSTEMS

2) Remove the magnet switch assembly from the starter housing assembly.

3) Remove screws (A) of the brush holder assembly, and through bolts (B) on both sides, and remove the starter cover assembly.

4) Remove the brush holder assembly from the armature assembly.

NOTE:

Hold the brush with your fingers so that the brush spring does not come flying out.

SC-02452

5) Remove the armature assembly and yoke assembly from the starter housing assembly together as a single unit.

SC-02453

Starter

STARTING/CHARGING SYSTEMS

6) Separate the armature assembly and yoke assembly.

SC-02454

7) Remove the pinion gear from the internal gear assembly.

SC-02455

8) Remove seal rubber (A), plate (B), and seal rubber (C).

SC-02456

9) Lightly tap the starter housing assembly with a plastic hammer as shown in the figure, and remove the overrunning clutch, internal gear assembly, shaft and shift lever together as one unit.

SC-02457

Starter

STARTING/CHARGING SYSTEMS

10) Use the following procedures to remove the overrunning clutch from the shaft.

(1) Use an appropriate tool (such as a fit socket wrench), and remove the stopper from snap ring by lightly tapping the stopper with a plastic hammer.

SC-02458

(A) Appropriate tool

(B) Snap ring

(C) Shaft

(D) Stopper

(2) Remove snap ring (A) from the shaft, and remove stopper (B).

SC-02459

(3) Remove the overrunning clutch from the shaft.

11) Separate the internal gear assembly and shaft.

Starter

STARTING/CHARGING SYSTEMS

D: ASSEMBLY

1) Apply grease to the shaft sliding surfaces of the internal gear assembly.

Grease:

Multemp #6129 or equivalent

2) Assemble the shaft to the internal gear assembly.

3) Assemble the overrunning clutch as follows:

(1) Apply grease to the spline portion of the shaft.

Grease:

Multemp #6129 or equivalent

(2) Install the overrunning clutch to shaft.

(3) Pass stopper (B) through the shaft assembly, and attach snap ring (A).

NOTE:

Use new stoppers and snap rings.

(4) Using a press, pressure fit stopper (B) into snap ring (A).

Starter

STARTING/CHARGING SYSTEMS

4) Assemble the overrunning clutch, internal gear assembly, shaft and shift lever as a single unit into the starter housing assembly.

NOTE:

Apply grease to the moving parts of the shift lever.

Grease:

Multemp #6129 or equivalent

5) Apply grease to the inside of the internal gear assembly and pinion gear, and attach the pinion gear to the internal gear assembly.

NOTE:

- Apply grease evenly to the contact surfaces of each gear.
- Be careful that no debris becomes attached.

Grease:

Molykote® AG650 or equivalent

6) Install seal rubber (A), plate (B), and seal rubber (C).

7) Assemble the armature assembly to the yoke assembly.

Starter

STARTING/CHARGING SYSTEMS

8) Attach the armature assembly and yoke assembly to the starter housing assembly together as a single unit.

NOTE:

As shown in the figure, match the protrusion of the yoke assembly to the cut out of the starter housing assembly.

SC-02464

SC-02453

9) Use an appropriate tool (such as correctly sized socket wrenches) and attach the brush holder assembly to the armature assembly.

NOTE:

Be careful not to damage the brushes.

10) Secure starter cover assembly to the brush holder assembly with screws (A).

Tightening torque:

1.4 N·m (0.1 kgf-m, 1.0 ft-lb)

11) Tighten through bolts (B) on both sides.

Tightening torque:

6 N·m (0.6 kgf-m, 4.4 ft-lb)

Starter

STARTING/CHARGING SYSTEMS

12) Attach the magnet switch assembly to the starter housing assembly.

Tightening torque:

7.5 N·m (0.8 kgf·m, 5.5 ft·lb)

13) Attach the cable to the terminal M of the magnet switch assembly, and secure with nuts.

Tightening torque:

10 N·m (1.0 kgf·m, 7.4 ft·lb)

E: INSPECTION

NOTE:

- After the inspection, reinstall the disassembled or removed parts during the inspection in the reverse order of disassembly/removal procedure.
- Refer to component for tightening torque of each part. <Ref. to SC(H4DO)-3, STARTER, COMPONENT, General Description.>

1. ARMATURE

- 1) Check the commutator for signs of seizure or stepped wear caused by roughness of the surface. If there is light wear, use sandpaper to repair.
- 2) Check for runout on the commutator. If excessive, replace the armature.

Commutator runout:

Standard

0.05 mm (0.0020 in)

Limit

0.10 mm (0.0039 in)

(A) Dial gauge

(B) V-block

- 3) Check the depth of the segment mold. If it is not within the standard, replace the armature.

Depth of segment mold:

Standard

0.50 mm (0.020 in)

(A) Depth of mold

(B) Segment

(C) Mold

Starter

STARTING/CHARGING SYSTEMS

4) Place the armature on the growler tester to check for short circuits. While slowly turning the armature, support the steel sheet for the armature core. If the circuit of the armature is shorted, the steel sheet will vibrate, causing it to move towards the core. When the steel sheet has moved or vibrated, replace the armature.

(A) Steel sheet

(B) Growler tester

5) Use a circuit tester to touch the probe of one side to the commutator segment, and the other probe to the shaft. If there is continuity, replace the armature.

SC-02469

2. YOKE

Make sure that the pole is set at the predetermined position.

3. OVERRUNNING CLUTCH

Inspect the pinion, and if there is any wear or damage, replace the overrunning clutch. Also, check that the pinion rotates counterclockwise smoothly and does not rotate clockwise. If there is any fault, replace the overrunning clutch.

CAUTION:

To prevent spilling of grease, do not clean the overrunning clutch with oil.

4. BRUSH AND BRUSH HOLDER

- 1) Visually check the brush. If there is any abnormal wear or cracks, replace the brush.
- 2) Measure the length of the brush. If it exceeds service limits, replace the brush.

Brush length:

Standard

12.3 mm (0.484 in)

Limit

7.0 mm (0.276 in)

(A) Service limit line

(B) Brush

- 3) Check that the brush moves smoothly in the brush holder.
- 4) Measure the brush spring force with a spring scale. Replace the brush holder if below the service limit.

Brush spring force:

Standard

15.9 — 19.5 N (1.62 — 1.99 kgf, 3.57 — 4.38 lbf) (when new)

Limit

2.5 N (0.25 kgf, 0.56 lbf)

Starter

STARTING/CHARGING SYSTEMS

5. SWITCH ASSEMBLY

Using a circuit tester, check there is continuity between S terminal and M terminal, and between S terminal and ground. Also, check that there is no continuity between M terminal and B terminal.

SC-02471

(A) Terminal S

(B) Terminal M

(C) Terminal B

Terminals	Standard
Terminal S — terminal M	1 Ω or less
Terminal S — Ground	1 Ω or less
Terminal M — terminal B	1 M Ω or more

6. SWITCH ASSEMBLY OPERATION

CAUTION:

Perform the inspection in a short period of time. (Within 3 to 5 seconds)

1) Loosen the nut which holds the cable to the M terminal.

NOTE:

This procedure is required to facilitate the cable removal from the M terminal.

SC-10046

2) Connect the battery positive terminal to the switch assembly S terminal, and connect the battery negative terminal to the starter body. Then, if the pinion protrudes, it is normal.

NOTE:

The starter motor may rotate while the pinion protrudes. This occurs due to current that flows to the motor via pull-in coil. This is not a problem.

(A) Terminal S

3) Disconnect the cable from the M terminal. Check that the pinion is being protruded at this time.

CAUTION:

Hold the disconnected cable so that it does not contact the terminal or wiring.

4) Disconnect the battery negative terminal from the starter body. Then, if the pinion returns to its original position, it is normal.

(A) Terminal S

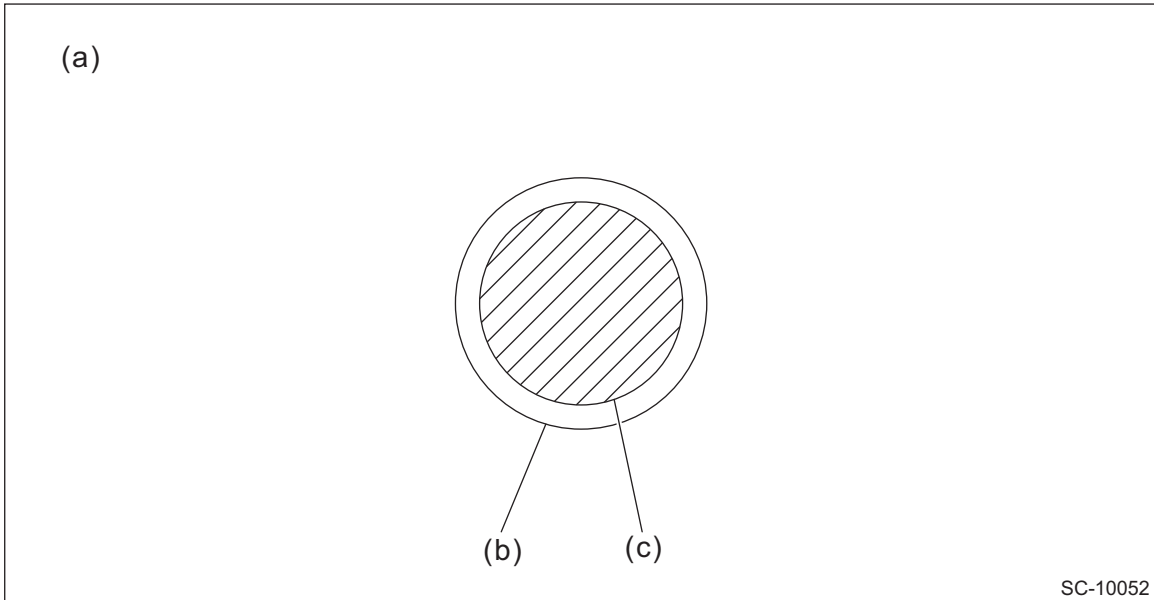

Starter

STARTING/CHARGING SYSTEMS

7. NO-LOAD TEST

CAUTION:

- Use a thick cable due to large current flowing through the cable.
 - It is recommended that the cross-section area of continuity part (shaded part) should be 20 mm^2 (0.00310 sq in) or more for terminal B and ground, and 1.25 mm^2 (0.00194 sq in) or more for terminal S.

(a) Cable cross-section

(b) Cable shield part

(c) Cable continuity part

- It is possible to use a booster cable instead of wiring.
- Be careful not to burn yourself and cause a fire due to heat.
- Perform the no-load test in a short period of time. (Within 3 to 5 seconds)

NOTE:

For no-load test, use the circuit shown in figure.

(A) Terminal S

(D) Magnet switch

(G) Circuit tester

(B) Terminal M

(E) Switch

(C) Terminal B

(F) Circuit tester with clamp-type ammeter

1) Using a vise, secure the starter.

CAUTION:

Be careful not to deform or damage the starter.

2) Turn the switch ON, and check that the pinion protrudes rapidly into the specified position and rotates powerfully without noise.

3) Check the current and voltage after its rotation speed stabilizes.

Current/Voltage

CVT model

90 A or less (approx. 11 V)

MT model

95 A or less (approx. 11 V)

8. OTHER INSPECTIONS

Check that the starter does not have deformation, cracks and any other damage.

Generator

STARTING/CHARGING SYSTEMS

3. Generator

A: REMOVAL

1) Remove the V-belt covers.

2) Disconnect the ground cable from battery. <Ref. to NT-6, BATTERY, NOTE, Note.>

3) Remove the V-belts. <Ref. to ME(H4DO)-83, V-BELT, REMOVAL, V-belt.>

4) Disconnect the connector (A) and terminal (B) from the generator, and remove the clip (C).

5) Remove the V-belt cover bracket.

6) Remove the generator from the generator bracket.

7) Remove the V-belt tensioner assembly. <Ref. to ME(H4DO)-83, V-BELT, REMOVAL, V-belt.>

8) Remove the generator bracket from the engine.

Generator

STARTING/CHARGING SYSTEMS

B: INSTALLATION

1) Temporarily install the generator bracket to the engine and tighten the bolts in the numerical order.

Tightening torque:

36 N·m (3.7 kgf·m, 26.6 ft·lb)

2) Install the V-belt tensioner assembly. <Ref. to ME(H4DO)-86, V-BELT, INSTALLATION, V-belt.>

3) Temporarily install the generator bracket to the generator and tighten the bolts in the numerical order.

Tightening torque:

25 N·m (2.5 kgf·m, 18.4 ft·lb)

- 4) Install the V-belt cover bracket.
- 5) Connect the connector (A) and terminal (B) to the generator, and attach the clip (C).

Tightening torque:

T1: 6.4 N·m (0.7 kgf-m, 4.7 ft-lb)

T2: 15.5 N·m (1.6 kgf-m, 11.4 ft-lb)

- 6) Install the V-belts. <Ref. to ME(H4DO)-86, V-BELT, INSTALLATION, V-belt.>
- 7) Connect the battery ground terminal. <Ref. to NT-6, BATTERY, NOTE, Note.>
- 8) Install the V-belt cover.

Tightening torque:

7 N·m (0.7 kgf-m, 5.2 ft-lb)

Generator

STARTING/CHARGING SYSTEMS

C: DISASSEMBLY

- 1) Remove the cap from the generator.

SC-02885

- 2) Remove four bolts.

SC-02886

Generator

3) Use a drier to heat the rear cover (A) portion to 50 — 60°C (122 — 140°F).

4) Insert a flat tip screwdriver or similar tool wrapped with protective tape into the gap between stator core and the front cover to disassemble.

(A) Flat tip screwdriver

Generator

STARTING/CHARGING SYSTEMS

5) Hold the rotor on a vise and remove the pulley.

CAUTION:

When holding the rotor with a vise, place aluminum plates or wooden pieces on the vise jaws to prevent rotor from damage.

SC-02889

6) Remove the rotor from the front cover.

SC-02890

(A) Pulley

(B) Front cover

(C) Rotor

- 7) Use the following procedures to remove the ball bearings.
- (1) Remove the bolt, and then detach the bearing retainer.

- (2) Firmly attach an appropriate tool (such as a correct size socket wrench) to the bearing inner race.

- (3) Use the press to push the ball bearings out from the front cover.

Generator

STARTING/CHARGING SYSTEMS

8) Using the bearing puller, remove the bearings from the rotor.

9) Remove six bolts which connect the rectifier and stator coil, then remove the stator coil.

10) Remove four screws which secure the IC regulator to the rear cover, then remove the IC regulator.

11) Use the following procedures to remove the brush.

(1) Remove the cover A.

(A) Cover A

Generator

STARTING/CHARGING SYSTEMS

(2) Remove the cover B.

SC-02945

(A) Cover B

(3) Disconnect the connection and remove the brush.

SC-02496

- 12) Remove the rectifier as follows.
(1) Remove the cover on terminal B.

- (2) Remove the nut on terminal B.

Generator

STARTING/CHARGING SYSTEMS

(3) Remove the bolts which secure the rectifier, and remove the rectifier.

D: ASSEMBLY

Assemble in the reverse order of disassembly.

NOTE:

- Refer to component for tightening torque of each part. <Ref. to SC(H4DO)-4, GENERATOR, COMPONENT, General Description.>
- After assembling, manually turn the pulley to check that the rotor rotates smoothly.

1) Assembling the rear cover and rectifier

Remove old silicone grease on the mating surface of rear cover and rectifier and apply new silicone grease.

CAUTION:

Do not apply silicone grease to the attachment threads of rectifier.

2) Push of the brush

Before assembling the front and rear parts, press the brush down into the brush holder, then fix the brush in that position by inserting a [1 mm (0.0394 in) dia., 40 — 50 mm (1.5748 — 1.9685 in) long] wire through the hole as shown in the figure.

CAUTION:

After assembling, remove the wire.

(A) Wire

3) Install the ball bearings.

- (1) Set the ball bearings in the front cover, then securely install an appropriate tool (such as a socket wrench of proper size) to the bearing outer race.
- (2) Using a press to press the ball bearings into the specified location.
- (3) Install the bearing retainer.

4) Install the bearings.

CAUTION:

Do not apply grease to the bearings. If there is any oil on the bearing box, remove it completely.

- (1) Use a press to install the bearings to the rotor shaft.
- (2) Heat the bearing box in rear cover at 50 to 60°C (122 to 140°F), and then press the bearing into rear cover.

Generator

STARTING/CHARGING SYSTEMS

E: INSPECTION

1. DIODE

CAUTION:

There is the possibility of damaging the diodes if a mega-tester (used to measure high voltages) or a similar measuring instrument is used. Never use a mega tester or equivalent for this test.

1) Check for continuity between the diode lead and terminal E or B. If continuity is not as shown in the table, replace the rectifier.

- At analog type tester

Tester lead		Continuity
-lead	+lead	
E	P1, P2, P3, P4, P5, P6	Yes
B		No
P1, P2, P3, P4, P5, P6	E	No
	B	Yes

- At digital type tester

Tester lead		Continuity
-lead	+lead	
E	P1, P2, P3, P4, P5, P6	No
B		Yes
P1, P2, P3, P4, P5, P6	E	Yes
	B	No

2. ROTOR

1) Slip ring surface

Inspect the slip rings for contamination or any roughness on the sliding surface. Repair the slip ring surface using a lathe or sand paper.

2) Slip ring outer diameter

Measure the slip ring outer diameter. Replace the rotor if the slip ring is worn.

Slip ring outer diameter:**Standard****22.7 mm (0.894 in)****Limit****22.1 mm (0.870 in)**

3) Continuity test

Using a circuit tester, check the resistance between slip rings. If the resistance is not within the standard, replace the rotor.

Standard:**Approx. 2.0 — 2.4 Ω** 

4) Insulation test

Check the continuity between slip ring and rotor core or shaft. If there is continuity, replace the rotor because the rotor coil is grounded.

5) Bearing

Check the bearings. If there is any noise, or the rotor does not rotate smoothly, replace the bearings.

Generator

STARTING/CHARGING SYSTEMS

3. STATOR COIL

1) Continuity test

Inspect the continuity between the stator coil terminals. If continuity is not as shown in the table, replace the stator coil.

(A)					
1	2	3	4	5	6
○—○					
○—○—○					
	○—○				
			○—○		
			○—○—○		
				○—○	

SC-02503

(A) Terminals

2) Insulation test

Inspect the continuity between the stator coil stator core and lead wire terminals. If there is continuity, replace the stator coil because the stator coil is grounded.

4. BRUSH

1) Measure the length of each brush. Replace the brush if wear exceeds service limits. There is a service limit mark (A) on each brush.

Brush length:

Standard (1)

22.5 mm (0.886 in)

Limit (2)

5.0 mm (0.197 in)

Generator

STARTING/CHARGING SYSTEMS

2) Check that there is appropriate pressure on the brush spring. Using a spring pressure indicator, push the brush into the brush holder until its tip protrudes 2 mm (0.0787 in). Then measure the pressure of brush spring. If the pressure is 1.7 N (173 gf, 6.11 ozf) or less, replace the brush spring. 4.1 — 5.3 N (418 — 540 gf, 14.75 — 19.06 ozf) pressure is required on the new spring.

SC-02507

5. BALL BEARING

Check the ball bearings. Replace the ball bearings if there is resistance in the rotation, or if there is any abnormal noise.

4. Battery

A: REMOVAL

- 1) Disconnect the positive (+) terminal after disconnecting the negative (-) terminal of battery.
- 2) Remove the battery cable holder from the battery rod.
- 3) Remove the flange nut from battery rod and remove battery holder.

- 4) Remove the battery.

B: INSTALLATION

CAUTION:

After the battery is installed, initial diagnosis of the electronic throttle control is performed. Wait for 10 seconds or more after turning the ignition switch to ON, and then start the engine.

- 1) Install the battery.
- 2) Set the battery holder and install the flange nut to the battery rod.

Tightening torque:

3.5 N·m (0.4 kgf·m, 2.6 ft·lb)

- 3) Install the battery cable holder to the battery rod.

Battery

STARTING/CHARGING SYSTEMS

4) Connect the positive terminal and then connect the negative terminal to the battery.

NOTE:

Clean the battery cable terminals and apply grease to prevent corrosion as necessary.

C: INSPECTION

WARNING:

- As batteries produce flammable gases, be careful not to bring an open flame close to the batteries.
- Ventilate sufficiently when using or charging battery in enclosed space.
- Electrolyte is corrosive acid, and has toxicity; be careful of handling the fluid.
- For safety, in case an explosion does occur, wear eye protection or shield your eyes when working near any battery. In addition, never lean over the battery.
- Be careful that the electrode does not come into contact with skin, eyes or clothing. Especially at contact with eyes, flush with water for 15 minutes and get prompt medical attention.
- Be careful not to let the electrode contact with the coated parts.
- Before starting work, remove rings, metal watch-bands, and other metal jewelry.
- Be careful not to let the metal tools contact the positive battery terminal and anything connected to it. When the operation using a metal tool to the positive terminal or anything connected to it is required, disconnect the battery ground terminal before starting the operation.

1. APPEARANCE

Check the battery case, top cover and terminal post for contamination or cracks and perform the following procedures as necessary.

- Clean the battery with water and wipe with a dry cloth.
- Apply a light coat of grease to the terminal post to prevent corrosion.

Check

- *Normal* → Go to the check item 2.
- *Abnormal* → Replace the battery.

2. ELECTROLYTE LEVEL

Check the electrolyte level in each cell.

CAUTION:

Do not fill beyond MAX level.

NOTE:

If the level is below the middle point between MIN level and MAX level, pour distilled water into the battery cell to bring the level to MAX.

Check

- *MAX level* → Go to the check item 3.
- *Below the middle point between MIN level and MAX level* → Fill → Go to the check item 3.

3. SPECIFIC GRAVITY OF ELECTROLYTE

Check the specific gravity of the electrolyte using a hydrometer and a thermometer.

NOTE:

• Specific gravity varies with temperature of electrolyte so that it must be corrected at 20°C (68°F) using the following calculation:

$$S_{20} = St + 0.0007 \times (t - 20)$$

S₂₀: Specific gravity corrected at electrolyte temperature of 20°C

St: Measured specific gravity

t: Measured temperature (°C)

Battery

- When measuring in a simplified manner using the battery terminal voltage, calculate the specific gravity by the following formula.

Specific gravity = [0.187 × battery terminal voltage (V)] – 1.1

Perform the steps 1) and 2) before measuring the voltage in order to stabilize the voltage.

- Turn the ignition switch to OFF and illuminate the headlight for 30 seconds.
- After turning off the headlight, leave the vehicle for one minute.

- Measuring the specific gravity of the electrolyte in the battery will disclose the state of charge of the battery. The relation between specific gravity and state of charge is as shown in the figure.

SC-03068

- (A) Specific gravity [20°C (68°F)] (B) Amount of discharge (%) (C) Good
 (D) Need to charge or replace

SC-02666

- (A) Specific gravity [20°C (68°F)] (B) Electrolyte temperature (C) Good
 (D) Caution (E) Need charging

Battery

STARTING/CHARGING SYSTEMS

Check

- **Specific gravity: 1.250 — 1.290, and difference between cells is 0.04 or less → Battery is normal**
- **Specific gravity: Less than 1.250, or difference between cells is 0.04 or more → Battery needs to be charged or replaced**

4. STANDBY CURRENT

1) Prepare the circuit tester which can measure down to 1 mA.

NOTE:

For model with keyless access function, the standby current changes regularly. Therefore, prepare the analog type circuit tester.

2) Using the circuit tester, check the standby current.

- (1) Check the battery. <Ref. to SC(H4DO)-52, APPEARANCE, INSPECTION, Battery.> <Ref. to SC(H4DO)-52, ELECTROLYTE LEVEL, INSPECTION, Battery.> <Ref. to SC(H4DO)-52, SPECIFIC GRAVITY OF ELECTROLYTE, INSPECTION, Battery.>

NOTE:

The standby current may be displayed lower than the actual value if the battery is weak, so be sure to check the battery. Charge or replace if necessary.

- (2) Check that the fuse is not blown out and is properly inserted.
(3) When non-genuine electrical parts (including parts sold in authorized workshops) are installed, remove all parts except for genuine electrical parts.
(4) Check that back-up fuse is inserted. <Ref. to PI-4, FUSE INSTALLATION, PRE-DELIVERY INSPECTION (PDI) PROCEDURE, Pre-delivery Inspection.>
(5) Start the engine, and set the switch positions for each system as shown in the following table.

NOTE:

Some of the listed systems are not equipped depending on the vehicle. Set only the systems equipped on the vehicle to the positions as shown.

System	Position
Headlight	ON or Auto
Fog light	ON
Wiper (front and rear)	ON or Low speed
Audio and navigation system	ON
Rear defogger	ON
Room light	DOOR
Luggage light	DOOR
Map light	OFF
Auto A/C	ON (AUTO)
Manual A/C	ON (Speed 1)
Electronic parking brake	ON
Electrical parts other than listed above (electrical parts that users can confirm the operation with the key removed)	OFF

- (6) Turn the ignition switch to OFF.
(7) Operate the front hood lock release lever to unlock the front hood.
(8) Close all the doors (including rear gate and trunk lid) and then lock the doors. (Security alarm is in set condition)

NOTE:

For model with keyless access function, take the access key 1.5 m or more away from the vehicle after the door lock. And do not put the access key close to the vehicle while measuring the standby current.

- (9) Wait for 5 minutes after door lock until the standby current stabilizes.

(10) Loosen the nut which holds the ground terminal to the battery.

NOTE:

Do not remove the ground terminal.

(11) Connect the circuit tester positive terminal to the ground terminal.

NOTE:

To prevent the damage to the circuit tester, set the circuit tester range to a large value first, then gradually change it to smaller values.

(12) Connect the circuit tester negative terminal to the ground terminal installation part of the battery.

(13) While connecting the circuit tester positive terminal with the ground terminal as shown in the figure below, remove the ground terminal from the battery.

Battery

STARTING/CHARGING SYSTEMS

(14) Check the standby current.

NOTE:

- For model with keyless access function, the standby current changes periodically because the keyless access system continuously searches the access key (polling).
- When measuring the standby current, the reading of the circuit tester oscillates. Therefore, read the average value (median value).
- The standby current may become large when the vehicle system is activated 5 times at 30-minute intervals or 5 hours after turning the ignition switch to OFF. Therefore, the measurement should be completed in 20 minutes. If it takes more than 20 minutes, start the engine once, stop the engine, then perform the inspection.

(A) Current/mA

(B) Time/min

(C) Ignition OFF

(D) Less than 70 mA

(E) 5 seconds (system operation)

(F) 300 mA or more

Check

- **When the maximum measurement value is less than 70 mA → Standby current is normal.**
- **When the maximum measurement value is 70 mA or more → Go to step (15).**
 - (15) Remove all fuses one by one to identify which system changes the standby current value significantly. <Ref. to WI-15, Power Supply Circuit.>
 - (16) Check the harness and connector of the system whose standby current has changed significantly.

D: CHARGE

WARNING:

- Do not bring an open flame close to the battery when working.

CAUTION:

- Prior to charging, corroded terminals should be cleaned with a brush and common caustic soda solution.
- Be careful while charging the battery because it produces flammable gasses.
- Observe instructions when handling the battery charger.
- Before charging the battery on the vehicle, disconnect the battery ground terminal to prevent damage of generator diodes or other electrical units.

1. NORMAL CHARGE (CONSTANT CURRENT CHARGE)

Charge the battery with the current value specified by manufacturer or with approximately 1/10 of battery's rating capacity. (See the table below.)

Type	Charging current (A)	CCA (A)
55D23L	4.0 — 5.0	390
75D23L	5.0 — 6.0	470

CAUTION:

- The charge control feature and specifications for judgment of charge completion depend on the device. Follow the instruction manual of the charger used.
- Keep the electrolyte temperature at 45°C (113°F) or less while charging. Stop charging when the temperature exceeds this value.

NOTE:

The characteristics of typical charging methods are as follows.

- Constant current charging

This method makes it easy to charge to 100%, since the electrolyte is agitated by the gassing occurred at the end of charging. However, the time for charging is comparatively long because the current value is kept constant.

- Constant voltage charging

This method completes charging in a short period of time due to the large current. However, it is difficult to charge to 100% because no gassing occurred at the end of charging and the electrolyte is not agitated. Therefore, the combined use with the constant current charging is preferable.

- Quasi-constant voltage charging

This method is widely used for commercially available chargers.

Compared to the constant voltage charging whose charging current at the beginning of charging becomes large, it reduces the charging current by lowering the voltage at the initial stage, resulting in battery load reduction. The time for charging is comparatively long. However, this type of chargers can be manufactured comparatively inexpensive due to the simple control circuit (or manual settings). After the initial stage of charging is completed, it gradually raises the charging voltage so that the charging current is within the specification, until the battery is fully charged.

- Constant voltage/current charging

In addition to the constant voltage charging, this method controls the upper limit of the current.

The constant current charging is applied at the beginning of charging, and the constant voltage charging is applied at the end. This makes battery charge comparatively efficient in a short period of time. Charging by generators is similar to this method.

Judgment of charge completion

- 1) Specific gravity of electrolyte should be held within the specific range of 1.250 — 1.290 for one hour or more.
- 2) Voltage while charging should be held within the specified range of 15.0 — 16.8 V for one hour or more.
- 3) Gas is actively generated in all cells.

Battery

STARTING/CHARGING SYSTEMS

4) The amount of charge reaches 1.2 — 1.5 times of the amount of discharge.

NOTE:

The amount of discharge/charge can be calculated by the following formula.

Amount of discharge (Ah) = Remaining capacity (%) calculated by specific gravity × 5 hour rate capacity (Ah)

Amount of charge (Ah) = Charging current value (A) × Time for charging

2. QUICK CHARGING

Charge the battery in a short period of time with a relatively large current by using a quick charger.

Charge the battery with the current value at approximately 1/2 of battery's rating capacity. (See the table below.)

CAUTION:

- **Quick charging is accompanied by a large amount of heat generation. Charging should be completed in up to 30 minutes regardless of battery size.**
- **Quick charging is used to recover the battery until it can start the vehicle. For full charging, use the normal charging method.**
- **Keep the electrolyte temperature at 55°C (131°F) or less while quick charging. Stop charging when the temperature exceeds this value.**

Type	Charging current (A)	CCA (A)
55D23L	20.0 — 25.0	390
75D23L	24.0 — 29.0	470

5. Battery Current & Temperature Sensor

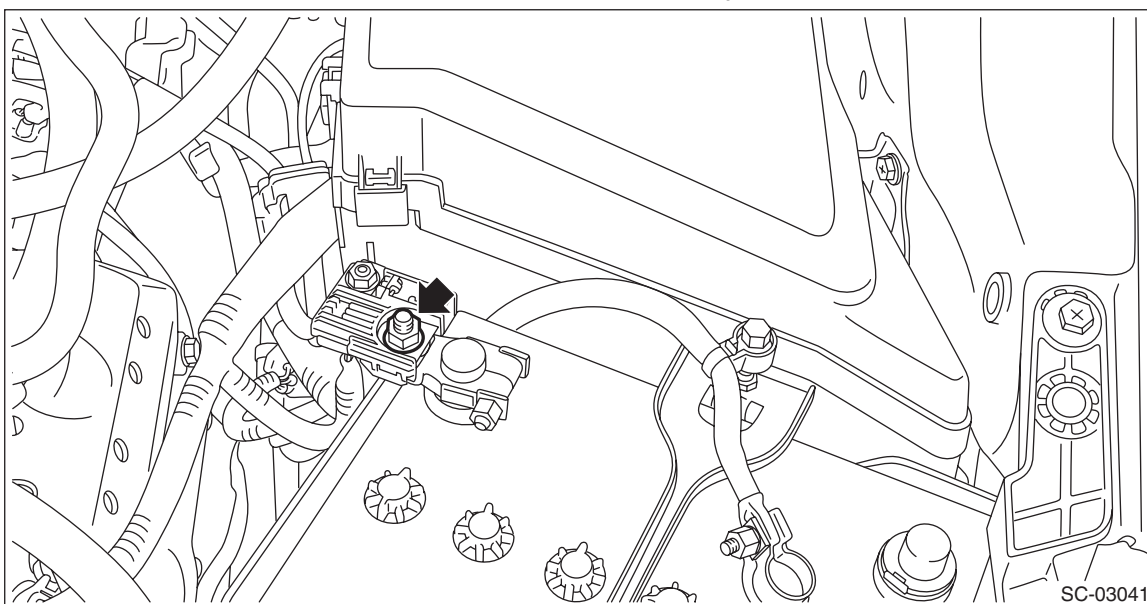

A: REMOVAL

1. BATTERY CURRENT SENSOR

NOTE:

Remove the battery current sensor and battery cable as a unit.

- 1) Disconnect the battery ground cable and remove the clip from the battery rod.
- 2) Remove the battery terminal boot.
- 3) Remove the nuts, and then remove the terminal fuse assembly.

- 4) Remove the ground terminal from the vehicle and remove the harness clip.

Battery Current & Temperature Sensor

STARTING/CHARGING SYSTEMS

- 5) Disconnect the harness connector (A) from the battery cable.
- 6) Remove the battery cable clip (B) from the battery cable bracket.

- 7) Remove the clip (A) from the air intake boot.
- 8) Loosen the clamp (B) securing the air cleaner case (rear) to the air intake boot.
- 9) Loosen the clamp (C) which secures the throttle body to the air intake boot.

Battery Current & Temperature Sensor

STARTING/CHARGING SYSTEMS

10) Remove the air intake boot from the throttle body, and place the air intake boot aside so that it does not interfere with the work.

11) Remove the terminal B (A) from the starter.

12) Remove the starter ground cable (B) and remove the battery cable.

Battery Current & Temperature Sensor

STARTING/CHARGING SYSTEMS

2. BATTERY TEMPERATURE SENSOR

- 1) Remove the battery. <Ref. to SC(H4DO)-51, REMOVAL, Battery.>
- 2) Remove the clip, and remove the battery temperature sensor from the bracket.

- 3) Disconnect the connector and remove the battery temperature sensor.

B: INSTALLATION

1. BATTERY CURRENT SENSOR

Install in the reverse order of removal.

Battery Current & Temperature Sensor

STARTING/CHARGING SYSTEMS

Tightening torque:

<Ref. to SC(H4DO)-6, BATTERY CURRENT & TEMPERATURE SENSOR, COMPONENT, General Description.>

3 N·m (0.3 kgf·m, 2.2 ft·lb)

2. BATTERY TEMPERATURE SENSOR

Install in the reverse order of removal.

C: INSPECTION

1. BATTERY CURRENT SENSOR

CAUTION:

Pay attention to polarity when checking the resistance in the battery current sensor.

Check the resistance between the battery current sensor terminals.

Terminal No.	Standard
1 (+) and 2 (-)	3 — 10 k Ω
1 (+) and 3 (-)	0.5 k Ω or less
2 (+) and 3 (-)	3 — 10 k Ω

Battery Current & Temperature Sensor

STARTING/CHARGING SYSTEMS

2. BATTERY TEMPERATURE SENSOR

Check the resistance between the battery temperature sensor terminals.

SC-02423

Temperature	Terminal No.	Standard
20 — 30°C (68 — 86°F)	1 and 2	1.5 — 2.8 kΩ

3. OTHER INSPECTIONS

Check that the battery current & temperature sensor has no deformation, cracks or other damages.

General Description

ENGINE (DIAGNOSTICS)

3. General Description

A: CAUTION

1) Airbag system wiring harness is routed near the ECM, main relay and fuel pump relay.

CAUTION:

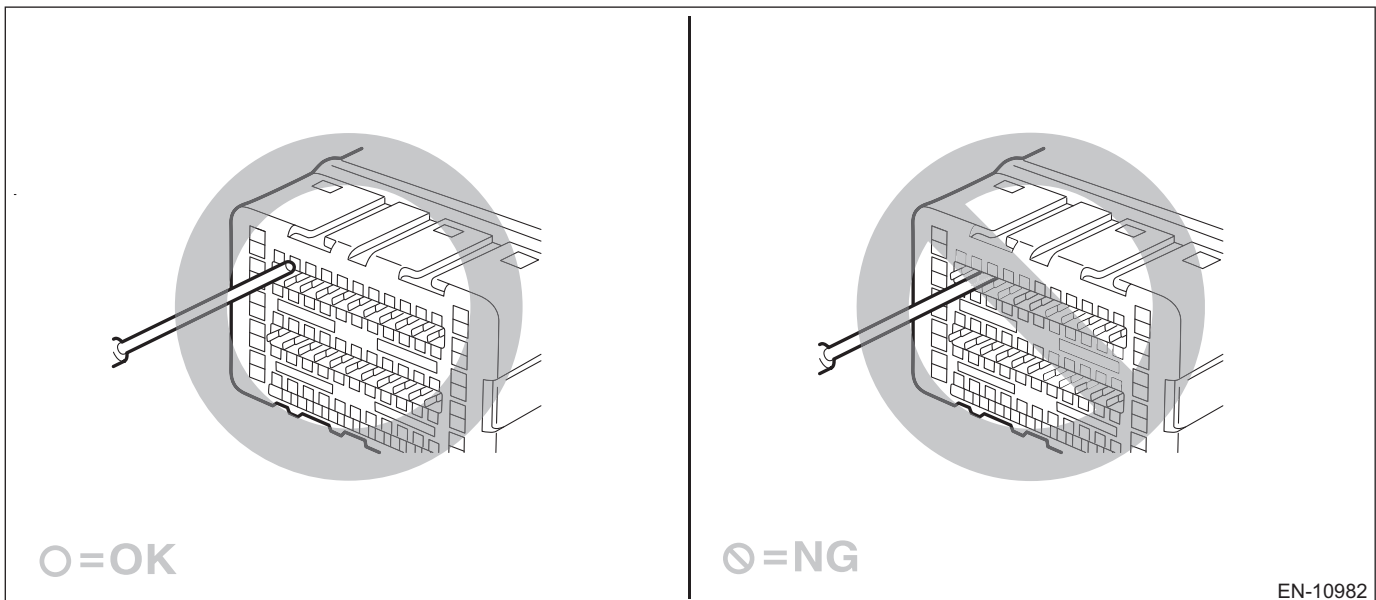

- Do not use electrical test equipment on the airbag system circuits.
- Be careful not to damage the airbag system wiring harness when servicing the ECM, TCM, main relay and fuel pump relay.

2) Never connect the battery in reverse polarity. Doing so will damage the ECM instantly, and other parts will also be damaged.

3) Do not disconnect the battery cables while the engine is running. A large counter electromotive force will be generated in the generator, and this voltage may damage electronic parts such as ECM etc.

4) When disconnecting the connectors of the electrical components, always be sure to turn the ignition switch to OFF. Perform the Clear Memory Mode after connecting the connectors. <Ref. to EN(H4DO)(diag)-66, Clear Memory Mode.>

5) When measuring the voltage or resistance of individual sensor or all electrical control modules, use a tapered pin with a diameter of 0.6 mm (0.024 in) or less and touch it to the tip of terminal.

Never insert the tapered pin into the terminal because it deforms inside which may lead to a malfunction.

CAUTION:

When replacing the ECM, be careful not to use the ECM of wrong specification to avoid any damage on the fuel injection system.

NOTE:

When replacing the ECM of the models with immobilizer, immobilizer system must be registered. For detailed operation procedure, refer to the "REGISTRATION MANUAL FOR IMMOBILIZER".

6) Take care not to allow water to get into the connectors when servicing or washing the vehicle in rainy weather. Avoid exposure to water even if the connectors are waterproof.

7) Use ECM mounting stud bolts for the grounding point when measuring voltage and resistance inside the passenger compartment.

(A) Stud bolt

8) Use the engine ground terminal or engine assembly for the grounding point when measuring the voltage and resistance in engine compartment.

9) All parts related to the engine control system are precision parts. Do not drop or otherwise apply impact. Do not reuse the parts that are dropped accidentally.

10) Observe the following cautions when installing a radio in vehicle.

CAUTION:

- The antenna must be kept as far apart as possible from the ECM. <Ref. to EN(H4DO)(diag)-10, CONTROL MODULE, LOCATION, Electrical Component Location.>

- The antenna feeder must be placed as far apart as possible from the ECM and engine control system harness.

- Carefully adjust the antenna for correct matching.

- When mounting a large power type radio, pay special attention to the three items mentioned above.

- Incorrect installation of the radio may affect the operation of ECM.

11) When disconnecting the fuel hose, release the fuel pressure. <Ref. to FU(H4DO)-107, RELEASING OF FUEL PRESSURE, PROCEDURE, Fuel.>

12) Warning lights may illuminate when performing driving test with jacked-up or lifted-up condition, but this is not a system malfunction. The reason for this is the rotating speed difference between the front and rear wheels. When engine control system diagnosis is finished, perform the VDC memory clearance procedure of self-diagnosis function. <Ref. to VDC(diag)-26, Clear Memory Mode.>

General Description

ENGINE (DIAGNOSTICS)

B: INSPECTION

Before performing diagnostics, check the following item which might affect engine problems.

1. BATTERY

1) Check the battery. <Ref. to SC(H4DO)-52, INSPECTION, Battery.>

2) Check the condition of the main and other fuses, and harnesses and connectors. Also check for proper grounding.

2. ENGINE GROUND

Make sure that the engine ground terminal has no contamination, corrosion or looseness and is properly connected to the engine.

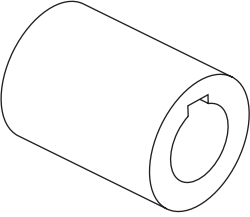

C: NOTE

- The on-board diagnostic (OBD) system detects and indicates a fault in various inputs and outputs of the complex electronic control. Malfunction indicator light in the combination meter indicates occurrence of a fault or trouble.
 - Further, against any failure of sensors that would cause the vehicle to stop running, the fail-safe function is provided to ensure the minimal drivability.
 - The OBD system incorporated with the vehicles within this type of engine complies with OBD-II regulations. The OBD system monitors the components and the system malfunction listed in "Engine Section" which affects on emissions.
 - When the system decides that a malfunction occurs, malfunction indicator light illuminates. At the same time of the malfunction indicator light illumination or blinking, a DTC and a freeze frame engine conditions are stored into on-board computer.
 - The OBD system stores freeze frame engine condition data (engine load, engine coolant temperature, fuel trim, engine speed and vehicle speed, etc.) into on-board computer when it detects a malfunction.
 - Freeze frame engine condition data are stored until the DTCs are cleared. However when such malfunctions as fuel trim fault and misfire are detected with the freeze frame engine condition data stored, they are rewritten into those related to the fuel trim fault and misfire.
 - When the malfunction does not occur again for three consecutive driving cycles*, malfunction indicator light is turned off, but DTC remains at on-board computer.
- *: One driving cycle means the period between the ignition switch ON and the ignition switch OFF after driving.
- When performing diagnosis, connect the Subaru Select Monitor or general scan tool to the vehicle.

D: PREPARATION TOOL

1. SPECIAL TOOL

ILLUSTRATION	TOOL NUMBER	DESCRIPTION	REMARKS
 STSSM4	—	SUBARU SELECT MONITOR 4	Used for setting of each function and trouble-shooting for electrical system. NOTE: For detailed operation procedures of Subaru Select Monitor 4, refer to “Application help”.
 ST18252AA000	18252AA000	CRANKSHAFT SOCKET	Used for rotating crankshaft.

2. GENERAL TOOL

TOOL NAME	REMARKS
Circuit tester	Used for measuring resistance, voltage and current.
Oscilloscope	Used for measuring the sensor.
DST-i	Used together with Subaru Select Monitor 4.

Engine Control Module (ECM) I/O Signal

ENGINE (DIAGNOSTICS)

NOTE:

- Perform measurement after warming up the engine.
- Place the select lever in "P" range or "N" range.
- Turn the A/C to OFF.
- Turn all the accessory switches to OFF.
- Waveforms vary depending on a measurement environment and vehicle condition.

*Waveform

EN-21553

(A) Magnified waveform of crankshaft position sensor and camshaft position sensor

Engine Control Module (ECM) I/O Signal

ENGINE (DIAGNOSTICS)

NOTE:

- For measurement of the waveform of the crankshaft position sensor, we recommend using the DST-i oscilloscope function or a general oscilloscope.
- The waveform of the crankshaft position sensor may appear as shown in figure (B) when measured by the Subaru Select Monitor oscilloscope function.

This is because the output unit of the crankshaft position sensor is smaller than the minimal measurement unit of the Subaru Select Monitor, and therefore this phenomenon is not a malfunction of either the Subaru Select monitor or the crankshaft position sensor.

EN-20954

Data Link Connector

ENGINE (DIAGNOSTICS)

6. Data Link Connector

A: NOTE

This connector is used for Subaru Select Monitor.

CAUTION:

Do not connect any scan tools other than Subaru Select Monitor or general scan tool because the circuit may be damaged.

Terminal No.	Contents	Terminal No.	Contents
1	Blank	9	Blank
2	Blank	10	Blank
3	Blank	11	Blank
4	Ground	12	Blank
5	Ground	13	Blank
6	CAN communication (Hi)	14	CAN communication (Lo)
7	Subaru Select Monitor signal	15	Blank
8	IG	16	Power supply

7. General Scan Tool

A: OPERATION

1. HOW TO USE GENERAL SCAN TOOL

- 1) Prepare a scan tool (general scan tool) required by SAE J1978.
- 2) Connect the general scan tool to data link connector located in the lower portion of the instrument panel (on the driver's side).

- 3) Using the general scan tool, call up each data. General scan tool functions consist of:
 - (1) MODE \$01: Current powertrain diagnostic data
 - (2) MODE \$02: Powertrain freeze frame data
 - (3) MODE \$03: Emission-related powertrain DTC
 - (4) MODE \$04: Clear/Reset emission-related diagnostic information
 - (5) MODE \$06: Request on-board monitoring test results for intermittently monitored systems
 - (6) MODE \$07: Initial emission-related powertrain DTC
 - (7) MODE \$08: Request control for on-board system, test, and component
 - (8) MODE \$09: Request vehicle information
- 4) Read out the data according to repair procedures. (For detailed operation procedures, refer to the general scan tool operation manual.)

NOTE:

For details concerning DTC, refer to "List of Diagnostic Trouble Code (DTC)". <Ref. to EN(H4DO)(diag)-96, List of Diagnostic Trouble Code (DTC).>

General Scan Tool

ENGINE (DIAGNOSTICS)

2. MODE \$01: (CURRENT POWERTRAIN DIAGNOSTIC DATA)

Refer to data denoting the current operating condition of analog input/output, digital input/output or the powertrain system.

A list of the support data and PID (Parameter Identification) codes are shown in the following table.

PID	Data	Unit of measure
\$01	Number of emission-related powertrain DTC, and malfunction indicator light status and diagnosis support information	—
\$03	Fuel system control status	—
\$04	Calculated engine load value	%
\$05	Engine coolant temperature	°C
\$06	Short term fuel trim	%
\$07	Long term fuel trim	%
\$0B	Intake manifold absolute pressure	kPa
\$0C	Engine speed	rpm
\$0D	Vehicle speed	MPH
\$0E	Ignition timing advance	°
\$0F	Intake air temperature	°C
\$10	Intake air amount	g/s
\$11	Throttle valve opening angle	%
\$13	Air fuel ratio sensor	—
\$15	Oxygen sensor output voltage and short term fuel trim associated with oxygen sensor (bank 1 sensor 2)	V and %
\$1C	Supporting OBD system	—
\$1F	Elapsed time after starting the engine	sec
\$21	Travel distance after the malfunction indicator light illuminates	miles
\$24	A/F value and A/F sensor output voltage (bank 1 sensor 1)	— and V
\$2C	Target EGR	%
\$2D	EGR deviation	%
\$2E	Evaporative purge	%
\$2F	Fuel level	%
\$30	Number of warm ups after DTC clear	time
\$31	Travel distance after DTC clear	miles
\$33	Barometric pressure	kPa
\$34	A/F value and A/F sensor current (bank 1 sensor 1)	— and mA
\$3C	Catalyst temperature #1	°C
\$41	Diagnostic monitor of each drive cycle	—
\$42	ECM power voltage	V
\$43	Absolute load	%
\$44	A/F target lambda	—
\$45	Relative throttle opening angle	%
\$46	Ambient temperature	°C
\$47	Absolute throttle opening angle 2	%
\$49	Absolute accelerator opening angle 1	%
\$4A	Absolute accelerator opening angle 2	%
\$4C	Target throttle opening angle	%
\$4D	Engine operating time while malfunction indicator lit	min
\$4E	Elapsed time after DTC clear	min
\$51	Fuel used	—
\$53	Evaporative Leak Check Module pressure	—
\$56	Learning value of sub feedback compensation level	—
\$5A	Relative accelerator opening angle	%
\$5C	Engine oil temperature	°C
\$65	Neutral status	—

NOTE:

Refer to general scan tool manufacturer's operation manual to access current powertrain diagnostic data (MODE \$01).

3. MODE \$02 (POWERTRAIN FREEZE FRAME DATA)

Refer to data denoting the operating condition when trouble is detected by on-board diagnosis system. A list of the support data and PID (Parameter Identification) codes are shown in the following table.

PID	Data	Unit of measure
\$02	DTC that caused freeze frame data to be stored	—
\$03	Fuel system control status	—
\$04	Calculated engine load value	%
\$05	Engine coolant temperature	°C
\$06	Short term fuel trim (bank 1 sensor 1)	%
\$07	Long term fuel trim (bank 1 sensor 1)	%
\$0B	Intake manifold absolute pressure	kPa
\$0C	Engine speed	rpm
\$0D	Vehicle speed	MPH
\$0E	Ignition timing advance	°
\$0F	Intake air temperature	°C
\$10	Intake air amount	g/s
\$11	Throttle valve opening angle	%
\$13	Air fuel ratio sensor	—
\$15	Oxygen sensor output voltage and short term fuel trim associated with oxygen sensor (bank 1 sensor 2)	V and %
\$1C	Supporting OBD system	—
\$1F	Elapsed time after starting the engine	sec
\$24	A/F value and A/F sensor output voltage	— and V
\$2C	Target EGR	%
\$2D	EGR deviation	%
\$2E	Evaporative purge	%
\$2F	Fuel level	%
\$33	Barometric pressure	kPa
\$34	A/F value and A/F sensor output current	— and mA
\$3C	Catalyst temperature	°C
\$42	ECM power voltage	V
\$43	Absolute load	%
\$44	A/F target lambda	—
\$45	Relative throttle opening angle	%
\$46	Ambient temperature	°C
\$47	Absolute throttle opening angle 2	%
\$49	Absolute accelerator opening angle 1	%
\$4A	Absolute accelerator opening angle 2	%
\$4C	Target throttle opening angle	%
\$51	Fuel used	—
\$5C	Engine oil temperature	°C
\$65	Neutral status	—

NOTE:

Refer to general scan tool manufacturer's instruction manual to access freeze frame data (MODE \$02).

4. MODE \$03 (EMISSION-RELATED POWERTRAIN DTC)

Refer to "List of Diagnostic Trouble Code (DTC)" for information about data denoting emission-related powertrain DTC. <Ref. to EN(H4DO)(diag)-96, List of Diagnostic Trouble Code (DTC).>

General Scan Tool

ENGINE (DIAGNOSTICS)

5. MODE \$04 (CLEAR/RESET EMISSION-RELATED DIAGNOSTIC INFORMATION)

Refer to the mode used to clear or reset emission-related diagnostic information.

NOTE:

Refer to general scan tool manufacturer's instruction manual to clear the emission-related diagnostic information (MODE \$04).

6. MODE \$06 (REQUEST ON-BOARD MONITORING TEST RESULTS FOR INTERMITTENTLY MONITORED SYSTEMS)

Refer to diagnostic value of troubleshooting and data of test limit indicated on the support data bit sequence table. A list of the support data is shown in the following table.

NOTE:

Some items are not displayed according to the specifications.

OBDMID	TID	SID	Diagnostic item

7. MODE \$07 (INITIAL EMISSION-RELATED POWERTRAIN DTC)

Refer to the data of DTC (pending code) for troubleshooting result about emission in the first time.

8. MODE \$09

Perform "Active Test" of the on-board system.

9. MODE \$09 (REQUEST VEHICLE INFORMATION)

Refer to the data of the vehicle specification.

Subaru Select Monitor

ENGINE (DIAGNOSTICS)

8. Subaru Select Monitor

A: OPERATION

1. HOW TO USE SUBARU SELECT MONITOR

NOTE:

For detailed operation procedures, refer to “Application help”.

2. DISPLAY ENGINE CURRENT DATA

NOTE:

- For detailed operation procedures, refer to “Application help”.
- A list of the support data is shown in the following table.
- *: For models without cruise control, the brake switch signal does not change.

- 1) On «Start» display, select «Diagnosis».
- 2) On «Vehicle selection» display, input the vehicle information and select «Confirmed».
- 3) On «Main Menu» display, select «Each System».
- 4) On «Select System» display, select «Engine Control System» and then select «Enter».
- 5) On «Select Function» display, select «Data monitor» and then select «Enter».

Display	Contents	Note (at idling)	Remarks
Engine Speed	Calculated from crankshaft position sensor signal.	700 rpm (agree with the tachometer indication)	rpm
Mass Air Flow	Amount of intake air calculated from air flow sensor output value.	2.5 g/s or 0.33 lb/m	g/s or lb/m
Vehicle Speed	Value calculated from vehicle speed sensor output value.	0 km/h	km/h
Throttle Opening Angle	Throttle valve opening angle (in percentage) calculated from throttle position sensor output value.	13.0%	%
Accel opening angle	Accelerator pedal opening angle (in percentage) calculated from accelerator pedal position sensor output value.	0.0%	%
A/F Sensor #1	Actual lambda value calculated from front A/F sensor output value.	1.0	—
Ignition Timing Advance for #1 Cylinder	Ignition timing control value for No. 1 cylinder. Calculated from rotation speed, intake manifold pressure, intake air temperature, water temperature, and data from knock sensor etc.	16.0°	°
Engine Coolant Temperature	Value calculated from engine coolant temperature sensor output value.	85°C or 185°F or more (after warm-up)	°C or °F
Fuel Injection #1 Pulse	Control value of fuel injection time by ECM. (RH bank)	2.82 ms	ms
Short Term Fuel Trim-Bank1	Air fuel ratio correction control value for the front.	-0.8%	%
Long Term Fuel Trim-Bank1	Air fuel ratio learning control value for the front.	0.0%	%
Learned Ignition Timing	Ignition timing learning value. Advance or retard angle amount when knocking occurs.	0 deg	deg
Intake Manifold Absolute Pressure	Value calculated from the intake manifold pressure sensor.	200 — 300 mmHg, 26.7 — 40 kPa, 7.8 — 11.8 inHg or 3.8 — 5.8 psig	kPa, mmHg, inHg or psig
Oxygen sensor #12	Rear oxygen sensor output voltage.	0.7 V	V
VVT Adv. Ang. Amount R	AVCS advance angle amount for the RH bank on the intake side.	0 deg	deg
VVT Adv. Ang. Amount L	AVCS advance angle amount for the LH bank on the intake side.	0 deg	deg
Exh. VVT Retard Ang. R	AVCS actual advance angle amount for the RH bank on the exhaust side.	±5 deg	deg
Exh. VVT Retard Ang. L	AVCS actual advance angle amount for the LH bank on the exhaust side.	±5 deg	deg

Subaru Select Monitor

ENGINE (DIAGNOSTICS)

Display	Contents	Note (at idling)	Remarks
VVT Initial Position Learning Value #1	AVCS initial position learning value for the RH bank on the intake side. Controls the angle against a standard angle. Deviation learning is performed based on this standard value.	29.9°C	°C
VVT Initial Position Learning Value #2	AVCS initial position learning value for the LH bank on the intake side. Controls the angle against a standard angle. Deviation learning is performed based on this standard value.	27.7°C	°C
VVT Ex Initial Position Learning Value #1	AVCS initial position learning value for the RH bank on the exhaust side. Controls the angle against a standard angle. Deviation learning is performed based on this standard value.	0	°C
VVT Ex Initial Position Learning Value #2	AVCS initial position learning value for the LH bank on the exhaust side. Controls the angle against a standard angle. Deviation learning is performed based on this standard value.	0	°C
ECU ACC	ECM input power supply voltage.	13.789 V	V
Target engine speed	ECM target engine speed.	675 rpm	rpm
Number of Cleaning Executions for VVT Self-recovery	Number of times that the intake AVCS oil control valve cleaning is performed.	—	times
Number of Cleaning Executions for Ex VVT Self-recovery	Number of times that the exhaust AVCS oil control valve cleaning is performed.	—	times
Target Equivalence Ratio	Target air fuel ratio. (Lambda) It usually becomes 1.0 aiming at a theoretical air fuel ratio.	0.976	—
Engine Oil Temperature	Value calculated from the engine oil temperature sensor output value.	≥ 85°C (after warm-up)	°C or °F
Intake Air Temperature	Intake air temperature calculated from the intake air temperature sensor output value.	36°C	°C or °F
Ambient Temperature	Ambient temperature that ECM estimates by input values from the engine coolant temperature sensor or the intake air temperature sensor etc.	Ambient Air Temperature	°C or °F
Ambient Temperature Sensor Signal	Data value of the ambient sensor input from the combination meter via CAN. Ambient temperature used for diagnosis.	—	°C or °F
Load Value	Current rate of air amount. Value assuming that the air amount at the current engine speed with the throttle fully open is 100%.	17.0	%
Absolute Load Value	Percentage of current intake air amount against the maximum air intake amount of the engine. For non-turbo engine, the value can be close to 95%, but will never be 100%. For turbo engine, this value may exceed 100% due to a boost pressure.	17	%
Atmospheric Pressure	Atmospheric pressure calculated from atmospheric pressure sensor output value.	(Atmospheric pressure)	kPa, mmHg, inHg or psig
Mani. Relative Pressure	Pressure value calculated from manifold pressure sensor output value. (Absolute value) (Air intake absolute pressure – Atmospheric pressure)	(Intake Manifold Absolute Pressure – Atmospheric Pressure)	kPa, mmHg, inHg or psig
Target Throttle Opening Angle	Target throttle opening angle calculated by ECM.	16 deg	deg
Actual Throttle Opening Angle	Actual throttle opening angle. Calculated by ECM based on the throttle sensor input value.	16 deg	deg

Subaru Select Monitor

ENGINE (DIAGNOSTICS)

Display	Contents	Note (at idling)	Remarks
Target Throttle Opening Angle	Control value of the target throttle opening angle calculated by ECM. Shows the target value of opening angle in percentage when 0% means fully closed and 100% means fully open.	0.0%	%
Relative Throttle Position	Current throttle opening angle in percentage against the throttle voltage (full range) that has reflected the full close point learning value. The value will be approx. 70% at full open.	2	%
Throttle Motor Voltage	Power supply voltage of the throttle motor. ECM input value.	(Battery voltage)	V
Main-Throttle Sensor	Voltage value of the main throttle position sensor. ECM input value.	0.66 V	V
Sub-Throttle Sensor	Voltage value of the sub throttle position sensor. ECM input value.	1.52 V	V
Throttle Motor Duty	Throttle motor control duty ratio. ECM output value.	-15%	%
Main-Accelerator Sensor	Voltage value of the main accelerator pedal position sensor. ECM input value.	0.68 V	V
Sub-Accelerator Sensor	Voltage value of the sub accelerator pedal position sensor. ECM input value.	0.68 V	V
Air Flow Sensor Voltage	Air flow sensor output value. Input value to ECM.	1.26 V	V
Fuel Level	Fuel level sensor output value. ECM input value. Total value of main and sub.	—	%
Fuel level resistance	Fuel level sensor resistance value. ECM input value.	—	Ω
Commanded Evap Purge	Evaporative purge rate displayed by the OBD.	0%	%
CPC Valve Duty Ratio	Purge control solenoid valve control duty ratio. ECM output value.	0 — 3%	%
ALT Duty	Electric power generation voltage is calculated by the ECM. Indicator voltage value from ECM to alternator is under a DUTY control.	0 — 100%	%
Alternator control mode	Control mode of the electric power generation voltage by the alternator. Low: Mode that controls the battery charge Mid: Mode where the battery is not charged and discharged High: Mode that fixes the voltage when the battery is charged or when an electric load is turned on ExHigh: Mode where the battery is charged during deceleration	High/Mid/Low	—
Battery current value	Battery charge/discharge current value input from the battery sensor. When the value is positive: The current flows to a direction that the battery is charged. When the value is negative: The current flows to a direction that the battery is discharged.	-2 — 5 A	A
Battery temperature	Estimated value of battery temperature which is output from the battery temperature sensor and input in the communication with ECM.	20 — 50°C or 68 — 112°F	°C or °F
Knocking Correction	Retard angle amount when knocking occurs. Partially learning value of ignition timing learning value.	0.0 deg	deg
Fuel system for Bank 1	Feedback status of air fuel ratio. Open: Feedback is stopped Closed: Feedback control is being performed	Cl_normal	—
A/F Sensor #1 Current	Front A/F sensor output current value. ECM input value.	-0.2 — 0.2 mA	mA

Subaru Select Monitor

ENGINE (DIAGNOSTICS)

Display	Contents	Note (at idling)	Remarks
A/F Sensor #1 Resistance	Front A/F sensor resistance value calculated from the front A/F sensor output value.	32 Ω	Ω
A/F Correction #3	Sub correction value of A/F feedback control.	0.3%	%
No. of EGR steps	Number of EGR valve steps. Number of stepping motor steps. ECM output value.	0 STEP	STEP
Commanded EGR	Target value as EGR setting value calculated by ECM.	—	%
EGR Error	Percentage of the difference in actual EGR steps as compared to the target EGR steps. Both a positive value and a negative value mean that it doesn't fulfill the target. When the value is positive, it opens more than the target value. When the value is negative, it opens smaller than the target value.	—	%
TGV Position SW1	Opening/closing status of tumble generator valve opening switch for RH bank. Input value to ECM from the tumble generator valve opening angle SW for RH bank.	Close	—
TGV Position SW2	Opening/closing status of tumble generator valve opening switch for LH bank. Input value to ECM from the tumble generator valve opening angle SW for LH bank.	Close	—
TGV Output	Drive signal to tumble generator valve motor. Set to "ON" when the tumble generator valve is activated (when the duty output is other than 0%). ECM output value.	—	OFF
TGV Drive	Tumble generator valve drive status. Set to "Open" when the tumble generator valve is open. ECM control status.	—	Close
OCV Duty R	Oil control solenoid control duty ratio. (RH bank) ECM output value.	40 — 60% (except for Euro 4 (2.0 L model))	%
		45 — 55% (Euro 4 (2.0 L model))	
OCV Duty L	Oil control solenoid control duty ratio. (LH bank) ECM output value.	40 — 60% (except for Euro 4 (2.0 L model))	%
		45 — 55% (Euro 4 (2.0 L model))	
OCV Current R	Actual current value of the oil control solenoid. (RH bank) ECM input value.	550 — 850 mA (except for Euro 4 (2.0 L model))	mA
		650 — 800 mA (Euro 4 (2.0 L model))	
OCV Current L	Actual current value of the oil control solenoid. (LH bank) ECM input value.	550 — 850 mA (except for Euro 4 (2.0 L model))	mA
		650 — 800 mA (Euro 4 (2.0 L model))	
Exh. OCV Duty R	Exhaust side oil control solenoid control duty ratio on the RH bank. ECM output value.	45 — 55%	%
Exh. OCV Duty L	Actual current value of the exhaust side oil control solenoid on the LH bank. ECM input value.	45 — 55%	%
Exh. OCV Current R	Actual current value of the exhaust side oil control solenoid on the RH bank. ECM input value.	650 — 800 mA	mA

Subaru Select Monitor

ENGINE (DIAGNOSTICS)

Display	Contents	Note (at idling)	Remarks
Exh. OCV Current L	Actual current value of the exhaust side oil control solenoid on the LH bank. ECM input value.	650 — 800 mA	mA
Roughness Monitor #1	#1 cylinder roughness monitor count value.	0	—
Roughness Monitor #2	#2 cylinder roughness monitor count value.	0	—
Roughness Monitor #3	#3 cylinder roughness monitor count value.	0	—
Roughness Monitor #4	#4 cylinder roughness monitor count value.	0	—
Ignition SW ON Count	Time stamp information. Number of times the ignition is ON since the vehicle was manufactured. The number of ignition ON is also recorded when a trouble code is recorded, so the comparison with that number will show you how many times the ignition has turned on since the diagnostic code was recorded.	—	times
Count	Time stamp information. Each unit individually counts the elapsed time since the ignition is turned ON. Master integrated unit and ECM synchronize with the master time. When synchronized: "Common" When not synchronized: "Originally"	Common	—
Time Count	Time stamp information. Elapsed time after ignition ON. When a trouble code is recorded, the elapsed time after ignition ON is also recorded.	—	ms
Time Since Engine Start	Elapsed time after starting the engine.	—	sec
Meter since DTC(s) cleared	Travel distance after DTC clear.	—	km
Time while MIL lighted	Engine operating time from when the malfunction indicator light illuminated till when it went off.	—	min
Time since DTC(s) cleared	Elapsed time after DTC clear.	—	min
Number of Warm-ups since DTC(s) cleared	Number of warm ups after DTC clear. 1 cycle is the time from the cold start till warmed up and stop. (Engine start after a warm-up is not counted.)	—	times
Lighted MI lamp history	Travel distance after the warning light illuminated.	—	km
Odometer	ECM calculates the total cumulative travel distance from the vehicle speed, separately from the odometer in the combination meter. Small difference from the odometer will be possible, but if there is a big difference, ECM or the combination meter may need to be replaced.	—	km
Maximum Engine Speed at the time of Misfire detection caused by out of Fuel	Maximum engine speed during fuel cut by a fuel run-out judgment.	0	rpm
Maximum Intake Air Amount at the time of Misfire detection caused by out of Fuel	Maximum air amount during fuel cut by a fuel run-out judgment.	0	g/s
Number of Misfire detection caused by out of Fuel	Number of times of fuel run-out judgment.	0	times
Estimated Total Mileage at the time of first Misfire detection caused by out of Fuel	Estimated cumulative travel distance during fuel cut by a fuel run-out judgment.	0	km
Memorized Cruise Speed	Cruise control system target vehicle speed. (Set speed)	0 km/h or 0 MPH	km/h or MPH

ENGINE (DIAGNOSTICS)

Display	Contents	Note (at idling)	Remarks
Catalyst Temperature #11	Estimated temperature of the front catalytic converter.	—	°C
Type of fuel	Fuel information recorded in the ECM. (It's not the fuel information currently used.)	GAS	—
AT drive status	Neutral condition. Information input from the inhibitor switch. (CVT model)	NEUT	—
MT gear status	Neutral condition. Information input from the neutral switch. (MT model)	NEUT	—
Evap System Vapor Pressure	Evaporative emission control system pressure. Pressure sensor input value.	101.43	kPa
Neutral switch	Neutral switch signal. Signal when in neutral (MT) or in P or N range (AT). Value input to ECM.	Neutral	—
ETC Motor Relay	Drive signal to the electronic throttle motor relay. Set to "ON" when drive signal is output. ECM output value.	ON	—
Clutch switch	Clutch switch signal. Set to "ON" when the clutch switch is ON. Item displayed only for MT model.	OFF	—
Stop Light Switch	Stop light switch signal. Set to "ON" when the stop light illuminates. ECM input value.	OFF (when OFF)	—
Brake Switch*	Brake switch signal. Set to "ON" when the brake pedal is depressed. ECM input value.	OFF (when OFF)	—
Idle Switch Signal	Idle signal. Set to "Idle" while idling.	Idle	—
Ignition switch	Ignition switch signal. Set to "ON" when the ignition switch is ON.	ON	—
A/C Mid Pressure Switch	Air conditioner middle pressure switch signal. Set to "ON" when the switch is ON. ECM input value.	OFF (when OFF)	—
A/C Compressor Signal	A/C compressor drive signal. Set to "ON" when the drive signal is output. ECM output value.	OFF (when OFF)	—
Radiator Fan Relay #1	Radiator fan relay drive signal. Set to "ON" when the drive signal is output. ECM output value.	OFF (when OFF)	—
Radiator Fan Relay #2	Radiator fan relay drive signal. Set to "ON" when the drive signal is output. ECM output value.	OFF (when OFF)	—
A/C Switch	Air conditioner switch signal. Set to "ON" when the air conditioner switch of the heater control is ON. ECM input value.	OFF (when OFF)	—
Starter Switch	Starter switch signal. Set to "ON" when the starter is ON. ECM input value.	OFF	—
Rear Defogger SW	Rear defogger switch input signal. Set to "ON" when the switch is ON. ECM input value.	OFF (when OFF)	—
Blower Fan SW	Blower fan switch input signal. Set to "ON" when the switch is ON. ECM input value.	OFF (when OFF)	—

Subaru Select Monitor

ENGINE (DIAGNOSTICS)

Display	Contents	Note (at idling)	Remarks
Light Switch	Light switch input signal. Set to "ON" when the switch is ON. ECM input value.	OFF (when OFF)	—
Front Fog Light Switch	Front fog light switch input signal. Set to "ON" when the switch is ON. ECM input value.	OFF (when OFF)	—
Wiper Switch	Wiper switch input signal. Set to "ON" when the switch is ON. ECM input value.	OFF (when OFF)	—
Delivery Mode Connector	Delivery mode terminal fuse installation status. ECM displays delivery mode status.	OFF	—
Rear O2 Rich Signal	Rear oxygen sensor output value. Set to "Rich" when the air fuel ratio of rear oxygen sensor is rich, and set to "Lean" when lean.	Rich/Lean	—
Knocking Signal	Knock sensor output signal. Judges if a knocking occurs or not. ECM input signal.	OFF	—
Crankshaft Position Sig.	Crankshaft position sensor output signal. Set to "ON" when the engine is running. ECM input signal.	ON	—
Camshaft Position Sig.	Camshaft position sensor output signal. Set to "ON" when the engine is running. ECM input signal.	ON	—
Ban of Torque Down VDC	Torque down prohibition notification signal to the vehicle dynamics control (VDC) module. Set to "OFF" when the prohibition signal is output. ECM output value.	ON	—
Request Torque Down VDC	Torque down request signal transmitted from the vehicle dynamics control (VDC) module. Set to "ON" when the request signal is sent. Vehicle dynamics control (VDC) ECM input signal.	OFF	—
Torque Permission Signal	Torque down permission notification signal to the transmission control module. (CVT model) Set to "ON" when the permission signal is output. ECM output value.	ON	—
SET/COAST Switch	Cruise control system SET/COAST SW signal. Set to "ON" when the switch is operated. ECM input signal.	OFF (when OFF)	—
RESUME/ACCEL Switch	Cruise control system RESUME/ACCEL SW signal. Set to "ON" when the switch is operated. ECM input signal.	OFF (when OFF)	—
Main switch	Cruise control system main switch signal. Set to "ON" when the switch is operated. ECM input signal.	OFF (when OFF)	—
distance change SW	Distance change switch. (Model with EyeSight)	OFF (when OFF)	—
Cruise Control Cancel Switch Signal	Cruise control cancel switch signal of the cruise control system. Set to "ON" when the switch is operated. ECM input signal.	OFF (when OFF)	—
Fuel Pump Relay	Fuel pump relay drive signal. Set to "ON" when the drive signal is output. ECM output value.	ON	—
All Cylinders Fuel cut	Status under the fuel injection amount control where the fuel injection is cut off in all cylinders.	OFF	—
Shift Pattern Demand for Low Water Temperature	Shift pattern request sent from ECM to the transmission CM. (CVT model) When the water temperature is low, shift pattern change to the low speed side is requested to raise the catalyst temperature faster.	OFF	—

NOTE:

- For detailed operation procedures, refer to “Application help”.
 - A list of the support data is shown in the following table.
- 1) On «Start» display, select «Diagnosis».
 - 2) On «Vehicle selection» display, input the vehicle information and select «Confirmed».
 - 3) On «Main Menu» display, select «Each System».
 - 4) On «Select System» display, select «Engine Control System» and then select «Enter».
 - 5) On «Select Function» display, select «DTC» and then select «Enter».

Display	Contents	Remarks
Engine Speed	Calculated from crankshaft position sensor signal.	rpm
Mass Air Flow	Amount of intake air calculated from air flow sensor output value.	g/s or lb/m
Vehicle Speed	Value calculated from vehicle speed sensor output value.	km/h or MPH
Throttle Opening Angle	Throttle valve opening angle (in percentage) calculated from throttle position sensor output value.	%
Ignition Timing Advance for #1 Cylinder	Ignition timing control value for No. 1 cylinder. Calculated from rotation speed, intake manifold pressure, intake air temperature, water temperature, and data from knock sensor etc.	°
Engine Coolant Temperature	Value calculated from engine coolant temperature sensor output value.	°C or °F
Short Term Fuel Trim-Bank1	Air fuel ratio correction control value for the front.	%
Long Term Fuel Trim-Bank1	Air fuel ratio learning control value for the front.	%
Intake Manifold Absolute Pressure	Value calculated from the intake manifold pressure sensor.	kPa, mmHg, inHg or psig
Oxygen sensor #12	Rear oxygen sensor output voltage.	V
ECU ACC	ECM input power supply voltage.	V
Target Equivalence Ratio	Target air fuel ratio. (Lambda) It usually becomes 1.0 aiming at a theoretical air fuel ratio.	—
Intake Air Temperature	Intake air temperature calculated from the intake air temperature sensor output value.	°C or °F
Ambient Temperature	Ambient temperature that ECM estimates by input values from the engine coolant temperature sensor or the intake air temperature sensor etc.	°C or °F
Ambient Temperature Sensor Signal	Data value of the ambient sensor input from the combination meter via CAN. Ambient temperature used for diagnosis.	°C or °F
Load Value	Current rate of air amount. Value assuming that the air amount at the current engine speed with the throttle fully open is 100%.	%
Absolute Load Value	Percentage of current intake air amount against the maximum air intake amount of the engine. For non-turbo engine, the value can be close to 95%, but will never be 100%. For turbo engine, this value may exceed 100% due to a boost pressure.	%
Atmospheric Pressure	Atmospheric pressure calculated from atmospheric pressure sensor output value.	kPa, mmHg, inHg or psig
Actual Throttle Opening Angle	Actual throttle opening angle. Calculated by ECM based on the throttle sensor input value.	deg
Target Throttle Opening Angle	Control value of the target throttle opening angle calculated by ECM. Shows the target value of opening angle in percentage when 0% means fully closed and 100% means fully open.	%

Subaru Select Monitor

ENGINE (DIAGNOSTICS)

Display	Contents	Remarks
Relative Throttle Position	Current throttle opening angle in percentage against the throttle voltage (full range) that has reflected the full close point learning value. The value will be approx. 70% at full open.	%
Fuel Level	Fuel level sensor output value. ECM input value. Total value of main and sub.	%
Commanded Evap Purge	Evaporative purge rate displayed by the OBD.	%
Fuel system for Bank 1	Feedback status of air fuel ratio. Open: Feedback is stopped Closed: Feedback control is being performed	—
Commanded EGR	Target value as EGR setting value calculated by ECM.	%
EGR Error	Percentage of the difference in actual EGR steps as compared to the target EGR steps. Both a positive value and a negative value mean that it doesn't fulfill the target. When the value is positive, it opens more than the target value. When the value is negative, it opens smaller than the target value.	%
Ignition SW ON Count	Time stamp information. Number of times the ignition is ON since the vehicle was manufactured. The number of ignition ON is also recorded when a trouble code is recorded, so the comparison with that number will show you how many times the ignition has turned on since the diagnostic code was recorded.	times
Count	Time stamp information. Each unit individually counts the elapsed time since the ignition is turned ON. Master integrated unit and ECM synchronize with the master time. When synchronized: "Common" When not synchronized: "Originally"	—
Time Count	Time stamp information. Elapsed time after ignition ON. When a trouble code is recorded, the elapsed time after ignition ON is also recorded.	ms
Time Since Engine Start	Elapsed time after starting the engine.	sec
AT drive status	Neutral condition. Information input from the inhibitor switch. (CVT model)	—
MT gear status	Neutral condition. Information input from the neutral switch. (MT model)	—
Clutch switch	Clutch switch signal. Set to "ON" when the clutch switch is ON. (MT model) Input value to ECM.	—
O2 Sensor #11	Installation status of the front oxygen sensor.	—
O2 Sensor #12	Installation status of the rear oxygen sensor.	—
Short term fuel trim #12	Air fuel ratio correction control value for the rear.	%
Absolute Throttle Pos.#2	Shows the sub throttle sensor voltage value in % against the full-range 5 V throttle sensor output voltage.	%
Accelerator Pedal Pos.#1	Shows the main accelerator sensor voltage value in % against the full-range 5 V.	%
Accelerator Pedal Pos.#2	Shows the sub accelerator sensor voltage value in % against the full-range 5 V.	%
OBD System	Shows the OBD regulation to be followed. This is the information recorded in the ECM, and it does not mean that the unit automatically judges the compliance to the OBD regulations.	—

Subaru Select Monitor

ENGINE (DIAGNOSTICS)

4. V.I.N REGISTRATION

- 1) On «Start» display, select «Diagnosis».
- 2) On «Vehicle selection» display, input the vehicle information and select «Confirmed».
- 3) On «Main Menu» display, select «Each System».
- 4) On «Select System» display, select «Engine Control System» and then select «Enter».
- 5) On «Select Function» display, select «Work Support».
- 6) On «Work Support» display, select «Entry VIN».
- 7) Perform the procedures shown on the display screen.

9. Read Diagnostic Trouble Code (DTC)

A: OPERATION

1. SUBARU SELECT MONITOR

NOTE:

- For detailed operation procedures, refer to “Application help”.
- For details concerning DTC, refer to “List of Diagnostic Trouble Code (DTC)”. <Ref. to EN(H4DO)(diag)-96, List of Diagnostic Trouble Code (DTC).>

- 1) On «Start» display, select «Diagnosis».
- 2) On «Vehicle selection» display, input the target vehicle information and select «Confirmed».
- 3) On «Main Menu» display, select «Each System».
- 4) On «Select System» display, select «Engine Control System» and then «Enter».
- 5) On «Select Function» display, select «DTC».

2. GENERAL SCAN TOOL

Refer to data denoting emission-related powertrain DTC. For details concerning DTC, refer to “List of Diagnostic Trouble Code (DTC)”. <Ref. to EN(H4DO)(diag)-96, List of Diagnostic Trouble Code (DTC).>

NOTE:

Refer to general scan tool manufacturer’s instruction manual to access powertrain DTC (MODE \$03).

Inspection Mode

ENGINE (DIAGNOSTICS)

10. Inspection Mode

A: PROCEDURE

Perform the diagnosis shown in the following DTC table.

When performing the diagnosis not listed in "List of Diagnostic Trouble Code (DTC)", refer to the item on the drive cycle. <Ref. to EN(H4DO)(diag)-55, Drive Cycle.>

Inspection Mode

ENGINE (DIAGNOSTICS)

1. PREPARATION FOR THE INSPECTION MODE

- 1) Check that the battery voltage is 12 V or more and fuel remains approx. half [20 — 40 L (5.3 — 10.6 US gal, 4.4 — 8.8 Imp gal)].
- 2) Lift up the vehicle using a garage jack and place it on rigid racks, or drive the vehicle onto free rollers.

WARNING:

- Before lifting up the vehicle, ensure parking brake is applied.
- Do not use a pantograph jack in place of a rigid rack.
- Secure a rope or wire to the front or rear towing hooks to prevent the lateral runout of front wheels.
- Before rotating the wheels, make sure that there is no one in front of the vehicle. Besides while the wheels are rotating, make sure that no one approaches the vehicle front side.
- Make sure that there is nothing around the wheels. For AWD model, pay attention to all four wheels.
- While servicing, do not depress or release the clutch pedal or accelerator pedal quickly regardless of the engine speed. Quick operation may cause the vehicle to drop off the free roller.
- To prevent the vehicle from slipping due to vibration, do not place anything between rigid rack and the vehicle.

- (A) Rigid rack
(B) Free roller

2. SUBARU SELECT MONITOR

- 1) Check that no DTC remains after clearing memory. <Ref. to EN(H4DO)(diag)-66, Clear Memory Mode.>
- 2) Warm up the engine.
- 3) Prepare the Subaru Select Monitor kit. <Ref. to EN(H4DO)(diag)-9, PREPARATION TOOL, General Description.>
- 4) Prepare PC with Subaru Select Monitor installed.
- 5) Connect the USB cable to the DST-i and the USB port on the personal computer (dedicated port for the Subaru Select Monitor).

NOTE:

The dedicated port for the Subaru Select Monitor means the USB port which was used to install the Subaru Select Monitor.

- 6) Connect the diagnosis cable to DST-i.

7) Install the delivery (test) mode fuse (A).

CAUTION:

Do not use any fuses that are installed on the vehicle.

8) Connect the DST-i to the data link connector located in the lower portion of the instrument panel (on the driver's side).

CAUTION:

Do not connect the scan tools except for Subaru Select Monitor and general scan tool.

9) Start the PC.

10) Turn the ignition switch to ON (engine OFF) and run the "PC application for Subaru Select Monitor".

11) On «Start» display, select «Diagnosis».

12) On «Vehicle selection» display, input the vehicle information and select «Confirmed».

13) On «Main Menu» display, select «Each System».

14) On «Select System» display, select «Engine Control System» and then select «Enter».

15) On «Select Function» display, select «Dealer Check Mode Procedure» and then select «Enter».

16) When «Perform Inspection (Dealer Check) Mode ?» is shown on the screen, click the «Next» button.

17) Perform subsequent procedures as instructed on the display screen.

- If trouble still remains in the memory, the corresponding DTC appears on the display screen.

NOTE:

- For detailed operation procedures, refer to "Application help".
 - For details concerning DTC, refer to "List of Diagnostic Trouble Code (DTC)".
- <Ref. to EN(H4DO)(diag)-96, List of Diagnostic Trouble Code (DTC).>
- Release the parking brake.
 - The rotating speed difference between front and rear wheels may illuminate the warning light, but this does not indicate a malfunction. When engine control system diagnosis is finished, perform the VDC memory clearance procedure of self-diagnosis function. <Ref. to VDC(diag)-26, Clear Memory Mode.>

Inspection Mode

ENGINE (DIAGNOSTICS)

3. GENERAL SCAN TOOL

- 1) Check that no DTC remains after clearing memory. <Ref. to EN(H4DO)(diag)-66, Clear Memory Mode.>
- 2) Warm up the engine.
- 3) Install the delivery (test) mode fuse (A).

CAUTION:

Do not use any fuses that are installed on the vehicle.

- 4) Connect the general scan tool to data link connector located in the lower portion of the instrument panel (on the driver's side).

CAUTION:

Do not connect the scan tools except for Subaru Select Monitor and general scan tool.

- 5) Start the engine.

NOTE:

- Ensure the selector lever is placed in the “P” range before starting. (CVT model)
 - Depress the clutch pedal when starting engine. (MT model)
- 6) Turn the neutral position switch to ON using select lever or gear shift lever.
 - 7) Depress the brake pedal to turn the brake switch ON. (CVT model)
 - 8) Keep the engine speed in 2,500 — 3,000 rpm range for 40 seconds.
 - 9) Place the select lever or gear shift lever in “D” position (CVT model) or “1st gear” (MT model) and drive the vehicle at 5 to 10 km/h (3 to 6 MPH).

NOTE:

- For AWD model, release the parking brake.
 - The rotating speed difference between front and rear wheels may illuminate the ABS warning light, but this does not indicate a malfunction. When engine control system diagnosis is finished, perform the VDC memory clearance procedure of self-diagnosis function. <Ref. to VDC(diag)-26, Clear Memory Mode.>
- 10) Using the general scan tool, check for DTC and record the result(s).

NOTE:

- For detailed operation procedures, refer to “Application help”.
 - For details concerning DTC, refer to “List of Diagnostic Trouble Code (DTC)”.
- <Ref. to EN(H4DO)(diag)-96, List of Diagnostic Trouble Code (DTC).>

11. Drive Cycle

A: PROCEDURE

It is necessary to perform the drive cycle listed below if DTC is not found in the Inspection Mode. It is possible to complete diagnosis of the DTC by performing the indicated drive cycle. After the repair for the DTC, perform a necessary drive cycle and make sure the function recovers and the DTC is recorded.

1. PREPARATION FOR DRIVE CYCLE

- 1) Check that the battery voltage is 12 V or more and fuel remains approx. half [20 — 40 L (5.3 — 10.6 US gal, 4.4 — 8.8 Imp gal)].
- 2) After performing the diagnostics and Clear Memory Mode, check that no DTC remains. <Ref. to EN(H4DO)(diag)-66, Clear Memory Mode.>
- 3) Check the delivery (test) mode fuse is removed.

NOTE:

- Perform the drive cycle after warming up the engine except when the engine coolant temperature at engine start is specified.
- Perform the drive cycle twice if the DTC in the list is marked with *. After completing the first drive cycle, stop the engine and perform second diagnosis in same condition.

2. DRIVE CYCLE A

DTC	Item	Condition
*P0128	COOLANT THERMOSTAT (ENGINE COOLANT TEMPERATURE BELOW THERMOSTAT REGULATING TEMPERATURE)	—

Drive Cycle

ENGINE (DIAGNOSTICS)

Diagnostic procedure:

Drive according to the drive pattern described below.

- | | | |
|--|--|--|
| (A) Shift the select lever to "P" range or the gear shift lever to the neutral position, and let the engine idle for 10 seconds or more. | (D) Decelerate with fully closed throttle to 64 km/h (40 MPH) or less. | (G) Stop vehicle with the throttle fully closed. |
| (B) Accelerate to 97 km/h (60 MPH) or more within 20 seconds. | (E) Drive for 20 seconds or more at 64 km/h (40 MPH) or less. | (H) Vehicle speed km/h (MPH) |
| (C) Drive for 20 seconds or more at 97 km/h (60 MPH) or more. | (F) Accelerate to 97 km/h (60 MPH) or more within 10 seconds. | (I) Sec. |

NOTE:

Perform the followings for catalyst system bank 1 only.

- Check that *«Catalyst monitoring completed» indicates *«YES», and read the temporary code.
- If *«Catalyst monitoring completed» indicates «NO», the diagnosis has not been completed yet. In this case, repeat driving until it indicates «YES».

*: Using Subaru Select Monitor, refer to "Engine Current Data Display".

5. DRIVE CYCLE F

DTC	Item	Condition
*P0111	INTAKE AIR TEMPERATURE SENSOR 1 CIRCUIT RANGE/PERFORMANCE BANK 1	<ul style="list-style-type: none"> • 6 hours have elapsed since ignition switch is OFF under a completely warmed up condition. • For models with block heater, at least 6 hours must have elapsed without operating the block heater.
*P0196	ENGINE OIL TEMPERATURE SENSOR "A" RANGE/PERFORMANCE	<ul style="list-style-type: none"> • 6 hours have elapsed since ignition switch is OFF under a completely warmed up condition. • For models with block heater, at least 6 hours must have elapsed without operating the block heater.

Diagnostic procedure:

- 1) Make sure that the engine coolant temperature is less than 30°C (86°F).
- 2) Drive according to the drive pattern described below.

EN-07588

(A) Vehicle speed

(B) Elapsed time

- | | | |
|--|---|---|
| <p>(1) Idle the engine for 10 seconds or more after engine start.</p> <p>(2) Drive for 8 minutes or more at a constant speed of 80 km/h (50 MPH) or more.</p> <p>(3) Stop the vehicle and idle for 30 seconds or more.</p> | <p>(4) Drive for 30 seconds or more at a constant speed of 80 km/h (50 MPH) or more.</p> <p>(5) Stop the vehicle and idle for 30 seconds or more.</p> | <p>(6) Drive for 30 seconds or more at a constant speed of 80 km/h (50 MPH) or more.</p> <p>(7) Stop the vehicle and idle for 30 seconds.</p> |
|--|---|---|

NOTE:

- There is no given transition time between idling and cruising.
- Driving at constant speed only on a downhill causes smaller engine load and may result in failure to obtain a right diagnostic result.
- When the engine stops while performing drive cycle F, perform it again from the state of procedure 1).

Drive Cycle

ENGINE (DIAGNOSTICS)

6. DRIVE CYCLE H

DTC	Item	Condition
P0071	AMBIENT AIR TEMPERATURE SENSOR CIRCUIT "A" RANGE/PERFORMANCE	<ul style="list-style-type: none"> • 6 hours have elapsed since ignition switch is OFF under a completely warmed up condition. • For models with block heater, at least 6 hours must have elapsed without operating the block heater.
P0116	ENGINE COOLANT TEMPERATURE SENSOR 1 CIRCUIT RANGE/PERFORMANCE	<ul style="list-style-type: none"> • 6 hours have elapsed since ignition switch is OFF under a completely warmed up condition. • For models with block heater, at least 6 hours must have elapsed without operating the block heater.
P0451	EVAP SYSTEM (CPC) PRESSURE SENSOR/SWITCH CIRCUIT RANGE/PERFORMANCE	60 seconds have elapsed since ignition switch is OFF.
*P050A	COLD START IDLE CONTROL SYSTEM PERFORMANCE	—
*P050B	COLD START IGNITION TIMING PERFORMANCE	—

- 1) Perform the Clear Memory Mode. <Ref. to EN(H4DO)(diag)-66, Clear Memory Mode.>
- 2) With the ignition switch ON, read the value in «Coolant Temp.» and «Intake Air Temp.». <Ref. to EN(H4DO)(diag)-36, Subaru Select Monitor.>
- 3) If the values from step 2) satisfy the following conditions, idle the engine for one minute.

Condition:

$$| \text{Engine coolant temperature} - \text{Intake air temperature} | \leq 5^{\circ}\text{C} (9^{\circ}\text{F})$$

NOTE:

- If the conditions are not satisfied, turn the ignition switch to OFF and wait until the parameters are satisfied.
- For CVT models, hold the select lever to "P" range or "N" range at idling, and for MT models, the gear shift lever in the neutral position at idling.

7. DRIVE CYCLE I

DTC	Item	Condition
*P0455	EVAP SYSTEM (CPC) LEAK DETECTED (LARGE LEAK)	«Coolant Temp.»: 5 — 45°C (41 — 113°F) «Intake Air Temp.»: 5 — 50°C (41 — 122°F)
*P0456	EVAP SYSTEM (CPC) LEAK DETECTED (VERY SMALL LEAK)	
*P1451	EVAP SYSTEM CLOG DETECTED (PIPE)	
*P2402	EVAP SYSTEM LEAK DETECTION PUMP CONTROL CIRCUIT HIGH	
*P2404	EVAP SYSTEM LEAK DETECTION PUMP SENSE CIRCUIT RANGE/PERFORMANCE	
*P2420	EVAP SYSTEM SWITCHING VALVE CONTROL CIRCUIT HIGH	

CAUTION:

Be careful of the state of the battery when performing the drive cycle I consecutively. Performing the drive cycle I consecutively without the engine running may cause a low battery voltage and battery discharge.

NOTE:

- If it is necessary to perform drive cycle I consecutively, drive the vehicle under the following conditions to release accumulated evaporating gas. Performing the drive cycle I consecutively without starting the engine causes a large amount of evaporating gas to accumulate in the canister, which hinders an accurate diagnosis.
 - After engine is warmed up
 - Drive for 10 minutes or more at a speed of 48 km/h (30 MPH) or more (duration of drive can be an accumulation)

- To obtain an accurate diagnostic result, perform the procedures according to the following points.
 - Do not refuel gas immediately before performing drive cycle I. There will be a large amount of evaporating gas immediately after refuel, which may cause a less accurate diagnostic performance.
 - Do not shake the vehicle while performing drive cycle I. Shaking the vehicle causes evaporating gas to increase inside the fuel tank, which may cause a less accurate diagnostic performance.
 - Do not perform any service operation including installation or removal of parts or connectors while performing drive cycle I. Performing service operation could affect on the functions of related parts, which may cause a less accurate diagnostic performance.

1) Prepare the Subaru Select Monitor kit. <Ref. to EN(H4DO)(diag)-9, PREPARATION TOOL, General Description.>

2) Prepare PC with Subaru Select Monitor installed.

3) Connect the USB cable to the DST-i and the USB port on the personal computer (dedicated port for the Subaru Select Monitor).

NOTE:

The dedicated port for the Subaru Select Monitor means the USB port which was used to install the Subaru Select Monitor.

4) Connect the diagnosis cable to DST-i.

5) Connect the DST-i to the data link connector located in the lower portion of the instrument panel (on the driver's side).

CAUTION:

Do not connect the scan tools except for Subaru Select Monitor and general scan tool.

6) Start the PC.

7) Turn the ignition switch to ON (engine OFF) and run the "PC application for Subaru Select Monitor".

8) On «Start» display, select «OBD System».

9) On «Main Menu» display, select «Each System».

10) On «Select System» display, select «ECM-EngineControl» and then select «Enter».

11) On «Select Function» display, select «Evaporative System Leak Test».

12) On «Evaporative System Leak Test» display, select «Evaporative System Leak Test».

13) On «Evaporative System Leak Test is running. Press Cancel to exit this function.» display, click the «OK» button to perform evaporative system leak test.

14) When «Conditions have been enabled to control this function. Turn the ignition switch off to terminate the test.» display appears, wait for 30 minutes without clicking the «OK» button.

CAUTION:

Do not leave the vehicle for an extended period of time after the test is complete. This may cause early deterioration of the battery or discharged battery.

NOTE:

- Clicking the «OK» button bring the «Evaporative System Leak Test» display back, although the test is continuing.

- The Subaru Select Monitor screen does not change after the evaporative system leak test is complete or when the test is aborted by turning off the ignition switch.

- If «Test conditions are not correct» display appears, use Subaru Select Monitor to check that the values in «Coolant Temp.» and «Intake Air Temp.» are within the specified range. If the conditions are satisfied, make the necessary preparation for the drive cycle again. <Ref. to EN(H4DO)(diag)-55, PREPARATION FOR DRIVE CYCLE, PROCEDURE, Drive Cycle.>

Drive Cycle

ENGINE (DIAGNOSTICS)

15) After 30 minutes passed from the start of step 14), click the «OK» button to return to the «Evaporative System Leak Test» display.

16) Return to the «Select System» display, then select «On-board monitor test result».

17) In the «On-board monitor test result», check TID \$C1 — \$CA of MID \$3C.

Result of on-board monitor test

Display	Details	Remarks
\$0000 is stored in all Val.	During the evaporative system leak test, the test conditions were not met and the test was canceled.	Once the test conditions are met, perform the test again.
All Val. are stored with values and OK is set to all the results.	Evaporative system leak test is completed correctly.	While the ignition switch is ON, read temporary codes using the Subaru Select Monitor.
Some results were no good.	The evaporative system leak test completed successfully but the results were faulty.	While the ignition switch is ON, read temporary codes using the Subaru Select Monitor.

18) When the evaporative system leak test is completed correctly, read the temporary codes with the ignition switch turned to ON position. If the DTC is recorded, check the appropriate DTC. <Ref. to EN(H4DO)(diag)-49, OPERATION, Read Diagnostic Trouble Code (DTC).>

NOTE:

The temporary code will be cleared by turning ignition switch to OFF.

8. DRIVE CYCLE J

DTC	Item	Condition
P2610	ECM/PCM ENGINE OFF TIMER PERFORMANCE	—

1) Idle the engine for 15 minutes or more.

2) Turn the ignition switch to OFF.

3) After 10 hours passed from the start of step 2), read the temporary code using the Subaru Select Monitor. <Ref. to EN(H4DO)(diag)-49, OPERATION, Read Diagnostic Trouble Code (DTC).>

9. DRIVE CYCLE N

DTC	Item	Condition
P0016	CRANKSHAFT POSITION - CAMSHAFT POSITION CORRELATION BANK 1 SENSOR A	«Coolant Temp.»: 80°C (176°F) or more
P0017	CRANKSHAFT POSITION - CAMSHAFT POSITION CORRELATION BANK 1 SENSOR B	
P0018	CRANKSHAFT POSITION - CAMSHAFT POSITION CORRELATION BANK 2 SENSOR A	
P0019	CRANKSHAFT POSITION - CAMSHAFT POSITION CORRELATION BANK 2 SENSOR B	

WARNING:

When performing drive cycle N on a public road, pay sufficient attention to the traffic condition and give the highest priority to safe driving.

1) Check the data in condition column of table by using the Subaru Select Monitor or general scan tool.

NOTE:

- Subaru Select Monitor

For detailed operation procedures, refer to “Current Data Display For Engine”. <Ref. to EN(H4DO)(diag)-36, DISPLAY ENGINE CURRENT DATA, OPERATION, Subaru Select Monitor.>

- General scan tool

For detailed operation procedures, refer to the general scan tool operation manual.

2) While the conditions in the list are satisfied, race the engine at the speed of approx. 2,500 rpm for 40 seconds or more.

3) Start the vehicle, then accelerate the vehicle to 50 km/h (31.1 MPH) or more.

Drive Cycle

4) When the speed reaches 50 km/h (31.1 MPH) or more, release the accelerator pedal, the brake pedal and the clutch pedal (MT model) to decelerate the vehicle without shifting the gear. At this time, select an appropriate gear beforehand so that the engine speed can decrease from 2,500 rpm to 1,900 rpm for 5 seconds or more.

NOTE:

- The vehicle speed does not matter so long as the engine speed can maintain from 2,500 rpm to 1,900 rpm for 5 seconds or more.

Example: On a downhill grade, it can be performed with a low speed gear and at a low vehicle speed.

- When it is performed with the electrical load such as the air conditioner, etc. turned OFF or the vehicle driven on a downhill grade, the engine speed decreases slowly. Therefore, the continuous time can be maintained easily.

5) Bring the vehicle to a stop in a safe place, and idle it for 5 minutes or more.

NOTE:

Driving method while vehicle is driven to a stop at safe place is not restricted.

6) With the vehicle idling, read the temporary diagnostic code of DTC using Subaru Select Monitor or general scan tool.

NOTE:

- For detailed operation procedures, refer to "Read Diagnostic Trouble Code (DTC)". <Ref. to EN(H4DO)(diag)-49, Read Diagnostic Trouble Code (DTC).>
- In the step 6), if the DTC is not displayed on the Subaru Select Monitor or general scan tool display screen, the trouble is resolved.

- | | | |
|-----------------------|-----------------------|------------------------|
| (A) 2500 rpm | (B) 1900 rpm | (C) 40 seconds or more |
| (D) 5 seconds or more | (E) 5 minutes or more | |

Drive Cycle

ENGINE (DIAGNOSTICS)

10.DRIVE CYCLE O

DTC	Item	Condition
P0441	EVAP SYSTEM (CPC) INCORRECT PURGE FLOW	—

Diagnostic procedure:

WARNING:

When performing drive cycle O on a public road, pay sufficient attention to the traffic condition and give the highest priority to safe driving.

1) Drive according to the drive pattern described below.

(A) Drive the vehicle at 60 km/h (37 MPH) or faster for at least 5 minutes in fully warm-up condition.

(B) Decelerate with the throttle fully closed for at least 3 seconds.

(C) Drive the vehicle at a constant vehicle speed by depressing the accelerator pedal for at least 30 seconds.

(D) Vehicle speed km/h (MPH)

(E) Sec.

2) Park the vehicle on a safe place.

NOTE:

Driving method while vehicle is driven to a stop at safe place is not restricted.

3) With the vehicle idling, read the temporary diagnostic code of DTC using Subaru Select Monitor or general scan tool.

NOTE:

- For detailed operation procedures, refer to “Read Diagnostic Trouble Code (DTC)”. <Ref. to EN(H4DO)(diag)-49, Read Diagnostic Trouble Code (DTC).>
- In the step 3), if the DTC is not displayed on the Subaru Select Monitor or general scan tool display screen, the trouble is resolved.

11.DRIVE CYCLE R

DTC	Item	Condition
P219A	BANK 1 AIR-FUEL RATIO IMBALANCE	—

WARNING:

When performing the drive cycle R on the public road, be very careful of the traffic condition and the safe driving must be the high priority.

1) Check the data in condition column of table by using the Subaru Select Monitor or general scan tool.

NOTE:

- Subaru Select Monitor

For detailed operation procedures, refer to “Current Data Display For Engine”. <Ref. to EN(H4DO)(diag)-36, DISPLAY ENGINE CURRENT DATA, OPERATION, Subaru Select Monitor.>

- General scan tool

For detailed operation procedures, refer to the general scan tool operation manual.

2) Keep the engine at idle for at least 30 seconds in a fully warm-up condition.

3) Start the driving.

4) With the gear position in the 4th, take 10 seconds to accelerate from 1200 rpm to 2600 rpm.

5) Decelerate to 1200 rpm in the 4th gear position. (There is no restrictions to the deceleration duration and how to use the brake.)

6) Repeat steps 4) and 5) 10 times (end when the temporary code is acquired).

(A) Idle the engine for at least 30 seconds in a fully warm-up condition.

(B) 10 seconds

(C) Accelerating

(D) Engine speed

(E) 1200 rpm

(F) 2600 rpm

(G) Accelerate and decelerate in the 4th gear position.

(H) Time

(I) Accelerating and decelerating

Clear Memory Mode

ENGINE (DIAGNOSTICS)

12. Clear Memory Mode

A: OPERATION

1. SUBARU SELECT MONITOR

NOTE:

- Initial diagnosis of electronic throttle control is performed after memory clearance. Wait for 10 seconds or more after turning the ignition switch to ON, and then start the engine.
 - For detailed operation procedures, refer to “Application help”.
- 1) On «Start» display, select «Diagnosis».
 - 2) On «Vehicle selection» display, input the target vehicle information and select «Confirmed».
 - 3) On «Main Menu» display, select «Each System».
 - 4) On «Select System» display, select «Engine Control System» and then «Enter».
 - 5) On «Select Function» display, select «DTC».
 - 6) On «DTC» display, select «Clear Memory».

2. GENERAL SCAN TOOL

For clear memory procedures using the general scan tool, refer to “General Scan Tool Instruction Manual”.

NOTE:

Initial diagnosis of electronic throttle control is performed after memory clearance. Wait for 10 seconds or more after turning the ignition switch to ON, and then start the engine.

13.Active Test

A: OPERATION

CAUTION:

After executing the system operation check mode, execute the Clear Memory Mode. <Ref. to EN(H4DO)(diag)-66, OPERATION, Clear Memory Mode.>

NOTE:

- *: After replacing ECM, be sure to perform this procedure.
 - For detailed operation procedures, refer to “Application help”.
- 1) On «Start» display, select «Diagnosis».
 - 2) On «Vehicle selection» display, input the vehicle information and select «Confirmed».
 - 3) On «Main Menu» display, select «Each System».
 - 4) On «Select System» display, select «Engine Control System».
 - 5) On «Select Function» display, select «Active Test».

Active test items	Contents	Execution condition
Fuel Pump Relay	ON/OFF of the fuel pump can be set.	Ignition switch is ON (engine OFF)
CPC Solenoid Valve	ON/OFF of the purge control solenoid valve can be set.	
Radiator Fan Relay	ON/OFF of the radiator fan relay can be set.	
A/C Compressor Relay	ON/OFF of the A/C relay can be set.	
ELCM switching valve	ON/OFF of the leak check valve assembly switching valve can be set.	
ELCM pump	ON/OFF of the leak check valve assembly vacuum pump can be set.	
Fuel Pump Control (OFF Drive)	Fuel pump can be set to OFF.	At idling
Fixed Idle Ignition Timing	Idle ignition timing can be set and fixed to 16.0°*1.	At idling
Idle Speed Control	Idle speed can be set to 500 — 2000 rpm.	At idling
Injection Stop Mode (Injector 1) Injection Stop Mode (Injector 2) Injection Stop Mode (Injector 3) Injection Stop Mode (Injector 4)	Injector of each cylinder can be set to stop the fuel injection.	At idling
Injection Quantity Control	The amount of fuel injection can be set to 0 — 20%.	At idling
EGR Valve Control	EGR control valve can be set to 0 — 255 STEP.	At idling
Alternator control	Alternator control mode can be set to one of the followings: Low mode Middle mode High mode *2 ExHigh mode	At idling

*1: Value may change depending on the idle speed.

*2: Control voltages of High mode and ExHigh mode are the same value.

Malfunction Indicator Light

ENGINE (DIAGNOSTICS)

14. Malfunction Indicator Light

A: PROCEDURE

1. Activation of malfunction indicator light <Ref. to EN(H4DO)(diag)-68, ACTIVATION OF MALFUNCTION INDICATOR LIGHT, Malfunction Indicator Light.>
↓
2. Malfunction indicator light does not come on <Ref. to EN(H4DO)(diag)-70, MALFUNCTION INDICATOR LIGHT DOES NOT COME ON, Malfunction Indicator Light.>
↓
3. Malfunction indicator light does not go off <Ref. to EN(H4DO)(diag)-70, MALFUNCTION INDICATOR LIGHT DOES NOT GO OFF, Malfunction Indicator Light.>
↓
4. Malfunction indicator light does not blink <Ref. to EN(H4DO)(diag)-71, MALFUNCTION INDICATOR LIGHT DOES NOT BLINK, Malfunction Indicator Light.>
↓
5. Malfunction indicator light remains blinking <Ref. to EN(H4DO)(diag)-73, MALFUNCTION INDICATOR LIGHT REMAINS BLINKING, Malfunction Indicator Light.>

B: ACTIVATION OF MALFUNCTION INDICATOR LIGHT

1) When the ignition switch is turned to ON (engine OFF), the malfunction indicator light (A) in the combination meter illuminates.

NOTE:

If the malfunction indicator light does not illuminate, perform diagnostics of the malfunction indicator light circuit or the combination meter circuit. <Ref. to EN(H4DO)(diag)-70, MALFUNCTION INDICATOR LIGHT DOES NOT COME ON, Malfunction Indicator Light.>

Malfunction Indicator Light

2) After starting the engine, the malfunction indicator light goes out. If it does not go off, any of the engine and emission control system has malfunction.

- (1) No faulty
- (2) Trouble occurs
- (3) ON
- (4) OFF
- (5) Ignition switch ON
- (6) Engine start

3) If the diagnostic system detects a misfire which could damage the catalyst, the malfunction indicator light will blink at a cycle of 1 Hz.

- (1) ON
- (2) OFF
- (3) Ignition switch ON
- (4) Engine start
- (5) Misfire start
- (6) 1 second

4) Install the delivery (test) mode fuse (A) with ignition switch to OFF.

CAUTION:

Do not use any fuses that are installed on the vehicle.

(1) When the ignition switch is turned to ON (engine OFF), the malfunction indicator light illuminates.

Malfunction Indicator Light

ENGINE (DIAGNOSTICS)

- (2) After the engine starts, malfunction indicator light blinks in a cycle of 0.5 Hz. (During diagnosis)
 (3) Malfunction indicator light blinks at a cycle of 3 Hz after diagnosis if there is no trouble. Malfunction indicator light illuminates if faulty.

- (1) ON
 (2) OFF
 (3) Ignition switch ON
 (4) 1 second

C: MALFUNCTION INDICATOR LIGHT DOES NOT COME ON

TROUBLE SYMPTOM:

When the ignition switch is turned to ON (engine OFF), malfunction indicator light does not illuminate.

NOTE:

Refer to IDI section for diagnostic procedure. <Ref. to IDI(diag)-2, Basic Diagnostic Procedure.>

D: MALFUNCTION INDICATOR LIGHT DOES NOT GO OFF

TROUBLE SYMPTOM:

Although malfunction indicator light comes on when the engine runs, DTC is not shown on the Subaru Select Monitor or general scan tool display.

	Step	Check	Yes	No
1	CHECK DTC.	Is DTC of engine or LAN system displayed? <Ref. to EN(H4DO)(diag)-49, OPERATION, Read Diagnostic Trouble Code (DTC).>	Check the appropriate DTC using the "List of Diagnostic Trouble Code (DTC)". <Ref. to EN(H4DO)(diag)-96, List of Diagnostic Trouble Code (DTC).> <Ref. to LAN(diag)-92, List of Diagnostic Trouble Code (DTC).>	Check the combination meter system. <Ref. to IDI(diag)-2, Basic Diagnostic Procedure.>

E: MALFUNCTION INDICATOR LIGHT DOES NOT BLINK

DIAGNOSIS:

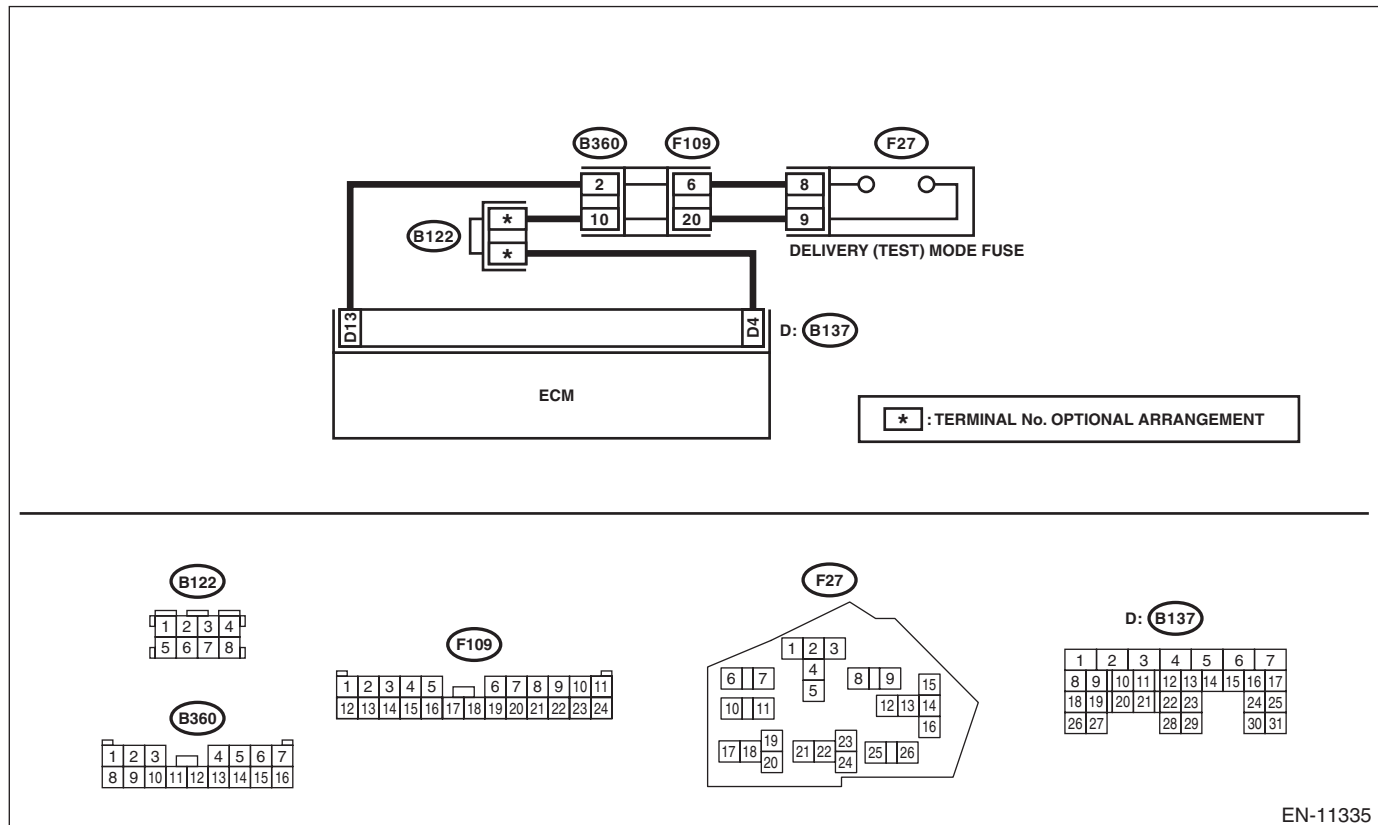

- The malfunction indicator light circuit is open or shorted.
- The delivery (test) mode fuse circuit is open.

TROUBLE SYMPTOM:

Malfunction indicator light does not blink during Inspection Mode.

WIRING DIAGRAM:

Engine electrical system <Ref. to WI-102, Engine Electrical System.>

Step	Check	Yes	No
1 CHECK STATUS OF MALFUNCTION INDICATOR LIGHT. 1) Turn the ignition switch to OFF. 2) Check the delivery (test) mode fuse is removed. 3) Turn the ignition switch to ON. (engine OFF)	Does the malfunction indicator light illuminate?	Go to step 2.	Repair the malfunction indicator light circuit. <Ref. to EN(H4DO)(diag)-70, MALFUNCTION INDICATOR LIGHT DOES NOT COME ON, Malfunction Indicator Light.>

Malfunction Indicator Light

ENGINE (DIAGNOSTICS)

Step	Check	Yes	No
2 CHECK HARNESS BETWEEN ECM AND DELIVERY (TEST) MODE FUSE. 1) Turn the ignition switch to OFF. 2) Disconnect the connector from ECM. 3) Install the delivery (test) mode fuse. CAUTION: Do not use any fuses that are installed on the vehicle. 4) Measure the resistance of harness between ECM connectors. <i>Connector & terminal</i> <i>(B137) No. 13 — (B137) No. 4:</i>	Is the resistance less than 1 Ω?	Go to step 3.	Repair the harness and connector. NOTE: In this case, repair the following item: <ul style="list-style-type: none"> • Open circuit in harness between ECM connector • Poor contact of each connector between ECM connector
3 CHECK FOR POOR CONTACT. Check for poor contact of ECM connector.	Is there poor contact of ECM connector?	Repair the poor contact of ECM connector.	Replace the ECM. <Ref. to FU(H4DO)-98, Engine Control Module (ECM).>

F: MALFUNCTION INDICATOR LIGHT REMAINS BLINKING

Diagnosis:

The delivery (test) mode fuse circuit is short-circuited to ground.

Trouble symptom:

Malfunction indicator light blinks when delivery (test) mode fuse is not connected.

Wiring diagram:

Engine electrical system <Ref. to WI-102, Engine Electrical System.>

EN-11335

Step	Check	Yes	No
1 CHECK DELIVERY (TEST) MODE CONNECTOR. 1) Check the delivery (test) mode fuse is removed. 2) Turn the ignition switch to ON.	Does the malfunction indicator light blink?	Go to step 2.	System is normal. NOTE: Malfunction indicator light blinks at a cycle of 3 Hz when delivery (test) mode fuse is attached.
2 CHECK HARNESS BETWEEN ECM AND DELIVERY (TEST) MODE FUSE. 1) Turn the ignition switch to OFF. 2) Disconnect the connector from ECM. 3) Measure the resistance between ECM connector and chassis ground. Connector & terminal (B137) No. 13 — Chassis ground:	Is the resistance 1 MΩ or more?	Replace the ECM. <Ref. to FU(H4DO)-98, Engine Control Module (ECM).>	Repair the short circuit to ground in the harness between the ECM connector and delivery (test) mode fuse.

Diagnostics for Engine Starting Failure

ENGINE (DIAGNOSTICS)

15. Diagnostics for Engine Starting Failure

A: PROCEDURE

1. Check of the fuel amount
↓
2. Inspection of starter motor circuit <Ref. to EN(H4DO)(diag)-75, STARTER MOTOR CIRCUIT, Diagnostics for Engine Starting Failure.>
↓
3. Inspection of ECM power supply and ground line <Ref. to EN(H4DO)(diag)-86, CHECK POWER SUPPLY AND GROUND LINE OF ENGINE CONTROL MODULE (ECM), Diagnostics for Engine Starting Failure.>
↓
4. Inspection of ignition control system <Ref. to EN(H4DO)(diag)-88, IGNITION CONTROL SYSTEM, Diagnostics for Engine Starting Failure.>
↓
5. Inspection of fuel pump circuit <Ref. to EN(H4DO)(diag)-90, FUEL PUMP CIRCUIT, Diagnostics for Engine Starting Failure.>
↓
6. Inspection of fuel injector circuit <Ref. to EN(H4DO)(diag)-92, FUEL INJECTOR CIRCUIT, Diagnostics for Engine Starting Failure.>

B: STARTER MOTOR CIRCUIT

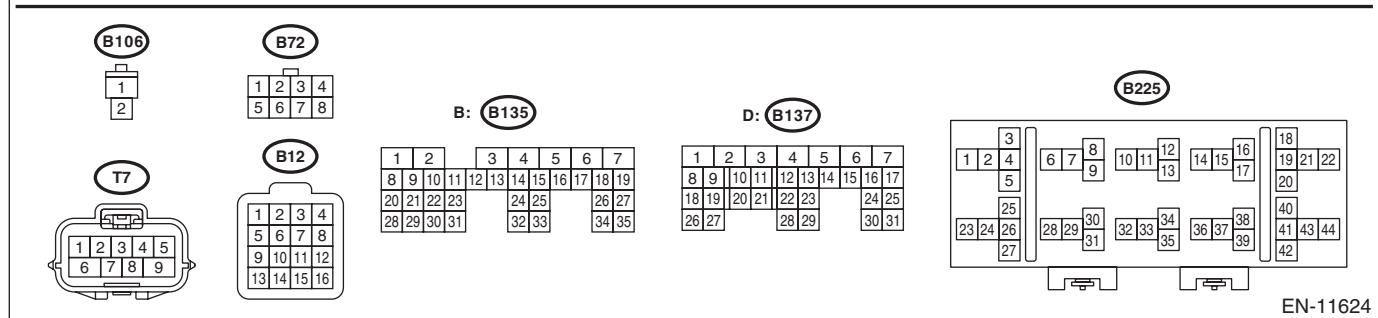

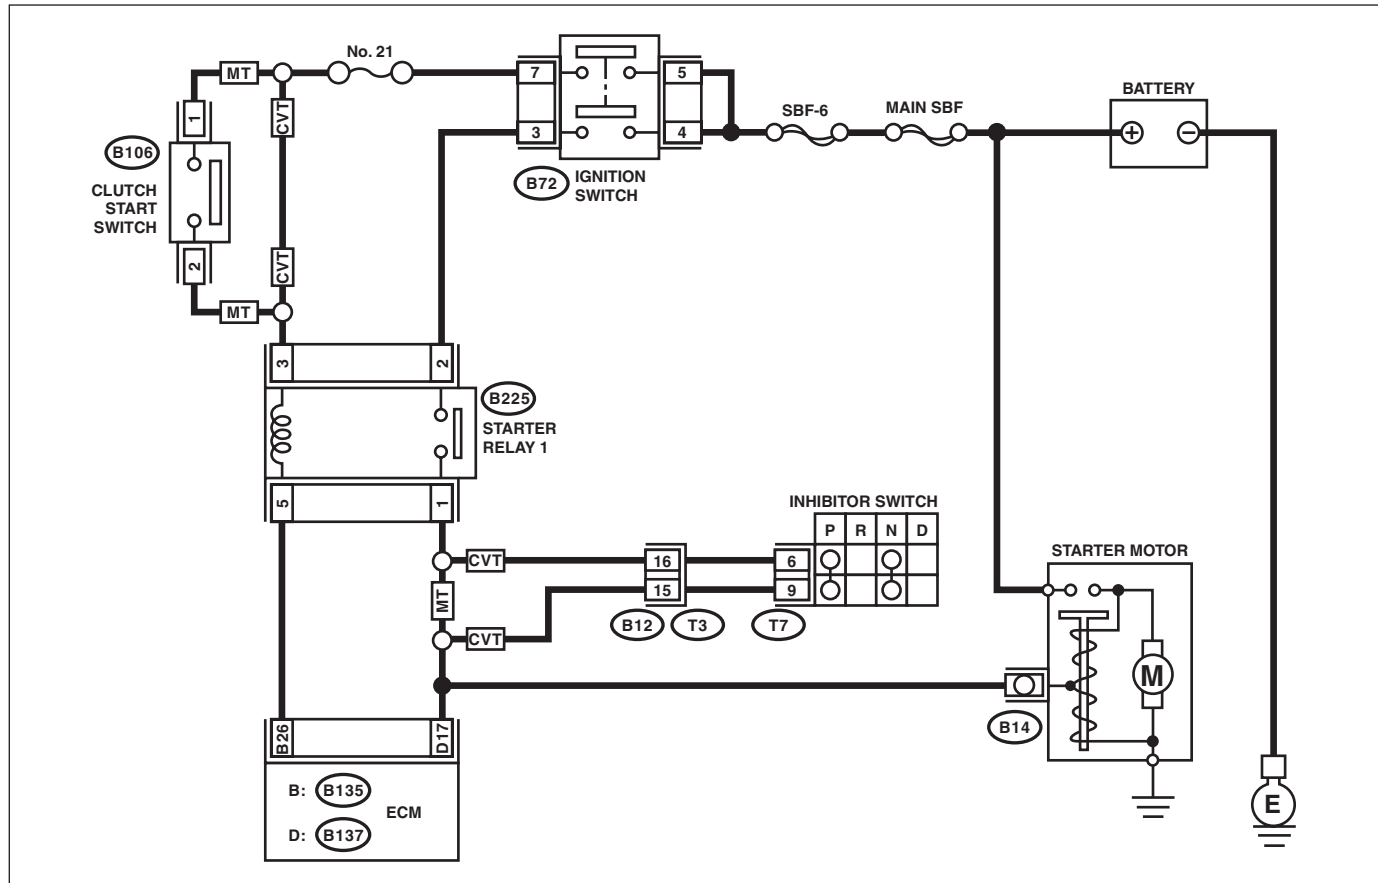

1. MODEL WITHOUT PUSH BUTTON START

CAUTION:

After servicing or replacing faulty parts, perform Clear Memory Mode <Ref. to EN(H4DO)(diag)-66, Clear Memory Mode.>, and Inspection Mode <Ref. to EN(H4DO)(diag)-50, Inspection Mode.>.

Wiring diagram:

Engine electrical system <Ref. to WI-102, Engine Electrical System.>

EN-11624

Step	Check	Yes	No
1	CHECK BATTERY. Check the battery. <Ref. to SC(H4DO)-51, Battery.>	Go to step 2.	Charge or replace the battery. <Ref. to SC(H4DO)-51, Battery.>
2	CHECK OPERATION OF STARTER MOTOR.	Go to step 3.	Go to step 4.

Diagnostics for Engine Starting Failure

ENGINE (DIAGNOSTICS)

Step	Check	Yes	No
3 CHECK DTC.	Are any DTCs displayed? <Ref. to EN(H4DO)(diag)-49, OPERATION, Read Diagnostic Trouble Code (DTC).>	Check the appropriate DTC using the "List of Diagnostic Trouble Code (DTC)". <Ref. to EN(H4DO)(diag)-96, List of Diagnostic Trouble Code (DTC).>	Check ignition control system. <Ref. to EN(H4DO)(diag)-88, IGNITION CONTROL SYSTEM, Diagnostics for Engine Starting Failure.>
4 CHECK INPUT SIGNAL FOR STARTER MOTOR. 1) Turn the ignition switch to OFF. 2) Disconnect the connector from starter motor. 3) Turn the ignition switch to START. 4) Measure the voltage between the starter motor connector and the engine ground. Connector & terminal (B14) No. 1 (+) — Engine ground (-): NOTE: <ul style="list-style-type: none"> • For CVT model, place the select lever in "P" range or "N" range. • For MT model, depress the clutch pedal. 	Is the voltage 10 V or more?	Check the starter motor. <Ref. to SC(H4DO)-8, Starter.>	Go to step 5.
5 CHECK HARNESS BETWEEN BATTERY AND IGNITION SWITCH CONNECTOR. 1) Turn the ignition switch to OFF. 2) Disconnect the connector from ignition switch. 3) Measure the power supply voltage between ignition switch connector and chassis ground. Connector & terminal (B72) No. 4 (+) — Chassis ground (-): (B72) No. 5 (+) — Chassis ground (-):	Is the voltage 10 V or more?	Go to step 6.	Repair the power supply circuit.
6 CHECK IGNITION SWITCH. Measure the resistance between ignition switch terminals after turning the ignition switch to START position. Terminals No. 3 — No. 4: No. 5 — No. 7:	Is the resistance less than 1 Ω ?	Go to step 7.	Replace the ignition switch. <Ref. to SL-58, REPLACEMENT, Ignition Key Lock.>
7 CHECK INPUT VOLTAGE OF STARTER RELAY 1. 1) Turn the ignition switch to OFF. 2) Remove the starter relay 1. 3) Connect the connector to ignition switch. 4) Measure the voltage between starter relay 1 connector and chassis ground after turning the ignition switch to START position. Connector & terminal (B225) No. 2 (+) — Chassis ground (-):	Is the voltage 10 V or more?	Go to step 8.	Repair the open circuit of harness between starter relay 1 and ignition switch connector.
8 CHECK HARNESS BETWEEN ECM AND STARTER RELAY 1 CONNECTOR. 1) Turn the ignition switch to OFF. 2) Disconnect the connector from ECM. 3) Measure the resistance of harness between ECM connector and starter relay 1 connector. Connector & terminal (B135) No. 26 — (B225) No. 5:	Is the resistance less than 1 Ω ?	Go to step 9.	Repair the open circuit of harness between ECM connector and starter relay 1 connector.

Diagnostics for Engine Starting Failure

ENGINE (DIAGNOSTICS)

Step	Check	Yes	No
9 CHECK STARTER RELAY 1. 1) Connect the battery to starter relay 1 terminals No. 3 and No. 5. 2) Measure the resistance between starter relay 1 terminals. <i>Terminals</i> <i>No. 1 — No. 2:</i>	Is the resistance less than 1 Ω ?	Go to step 10.	Replace the starter relay 1. <Ref. to EN(H4DO)(diag)-10, Electrical Component Location.>
10 CHECK TRANSMISSION TYPE.	Is the transmission type CVT?	Go to step 11.	Go to step 15.
11 CHECK INPUT VOLTAGE OF STARTER RELAY 1. Measure the voltage between starter relay 1 connector and chassis ground after turning the ignition switch to START position. <i>Connector & terminal</i> <i>(B225) No. 3 (+) — Chassis ground (-):</i>	Is the voltage 10 V or more?	Go to step 12.	Check the following item and repair if necessary. <ul style="list-style-type: none"> • Blown out of fuse • Open or short circuit to ground in harness between starter relay 1 and ignition switch connector
12 CHECK HARNESS BETWEEN STARTER RELAY 1 AND INHIBITOR SWITCH CONNECTOR. 1) Turn the ignition switch to OFF. 2) Disconnect the connector from inhibitor switch. 3) Measure the resistance of harness between starter relay 1 connector and inhibitor switch connector. <i>Connector & terminal</i> <i>(B225) No. 1 — (T7) No. 6:</i>	Is the resistance less than 1 Ω ?	Go to step 13.	Repair the harness and connector. NOTE: In this case, repair the following item: <ul style="list-style-type: none"> • Open circuit in harness between starter relay 1 connector and inhibitor switch connector • Poor contact of coupling connector
13 CHECK HARNESS BETWEEN INHIBITOR SWITCH AND STARTER MOTOR. Measure the resistance of harness between the inhibitor switch connector and starter motor. <i>Connector & terminal</i> <i>(T7) No. 9 — (B14) No. 1:</i>	Is the resistance less than 1 Ω ?	Go to step 14.	Repair the harness and connector. NOTE: In this case, repair the following item: <ul style="list-style-type: none"> • Open circuit in harness between inhibitor switch connector and starter motor • Poor contact of coupling connector
14 CHECK INHIBITOR SWITCH. 1) Place the select lever in “P” range and “N” range. 2) Measure the resistance between inhibitor switch terminals. <i>Terminals</i> <i>No. 6 — No. 9:</i>	Is the resistance less than 1 Ω ?	Check the engine control module (ECM) power supply and ground line. <Ref. to EN(H4DO)(diag)-86, CHECK POWER SUPPLY AND GROUND LINE OF ENGINE CONTROL MODULE (ECM), Diagnostics for Engine Starting Failure.>	Replace the inhibitor switch. <Ref. to CVT(TR580)-97, Inhibitor Switch.>

Diagnostics for Engine Starting Failure

ENGINE (DIAGNOSTICS)

Step	Check	Yes	No
15 CHECK INPUT VOLTAGE OF CLUTCH START SWITCH. 1) Disconnect the connector from clutch start switch. 2) Turn the ignition switch to START. 3) Measure the voltage between the clutch start switch connector and chassis ground. Connector & terminal (B106) No. 1 (+) — Chassis ground (-):	Is the voltage 10 V or more?	Go to step 16.	Check the following item and repair if necessary. <ul style="list-style-type: none"> • Blown out of fuse • Open or short circuit to ground in harness between ignition switch connector and clutch start switch connector
16 CHECK CLUTCH START SWITCH. 1) Turn the ignition switch to OFF. 2) Measure the resistance between clutch start switch terminals while keeping the clutch pedal depressed. Terminals No. 1 — No. 2:	Is the resistance less than 1 Ω ?	Go to step 17.	Replace the clutch start switch. <Ref. to CL-30, Clutch Switch.>
17 CHECK HARNESS BETWEEN STARTER RELAY 1 AND CLUTCH START SWITCH. Measure the resistance of harness between starter relay 1 and clutch start switch connector. Connector & terminal (B225) No. 3 — (B106) No. 2:	Is the resistance less than 1 Ω ?	Go to step 18.	Repair the open circuit in harness between starter relay 1 and clutch start switch connector.
18 CHECK HARNESS BETWEEN STARTER RELAY 1 AND STARTER MOTOR. Measure the resistance of harness between starter relay 1 connector and starter motor. Connector & terminal (B225) No. 1 — (B14) No. 1:	Is the resistance less than 1 Ω ?	Check the engine control module (ECM) power supply and ground line. <Ref. to EN(H4DO)(diag)-86, CHECK POWER SUPPLY AND GROUND LINE OF ENGINE CONTROL MODULE (ECM), Diagnostics for Engine Starting Failure.>	Repair the open circuit of the harness between starter relay 1 connector and starter motor.

Diagnostics for Engine Starting Failure

2. MODEL WITH PUSH BUTTON START

CAUTION:

After servicing or replacing faulty parts, perform Clear Memory Mode <Ref. to EN(H4DO)(diag)-66, Clear Memory Mode.>, and Inspection Mode <Ref. to EN(H4DO)(diag)-50, Inspection Mode.>.

Wiring diagram:

Engine electrical system <Ref. to WI-102, Engine Electrical System.>

Diagnostics for Engine Starting Failure

ENGINE (DIAGNOSTICS)

Step	Check	Yes	No
1 CHECK DTC.	Are any DTCs displayed? <Ref. to EN(H4DO)(diag)-49, OPERATION, Read Diagnostic Trouble Code (DTC).>	Check the appropriate DTC using the "List of Diagnostic Trouble Code (DTC)". <Ref. to EN(H4DO)(diag)-96, List of Diagnostic Trouble Code (DTC).>	Go to step 2.
2 CHECK NEUTRAL POSITION SWITCH SIGNAL. 1) Read the value of «Neutral Position Switch» using the Subaru Select Monitor. NOTE: For detailed operation procedures, refer to "Current Data Display For Engine". <Ref. to EN(H4DO)(diag)-36, Subaru Select Monitor.> 2) Turn the ignition to ON. 3) Place the select lever in "P" range or "N" range.	Is «Neutral» displayed?	Go to step 3.	Go to step 8.
3 CHECK BATTERY. Check the battery. <Ref. to SC(H4DO)-51, Battery.>	Is the check result OK?	Go to step 4.	Charge or replace the battery. <Ref. to SC(H4DO)-51, Battery.>
4 CHECK OPERATION OF STARTER MOTOR.	Does the starter motor operate?	Check ignition control system. <Ref. to EN(H4DO)(diag)-88, IGNITION CONTROL SYSTEM, Diagnostics for Engine Starting Failure.>	Go to step 5.
5 CHECK PUSH BUTTON IGNITION SWITCH. Press the push button ignition switch twice with the ignition OFF (ACC OFF). NOTE: Release the brake pedal.	Does the ignition turn to ON?	Go to step 6.	Check the push button start system. <Ref. to KPS(diag)-99, POWER SUPPLY SWITCHING SYSTEM, INSPECTION, General Diagnostic Table.>
6 CHECK PUSH BUTTON IGNITION SWITCH. 1) Depress the brake pedal. NOTE: Shift the select lever to "P" range. 2) Check the push button ignition switch indicator.	Does the indicator turn to green?	Go to step 7.	Check the push button start system. <Ref. to KPS(diag)-124, ENGINE DOES NOT START, INSPECTION, Diagnostics with Phenomenon.>

Diagnostics for Engine Starting Failure

ENGINE (DIAGNOSTICS)

Step	Check	Yes	No
<p>7 CHECK START SWITCH SIGNAL. 1) Read the waveform of «Starter Switch» using the Subaru Select Monitor. NOTE: For detailed operation procedures, refer to “Current Data Display For Engine”. <Ref. to EN(H4DO)(diag)-36, Subaru Select Monitor.> 2) Press the push button ignition switch once with the brake pedal depressed.</p>	Does waveform of the «Starter Switch» occur?	Go to step 11.	Go to step 8.
<p>8 CHECK HARNESS BETWEEN ECM AND KEYLESS ACCESS CM. 1) Turn the ignition to OFF. 2) Disconnect the connector from ECM. 3) Disconnect the connector from the keyless access CM. 4) Measure the resistance of harness between ECM connector and keyless access CM. Connector & terminal (B137) No. 17 — (B572) No. 7:</p>	Is the resistance less than 1 Ω?	Go to step 9.	Repair the harness and connector. NOTE: In this case, repair the following item: • Open circuit of harness between ECM connector and keyless access CM connector • Poor contact of coupling connector
<p>9 CHECK HARNESS BETWEEN ECM AND KEYLESS ACCESS CM. Measure the resistance between ECM connector and chassis ground. Connector & terminal (B137) No. 17 — Chassis ground:</p>	Is the resistance 1 MΩ or more?	Go to step 10.	Repair the short circuit to ground in harness between ECM connector and keyless access CM connector.
<p>10 CHECK START SWITCH SIGNAL. 1) Connect the connector to ECM. 2) Connect the connector to the keyless access CM. 3) Read the waveform of start switch signal using an oscilloscope. 4) Press the push button ignition switch once with the brake pedal depressed. Connector & terminal (B137) No. 17 (+) — Chassis ground (-):</p>	Does waveform of the start switch signal occur?	Repair the poor contact of ECM connector.	Repair the poor contact of keyless access CM connector.
<p>11 CHECK INPUT SIGNAL FOR STARTER MOTOR. 1) Turn the ignition to OFF. 2) Disconnect the connector from starter motor. 3) Place the select lever in “P” range or “N” range. 4) Press the push button ignition switch once with the brake pedal depressed. 5) Measure the voltage between the starter motor connector and the engine ground. Connector & terminal (B14) No. 1 (+) — Engine ground (-):</p>	Is the voltage 10 V or more?	Check the starter motor. <Ref. to SC(H4DO)-8, Starter.>	Go to step 12.
<p>12 CHECK HARNESS BETWEEN BATTERY AND STARTER MOTOR. 1) Turn the ignition to OFF. 2) Measure the voltage between starter motor terminal B and engine ground. Terminals Terminal B (+) — Engine ground (-):</p>	Is the voltage 10 V or more?	Go to step 13.	Repair the power supply circuit.

Diagnostics for Engine Starting Failure

ENGINE (DIAGNOSTICS)

Step	Check	Yes	No
13 CHECK IG RELAY 1 (PUSH BUTTON START) POWER SUPPLY. 1) Remove the IG relay 1 (push button start). 2) Turn the ignition to ON. 3) Measure the voltage between the IG relay 1 (push button start) connector and chassis ground. <i>Connector & terminal</i> <i>(B225) No. 37 (+) — Chassis ground (-):</i> <i>(B225) No. 38 (+) — Chassis ground (-):</i>	Is the voltage 10 V or more?	Go to step 14.	Check the following item and repair or replace if necessary. <ul style="list-style-type: none"> • Blown out of fuse • Open circuit or short circuit to ground in harness between IG relay 1 (push button start) connector and keyless access CM connector • Open circuit or short circuit to ground in harness between IG relay 1 (push button start) connector and battery • Poor contact of coupling connector
14 CHECK HARNESS BETWEEN IG RELAY 1 (PUSH BUTTON START) CONNECTOR AND CHASSIS GROUND. 1) Turn the ignition to OFF. 2) Measure the resistance of harness between the IG relay 1 (push button start) connector and chassis ground. <i>Connector & terminal</i> <i>(B225) No. 39 — Chassis ground:</i>	Is the resistance less than 5 Ω ?	Go to step 15.	Repair the open circuit in harness between the IG relay 1 (push button start) connector and chassis ground.
15 CHECK IG RELAY 1 (PUSH BUTTON START). 1) Connect the battery to IG relay 1 (push button start) terminals No. 38 and No. 39. 2) Measure the resistance between IG relay 1 (push button start) terminals. <i>Terminals</i> <i>No. 36 — No. 37:</i>	Is the resistance less than 1 Ω ?	Go to step 16.	Replace the IG relay 1 (push button start). <Ref. to SL-98, IG Relay1 (Push Button Start).>

Diagnostics for Engine Starting Failure

ENGINE (DIAGNOSTICS)

Step	Check	Yes	No
<p>16 CHECK STARTER RELAY (PUSH BUTTON START) POWER SUPPLY.</p> <p>1) Install the IG relay 1 (push button start). 2) Remove the starter relay (push button start). 3) Turn the ignition to ON. 4) Measure the voltage between starter relay (push button start) connector and chassis ground.</p> <p>Connector & terminal (B225) No. 29 (+) — Chassis ground (-): (B225) No. 30 (+) — Chassis ground (-):</p>	Is the voltage 10 V or more?	Go to step 17.	Check the following item and repair or replace if necessary. <ul style="list-style-type: none"> • Blown out of fuse (F/B No. 26) • Open circuit or short circuit to ground in harness between starter relay (push button start) connector and IG relay 1 (push button start) connector • Open circuit or short circuit to ground in harness between starter relay (push button start) connector and battery
<p>17 CHECK HARNESS BETWEEN STARTER RELAY (PUSH BUTTON START) CONNECTOR AND CHASSIS GROUND.</p> <p>1) Turn the ignition to OFF. 2) Measure the resistance of harness between starter relay (push button start) connector and chassis ground.</p> <p>Connector & terminal (B225) No. 31 — Chassis ground:</p>	Is the resistance less than 5 Ω?	Go to step 18.	Repair the open circuit in harness between starter relay (push button start) connector and chassis ground.
<p>18 CHECK STARTER RELAY (PUSH BUTTON START).</p> <p>1) Connect the battery to starter relay (push button start) terminals No. 30 and No. 31. 2) Measure the resistance between starter relay (push button start) terminals.</p> <p>Terminals No. 28 — No. 29:</p>	Is the resistance less than 1 Ω?	Go to step 19.	Replace the starter relay (push button start). <Ref. to SL-96, Starter Relay (Push Button Start).>
<p>19 CHECK HARNESS BETWEEN STARTER RELAY (PUSH BUTTON START) CONNECTOR AND STARTER CUT RELAY CONNECTOR.</p> <p>1) Remove the starter cut relay. 2) Measure the resistance of harness between starter relay (push button start) connector and starter cut relay connector.</p> <p>Connector & terminal (B225) No. 28 — (B225) No. 42: (B225) No. 28 — (B225) No. 44:</p>	Is the resistance less than 1 Ω?	Go to step 20.	Repair the open circuit in harness between starter relay (push button start) connector and starter cut relay connector.
<p>20 CHECK HARNESS BETWEEN ECM AND STARTER CUT RELAY CONNECTOR.</p> <p>1) Disconnect the connector from ECM. 2) Measure the resistance between starter cut relay connector and chassis ground.</p> <p>Connector & terminal (B225) No. 40 — Chassis ground:</p>	Is the resistance 1 MΩ or more?	Go to step 21.	Repair the short circuit to ground in harness between ECM connector and starter cut relay connector.

Diagnostics for Engine Starting Failure

ENGINE (DIAGNOSTICS)

Step	Check	Yes	No
21 CHECK STARTER CUT RELAY. Measure the resistance between starter cut relay terminals. <i>Terminals</i> <i>No. 41 — No. 44:</i>	Is the resistance less than 1 Ω ?	Go to step 22 .	Replace the starter cut relay. <Ref. to SL-104, Starter Cut Relay.>
22 CHECK HARNESS BETWEEN STARTER CUT RELAY CONNECTOR AND STARTER RELAY 1 CONNECTOR. 1) Remove the starter relay 1. 2) Measure the resistance of harness between starter cut relay connector and starter relay 1 connector. <i>Connector & terminal</i> <i>(B225) No. 41 — (B225) No. 2:</i> <i>(B225) No. 41 — (B225) No. 3:</i>	Is the resistance less than 1 Ω ?	Go to step 23 .	Repair the open circuit of harness between starter cut relay connector and starter relay 1 connector.
23 CHECK HARNESS BETWEEN ECM AND STARTER RELAY 1 CONNECTOR. Measure the resistance of harness between ECM connector and starter relay 1 connector. <i>Connector & terminal</i> <i>(B135) No. 26 — (B225) No. 5:</i>	Is the resistance less than 1 Ω ?	Go to step 24 .	Repair the open circuit of harness between ECM connector and starter relay 1 connector.
24 CHECK STARTER RELAY 1. 1) Connect the battery to starter relay 1 terminals No. 3 and No. 5. 2) Measure the resistance between starter relay 1 terminals. <i>Terminals</i> <i>No. 1 — No. 2:</i>	Is the resistance less than 1 Ω ?	Go to step 25 .	Replace the starter relay 1. <Ref. to EN(H4DO)(diag)-10, LOCATION, Electrical Component Location.>
25 CHECK HARNESS BETWEEN STARTER RELAY 1 CONNECTOR AND INHIBITOR SWITCH CONNECTOR. 1) Disconnect the connector from inhibitor switch. 2) Measure the resistance of harness between starter relay 1 connector and inhibitor switch connector. <i>Connector & terminal</i> <i>(B225) No. 1 — (T7) No. 6:</i>	Is the resistance less than 1 Ω ?	Go to step 26 .	Repair the harness and connector. NOTE: In this case, repair the following item: <ul style="list-style-type: none"> • Open circuit in harness between starter relay 1 connector and inhibitor switch connector • Poor contact of coupling connector
26 CHECK INHIBITOR SWITCH. 1) Place the select lever in “P” range and “N” range. 2) Measure the resistance between inhibitor switch terminals. <i>Terminals</i> <i>No. 6 — No. 9:</i>	Is the resistance less than 1 Ω ?	Go to step 27 .	Replace the inhibitor switch. <Ref. to CVT(TR580)-97, Inhibitor Switch.>
27 CHECK HARNESS BETWEEN ECM AND INHIBITOR SWITCH CONNECTOR. 1) Disconnect the connector from ECM. 2) Measure the resistance of harness between ECM connector and inhibitor switch connector. <i>Connector & terminal</i> <i>(B137) No. 16 — (T7) No. 6:</i>	Is the resistance less than 1 Ω ?	Go to step 28 .	Repair the harness and connector. NOTE: In this case, repair the following item: <ul style="list-style-type: none"> • Open circuit in harness between ECM connector and inhibitor switch connector • Poor contact of coupling connector

Diagnostics for Engine Starting Failure

ENGINE (DIAGNOSTICS)

Step	Check	Yes	No
<p>28</p> <p>CHECK HARNESS BETWEEN INHIBITOR SWITCH AND STARTER MOTOR. Measure the resistance of harness between the inhibitor switch connector and starter motor. Connector & terminal <i>(T7) No. 9 — (B14) No. 1:</i></p>	<p>Is the resistance less than 1 Ω?</p>	<p>Check the engine control module (ECM) power supply and ground line. <Ref. to EN(H4DO)(diag)-86, CHECK POWER SUPPLY AND GROUND LINE OF ENGINE CONTROL MODULE (ECM), Diagnostics for Engine Starting Failure.></p>	<p>Repair the harness and connector. NOTE: In this case, repair the following item:</p> <ul style="list-style-type: none"> • Open circuit in harness between inhibitor switch connector and starter motor connector • Poor contact of coupling connector

Diagnostics for Engine Starting Failure

ENGINE (DIAGNOSTICS)

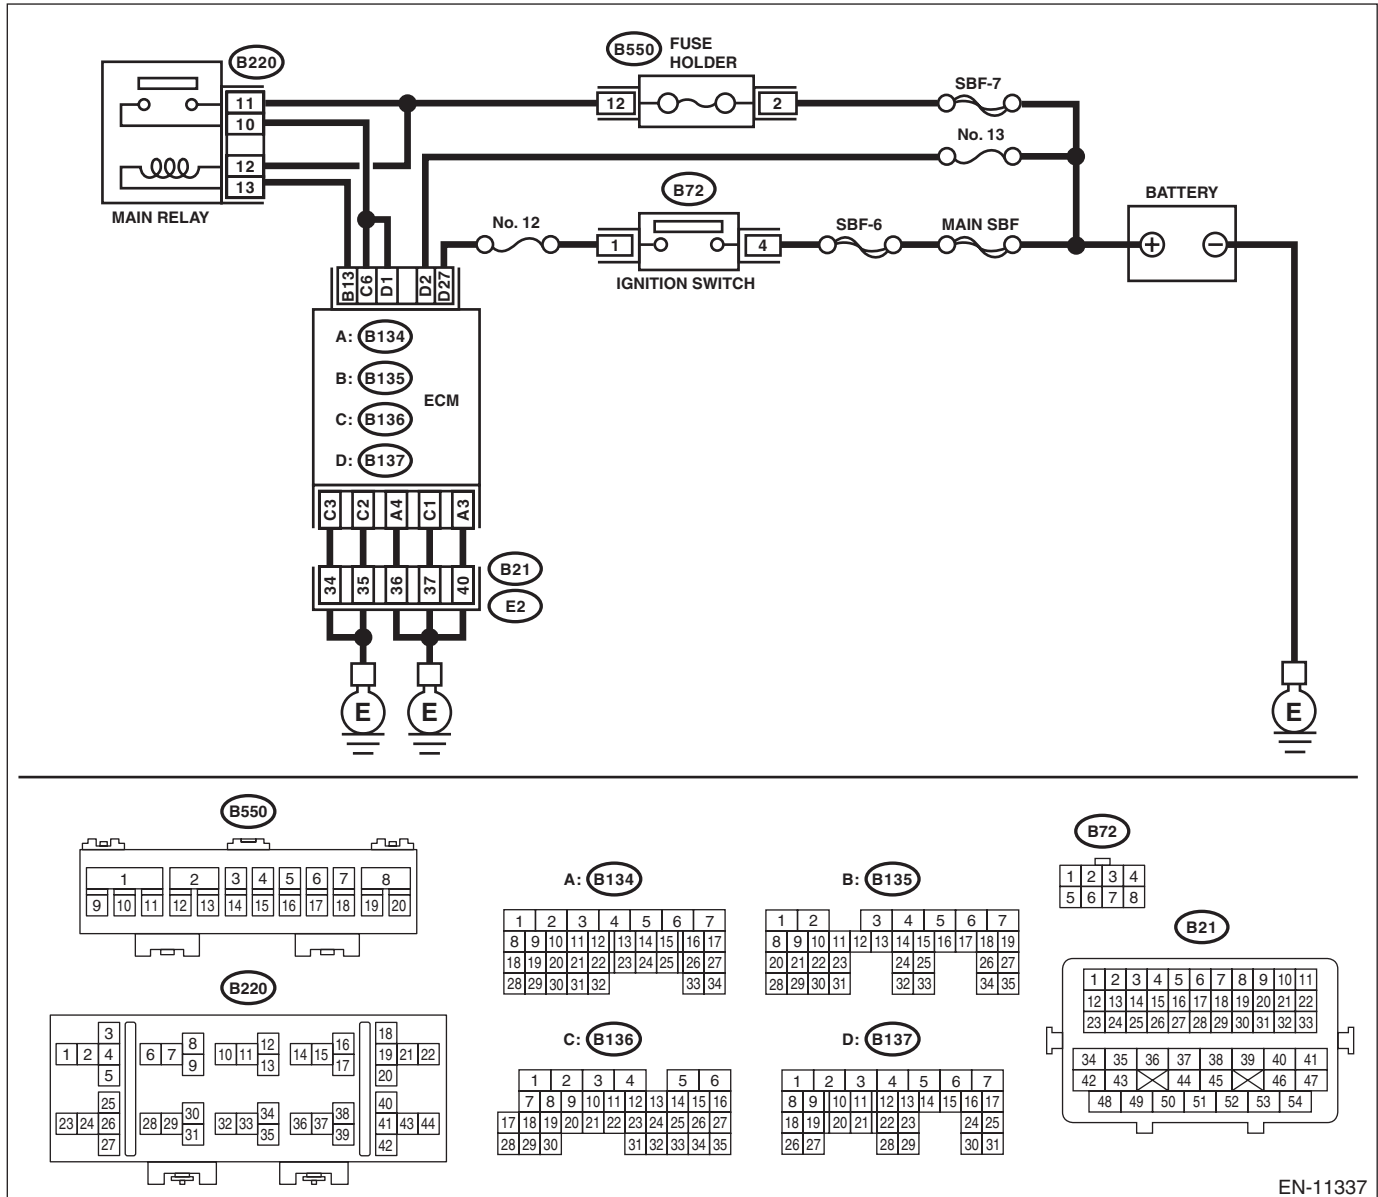

C: CHECK POWER SUPPLY AND GROUND LINE OF ENGINE CONTROL MODULE (ECM)

CAUTION:

After servicing or replacing faulty parts, perform Clear Memory Mode <Ref. to EN(H4DO)(diag)-66, OPERATION, Clear Memory Mode.>, and Inspection Mode <Ref. to EN(H4DO)(diag)-50, PROCEDURE, Inspection Mode.>.

WIRING DIAGRAM:

Engine electrical system <Ref. to WI-102, Engine Electrical System.>

EN-11337

Step	Check	Yes	No
1 CHECK MAIN RELAY. 1) Turn the ignition switch to OFF. 2) Remove the main relay. 3) Connect the battery to main relay terminals No. 12 and No. 13. 4) Measure the resistance between main relay terminals. Terminals No. 10 — No. 11:	Is the resistance less than 1 Ω?	Go to step 2.	Replace the main relay. <Ref. to FU(H4DO)-100, Main Relay.>

Diagnostics for Engine Starting Failure

ENGINE (DIAGNOSTICS)

Step	Check	Yes	No
<p>2 CHECK GROUND CIRCUIT FOR ECM. 1) Disconnect the connector from ECM. 2) Measure the resistance of harness between ECM connector and chassis ground. Connector & terminal <i>(B134) No. 3 — Chassis ground:</i> <i>(B134) No. 4 — Chassis ground:</i> <i>(B136) No. 1 — Chassis ground:</i> <i>(B136) No. 2 — Chassis ground:</i> <i>(B136) No. 3 — Chassis ground:</i></p>	Is the resistance less than 5 Ω?	Go to step 3.	Repair the harness and connector. NOTE: In this case, repair the following item: <ul style="list-style-type: none"> • Open circuit of harness between ECM connector and engine ground terminal • Poor contact of coupling connector
<p>3 CHECK INPUT VOLTAGE OF ECM. 1) Turn the ignition switch to ON. 2) Measure the voltage between ECM connector and chassis ground. Connector & terminal <i>(B137) No. 2 (+) — Chassis ground (-):</i> <i>(B137) No. 27 (+) — Chassis ground (-):</i></p>	Is the voltage 10 V or more?	Go to step 4.	Repair the open or ground short circuit of harness of power supply circuit.
<p>4 CHECK INPUT VOLTAGE OF MAIN RELAY. Measure the voltage between main relay connector and chassis ground. Connector & terminal <i>(B220) No. 11 (+) — Chassis ground (-):</i> <i>(B220) No. 12 (+) — Chassis ground (-):</i></p>	Is the voltage 10 V or more?	Go to step 5.	Repair the open or ground short circuit of harness of power supply circuit.
<p>5 CHECK INPUT VOLTAGE OF ECM. 1) Turn the ignition switch to OFF. 2) Install the main relay. 3) Turn the ignition switch to ON. 4) Measure the voltage between ECM connector and chassis ground. Connector & terminal <i>(B135) No. 13 (+) — Chassis ground (-):</i></p>	Is the voltage 10 V or more?	Go to step 6.	Repair the open circuit of harness between ECM connector and main relay connector.
<p>6 CHECK INPUT VOLTAGE OF ECM. 1) Turn the ignition switch to OFF. 2) Connect the connector to ECM. 3) Turn the ignition switch to ON. 4) Measure the voltage between ECM connector and chassis ground. Connector & terminal <i>(B136) No. 6 (+) — Chassis ground (-):</i> <i>(B137) No. 1 (+) — Chassis ground (-):</i></p>	Is the voltage 10 V or more?	Check ignition control system. <Ref. to EN(H4DO)(diag)-88, IGNITION CONTROL SYSTEM, Diagnostics for Engine Starting Failure.>	Repair the harness and connector. NOTE: In this case, repair the following item: <ul style="list-style-type: none"> • Open circuit in harness between ECM connector and main relay connector • Poor contact of main relay connector • Poor contact of ECM connector

Diagnostics for Engine Starting Failure

Step	Check	Yes	No	
1	<p>CHECK SPARK PLUG CONDITION.</p> <p>1) Remove the spark plug. <Ref. to IG(H4DO)-4, REMOVAL, Spark Plug.></p> <p>2) Check the spark plug condition. <Ref. to IG(H4DO)-6, INSPECTION, Spark Plug.></p>	Is the check result OK?	Go to step 2.	Replace the spark plug. <Ref. to IG(H4DO)-4, Spark Plug.>

Diagnostics for Engine Starting Failure

ENGINE (DIAGNOSTICS)

Step	Check	Yes	No
<p>2 CHECK IGNITION SYSTEM FOR SPARKS. 1) Connect the spark plug to ignition coil. 2) Release the fuel pressure. <Ref. to FU(H4DO)-107, RELEASING OF FUEL PRESSURE, PROCEDURE, Fuel.> 3) Contact the spark plug thread portion to engine. 4) While opening the throttle valve fully, crank the engine to check that spark occurs at each cylinder.</p>	Does spark occur at each cylinder?	Check fuel pump system. <Ref. to EN(H4DO)(diag)-90, FUEL PUMP CIRCUIT, Diagnostics for Engine Starting Failure.>	Go to step 3.
<p>3 CHECK IGNITION COIL POWER SUPPLY CIRCUIT. 1) Turn the ignition switch to OFF. 2) Disconnect the connector from ignition coil. 3) Turn the ignition switch to ON. 4) Measure the voltage between ignition coil connector and engine ground. Connector & terminal <i>(E31) No. 1 (+) — Engine ground (-):</i> <i>(E32) No. 1 (+) — Engine ground (-):</i> <i>(E33) No. 1 (+) — Engine ground (-):</i> <i>(E34) No. 1 (+) — Engine ground (-):</i></p>	Is the voltage 10 V or more?	Go to step 4.	Repair the harness and connector. NOTE: In this case, repair the following item: <ul style="list-style-type: none"> • Open or short to ground in harness of power supply circuit • Poor contact of coupling connector • Blown out of fuse
<p>4 CHECK HARNESS OF IGNITION COIL GROUND CIRCUIT. 1) Turn the ignition switch to OFF. 2) Measure the resistance of harness between ignition coil connector and engine ground. Connector & terminal <i>(E31) No. 3 — Engine ground:</i> <i>(E32) No. 3 — Engine ground:</i> <i>(E33) No. 3 — Engine ground:</i> <i>(E34) No. 3 — Engine ground:</i></p>	Is the resistance less than 5 Ω?	Go to step 5.	Repair the open circuit in harness between ignition coil connector and engine grounding terminal.
<p>5 CHECK HARNESS BETWEEN ECM AND IGNITION COIL CONNECTOR. 1) Disconnect the connector from ECM. 2) Measure the resistance of harness between ECM connector and ignition coil connector. Connector & terminal <i>(B134) No. 21 — (E31) No. 2:</i> <i>(B134) No. 10 — (E32) No. 2:</i> <i>(B134) No. 31 — (E33) No. 2:</i> <i>(B134) No. 8 — (E34) No. 2:</i></p>	Is the resistance less than 1 Ω?	Go to step 6.	Repair the harness and connector. NOTE: In this case, repair the following item: <ul style="list-style-type: none"> • Open circuit of harness between ECM connector and the ignition coil connector • Poor contact of coupling connector
<p>6 CHECK HARNESS BETWEEN ECM AND IGNITION COIL CONNECTOR. Measure the resistance of harness between ECM connector and engine ground. Connector & terminal: <i>(B134) No. 21 — Engine ground:</i> <i>(B134) No. 10 — Engine ground:</i> <i>(B134) No. 31 — Engine ground:</i> <i>(B134) No. 8 — Engine ground:</i></p>	Is the resistance 1 MΩ or more?	Go to step 7.	Repair the ground short circuit of harness between ECM connector and ignition coil connector.
<p>7 CHECK FOR POOR CONTACT. Check for poor contact of ECM connector.</p>	Is there poor contact of ECM connector?	Repair the poor contact of ECM connector.	Replace the ignition coil. <Ref. to IG(H4DO)-10, Ignition Coil.>

Diagnostics for Engine Starting Failure

ENGINE (DIAGNOSTICS)

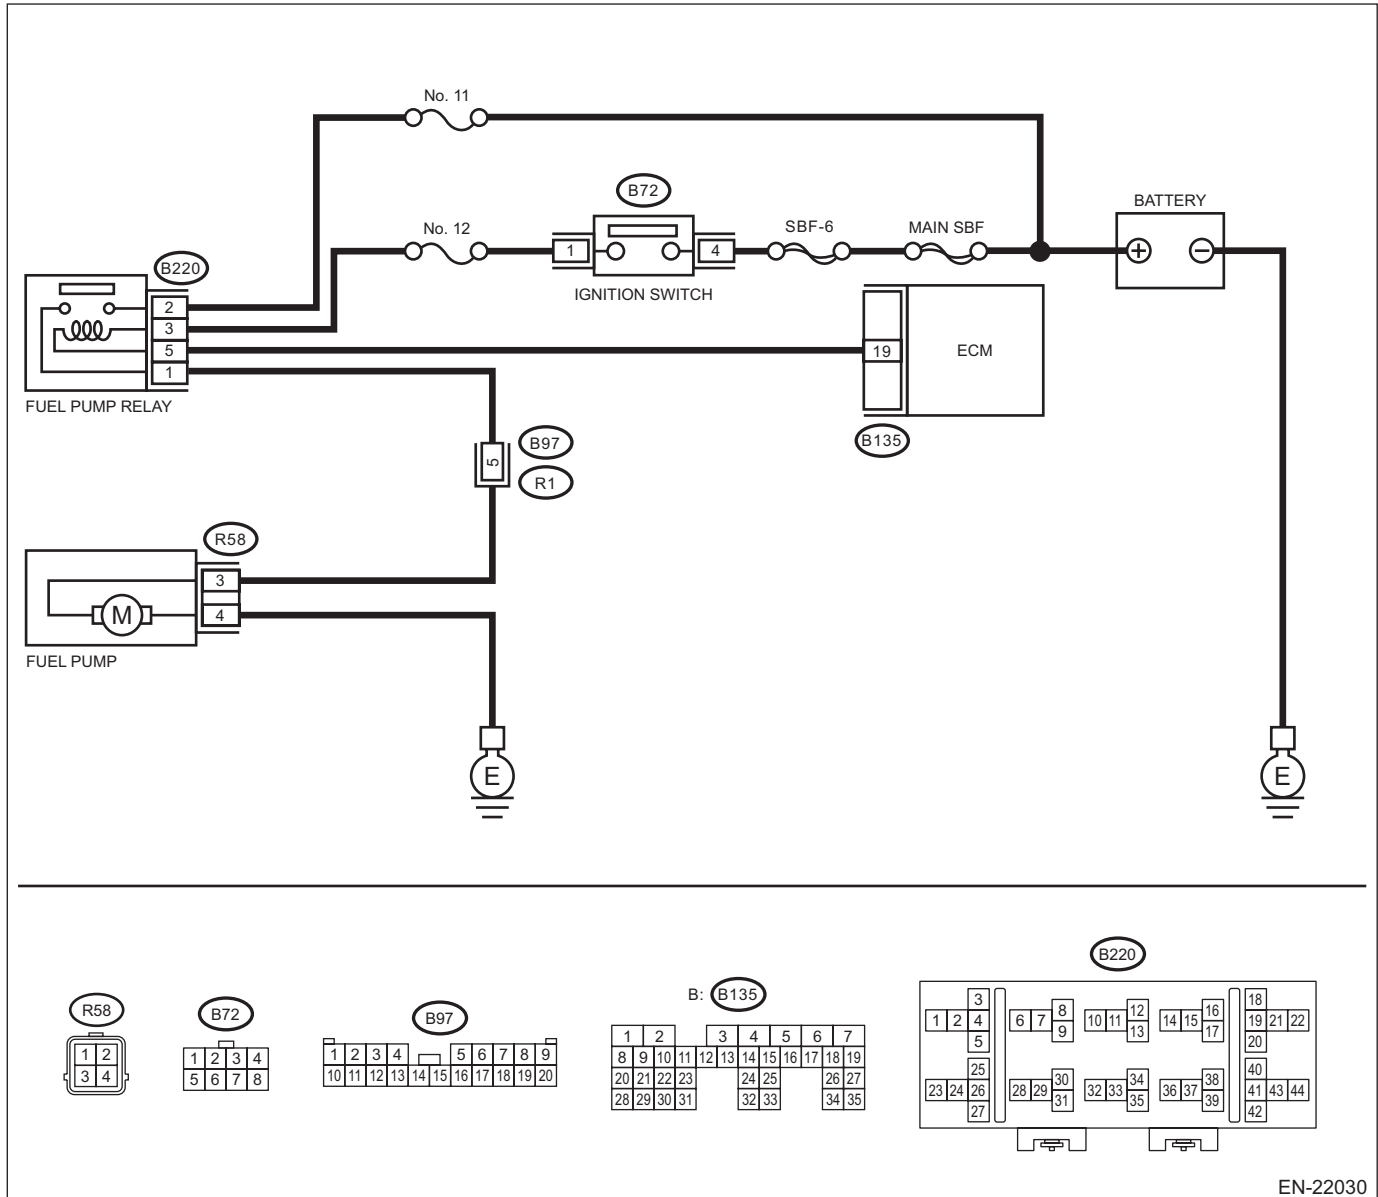

E: FUEL PUMP CIRCUIT

CAUTION:

Wiring diagram:

Engine electrical system <Ref. to WI-102, Engine Electrical System.>

EN-22030

Step	Check	Yes	No	
1	<p>CHECK OPERATING SOUND OF FUEL PUMP.</p> <p>Check if the fuel pump operates for two seconds when turning the ignition switch to ON.</p> <p>NOTE: Fuel pump operation can be executed using the Subaru Select Monitor. Refer to "Active Test" for the procedures. <Ref. to EN(H4DO)(diag)-67, Active Test.></p>	<p>Does the fuel pump emit operating sound?</p>	<p>Check the fuel injector circuit. <Ref. to EN(H4DO)(diag)-92, FUEL INJECTOR CIRCUIT, Diagnostics for Engine Starting Failure.></p>	<p>Go to step 2.</p>

Diagnostics for Engine Starting Failure

ENGINE (DIAGNOSTICS)

Step	Check	Yes	No
<p>2 CHECK GROUND CIRCUIT OF FUEL PUMP. 1) Turn the ignition switch to OFF. 2) Remove the fuel pump access hole lid. 3) Disconnect the connector from fuel pump. 4) Measure the resistance of harness between fuel pump and chassis ground. Connector & terminal (R58) No. 4 — Chassis ground:</p>	Is the resistance less than 5 Ω?	Go to step 3.	Repair the open circuit in harness between fuel pump connector and chassis ground terminal.
<p>3 CHECK POWER SUPPLY TO FUEL PUMP. 1) Turn the ignition switch to ON. 2) Measure the voltage of power supply circuit between fuel pump connector and chassis ground. Connector & terminal (R58) No. 3 (+) — Chassis ground (-):</p>	Is the voltage 10 V or more?	Replace the fuel pump. <Ref. to FU(H4DO)-134, Fuel Pump.>	Go to step 4.
<p>4 CHECK HARNESS BETWEEN FUEL PUMP CONNECTOR AND FUEL PUMP RELAY CONNECTOR. 1) Turn the ignition switch to OFF. 2) Remove the fuel pump relay. 3) Measure the resistance of harness between fuel pump connector and fuel pump relay connector. Connector & terminal (R58) No. 3 — (B220) No. 1:</p>	Is the resistance less than 1 Ω?	Go to step 5.	Repair the harness and connector. NOTE: In this case, repair the following item: • Open circuit in harness between fuel pump connector and fuel pump relay connector • Poor contact of coupling connector
<p>5 CHECK HARNESS BETWEEN FUEL PUMP CONNECTOR AND FUEL PUMP RELAY CONNECTOR. Measure the resistance between fuel pump connector and chassis ground. Connector & terminal (R58) No. 3 — Chassis ground:</p>	Is the resistance 1 MΩ or more?	Go to step 6.	Repair the short circuit to ground in harness between fuel pump connector and fuel pump relay connector.
<p>6 CHECK FUEL PUMP RELAY. 1) Connect the battery to fuel pump relay terminals No. 3 and No. 5. 2) Measure the resistance between fuel pump relay terminals. Terminals No. 1 — No. 2:</p>	Is the resistance less than 1 Ω?	Go to step 7.	Replace the fuel pump relay. <Ref. to FU(H4DO)-102, Fuel Pump Relay.>
<p>7 CHECK HARNESS BETWEEN ECM AND FUEL PUMP RELAY CONNECTOR. 1) Disconnect the connector from ECM. 2) Measure the resistance of harness between ECM connector and fuel pump relay connector. Connector & terminal (B135) No. 19 — (B220) No. 5:</p>	Is the resistance less than 1 Ω?	Go to step 8.	Repair the open circuit of harness between ECM connector and fuel pump relay connector.
<p>8 CHECK POWER SUPPLY OF FUEL PUMP RELAY. 1) Turn the ignition switch to ON. 2) Measure the voltage between fuel pump relay connector and chassis ground. Connector & terminal (B220) No. 2 (+) — Chassis ground (-): (B220) No. 3 (+) — Chassis ground (-):</p>	Is the voltage 10 V or more?	Repair the poor contact of ECM connector.	Repair the open or ground short in the harness of power supply circuit.

Diagnostics for Engine Starting Failure

ENGINE (DIAGNOSTICS)

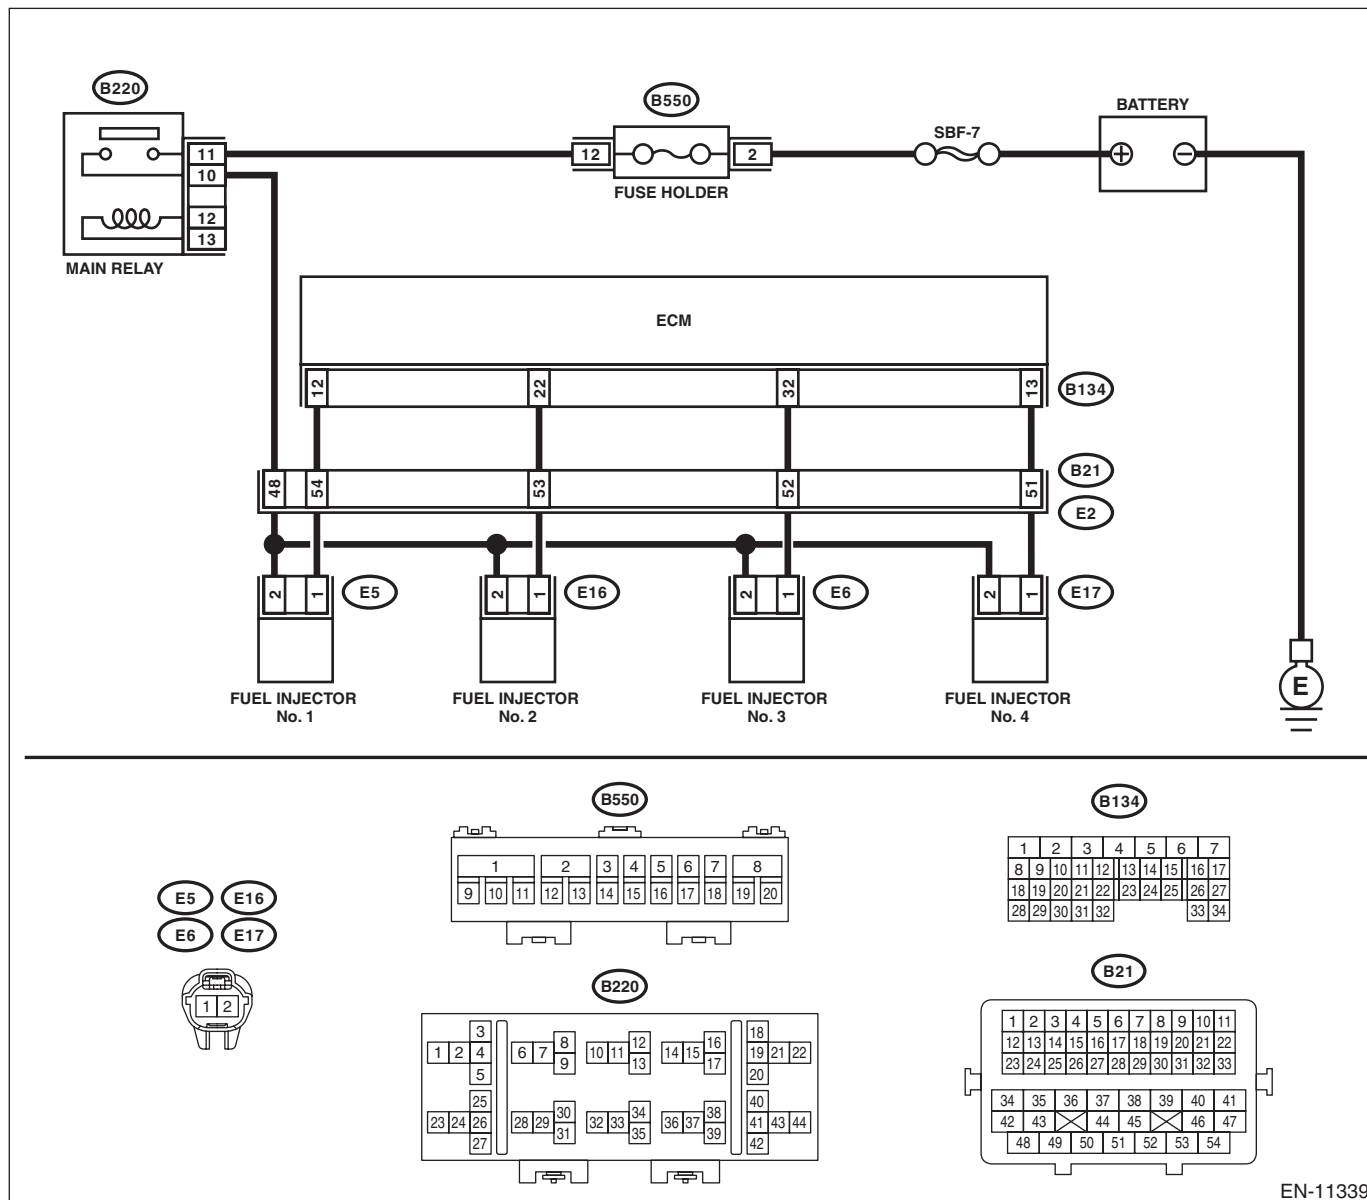

F: FUEL INJECTOR CIRCUIT

CAUTION:

- Check or repair only faulty parts.
- After servicing or replacing faulty parts, perform Clear Memory Mode <Ref. to EN(H4DO)(diag)-66, OPERATION, Clear Memory Mode.>, and Inspection Mode <Ref. to EN(H4DO)(diag)-50, PROCEDURE, Inspection Mode.>.

WIRING DIAGRAM:

Engine electrical system <Ref. to WI-102, Engine Electrical System.>

EN-11339

Step	Check	Yes	No	
1	<p>CHECK OPERATION OF EACH FUEL INJECTOR.</p> <p>While cranking the engine, check each fuel injector emits operating sound. Use a sound scope or attach a screwdriver to the injector to listen to sounds for this check.</p>	<p>Does the fuel injector emit operating sound?</p>	<p>Check the fuel pressure. <Ref. to ME(H4DO)-31, INSPECTION, Fuel Pressure.></p>	<p>Go to step 2.</p>

Diagnostics for Engine Starting Failure

ENGINE (DIAGNOSTICS)

Step	Check	Yes	No
<p>2 CHECK POWER SUPPLY TO EACH FUEL INJECTOR.</p> <p>1) Turn the ignition switch to OFF. 2) Disconnect the connector from fuel injector. 3) Turn the ignition switch to ON. 4) Measure the power supply voltage between fuel injector terminal and engine ground.</p> <p>Connector & terminal #1 (E5) No. 2 (+) — Engine ground (-): #2 (E16) No. 2 (+) — Engine ground (-): #3 (E6) No. 2 (+) — Engine ground (-): #4 (E17) No. 2 (+) — Engine ground (-):</p>	Is the voltage 10 V or more?	Go to step 3.	Repair the harness and connector. NOTE: In this case, repair the following item: <ul style="list-style-type: none"> • Open circuit in harness between main relay connector and fuel injector connector • Poor contact of main relay connector • Poor contact of coupling connector
<p>3 CHECK HARNESS BETWEEN ECM AND FUEL INJECTOR CONNECTOR.</p> <p>1) Turn the ignition switch to OFF. 2) Disconnect the connector from ECM. 3) Measure the resistance of harness between ECM connector and fuel injector connector.</p> <p>Connector & terminal #1 (B134) No. 12 — (E5) No. 1: #2 (B134) No. 22 — (E16) No. 1: #3 (B134) No. 32 — (E6) No. 1: #4 (B134) No. 13 — (E17) No. 1:</p>	Is the resistance less than 1 Ω?	Go to step 4.	Repair the harness and connector. NOTE: In this case, repair the following item: <ul style="list-style-type: none"> • Open circuit in harness between ECM connector and fuel injector connector • Poor contact of coupling connector
<p>4 CHECK HARNESS BETWEEN ECM AND FUEL INJECTOR CONNECTOR.</p> <p>Measure the resistance between ECM connector and chassis ground.</p> <p>Connector & terminal #1 (B134) No. 12 — Chassis ground: #2 (B134) No. 22 — Chassis ground: #3 (B134) No. 32 — Chassis ground: #4 (B134) No. 13 — Chassis ground:</p>	Is the resistance 1 MΩ or more?	Go to step 5.	Repair the short circuit to ground in harness between ECM connector and fuel injector connector.
<p>5 CHECK EACH FUEL INJECTOR.</p> <p>Measure the resistance between each fuel injector terminals.</p> <p>Terminals No. 1 — No. 2:</p>	Is the resistance 5 — 20 Ω?	Go to step 6.	Replace the faulty fuel injector. <Ref. to FU(H4DO)-77, Fuel Injector.>
<p>6 CHECK FOR POOR CONTACT.</p> <p>Check for poor contact of ECM connector.</p>	Is there poor contact of ECM connector?	Repair the poor contact of ECM connector.	Inspection using “General Diagnostic Table” <Ref. to EN(H4DO)(diag)-548, INSPECTION, General Diagnostic Table.>

Diagnostic Procedure for Subaru Select Monitor Communication

ENGINE (DIAGNOSTICS)

16. Diagnostic Procedure for Subaru Select Monitor Communication

A: COMMUNICATION FOR INITIALIZING IMPOSSIBLE

DIAGNOSIS:

Open or short circuit in data link connector

TROUBLE SYMPTOM:

Subaru Select Monitor communication failure

WIRING DIAGRAM:

Engine electrical system <Ref. to WI-102, Engine Electrical System.>

Step	Check	Yes	No	
1	CHECK POWER SUPPLY CIRCUIT. Connect DST-i or general scan tool to data link connector.	Does DST-i or the general scan tool turn ON?	Go to step 4.	Go to step 2.

Diagnostic Procedure for Subaru Select Monitor Communication

ENGINE (DIAGNOSTICS)

Step	Check	Yes	No
<p>2 CHECK POWER SUPPLY CIRCUIT. Measure the voltage between data link connector and chassis ground. <i>Connector & terminal</i> <i>(B40) No. 16 (+) — Chassis ground (-):</i></p>	Is the voltage 10 V or more?	Go to step 3.	Repair the power supply circuit. NOTE: In this case, repair the following item: <ul style="list-style-type: none"> • Open or ground short circuit of harness between battery and data link connector • Blown out of fuse (M/B No. 13)
<p>3 CHECK HARNESS BETWEEN DATA LINK CONNECTOR AND CHASSIS GROUND. 1) Turn the ignition switch to OFF. 2) Measure the resistance of harness between data link connector and chassis ground. <i>Connector & terminal</i> <i>(B40) No. 4 — Chassis ground:</i> <i>(B40) No. 5 — Chassis ground:</i></p>	Is the resistance less than 5 Ω?	Repair the poor contact of data link connector.	Repair the harness and connector. NOTE: In this case, repair the following item: <ul style="list-style-type: none"> • Open circuit in harness between ECM connector and data link connector • Open circuit of harness between ECM connector and engine ground • Poor contact of ECM connector • Poor contact of coupling connector
<p>4 CHECK HARNESS BETWEEN ECM AND DATA LINK CONNECTOR. Measure the resistance between data link connector and chassis ground. <i>Connector & terminal</i> <i>(B40) No. 7 — Chassis ground:</i></p>	Is the resistance 1 MΩ or more?	Repair the poor contact of the ECM or data link connector.	Repair the short circuit to ground in harness between ECM connector and data link connector.

18. Diagnostic Procedure with Diagnostic Trouble Code (DTC)

A: DTC P000A "A" CAMSHAFT POSITION SLOW RESPONSE BANK 1

NOTE:

For the diagnostic procedure, refer to DTC P0011. <Ref. to EN(H4DO)(diag)-110, DTC P0011 "A" CAMSHAFT POSITION - TIMING OVER-ADVANCED OR SYSTEM PERFORMANCE BANK 1, Diagnostic Procedure with Diagnostic Trouble Code (DTC).>

1. OUTLINE OF DIAGNOSIS

Detect the AVCS system malfunction.

Judge NG when the amount of AVCS actual timing advance does not approach to the amount of AVCS target timing advance.

2. EXECUTION CONDITION

Secondary parameters	Execution condition
Battery voltage	≥ 10.9 V
AVCS control	In operation
Target timing advance change amount (per 64 ms)	< 3.2 °CA

3. GENERAL DRIVING CYCLE

Perform the diagnosis continuously when the engine speed increases and AVCS operates.

4. DIAGNOSTIC METHOD

When the differences of target timing advance amount and actual timing advance amount is calculated during AVCS control, and the difference per predetermined time is the specified value or larger.

Judge as NG when the following conditions are established within the predetermined time.

Malfunction Criteria	Threshold Value
$\Sigma (\text{Target position} - \text{Actual position}) $	> 4000 °CA (Bank 1) > 4000 °CA (Bank 2)

Time needed for diagnosis: Less than 1 second

Malfunction indicator light illumination: Illuminates when malfunction occurs in 2 continuous driving cycles.

Diagnostic Procedure with Diagnostic Trouble Code (DTC)

ENGINE (DIAGNOSTICS)

B: DTC P000B "B" CAMSHAFT POSITION SLOW RESPONSE BANK 1

NOTE:

For the diagnostic procedure, refer to DTC P0014. <Ref. to EN(H4DO)(diag)-115, DTC P0014 "B" CAMSHAFT POSITION - TIMING OVER-ADVANCED OR SYSTEM PERFORMANCE BANK 1, Diagnostic Procedure with Diagnostic Trouble Code (DTC).>

1. OUTLINE OF DIAGNOSIS

Detect the exhaust AVCS system malfunction.

Judge NG when the amount of exhaust AVCS actual timing advance does not approach the amount of exhaust AVCS target timing advance.

2. EXECUTION CONDITION

Secondary parameters	Execution condition
Battery voltage	$\geq 10.9 \text{ V}$
Exhaust AVCS control	In operation
Target timing advance change amount (per 64 ms)	$< 3.2 \text{ }^\circ\text{CA}$

3. GENERAL DRIVING CYCLE

Perform the diagnosis continuously when the engine speed increases and exhaust AVCS operates.

4. DIAGNOSTIC METHOD

When the differences of target timing advance amount and actual timing advance amount is calculated during exhaust AVCS control, and the difference per predetermined time is the specified value or larger.

Judge as NG when the following conditions are established within the predetermined time.

Malfunction Criteria	Threshold Value
$\Sigma (\text{Target position} - \text{Actual position}) $	$> 4000 \text{ }^\circ\text{CA (Bank 1)}$ $> 4000 \text{ }^\circ\text{CA (Bank 2)}$

Time needed for diagnosis: Less than 1 second

Malfunction indicator light illumination: Illuminates when malfunction occurs in 2 continuous driving cycles.

C: DTC P000C "A" CAMSHAFT POSITION SLOW RESPONSE BANK 2

NOTE:

For the diagnostic procedure, refer to DTC P0021. <Ref. to EN(H4DO)(diag)-129, DTC P0021 "A" CAMSHAFT POSITION - TIMING OVER-ADVANCED OR SYSTEM PERFORMANCE BANK 2, Diagnostic Procedure with Diagnostic Trouble Code (DTC).>

1. OUTLINE OF DIAGNOSIS

NOTE:

For the detection standard, refer to P000A. <Ref. to EN(H4DO)(diag)-105, DTC P000A "A" CAMSHAFT POSITION SLOW RESPONSE BANK 1, Diagnostic Procedure with Diagnostic Trouble Code (DTC).>

D: DTC P000D "B" CAMSHAFT POSITION SLOW RESPONSE BANK 2

NOTE:

For the diagnostic procedure, refer to DTC P0024. <Ref. to EN(H4DO)(diag)-133, DTC P0024 "B" CAMSHAFT POSITION - TIMING OVER-ADVANCED OR SYSTEM PERFORMANCE BANK 2, Diagnostic Procedure with Diagnostic Trouble Code (DTC).>

1. OUTLINE OF DIAGNOSIS

NOTE:

For the detection standard, refer to P000B. <Ref. to EN(H4DO)(diag)-106, DTC P000B "B" CAMSHAFT POSITION SLOW RESPONSE BANK 1, Diagnostic Procedure with Diagnostic Trouble Code (DTC).>

Diagnostic Procedure with Diagnostic Trouble Code (DTC)

ENGINE (DIAGNOSTICS)

E: DTC P0010 "A" CAMSHAFT POSITION ACTUATOR CONTROL CIRCUIT/ OPEN BANK 1

DTC detecting condition:

Immediately at fault recognition

Trouble symptom:

Improper idling

CAUTION:

After servicing or replacing faulty parts, perform Clear Memory Mode <Ref. to EN(H4DO)(diag)-66, OPERATION, Clear Memory Mode.>, and Inspection Mode <Ref. to EN(H4DO)(diag)-50, PROCEDURE, Inspection Mode.>.

Wiring diagram:

Engine electrical system <Ref. to WI-15, Power Supply Circuit.>

EN-22031

Diagnostic Procedure with Diagnostic Trouble Code (DTC)

ENGINE (DIAGNOSTICS)

Step	Check	Yes	No
1 CHECK OUTPUT SIGNAL OF ECM. 1) Turn the ignition switch to ON. 2) Measure the voltage between ECM connector and chassis ground. <i>Connector & terminal</i> <i>(B134) No. 17 (+) — Chassis ground (-):</i>	Is the voltage 10 V or more?	Go to step 2.	Go to step 3.
2 CHECK FOR POOR CONTACT. Check for poor contact of ECM connector.	Is there poor contact of ECM connector?	Repair the poor contact of ECM connector.	Even if DTC is detected, the circuit has returned to a normal condition at this time. Reproduce the failure, and then perform the diagnosis again. NOTE: In this case, temporary poor contact of connector, temporary open or short circuit of harness may be the cause.
3 CHECK POWER SUPPLY TO THE INTAKE OIL CONTROL SOLENOID RH. Measure the voltage between intake oil control solenoid RH connector and engine ground. <i>Connector & terminal</i> <i>(E38) No. 1 (+) — Engine ground (-):</i>	Is the voltage 10 V or more?	Go to step 4.	Repair the power supply circuit.
4 CHECK HARNESS BETWEEN ECM AND INTAKE OIL CONTROL SOLENOID RH CONNECTOR. 1) Turn the ignition switch to OFF. 2) Disconnect the connector from ECM. 3) Disconnect the connector from the intake oil control solenoid RH. 4) Measure the resistance between intake oil control solenoid RH connector and engine ground. <i>Connector & terminal</i> <i>(E38) No. 2 — Engine ground:</i>	Is the resistance 1 M Ω or more?	Go to step 5.	Repair the short circuit to ground in harness between ECM connector and intake oil control solenoid RH connector.
5 CHECK HARNESS BETWEEN ECM AND INTAKE OIL CONTROL SOLENOID RH CONNECTOR. Measure the resistance of harness between ECM connector and intake oil control solenoid RH. <i>Connector & terminal</i> <i>(B134) No. 17 — (E38) No. 2:</i>	Is the resistance less than 1 Ω ?	Go to step 6.	Repair the harness and connector. NOTE: In this case, repair the following item: <ul style="list-style-type: none"> • Open circuit in harness between ECM connector and intake oil control solenoid RH connector • Poor contact of coupling connector

Diagnostic Procedure with Diagnostic Trouble Code (DTC)

ENGINE (DIAGNOSTICS)

Step	Check	Yes	No
6 CHECK INTAKE OIL CONTROL SOLENOID RH. Measure the resistance between intake oil control solenoid RH terminals. Terminals No. 1 — No. 2:	Is the resistance 6 — 12 Ω?	Repair the poor contact of intake oil control solenoid RH connector.	Replace the intake oil control solenoid RH. <Ref. to FU(H4DO)-62, Oil Control Solenoid.>

1. OUTLINE OF DIAGNOSIS

Detect open or short circuit of the oil control solenoid.

Judge as NG when the current is small even though the duty signal is large.

2. EXECUTION CONDITION

Secondary Parameters	Execution condition
Battery voltage	≥ 10.9 V
Oil control solenoid control duty	≥ 99.61 %

3. GENERAL DRIVING CYCLE

Always perform the diagnosis continuously.

4. DIAGNOSTIC METHOD

If the duration of time while the following conditions are met is longer than the time indicated, judge as NG.

Judgment Value

Malfunction Criteria	Threshold Value
Oil control solenoid control present current	< 0.306 A

Time Needed for Diagnosis: 2000 ms

Malfunction Indicator Light Illumination: Illuminates as soon as a malfunction occurs.

Diagnostic Procedure with Diagnostic Trouble Code (DTC)

ENGINE (DIAGNOSTICS)

F: DTC P0011 "A" CAMSHAFT POSITION - TIMING OVER-ADVANCED OR SYSTEM PERFORMANCE BANK 1

DTC detecting condition:

Detected when two consecutive driving cycles with fault occur.

Trouble symptom:

- Engine stall
- Improper idling

CAUTION:

After servicing or replacing faulty parts, perform Clear Memory Mode <Ref. to EN(H4DO)(diag)-66, OPERATION, Clear Memory Mode.>, and Inspection Mode <Ref. to EN(H4DO)(diag)-50, PROCEDURE, Inspection Mode.>.

Step	Check	Yes	No
1 IDENTIFYING FAULTY PART. 1) Perform the Clear Memory Mode. <Ref. to EN(H4DO)(diag)-66, Clear Memory Mode.> 2) Replace the defective oil control solenoid by the other (RH or LH, intake side or exhaust side) oil control solenoid. 3) Perform appropriate drive cycle test. <Ref. to EN(H4DO)(diag)-55, Drive Cycle.> 4) Make sure that the fault occurrence (DTC and incorrect advancing) has shifted to the other location.	Did the detected DTC shift to the location where the oil control solenoid was replaced?	Replace the faulty oil control solenoid.	Go to step 2.
2 CHECK CURRENT DATA. 1) Start the engine and let it idle. 2) Read the value of «VVT Adv. Ang. Amount R» using the Subaru Select Monitor. NOTE: For detailed operation procedures, refer to "Current Data Display For Engine". <Ref. to EN(H4DO)(diag)-36, Subaru Select Monitor.>	Is the value of «VVT Adv. Ang. Amount R» approx. 0 deg?	Go to step 3.	Check the following item and repair or replace if necessary. • Intake cam sprocket (clog or dirt of oil routing, setting of spring) • Intake camshaft (dirt, damage of camshaft)
3 CHECK CURRENT DATA. 1) Drive with acceleration and deceleration at 80 km/h (50 MPH) or less. NOTE: Drive to an extent that the duty output of oil flow control solenoid valve increases. 2) Read the values of «OCV Duty R» and «VVT Adv. Ang. Amount R» using the Subaru Select Monitor. NOTE: For detailed operation procedures, refer to "Current Data Display For Engine". <Ref. to EN(H4DO)(diag)-36, Subaru Select Monitor.>	When the value of «OCV Duty R» increases more than 10%, is the value of «VVT Adv. Ang. Amount R» approx. 0 deg?	Check the following item and repair or replace if necessary. • Intake cam sprocket (clog or dirt of oil routing, setting of spring) • Intake camshaft (dirt, damage of camshaft)	Perform the following procedures, and clean the oil routing. Replace the engine oil and idle the engine for 5 minutes, and then replace the oil filter and engine oil. <Ref. to LU(H4DO)-11, REPLACEMENT, Engine Oil.> <Ref. to LU(H4DO)-25, Engine Oil Filter.>

Diagnostic Procedure with Diagnostic Trouble Code (DTC)

ENGINE (DIAGNOSTICS)

1. OUTLINE OF DIAGNOSIS

Detect the AVCS system malfunction.

Judge as NG when the conditions during which the differences of AVCS target timing advance amount and AVCS actual timing advance amount is large continues.

2. EXECUTION CONDITION

- Target error

Secondary parameters	Execution condition
Battery voltage	≥ 10.9 V
AVCS control	In operation

- Intermediate lock position

Secondary parameters	Execution condition
Battery voltage	≥ 10.9 V
Engine speed	≥ 500 rpm
Elapsed time after starting the engine	> 500 ms and \leq Value from Map

Map

Engine coolant temperature at engine starting °C (°F)	-40 (-40)	-30 (-22)	-20 (-4)	-10 (14)	0 (32)	10 (50)	20 (68)	30 (86)
Elapsed time after starting the engine ms	10000	10000	10000	8000	5000	3500	2800	2800

Engine coolant temperature at engine starting °C (°F)	40 (104)	50 (122)	60 (140)	70 (158)	80 (176)	90 (194)	100 (212)	110 (230)
Elapsed time after starting the engine ms	2800	2800	2800	2800	2800	2800	2800	2800

3. GENERAL DRIVING CYCLE

- Normal

Perform the diagnosis continuously when the engine speed increases and AVCS operates.

- Intermediate lock

Perform the diagnosis when the AVCS is carrying out the intermediate lock control at the engine start.

4. DIAGNOSTIC METHOD

When the conditions during which the differences of AVCS target timing advance amount and AVCS actual timing advance amount is large continues for certain amount of time.

Judge as NG when the following conditions are established within the predetermined time.

Judgment value

Malfunction Criteria	Threshold Value
• Target error (Target position – Actual position)	> 10 °CA
• Intermediate lock position (Target position – Actual position)	> 10 °CA

Time needed for diagnosis:

- Target error: 10000 ms
- Intermediate lock position: 2000 ms

Malfunction indicator light illumination: Illuminates when malfunction occurs in 2 continuous driving cycles.

Diagnostic Procedure with Diagnostic Trouble Code (DTC)

ENGINE (DIAGNOSTICS)

G: DTC P0013 "B" CAMSHAFT POSITION ACTUATOR CONTROL CIRCUIT/ OPEN BANK 1

DTC detecting condition:

Immediately at fault recognition

Trouble symptom:

Improper idling

CAUTION:

After servicing or replacing faulty parts, perform Clear Memory Mode <Ref. to EN(H4DO)(diag)-66, OPERATION, Clear Memory Mode.>, and Inspection Mode <Ref. to EN(H4DO)(diag)-50, PROCEDURE, Inspection Mode.>.

Wiring diagram:

Engine electrical system <Ref. to WI-15, Power Supply Circuit.>

EN-21922

Diagnostic Procedure with Diagnostic Trouble Code (DTC)

ENGINE (DIAGNOSTICS)

	Step	Check	Yes	No
1	CHECK OUTPUT SIGNAL OF ECM. 1) Turn the ignition switch to ON. 2) Measure the voltage between ECM connector and chassis ground. Connector & terminal (B134) No. 7 (+) — Chassis ground (-):	Is the voltage 10 V or more?	Go to step 2.	Go to step 3.
2	CHECK FOR POOR CONTACT. Check for poor contact of ECM connector.	Is there poor contact of ECM connector?	Repair the poor contact of ECM connector.	Even if DTC is detected, the circuit has returned to a normal condition at this time. Reproduce the failure, and then perform the diagnosis again. NOTE: In this case, temporary poor contact of connector, temporary open or short circuit of harness may be the cause.
3	CHECK POWER SUPPLY TO THE EXHAUST OIL CONTROL SOLENOID RH. Measure the voltage between exhaust oil control solenoid RH connector and engine ground. Connector & terminal (E63) No. 1 (+) — Engine ground (-):	Is the voltage 10 V or more?	Go to step 4.	Repair the power supply circuit.
4	CHECK HARNESS BETWEEN ECM AND EXHAUST OIL CONTROL SOLENOID RH CONNECTOR. 1) Turn the ignition switch to OFF. 2) Disconnect the connector from ECM. 3) Disconnect the connector from the exhaust oil control solenoid RH. 4) Measure the resistance between exhaust oil control solenoid RH connector and engine ground. Connector & terminal (E63) No. 2 — Engine ground:	Is the resistance 1 M Ω or more?	Go to step 5.	Repair the short circuit to ground in harness between ECM connector and exhaust oil control solenoid RH connector.
5	CHECK HARNESS BETWEEN ECM AND EXHAUST OIL CONTROL SOLENOID RH CONNECTOR. Measure the resistance of harness between ECM connector and exhaust oil control solenoid RH. Connector & terminal (B134) No. 7 — (E63) No. 2:	Is the resistance less than 1 Ω ?	Go to step 6.	Repair the harness and connector. NOTE: In this case, repair the following item: <ul style="list-style-type: none"> • Open circuit in harness between ECM connector and exhaust oil control solenoid RH connector • Poor contact of coupling connector

Diagnostic Procedure with Diagnostic Trouble Code (DTC)

ENGINE (DIAGNOSTICS)

Step	Check	Yes	No
6 CHECK EXHAUST OIL CONTROL SOLENOID RH. Measure the resistance between exhaust oil control solenoid RH terminals. Terminals No. 1 — No. 2:	Is the resistance 6 — 12 Ω?	Repair the poor contact of exhaust oil control solenoid RH connector.	Replace the exhaust oil control solenoid RH. <Ref. to FU(H4DO)-62, Oil Control Solenoid.>

1. OUTLINE OF DIAGNOSIS

Detect open or short circuit of the oil control solenoid.

Judge as NG when the current is small even though the duty signal is large.

2. EXECUTION CONDITION

Secondary Parameters	Execution condition
Battery voltage	≥ 10.9 V
Oil control solenoid control duty	≥ 99.61 %

3. GENERAL DRIVING CYCLE

Always perform the diagnosis continuously.

4. DIAGNOSTIC METHOD

If the duration of time while the following conditions are met is longer than the time indicated, judge as NG.

Judgment Value

Malfunction Criteria	Threshold Value
Oil control solenoid control present current	< 0.306 A

Time Needed for Diagnosis: 2000 ms

Malfunction Indicator Light Illumination: Illuminates as soon as a malfunction occurs.

Diagnostic Procedure with Diagnostic Trouble Code (DTC)

ENGINE (DIAGNOSTICS)

H: DTC P0014 "B" CAMSHAFT POSITION - TIMING OVER-ADVANCED OR SYSTEM PERFORMANCE BANK 1

DTC detecting condition:

Detected when two consecutive driving cycles with fault occur.

Trouble symptom:

- Engine stall
- Improper idling

CAUTION:

After servicing or replacing faulty parts, perform Clear Memory Mode <Ref. to EN(H4DO)(diag)-66, OPERATION, Clear Memory Mode.>, and Inspection Mode <Ref. to EN(H4DO)(diag)-50, PROCEDURE, Inspection Mode.>.

Step	Check	Yes	No
1 IDENTIFYING FAULTY PART. 1) Perform the Clear Memory Mode. <Ref. to EN(H4DO)(diag)-66, Clear Memory Mode.> 2) Replace the defective oil control solenoid by the other (RH or LH, intake side or exhaust side) oil control solenoid. 3) Perform appropriate drive cycle test. <Ref. to EN(H4DO)(diag)-55, Drive Cycle.> 4) Make sure that the fault occurrence (DTC and incorrect advancing) has shifted to the other location.	Did the detected DTC shift to the location where the oil control solenoid was replaced?	Replace the faulty oil control solenoid.	Go to step 2.
2 CHECK CURRENT DATA. 1) Start the engine and let it idle. 2) Read the value of «Exh. VVT Retard Ang. R» using the Subaru Select Monitor. NOTE: For detailed operation procedures, refer to "Current Data Display For Engine". <Ref. to EN(H4DO)(diag)-36, Subaru Select Monitor.>	Is the value of «Exh. VVT Retard Ang. R» approx. 0 deg?	Go to step 3.	Check the following item and repair or replace if necessary. • Exhaust cam sprocket (clog or dirt of oil routing, setting of spring) • Exhaust camshaft (dirt, damage of camshaft)
3 CHECK CURRENT DATA. 1) Drive with acceleration and deceleration at 80 km/h (50 MPH) or less. NOTE: Drive to an extent that the duty output of oil flow control solenoid valve increases. 2) Read the values of «Exh. OCV Duty R» and «Exh. VVT Retard Ang. R» using the Subaru Select Monitor. NOTE: For detailed operation procedures, refer to "Current Data Display For Engine". <Ref. to EN(H4DO)(diag)-36, Subaru Select Monitor.>	When the value of «Exh. OCV Duty R» increases more than 10%, is the value of «Exh. VVT Retard Ang. R» approx. 0 deg?	Check the following item and repair or replace if necessary. • Exhaust cam sprocket (clog or dirt of oil routing, setting of spring) • Exhaust camshaft (dirt, damage of camshaft)	Perform the following procedures, and clean the oil routing. Replace the engine oil and idle the engine for 5 minutes, and then replace the oil filter and engine oil. <Ref. to LU(H4DO)-11, REPLACEMENT, Engine Oil.> <Ref. to LU(H4DO)-25, Engine Oil Filter.>

Diagnostic Procedure with Diagnostic Trouble Code (DTC)

ENGINE (DIAGNOSTICS)

1. OUTLINE OF DIAGNOSIS

Detect the exhaust AVCS system malfunction.

Judge as NG when the conditions during which the differences of exhaust AVCS target timing advance amount and exhaust AVCS actual timing advance amount is large continues.

2. EXECUTION CONDITION

Secondary Parameters	Execution condition
Battery voltage	≥ 10.9 V
Exhaust AVCS control	In operation

3. GENERAL DRIVING CYCLE

Perform the diagnosis continuously when the engine speed increases and exhaust AVCS operates.

4. DIAGNOSTIC METHOD

When the conditions during which the differences of exhaust AVCS target timing advance amount and exhaust AVCS actual timing advance amount is large continues for certain amount of time.

Judge as NG when the following conditions are established within the predetermined time.

Judgment value

Malfunction Criteria	Threshold Value
$ (Target\ position - Actual\ position) $	> 10 °CA

Time needed for diagnosis: 10000 ms

Malfunction indicator light illumination: Illuminates when malfunction occurs in 2 continuous driving cycles.

Diagnostic Procedure with Diagnostic Trouble Code (DTC)

ENGINE (DIAGNOSTICS)

I: DTC P0016 CRANKSHAFT POSITION - CAMSHAFT POSITION CORRELATION BANK 1 SENSOR A

DTC detecting condition:

Detected when two consecutive driving cycles with fault occur.

Trouble symptom:

- Engine stall
- Improper idling

CAUTION:

After servicing or replacing faulty parts, perform Clear Memory Mode <Ref. to EN(H4DO)(diag)-66, OPERATION, Clear Memory Mode.>, and Inspection Mode <Ref. to EN(H4DO)(diag)-50, PROCEDURE, Inspection Mode.>.

Step	Check	Yes	No
1	CHECK FOR ANY OTHER DTC ON DISPLAY. Is DTC other than P0016, P0017, P0018 or P0019 displayed?	Check the appropriate DTC using the "List of Diagnostic Trouble Code (DTC)". <Ref. to EN(H4DO)(diag)-96, List of Diagnostic Trouble Code (DTC).>	Go to step 2.
2	CHECK INTAKE OIL CONTROL SOLENOID RH. Check the intake oil control solenoid RH. <Ref. to FU(H4DO)-65, INSPECTION, Oil Control Solenoid.>	Go to step 3.	Replace the intake oil control solenoid RH. <Ref. to FU(H4DO)-62, Oil Control Solenoid.>
3	CHECK INSTALLATION CONDITION OF TIMING CHAIN. Using ST and by turning the crankshaft, align the alignment marks of crank sprocket, intake cam sprocket and exhaust cam sprocket. <Ref. to ME(H4DO)-115, Timing Chain Assembly.> ST 18252AA000 CRANKSHAFT SOCKET	Go to step 4.	Correct the installation condition of timing chain. <Ref. to ME(H4DO)-115, Timing Chain Assembly.>
4	CHECK CAM CARRIER FILTER. Check the filter installed to the cam carrier. <Ref. to ME(H4DO)-201, INSPECTION, Cam Carrier.>	Replace the intake cam sprocket RH. <Ref. to ME(H4DO)-138, Cam Sprocket.> After the operation is complete, go to the next step. Go to step 5.	Replace the cam carrier filter. <Ref. to ME(H4DO)-163, Cam Carrier.>

Diagnostic Procedure with Diagnostic Trouble Code (DTC)

ENGINE (DIAGNOSTICS)

Step	Check	Yes	No
<p>5</p> <p>CHECK CURRENT DATA.</p> <p>1) Clear the memory using the Subaru Select Monitor or general scan tool. <Ref. to EN(H4DO)(diag)-66, OPERATION, Clear Memory Mode.></p> <p>2) Start the engine and warm up completely.</p> <p>3) Using the Subaru Select Monitor, read the values of «VVT Initial Position Learning Value #1» and «VVT Adv. Ang. Amount R» while the vehicle is in stable condition for 30 seconds or more with the engine idling.</p> <p>NOTE: For detailed operation procedures, refer to “Current Data Display For Engine”. <Ref. to EN(H4DO)(diag)-36, Subaru Select Monitor.></p> <p>4) Calculate the values using the following formula. Ignore the unit at this time. «VVT Initial Position Learning Value #1» – (60 + «VVT Adv. Ang. Amount R») </p>	<p>Is the calculation result less than 10?</p>	<p>Go to step 6.</p>	<p>Replace the ECM. <Ref. to FU(H4DO)-98, Engine Control Module (ECM).></p>
<p>6</p> <p>CHECK DTC.</p> <p>1) Clear the memory using the Subaru Select Monitor or general scan tool. <Ref. to EN(H4DO)(diag)-66, OPERATION, Clear Memory Mode.></p> <p>2) Perform drive cycle N. <Ref. to EN(H4DO)(diag)-62, DRIVE CYCLE N, PROCEDURE, Drive Cycle.></p>	<p>Is the same DTC as current diagnosis output?</p>	<p>Replace the ECM. <Ref. to FU(H4DO)-98, Engine Control Module (ECM).></p>	<p>End.</p>

Diagnostic Procedure with Diagnostic Trouble Code (DTC)

ENGINE (DIAGNOSTICS)

1. OUTLINE OF DIAGNOSIS

Detect the AVCS system malfunction.

Judge as NG when standard timing advance amount is far from learning angle.

2. EXECUTION CONDITION

Secondary Parameters	Execution condition
Battery voltage	≥ 10.9 V
Elapsed time after external load (power steering, neutral position switch) change	≥ 3000 ms
AVCS position learning	In operation

3. GENERAL DRIVING CYCLE

Perform the diagnosis continuously after starting engine and while AVCS is not operating.

4. DIAGNOSTIC METHOD

Judge as NG when the absolute value of the difference between cam signal input position and learning value is out of specification.

If the duration of time while the following conditions are met is longer than the time indicated, judge as NG.

Judgment value

Malfunction Criteria	Threshold Value
<Diagnosis 1> One tooth shifted Crankshaft position when camshaft position sensor signal is input – Learning value	> 10 °CA
<Diagnosis 2> Two teeth shifted Camshaft position sensor signal input position (Bank 1)	< 29.05 °CA or > 87.73 °CA
Camshaft position sensor signal input position (Bank 2)	< 28.52 °CA or > 86.26 °CA

Time needed for diagnosis: 500 ms

Malfunction indicator light illumination: Illuminates when malfunction occurs in 2 continuous driving cycles.

NOTE:

Initial standard learning value is the value of crank angle initially input at the production plant. And then it will be updated every time normal judgment has been completed. Learning value will not be updated if NG judgment occurs because timing belt or chain derails suddenly in process or because wrong assembly occurs during servicing.

Diagnostic Procedure with Diagnostic Trouble Code (DTC)

ENGINE (DIAGNOSTICS)

J: DTC P0017 CRANKSHAFT POSITION - CAMSHAFT POSITION CORRELATION BANK 1 SENSOR B

DTC detecting condition:

Detected when two consecutive driving cycles with fault occur.

Trouble symptom:

- Engine stall
- Improper idling

CAUTION:

After servicing or replacing faulty parts, perform Clear Memory Mode <Ref. to EN(H4DO)(diag)-66, OPERATION, Clear Memory Mode.>, and Inspection Mode <Ref. to EN(H4DO)(diag)-50, PROCEDURE, Inspection Mode.>.

Step	Check	Yes	No
1	CHECK FOR ANY OTHER DTC ON DISPLAY. Is DTC other than P0016, P0017, P0018 or P0019 displayed?	Check the appropriate DTC using the "List of Diagnostic Trouble Code (DTC)". <Ref. to EN(H4DO)(diag)-96, List of Diagnostic Trouble Code (DTC).>	Go to step 2.
2	CHECK EXHAUST OIL CONTROL SOLENOID RH. Check the exhaust oil control solenoid RH. <Ref. to FU(H4DO)-65, INSPECTION, Oil Control Solenoid.>	Go to step 3.	Replace the exhaust oil control solenoid RH. <Ref. to FU(H4DO)-62, Oil Control Solenoid.>
3	CHECK INSTALLATION CONDITION OF TIMING CHAIN. Using ST and by turning the crankshaft, align the alignment marks of crank sprocket, intake cam sprocket and exhaust cam sprocket. <Ref. to ME(H4DO)-115, Timing Chain Assembly.> ST 18252AA000 CRANKSHAFT SOCKET	Go to step 4.	Correct the installation condition of timing chain. <Ref. to ME(H4DO)-115, Timing Chain Assembly.>
4	CHECK CAM CARRIER FILTER. Check the filter installed to the cam carrier. <Ref. to ME(H4DO)-201, INSPECTION, Cam Carrier.>	Replace the exhaust cam sprocket RH. <Ref. to ME(H4DO)-138, Cam Sprocket.> After the operation is complete, go to the next step. Go to step 5.	Replace the cam carrier filter. <Ref. to ME(H4DO)-163, Cam Carrier.>

Diagnostic Procedure with Diagnostic Trouble Code (DTC)

ENGINE (DIAGNOSTICS)

Step	Check	Yes	No
5 CHECK CURRENT DATA. 1) Clear the memory using the Subaru Select Monitor or general scan tool. <Ref. to EN(H4DO)(diag)-66, OPERATION, Clear Memory Mode.> 2) Start the engine and warm up completely. 3) Using the Subaru Select Monitor, read the values of «VVT Ex Initial Position Learning Value #1» and «Exh. VVT Retard Ang. R» while the vehicle is in stable condition for 30 seconds or more with the engine idling. NOTE: For detailed operation procedures, refer to "Current Data Display For Engine". <Ref. to EN(H4DO)(diag)-36, Subaru Select Monitor.> 4) Calculate the values using the following formula. Ignore the unit at this time. [«VVT Ex Initial Position Learning Value #1» – (90 – «Exh. VVT Retard Ang. R»)]	Is the calculation result less than 10?	Go to step 6.	Replace the ECM. <Ref. to FU(H4DO)-98, Engine Control Module (ECM).>
6 CHECK DTC. 1) Clear the memory using the Subaru Select Monitor or general scan tool. <Ref. to EN(H4DO)(diag)-66, OPERATION, Clear Memory Mode.> 2) Perform drive cycle N. <Ref. to EN(H4DO)(diag)-62, DRIVE CYCLE N, PROCEDURE, Drive Cycle.>	Is the same DTC as current diagnosis output?	Replace the ECM. <Ref. to FU(H4DO)-98, Engine Control Module (ECM).>	End.

1. OUTLINE OF DIAGNOSIS

Detect the exhaust AVCS system malfunction.

Judge as NG when standard timing advance amount is far from learning angle.

2. EXECUTION CONDITION

Secondary parameters	Execution condition
Battery voltage	≥ 10.9 V
Elapsed time after external load (power steering, neutral position switch) change	≥ 3000 ms
Exhaust AVCS position learning	In operation

3. GENERAL DRIVING CYCLE

Perform the diagnosis continuously while the exhaust AVCS is not operating after warming up.

4. DIAGNOSTIC METHOD

Judge as NG when the absolute value of the difference between cam signal input position and learning value is out of specification.

Judgment value

Malfunction Criteria	Threshold Value
<Diagnosis 1> One tooth shifted Crankshaft position when camshaft position sensor signal is input – Learning value	> 10 °CA
<Diagnosis 2> Two teeth shifted Camshaft position sensor signal input position (Bank 1)	< 63.9 °CA or > 121.64 °CA
Camshaft position sensor signal input position (Bank 2)	< 62.11 °CA or > 120.79 °CA

Diagnostic Procedure with Diagnostic Trouble Code (DTC)

ENGINE (DIAGNOSTICS)

K: DTC P0018 CRANKSHAFT POSITION - CAMSHAFT POSITION CORRELATION BANK 2 SENSOR A

DTC detecting condition:

Detected when two consecutive driving cycles with fault occur.

Trouble symptom:

- Engine stall
- Improper idling

CAUTION:

After servicing or replacing faulty parts, perform Clear Memory Mode <Ref. to EN(H4DO)(diag)-66, OPERATION, Clear Memory Mode.>, and Inspection Mode <Ref. to EN(H4DO)(diag)-50, PROCEDURE, Inspection Mode.>.

Step	Check	Yes	No
1 CHECK FOR ANY OTHER DTC ON DISPLAY.	Is DTC other than P0016, P0017, P0018 or P0019 displayed?	Check the appropriate DTC using the "List of Diagnostic Trouble Code (DTC)". <Ref. to EN(H4DO)(diag)-96, List of Diagnostic Trouble Code (DTC).>	Go to step 2.
2 CHECK INTAKE OIL CONTROL SOLENOID LH. Check the intake oil control solenoid LH. <Ref. to FU(H4DO)-65, INSPECTION, Oil Control Solenoid.>	Is the check result OK?	Go to step 3.	Replace the intake oil control solenoid LH. <Ref. to FU(H4DO)-62, Oil Control Solenoid.>
3 CHECK INSTALLATION CONDITION OF TIMING CHAIN. Using ST and by turning the crankshaft, align the alignment marks of crank sprocket, intake cam sprocket and exhaust cam sprocket. <Ref. to ME(H4DO)-115, Timing Chain Assembly.> ST 18252AA000 CRANKSHAFT SOCKET	Is the timing chain installed in the proper position?	Go to step 4.	Correct the installation condition of timing chain. <Ref. to ME(H4DO)-115, Timing Chain Assembly.>
4 CHECK CAM CARRIER FILTER. Check the filter installed to the cam carrier. <Ref. to ME(H4DO)-201, INSPECTION, Cam Carrier.>	Is the check result OK?	Replace the intake cam sprocket LH. <Ref. to ME(H4DO)-138, Cam Sprocket.> After the operation is complete, go to the next step. Go to step 5.	Replace the cam carrier filter. <Ref. to ME(H4DO)-163, Cam Carrier.>

Diagnostic Procedure with Diagnostic Trouble Code (DTC)

ENGINE (DIAGNOSTICS)

Step	Check	Yes	No
<p>5 CHECK CURRENT DATA. 1) Clear the memory using the Subaru Select Monitor or general scan tool. <Ref. to EN(H4DO)(diag)-66, OPERATION, Clear Memory Mode.> 2) Start the engine and warm up completely. 3) Using the Subaru Select Monitor, read the values of «VVT Initial Position Learning Value #2» and «VVT Adv. Ang. Amount L» while the vehicle is in stable condition for 30 seconds or more with the engine idling. NOTE: For detailed operation procedures, refer to "Current Data Display For Engine". <Ref. to EN(H4DO)(diag)-36, Subaru Select Monitor.> 4) Calculate the values using the following formula. Ignore the unit at this time. $\llcorner \llcorner \text{VVT Initial Position Learning Value \#2} \llcorner \llcorner - (60 + \llcorner \llcorner \text{VVT Adv. Ang. Amount L} \llcorner \llcorner)$</p>	<p>Is the calculation result less than 10?</p>	<p>Go to step 6.</p>	<p>Replace the ECM. <Ref. to FU(H4DO)-98, Engine Control Module (ECM).></p>
<p>6 CHECK DTC. 1) Clear the memory using the Subaru Select Monitor or general scan tool. <Ref. to EN(H4DO)(diag)-66, OPERATION, Clear Memory Mode.> 2) Perform drive cycle N. <Ref. to EN(H4DO)(diag)-62, DRIVE CYCLE N, PROCEDURE, Drive Cycle.></p>	<p>Is the same DTC as current diagnosis output?</p>	<p>Replace the ECM. <Ref. to FU(H4DO)-98, Engine Control Module (ECM).></p>	<p>End.</p>

1. OUTLINE OF DIAGNOSIS

NOTE:

For the detection standard, refer to DTC P0016. <Ref. to EN(H4DO)(diag)-117, DTC P0016 CRANKSHAFT POSITION - CAMSHAFT POSITION CORRELATION BANK 1 SENSOR A, Diagnostic Procedure with Diagnostic Trouble Code (DTC).>

Diagnostic Procedure with Diagnostic Trouble Code (DTC)

ENGINE (DIAGNOSTICS)

L: DTC P0019 CRANKSHAFT POSITION - CAMSHAFT POSITION CORRELATION BANK 2 SENSOR B

DTC detecting condition:

Detected when two consecutive driving cycles with fault occur.

Trouble symptom:

- Engine stall
- Improper idling

CAUTION:

After servicing or replacing faulty parts, perform Clear Memory Mode <Ref. to EN(H4DO)(diag)-66, OPERATION, Clear Memory Mode.>, and Inspection Mode <Ref. to EN(H4DO)(diag)-50, PROCEDURE, Inspection Mode.>.

Step	Check	Yes	No
1	CHECK FOR ANY OTHER DTC ON DISPLAY. Is DTC other than P0016, P0017, P0018 or P0019 displayed?	Check the appropriate DTC using the "List of Diagnostic Trouble Code (DTC)". <Ref. to EN(H4DO)(diag)-96, List of Diagnostic Trouble Code (DTC).>	Go to step 2.

Diagnostic Procedure with Diagnostic Trouble Code (DTC)

ENGINE (DIAGNOSTICS)

M: DTC P0020 "A" CAMSHAFT POSITION ACTUATOR CONTROL CIRCUIT/ OPEN BANK 2

DTC detecting condition:

Immediately at fault recognition

Trouble symptom:

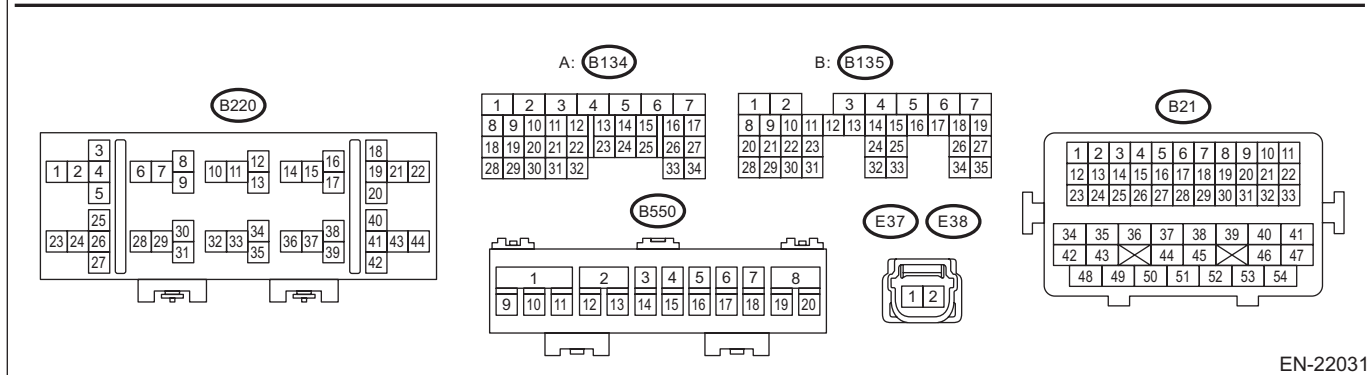

Improper idling

CAUTION:

After servicing or replacing faulty parts, perform Clear Memory Mode <Ref. to EN(H4DO)(diag)-66, OPERATION, Clear Memory Mode.>, and Inspection Mode <Ref. to EN(H4DO)(diag)-50, PROCEDURE, Inspection Mode.>.

Wiring diagram:

Engine electrical system <Ref. to WI-15, Power Supply Circuit.>

EN-22031

Diagnostic Procedure with Diagnostic Trouble Code (DTC)

ENGINE (DIAGNOSTICS)

	Step	Check	Yes	No
1	CHECK OUTPUT SIGNAL OF ECM. 1) Turn the ignition switch to ON. 2) Measure the voltage between ECM connector and chassis ground. Connector & terminal (B134) No. 16 (+) — Chassis ground (-):	Is the voltage 10 V or more?	Go to step 2.	Go to step 3.
2	CHECK FOR POOR CONTACT. Check for poor contact of ECM connector.	Is there poor contact of ECM connector?	Repair the poor contact of ECM connector.	Even if DTC is detected, the circuit has returned to a normal condition at this time. Reproduce the failure, and then perform the diagnosis again. NOTE: In this case, temporary poor contact of connector, temporary open or short circuit of harness may be the cause.
3	CHECK POWER SUPPLY TO THE INTAKE OIL CONTROL SOLENOID LH. Measure the voltage between intake oil control solenoid LH connector and engine ground. Connector & terminal (E37) No. 1 (+) — Engine ground (-):	Is the voltage 10 V or more?	Go to step 4.	Repair the power supply circuit.
4	CHECK HARNESS BETWEEN ECM AND INTAKE OIL CONTROL SOLENOID LH CONNECTOR. 1) Turn the ignition switch to OFF. 2) Disconnect the connector from ECM. Disconnect the connector from the intake oil control solenoid LH. 3) Measure the resistance between intake oil control solenoid LH connector and engine ground. Connector & terminal (E37) No. 2 — Engine ground:	Is the resistance 1 M Ω or more?	Go to step 5.	Repair the short circuit to ground in harness between ECM connector and intake oil control solenoid LH connector.
5	CHECK HARNESS BETWEEN ECM AND INTAKE OIL CONTROL SOLENOID LH CONNECTOR. Measure the resistance of harness between ECM connector and intake oil control solenoid LH. Connector & terminal (B134) No. 16 — (E37) No. 2:	Is the resistance less than 1 Ω ?	Go to step 6.	Repair the harness and connector. NOTE: In this case, repair the following item: <ul style="list-style-type: none"> • Open circuit in harness between ECM connector and intake oil control solenoid LH connector • Poor contact of coupling connector

Diagnostic Procedure with Diagnostic Trouble Code (DTC)

ENGINE (DIAGNOSTICS)

Step	Check	Yes	No
6 CHECK INTAKE OIL CONTROL SOLENOID LH. Measure the resistance between intake oil control solenoid LH terminals. <i>Terminals</i> <i>No. 1 — No. 2:</i>	Is the resistance 6 — 12 Ω ?	Repair the poor contact of intake oil control solenoid LH connector.	Replace the intake oil control solenoid LH. <Ref. to FU(H4DO)-62, Oil Control Solenoid.>

1. OUTLINE OF DIAGNOSIS

NOTE:

For the detection standard, refer to DTC P0010. <Ref. to EN(H4DO)(diag)-107, DTC P0010 "A" CAMSHAFT POSITION ACTUATOR CONTROL CIRCUIT/OPEN BANK 1, Diagnostic Procedure with Diagnostic Trouble Code (DTC).>

Diagnostic Procedure with Diagnostic Trouble Code (DTC)

ENGINE (DIAGNOSTICS)

N: DTC P0021 "A" CAMSHAFT POSITION - TIMING OVER-ADVANCED OR SYSTEM PERFORMANCE BANK 2

DTC detecting condition:

Detected when two consecutive driving cycles with fault occur.

Trouble symptom:

- Engine stall
- Improper idling

CAUTION:

After servicing or replacing faulty parts, perform Clear Memory Mode <Ref. to EN(H4DO)(diag)-66, OPERATION, Clear Memory Mode.>, and Inspection Mode <Ref. to EN(H4DO)(diag)-50, PROCEDURE, Inspection Mode.>.

Step	Check	Yes	No
1 IDENTIFYING FAULTY PART. 1) Perform the Clear Memory Mode. <Ref. to EN(H4DO)(diag)-66, Clear Memory Mode.> 2) Replace the defective oil control solenoid by the other (RH or LH, intake side or exhaust side) oil control solenoid. 3) Perform appropriate drive cycle test. <Ref. to EN(H4DO)(diag)-55, Drive Cycle.> 4) Make sure that the fault occurrence (DTC and incorrect advancing) has shifted to the other location.	Did the detected DTC shift to the location where the oil control solenoid was replaced?	Replace the faulty oil control solenoid.	Go to step 2.
2 CHECK CURRENT DATA. 1) Start the engine and let it idle. 2) Read the value of «VVT Adv. Ang. Amount L» using the Subaru Select Monitor. NOTE: For detailed operation procedures, refer to "Current Data Display For Engine". <Ref. to EN(H4DO)(diag)-36, Subaru Select Monitor.>	Is the value of «VVT Adv. Ang. Amount L» approx. 0 deg?	Go to step 3.	Check the following item and repair or replace if necessary. • Intake cam sprocket (clog or dirt of oil routing, setting of spring) • Intake camshaft (dirt, damage of camshaft)
3 CHECK CURRENT DATA. 1) Drive with acceleration and deceleration at 80 km/h (50 MPH) or less. NOTE: Drive to an extent that the duty output of oil flow control solenoid valve increases. 2) Read the values of «OCV Duty L» and «VVT Adv. Ang. Amount L» using the Subaru Select Monitor. NOTE: For detailed operation procedures, refer to "Current Data Display For Engine". <Ref. to EN(H4DO)(diag)-36, Subaru Select Monitor.>	When the value of «OCV Duty L» increases more than 10%, is the value of «VVT Adv. Ang. Amount L» approx. 0 deg?	Check the following item and repair or replace if necessary. • Intake cam sprocket (clog or dirt of oil routing, setting of spring) • Intake camshaft (dirt, damage of camshaft)	Perform the following procedures, and clean the oil routing. Replace the engine oil and idle the engine for 5 minutes, and then replace the oil filter and engine oil. <Ref. to LU(H4DO)-11, REPLACEMENT, Engine Oil.> <Ref. to LU(H4DO)-25, Engine Oil Filter.>

1. OUTLINE OF DIAGNOSIS

NOTE:

For the detection standard, refer to DTC P0011. <Ref. to EN(H4DO)(diag)-110, DTC P0011 "A" CAMSHAFT POSITION - TIMING OVER-ADVANCED OR SYSTEM PERFORMANCE BANK 1, Diagnostic Procedure with Diagnostic Trouble Code (DTC).>

Diagnostic Procedure with Diagnostic Trouble Code (DTC)

ENGINE (DIAGNOSTICS)

O: DTC P0023 "B" CAMSHAFT POSITION ACTUATOR CONTROL CIRCUIT/ OPEN BANK 2

DTC detecting condition:

Immediately at fault recognition

Trouble symptom:

Improper idling

CAUTION:

After servicing or replacing faulty parts, perform Clear Memory Mode <Ref. to EN(H4DO)(diag)-66, OPERATION, Clear Memory Mode.>, and Inspection Mode <Ref. to EN(H4DO)(diag)-50, PROCEDURE, Inspection Mode.>.

Wiring diagram:

Engine electrical system <Ref. to WI-15, Power Supply Circuit.>

EN-21922

Diagnostic Procedure with Diagnostic Trouble Code (DTC)

ENGINE (DIAGNOSTICS)

Step	Check	Yes	No
1 CHECK OUTPUT SIGNAL OF ECM. 1) Turn the ignition switch to ON. 2) Measure the voltage between ECM connector and chassis ground. <i>Connector & terminal</i> <i>(B134) No. 5 (+) — Chassis ground (-):</i>	Is the voltage 10 V or more?	Go to step 2.	Go to step 3.
2 CHECK FOR POOR CONTACT. Check for poor contact of ECM connector.	Is there poor contact of ECM connector?	Repair the poor contact of ECM connector.	Even if DTC is detected, the circuit has returned to a normal condition at this time. Reproduce the failure, and then perform the diagnosis again. NOTE: In this case, temporary poor contact of connector, temporary open or short circuit of harness may be the cause.
3 CHECK POWER SUPPLY TO THE EXHAUST OIL CONTROL SOLENOID LH. Measure the voltage between exhaust oil control solenoid LH connector and engine ground. <i>Connector & terminal</i> <i>(E66) No. 1 (+) — Engine ground (-):</i>	Is the voltage 10 V or more?	Go to step 4.	Repair the power supply circuit.
4 CHECK HARNESS BETWEEN ECM AND EXHAUST OIL CONTROL SOLENOID LH CONNECTOR. 1) Turn the ignition switch to OFF. 2) Disconnect the connector from ECM. 3) Disconnect the connector from the exhaust oil control solenoid LH. 4) Measure the resistance between exhaust oil control solenoid LH connector and engine ground. <i>Connector & terminal</i> <i>(E66) No. 2 — Engine ground:</i>	Is the resistance 1 M Ω or more?	Go to step 5.	Repair the short circuit to ground in harness between ECM connector and exhaust oil control solenoid LH connector.
5 CHECK HARNESS BETWEEN ECM AND EXHAUST OIL CONTROL SOLENOID LH CONNECTOR. Measure the resistance of harness between ECM connector and exhaust oil control solenoid LH. <i>Connector & terminal</i> <i>(B134) No. 5 — (E66) No. 2:</i>	Is the resistance less than 1 Ω ?	Go to step 6.	Repair the harness and connector. NOTE: In this case, repair the following item: <ul style="list-style-type: none"> • Open circuit in harness between ECM connector and exhaust oil control solenoid LH connector • Poor contact of coupling connector

Diagnostic Procedure with Diagnostic Trouble Code (DTC)

ENGINE (DIAGNOSTICS)

Step	Check	Yes	No
6 CHECK EXHAUST OIL CONTROL SOLENOID LH. Measure the resistance between exhaust oil control solenoid LH terminals. <i>Terminals</i> <i>No. 1 — No. 2:</i>	Is the resistance 6 — 12 Ω?	Repair the poor contact of exhaust oil control solenoid LH connector.	Replace the exhaust oil control solenoid LH. <Ref. to FU(H4DO)-62, Oil Control Solenoid.>

1. OUTLINE OF DIAGNOSIS

NOTE:

For the detection standard, refer to DTC P0013. <Ref. to EN(H4DO)(diag)-112, DTC P0013 "B" CAMSHAFT POSITION ACTUATOR CONTROL CIRCUIT/OPEN BANK 1, Diagnostic Procedure with Diagnostic Trouble Code (DTC).>

Diagnostic Procedure with Diagnostic Trouble Code (DTC)

ENGINE (DIAGNOSTICS)

P: DTC P0024 "B" CAMSHAFT POSITION - TIMING OVER-ADVANCED OR SYSTEM PERFORMANCE BANK 2

DTC detecting condition:

Detected when two consecutive driving cycles with fault occur.

Trouble symptom:

- Engine stall
- Improper idling

CAUTION:

After servicing or replacing faulty parts, perform Clear Memory Mode <Ref. to EN(H4DO)(diag)-66, OPERATION, Clear Memory Mode.>, and Inspection Mode <Ref. to EN(H4DO)(diag)-50, PROCEDURE, Inspection Mode.>.

Step	Check	Yes	No
1 IDENTIFYING FAULTY PART. 1) Perform the Clear Memory Mode. <Ref. to EN(H4DO)(diag)-66, Clear Memory Mode.> 2) Replace the defective oil control solenoid by the other (RH or LH, intake side or exhaust side) oil control solenoid. 3) Perform appropriate drive cycle test. <Ref. to EN(H4DO)(diag)-55, Drive Cycle.> 4) Make sure that the fault occurrence (DTC and incorrect advancing) has shifted to the other location.	Did the detected DTC shift to the location where the oil control solenoid was replaced?	Replace the faulty oil control solenoid.	Go to step 2.
2 CHECK CURRENT DATA. 1) Start the engine and let it idle. 2) Read the value of «Exh. VVT Retard Ang. L» using the Subaru Select Monitor. NOTE: For detailed operation procedures, refer to "Current Data Display For Engine". <Ref. to EN(H4DO)(diag)-36, Subaru Select Monitor.>	Is the value of «Exh. VVT Retard Ang. L» approx. 0 deg?	Go to step 3.	Check the following item and repair or replace if necessary. • Exhaust cam sprocket (clog or dirt of oil routing, setting of spring) • Exhaust camshaft (dirt, damage of camshaft)
3 CHECK CURRENT DATA. 1) Drive with acceleration and deceleration at 80 km/h (50 MPH) or less. NOTE: Drive to an extent that the duty output of oil flow control solenoid valve increases. 2) Read the values of «Exh. OCV Duty L» and «Exh. VVT Retard Ang. L» using the Subaru Select Monitor. NOTE: For detailed operation procedures, refer to "Current Data Display For Engine". <Ref. to EN(H4DO)(diag)-36, Subaru Select Monitor.>	When the value of «Exh. OCV Duty L» increases more than 10%, is the value of «Exh. VVT Retard Ang. L» approx. 0 deg?	Check the following item and repair or replace if necessary. • Exhaust cam sprocket (clog or dirt of oil routing, setting of spring) • Exhaust camshaft (dirt, damage of camshaft)	Perform the following procedures, and clean the oil routing. Replace the engine oil and idle the engine for 5 minutes, and then replace the oil filter and engine oil. <Ref. to LU(H4DO)-11, REPLACEMENT, Engine Oil.> <Ref. to LU(H4DO)-25, Engine Oil Filter.>

1. OUTLINE OF DIAGNOSIS

NOTE:

For the detection standard, refer to DTC P0014. <Ref. to EN(H4DO)(diag)-115, DTC P0014 "B" CAMSHAFT POSITION - TIMING OVER-ADVANCED OR SYSTEM PERFORMANCE BANK 1, Diagnostic Procedure with Diagnostic Trouble Code (DTC).>

Diagnostic Procedure with Diagnostic Trouble Code (DTC)

ENGINE (DIAGNOSTICS)

Q: DTC P0030 A/F / O2 HEATER CONTROL CIRCUIT BANK 1 SENSOR 1

DTC detecting condition:

Detected when two consecutive driving cycles with fault occur.

CAUTION:

After servicing or replacing faulty parts, perform Clear Memory Mode <Ref. to EN(H4DO)(diag)-66, OPERATION, Clear Memory Mode.>, and Inspection Mode <Ref. to EN(H4DO)(diag)-50, PROCEDURE, Inspection Mode.>.

Repair the poor contact of ECM or front oxygen (A/F) sensor connector.	<p>Replace the front oxygen (A/F) sensor. <Ref. to FU(H4DO)-90, Front Oxygen (A/F) Sensor.></p>

Diagnostic Procedure with Diagnostic Trouble Code (DTC)

ENGINE (DIAGNOSTICS)

1. OUTLINE OF DIAGNOSIS

Detect functional errors of the front oxygen (A/F) sensor heater.

Judge as NG when it is determined that the front oxygen (A/F) sensor impedance is large when looking at engine status such as deceleration fuel cut.

2. COMPONENT DESCRIPTION

EN-08982

- (1) Element cover (outer)
(2) Element cover (inner)

- (3) Sensor element

- (4) Sensor housing

3. EXECUTION CONDITION

Secondary parameters	Execution condition
Battery voltage	≥ 10.9 V
A/F sensor heater control duty	> 17 %
Elapsed time after fuel cut	≥ 20000 ms

4. GENERAL DRIVING CYCLE

Perform the diagnosis continuously after 42000 ms seconds or more have passed since the engine started.

5. DIAGNOSTIC METHOD

If the duration of time while the following conditions are met is longer than the time indicated, judge as NG.

Judgment Value

Malfunction Criteria	Threshold Value
Front oxygen (A/F) sensor impedance	$> 82 \Omega$

Time Needed for Diagnosis: 10000 ms

Malfunction Indicator Light Illumination: Illuminates when malfunction occurs in 2 continuous driving cycles.

Diagnostic Procedure with Diagnostic Trouble Code (DTC)

ENGINE (DIAGNOSTICS)

R: DTC P0031 A/F / O2 HEATER CONTROL CIRCUIT LOW BANK 1 SENSOR 1

DTC DETECTING CONDITION:

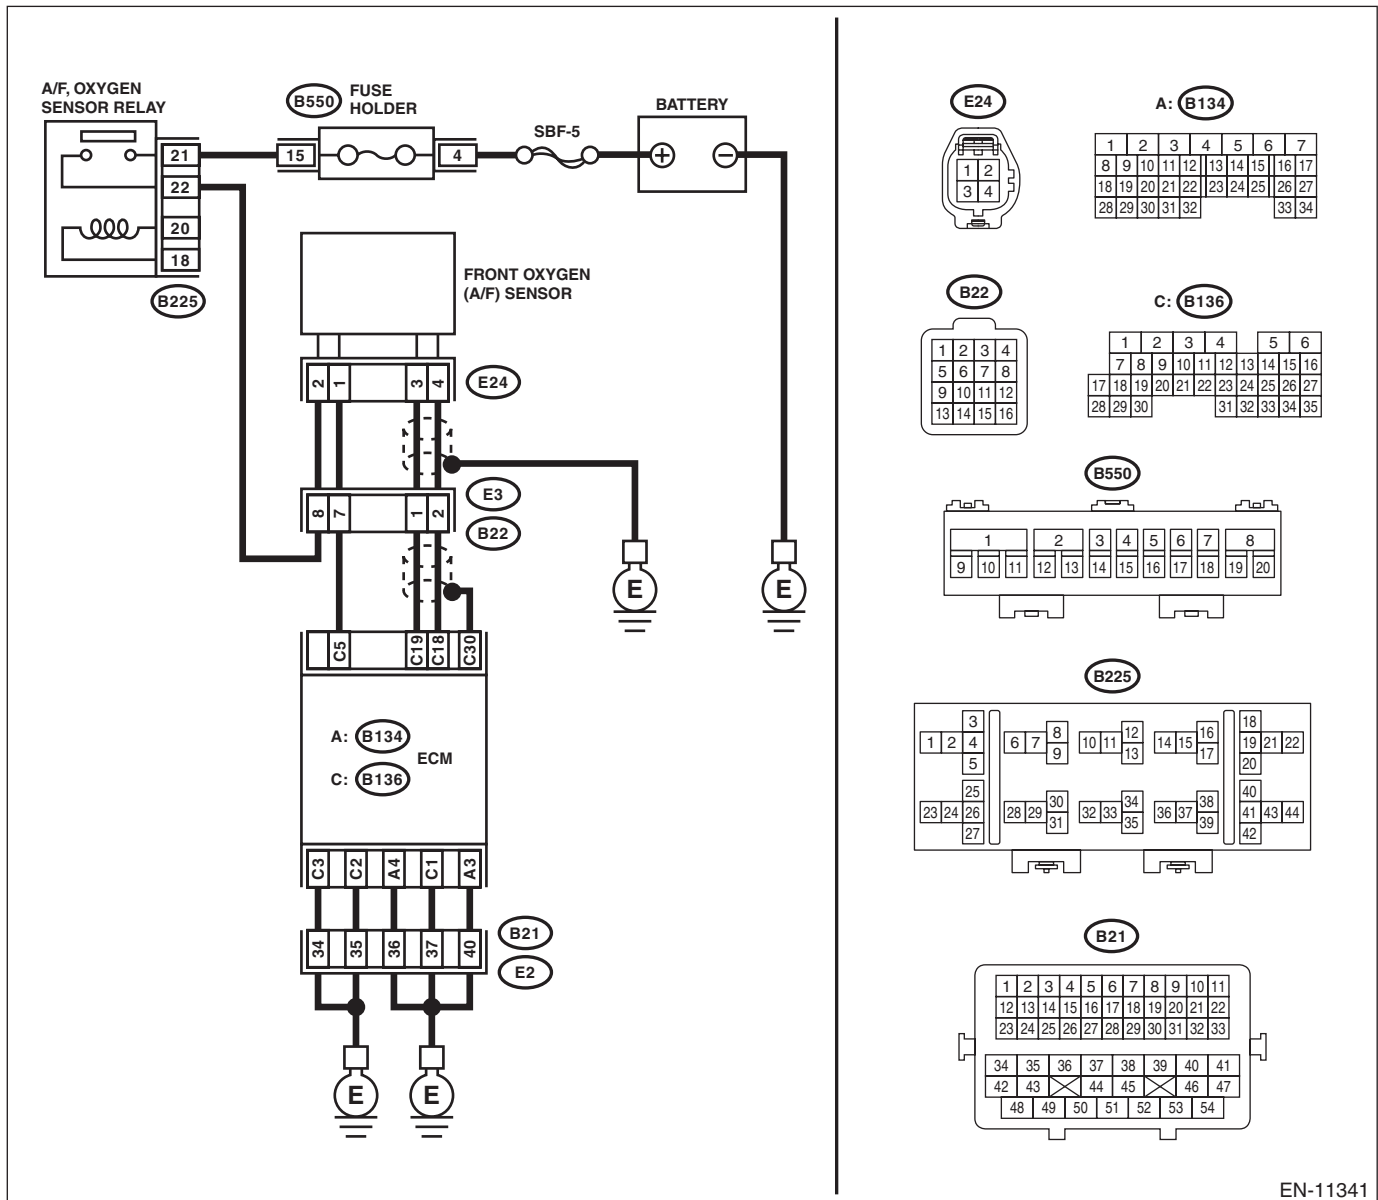

Immediately at fault recognition

CAUTION:

After servicing or replacing faulty parts, perform Clear Memory Mode <Ref. to EN(H4DO)(diag)-66, OPERATION, Clear Memory Mode.>, and Inspection Mode <Ref. to EN(H4DO)(diag)-50, PROCEDURE, Inspection Mode.>.

Go to step 4.	Repair the harness and connector. NOTE: In this case, repair the following item: • Open circuit of harness between ECM connector and engine ground • Poor contact of coupling connector
<p>4 CHECK FRONT OXYGEN (A/F) SENSOR. Measure the resistance between front oxygen (A/F) sensor terminals. Terminals No. 1 — No. 2:</p>	Is the resistance 2 — 3 Ω ?	Repair the poor contact of ECM connector.	Replace the front oxygen (A/F) sensor. <Ref. to FU(H4DO)-90, Front Oxygen (A/F) Sensor.>

Diagnostic Procedure with Diagnostic Trouble Code (DTC)

ENGINE (DIAGNOSTICS)

1. OUTLINE OF DIAGNOSIS

Detect front oxygen (A/F) sensor heater open or short circuit.

The front oxygen (A/F) sensor heater performs duty control, and the output terminal voltage at ON is 0 V, and the output terminal voltage at OFF is the battery voltage.

Judge as NG when the terminal voltage remains Low.

2. COMPONENT DESCRIPTION

EN-01792

(A) Battery voltage

(B) Front oxygen (A/F) sensor heater output voltage

(C) 128 ms

(D) Low error

3. EXECUTION CONDITION

Secondary Parameters	Execution condition
Battery voltage	≥ 10.9 V
Primary oxygen sensor heater control duty	< 87.5 %

4. GENERAL DRIVING CYCLE

Always perform the diagnosis continuously.

5. DIAGNOSTIC METHOD

If the duration of time while the following conditions are met is longer than the time indicated, judge as NG.

Judgment Value

Malfunction Criteria	Threshold Value
Measured primary oxygen sensor heater control voltage	< 1.9 V

Time Needed for Diagnosis: 1 second

Malfunction Indicator Light Illumination: Illuminates as soon as a malfunction occurs.

Diagnostic Procedure with Diagnostic Trouble Code (DTC)

ENGINE (DIAGNOSTICS)

S: DTC P0032 A/F / O2 HEATER CONTROL CIRCUIT HIGH BANK 1 SENSOR 1

Battery voltage	≥ 10.9 V
Secondary oxygen sensor heater control duty	≥ 20 %

4. GENERAL DRIVING CYCLE

After starting the engine, perform the diagnosis continuously when engine is low speed.

5. DIAGNOSTIC METHOD

If the duration of time while the following conditions are met is longer than the time indicated, judge as NG.

Judgment Value

Malfunction Criteria	Threshold Value
Measured secondary oxygen sensor heater control voltage	12 V battery system voltage \times 0.30 V

Time Needed for Diagnosis: 2.56 seconds

Malfunction Indicator Light Illumination: Illuminates when malfunction occurs in 2 continuous driving cycles.

Diagnostic Procedure with Diagnostic Trouble Code (DTC)

ENGINE (DIAGNOSTICS)

V: DTC P0068 MAP/MAF - THROTTLE POSITION CORRELATION

DTC detecting condition:

Detected when two consecutive driving cycles with fault occur.

CAUTION:

After servicing or replacing faulty parts, perform Clear Memory Mode <Ref. to EN(H4DO)(diag)-66, OPERATION, Clear Memory Mode.>, and Inspection Mode <Ref. to EN(H4DO)(diag)-50, PROCEDURE, Inspection Mode.>.

	Step	Check	Yes	No
1	CHECK AIR INTAKE SYSTEM.	Are there holes, loose bolts or disconnection of hose on air intake system?	Repair the air intake system.	Go to step 2.
2	CHECK MANIFOLD ABSOLUTE PRESSURE SENSOR. 1) Start the engine and warm up engine until coolant temperature is higher than 75°C (167°F). 2) For CVT models, set the select lever to "P" range or "N" range, and for MT models, place the gear shift lever in the neutral position. 3) Turn the A/C switch to OFF. 4) Turn all the accessory switches to OFF. 5) Read the value of «Mani. Absolute Pressure» using the Subaru Select Monitor or a general scan tool. NOTE: • Subaru Select Monitor For detailed operation procedures, refer to "Current Data Display For Engine". <Ref. to EN(H4DO)(diag)-36, Subaru Select Monitor.> • General scan tool For detailed operation procedures, refer to the general scan tool operation manual.	Is the value in «Mani. Absolute Pressure» 73.3 — 106.6 kPa (550 — 800 mmHg, 21.65 — 31.50 inHg) when the ignition is turned ON, and 20.0 — 46.7 kPa (150 — 350 mmHg, 5.91 — 13.78 inHg) during idling?	Go to step 3.	Replace the manifold absolute pressure sensor. <Ref. to FU(H4DO)-74, Manifold Absolute Pressure Sensor.>
3	CHECK THROTTLE OPENING ANGLE. Using the Subaru Select Monitor or a general scan tool, read the value in «Throttle Opening Angle». NOTE: • Subaru Select Monitor For detailed operation procedures, refer to "Current Data Display For Engine". <Ref. to EN(H4DO)(diag)-36, Subaru Select Monitor.> • General scan tool For detailed operation procedures, refer to the general scan tool operation manual.	Is the value in «Throttle Opening Angle» with the throttle fully closed less than 5%?	Go to step 4.	Replace the electronic throttle control. <Ref. to FU(H4DO)-15, Throttle Body.>
4	CHECK THROTTLE OPENING ANGLE.	Is the value in «Throttle Opening Angle» with the throttle fully open 85% or more?	Replace the manifold absolute pressure sensor. <Ref. to FU(H4DO)-74, Manifold Absolute Pressure Sensor.>	Replace the electronic throttle control. <Ref. to FU(H4DO)-15, Throttle Body.>

Diagnostic Procedure with Diagnostic Trouble Code (DTC)

ENGINE (DIAGNOSTICS)

1. OUTLINE OF DIAGNOSIS

Detect problems in the intake manifold pressure sensor output properties.

Judge as NG when the intake air pressure AD value is Low whereas it seemed to be High from the viewpoint of engine condition, or when it is High whereas it seemed to be Low from the engine condition.

2. COMPONENT DESCRIPTION

EN-08984

(A) Output voltage

(B) Absolute pressure

(1) Connector

(2) Terminals

(3) O-ring

3. EXECUTION CONDITION

Secondary parameters	Execution condition
Low	
Engine speed	< 4000 rpm
Engine load	> 0.71 g/rev (0.03 oz/rev) (CVT model) > 0.71 g/rev (0.03 oz/rev) (MT model)
Throttle position	≥ 14 ° (CVT model) ≥ 14 ° (MT model)
High	
Engine speed	500 rpm — 800 rpm (CVT model) 500 rpm — 950 rpm (MT model)
Engine load	< 0.31 g/rev (0.01 oz/rev)
Throttle position	≤ 5 °

4. GENERAL DRIVING CYCLE

Perform the diagnosis continuously after idling.

Diagnostic Procedure with Diagnostic Trouble Code (DTC)

ENGINE (DIAGNOSTICS)

5. DIAGNOSTIC METHOD

Judge as NG when Low side or High side becomes NG.

If the duration of time while the following conditions are met is longer than the time indicated, judge as NG.

Judgment value

Malfunction Criteria	Threshold Value
Low Output voltage (Manifold absolute pressure) Less than 57.73 kPa (433.1 mmHg, 17.05 inHg)	< 2.332 V (CVT model) < 2.332 V (MT model)
High Output voltage (Manifold absolute pressure) Less than 57.73 kPa (433.1 mmHg, 17.05 inHg)	≥ 2.332 V

Time needed for diagnosis:

Low side: 5000 ms

High side: 5000 ms

Malfunction indicator light illumination: Illuminates when malfunction occurs in 2 continuous driving cycles.

Diagnostic Procedure with Diagnostic Trouble Code (DTC)

ENGINE (DIAGNOSTICS)

W: DTC P0071 AMBIENT AIR TEMPERATURE SENSOR CIRCUIT "A" RANGE/ PERFORMANCE

DTC detecting condition:

Detected when two consecutive driving cycles with fault occur.

CAUTION:

After servicing or replacing faulty parts, perform Clear Memory Mode <Ref. to EN(H4DO)(diag)-66, OPERATION, Clear Memory Mode.>, and Inspection Mode <Ref. to EN(H4DO)(diag)-50, PROCEDURE, Inspection Mode.>.

Wiring diagram:

Air conditioning system <Ref. to WI-44, WIRING DIAGRAM, Air Conditioning System.>

EN-11365

Step	Check	Yes	No
1	CHECK FOR ANY OTHER DTC ON DISPLAY. Is any other DTC displayed?	Check the appropriate DTC using the "List of Diagnostic Trouble Code (DTC)". <Ref. to EN(H4DO)(diag)-96, List of Diagnostic Trouble Code (DTC).>	Go to step 2.

Diagnostic Procedure with Diagnostic Trouble Code (DTC)

ENGINE (DIAGNOSTICS)

Step	Check	Yes	No
2 CHECK AMBIENT SENSOR. 1) Turn the ignition switch to OFF. 2) Disconnect the connector from ambient sensor. 3) Measure the resistance between ambient sensor terminals while heating and cooling the ambient sensor using a hair dryer. CAUTION: Do not heat the part to the temperature where you cannot touch it with your bare hand in order to prevent burning yourself and protect the part. <i>Terminals</i> <i>No. 1 — No. 2:</i>	Does the resistance value of ambient sensor change between heating and cooling?	Repair the poor contact of ECM connector.	Replace the ambient sensor. <Ref. to AC-67, Ambient Sensor.>

1. OUTLINE OF DIAGNOSIS

Detect the malfunction of ambient temperature sensor characteristics.

After the engine starts after the specified period of soaking time has elapsed, judge by correlation between ambient temperature sensor value, intake air temperature sensor value and engine coolant temperature sensor value. Judge as NG when the differences are both above the specified value by comparing between ambient air temperature and intake air temperature, ambient air temperature and engine coolant temperature.

2. COMPONENT DESCRIPTION

Ambient temperature sensor is connected to combination meter. ECM receives the data of ambient temperature sensor via CAN communication with combination meter.

EN-10816

(1) Ambient sensor

(2) Resistance value (kΩ)

(3) Ambient air temperature (°C (°F))

3. EXECUTION CONDITION

Secondary parameters	Execution condition
Battery voltage	≥ 10.9 V
Soaking time	≥ 21600 s
Block heater judgment	Completed
Block heater operation	Not in operation

Diagnostic Procedure with Diagnostic Trouble Code (DTC)

ENGINE (DIAGNOSTICS)

4. GENERAL DRIVING CYCLE

Perform the diagnosis only once after the engine starts after a certain period of soaking time.

5. DIAGNOSTIC METHOD

If the duration of time while the following conditions are met is longer than the time indicated, judge as NG.

Judgment value

Malfunction Criteria	Threshold Value
Ambient air temperature 30 sec. after engine start – Intake air temperature 30 sec. after engine start	> Value from Map
Ambient air temperature at engine start – Engine coolant temperature at engine start	> 25 °C (45°F)

Map

Ambient temperature °C (°F)	-30 (-22)	45 (113)	60 (140)	80 (176)
Ambient air temperature 30 sec. after engine start – Intake air temperature 30 sec. after engine start °C (°F)	20 (36°F)	20 (36°F)	32 (57.6°F)	32 (57.6°F)

Time needed for diagnosis: Less than 1 second

Malfunction indicator light illumination: Illuminates when malfunction occurs in 2 continuous driving cycles.

Diagnostic Procedure with Diagnostic Trouble Code (DTC)

ENGINE (DIAGNOSTICS)

X: DTC P0072 AMBIENT AIR TEMPERATURE SENSOR CIRCUIT "A" LOW

DTC detecting condition:

Immediately at fault recognition

CAUTION:

After servicing or replacing faulty parts, perform Clear Memory Mode <Ref. to EN(H4DO)(diag)-66, OPERATION, Clear Memory Mode.>, and Inspection Mode <Ref. to EN(H4DO)(diag)-50, PROCEDURE, Inspection Mode.>.

	Step	Check	Yes	No
1	CHECK DTC. Check for DTC. <Ref. to EN(H4DO)(diag)-49, Read Diagnostic Trouble Code (DTC).>	Is P0072 or P0073 displayed in current malfunction?	Go to step 2.	Even if DTC is detected, the circuit has returned to a normal condition at this time. Reproduce the failure, and then perform the diagnosis again. NOTE: In this case, temporary poor contact of connector, temporary open or short circuit of harness may be the cause.
2	CHECK COMBINATION METER. Check the combination meter system. <Ref. to IDI(diag)-2, Basic Diagnostic Procedure.>	Is the check result OK?	Replace the ambient sensor. <Ref. to AC-67, Ambient Sensor.>	Repair the combination meter system. <Ref. to IDI(diag)-2, Basic Diagnostic Procedure.>

Diagnostic Procedure with Diagnostic Trouble Code (DTC)

ENGINE (DIAGNOSTICS)

1. OUTLINE OF DIAGNOSIS

Detect the open or short circuit of ambient temperature sensor.
Judge as NG if out of specification.

2. COMPONENT DESCRIPTION

Ambient temperature sensor is connected to combination meter. ECM receives the data of ambient temperature sensor via CAN communication with combination meter.

(1) Ambient sensor

(2) Resistance value (kΩ)

(3) Ambient air temperature (°C (°F))

3. EXECUTION CONDITION

Secondary Parameters	Execution condition
Battery voltage	≥ 10.9 V

4. GENERAL DRIVING CYCLE

Always perform the diagnosis continuously.

5. DIAGNOSTIC METHOD

If the duration of time while the following conditions are met is longer than the time indicated, judge as NG.

Judgment Value

Malfunction Criteria	Threshold Value
Output voltage	< 0.42 V

Time Needed for Diagnosis: 2500 ms

Malfunction Indicator Light Illumination: Illuminates as soon as a malfunction occurs.

Y: DTC P0073 AMBIENT AIR TEMPERATURE SENSOR CIRCUIT "A" HIGH

NOTE:

For the diagnostic procedure, refer to DTC P0072. <Ref. to EN(H4DO)(diag)-155, DTC P0072 AMBIENT AIR TEMPERATURE SENSOR CIRCUIT "A" LOW, Diagnostic Procedure with Diagnostic Trouble Code (DTC).>

1. OUTLINE OF DIAGNOSIS

Detect the open or short circuit of ambient temperature sensor.

Judge as NG if out of specification.

2. COMPONENT DESCRIPTION

Ambient temperature sensor is connected to combination meter. ECM receives the data of ambient temperature sensor via CAN communication with combination meter.

EN-10816

(1) Ambient sensor

(2) Resistance value (kΩ)

(3) Ambient air temperature (°C (°F))

3. EXECUTION CONDITION

Secondary Parameters	Execution condition
Battery voltage	≥ 10.9 V

4. GENERAL DRIVING CYCLE

Always perform the diagnosis continuously.

5. DIAGNOSTIC METHOD

If the duration of time while the following conditions are met is longer than the time indicated, judge as NG.

Judgment Value

Malfunction Criteria	Threshold Value
Output voltage	> 4.88 V

Time Needed for Diagnosis: 2500 ms

Malfunction Indicator Light Illumination: Illuminates as soon as a malfunction occurs.

Diagnostic Procedure with Diagnostic Trouble Code (DTC)

ENGINE (DIAGNOSTICS)

Z: DTC P0101 MASS OR VOLUME AIR FLOW SENSOR "A" CIRCUIT RANGE/ PERFORMANCE

DTC DETECTING CONDITION:

Detected when two consecutive driving cycles with fault occur.

TROUBLE SYMPTOM:

- Improper idling
- Engine stall
- Poor driving performance

CAUTION:

After servicing or replacing faulty parts, perform Clear Memory Mode <Ref. to EN(H4DO)(diag)-66, OPERATION, Clear Memory Mode.>, and Inspection Mode <Ref. to EN(H4DO)(diag)-50, PROCEDURE, Inspection Mode.>.

Step	Check	Yes	No
1 CHECK FOR ANY OTHER DTC ON DISPLAY.	Is any other DTC displayed?	Check the appropriate DTC using the "List of Diagnostic Trouble Code (DTC)". <Ref. to EN(H4DO)(diag)-96, List of Diagnostic Trouble Code (DTC).>	Replace the mass air flow and intake air temperature sensor. <Ref. to FU(H4DO)-71, Mass Air Flow and Intake Air Temperature Sensor.>

Diagnostic Procedure with Diagnostic Trouble Code (DTC)

ENGINE (DIAGNOSTICS)

1. OUTLINE OF DIAGNOSIS

Detect the malfunction of air flow sensor output properties.

Judge as a low side NG when the air flow voltage indicates a small value regardless of running in a state where the air flow voltage increases. Judge as a high side NG when the air flow voltage indicates a large value regardless of running in a state where the air flow voltage decreases. Judge air flow sensor property NG when the Low side or High side becomes NG.

2. COMPONENT DESCRIPTION

EN-01766

(A) Air

(1) Air flow sensor

(3) Voltage (V)

(4) Intake air amount (kg (lb)/s)

(2) Intake air temperature sensor

3. EXECUTION CONDITION

Secondary parameters	Execution condition
Low Engine speed Throttle position Intake manifold pressure (with atmospheric pressure compensation)	≥ 1800 rpm $\geq 12^\circ$ (CVT model) $\geq 12^\circ$ (MT model) ≥ 74.7 kPa (560 mmHg, 22 inHg) (CVT model) ≥ 74.7 kPa (560 mmHg, 22 inHg) (MT model)
High Engine speed Throttle position Intake manifold pressure (with atmospheric pressure compensation)	500 rpm — 800 rpm (CVT model) 500 rpm — 950 rpm (MT model) $< 5^\circ$ < 56 kPa (420 mmHg, 16.5 inHg) (CVT model) < 46.7 kPa (350 mmHg, 13.8 inHg) (MT model)

4. GENERAL DRIVING CYCLE

Perform the diagnosis continuously after idling.

Diagnostic Procedure with Diagnostic Trouble Code (DTC)

ENGINE (DIAGNOSTICS)

5. DIAGNOSTIC METHOD

Judge as NG when Low side or High side becomes NG.

If the duration of time while the following conditions are met is longer than the time indicated, judge as NG.

Judgment value

Malfunction Criteria	Threshold Value
Low	
Output voltage	< 1.698 V (CVT model)
(Air amount) 8.4 g/s (0.3 oz/s)	< 1.66 V (MT model)
High	
Output voltage	≥ 1.698 V (CVT model)
(Air amount) 8.4 g/s (0.3 oz/s)	≥ 1.66 V (MT model)

Time Needed for Diagnosis:

Low: 5000 ms

High: 5000 ms

Malfunction indicator light illumination: Illuminates when malfunction occurs in 2 continuous driving cycles.

AA:DTC P0102 MASS OR VOLUME AIR FLOW SENSOR "A" CIRCUIT LOW

DTC detecting condition:

Immediately at fault recognition

Trouble symptom:

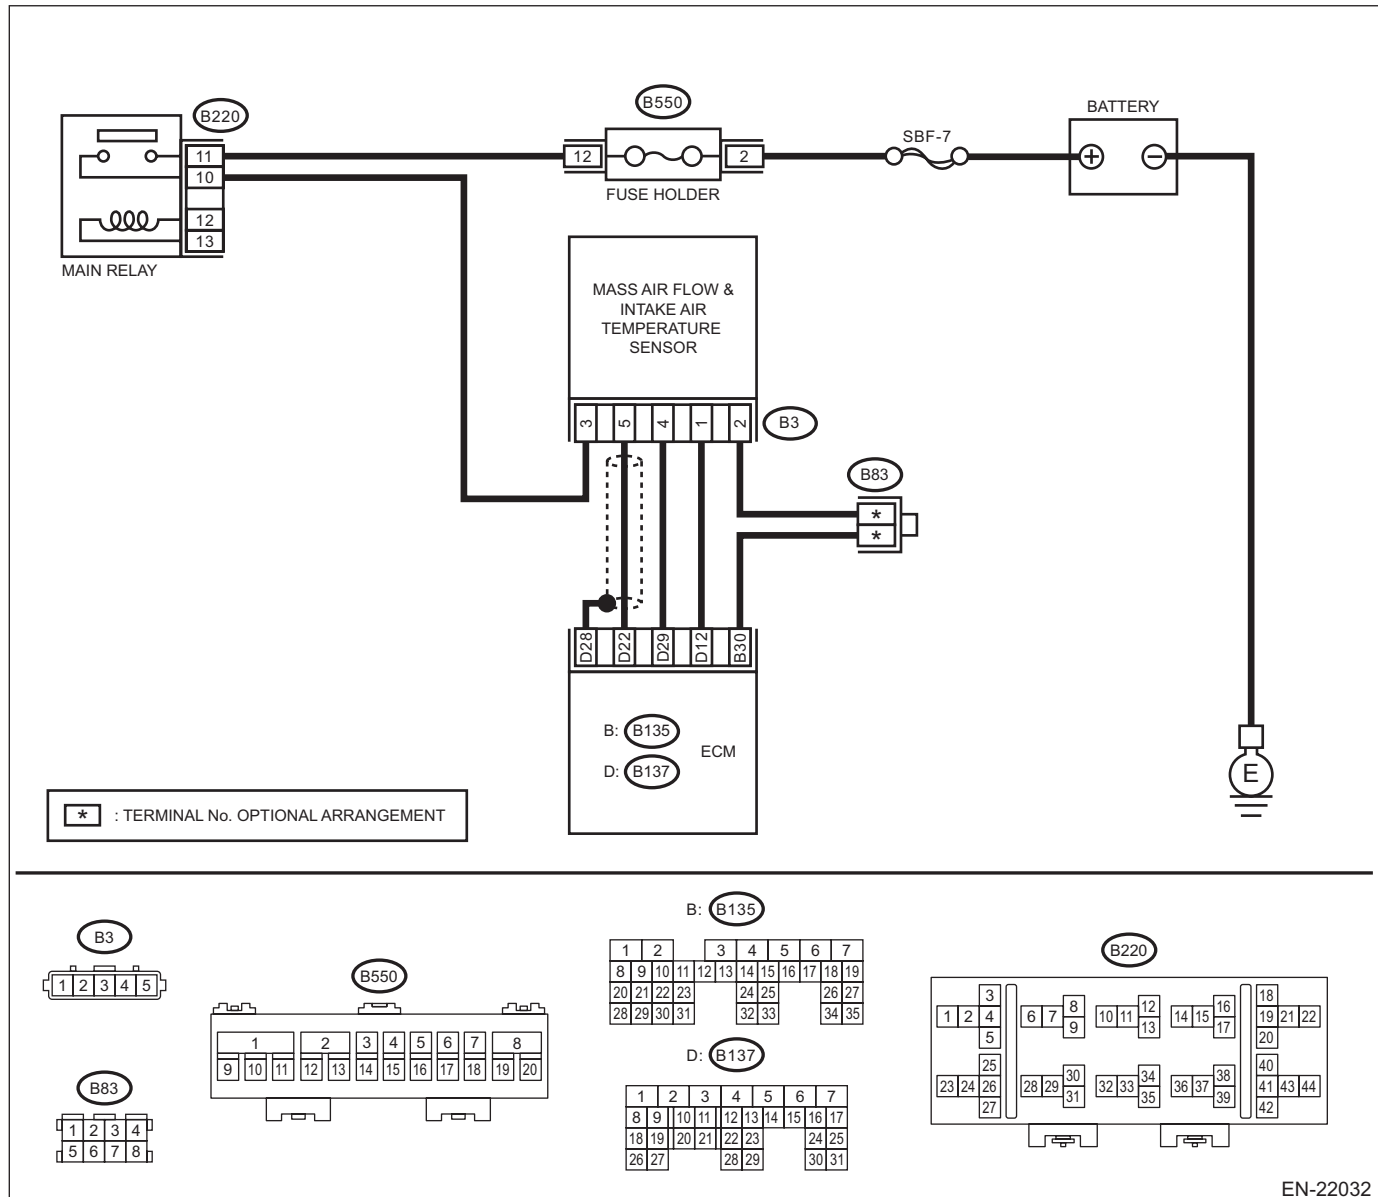

- Improper idling
- Engine stall
- Poor driving performance

CAUTION:

After servicing or replacing faulty parts, perform Clear Memory Mode <Ref. to EN(H4DO)(diag)-66, OPERATION, Clear Memory Mode.>, and Inspection Mode <Ref. to EN(H4DO)(diag)-50, PROCEDURE, Inspection Mode.>.

Diagnostic Procedure with Diagnostic Trouble Code (DTC)

ENGINE (DIAGNOSTICS)

1. OUTLINE OF DIAGNOSIS

Detect the open or short circuit of intake manifold pressure sensor.
Judge as NG if out of specification.

2. COMPONENT DESCRIPTION

EN-08984

(A) Output voltage

(B) Absolute pressure

(1) Connector

(2) Terminals

(3) O-ring

3. EXECUTION CONDITION

Secondary Parameters	Execution condition
None	

4. GENERAL DRIVING CYCLE

Always perform the diagnosis continuously.

5. DIAGNOSTIC METHOD

If the duration of time while the following conditions are met is longer than the time indicated, judge as NG.

Judgment Value

Malfunction Criteria	Threshold Value
Output voltage	≥ 3.906 V

Time Needed for Diagnosis: 2000 ms

Malfunction Indicator Light Illumination: Illuminates as soon as a malfunction occurs.

Diagnostic Procedure with Diagnostic Trouble Code (DTC)

ENGINE (DIAGNOSTICS)

AE:DTC P0111 INTAKE AIR TEMPERATURE SENSOR 1 CIRCUIT RANGE/PERFORMANCE BANK 1

DTC detecting condition:

Detected when two consecutive driving cycles with fault occur.

Trouble symptom:

- Improper idling
- Poor driving performance

CAUTION:

After servicing or replacing faulty parts, perform Clear Memory Mode <Ref. to EN(H4DO)(diag)-66, OPERATION, Clear Memory Mode.>, and Inspection Mode <Ref. to EN(H4DO)(diag)-50, PROCEDURE, Inspection Mode.>.

Step	Check	Yes	No
1 CHECK ENGINE COOLANT TEMPERATURE. 1) Start the engine and warm up completely. 2) Read the value of «Coolant Temp.» using the Subaru Select Monitor or a general scan tool. NOTE: <ul style="list-style-type: none">• Subaru Select Monitor For detailed operation procedures, refer to "Current Data Display For Engine". <Ref. to EN(H4DO)(diag)-36, Subaru Select Monitor.> <ul style="list-style-type: none">• General scan tool For detailed operation procedures, refer to the general scan tool operation manual.	Is the value of «Coolant Temp.» 75°C (167°F) or more?	Replace the mass air flow and intake air temperature sensor. <Ref. to FU(H4DO)-71, Mass Air Flow and Intake Air Temperature Sensor.>	Check for DTC P0125. <Ref. to EN(H4DO)(diag)-196, DTC P0125 INSUFFICIENT COOLANT TEMPERATURE FOR CLOSED LOOP FUEL CONTROL, Diagnostic Procedure with Diagnostic Trouble Code (DTC).>

1. OUTLINE OF DIAGNOSIS

Detect the malfunction of the intake air temperature sensor output properties. Using the following two diagnoses, judge as NG when either is NG.

- **Diagnosis 1 (correlation diagnosis):** After the engine starts after the specified period of soaking time has elapsed, diagnose by correlation between intake air temperature sensor value, engine coolant temperature sensor value and ambient temperature sensor value. Judge as NG when the differences are both above the specified value by comparing between intake air temperature and engine coolant temperature, intake air temperature and ambient air temperature.
- **Diagnosis 2 (stuck diagnosis):** Judge as NG when intake air temperature does not change under the driving condition where it should change, considering engine condition.

Diagnostic Procedure with Diagnostic Trouble Code (DTC)

ENGINE (DIAGNOSTICS)

2. COMPONENT DESCRIPTION

EN-01767

(A) Air

(1) Air flow sensor

(3) Resistance value (Ω)

(4) Intake air temperature $^{\circ}\text{C}$ ($^{\circ}\text{F}$)

(2) Intake air temperature sensor

3. EXECUTION CONDITION

Diagnosis 1

Secondary parameters	Execution condition
Battery voltage	$\geq 10.9 \text{ V}$
Soaking time	$\geq 21600 \text{ s}$
Block heater judgment	Completed
Block heater operation	Not in operation

Diagnosis 2

Secondary parameters	Execution condition
Battery voltage	$\geq 10.9 \text{ V}$
Engine coolant temperature	$\geq 60 \text{ }^{\circ}\text{C}$ (140 $^{\circ}\text{F}$)
Integrated value of intake air amount	$\geq 5500 \text{ g/s}$ (193.99 oz/s)
Number of experiences under following driving conditions	$\geq 3 \text{ time(s)}$
• Duration of driving condition 1	$\geq 15 \text{ s}$
• Vehicle speed	$\geq 40 \text{ km/h}$ (24.9 MPH)
and	
• Amount of intake air	$\geq 10 \text{ g/s}$ (0.35 oz/s)
• Duration of driving condition 2	$\geq \text{Value of Map 1}$
• Vehicle speed	$\geq 4 \text{ km/h}$ (2.5 MPH)

Map 1

Engine coolant temperature $^{\circ}\text{C}$ ($^{\circ}\text{F}$)	-30 (-22)	-10 (14)	0 (32)	10 (50)	20 (68)
Continuous time (s) when vehicle speed is less than 4 km/h (2.5 MPH)	180	100	70	45	15

Diagnostic Procedure with Diagnostic Trouble Code (DTC)

ENGINE (DIAGNOSTICS)

4. GENERAL DRIVING CYCLE

- **Diagnosis 1:** Perform the diagnosis only once after the engine starts after a certain period of soaking time.
- **Diagnosis 2:** Perform the diagnosis when the vehicle speed condition is met after warming up from a cold condition.

5. DIAGNOSTIC METHOD

Judge as NG when Diagnosis 1 or Diagnosis 2 becomes NG.

Diagnosis 1

If the duration of time while the following conditions are met is longer than the time indicated, judge as NG.

Judgment value

Malfunction Criteria	Threshold Value
Intake air temperature 30 sec. after engine start – Engine coolant temperature at engine start	> Value of Map 2
Intake air temperature 30 sec. after engine start – Ambient air temperature 30 sec. after engine start	> Value of Map 3

Map 2

Ambient temperature °C (°F)	-30 (-22)	30 (86)	45 (113)	60 (140)
Intake air temperature 30 sec. after engine start – Engine coolant temperature at engine start °C (°F)	12 (21.6)	12 (21.6)	22 (39.6)	22 (39.6)

Map 3

Ambient temperature °C (°F)	-30 (-22)	30 (86)	45 (113)	60 (140)
Intake air temperature 30 sec. after engine start – Ambient air temperature 30 sec. after engine start °C (°F)	20 (36)	20 (36)	32 (57.6)	32 (57.6)

Time needed for diagnosis: Less than 1 second

Diagnosis 2

Judge as NG when the following conditions are established.

Judgment value

Malfunction Criteria	Threshold Value
Output voltage difference between Max. and Min.	< 0.02 V (Equivalent to ambient temperature of approximately 0.5°C (0.9°F) near 25°C (77°F)) (Equivalent to ambient temperature of approximately 0.9°C (1.6°F) near -7°C (19.4°F))

Time needed for diagnosis: Less than 1 second

Malfunction indicator light illumination: Illuminates when malfunction occurs in 2 continuous driving cycles.

Diagnostic Procedure with Diagnostic Trouble Code (DTC)

ENGINE (DIAGNOSTICS)

AF:DTC P0112 INTAKE AIR TEMPERATURE SENSOR 1 CIRCUIT LOW BANK 1

DTC detecting condition:

Immediately at fault recognition

Trouble symptom:

- Improper idling

<p>2 CHECK HARNESS BETWEEN ECM AND ELECTRONIC THROTTLE CONTROL CONNECTOR.</p> <p>1) Connect the connector to ECM. 2) Measure the resistance between electronic throttle control connector and engine ground.</p> <p>Connector & terminal (E57) No. 3 — Engine ground:</p>	Is the resistance less than 5 Ω ?	Go to step 3.	Repair the harness and connector. NOTE: In this case, repair the following item: • Open circuit of harness between ECM connector and engine ground • Poor contact of ECM connector • Poor contact of coupling connector
<p>3 CHECK HARNESS BETWEEN ECM AND ELECTRONIC THROTTLE CONTROL CONNECTOR.</p> <p>1) Turn the ignition switch to ON. 2) Measure the voltage between electronic throttle control connector and engine ground.</p> <p>Connector & terminal (E57) No. 6 (+) — Engine ground (-):</p>	Is the voltage 5 V or more?	Repair the short circuit to power in the harness between ECM connector and electronic throttle control connector.	Go to step 4.
<p>4 CHECK HARNESS BETWEEN ECM AND ELECTRONIC THROTTLE CONTROL CONNECTOR.</p> <p>1) Turn the ignition switch to OFF. 2) Disconnect the connector from ECM. 3) Measure the resistance between ECM connectors.</p> <p>Connector & terminal (B134) No. 19 — (B134) No. 18:</p>	Is the resistance 1 M Ω or more?	Repair the poor contact of electronic throttle control connector. Replace the electronic throttle control if defective. <Ref. to FU(H4DO)-15, Throttle Body.>	Repair the short circuit to power in the harness between ECM connector and electronic throttle control connector.

1. OUTLINE OF DIAGNOSIS

Detect the open or short circuit of throttle position sensor 1.
Judge as NG if out of specification.

2. COMPONENT DESCRIPTION

- (1) Throttle position sensor 1 signal (3) Throttle position sensor (4) Engine control module (ECM)
 (2) Throttle position sensor 2 signal

3. EXECUTION CONDITION

Secondary Parameters	Execution condition
Battery voltage	$\geq 6 \text{ V}$

4. GENERAL DRIVING CYCLE

Always perform the diagnosis continuously.

5. DIAGNOSTIC METHOD

If the duration of time while the following conditions are met is longer than the time indicated, judge as NG.

Judgment Value

Malfunction Criteria	Threshold Value
Sensor 1 input voltage	$\geq 4.727 \text{ V}$

Time Needed for Diagnosis: 24 ms

Malfunction Indicator Light Illumination: Illuminates as soon as a malfunction occurs.

Diagnostic Procedure with Diagnostic Trouble Code (DTC)

ENGINE (DIAGNOSTICS)

AM:DTC P0125 INSUFFICIENT COOLANT TEMPERATURE FOR CLOSED LOOP FUEL CONTROL

DTC detecting condition:

Detected when two consecutive driving cycles with fault occur.

Trouble symptom:

Engine does not return to idle.

CAUTION:

After servicing or replacing faulty parts, perform Clear Memory Mode <Ref. to EN(H4DO)(diag)-66, OPERATION, Clear Memory Mode.>, and Inspection Mode <Ref. to EN(H4DO)(diag)-50, PROCEDURE, Inspection Mode.>.

	Step	Check	Yes	No
1	CHECK ENGINE COOLANT. Check the following items: <ul style="list-style-type: none">• Amount of engine coolant• Engine coolant freeze• Contamination of engine coolant	Is the check result OK?	Go to step 2.	Fill or replace the engine coolant. <Ref. to CO(H4DO)-13, REPLACEMENT, Engine Coolant.>
2	CHECK THERMOSTAT.	Does the thermostat remain opened?	Replace the thermostat. <Ref. to CO(H4DO)-41, Thermostat.>	Replace the engine coolant temperature sensor. <Ref. to FU(H4DO)-49, Engine Coolant Temperature Sensor.>

1. OUTLINE OF DIAGNOSIS

Detect the malfunction of engine coolant temperature output property.

Judge as NG when engine coolant temperature does not rise to the specified value after predetermined time has elapsed since engine start.

2. COMPONENT DESCRIPTION

EN-02917

- (A) Resistance value (k Ω) (B) Temperature $^{\circ}\text{C}$ ($^{\circ}\text{F}$)
- (1) Connector (2) Thermistor element

3. EXECUTION CONDITION

Secondary parameters	Execution condition
Battery voltage	$\geq 10.9 \text{ V}$
Engine speed	$\geq 500 \text{ rpm}$
Engine coolant temperature at engine start	$< -15 \text{ }^{\circ}\text{C}$ ($5 \text{ }^{\circ}\text{F}$)

4. GENERAL DRIVING CYCLE

Perform the diagnosis only once after starting the engine from cold condition.

5. DIAGNOSTIC METHOD

If the duration of time while the following conditions are met is longer than the time indicated, judge as NG.

Judgment value

Malfunction Criteria	Threshold Value
Engine coolant temperature	$< -15 \text{ }^{\circ}\text{C}$ ($5 \text{ }^{\circ}\text{F}$)
Elapsed time after starting the engine (At the time of (The smaller value of either Engine coolant temperature or Intake air temperature at engine start) $\geq -23.3^{\circ}\text{C}$ (-9.9°F))	$\geq 120 \text{ s}$
or (At the time of (The smaller value of either Engine coolant temperature or Intake air temperature at engine start) $< -23.3^{\circ}\text{C}$ (-9.9°F))	$\geq 300 \text{ s}$

Time needed for diagnosis: Less than 1 second

Malfunction indicator light illumination: Illuminates when malfunction occurs in 2 continuous driving cycles.

Diagnostic Procedure with Diagnostic Trouble Code (DTC)

ENGINE (DIAGNOSTICS)

AN:DTC P0128 COOLANT THERMOSTAT (ENGINE COOLANT TEMPERATURE BELOW THERMOSTAT REGULATING TEMPERATURE)

DTC detecting condition:

Detected when two consecutive driving cycles with fault occur.

Trouble symptom:

- Thermostat remains open.
- Coolant temperature rises slowly.

CAUTION:

After servicing or replacing faulty parts, perform Clear Memory Mode <Ref. to EN(H4DO)(diag)-66, OPERATION, Clear Memory Mode.>, and Inspection Mode <Ref. to EN(H4DO)(diag)-50, PROCEDURE, Inspection Mode.>.

Step	Check	Yes	No
1 CHECK FOR ANY OTHER DTC ON DISPLAY.	Is any other DTC displayed?	Check the appropriate DTC using the "List of Diagnostic Trouble Code (DTC)". <Ref. to EN(H4DO)(diag)-96, List of Diagnostic Trouble Code (DTC).>	Go to step 2.
2 CHECK ENGINE COOLANT.	Is the check result OK?	Go to step 3.	Refill the engine coolant. <Ref. to CO(H4DO)-13, Engine Coolant.>
3 CHECK RADIATOR FAN. 1) Start the engine. 2) While keeping idling for approx. 3 minutes (with accelerator OFF), check the operation of the radiator fan.	Does the radiator fan continuously rotate for 3 minutes or more during idling?	Repair radiator fan circuit. <Ref. to CO(H4DO)-61, Radiator Main Fan and Fan Motor.> and <Ref. to CO(H4DO)-64, Radiator Sub Fan and Fan Motor.>	Go to step 4.
4 CHECK ENGINE COOLANT TEMPERATURE SENSOR. Check the engine coolant temperature sensor. <Ref. to FU(H4DO)-50, INSPECTION, Engine Coolant Temperature Sensor.>	Is the check result OK?	Replace the thermostat. <Ref. to CO(H4DO)-41, Thermostat.>	Replace the engine coolant temperature sensor. <Ref. to FU(H4DO)-49, Engine Coolant Temperature Sensor.>

1. OUTLINE OF DIAGNOSIS

Detect malfunctions of the thermostat function.

Judge as NG when any one of the following conditions is established.

- When the actual engine coolant temperature does not reach the maximum temperature necessary to perform other OBDII diagnosis and Σ (Estimated engine coolant temperature – actual engine coolant temperature) exceeded the predetermined value. (Judgment 1)
- When the actual engine coolant temperature does not reach the range within -11°C (-19.8°F) from the regulated temperature and Σ (Estimated engine coolant temperature – actual engine coolant temperature) exceeded the predetermined value. (Judgment 2)
- When the difference between the estimated coolant temperature and the actual engine coolant temperature exceeds the predetermined value, and Σ (Estimated engine coolant temperature – actual engine coolant temperature) exceeded the predetermined value. (Judgment 3)

2. COMPONENT DESCRIPTION

EN-08985

- | | | |
|------------------|-----------------|-------------------|
| (1) Jiggle valve | (5) Dust seal | (9) Bypass spring |
| (2) Piston | (6) Main spring | (10) Bypass valve |
| (3) Flange | (7) Wax element | (11) Stop ring |
| (4) Stop ring | (8) Frame | |

3. EXECUTION CONDITION

Secondary parameters	Execution condition
<Judgment 1>	
Battery voltage	≥ 10.9 V
Ambient air temperature	≥ -7 °C (19.4 °F)
Vehicle speed	≥ 30 km/h (18.6 MPH)
Estimated coolant temperature	> Value of Map 1
Engine coolant temperature at engine starting	< 62 °C (143.6 °F)
<Judgment 2>	
Battery voltage	≥ 10.9 V
Ambient air temperature	≥ -7 °C (19.4 °F)
Vehicle speed	≥ 30 km/h (18.6 MPH)
Estimated coolant temperature	> Value of Map 2
Engine coolant temperature at engine starting	< 62 °C (143.6 °F)
<Judgment 3>	
Battery voltage	≥ 10.9 V
Ambient air temperature	≥ -7 °C (19.4 °F)
Vehicle speed	≥ 30 km/h (18.6 MPH)
Estimated coolant temperature	≥ Value from Map 3
Engine coolant temperature at engine starting	< 62 °C (143.6 °F)

Diagnostic Procedure with Diagnostic Trouble Code (DTC)

ENGINE (DIAGNOSTICS)

Map 1

Engine coolant temperature at engine starting °C (°F)	-7 (19.4)	8 (46.4)	10 (50)	25 (77)
Estimated coolant temperature °C (°F)	60 (140)	60 (140)	60 (140)	60 (140)

Map 2

Engine coolant temperature at engine starting °C (°F)	-7 (19.4)	8 (46.4)	10 (50)	25 (77)
Estimated coolant temperature °C (°F)	70.5 (158.9)	79.5 (175.1)	79.5 (175.1)	79.5 (175.1)

Map 3

Engine coolant temperature at engine starting °C (°F)	-7 (19.4)	10 (50)	25 (77)	28.5 (83.3)
Estimated coolant temperature °C (°F)	44 (111.2)	61 (141.8)	76 (168.8)	79.5 (175.1)

4. GENERAL DRIVING CYCLE

Perform the diagnosis only once after starting the engine.

5. DIAGNOSTIC METHOD

If the duration of time while the following conditions are met is longer than the time indicated, judge as NG.

Judgment value

Malfunction Criteria	Threshold Value
When any one of the followings is established:	
<Judgment 1>	
Actual engine coolant temperature and Σ (Estimated engine coolant temperature – actual engine coolant temperature)	< Value of Map 4 > Value of Map 5
<Judgment 2>	
Actual engine coolant temperature and Σ (Estimated engine coolant temperature – actual engine coolant temperature)	< Regulated temperature* – Value of Map 6 > Value of Map 7
<Judgment 3>	
Estimated engine coolant temperature – actual engine coolant temperature and Σ (Estimated engine coolant temperature – actual engine coolant temperature)	> Value of Map 8 > Value of Map 9

* Regulated temperature = 90.6 (195°F)

Diagnostic Procedure with Diagnostic Trouble Code (DTC)

Diagnostic Procedure with Diagnostic Trouble Code (DTC)

ENGINE (DIAGNOSTICS)

1. OUTLINE OF DIAGNOSIS

NOTE:

For the detection standard, refer to DTC P0137. <Ref. to EN(H4DO)(diag)-211, DTC P0137 O2 SENSOR CIRCUIT LOW VOLTAGE BANK 1 SENSOR 2, Diagnostic Procedure with Diagnostic Trouble Code (DTC).>

Diagnostic Procedure with Diagnostic Trouble Code (DTC)

ENGINE (DIAGNOSTICS)

AT:DTC P013A O2 SENSOR SLOW RESPONSE - RICH TO LEAN BANK 1 SENSOR 2

DTC detecting condition:

Detected when two consecutive driving cycles with fault occur.

CAUTION:

After servicing or replacing faulty parts, perform Clear Memory Mode <Ref. to EN(H4DO)(diag)-66, OPERATION, Clear Memory Mode.>, and Inspection Mode <Ref. to EN(H4DO)(diag)-50, PROCEDURE, Inspection Mode.>.

Wiring diagram:

Engine electrical system <Ref. to WI-102, Engine Electrical System.>

EN-11342

Diagnostic Procedure with Diagnostic Trouble Code (DTC)

ENGINE (DIAGNOSTICS)

Step	Check	Yes	No
<p>1</p> <p>CHECK HARNESS BETWEEN ECM AND REAR OXYGEN SENSOR CONNECTOR.</p> <p>1) Turn the ignition switch to OFF. 2) Disconnect the connector from ECM. 3) Disconnect the connector from rear oxygen sensor. 4) Measure the resistance of harness between ECM connector and rear oxygen sensor connector.</p> <p>Connector & terminal (B136) No. 21 — (E25) No. 3:</p>	<p>Is the resistance less than 1 Ω?</p>	<p>Go to step 2.</p>	<p>Repair the harness and connector.</p> <p>NOTE: In this case, repair the following item:</p> <ul style="list-style-type: none"> • Open circuit in harness between ECM connector and rear oxygen sensor connector • Poor contact of coupling connector
<p>2</p> <p>CHECK HARNESS BETWEEN ECM AND REAR OXYGEN SENSOR CONNECTOR.</p> <p>Measure the resistance between rear oxygen sensor connector and chassis ground.</p> <p>Connector & terminal (E25) No. 3 — Chassis ground:</p>	<p>Is the resistance 1 MΩ or more?</p>	<p>Go to step 3.</p>	<p>Repair the short circuit to ground in harness between ECM connector and rear oxygen sensor connector.</p>
<p>3</p> <p>CHECK REAR OXYGEN SENSOR.</p> <p>Measure the resistance between rear oxygen sensor terminals.</p> <p>Terminals No. 3 — No. 4</p>	<p>Is the resistance less than 1 Ω?</p>	<p>Replace the rear oxygen sensor. <Ref. to FU(H4DO)-94, Rear Oxygen Sensor.></p>	<p>Even if DTC is detected, the circuit has returned to a normal condition at this time. Reproduce the failure, and then perform the diagnosis again.</p> <p>NOTE: In this case, temporary poor contact of connector, temporary open or short circuit of harness may be the cause.</p>

Diagnostic Procedure with Diagnostic Trouble Code (DTC)

ENGINE (DIAGNOSTICS)

1. OUTLINE OF DIAGNOSIS

Detect the slow response of rich → lean for rear oxygen sensor output.

When the deceleration fuel cut has occurred, detect the trouble by calculating the time when the rear oxygen sensor output passes through the predetermined range of voltages.

Judge as NG when the response time is larger than the threshold value.

2. COMPONENT DESCRIPTION

EN-01696

- | | | |
|-------------------------|--------------------------------|-------------------------|
| (A) Electromotive force | (B) Air fuel ratio | (C) Lean |
| (D) Rich | (E) Theoretical air fuel ratio | (F) Comparative voltage |
| (1) Atmosphere | (2) Exhaust gas | (3) Electromotive force |

3. EXECUTION CONDITION

Secondary parameters	Execution condition
Battery voltage	$\geq 10.9 \text{ V}$
Current calculation time of the rear oxygen sensor heater after starting	$\geq 180000 \text{ ms}$
Rear oxygen sensor voltage when fuel cut starts	$\geq 0.55 \text{ V}$
Elapsed time after fuel cut	$\geq 5000 \text{ ms}$
Rear oxygen sensor estimated element temperature when fuel cut starts	$\geq 500 \text{ }^\circ\text{C}$ (932 $^\circ\text{F}$)

4. GENERAL DRIVING CYCLE

Perform diagnosis once during deceleration fuel cut from a constant and high speed driving, when rear oxygen sensor is warmed up sufficiently.

5. DIAGNOSTIC METHOD

Detect the trouble by calculating the response time of the rear oxygen sensor during fuel cut.

EN-09344

- | | | |
|------------|-----------------|--------------------------|
| (A) 0.55 V | (B) 0.50 V | (C) 0.20 V |
| (D) 0.15 V | (E) 0 V | (F) Diagnostic parameter |
| (G) Normal | (H) Malfunction | |

Judge as NG when the following conditions are established.

Judgment value

Malfunction Criteria	Threshold Value
Time needed for rear oxygen sensor voltage to change from 0.5 V to 0.2 V	> 491 ms

Time needed for diagnosis: Less than 1 second

Malfunction indicator light illumination: Illuminates when malfunction occurs in 2 continuous driving cycles.

Diagnostic Procedure with Diagnostic Trouble Code (DTC)

ENGINE (DIAGNOSTICS)

AU:DTC P013B O2 SENSOR SLOW RESPONSE - LEAN TO RICH BANK 1 SENSOR 2

NOTE:

For the diagnostic procedure, refer to DTC P013A. <Ref. to EN(H4DO)(diag)-218, DTC P013A O2 SENSOR SLOW RESPONSE - RICH TO LEAN BANK 1 SENSOR 2, Diagnostic Procedure with Diagnostic Trouble Code (DTC).>

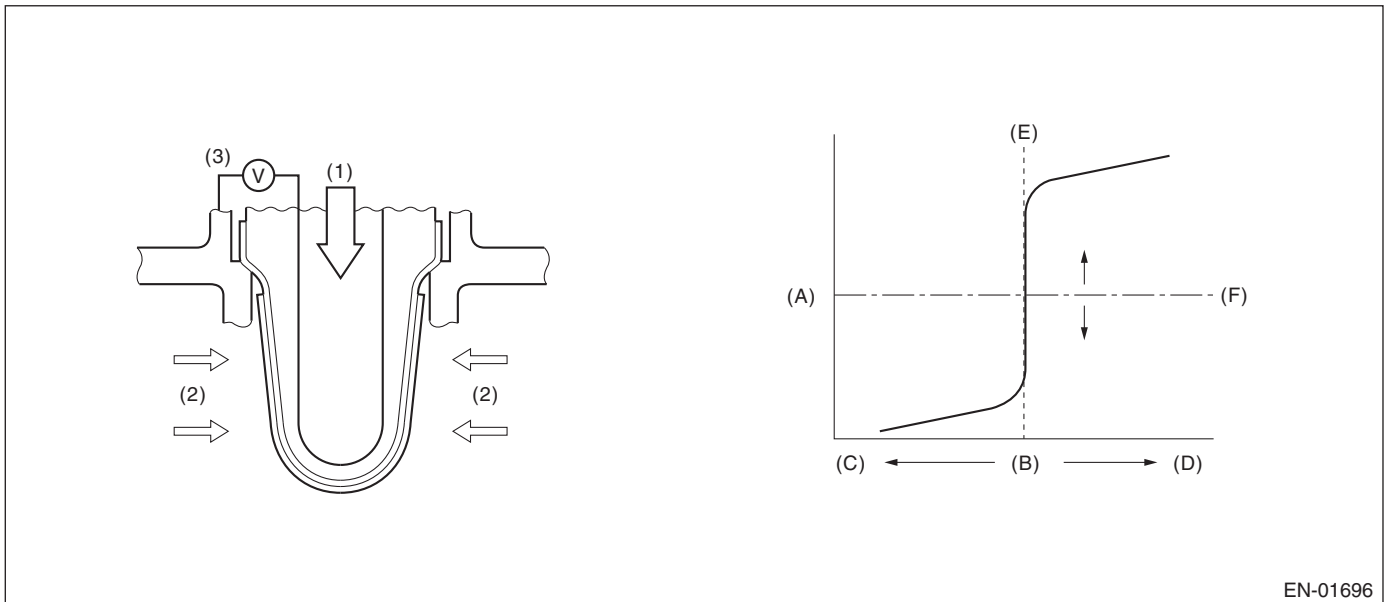

1. OUTLINE OF DIAGNOSIS

Detect the slow response of lean → rich for rear oxygen sensor output.

After the deceleration fuel cut has occurred, detect the trouble by calculating the time when the rear oxygen sensor output passes through the predetermined range of voltages.

Judge as NG when the response time is larger than the threshold value.

2. COMPONENT DESCRIPTION

EN-01696

- | | | |
|-------------------------|--------------------------------|-------------------------|
| (A) Electromotive force | (B) Air fuel ratio | (C) Lean |
| (D) Rich | (E) Theoretical air fuel ratio | (F) Comparative voltage |
| (1) Atmosphere | (2) Exhaust gas | (3) Electromotive force |

3. EXECUTION CONDITION

Secondary parameters	Execution condition
Battery voltage	≥ 10.9 V
Main feedback	In operation
(Elapsed time after fuel cut	≥ 5000 ms
Time of fuel cut recovery from above)	≥ 4000 ms

4. GENERAL DRIVING CYCLE

Perform diagnosis only once after recovering from a deceleration fuel cut continued for more than predetermined time.

5. DIAGNOSTIC METHOD

Detect the trouble by calculating the response time of the rear oxygen sensor after fuel cut.

- | | | |
|------------|-----------------|--------------------------|
| (A) 0.55 V | (B) 0.50 V | (C) 0.30 V |
| (D) 0.25 V | (E) 0 V | (F) Diagnostic parameter |
| (G) Normal | (H) Malfunction | |

Judge as NG when the following conditions are established.

Judgment value

Malfunction Criteria	Threshold Value
Time needed for rear oxygen sensor voltage to change from 0.3 V to 0.5 V	> 4000 ms

Time needed for diagnosis: Less than 1 second

Malfunction indicator light illumination: Illuminates when malfunction occurs in 2 continuous driving cycles.

Diagnostic Procedure with Diagnostic Trouble Code (DTC)

ENGINE (DIAGNOSTICS)

AV:DTC P013E O2 SENSOR DELAYED RESPONSE - RICH TO LEAN BANK 1 SENSOR 2

NOTE:

For the diagnostic procedure, refer to DTC P013A. <Ref. to EN(H4DO)(diag)-218, DTC P013A O2 SENSOR SLOW RESPONSE - RICH TO LEAN BANK 1 SENSOR 2, Diagnostic Procedure with Diagnostic Trouble Code (DTC).>

1. OUTLINE OF DIAGNOSIS

Detect the delayed response of rear oxygen sensor output for rich → lean.

After the deceleration fuel cut has started, detect the trouble by calculating the time when the rear oxygen sensor output decreases to the predetermined voltages.

Judge as NG when the response time is larger than the threshold value.

2. COMPONENT DESCRIPTION

EN-01696

- | | | |
|-------------------------|--------------------------------|-------------------------|
| (A) Electromotive force | (B) Air fuel ratio | (C) Lean |
| (D) Rich | (E) Theoretical air fuel ratio | (F) Comparative voltage |
| (1) Atmosphere | (2) Exhaust gas | (3) Electromotive force |

3. EXECUTION CONDITION

Secondary parameters	Execution condition
Battery voltage	≥ 10.9 V
Rear oxygen sensor voltage when fuel cut starts	≥ 0.55 V
(Elapsed time after fuel cut	≥ 5000 ms
Fuel shut-off function from above)	Not in operation
Rear oxygen sensor estimated element temperature when fuel cut starts	≥ 500 °C (932 °F)

4. GENERAL DRIVING CYCLE

Perform diagnosis once during deceleration fuel cut from a constant and high speed driving, when rear oxygen sensor is warmed up sufficiently.

5. DIAGNOSTIC METHOD

Detect the trouble by calculating the time from the beginning of the fuel cut to the beginning of the rear oxygen sensor voltage starting to drop.

EN-09346

(A) 0.5 V

(B) 0 V

(C) Diagnostic parameter

(D) Normal

(E) Malfunction

Judge as NG when the following conditions are established.

Judgment value

Malfunction Criteria	Threshold Value
Time when rear oxygen sensor voltage changed to 0.5 V after the fuel cut started	> 4000 ms

Time needed for diagnosis: Less than 1 second

Malfunction indicator light illumination: Illuminates when malfunction occurs in 2 continuous driving cycles.

Diagnostic Procedure with Diagnostic Trouble Code (DTC)

ENGINE (DIAGNOSTICS)

AW:DTC P013F O2 SENSOR DELAYED RESPONSE - LEAN TO RICH BANK 1 SENSOR 2

NOTE:

For the diagnostic procedure, refer to DTC P013A. <Ref. to EN(H4DO)(diag)-218, DTC P013A O2 SENSOR SLOW RESPONSE - RICH TO LEAN BANK 1 SENSOR 2, Diagnostic Procedure with Diagnostic Trouble Code (DTC).>

1. OUTLINE OF DIAGNOSIS

Detect the delayed response of rear oxygen sensor output for lean → rich.

After the deceleration fuel cut has completed, detect the trouble by calculating the time when the rear oxygen sensor output increases to the predetermined voltages.

Judge as NG when the response time is larger than the threshold value.

2. COMPONENT DESCRIPTION

EN-01696

- | | | |
|-------------------------|--------------------------------|-------------------------|
| (A) Electromotive force | (B) Air fuel ratio | (C) Lean |
| (D) Rich | (E) Theoretical air fuel ratio | (F) Comparative voltage |
| (1) Atmosphere | (2) Exhaust gas | (3) Electromotive force |

3. EXECUTION CONDITION

Secondary parameters	Execution condition
Battery voltage	≥ 10.9 V
Main feedback	In operation
Rear oxygen sensor voltage when fuel cut ends	≤ 0.15 V
(Duration of fuel cut	≥ 5 s
Fuel shut-off function from above)	Not in operation
Rear oxygen sensor estimated element temperature when fuel cut ends	≥ 500 °C (932 °F)
Amount of intake air	≥ 10 g/s

4. GENERAL DRIVING CYCLE

Perform diagnosis only once when recovering from the deceleration fuel cut continued for more than predetermined time with the rear oxygen sensor warmed up sufficiently.

5. DIAGNOSTIC METHOD

Detect the trouble by calculating the time from the completion of the fuel cut to the beginning of the rear oxygen sensor voltage starting to rise.

EN-09347

- | | | |
|------------|-----------------|--------------------------|
| (A) 0.3 V | (B) 0 V | (C) Diagnostic parameter |
| (D) Normal | (E) Malfunction | |

Judge as NG when the following conditions are established.

Judgment value

Malfunction Criteria	Threshold Value
Rear oxygen sensor output voltage value	< 0.2 V

Time needed for diagnosis: Value of Map

Map

(CVT model)

Amount of intake air g/s (oz/s)	10 (0.35)	12 (0.42)	18 (0.63)	32 (1.13)
Duration of time (s)	7.5	6.0	4.5	3.5

(MT model)

Amount of intake air g/s (oz/s)	10 (0.35)	12 (0.42)	14 (0.49)	22 (0.78)
Duration of time (s)	8.5	6.5	5	3.5

Elapsed time: The time since the λ became less than 1 after the end of fuel cut

Malfunction indicator light illumination: Illuminates when malfunction occurs in 2 continuous driving cycles.

Diagnostic Procedure with Diagnostic Trouble Code (DTC)

ENGINE (DIAGNOSTICS)

AX:DTC P0141 O2 SENSOR HEATER CIRCUIT BANK 1 SENSOR 2

Refer to DTC P0037 for diagnostic procedure. <Ref. to EN(H4DO)(diag)-143, DTC P0037 A/F / O2 HEATER CONTROL CIRCUIT LOW BANK 1 SENSOR 2, Diagnostic Procedure with Diagnostic Trouble Code (DTC).>

1. OUTLINE OF DIAGNOSIS

Detect malfunction of the rear oxygen sensor heater.

Judge as NG if it is determined that the rear oxygen sensor impedance is large by observing the engine conditions.

2. COMPONENT DESCRIPTION

EN-08983

- (1) Element cover (outer) (3) Sensor element (5) Sensor housing
(2) Element cover (inner) (4) Ceramic heater

3. EXECUTION CONDITION

Secondary Parameters	Execution condition
Battery voltage	$\geq 10.9 \text{ V}$
Elapsed time after starting the engine	$\geq 1000 \text{ ms}$
A/F sensor element impedance	$\leq 82 \Omega$
A/F sensor heater control duty	$\leq 75 \%$
Rear oxygen sensor heater control duty	$< 70 \%$

4. GENERAL DRIVING CYCLE

Perform the diagnosis continuously after 1000 ms or more have passed since the engine started.

5. DIAGNOSTIC METHOD

If the duration of time while the following conditions are met is longer than the time indicated, judge as NG.

Judgment value

Malfunction Criteria	Threshold Value
Measured secondary oxygen sensor heater control voltage	12 V battery system voltage $\times 0.88 \text{ V}$

Time needed for diagnosis: 4 ms \times 2500 times

Malfunction indicator light illumination: Illuminates when malfunction occurs in 2 continuous driving cycles.

Diagnostic Procedure with Diagnostic Trouble Code (DTC)

ENGINE (DIAGNOSTICS)

AY:DTC P014C A/F / O₂ SENSOR SLOW RESPONSE - RICH TO LEAN BANK 1 SENSOR 1

DTC DETECTING CONDITION:

Detected when two consecutive driving cycles with fault occur.

CAUTION:

After servicing or replacing faulty parts, perform Clear Memory Mode <Ref. to EN(H4DO)(diag)-66, OPERATION, Clear Memory Mode.>, and Inspection Mode <Ref. to EN(H4DO)(diag)-50, PROCEDURE, Inspection Mode.>.

Step	Check	Yes	No
1 CHECK EXHAUST SYSTEM. NOTE: Check the following items. <ul style="list-style-type: none"> Loose installation of front portion of exhaust pipe onto cylinder heads Loose connection between front exhaust pipe and front catalytic converter Damage of exhaust pipe resulting in a hole 	Is there any fault in exhaust system?	Repair the exhaust system.	Replace the front oxygen (A/F) sensor. <Ref. to FU(H4DO)-90, Front Oxygen (A/F) Sensor.>

1. OUTLINE OF DIAGNOSIS

Detect the slow response of front oxygen (A/F) sensor.

For diagnosis, detect the trouble by processing the λ waveform in normal driving without forcibly changing the target air fuel ratio.

2. COMPONENT DESCRIPTION

EN-09361

(A) Electromotive force

(B) Air fuel ratio

(C) Rich

(D) Lean

(1) Exhaust gas

(2) Zirconia element oxygen

Diagnostic Procedure with Diagnostic Trouble Code (DTC)

ENGINE (DIAGNOSTICS)

3. EXECUTION CONDITION

Diagnostic method 1 and 2

Secondary parameters	Execution condition
Battery voltage	≥ 10.9 V
Barometric pressure	≥ 75.1 kPa (563 mmHg, 22.2 inHg)
Duration of main feedback	≥ 3000 ms
Engine speed	≥ 1000 rpm
Amount of intake air	≥ 10 g/s (0.35 oz/s) (CVT model) ≥ 10 g/s (0.35 oz/s) (MT model)

4. GENERAL DRIVING CYCLE

Perform diagnosis only once in a city driving including normal acceleration and deceleration.

5. DIAGNOSTIC METHOD 1

Detect the malfunction by checking “Cumulative value of time when λ changes from lean \rightarrow rich” in comparison to “Time during which diagnosis is in progress”.

EN-09340

- (A) Time during which diagnosis is in progress (B) Cumulative value of time when λ changes from lean \rightarrow rich

Judge as NG when the following conditions are established.

Diagnostic Procedure with Diagnostic Trouble Code (DTC)

ENGINE (DIAGNOSTICS)

Diagnosis (CVT model)

Judgment Value

Malfunction Criteria	Threshold Value	DTC
(Cumulative value of time when λ changes from lean \rightarrow rich) / (Time during which diagnosis is in progress) and Average value of time necessary for λ to inverse the air fuel ratio to Lean \rightarrow Rich \rightarrow Lean	< 0.39 < 30 ms	P014C
(Cumulative value of time when λ changes from rich \rightarrow lean) / (Time during which diagnosis is in progress) and Average value of time necessary for λ to inverse the air fuel ratio to Rich \rightarrow Lean \rightarrow Rich	> 0.63 > 20 ms	P014D

Diagnosis (MT model)

Judgment Value

Malfunction Criteria	Threshold Value	DTC
(Cumulative value of time when λ changes from lean \rightarrow rich) / (Time during which diagnosis is in progress) and Average value of time necessary for λ to inverse the air fuel ratio to Lean \rightarrow Rich \rightarrow Lean	< 0.4 < 25 ms	P014C
(Cumulative value of time when λ changes from rich \rightarrow lean) / (Time during which diagnosis is in progress) and Average value of time necessary for λ to inverse the air fuel ratio to Rich \rightarrow Lean \rightarrow Rich	> 0.6 > 5 ms	P014D

Diagnosis (CVT model)

Time Needed for Diagnosis: 90 seconds

Diagnosis (MT model)

Time Needed for Diagnosis: 60 seconds

Malfunction Indicator Light Illumination: Illuminates when malfunction occurs in 2 continuous driving cycles.

Diagnostic Procedure with Diagnostic Trouble Code (DTC)

ENGINE (DIAGNOSTICS)

6. DIAGNOSTIC METHOD 2

Detect the malfunction by the cumulative value obtained from the amount of variation in λ change.

Judge as NG when the following conditions are established.

Judgment value

Malfunction Criteria	Threshold Value	DTC
Cumulative value obtained from the amount of variation in λ change	< Value from Map	P014C and P014D

Map (CVT model)

Cumulative value obtained from the amount of variation in λ	0.00	3.50
Cumulative value obtained from the amount of variation in λ change	0.00	3.50

Map (MT model)

Cumulative value obtained from the amount of variation in λ	0.00	3.50
Cumulative value obtained from the amount of variation in λ change	0.00	3.50

Diagnosis (CVT model)

Time needed for diagnosis: 90 seconds

Diagnosis (MT model)

Time needed for diagnosis: 60 seconds

Malfunction indicator light illumination: Illuminates when malfunction occurs in 2 continuous driving cycles.

(1) Exhaust gas

(2) Zirconia element oxygen

Diagnostic Procedure with Diagnostic Trouble Code (DTC)

ENGINE (DIAGNOSTICS)

3. EXECUTION CONDITION

Diagnostic method 1 and 2

Secondary parameters	Execution condition
Battery voltage	≥ 10.9 V
Barometric pressure	> 75.1 kPa (563 mmHg, 22.2 inHg)
Duration of main feedback	≥ 3000 ms
Engine speed	≥ 1000 rpm
Amount of intake air	≥ 10 g/s (0.35 oz/s) (CVT model) ≥ 10 g/s (0.35 oz/s) (MT model)

DIAGNOSIS METHOD 3 (MT MODEL ONLY)

Secondary parameters	Execution condition
Battery voltage	≥ 10.9 V
Barometric pressure	≥ 75.1 kPa (563 mmHg, 22.2 inHg)
Main feedback	In operation
Vehicle speed	> 40 km/h (24.9 MPH)
Engine speed	≥ 1000 rpm and < 4000 rpm
Amount of intake air	≥ 7.5 g/s (0.26 oz/s) and < 40 g/s (1.41 oz/s)
Catalyst depletion diagnosis	Not under diagnosis

4. GENERAL DRIVING CYCLE

Perform diagnosis only once in a city driving including normal acceleration and deceleration.

5. DIAGNOSTIC METHOD 1

Detect the malfunction depending on the average value of time necessary for λ to inverse the air fuel ratio from "Lean \rightarrow Rich \rightarrow Lean" to "Rich \rightarrow Lean \rightarrow Rich".

EN-09342

Judge as NG when the following conditions are established.

Diagnosis (CVT model)

Judgment Value

Malfunction Criteria	Threshold Value	DTC
Average value of time necessary for λ to inverse the air fuel ratio to Lean \rightarrow Rich \rightarrow Lean and Average value of time needed to change to Lean	> 100 ms > 130 ms	P015A
Average value of time necessary for λ to inverse the air fuel ratio to Rich \rightarrow Lean \rightarrow Rich and Average value of time needed to change to Rich	> 200 ms > 300 ms	P015B

Diagnosis (MT model)

Judgment Value

Malfunction Criteria	Threshold Value	DTC
Average value of time necessary for λ to inverse the air fuel ratio to Lean \rightarrow Rich \rightarrow Lean and Average value of time needed to change to Lean	> 120 ms > 150 ms	P015A
Average value of time necessary for λ to inverse the air fuel ratio to Rich \rightarrow Lean \rightarrow Rich and Average value of time needed to change to Rich	> 200 ms > 250 ms	P015B

Diagnosis (CVT model)

Time Needed for Diagnosis: 90 seconds

Diagnosis (MT model)

Time Needed for Diagnosis: 60 seconds

Malfunction Indicator Light Illumination: Illuminates when malfunction occurs in 2 continuous driving cycles.

Diagnostic Procedure with Diagnostic Trouble Code (DTC)

ENGINE (DIAGNOSTICS)

6. DIAGNOSTIC METHOD 2

Detect the malfunction by calculating the average amplitude of λ .

EN-09343

Judge as NG when the following conditions are established.

Judgment value (CVT model)

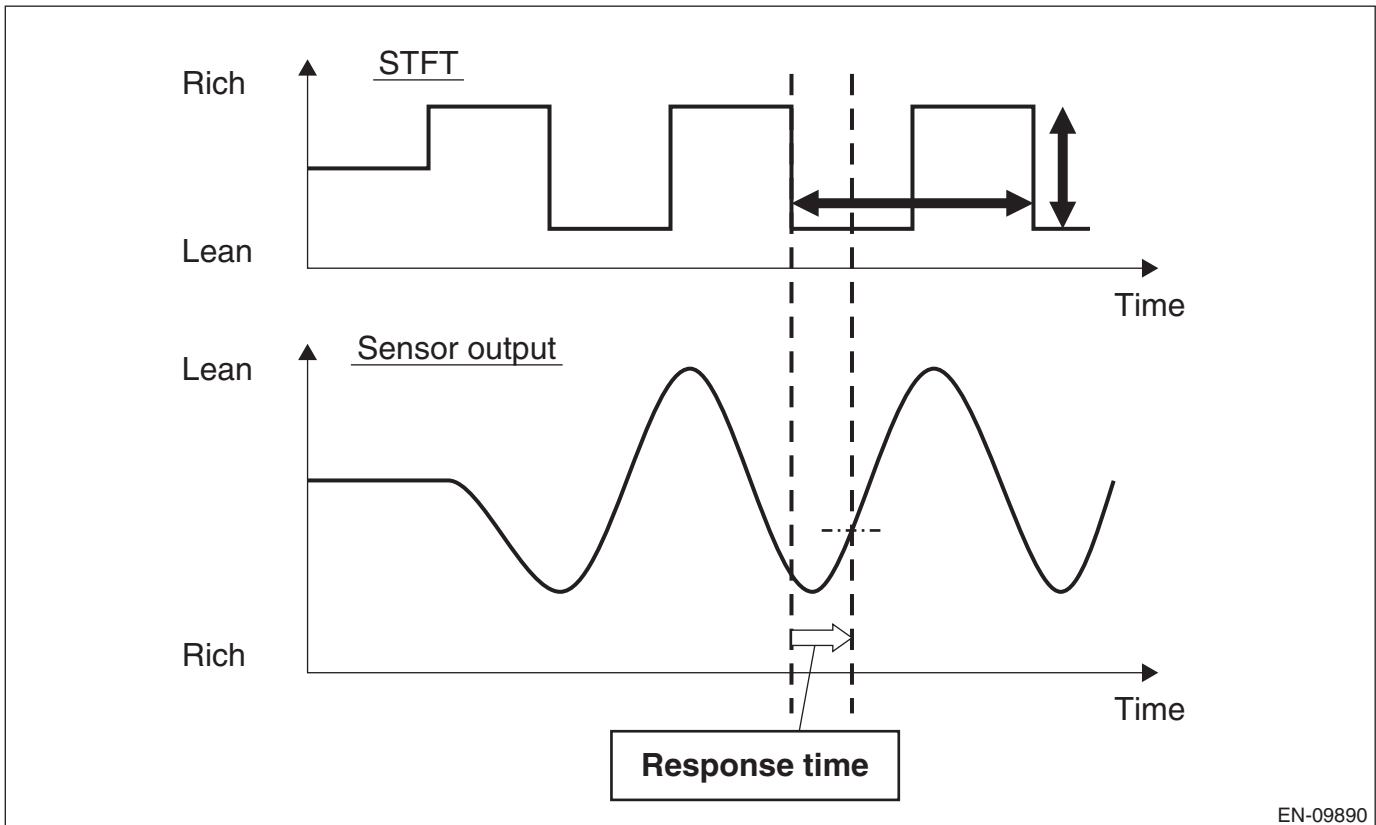

Malfunction Criteria	Threshold Value	DTC
Average value for λ amplitude	> 0.07	P015A and P015B

Time needed for diagnosis: 1000 ms \times 4.5 ms

Malfunction indicator light illumination: Illuminates when malfunction occurs in 2 continuous driving cycles.

7. DIAGNOSIS METHOD 3 (MT MODEL ONLY)

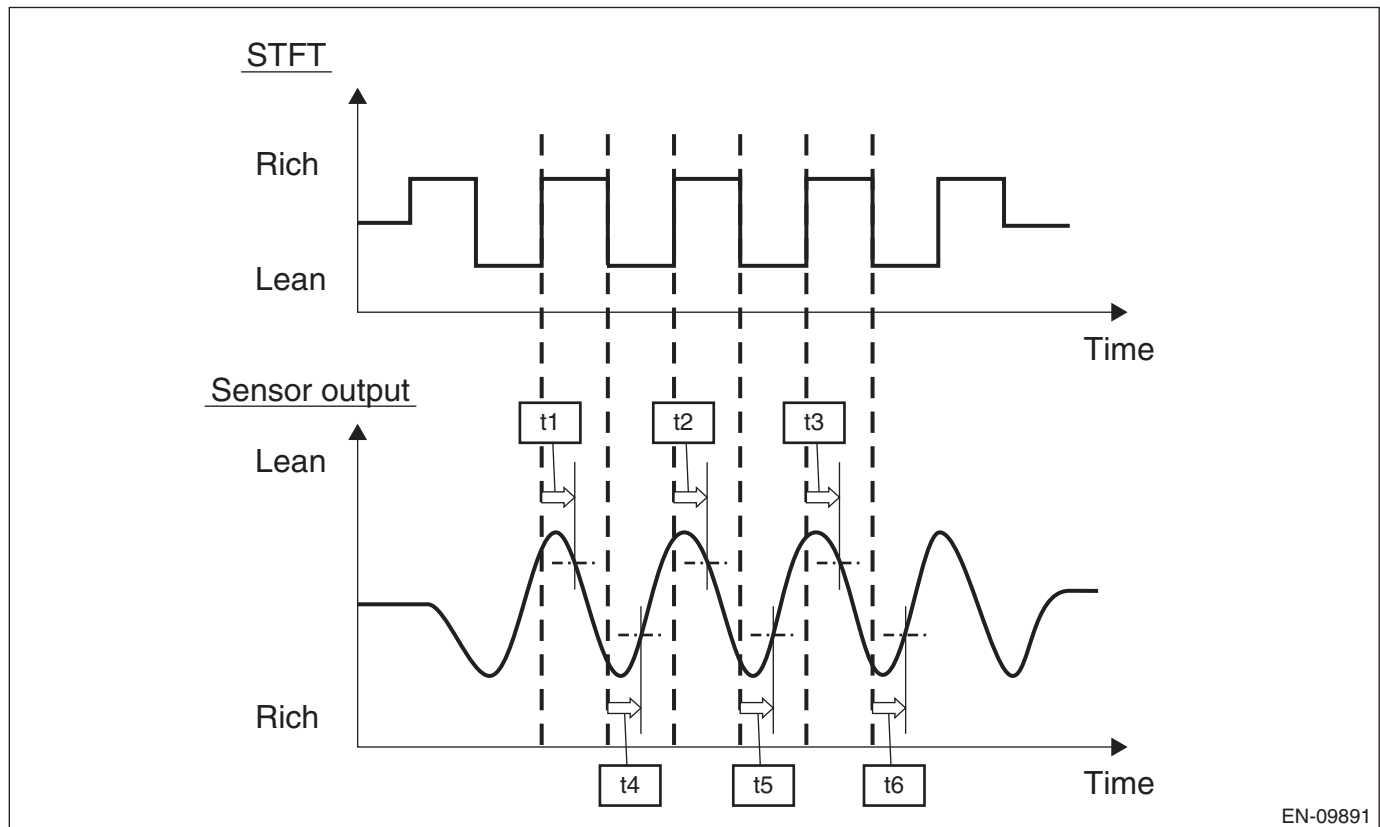

Change STFT (A/F compensation value) by interruption, and measure the reaction time of λ value. When A/F sensor malfunctions, the reaction time takes longer than at normal condition. In this case, judge as abnormal.

Diagnostic Procedure with Diagnostic Trouble Code (DTC)

ENGINE (DIAGNOSTICS)

Measure reaction time (t1, t2, t3) and reaction time (t4, t5, t6). Use the average value of the reaction time to obtain the diagnostic value.

EN-09891

Judge as NG when the following conditions are established.

Judgment Value

Malfunction Criteria	Threshold Value	DTC
Condition either A or B should be satisfied. A: Average value for λ amplitude or B: (t1 + t2 + t3)/3 and (t4 + t5 + t6)/3	> 0.1 > 450 ms > 450 ms	P015A and P015B

Time Needed for Diagnosis: 1000 ms × 4.5 ms

Malfunction Indicator Light Illumination: Illuminates when malfunction occurs in 2 continuous driving cycles.

BB:DTC P015B A/F / O2 SENSOR DELAYED RESPONSE - LEAN TO RICH BANK 1 SENSOR 1

NOTE:

For the diagnostic procedure, refer to DTC P014C. <Ref. to EN(H4DO)(diag)-229, DTC P014C A/F / O2 SENSOR SLOW RESPONSE - RICH TO LEAN BANK 1 SENSOR 1, Diagnostic Procedure with Diagnostic Trouble Code (DTC).>

1. OUTLINE OF DIAGNOSIS

NOTE:

For the detection standard, refer to DTC P015A. <Ref. to EN(H4DO)(diag)-233, DTC P015A A/F / O2 SENSOR DELAYED RESPONSE - RICH TO LEAN BANK 1 SENSOR 1, Diagnostic Procedure with Diagnostic Trouble Code (DTC).>

BC:DTC P0171 SYSTEM TOO LEAN BANK 1

Refer to DTC P0172 for diagnostic procedure. <Ref. to EN(H4DO)(diag)-240, DTC P0172 SYSTEM TOO RICH BANK 1, Diagnostic Procedure with Diagnostic Trouble Code (DTC).>

1. OUTLINE OF DIAGNOSIS

Detect fuel system malfunction by the amount of main feedback control.

Diagnostic method

Fuel system is diagnosed by comparing the target air fuel ratio calculated by ECM with the actual air fuel ratio measured by sensor.

2. EXECUTION CONDITION

Secondary parameters	Execution condition
Main feedback	In operation

3. GENERAL DRIVING CYCLE

Perform the diagnosis continuously at idling or at a constant speed after warming up the engine.

4. DIAGNOSTIC METHOD

Compare the diagnostic value with the threshold value, and if a condition meeting the malfunction criteria listed below continues for 10 s × 3 time(s) or more, judge that there is a fault in the fuel system.

Judgment value

Malfunction Criteria	Threshold Value
Offset amount of main feedback compensation	≥ Value from Map

Map

Amount of air g/s (oz/s)	0 (0)	3.2 (0.11)	6.4 (0.23)	9.6 (0.34)	12.8 (0.45)	16 (0.56)	19.2 (0.68)
Threshold Value	1.33	1.33	1.33	1.33	1.33	1.33	1.33

Time needed for diagnosis: 10 s × 3 time(s)

Malfunction indicator light illumination: Illuminates when malfunction occurs in 2 continuous driving cycles.

Diagnostic Procedure with Diagnostic Trouble Code (DTC)

ENGINE (DIAGNOSTICS)

BD:DTC P0172 SYSTEM TOO RICH BANK 1

DTC detecting condition:

Detected when two consecutive driving cycles with fault occur.

Trouble symptom:

- Improper idling
- Engine stall
- Poor driving performance

CAUTION:

After servicing or replacing faulty parts, perform Clear Memory Mode <Ref. to EN(H4DO)(diag)-66, OPERATION, Clear Memory Mode.>, and Inspection Mode <Ref. to EN(H4DO)(diag)-50, PROCEDURE, Inspection Mode.>.

Step	Check	Yes	No
1	CHECK EXHAUST SYSTEM.	Are there holes or loose bolts on exhaust system?	Repair the exhaust system. Go to step 2.
2	CHECK AIR INTAKE SYSTEM.	Are there holes, loose bolts or disconnection of hose on air intake system?	Repair the air intake system. Go to step 3.
3	CHECK FUEL PRESSURE. WARNING: Place “NO OPEN FLAMES” signs near the working area. CAUTION: Be careful not to spill fuel. Measure the fuel pressure. <Ref. to ME(H4DO)-31, INSPECTION, Fuel Pressure.> CAUTION: Release fuel pressure before removing the fuel pressure gauge.	Is the measured value 340 — 400 kPa (3.5 — 4.1 kg/cm ² , 49 — 58 psi)?	Go to step 4. Check the fuel pump and fuel delivery line. <Ref. to FU(H4DO)-141, INSPECTION, Fuel Pump.> <Ref. to FU(H4DO)-171, INSPECTION, Fuel Delivery and Evaporation Lines.>
4	CHECK ENGINE COOLANT TEMPERATURE SENSOR. 1) Start the engine and warm up completely. 2) Read the value of «Coolant Temp.» using the Subaru Select Monitor or a general scan tool. NOTE: • Subaru Select Monitor For detailed operation procedures, refer to “Current Data Display For Engine”. <Ref. to EN(H4DO)(diag)-36, Subaru Select Monitor.> • General scan tool For detailed operation procedures, refer to the general scan tool operation manual.	Is the value of «Coolant Temp.» 75°C (167°F) or more?	Go to step 5. Replace the engine coolant temperature sensor. <Ref. to FU(H4DO)-49, Engine Coolant Temperature Sensor.>

Diagnostic Procedure with Diagnostic Trouble Code (DTC)

ENGINE (DIAGNOSTICS)

Step	Check	Yes	No
<p>5 CHECK MASS AIR FLOW AND INTAKE AIR TEMPERATURE SENSOR.</p> <p>1) Start the engine and warm up engine until coolant temperature is higher than 75°C (167°F).</p> <p>2) For CVT models, set the select lever to “P” range or “N” range, and for MT models, place the gear shift lever in the neutral position.</p> <p>3) Turn the A/C switch to OFF.</p> <p>4) Turn all the accessory switches to OFF.</p> <p>5) Read the value of «Mass Air Flow» using the Subaru Select Monitor or a general scan tool.</p> <p>NOTE:</p> <ul style="list-style-type: none"> • Subaru Select Monitor <p>For detailed operation procedures, refer to “Current Data Display For Engine”. <Ref. to EN(H4DO)(diag)-36, Subaru Select Monitor.></p> <ul style="list-style-type: none"> • General scan tool <p>For detailed operation procedures, refer to the general scan tool operation manual.</p>	<p>Is the value of «Mass Air Flow» 2.0 — 5.0 g/s (0.26 — 0.66 lb/m)?</p>	<p>Go to step 6.</p>	<p>Replace the mass air flow and intake air temperature sensor. <Ref. to FU(H4DO)-71, Mass Air Flow and Intake Air Temperature Sensor.></p>
<p>6 CHECK MASS AIR FLOW AND INTAKE AIR TEMPERATURE SENSOR.</p> <p>1) Start the engine and warm up engine until coolant temperature is higher than 75°C (167°F).</p> <p>2) For CVT models, set the select lever to “P” range or “N” range, and for MT models, place the gear shift lever in the neutral position.</p> <p>3) Turn the A/C switch to OFF.</p> <p>4) Turn all the accessory switches to OFF.</p> <p>5) Open the front hood.</p> <p>6) Measure the ambient temperature.</p> <p>7) Read the value of «Intake Air Temp.» using the Subaru Select Monitor or a general scan tool.</p> <p>NOTE:</p> <ul style="list-style-type: none"> • Subaru Select Monitor <p>For detailed operation procedures, refer to “Current Data Display For Engine”. <Ref. to EN(H4DO)(diag)-36, Subaru Select Monitor.></p> <ul style="list-style-type: none"> • General scan tool <p>For detailed operation procedures, refer to the general scan tool operation manual.</p>	<p>Subtract ambient temperature from «Intake Air Temp.». Is the obtained value -10 — 50°C (-18 — 90°F)?</p>	<p>Go to step 7.</p>	<p>Check the mass air flow and intake air temperature sensor. <Ref. to FU(H4DO)-71, Mass Air Flow and Intake Air Temperature Sensor.></p>
<p>7 CHECK PCV VALVE. Check the PCV valve.</p>	<p>Check that the PCV valve has no deformation, cracks or other damages.</p>	<p>Repair or replace the PCV valve.</p>	<p>Go to step 8.</p>
<p>8 CHECK PCV HOSE. Check the PCV hose.</p>	<p>Check the PCV hose assembly for cracks, damage or looseness.</p>	<p>Repair or replace the PCV hose.</p>	<p>Repair the poor contact of ECM connector.</p>

Diagnostic Procedure with Diagnostic Trouble Code (DTC)

ENGINE (DIAGNOSTICS)

1. OUTLINE OF DIAGNOSIS

Detect fuel system malfunction by the amount of main feedback control.

2. EXECUTION CONDITION

Secondary parameters	Execution condition
Main feedback	In operation

3. GENERAL DRIVING CYCLE

Perform the diagnosis continuously during the closed loop.

4. DIAGNOSTIC METHOD

Compare the diagnostic value with the threshold value, and if a condition meeting the malfunction criteria listed below continues for 10 s × 3 time(s) or more, judge that there is a fault in the fuel system.

Judgment value

Malfunction Criteria	Threshold Value
Offset amount of main feedback compensation	< Value from Map

Map

Warm-up increase compensation coefficient	0	0.1	0.2	0.3
Threshold Value	0.67	0.572	0.494	0.432

Warm-up increase compensation coefficient	0.35	0.6
Threshold Value	0.401	0.401

Time needed for diagnosis: 10 s × 3 time(s)

Malfunction indicator light illumination: Illuminates when malfunction occurs in 2 continuous driving cycles.

Diagnostic Procedure with Diagnostic Trouble Code (DTC)

ENGINE (DIAGNOSTICS)

BE:DTC P0196 ENGINE OIL TEMPERATURE SENSOR "A" RANGE/PERFORMANCE

DTC DETECTING CONDITION:

Detected when two consecutive driving cycles with fault occur.

TROUBLE SYMPTOM:

- Hard to start
- Improper idling
- Poor driving performance

CAUTION:

After servicing or replacing faulty parts, perform Clear Memory Mode <Ref. to EN(H4DO)(diag)-66, OPERATION, Clear Memory Mode.>, and Inspection Mode <Ref. to EN(H4DO)(diag)-50, PROCEDURE, Inspection Mode.>.

Step	Check	Yes	No
1 CHECK FOR ANY OTHER DTC ON DISPLAY.	Is any other DTC displayed?	Check the appropriate DTC using the "List of Diagnostic Trouble Code (DTC)". <Ref. to EN(H4DO)(diag)-96, List of Diagnostic Trouble Code (DTC).>	Replace the engine oil temperature sensor. <Ref. to FU(H4DO)-51, Engine Oil Temperature Sensor.>

Diagnostic Procedure with Diagnostic Trouble Code (DTC)

ENGINE (DIAGNOSTICS)

1. OUTLINE OF DIAGNOSIS

Detect the malfunction of the engine oil temperature sensor output properties. Using the following two diagnoses, judge as NG when either is NG.

- **Diagnosis 1 (correlation diagnosis):** After the engine starts after the specified period of soaking time has elapsed, diagnose by correlation between engine oil temperature sensor value, engine coolant temperature sensor value and intake air temperature sensor value. Judge as NG when the differences are both above the specified value by comparing between engine oil temperature and engine coolant temperature, engine oil temperature and intake air temperature.
- **Diagnosis 2 (function diagnosis):** Judge as NG when engine oil temperature does not rise to the specified value regardless of an engine running condition that clears certain conditions.

2. COMPONENT DESCRIPTION

EN-02917

(A) Resistance value (k Ω)

(B) Temperature °C (°F)

(1) Connector

(2) Thermistor element

3. EXECUTION CONDITION

Diagnosis 1

Secondary parameters	Execution condition
Battery voltage	≥ 10.9 V
Soaking time	≥ 21600 s
Block heater judgment	Completed
Block heater operation	Not in operation

Diagnosis 2

Secondary parameters	Execution condition
Battery voltage	≥ 10.9 V
Engine oil temperature at engine starting	< 50 °C (122 °F)
Engine speed	≥ 500 rpm
Percentage of idling	$\leq 0.5 \times 100$

4. GENERAL DRIVING CYCLE

- **Diagnosis 1:** Perform the diagnosis only once after the engine starts after a certain period of soaking time.
- **Diagnosis 2:** Perform the diagnosis only once after starting the engine from cold condition.

Diagnostic Procedure with Diagnostic Trouble Code (DTC)

ENGINE (DIAGNOSTICS)

5. DIAGNOSTIC METHOD

Judge as NG when Diagnosis 1 or Diagnosis 2 becomes NG.

If the duration of time while the following conditions are met is longer than the time indicated, judge as NG.

Diagnosis 1

Judgment value

Malfunction Criteria	Threshold Value
Absolute value Engine oil temperature at engine start – Engine coolant temperature at engine start	> 10 °C (18°F)
Absolute value Engine oil temperature at engine start – Intake air temperature 30 sec. after engine start	> Value of Map 1

Map 1

Ambient temperature °C (°F)	-30 (-22)	30 (86)	45 (113)	60 (140)
Engine oil temperature at engine start – Intake air temperature 30 sec. after engine start °C (°F)	10 (18)	10 (18)	22 (39.6)	22 (39.6)

Time needed for diagnosis: Less than 1 second

Diagnosis 2

Judgment value

Malfunction Criteria	Threshold Value
Engine oil temperature	< 50 °C (122 °F)
Elapsed time after starting the engine	≥ Value from Map 2

Map 2

		Intake air temperature at engine start °C (°F)							
		-40 (-40)	-30 (-22)	-20 (-4)	-10 (14)	0 (32)	10 (50)	20 (68)	30 (86)
Percentage of time when engine is at stop against time elapsed since engine start	0.0	3300000	2730000	2200000	1740000	1400000	1120000	800000	500000
	0.3	3300000	2730000	2200000	1740000	1400000	1120000	800000	500000
	0.6	3300000	2730000	2200000	1740000	1400000	1120000	800000	500000
	1.0	3300000	2730000	2200000	1740000	1400000	1120000	800000	500000

ms

Time needed for diagnosis: Less than 1 second

Malfunction indicator light illumination: Illuminates when malfunction occurs in 2 continuous driving cycles.

Diagnostic Procedure with Diagnostic Trouble Code (DTC)

ENGINE (DIAGNOSTICS)

BF:DTC P0197 ENGINE OIL TEMPERATURE SENSOR "A" CIRCUIT LOW

DTC detecting condition:

Immediately at fault recognition

Trouble symptom:

- Hard to start
- Improper idling
- Poor driving performance

CAUTION:

After servicing or replacing faulty parts, perform Clear Memory Mode <Ref. to EN(H4DO)(diag)-66, OPERATION, Clear Memory Mode.>, and Inspection Mode <Ref. to EN(H4DO)(diag)-50, PROCEDURE, Inspection Mode.>.

Wiring diagram:

Diagnostic Procedure with Diagnostic Trouble Code (DTC)

ENGINE (DIAGNOSTICS)

Step	Check	Yes	No
<p>1 CHECK POWER SUPPLY TO FUEL INJECTOR. 1) Turn the ignition switch to OFF. 2) Disconnect the connector from fuel injector. 3) Turn the ignition switch to ON. 4) Measure the voltage between fuel injector connector and the engine ground. Connector & terminal DTC P0201; (E5) No. 2 (+) — Engine ground (-): DTC P0202; (E16) No. 2 (+) — Engine ground (-): DTC P0203; (E6) No. 2 (+) — Engine ground (-): DTC P0204; (E17) No. 2 (+) — Engine ground (-):</p>	Is the voltage 10 V or more?	Go to step 2.	Repair the harness and connector. NOTE: In this case, repair the following item: <ul style="list-style-type: none"> • Open circuit in harness between main relay and fuel injector connector • Poor contact of main relay connector • Poor contact of coupling connector
<p>2 CHECK HARNESS BETWEEN ECM AND FUEL INJECTOR CONNECTOR. 1) Turn the ignition switch to OFF. 2) Disconnect the connector from ECM. 3) Measure the resistance between fuel injector connector and engine ground. Connector & terminal DTC P0201; (E5) No. 1 — Engine ground: DTC P0202; (E16) No. 1 — Engine ground: DTC P0203; (E6) No. 1 — Engine ground: DTC P0204; (E17) No. 1 — Engine ground:</p>	Is the resistance 1 M Ω or more?	Go to step 3.	Repair the short circuit to ground in harness between ECM connector and fuel injector connector.
<p>3 CHECK HARNESS BETWEEN ECM AND FUEL INJECTOR CONNECTOR. Measure the resistance of harness between ECM connector and fuel injector connector. Connector & terminal DTC P0201; (B134) No. 12 — (E5) No. 1: DTC P0202; (B134) No. 22 — (E16) No. 1: DTC P0203; (B134) No. 32 — (E6) No. 1: DTC P0204; (B134) No. 13 — (E17) No. 1:</p>	Is the resistance less than 1 Ω ?	Go to step 4.	Repair the harness and connector. NOTE: In this case, repair the following item: <ul style="list-style-type: none"> • Open circuit in harness between ECM connector and fuel injector connector • Poor contact of coupling connector
<p>4 CHECK FUEL INJECTOR. Measure the resistance between fuel injector terminals on the corresponding cylinder. Terminals No. 1 — No. 2:</p>	Is the resistance 5 — 20 Ω ?	Go to step 5.	Replace the fuel injector. <Ref. to FU(H4DO)-77, Fuel Injector.>
<p>5 CHECK FOR POOR CONTACT. Check for poor contact of ECM connector.</p>	Is there poor contact of ECM connector?	Repair the poor contact of ECM connector.	Go to step 6.

Diagnostic Procedure with Diagnostic Trouble Code (DTC)

ENGINE (DIAGNOSTICS)

Step	Check	Yes	No
6 CHECK FUEL INJECTOR OPERATION. 1) Connect all connectors. 2) Start the engine. 3) Check if the corresponding fuel injector emits operating sound. NOTE: Use a sound scope to check the operating sound.	Does the fuel injector emit operating sound?	Even if DTC is detected, the circuit has returned to a normal condition at this time. Reproduce the failure, and then perform the diagnosis again. NOTE: In this case, temporary poor contact of connector, temporary open or short circuit of harness may be the cause.	Repair the poor contact of fuel injector connector.

1. OUTLINE OF DIAGNOSIS

Based on the self-diagnostic result of the injector driving IC, judge the injector driving circuit as normal or abnormal.

Injector driving IC detects the status of “fuel remains injected” or “fuel is not injected” as a malfunction.

2. EXECUTION CONDITION

Secondary parameters	Execution condition
Battery voltage	≥ 10.9 V
Elapsed time after starting the engine	> 1 s
Engine speed	≥ 500 rpm
Injection status	Not during fuel cut

3. GENERAL DRIVING CYCLE

Always perform the diagnosis continuously.

4. DIAGNOSTIC METHOD

Judge as NG when the following conditions are established.

Judgment Value

Malfunction Criteria	Threshold Value
Injector driving IC information	Trouble

Time Needed for Diagnosis: 2560 ms

Malfunction Indicator Light Illumination: Illuminates as soon as a malfunction occurs.

Always perform the diagnosis continuously.

5. DIAGNOSTIC METHOD

If the duration of time while the following conditions are met is longer than the time indicated, judge as NG.

Judgment Value

Malfunction Criteria	Threshold Value
Sensor 2 input voltage	$\geq 4.772 \text{ V}$

Time Needed for Diagnosis: 24 ms

Malfunction Indicator Light Illumination: Illuminates as soon as a malfunction occurs.

Diagnostic Procedure with Diagnostic Trouble Code (DTC)

ENGINE (DIAGNOSTICS)

BN:DTC P0300 RANDOM/MULTIPLE CYLINDER MISFIRE DETECTED

DTC DETECTING CONDITION:

- Detected when two consecutive driving cycles with fault occur.
- Immediately at fault recognition (A misfire which could damage catalyst occurs.)

TROUBLE SYMPTOM:

- Engine stall
- Improper idling
- Rough driving

CAUTION:

After servicing or replacing faulty parts, perform Clear Memory Mode <Ref. to EN(H4DO)(diag)-66, OPERATION, Clear Memory Mode.>, and Inspection Mode <Ref. to EN(H4DO)(diag)-50, PROCEDURE, Inspection Mode.>.

WIRING DIAGRAM:

Engine electrical system <Ref. to WI-102, Engine Electrical System.>

EN-11339

Diagnostic Procedure with Diagnostic Trouble Code (DTC)

ENGINE (DIAGNOSTICS)

Step	Check	Yes	No
1 CHECK OUTPUT SIGNAL OF ECM. 1) Turn the ignition switch to ON. 2) Measure the voltage between ECM and chassis ground on all cylinders. Connector & terminal <i>#1 (B134) No. 12 (+) — Chassis ground (-):</i> <i>#2 (B134) No. 22 (+) — Chassis ground (-):</i> <i>#3 (B134) No. 32 (+) — Chassis ground (-):</i> <i>#4 (B134) No. 13 (+) — Chassis ground (-):</i>	Is the voltage 10 V or more?	Go to step 6.	Go to step 2.
2 CHECK HARNESS BETWEEN ECM AND FUEL INJECTOR CONNECTOR. 1) Turn the ignition switch to OFF. 2) Disconnect the connector from all fuel injectors. 3) Measure the resistance between all fuel injector connectors and engine ground. Connector & terminal <i>#1 (E5) No. 1 — Engine ground:</i> <i>#2 (E16) No. 1 — Engine ground:</i> <i>#3 (E6) No. 1 — Engine ground:</i> <i>#4 (E17) No. 1 — Engine ground:</i>	Is the resistance 1 M Ω or more?	Go to step 3.	Repair the short circuit to ground in harness between ECM connector and fuel injector connector.
3 CHECK HARNESS BETWEEN ECM AND FUEL INJECTOR CONNECTOR. Measure the resistance of harness between ECM and fuel injector on all cylinders. Connector & terminal <i>#1 (B134) No. 12 — (E5) No. 1:</i> <i>#2 (B134) No. 22 — (E16) No. 1:</i> <i>#3 (B134) No. 32 — (E6) No. 1:</i> <i>#4 (B134) No. 13 — (E17) No. 1:</i>	Is the resistance less than 1 Ω ?	Go to step 4.	Repair the harness and connector. NOTE: In this case, repair the following item: <ul style="list-style-type: none"> • Open circuit in harness between ECM connector and fuel injector connector • Poor contact of coupling connector
4 CHECK FUEL INJECTOR. Measure the resistance between all fuel injector terminals. Terminals <i>No. 1 — No. 2:</i>	Is the resistance 5 — 20 Ω ?	Go to step 5.	Replace the faulty fuel injector. <Ref. to FU(H4DO)-77, Fuel Injector.>
5 CHECK POWER SUPPLY LINE. 1) Turn the ignition switch to ON. 2) Measure the voltage between all fuel injectors and the engine ground. Connector & terminal <i>#1 (E5) No. 2 (+) — Engine ground (-):</i> <i>#2 (E16) No. 2 (+) — Engine ground (-):</i> <i>#3 (E6) No. 2 (+) — Engine ground (-):</i> <i>#4 (E17) No. 2 (+) — Engine ground (-):</i>	Is the voltage 10 V or more?	Repair the poor contact of all connectors in fuel injector circuit.	Repair the harness and connector. NOTE: In this case, repair the following item: <ul style="list-style-type: none"> • Open circuit in harness between the main relay connector and fuel injector connector on faulty cylinders • Poor contact of coupling connector • Poor contact of main relay connector

Diagnostic Procedure with Diagnostic Trouble Code (DTC)

ENGINE (DIAGNOSTICS)

Step	Check	Yes	No
6 CHECK HARNESS BETWEEN ECM AND FUEL INJECTOR CONNECTOR. 1) Turn the ignition switch to OFF. 2) Disconnect the connector from all fuel injectors. 3) Turn the ignition switch to ON. 4) Measure the voltage between ECM and chassis ground on all cylinders. Connector & terminal #1 (B134) No. 12 (+) — Chassis ground (-): #2 (B134) No. 22 (+) — Chassis ground (-): #3 (B134) No. 32 (+) — Chassis ground (-): #4 (B134) No. 13 (+) — Chassis ground (-):	Is the voltage 10 V or more?	Repair the short circuit to power in harness between ECM connector and fuel injector connectors.	Go to step 7.
7 CHECK FUEL INJECTOR. 1) Turn the ignition switch to OFF. 2) Measure the resistance between all fuel injector terminals. Terminals No. 1 — No. 2:	Is the resistance 5 — 20 Ω?	Go to step 8.	Replace the faulty fuel injector. <Ref. to FU(H4DO)-77, Fuel Injector.>
8 CHECK INSTALLATION CONDITION OF CAMSHAFT POSITION SENSOR/CRANKSHAFT POSITION SENSOR.	Is the camshaft position sensor or crankshaft position sensor loosely installed?	Tighten the camshaft position sensor or crankshaft position sensor. <Ref. to FU(H4DO)-59, INSTALLATION, Camshaft Position Sensor.> <Ref. to FU(H4DO)-54, INSTALLATION, Crankshaft Position Sensor.>	Go to step 9.
9 CHECK CRANKSHAFT POSITION SENSOR PLATE.	Is the crankshaft position sensor plate rusted or does it have broken teeth?	Replace the crankshaft position sensor plate. <Ref. to ME(H4DO)-247, Cylinder Block.>	Go to step 10.
10 CHECK INSTALLATION CONDITION OF TIMING CHAIN. Turn the crankshaft using ST, and align the alignment mark on crank sprocket with alignment mark on cylinder block. ST 18252AA000 CRANKSHAFT SOCKET	Is the timing chain dislocated from its proper position?	Correct the installation condition of timing chain. <Ref. to ME(H4DO)-115, Timing Chain Assembly.>	Go to step 11.
11 CHECK FUEL LEVEL.	Is the fuel meter indication higher than the “Lower” level?	Go to step 12.	Refill the fuel so that the fuel meter indication is higher than the “Lower” level, and proceed to the next step. Go to step 12.
12 CHECK STATUS OF MALFUNCTION INDICATOR LIGHT. 1) Clear the memory using the Subaru Select Monitor or general scan tool. <Ref. to EN(H4DO)(diag)-66, Clear Memory Mode.> 2) Start the engine, and drive the vehicle 10 minutes or more.	Does the malfunction indicator light illuminate or blink?	Go to step 14.	Go to step 13.

Diagnostic Procedure with Diagnostic Trouble Code (DTC)

ENGINE (DIAGNOSTICS)

Step	Check	Yes	No
13 CHECK CAUSE OF MISFIRE.	Was the cause of misfire identified when the engine is running?	Finish diagnostics operation, if the engine has no abnormality.	Repair the poor contact of connector. NOTE: In this case, repair the following item: <ul style="list-style-type: none"> • Poor contact of ignition coil connector • Poor contact of fuel injector connector on faulty cylinders • Poor contact of ECM connector • Poor contact of coupling connector
14 CHECK AIR INTAKE SYSTEM.	Is there any fault in air intake system?	Repair the air intake system. NOTE: Check the following items. <ul style="list-style-type: none"> • Are there air leaks or air suction caused by loose or dislocated nuts and bolts? • Are there cracks or any disconnection of hoses? 	Go to step 15.
15 CHECK ALL CYLINDERS.	Is there a fault in any cylinder?	Repair or replace the faulty part of the faulty cylinder. NOTE: Check the following items. <ul style="list-style-type: none"> • Spark plug • Ignition coil • Fuel injector • Compression • Skipping timing chain teeth 	Go to DTC P0171. <Ref. to EN(H4DO)(diag)-239, DTC P0171 SYSTEM TOO LEAN BANK 1, Diagnostic Procedure with Diagnostic Trouble Code (DTC).>

1. OUTLINE OF DIAGNOSIS

NOTE:

For the detection standard, refer to DTC P0301. <Ref. to EN(H4DO)(diag)-266, DTC P0301 CYLINDER 1 MISFIRE DETECTED, Diagnostic Procedure with Diagnostic Trouble Code (DTC).>

Diagnostic Procedure with Diagnostic Trouble Code (DTC)

ENGINE (DIAGNOSTICS)

BO:DTC P0301 CYLINDER 1 MISFIRE DETECTED

NOTE:

For the diagnostic procedure, refer to DTC P0304. <Ref. to EN(H4DO)(diag)-275, DTC P0304 CYLINDER 4 MISFIRE DETECTED, Diagnostic Procedure with Diagnostic Trouble Code (DTC).>

1. OUTLINE OF DIAGNOSIS

Detect the presence of misfire occurrence. (Revolution fluctuation method)

Monitoring Misfire which influences exhaust deterioration (1.5 times of FTP) and catalyst damage is made obligatory by the law. Misfire affecting these two has two patterns below:

- Intermittent misfire (The same cylinder misfires in random, or different cylinders misfire in random.): FTP 1.5 times misfire
- Every time misfire (The same cylinder misfires every time.): FTP 1.5 times misfire, Catalyst damage misfire

The following detecting methods are adopted for these detection.

1) Intermittent misfire: FTP 1.5 times misfire

- 180° Interval Difference Method
- 360° Interval Difference Method
- 720° Interval Difference Method

2) Misfire every time: FTP 1.5 times misfire, Catalyst damage misfire

- 180° Interval Difference Method
- 360° Interval Difference Method

2. EXECUTION CONDITION

Secondary parameters	Execution condition
Battery voltage	≥ 8 V
Throttle position change during 16 milliseconds	< 24.84 °
Fuel shut-off function	Not in operation
Engine speed	450 rpm — 6450 rpm (CVT model) 500 rpm — 6700 rpm (MT model)
Intake manifold pressure	> Value of Map 1
Time elapsed after engine start	≥ 2 crankshaft revolutions
Following condition A or B is met	
A: Engine coolant temperature at engine starting	> -6.7°C (19.4°F)
B: Following conditions (b1) and (b2) are met	
(b1) Engine coolant temperature at engine starting	≤ -6.7°C (19.4°F)
(b2) Engine coolant temperature	≥ 21.1°C (69.8°F)

Diagnostic Procedure with Diagnostic Trouble Code (DTC)

kPa (mmHg, inHg)

3. GENERAL DRIVING CYCLE

- If conditions are met, it is possible to detect the misfires from idling to high engine speed. However, in case any engine load or breakage occurs, perform with the engine at idle.
- Perform the diagnosis continuously.

Diagnostic Procedure with Diagnostic Trouble Code (DTC)

ENGINE (DIAGNOSTICS)

4. DIAGNOSTIC METHOD

When a misfire occurs, the engine speed will decrease and the crankshaft position speed will change. Calculate the interval difference value (diagnostic value) from crankshaft position speed by the following formula, and judge whether a misfire is occurring or not comparing the calculated result with judgment value. Count the number of misfires, if the misfire ratio is higher during 1000 revs. or 200 revs., judge corresponding cylinders as NG.

Diagnostic value calculation (Calculate from angle speed) →	Misfire detection in every single ignition (Compare diagnostic value with judgment value) →	NG judgment (Misfire occurrence judgment required by the law) (Compare number of misfire with judgment value)
	<ul style="list-style-type: none"> • 180 Degree Interval Difference Method • 360 Degree Interval Difference Method • 720 Degree Interval Difference Method 	<ul style="list-style-type: none"> • FTP 1.5 times misfire NG judgment • NG judgment for catalyst-damaging misfire

As shown in the following figure, pick a cylinder as the standard and name it A. And the former crankshaft position speed is named B, the second former crankshaft position speed is named C, the third is named D, etc.

EN-20541

(A) Ignition order

(B) Crankshaft position speed

Diagnostic Procedure with Diagnostic Trouble Code (DTC)

ENGINE (DIAGNOSTICS)

180° Interval Difference Method

Diagnostic value	$180 \text{ degree interval difference} = \{(C - B) - (G - C)/4\} - \{(B - A) - (F - B)/4\}$
Misfire judgment	<p>Judge as a misfire in the following cases.</p> <ul style="list-style-type: none">• 180 degree interval difference > Judgment value of positive side• 180 degree interval difference \leq Judgment value of negative side (Diagnostic value before 180° CA)

- (A) 180 degree interval difference (C) Threshold value (negative number)
(B) Threshold value (positive number) (D) Judged as misfire

Diagnostic Procedure with Diagnostic Trouble Code (DTC)

ENGINE (DIAGNOSTICS)

360° Interval Difference Method

Diagnostic value	$360 \text{ degree interval difference} = (B - A) - (D - C)$
Misfire judgment	$360 \text{ degree interval difference} > \text{Judgment value} \rightarrow \text{Judged as misfire}$

EN-21637

- (A) 360 degree interval difference (C) Judged as misfire
(B) Threshold value

720° Interval Difference Method

Diagnostic value	$720 \text{ degree interval difference} = (B - A) - (F - E)$
Misfire judgment	$720 \text{ degree interval difference} > \text{Judgment value} \rightarrow \text{Judged as misfire}$

EN-21637

- (A) 720 degree interval difference (C) Judged as misfire
(B) Threshold value

Diagnostic Procedure with Diagnostic Trouble Code (DTC)

ENGINE (DIAGNOSTICS)

- FTP 1.5 times misfire (misfire occurrence level which influences exhaust gas)

Judgment value (Judge that malfunction occurs when the misfire ratio is high in 1000 engine revs.)

Malfunction Criteria	Threshold Value
FTP emission diagnostic value	$\geq 24 \times 100/2000\%$ in 1000 revs. (CVT model) $\geq 17 \times 100/2000\%$ in 1000 revs. (MT model)

Time needed for diagnosis: 1000 engine revs.

Malfunction indicator light illumination: Illuminates when malfunction occurs in 2 continuous driving cycles.

- Catalyst-damaging misfire (misfire occurrence level that will damage catalyst)

Judgment value

Malfunction Criteria	Threshold Value
Catalyst-damaging misfire diagnostic value	\geq Value from Map 2

Map 2

Diagnostic Procedure with Diagnostic Trouble Code (DTC)

ENGINE (DIAGNOSTICS)

BR:DTC P0304 CYLINDER 4 MISFIRE DETECTED

DTC detecting condition:

- Detected when two consecutive driving cycles with fault occur.
- Immediately at fault recognition (A misfire which could damage catalyst occurs.)

Trouble symptom:

- Engine stall
- Improper idling
- Rough driving

CAUTION:

After servicing or replacing faulty parts, perform Clear Memory Mode <Ref. to EN(H4DO)(diag)-66, OPERATION, Clear Memory Mode.>, and Inspection Mode <Ref. to EN(H4DO)(diag)-50, PROCEDURE, Inspection Mode.>.

Wiring diagram:

Engine electrical system <Ref. to WI-102, Engine Electrical System.>

EN-11339

Diagnostic Procedure with Diagnostic Trouble Code (DTC)

ENGINE (DIAGNOSTICS)

Step	Check	Yes	No
1 CHECK OUTPUT SIGNAL OF ECM. 1) Turn the ignition switch to ON. 2) Measure the voltage between ECM and chassis ground on faulty cylinders. Connector & terminal <i>#1 (B134) No. 12 (+) — Chassis ground (-):</i> <i>#2 (B134) No. 22 (+) — Chassis ground (-):</i> <i>#3 (B134) No. 32 (+) — Chassis ground (-):</i> <i>#4 (B134) No. 13 (+) — Chassis ground (-):</i>	Is the voltage 10 V or more?	Go to step 6.	Go to step 2.
2 CHECK HARNESS BETWEEN ECM AND FUEL INJECTOR CONNECTOR. 1) Turn the ignition switch to OFF. 2) Disconnect the connector from fuel injector on faulty cylinders. 3) Measure the resistance between fuel injector connector and engine ground on faulty cylinders. Connector & terminal <i>#1 (E5) No. 1 — Engine ground:</i> <i>#2 (E16) No. 1 — Engine ground:</i> <i>#3 (E6) No. 1 — Engine ground:</i> <i>#4 (E17) No. 1 — Engine ground:</i>	Is the resistance 1 M Ω or more?	Go to step 3.	Repair the short circuit to ground in harness between ECM connector and fuel injector connector.
3 CHECK HARNESS BETWEEN ECM AND FUEL INJECTOR CONNECTOR. Measure the resistance of harness between ECM and fuel injector on faulty cylinders. Connector & terminal <i>#1 (B134) No. 12 — (E5) No. 1:</i> <i>#2 (B134) No. 22 — (E16) No. 1:</i> <i>#3 (B134) No. 32 — (E6) No. 1:</i> <i>#4 (B134) No. 13 — (E17) No. 1:</i>	Is the resistance less than 1 Ω ?	Go to step 4.	Repair the harness and connector. NOTE: In this case, repair the following item: <ul style="list-style-type: none"> • Open circuit in harness between ECM connector and fuel injector connector • Poor contact of coupling connector
4 CHECK FUEL INJECTOR. Measure the resistance between fuel injector terminals on faulty cylinder. Terminals <i>No. 1 — No. 2:</i>	Is the resistance 5 — 20 Ω ?	Go to step 5.	Replace the faulty fuel injector. <Ref. to FU(H4DO)-77, Fuel Injector.>
5 CHECK POWER SUPPLY LINE. 1) Turn the ignition switch to ON. 2) Measure the voltage between fuel injector and engine ground on faulty cylinders. Connector & terminal <i>#1 (E5) No. 2 (+) — Engine ground (-):</i> <i>#2 (E16) No. 2 (+) — Engine ground (-):</i> <i>#3 (E6) No. 2 (+) — Engine ground (-):</i> <i>#4 (E17) No. 2 (+) — Engine ground (-):</i>	Is the voltage 10 V or more?	Repair the poor contact of all connectors in fuel injector circuit.	Repair the harness and connector. NOTE: In this case, repair the following item: <ul style="list-style-type: none"> • Open circuit in harness between the main relay connector and fuel injector connector on faulty cylinders • Poor contact of coupling connector • Poor contact of main relay connector

Diagnostic Procedure with Diagnostic Trouble Code (DTC)

ENGINE (DIAGNOSTICS)

Step	Check	Yes	No
6 CHECK HARNESS BETWEEN ECM AND FUEL INJECTOR CONNECTOR. 1) Turn the ignition switch to OFF. 2) Disconnect the connector from fuel injector on faulty cylinders. 3) Turn the ignition switch to ON. 4) Measure the voltage between ECM and chassis ground on faulty cylinders. Connector & terminal #1 (B134) No. 12 (+) — Chassis ground (-): #2 (B134) No. 22 (+) — Chassis ground (-): #3 (B134) No. 32 (+) — Chassis ground (-): #4 (B134) No. 13 (+) — Chassis ground (-):	Is the voltage 10 V or more?	Repair the short circuit to power in harness between ECM connector and fuel injector connectors.	Go to step 7.
7 CHECK FUEL INJECTOR. 1) Turn the ignition switch to OFF. 2) Measure the resistance between fuel injector terminals on faulty cylinder. Terminals No. 1 — No. 2:	Is the resistance 5 — 20 Ω?	Go to step 8.	Replace the faulty fuel injector. <Ref. to FU(H4DO)-77, Fuel Injector.>
8 CHECK INSTALLATION CONDITION OF CAMSHAFT POSITION SENSOR/CRANKSHAFT POSITION SENSOR.	Is the camshaft position sensor or crankshaft position sensor loosely installed?	Tighten the camshaft position sensor or crankshaft position sensor. <Ref. to FU(H4DO)-59, INSTALLATION, Camshaft Position Sensor.> <Ref. to FU(H4DO)-54, INSTALLATION, Crankshaft Position Sensor.>	Go to step 9.
9 CHECK CRANKSHAFT POSITION SENSOR PLATE.	Is the crankshaft position sensor plate rusted or does it have broken teeth?	Replace the crankshaft position sensor plate. <Ref. to ME(H4DO)-247, Cylinder Block.>	Go to step 10.
10 CHECK INSTALLATION CONDITION OF TIMING CHAIN. Turn the crankshaft using ST, and align the alignment mark on crank sprocket with alignment mark on cylinder block. ST 18252AA000 CRANKSHAFT SOCKET	Is the timing chain dislocated from its proper position?	Correct the installation condition of timing chain. <Ref. to ME(H4DO)-115, Timing Chain Assembly.>	Go to step 11.
11 CHECK FUEL LEVEL.	Is the fuel meter indication higher than the “Lower” level?	Go to step 12.	Refill the fuel so that the fuel meter indication is higher than the “Lower” level, and proceed to the next step. Go to step 12.
12 CHECK PCV VALVE. Check the PCV valve.	Check that the PCV valve has no deformation, cracks or other damages.	Repair or replace the PCV valve.	Go to step 13.
13 CHECK PCV HOSE. Check the PCV hose.	Check the PCV hose assembly for cracks, damage or looseness.	Repair or replace the PCV hose.	Go to step 14.

Diagnostic Procedure with Diagnostic Trouble Code (DTC)

ENGINE (DIAGNOSTICS)

Step	Check	Yes	No
14 CHECK STATUS OF MALFUNCTION INDICATOR LIGHT. 1) Clear the memory using the Subaru Select Monitor or general scan tool. <Ref. to EN(H4DO)(diag)-66, Clear Memory Mode.> 2) Start the engine, and drive the vehicle 10 minutes or more.	Does the malfunction indicator light illuminate or blink?	Go to step 16.	Go to step 15.
15 CHECK CAUSE OF MISFIRE.	Was the cause of misfire identified when the engine is running?	Finish diagnostics operation, if the engine has no abnormality.	Repair the poor contact of connector. NOTE: In this case, repair the following item: <ul style="list-style-type: none"> • Poor contact of ignition coil connector • Poor contact of fuel injector connector on faulty cylinders • Poor contact of ECM connector • Poor contact of coupling connector
16 CHECK AIR INTAKE SYSTEM.	Is there any fault in air intake system?	Repair the air intake system. NOTE: Check the following items. <ul style="list-style-type: none"> • Are there air leaks or air suction caused by loose or dislocated nuts and bolts? • Are there cracks or any disconnection of hoses? 	Go to step 17.
17 CHECK CYLINDER.	Is there any fault in the cylinder?	Repair or replace faulty parts. NOTE: Check the following items. <ul style="list-style-type: none"> • Spark plug • Ignition coil • Fuel injector • Compression • Skipping timing chain teeth 	Go to DTC P0171. <Ref. to EN(H4DO)(diag)-239, DTC P0171 SYSTEM TOO LEAN BANK 1, Diagnostic Procedure with Diagnostic Trouble Code (DTC).>

1. OUTLINE OF DIAGNOSIS

NOTE:

For the detection standard, refer to DTC P0301. <Ref. to EN(H4DO)(diag)-266, DTC P0301 CYLINDER 1 MISFIRE DETECTED, Diagnostic Procedure with Diagnostic Trouble Code (DTC).>

BS:DTC P0327 KNOCK/COMBUSTION VIBRATION SENSOR 1 CIRCUIT LOW BANK 1 OR SINGLE SENSOR

DTC DETECTING CONDITION:

Immediately at fault recognition

TROUBLE SYMPTOM:

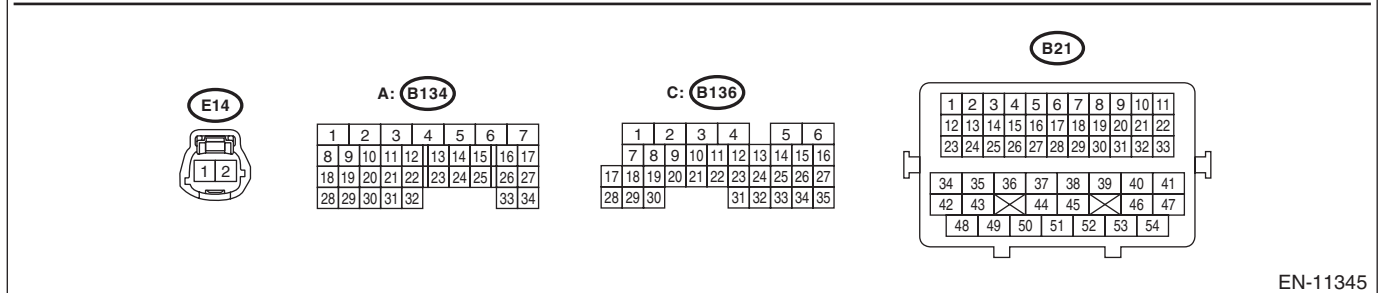

- Poor driving performance
- Knocking occurs

CAUTION:

After servicing or replacing faulty parts, perform Clear Memory Mode <Ref. to EN(H4DO)(diag)-66, OPERATION, Clear Memory Mode.>, and Inspection Mode <Ref. to EN(H4DO)(diag)-50, PROCEDURE, Inspection Mode.>.

1. OUTLINE OF DIAGNOSIS

Detect the open or short circuit of knock sensor.

Judge as NG if out of specification.

2. COMPONENT DESCRIPTION

(A) To knock sensor harness

(1) Case

(3) Piezoelectric element

(5) Resistance

(2) Weight

(4) Nut

3. EXECUTION CONDITION

Secondary Parameters	Execution condition
None	

4. GENERAL DRIVING CYCLE

Always perform the diagnosis continuously.

5. DIAGNOSTIC METHOD

If the duration of time while the following conditions are met is longer than the time indicated, judge as NG.

Judgment Value

Malfunction Criteria	Threshold Value
Output voltage	< 0.154 V

Time Needed for Diagnosis: 1000 ms

Malfunction Indicator Light Illumination: Illuminates as soon as a malfunction occurs.

Connector & terminal (B136) No. 28 — (B134) No. 29:</p>	<p>Is the resistance 600 kΩ or more?</p>	<p>Go to step 2.</p>	<p>Repair the poor contact of ECM connector.</p>
<p>2 CHECK KNOCK SENSOR. 1) Disconnect the connector from the knock sensor. 2) Measure the resistance between knock sensor terminals. Terminals No. 1 — No. 2:</p>	<p>Is the resistance 600 kΩ or more?</p>	<p>Replace the knock sensor. <Ref. to FU(H4DO)-66, Knock Sensor.></p>	<p>Repair the harness and connector. NOTE: In this case, repair the following item: • Open circuit in harness between ECM connector and knock sensor connector • Poor contact of knock sensor connector • Poor contact of coupling connector</p>

Diagnostic Procedure with Diagnostic Trouble Code (DTC)

ENGINE (DIAGNOSTICS)

1. OUTLINE OF DIAGNOSIS

Detect the open or short circuit of knock sensor.

Judge as NG if out of specification.

2. COMPONENT DESCRIPTION

(A) To knock sensor harness

(1) Case

(2) Weight

(3) Piezoelectric element

(4) Nut

(5) Resistance

3. EXECUTION CONDITION

Secondary Parameters	Execution condition
None	

4. GENERAL DRIVING CYCLE

Always perform the diagnosis continuously.

5. DIAGNOSTIC METHOD

If the duration of time while the following conditions are met is longer than the time indicated, judge as NG.

Judgment Value

Malfunction Criteria	Threshold Value
Output voltage	≥ 4.838 V

Time Needed for Diagnosis: 1000 ms

Malfunction Indicator Light Illumination: Illuminates as soon as a malfunction occurs.

Diagnostic Procedure with Diagnostic Trouble Code (DTC)

ENGINE (DIAGNOSTICS)

BU:DTC P0335 CRANKSHAFT POSITION SENSOR "A" CIRCUIT

DTC DETECTING CONDITION:

Immediately at fault recognition

TROUBLE SYMPTOM:

- Engine stall
- Failure of engine to start

CAUTION:

After servicing or replacing faulty parts, perform Clear Memory Mode <Ref. to EN(H4DO)(diag)-66, OPERATION, Clear Memory Mode.>, and Inspection Mode <Ref. to EN(H4DO)(diag)-50, PROCEDURE, Inspection Mode.>.

WIRING DIAGRAM:

Engine electrical system <Ref. to WI-102, Engine Electrical System.>

EN-11346

Diagnostic Procedure with Diagnostic Trouble Code (DTC)

ENGINE (DIAGNOSTICS)

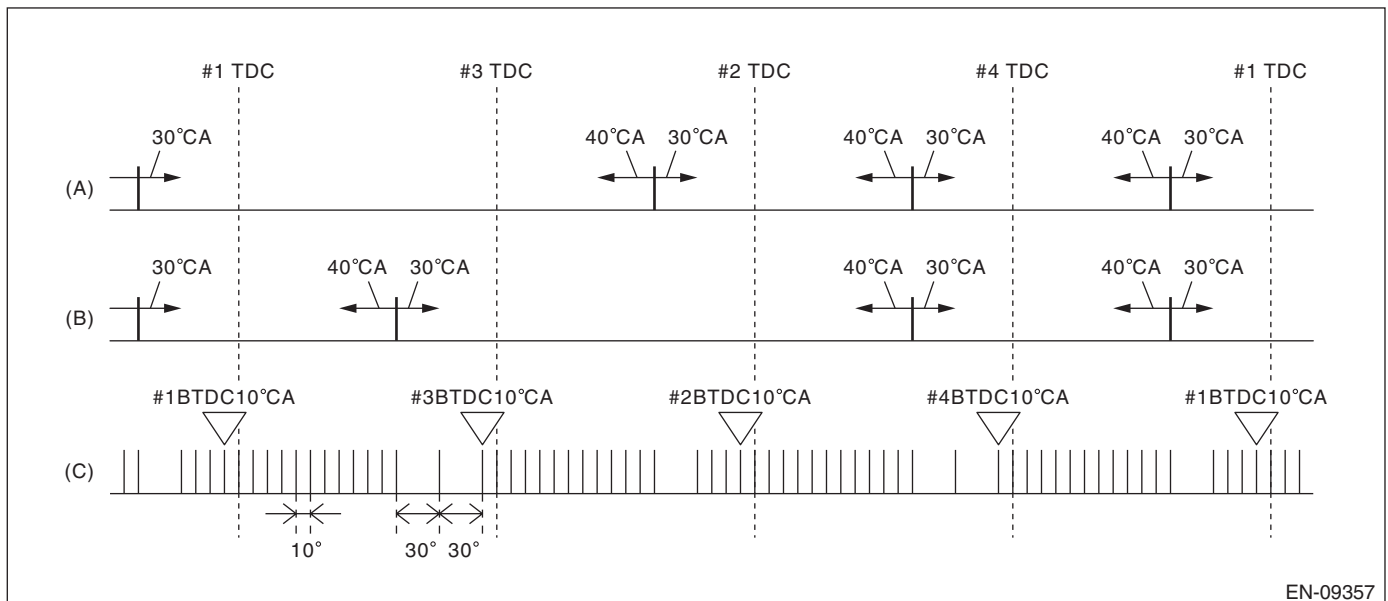

Step	Check	Yes	No
1 CHECK INSTALLATION CONDITION OF CRANKSHAFT POSITION SENSOR.	Is the crankshaft position sensor installation bolt tightened securely?	Go to step 2.	Tighten the crankshaft position sensor installation bolt securely. <Ref. to FU(H4DO)-54, INSTALLATION, Crankshaft Position Sensor.>
2 CHECK CRANKSHAFT POSITION SENSOR. 1) Turn the ignition switch to OFF. 2) Remove the crankshaft position sensor. 3) Measure the resistance between terminals of crankshaft position sensor. Terminals No. 1 — No. 2:	Is the resistance between 1 and 4 k Ω ?	Go to step 3.	Replace the crankshaft position sensor. <Ref. to FU(H4DO)-53, Crankshaft Position Sensor.>
3 CHECK HARNESS BETWEEN ECM AND CRANKSHAFT POSITION SENSOR CONNECTOR. 1) Disconnect the connector from ECM. 2) Measure the resistance of harness between ECM connector and crankshaft position sensor connector. Connector & terminal (B136) No. 16 — (E10) No. 1: (B136) No. 27 — (E10) No. 2:	Is the resistance less than 1 Ω ?	Repair the poor contact of ECM and crankshaft position sensor connector.	Repair the harness and connector. NOTE: In this case, repair the following item: • Open circuit in harness between ECM connector and crankshaft position sensor connector • Poor contact of coupling connector

1. OUTLINE OF DIAGNOSIS

Detect the open or short circuit of the crankshaft position sensor.

Judge as NG when the crank signal is not input even though the starter was rotated.

2. COMPONENT DESCRIPTION

EN-09357

(A) Camshaft signal (RH)

(B) Camshaft signal (LH)

(C) Crankshaft signal

EN-08958

- (1) Crankshaft position sensor (2) Crankshaft position sensor plate (3) Crankshaft half-turn

3. EXECUTION CONDITION

Secondary Parameters	Execution condition
Battery voltage	$\geq 8 \text{ V}$

4. GENERAL DRIVING CYCLE

Always perform the diagnosis continuously.

5. DIAGNOSTIC METHOD

If the duration of time while the following conditions are met is longer than the time indicated, judge as NG.

Judgment Value

Malfunction Criteria	Threshold Value
Crankshaft position sensor signal	Not detected

Time Needed for Diagnosis: 3000 ms

Malfunction Indicator Light Illumination: Illuminates as soon as a malfunction occurs.

Diagnostic Procedure with Diagnostic Trouble Code (DTC)

ENGINE (DIAGNOSTICS)

BV:DTC P0336 CRANKSHAFT POSITION SENSOR "A" CIRCUIT RANGE/PERFORMANCE

DTC detecting condition:

Detected when two consecutive driving cycles with fault occur.

Trouble symptom:

- Engine stall
- Failure of engine to start

CAUTION:

After servicing or replacing faulty parts, perform Clear Memory Mode <Ref. to EN(H4DO)(diag)-66, OPERATION, Clear Memory Mode.>, and Inspection Mode <Ref. to EN(H4DO)(diag)-50, PROCEDURE, Inspection Mode.>.

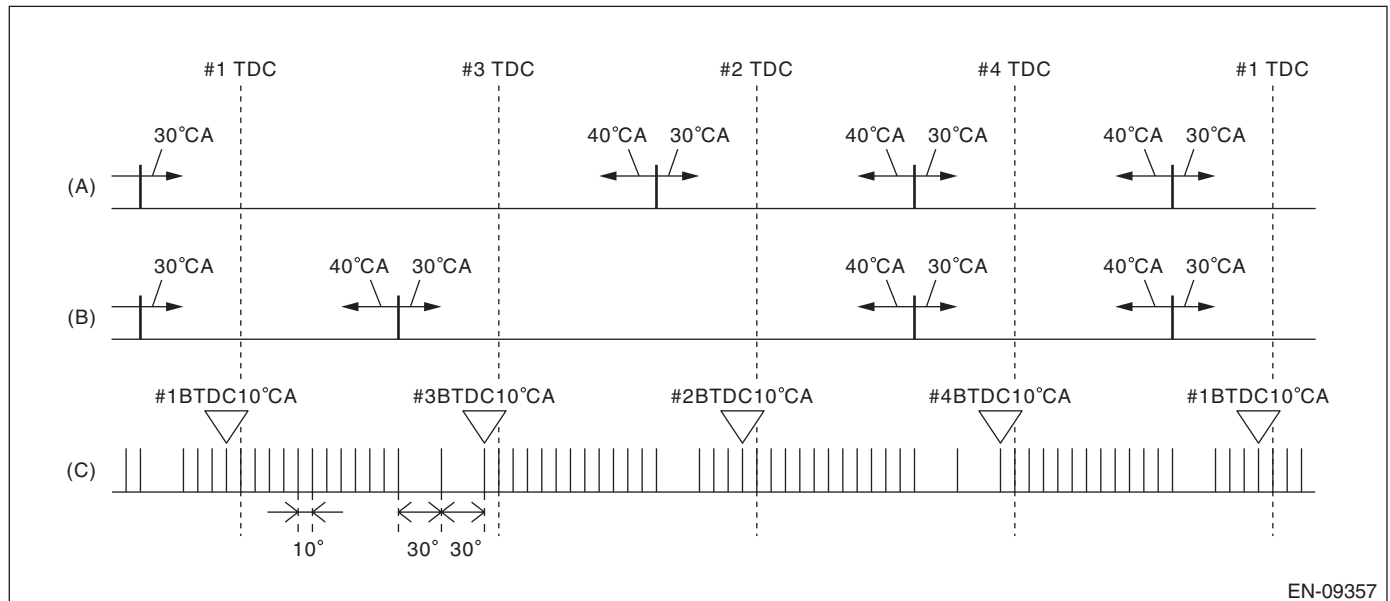

Step	Check	Yes	No
1 CHECK CONDITION OF CRANKSHAFT POSITION SENSOR. Turn the ignition switch to OFF.	Is the crankshaft position sensor installation bolt tightened securely?	Go to step 2.	Tighten the crankshaft position sensor installation bolt securely. <Ref. to FU(H4DO)-54, INSTALLATION, Crankshaft Position Sensor.>
2 CHECK CRANKSHAFT POSITION SENSOR PLATE.	Is there crack or damage in the crankshaft position sensor plate teeth?	Replace the crankshaft position sensor plate. <Ref. to ME(H4DO)-247, Cylinder Block.>	Go to step 3.
3 CHECK INSTALLATION CONDITION OF TIMING CHAIN. Turn the crankshaft using ST, and align the alignment mark on crank sprocket with alignment mark on cylinder block. ST 18252AA000 CRANKSHAFT SOCKET	Is the timing chain dislocated from its proper position?	Correct the installation condition of timing chain. <Ref. to ME(H4DO)-115, Timing Chain Assembly.>	Replace the crankshaft position sensor. <Ref. to FU(H4DO)-53, Crankshaft Position Sensor.>

1. OUTLINE OF DIAGNOSIS

Detect for faults in crankshaft position sensor output properties.

Judge as NG when there is a problem in the number of crankshaft signals for every revolution of crankshaft.

2. COMPONENT DESCRIPTION

EN-09357

(A) Camshaft signal (RH)

(B) Camshaft signal (LH)

(C) Crankshaft signal

EN-08958

(1) Crankshaft position sensor

(2) Crankshaft position sensor plate

(3) Crankshaft half-turn

3. EXECUTION CONDITION

Secondary Parameters	Execution condition
Battery voltage	≥ 8 V

4. GENERAL DRIVING CYCLE

Always perform the diagnosis continuously.

Diagnostic Procedure with Diagnostic Trouble Code (DTC)

ENGINE (DIAGNOSTICS)

5. DIAGNOSTIC METHOD

Judge as NG when the following conditions are established.

Judgment Value

Malfunction Criteria	Threshold Value
Amount of crank sensor signal during 1 rev of crankshaft	Not = 30

Time Needed for Diagnosis: 10 time(s) engine revs.

Malfunction Indicator Light Illumination: Illuminates when malfunction occurs in 2 continuous driving cycles.

Diagnostic Procedure with Diagnostic Trouble Code (DTC)

ENGINE (DIAGNOSTICS)

BW:DTC P0340 CAMSHAFT POSITION SENSOR "A" CIRCUIT BANK 1 OR SINGLE SENSOR

DTC DETECTING CONDITION:

Immediately at fault recognition

TROUBLE SYMPTOM:

- Engine stall
- Failure of engine to start

CAUTION:

After servicing or replacing faulty parts, perform Clear Memory Mode <Ref. to EN(H4DO)(diag)-66, OPERATION, Clear Memory Mode.>, and Inspection Mode <Ref. to EN(H4DO)(diag)-50, PROCEDURE, Inspection Mode.>.

WIRING DIAGRAM:

Engine electrical system <Ref. to WI-102, Engine Electrical System.>

EN-11347

Diagnostic Procedure with Diagnostic Trouble Code (DTC)

ENGINE (DIAGNOSTICS)

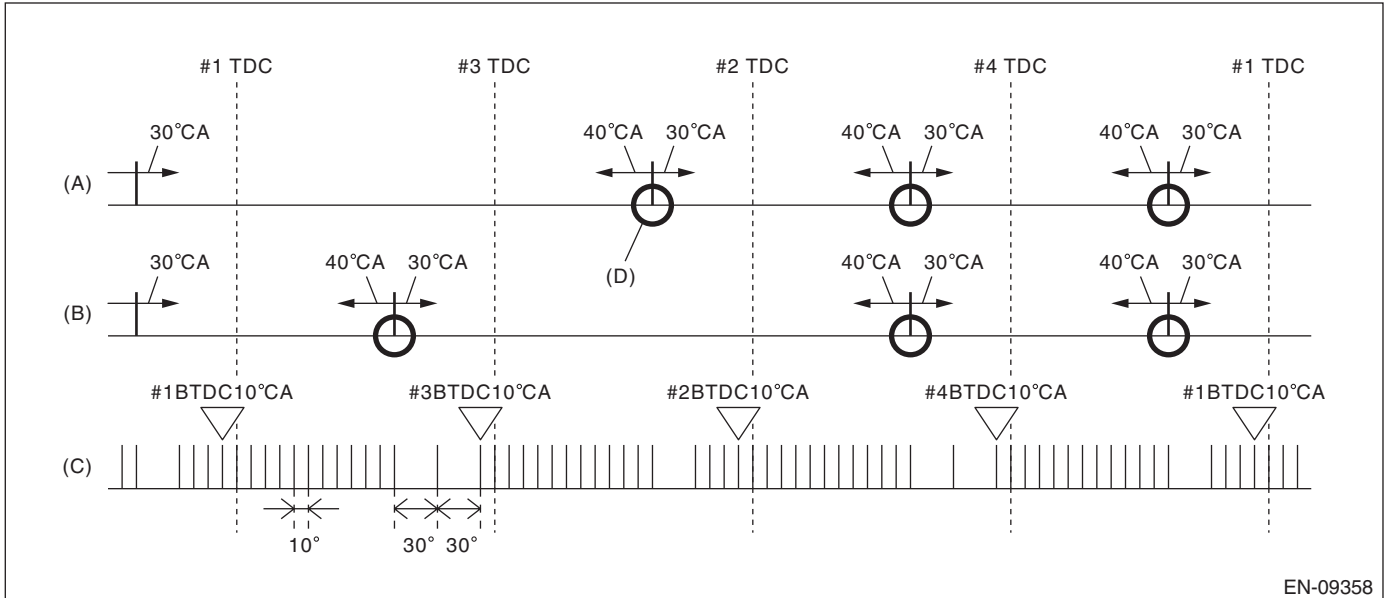

Step	Check	Yes	No
1 CHECK POWER SUPPLY OF CAMSHAFT POSITION SENSOR. 1) Turn the ignition switch to OFF. 2) Disconnect the connector from camshaft position sensor. 3) Turn the ignition switch to ON. 4) Measure the voltage between camshaft position sensor connector and engine ground. Connector & terminal (E36) No. 1 (+) — Engine ground (-):	Is the voltage 10 V or more?	Go to step 2.	Repair the harness and connector. NOTE: In this case, repair the following item: <ul style="list-style-type: none"> • Open circuit or short circuit to ground in harness between main relay connector and camshaft position sensor connector • Poor contact of coupling connector
2 CHECK HARNESS BETWEEN ECM AND CAMSHAFT POSITION SENSOR CONNECTOR. 1) Turn the ignition switch to OFF. 2) Disconnect the connector from ECM. 3) Measure the resistance between ECM connector and camshaft position sensor connector. Connector & terminal (B136) No. 26 — (E36) No. 2: (B136) No. 34 — (E36) No. 3:	Is the resistance less than 1 Ω?	Go to step 3.	Repair the harness and connector. NOTE: In this case, repair the following item: <ul style="list-style-type: none"> • Open circuit in harness between ECM connector and camshaft position sensor connector • Poor contact of coupling connector
3 CHECK HARNESS BETWEEN ECM AND CAMSHAFT POSITION SENSOR CONNECTOR. Measure the resistance between camshaft position sensor connector and engine ground. Connector & terminal (E36) No. 2 — Engine ground:	Is the resistance 1 MΩ or more?	Go to step 4.	Repair short circuit to ground in harness between ECM connector and camshaft position sensor connector.
4 CHECK HARNESS BETWEEN ECM AND CAMSHAFT POSITION SENSOR CONNECTOR. Measure the voltage between camshaft position sensor connector and engine ground. Connector & terminal (E36) No. 2 (+) — Engine ground (-):	Is the voltage 5 V or more?	Repair the short circuit to power in the harness between ECM connector and camshaft position sensor connector.	Go to step 5.
5 CHECK CONDITION OF CAMSHAFT POSITION SENSOR.	Is the camshaft position sensor installation bolt tightened securely?	Go to step 6.	Tighten the camshaft position sensor installation bolt securely.
6 CHECK CAMSHAFT POSITION SENSOR. Check the waveform of the camshaft position sensor. <Ref. to EN(H4DO)(diag)-20, Engine Control Module (ECM) I/O Signal.>	Is there any abnormality in waveform?	Replace the camshaft position sensor. <Ref. to FU(H4DO)-57, Camshaft Position Sensor.>	Repair the following item. <ul style="list-style-type: none"> • Poor contact of ECM connector • Poor contact of camshaft position sensor connector • Poor contact of coupling connector

1. OUTLINE OF DIAGNOSIS

Detect the open or short circuit of the camshaft position sensor.

When there is no camshaft position signal input continuously, judge as NG.

2. COMPONENT DESCRIPTION

EN-09358

- (A) Camshaft signal (RH) (B) Camshaft signal (LH) (C) Crankshaft signal
- (D) Camshaft position signal: When normal, there will be 3 camshaft position signals for every 2 crankshaft revolutions.

3. EXECUTION CONDITION

Diagnosis 1

Secondary Parameters	Execution condition
Battery voltage	≥ 8 V

Diagnosis 2

Secondary Parameters	Execution condition
Battery voltage	≥ 8 V
Elapsed time after starting the engine	≥ 200 ms

4. GENERAL DRIVING CYCLE

Always perform the diagnosis continuously.

5. DIAGNOSTIC METHOD

Diagnosis 1

Judge as NG when no input of camshaft position sensor signal in TDC remains for 10 time(s).

Judgment Value

Malfunction Criteria	Threshold Value
Number of intake camshaft position sensor pulses during cranking	= 0

Time Needed for Diagnosis: TDC × 10 time(s)

Diagnosis 2

If the duration of time while the following conditions are met is longer than the time indicated, judge as NG.

Judgment Value

Malfunction Criteria	Threshold Value
Number of intake camshaft position sensor pulses during 0.5 crankshaft rev.	= 0

Time Needed for Diagnosis: 3000 ms

Malfunction Indicator Light Illumination: Illuminates as soon as a malfunction occurs.

Diagnostic Procedure with Diagnostic Trouble Code (DTC)

ENGINE (DIAGNOSTICS)

BX:DTC P0341 CAMSHAFT POSITION SENSOR "A" CIRCUIT RANGE/PERFORMANCE BANK 1 OR SINGLE SENSOR

NOTE:

For the diagnostic procedure, refer to DTC P0340. <Ref. to EN(H4DO)(diag)-291, DTC P0340 CAMSHAFT POSITION SENSOR "A" CIRCUIT BANK 1 OR SINGLE SENSOR, Diagnostic Procedure with Diagnostic Trouble Code (DTC).>

1. OUTLINE OF DIAGNOSIS

Detect the malfunction of camshaft position sensor property.

Judge as NG when the number of camshaft signals remains abnormal.

2. COMPONENT DESCRIPTION

EN-09358

(A) Camshaft signal (RH)

(B) Camshaft signal (LH)

(C) Crankshaft signal

(D) Camshaft position signal: When normal, there will be 3 camshaft position signals for every 2 crankshaft revolutions.

3. EXECUTION CONDITION

Secondary Parameters	Execution condition
Battery voltage	$\geq 8 \text{ V}$
Elapsed time after starting the engine	$\geq 200 \text{ ms}$

4. GENERAL DRIVING CYCLE

Always perform the diagnosis continuously.

5. DIAGNOSTIC METHOD

Judge as NG when the status where the number of camshaft position sensor signal in two crankshaft revolutions is other than 3 time(s).

Judgment Value

Malfunction Criteria	Threshold Value
Amount of camshaft sensor signal during 2 revs of crankshaft	$\neq 3 \text{ time(s)}$

Time Needed for Diagnosis: Two engine revs. \times 4 time(s)

Malfunction Indicator Light Illumination: Illuminates as soon as a malfunction occurs.

Diagnostic Procedure with Diagnostic Trouble Code (DTC)

ENGINE (DIAGNOSTICS)

BY:DTC P0345 CAMSHAFT POSITION SENSOR "A" CIRCUIT BANK 2

DTC DETECTING CONDITION:

Immediately at fault recognition

TROUBLE SYMPTOM:

- Engine stall
- Failure of engine to start

CAUTION:

After servicing or replacing faulty parts, perform Clear Memory Mode <Ref. to EN(H4DO)(diag)-66, OPERATION, Clear Memory Mode.>, and Inspection Mode <Ref. to EN(H4DO)(diag)-50, PROCEDURE, Inspection Mode.>.

Diagnostic Procedure with Diagnostic Trouble Code (DTC)

ENGINE (DIAGNOSTICS)

1. OUTLINE OF DIAGNOSIS

Based on the self-diagnostic result of the ignition coil driving IC, judge the ignition coil driving circuit as normal or abnormal.

The ignition coil driving IC detects "no ignition" status as a malfunction.

2. EXECUTION CONDITION

Secondary parameters	Execution condition
Battery voltage	≥ 10.9 V
Elapsed time after starting the engine	> 1 s
Engine speed	≥ 500 rpm

3. GENERAL DRIVING CYCLE

Always perform the diagnosis continuously.

4. DIAGNOSTIC METHOD

Judge as NG when the following conditions are established.

Judgment Value

Malfunction Criteria	Threshold Value
Ignition driving IC information	Trouble

Time Needed for Diagnosis: 2560 ms

Malfunction Indicator Light Illumination: Illuminates as soon as a malfunction occurs.

ENGINE (DIAGNOSTICS)

Step	Check	Yes	No
1 CHECK POWER SUPPLY OF CAMSHAFT POSITION SENSOR. 1) Turn the ignition switch to OFF. 2) Disconnect the connector from camshaft position sensor. 3) Turn the ignition switch to ON. 4) Measure the voltage between camshaft position sensor connector and engine ground. Connector & terminal (E62) No. 1 (+) — Engine ground (-):	Is the voltage 10 V or more?	Go to step 2.	Repair the harness and connector. NOTE: In this case, repair the following item: • Open circuit or short circuit to ground in harness between main relay connector and camshaft position sensor connector • Poor contact of coupling connector
2 CHECK HARNESS BETWEEN ECM AND CAMSHAFT POSITION SENSOR CONNECTOR. 1) Turn the ignition switch to OFF. 2) Disconnect the connector from ECM. 3) Measure the resistance between ECM connector and camshaft position sensor connector. Connector & terminal (B136) No. 14 — (E62) No. 2: (B136) No. 34 — (E62) No. 3:	Is the resistance less than 1 Ω?	Go to step 3.	Repair the harness and connector. NOTE: In this case, repair the following item: • Open circuit in harness between ECM connector and camshaft position sensor connector • Poor contact of coupling connector
3 CHECK HARNESS BETWEEN ECM AND CAMSHAFT POSITION SENSOR CONNECTOR. Measure the resistance between camshaft position sensor connector and engine ground. Connector & terminal (E62) No. 2 — Engine ground:	Is the resistance 1 MΩ or more?	Go to step 4.	Repair short circuit to ground in harness between ECM connector and camshaft position sensor connector.
4 CHECK HARNESS BETWEEN ECM AND CAMSHAFT POSITION SENSOR CONNECTOR. Measure the voltage between camshaft position sensor connector and engine ground. Connector & terminal (E62) No. 2 (+) — Engine ground (-):	Is the voltage 5 V or more?	Repair the short circuit to power in the harness between ECM connector and camshaft position sensor connector.	Go to step 5.
5 CHECK CONDITION OF CAMSHAFT POSITION SENSOR.	Is the camshaft position sensor installation bolt tightened securely?	Go to step 6.	Tighten the camshaft position sensor installation bolt securely.
6 CHECK CAMSHAFT POSITION SENSOR. Check the waveform of the camshaft position sensor. <Ref. to EN(H4DO)(diag)-20, Engine Control Module (ECM) I/O Signal.>	Is there any abnormality in waveform?	Replace the camshaft position sensor. <Ref. to FU(H4DO)-57, Camshaft Position Sensor.>	Repair the following item. • Poor contact of ECM connector • Poor contact of camshaft position sensor connector • Poor contact of coupling connector

1. OUTLINE OF DIAGNOSIS

Detect the open or short circuit of the camshaft position sensor.

When there is no camshaft position signal input continuously, judge as NG.

2. COMPONENT DESCRIPTION

(A) Camshaft signal (RH)

(B) Camshaft signal (LH)

(C) Crankshaft signal

(D) Camshaft position signal: When normal, there will be 2 camshaft position signals for every 2 crankshaft revolutions.

3. EXECUTION CONDITION

Secondary Parameters	Execution condition
Battery voltage	≥ 10.9 V
Elapsed time after starting the engine	≥ 200 ms

4. GENERAL DRIVING CYCLE

Always perform the diagnosis continuously.

5. DIAGNOSTIC METHOD

Judge as NG when no input of camshaft position sensor signal in TDC remains for 10 time(s).

Judgment Value

Malfunction Criteria	Threshold Value
Number of exhaust camshaft position sensor pulse during 0.5 crankshaft rev.	= 0

Time Needed for Diagnosis: TDC × 10 time(s)

Malfunction Indicator Light Illumination: Illuminates as soon as a malfunction occurs.

Diagnostic Procedure with Diagnostic Trouble Code (DTC)

ENGINE (DIAGNOSTICS)

Step	Check	Yes	No
1 CHECK POWER SUPPLY OF CAMSHAFT POSITION SENSOR. 1) Turn the ignition switch to OFF. 2) Disconnect the connector from camshaft position sensor. 3) Turn the ignition switch to ON. 4) Measure the voltage between camshaft position sensor connector and engine ground. Connector & terminal (E65) No. 1 (+) — Engine ground (-):	Is the voltage 10 V or more?	Go to step 2.	Repair the harness and connector. NOTE: In this case, repair the following item: <ul style="list-style-type: none"> • Open circuit or short circuit to ground in harness between main relay connector and camshaft position sensor connector • Poor contact of coupling connector
2 CHECK HARNESS BETWEEN ECM AND CAMSHAFT POSITION SENSOR CONNECTOR. 1) Turn the ignition switch to OFF. 2) Disconnect the connector from ECM. 3) Measure the resistance between ECM connector and camshaft position sensor connector. Connector & terminal (B136) No. 25 — (E65) No. 2: (B136) No. 34 — (E65) No. 3:	Is the resistance less than 1 Ω?	Go to step 3.	Repair the harness and connector. NOTE: In this case, repair the following item: <ul style="list-style-type: none"> • Open circuit in harness between ECM connector and camshaft position sensor connector • Poor contact of coupling connector
3 CHECK HARNESS BETWEEN ECM AND CAMSHAFT POSITION SENSOR CONNECTOR. Measure the resistance between camshaft position sensor connector and engine ground. Connector & terminal (E65) No. 2 — Engine ground:	Is the resistance 1 MΩ or more?	Go to step 4.	Repair short circuit to ground in harness between ECM connector and camshaft position sensor connector.
4 CHECK HARNESS BETWEEN ECM AND CAMSHAFT POSITION SENSOR CONNECTOR. Measure the voltage between camshaft position sensor connector and engine ground. Connector & terminal (E65) No. 2 (+) — Engine ground (-):	Is the voltage 5 V or more?	Repair the short circuit to power in the harness between ECM connector and camshaft position sensor connector.	Go to step 5.
5 CHECK CONDITION OF CAMSHAFT POSITION SENSOR.	Is the camshaft position sensor installation bolt tightened securely?	Go to step 6.	Tighten the camshaft position sensor installation bolt securely.
6 CHECK CAMSHAFT POSITION SENSOR. Check the waveform of the camshaft position sensor. <Ref. to EN(H4DO)(diag)-20, Engine Control Module (ECM) I/O Signal.>	Is there any abnormality in waveform?	Replace the camshaft position sensor. <Ref. to FU(H4DO)-57, Camshaft Position Sensor.>	Repair the following item. <ul style="list-style-type: none"> • Poor contact of ECM connector • Poor contact of camshaft position sensor connector • Poor contact of coupling connector

1. OUTLINE OF DIAGNOSIS

NOTE:

For the detection standard, refer to DTC P0365. <Ref. to EN(H4DO)(diag)-301, DTC P0365 CAMSHAFT POSITION SENSOR "B" CIRCUIT BANK 1, Diagnostic Procedure with Diagnostic Trouble Code (DTC).>

CH:DTC P0391 CAMSHAFT POSITION SENSOR "B" CIRCUIT RANGE/PERFORMANCE BANK 2

NOTE:

For the diagnostic procedure, refer to DTC P0390. <Ref. to EN(H4DO)(diag)-305, DTC P0390 CAMSHAFT POSITION SENSOR "B" CIRCUIT BANK 2, Diagnostic Procedure with Diagnostic Trouble Code (DTC).>

1. OUTLINE OF DIAGNOSIS

NOTE:

For the detection standard, refer to DTC P0366. <Ref. to EN(H4DO)(diag)-304, DTC P0366 CAMSHAFT POSITION SENSOR "B" CIRCUIT RANGE/PERFORMANCE BANK 1, Diagnostic Procedure with Diagnostic Trouble Code (DTC).>

Diagnostic Procedure with Diagnostic Trouble Code (DTC)

ENGINE (DIAGNOSTICS)

CI: DTC P0400 EGR "A" FLOW

DTC detecting condition:

Detected when two consecutive driving cycles with fault occur.

Trouble symptom:

- Movement performance problem when engine is low speed
- Improper idling
- Movement performance problem

CAUTION:

After servicing or replacing faulty parts, perform Clear Memory Mode <Ref. to EN(H4DO)(diag)-66, OPERATION, Clear Memory Mode.>, and Inspection Mode <Ref. to EN(H4DO)(diag)-50, PROCEDURE, Inspection Mode.>.

Step	Check	Yes	No
1 CHECK CURRENT DATA. 1) Start the engine. 2) Read the value of «Mani. Absolute Pressure» using the Subaru Select Monitor or a general scan tool. NOTE: • Subaru Select Monitor For detailed operation procedures, refer to "Current Data Display For Engine". <Ref. to EN(H4DO)(diag)-36, Subaru Select Monitor.> • General scan tool For detailed operation procedures, refer to the general scan tool operation manual.	Is the value of «Mani. Absolute Pressure» 53.3 kPa (400 mmHg, 15.75 inHg) or more?	Make sure that the EGR control valve, manifold absolute pressure sensor and throttle body are installed securely.	Go to step 2.
2 CHECK EGR CONTROL VALVE. Remove the EGR control valve.	Are there any holes, clogged lines or foreign matters in the EGR system?	Repair the EGR system.	Replace EGR control valve. <Ref. to EC(H4DO)-23, EGR Control Valve.>

Diagnostic Procedure with Diagnostic Trouble Code (DTC)

ENGINE (DIAGNOSTICS)

1. OUTLINE OF DIAGNOSIS

Detect EGR system malfunction.

Intake manifold pressure (negative pressure) is constant because the throttle valve is fully closed during deceleration fuel cut. At this time, when the EGR control valve is opened/closed, the intake manifold pressure will change. EGR System OK/NG is judged by the range of this change.

2. COMPONENT DESCRIPTION

EN-09573

- | | | |
|---------------------------------|-----------------------|-----------------------|
| (1) Engine control module (ECM) | (4) Switching circuit | (6) Main relay |
| (2) Computer unit (CPU) | (5) Battery voltage | (7) EGR control valve |
| (3) Detecting circuit | | |

3. EXECUTION CONDITION

Secondary parameters	Execution condition
Battery voltage	≥ 10.9 V
Barometric pressure	≥ 75.1 kPa (563 mmHg, 22.2 inHg)
Intake air temperature	≥ 0 °C(32 °F)
Engine speed	1300 rpm — 5000 rpm
Vehicle speed	≥ 40 km/h (24.9 MPH)
Elapsed time after fuel cut	≥ 3000 ms
Neutral switch	= OFF

4. GENERAL DRIVING CYCLE

During deceleration fuel cut from 40 km/h (approx. 24.9 MPH) or more, perform diagnosis once.

Be careful of vehicle speed and engine speed. (Diagnosis will not be completed if the vehicle speed and engine speed conditions become out of specification due to deceleration.)

5. DIAGNOSTIC METHOD

Measure the pressure values when the enable conditions are established, and perform diagnosis by calculating those results.

1. Label the intake manifold pressure value as PMOF1, which is observed when enable conditions are established, and set the EGR target step to 45 step(s) (nearly full open).

2. Label the intake manifold pressure value as PMON, which is observed after 1000 ms has passed since EGR target step was set to 45 step(s) (when the enable conditions were established), and set the EGR target step to 0.

Diagnostic Procedure with Diagnostic Trouble Code (DTC)

ENGINE (DIAGNOSTICS)

3. Label the intake manifold pressure as PMOF2, which is observed after 1000 ms has passed since EGR target step was set to 0 (after (1000 ms + 1000 ms) have passed since the enable conditions were established).

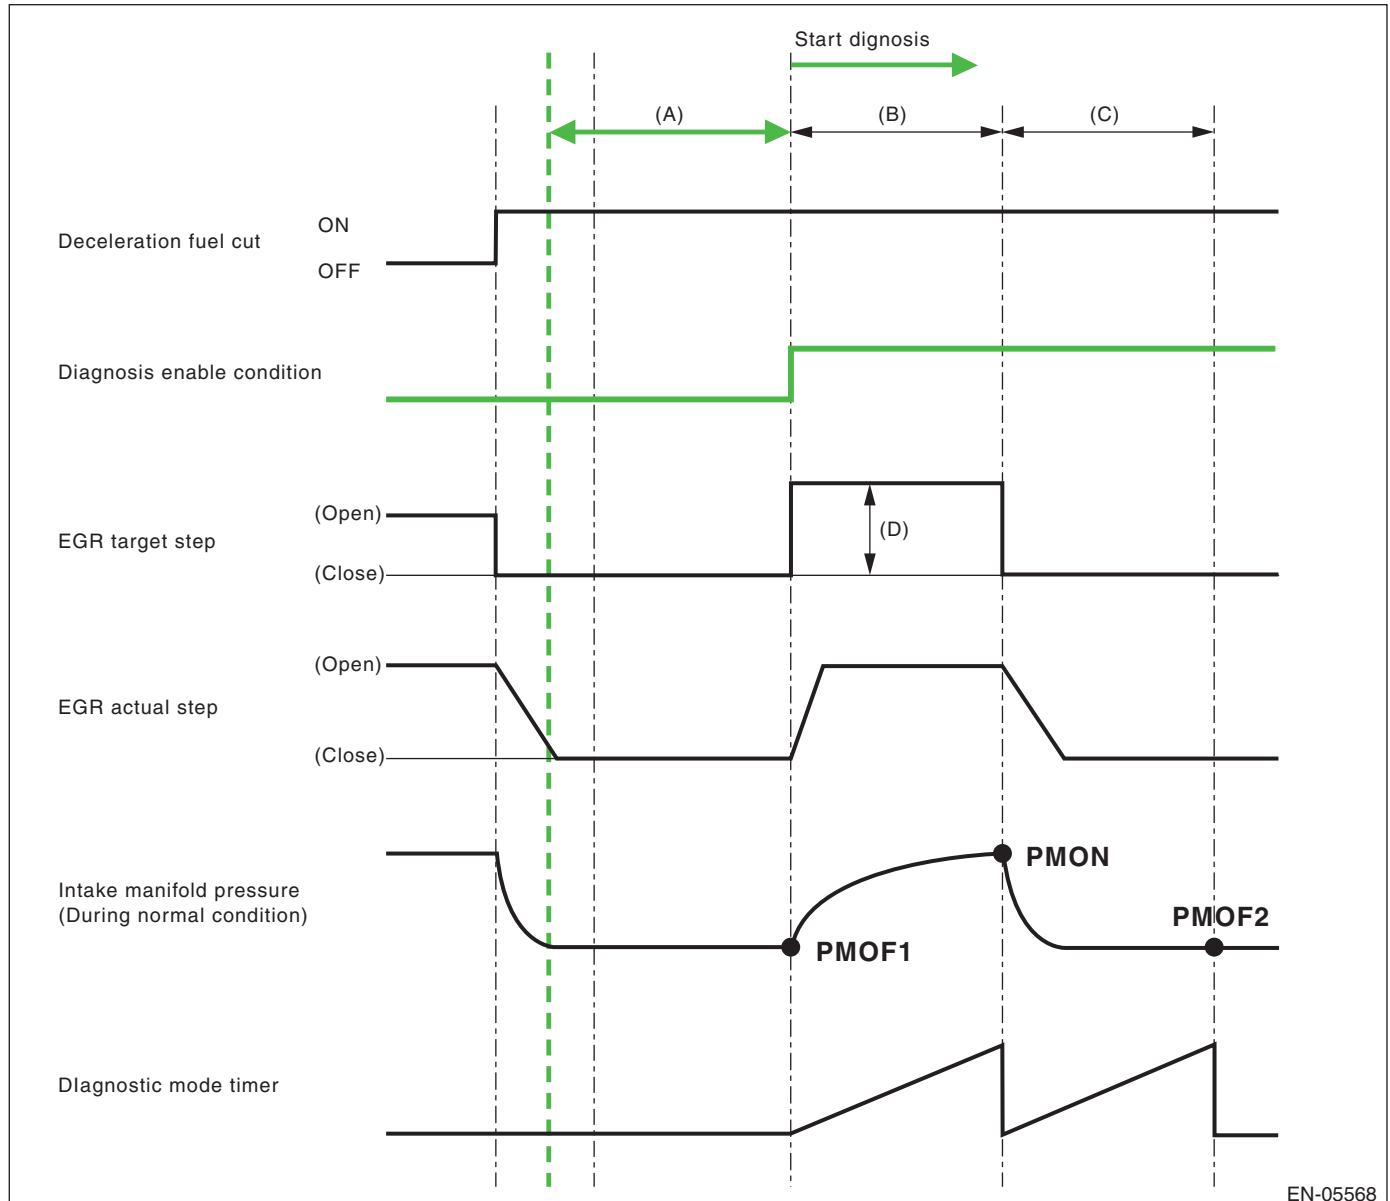

Judge as NG when the following conditions are established.

Judgment Value

Malfunction Criteria	Threshold Value
$PMON - (PMOF1 + PMOF2)/2$	< 2.5 kPa (18.63 mmHg, 0.7 inHg)

Time Needed for Diagnosis: 2 seconds

Malfunction Indicator Light Illumination: Illuminates when malfunction occurs in 2 continuous driving cycles.

Diagnostic Procedure with Diagnostic Trouble Code (DTC)

ENGINE (DIAGNOSTICS)

Step	Check	Yes	No
<p>1</p> <p>CHECK EXHAUST SYSTEM. Check for gas leaks or air suction caused by loose or dislocated nuts and bolts, and open hole at exhaust pipes.</p> <p>NOTE: Check the following positions.</p> <ul style="list-style-type: none"> • Between cylinder head and front exhaust pipe • Between front exhaust pipe and front catalytic converter • Between front catalytic converter and rear catalytic converter • Loose or improperly attached front oxygen (A/F) sensor or rear oxygen sensor 	<p>Is there any fault in exhaust system?</p>	<p>Repair or replace the exhaust system. <Ref. to EX(H4DO)-2, General Description.></p>	<p>Go to step 2.</p>
<p>2</p> <p>CHECK WAVEFORM DATA ON THE SUBARU SELECT MONITOR (WHILE DRIVING).</p> <p>1) Drive at a constant speed between 80 — 112 km/h (50 — 70 MPH).</p> <p>2) After 5 minutes have elapsed in the condition of step 1), use the Subaru Select Monitor while still driving to read the waveform data.</p> <ul style="list-style-type: none"> • At normal condition  <p>10 sec/div EN-06666</p> <ul style="list-style-type: none"> • At abnormal condition (numerous inversion)  <p>10 sec/div EN-06667</p>	<p>Is a normal waveform displayed?</p>	<p>Even if DTC is detected, the circuit has returned to a normal condition at this time. Reproduce the failure, and then perform the diagnosis again.</p> <p>NOTE: In this case, temporary poor contact of connector, temporary open or short circuit of harness may be the cause.</p>	<p>Go to step 3.</p>

Diagnostic Procedure with Diagnostic Trouble Code (DTC)

ENGINE (DIAGNOSTICS)

Step	Check	Yes	No
<p>3 CHECK WAVEFORM DATA ON THE SUBARU SELECT MONITOR (WHILE IDLING).</p> <p>1) Run the engine at idle. 2) In the condition of step 1), use the Subaru Select Monitor to read the waveform data.</p> <ul style="list-style-type: none"> At normal condition  <p>10 sec/div EN-06668</p> <ul style="list-style-type: none"> At abnormal condition 1 (numerous inversion)  <p>10 sec/div EN-06669</p> <ul style="list-style-type: none"> At abnormal condition 2 (noise input)  <p>10 sec/div EN-06670</p>	<p>Is a normal waveform displayed?</p>	<p>Go to step 4.</p>	<ul style="list-style-type: none"> The waveform is displayed at abnormal condition 1: Go to step 4. The waveform is displayed at abnormal condition 2: Go to step 5.
<p>4 CHECK CATALYTIC CONVERTER.</p>	<p>Is the catalytic converter damaged?</p>	<p>Replace the catalytic converter. <Ref. to EC(H4DO)-8, Front Catalytic Converter.> <Ref. to EC(H4DO)-9, Rear Catalytic Converter.></p>	<p>Go to step 5.</p>
<p>5 CHECK REAR OXYGEN SENSOR CONNECTOR AND COUPLING CONNECTOR.</p>	<p>Has water entered the connector?</p>	<p>Completely remove any water inside.</p>	<p>Go to step 6.</p>

Diagnostic Procedure with Diagnostic Trouble Code (DTC)

ENGINE (DIAGNOSTICS)

Step	Check	Yes	No
6 CHECK HARNESS BETWEEN ECM AND REAR OXYGEN SENSOR CONNECTOR. 1) Turn the ignition switch to OFF. 2) Disconnect the connector from ECM. 3) Disconnect the connector from rear oxygen sensor. 4) Measure the resistance of harness between ECM connector and rear oxygen sensor connector. <i>Connector & terminal</i> <i>(B136) No. 21 — (E25) No. 3:</i> <i>(B135) No. 30 — (E25) No. 4:</i>	Is the resistance less than 1 Ω ?	Go to step 7.	Repair the harness and connector. NOTE: Repair the following locations. • Open circuit in harness between ECM connector and rear oxygen sensor connector • Poor contact of coupling connector
7 CHECK REAR OXYGEN SENSOR SHIELD. 1) Turn the ignition switch to OFF. 2) Expose the rear oxygen sensor connector body side harness sensor shield. 3) Measure the resistance between sensor shield and chassis ground.	Is the resistance less than 1 Ω ?	Go to step 8.	Repair the open circuit of rear oxygen sensor harness.
8 CHECK ENGINE OIL AMOUNT AND EXHAUST GAS. 1) Check the engine oil amount. <Ref. to LU(H4DO)-10, INSPECTION, Engine Oil.> 2) Check exhaust gas during idling.	Does the engine oil amount drop or white smoke emit from the muffler?	Check the engine, and repair the defective part. <Ref. to ME(H4DO)-353, INSPECTION, Engine Trouble in General.> After repairing the engine, replace the catalytic converter. <Ref. to EC(H4DO)-8, Front Catalytic Converter.> <Ref. to EC(H4DO)-9, Rear Catalytic Converter.> After the catalytic converter is replaced, perform step 2 to check the normal waveform is displayed, and then exit the procedure.	Go to step 9.

Diagnostic Procedure with Diagnostic Trouble Code (DTC)

ENGINE (DIAGNOSTICS)

Step	Check	Yes	No
9 CHECK IGNITION SYSTEM. 1) Check the spark plug. <Ref. to IG(H4DO)-6, INSPECTION, Spark Plug.> 2) Check the status of the ignition coil connector and the spark plug terminal.	Is there any fault in the ignition system?	After repairing the ignition system, replace the catalytic converter. <Ref. to EC(H4DO)-8, Front Catalytic Converter.> <Ref. to EC(H4DO)-9, Rear Catalytic Converter.> After the catalytic converter is replaced, perform step 2 to check the normal waveform is displayed, and then exit the procedure.	Go to step 10.
10 CHECK FUEL SYSTEM. 1) Refer to and check the items in "Insufficient fuel supply to fuel injector" (except for "a. Fuel pump does not operate.") and "Leakage or blow out of fuel". <Ref. to FU(H4DO)-172, INSPECTION, Fuel System Trouble in General.> 2) Check throttle body. <Ref. to FU(H4DO)-17, INSPECTION, Throttle Body.> 3) Check intake manifold. <Ref. to FU(H4DO)-40, INSPECTION, Intake Manifold.>	Is there any fault in the fuel system?	After repairing the fuel system, replace the catalytic converter. <Ref. to EC(H4DO)-8, Front Catalytic Converter.> <Ref. to EC(H4DO)-9, Rear Catalytic Converter.> After the catalytic converter is replaced, perform step 2 to check the normal waveform is displayed, and then exit the procedure.	Go to step 11.

Diagnostic Procedure with Diagnostic Trouble Code (DTC)

ENGINE (DIAGNOSTICS)

Step	Check	Yes	No
11 CHECK DTC.	Is any other DTC displayed?	Check the appropriate DTC using the "List of Diagnostic Trouble Code (DTC)". <Ref. to EN(H4DO)(diag)-96, List of Diagnostic Trouble Code (DTC).> After checking the DTC, replace the catalytic converter. <Ref. to EC(H4DO)-8, Front Catalytic Converter.> <Ref. to EC(H4DO)-9, Rear Catalytic Converter.> After the catalytic converter is replaced, perform step 2 to check the normal waveform is displayed, and then exit the procedure.	Replace the rear oxygen sensor. <Ref. to FU(H4DO)-94, Rear Oxygen Sensor.>

1. OUTLINE OF DIAGNOSIS

Detect the deterioration of the catalyst function.

Detect the degradation of catalyst function using catalyst conversion efficiency.

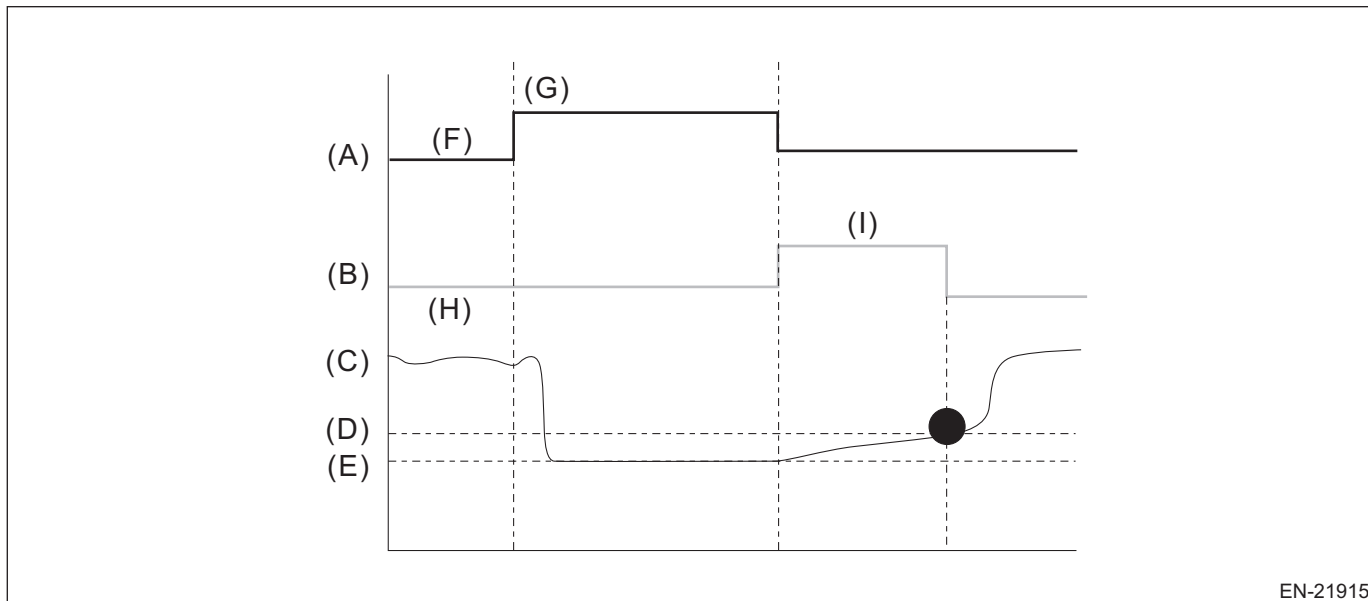

Catalyst diagnosis is performed by comparing the catalyst monitor value and the compensation coefficient of rear oxygen sensor response.

2. EXECUTION CONDITION

Secondary parameters	Execution condition
Battery voltage	≥ 10.9 V
Barometric pressure	≥ 75.1 kPa (563 mmHg, 22.2 inHg)
Amount of intake air	< 6.2 g/s (0.22 oz/s)
Accelerator pedal position	While idling
Rear oxygen sensor output voltage after fuel cut	< 0.15 V
Estimated catalyst temperature	≥ 525 °C (977 °F) (CVT model) ≥ 525 °C (977 °F) (MT model)
Estimated rear oxygen element temperature	≥ 500 °C (932 °F)
(Integrated intake air amount during fuel cut	≥ 13.45 g (0.47 oz)
Fuel shut-off function from above)	Not in operation

3. DIAGNOSTIC METHOD

Judge as NG when the duration is within the predetermined time at the time when the conditions below are established by calculating the difference between the catalyst monitor value and the compensation coefficient of rear oxygen sensor response after the execution conditions are established.

EN-21915

- | | | |
|--------------------------------|-----------|-------------|
| (A) Fuel cut | (D) 0.2 V | (G) ON |
| (B) Catalyst monitor condition | (E) 0 V | (H) Disable |
| (C) Rear oxygen sensor voltage | (F) OFF | (I) Enable |

Judgment value

Malfunction Criteria	Threshold Value
Catalyst monitoring value – Rear oxygen sensor response compensation coefficient	< 0.35 g

$$\text{Catalytic converter monitor value}^* = \left| \left(\left\{ \frac{\text{Amount of intake air}}{14.7} - \frac{\text{Amount of intake air}}{\text{Main feedback } \lambda \text{ value} \times 14.7} \right\} \times 14.7 \times 0.23 \right) \times \text{TF} \right|$$

EN-22042

* After 5 to 15 seconds of fuel cut recovery, the catalyst monitoring value will be calculated until the rear oxygen sensor exceeds 0.2 V.

Diagnostic Procedure with Diagnostic Trouble Code (DTC)

ENGINE (DIAGNOSTICS)

TF = Temperature Factor

Map

Estimated catalyst temperature °C (°F)	500 (842)	500 (932)	600 (1,112)	650 (1,202)	800 (1,472)	900 (1,652)
Temperature Factor	1.25	1	1	1.25	1.25	1.25

Time needed for diagnosis: Less than 1 second

Malfunction indicator light illumination: Illuminates when malfunction occurs in 2 continuous driving cycles.

Diagnostic Procedure with Diagnostic Trouble Code (DTC)

ENGINE (DIAGNOSTICS)

CK:DTC P0441 EVAP SYSTEM (CPC) INCORRECT PURGE FLOW

DTC DETECTING CONDITION:

Detected when two consecutive driving cycles with fault occur.

TROUBLE SYMPTOM:

Improper idling

CAUTION:

After servicing or replacing faulty parts, perform Clear Memory Mode <Ref. to EN(H4DO)(diag)-66, OPERATION, Clear Memory Mode.>, and Inspection Mode <Ref. to EN(H4DO)(diag)-50, PROCEDURE, Inspection Mode.>.

Step	Check	Yes	No
1 CHECK FOR ANY OTHER DTC ON DISPLAY.	Is any other DTC displayed?	Check the appropriate DTC using the "List of Diagnostic Trouble Code (DTC)". <Ref. to EN(H4DO)(diag)-96, List of Diagnostic Trouble Code (DTC).>	Go to step 2.
2 CHECK PURGE CONTROL SOLENOID VALVE. Operate the purge control solenoid valve using the Subaru Select Monitor. NOTE: For detailed operation procedures, refer to the "Active Test". <Ref. to EN(H4DO)(diag)-67, Active Test.>	Does the purge control solenoid valve operate?	Go to step 3.	Replace the purge control solenoid valve. <Ref. to EC(H4DO)-18, Purge Control Solenoid Valve.>
3 CHECK EVAPORATIVE EMISSION CONTROL SYSTEM LINE. 1) Turn the ignition switch to OFF. 2) Check the delivery (test) mode fuse is removed.	Are there holes, cracks, clogging, or disconnection, misconnection of hoses or pipes in evaporative emission control system?	Repair or replace the hoses or pipes.	Repair the poor contact of ECM connector.

Diagnostic Procedure with Diagnostic Trouble Code (DTC)

ENGINE (DIAGNOSTICS)

1. OUTLINE OF DIAGNOSIS

This monitor intrusively performs a functional check to detect incorrect purge flow. The monitor seals the EVAP system (i.e. isolate from atmosphere) by closing the Evaporative Leak Check Module switching valve intrusively after recovering from a fuel cut event. In the case of normal condition, and the commanded purge control duty ratio is more than 0%, Evaporative Leak Check Module pressure (gauge) will decrease due to engine vacuum and reach to the threshold value. However, in the case of malfunction condition (e.g. fuel cap open, purge valve stuck closed, purge line disconnected or blocked), if the Evaporative Leak Check Module pressure (gauge) does not reach the threshold within a predetermined time, the monitor determines a malfunction and stores a fault code.

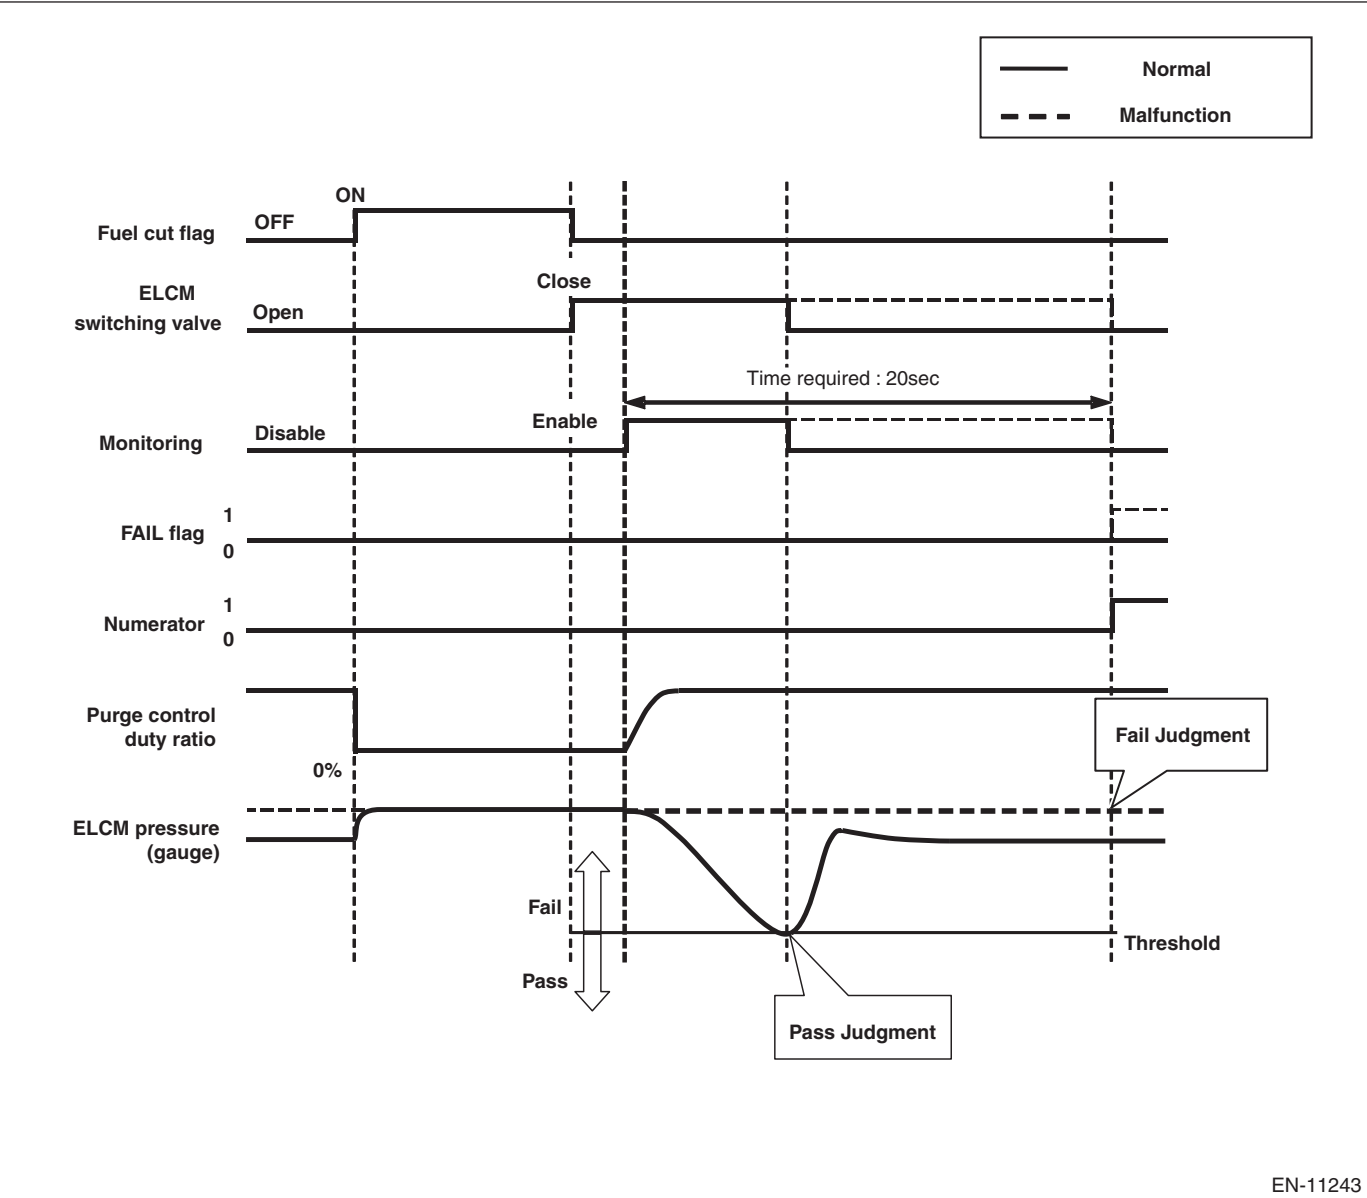

Malfunction Criteria

Evaporative Leak Check Module pressure (gauge) > Threshold

- | | | |
|---|----------------------------------|---------------|
| (1) Leak check valve ASSY | (5) Vacuum pump | (9) Fuel tank |
| (2) Switching valve (closed) | (6) Drain filter | (10) Canister |
| (3) Reference orifice (0.02 inch orifice) | (7) Purge control solenoid valve | |
| (4) Pressure sensor | (8) Intake manifold | |

Diagnostic Procedure with Diagnostic Trouble Code (DTC)

Diagnostic Procedure with Diagnostic Trouble Code (DTC)

ENGINE (DIAGNOSTICS)

2. EXECUTION CONDITION

Secondary parameters	Execution condition
Time when Evaporative Leak Check Module switching valve is closed	< 120000 ms
Purge control duty ratio	> 0%
Precondition (The precondition is to close the intrusive Evaporative Leak Check Module switching valve)	
Battery voltage	≥ 10.9 V
Barometric pressure	≥ 75.1 kPa (563 mmHg, 22.2 inHg)
Purge air amount sum value calculated at engine starting	≥ Value from Map*
Atmospheric pressure – Intake manifold absolute pressure (Duration of fuel cut Fuel shut-off function from above)	≥ 8.7 kPa (65 mmHg, 2.6 inHg) ≥ 1000 ms Not in operation
Ambient temperature	≥ -25 °C (-13 °F)

*It takes approximately 2 min at 40 MPH

Map

Ambient temperature °C (°F)	0 (32)	10 (50)	20 (68)	30 (86)	40 (104)	50 (122)
Purge air amount sum value calculated at engine starting g (oz)	72 (2.54)	72 (2.54)	72 (2.54)	72 (2.54)	72 (2.54)	72 (2.54)

3. GENERAL DRIVING CYCLE

Perform the diagnosis only once during ordinary driving.

4. DIAGNOSTIC METHOD

Judge as NG when the following conditions are established.

Judgment value

Malfunction Criteria	Threshold Value
Evaporative Leak Check Module pressure (relative pressure)	> 666.6 Pa × -1 (5 mmHg × -1, 0.2 inHg × -1)

Time needed for diagnosis: 30000 ms – 10000 ms

Malfunction indicator light illumination: Illuminates when malfunction occurs in 2 continuous driving cycles.

Diagnostic Procedure with Diagnostic Trouble Code (DTC)

ENGINE (DIAGNOSTICS)

CL:DTC P0451 EVAP SYSTEM (CPC) PRESSURE SENSOR/SWITCH CIRCUIT RANGE/PERFORMANCE

DTC detecting condition:

Detected when two consecutive driving cycles with fault occur.

CAUTION:

After servicing or replacing faulty parts, perform Clear Memory Mode <Ref. to EN(H4DO)(diag)-66, OPERATION, Clear Memory Mode.>, and Inspection Mode <Ref. to EN(H4DO)(diag)-50, PROCEDURE, Inspection Mode.>.

Step	Check	Yes	No	
1	CHECK FOR ANY OTHER DTC ON DISPLAY.	Is any other DTC displayed?	Check the appropriate DTC using the "List of Diagnostic Trouble Code (DTC)". <Ref. to EN(H4DO)(diag)-96, List of Diagnostic Trouble Code (DTC).>	Go to step 2.
2	CHECK CURRENT DATA. 1) Turn the ignition switch to ON (engine OFF). 2) Using the Subaru Select Monitor or general scan tool, read the value in «Absolute Evap Sys. Pressure» and «Mani. Absolute Pressure», and compare them with the actual atmospheric pressure. NOTE: • Subaru Select Monitor For detailed operation procedures, refer to "Current Data Display For Engine". <Ref. to EN(H4DO)(diag)-36, Subaru Select Monitor.> • General scan tool For detailed operation procedures, refer to the general scan tool operation manual. • To read the actual atmospheric pressure, connect the Subaru Select Monitor or general scan tool to the other known good vehicle.	Is the difference with the actual atmospheric pressure 2.4 kPa (18 mmHg, 0.7 inHg) or more?	Replace the part that showed larger deviation from the actual atmospheric pressure than the other. • If deviations in value for «Absolute Evap Sys. Pressure» is larger: Replace the leak check valve assembly. <Ref. to EC(H4DO)-43, Leak Check Valve Assembly.> • If deviations in value for «Mani. Absolute Pressure» is larger: Replace the manifold absolute pressure sensor. <Ref. to FU(H4DO)-74, Manifold Absolute Pressure Sensor.>	Even if DTC is detected, the circuit has returned to a normal condition at this time. Reproduce the failure, and then perform the diagnosis again. NOTE: In this case, temporary poor contact of connector, temporary open or short circuit of harness may be the cause.

Diagnostic Procedure with Diagnostic Trouble Code (DTC)

ENGINE (DIAGNOSTICS)

1. OUTLINE OF DIAGNOSIS

Detect the output characteristics malfunction of Evaporative Leak Check Module pressure sensor. Judge as NG when the Evaporative Leak Check Module pressure sensor output value is largely different from the intake manifold pressure when the ignition switch is ON.

2. COMPONENT DESCRIPTION

EN-08957

- | | | |
|---|----------------------------------|---------------|
| (1) Leak check valve ASSY | (5) Vacuum pump | (9) Fuel tank |
| (2) Switching valve | (6) Drain filter | (10) Canister |
| (3) Reference orifice (0.02 inch orifice) | (7) Purge control solenoid valve | |
| (4) Pressure sensor | (8) Intake manifold | |

3. EXECUTION CONDITION

Secondary parameters	Execution condition
Elapsed time after ignition switch is turned to ON	≥ 500 ms and < 60000 ms
Soaking time	≥ 60 s
Evaporative Leak Check Module vacuum pump	Not in operation
Evaporative Leak Check Module switching valve	Open
Purge control	Not in operation

4. GENERAL DRIVING CYCLE

Perform the diagnosis once at ignition ON.

5. DIAGNOSTIC METHOD

If the duration of time while the following conditions are met is longer than the time indicated, judge as NG.

Judgment value

Malfunction Criteria	Threshold Value
Absolute value (Evaporative Leak Check Module pressure sensor output value – intake manifold pressure (absolute pressure) when ignition switch is ON)	> 4.7 kPa (35.5 mmHg, 1.4 inHg)

Time needed for diagnosis: 320 ms

Malfunction indicator light illumination: Illuminates when malfunction occurs in 2 continuous driving cycles.

CM:DTC P0452 EVAP SYSTEM (CPC) PRESSURE SENSOR/SWITCH CIRCUIT LOW

DTC detecting condition:

Immediately at fault recognition

CAUTION:

After servicing or replacing faulty parts, perform Clear Memory Mode <Ref. to EN(H4DO)(diag)-66, OPERATION, Clear Memory Mode.>, and Inspection Mode <Ref. to EN(H4DO)(diag)-50, PROCEDURE, Inspection Mode.>.

| (4) Pressure sensor | (8) Intake manifold | |

3. EXECUTION CONDITION

Secondary Parameters	Execution condition
12 V battery system voltage	≥ 10.9 V

4. GENERAL DRIVING CYCLE

Always perform the diagnosis continuously.

5. DIAGNOSTIC METHOD

If the duration of time while the following conditions are met is longer than the time indicated, judge as NG.

Judgment Value

Malfunction Criteria	Threshold Value
Output voltage	≥ 4.095 V

Time Needed for Diagnosis: 1000 ms

Malfunction Indicator Light Illumination: Illuminates as soon as a malfunction occurs.

Diagnostic Procedure with Diagnostic Trouble Code (DTC)

ENGINE (DIAGNOSTICS)

CO:DTC P0455 EVAP SYSTEM (CPC) LEAK DETECTED (LARGE LEAK)

DTC detecting condition:

Detected when two consecutive driving cycles with fault occur.

Trouble symptom:

- Fuel odor
- There is a hole of more than 1.0 mm (0.04 in) dia. in evaporation system or fuel tank.
- Fuel filler cap loose or lost

CAUTION:

After servicing or replacing faulty parts, perform Clear Memory Mode <Ref. to EN(H4DO)(diag)-66, OPERATION, Clear Memory Mode.>, and Inspection Mode <Ref. to EN(H4DO)(diag)-50, PROCEDURE, Inspection Mode.>.

Step	Check	Yes	No
1 CHECK FUEL FILLER CAP. 1) Turn the ignition switch to OFF. 2) Check the fuel filler cap. NOTE: The DTC is stored in memory if fuel filler cap is or was loose or if the cap chain has caught while tightening.	Is the fuel filler cap tightened securely?	Go to step 2.	Tighten fuel filler cap securely.
2 CHECK FUEL FILLER CAP.	Is the fuel filler cap genuine?	Go to step 3.	Replace with a genuine fuel filler cap.
3 CHECK FUEL FILLER PIPE GASKET.	Is there any damage to the seal between fuel filler cap and fuel filler pipe?	Repair or replace the fuel filler cap and fuel filler pipe. <Ref. to FU(H4DO)-129, Fuel Filler Pipe.>	Go to step 4.
4 CHECK PURGE CONTROL SOLENOID VALVE. Check air-tightness of the purge control solenoid valve. <Ref. to EC(H4DO)-21, INSPECTION, Purge Control Solenoid Valve.>	Is the check result OK?	Go to step 5.	Replace the purge control solenoid valve. <Ref. to EC(H4DO)-18, Purge Control Solenoid Valve.>
5 CHECK EVAPORATIVE EMISSION CONTROL SYSTEM LINE.	Are there holes on the evaporation line?	Repair or replace the evaporation line. <Ref. to FU(H4DO)-165, Fuel Delivery and Evaporation Lines.>	Go to step 6.
6 CHECK CANISTER.	Are there holes on the canister?	Replace the canister. <Ref. to EC(H4DO)-10, Canister.>	Go to step 7.
7 CHECK LEAK CHECK VALVE ASSEMBLY.	Are there damage or holes on the leak check valve assembly?	Replace the leak check valve assembly. <Ref. to EC(H4DO)-43, Leak Check Valve Assembly.>	Go to step 8.
8 CHECK FUEL TANK. Remove the fuel tank. <Ref. to FU(H4DO)-113, Fuel Tank.>	Are there damage or holes on the fuel tank?	Repair or replace the fuel tank. <Ref. to FU(H4DO)-113, Fuel Tank.>	Go to step 9.

Diagnostic Procedure with Diagnostic Trouble Code (DTC)

ENGINE (DIAGNOSTICS)

Step	Check	Yes	No	
9	CHECK ANY OTHER MECHANICAL TROUBLE IN EVAPORATIVE EMISSION CONTROL SYSTEM.	Are there holes, cracks, clogging, or disconnection, misconnection of hoses or pipes in evaporative emission control system?	Repair or replace the hoses or pipes.	Repair the poor contact of ECM connector.

1. OUTLINE OF DIAGNOSIS

This diagnosis judges whether the Evaporative Leak Check Module operation is normal or not, and whether the evaporative emission system has leak and clogging or not.

To purge the canister, after driving, perform the five hours soaking after ignition switch OFF in order to stabilize the evaporative gas status. * After 5 or 7 or 9.5 hours passed, ECM is activated by soaking timer, and the leak check is started.

Judges whether the Evaporative Leak Check Module operation is normal or not, by measuring the reference pressure status via reference orifice (0.02 inch orifice). Judge as malfunction if the reference pressure is out of specified range. Then, judge whether there is a leak or not, by comparing the pressure (leak pressure) when the reference pressure and the evaporative emission system are in negative pressure condition. Judge as system leak in the evaporative emission system if the leak pressure is higher than reference pressure. Judge as clogging of pipe if the leak pressure becomes lower than the reference pressure within the specified amount of time.

0.02 inch leak and 0.04 inch leak can be distinguished by measuring the leak pressure.

The diagnosis results are stored inside ECM until the engine is started again.

*: When the test conditions are not met in 5 hours, perform diagnosis at elapsed time of 7 hours. When the test conditions are not met in 7 hours, perform diagnosis at elapsed time of 9.5 hours.

	Diagnostic item
Evaporative Leak Check Module system (leak check valve assembly main body)	Vacuum pump stuck Switching valve stuck to open Switching valve stuck to close Reference orifice flow large Reference orifice flow small
Leak check	Large leak <ul style="list-style-type: none"> • 0.04 inch leak • Fuel cap loose • Fuel cap off • System malfunction
	Very small leak <ul style="list-style-type: none"> • 0.02 inch leak
Clogging of pipe	—

OUTLINE OF DIAGNOSIS

2. COMPONENT DESCRIPTION

Evaporative Leak Check Module consists of the pressure sensor, the reference orifice (diameter of 0.02 inch), the vacuum pump which introduces the negative pressure into evaporative emission system, and the switching valve which switches the passage to introduce the negative pressure.

- | | | |
|---|----------------------------------|---------------|
| (1) Leak check valve ASSY | (5) Vacuum pump | (9) Fuel tank |

| (4) Pressure sensor | (8) Intake manifold | |

Diagnostic Procedure with Diagnostic Trouble Code (DTC)

ENGINE (DIAGNOSTICS)

3. EXECUTION CONDITION

Secondary parameters	Execution condition
Battery voltage	≥ 10.9 V
Barometric pressure	≥ 75.1 kPa (563 mmHg, 22.2 inHg)
Activation of soaking timer	Completed
Intake air temperature	≥ 4.4 °C (39.9 °F)
Engine oil temperature	≥ 4.4 °C (39.9 °F)
Engine coolant temperature	≥ 4.4 °C (39.9 °F)
Accumulated purge amount during previous driving cycle	and < 45 °C (113 °F) ≥ Value of Map 1*

*It takes approximately 2 min at 40 MPH

Map 1

Engine coolant temperature °C (°F)	0 (32)	30 (86)	35 (95)	40 (104)	45 (113)
Accumulated purge amount during previous driving cycle g (oz)	128 (4.51)	128 (4.51)	480 (16.93)	800 (28.22)	1120 (39.5)

4. GENERAL DRIVING CYCLE

Perform the diagnosis only once when 5 or 7 or 9.5 hours has passed after ignition switch is OFF. For more detail, refer to "OUTLINE OF DIAGNOSIS". <Ref. to EN(H4DO)(diag)-332, OUTLINE OF DIAGNOSIS, DTC P0455 EVAP SYSTEM (CPC) LEAK DETECTED (LARGE LEAK), Diagnostic Procedure with Diagnostic Trouble Code (DTC).>

5. DIAGNOSTIC METHOD

Mode	Explanation of Mode	Diagnosis Period
A	Vacuum pump operation confirmation and characteristics stability	7 s or less & 300 s
B	Measurement of reference pressure for setting the target negative pressure	40 s or less
C	Switching valve operation confirmation	12 s or less
D	Clogging of pipe diagnosis and leak pressure measurement	900 s or less
E	Reference pressure measurement for judgment	40 s or less

Diagnostic Procedure with Diagnostic Trouble Code (DTC)

ENGINE (DIAGNOSTICS)

EN-08956

Phase	Explanation	DTC
Z	Measurement atmospheric pressure	—
A	Diagnostic 1. Evaporative Leak Check Module Component Performance	P2404
B	Diagnostic 1. Evaporative Leak Check Module Component Performance	P2404
C	Diagnostic 1. Evaporative Leak Check Module Component Performance	P2404
D	Diagnostic 2. Pipe clogging in Evaporative Leak Check Module Measure the tank pressure (Ptank)	P1451
E	Diagnostic 3. Measure the referense for judgment (Pref) Detect 0.020 inch leak or 0.040 inch leak malfunctions. Diagnostic 1. Evaporative Leak Check Module Component Performance	P0455 P0456 P2404

Mode A (Vacuum pump operation confirmation and characteristics stability)

Purpose: Detect the vacuum pump operation trouble.

Judge as NG when the following conditions are established.

Judge as OK if the following conditions are not established, and warm up for five minutes to stabilize the vacuum pump characteristics.

Judgment value

Malfunction Criteria	Threshold Value	DTC
Pressure sensor output value	> -0.2 kPa (-1.68 mmHg, -0.1 inHg)	P2404

Diagnostic Procedure with Diagnostic Trouble Code (DTC)

ENGINE (DIAGNOSTICS)

Mode B (Measurement of reference pressure for setting the target negative pressure)

Judgment 1

Purpose: Judge the reference pressure stability.

Judge as NG when the following conditions are established.

Judgment 2

Purpose: Judge whether the reference pressure is within the normal range, and detect the vacuum pump and orifice malfunctions.

Judge as NG when the following conditions are established.

Judgment value

Malfunction Criteria	Threshold Value	DTC
Judgment 1 Pressure sensor maximum output value – Pressure sensor minimum output value or Judgment 2 Reference pressure for setting the target negative pressure	> 314 Pa (2.355 mmHg, 0.1 inHg) < Value of Map 2 or > Value of Map 3	P2404 P2404

Map 2

Barometric pressure kPa (mmHg, inHg)	70 (525, 20.7)	80 (600, 23.6)	90 (675, 26.6)	100 (750, 29.5)
Reference pressure for setting the target negative pressure kPa (mmHg, inHg)	-4 (-29.79, -1.2)	-4.1 (-30.593, -1.2)	-4.2 (-31.395, -1.2)	-4.3 (-32.19, -1.3)

Map 3

Barometric pressure kPa (mmHg, inHg)	70 (525, 20.7)	80 (600, 23.6)	90 (675, 26.6)	100 (750, 29.5)
Reference pressure for setting the target negative pressure kPa (mmHg, inHg)	-0.9 (-7.065, -0.3)	-1 (-7.86, -0.3)	-1.2 (-8.663, -0.3)	-1.3 (-9.465, -0.4)

Mode C (Switching valve operation confirmation)

Purpose: Measure the pressure increase when switching valve is changed from open to close, and detect the stuck to open/close malfunctions of the switching valve.

Judge as NG when the following conditions are established.

Judgment value

Malfunction Criteria	Threshold Value	DTC
Pressure sensor output value – Reference pressure for setting the target negative pressure	< 0.2 kPa (1.68 mmHg, 0.1 inHg)	P2404

Diagnostic Procedure with Diagnostic Trouble Code (DTC)

ENGINE (DIAGNOSTICS)

Mode D (Clogging of pipe diagnosis and leak pressure measurement)

1. Clogging of pipe

Purpose: Measure the time required for the evaporative emission system to reach the target negative pressure by the vacuum pump, and detect the clogging of pipe trouble.

Judge as clogging of pipe malfunction if the evaporative emission system reaches to the target negative pressure within the specified time.

2. Leak pressure measurement

Purpose: Measure the pressure (leak pressure) when the evaporative emission system becomes the negative pressure by the vacuum pump.

Store the pressure as a leak pressure while the following conditions are met.

Phase D

Judgment value

Malfunction Criteria	Threshold Value	DTC
Time required to reach to the target negative pressure <Large leak (0.04 inch)>	≤ 34000 ms	P1451 P0455
Leak pressure <Very small leak (0.02 inch)>	≥ Value of Map 6	P0456
Leak pressure	> Reference pressure of 0.018 inch (Pa) and < Value of Map 6	

Map 6

Reference pressure kPa (mmHg, inHg)	-4856 (-36429, -1434)	-4000 (-30007, -1181)	-2750 (-20630, -812)	-1500 (-11252, -443)	-824 (-6181, -243)
Threshold Value kPa (mmHg, inHg)	-1785 (-13390, -527)	-1463 (-10975, -432)	-991 (-7434, -292)	-520 (-3901, -153)	-265 (-1988, -78)

Formula for threshold value = Reference pressure × 0.377 – 0.341

Time needed for diagnosis: 24 min

Diagnostic Procedure with Diagnostic Trouble Code (DTC)

ENGINE (DIAGNOSTICS)

Mode E (Measurement of reference pressure for judgment)

Judgment 1

Purpose: Judge the reference pressure stability.

Judge as NG when the following conditions are established.

Judgment 2

Purpose: Judge whether the reference pressure is within the normal range, and detect the vacuum pump and orifice malfunctions. Judge the vacuum pump performance stability.

Judge as NG when the following conditions are established.

Judgment 3

Purpose: Judge the presence of evaporative emission system leak.

Judge as NG when the following conditions are established.

Judgment value

Malfunction Criteria	Threshold Value	DTC
Judgment 1 Pressure sensor maximum output value – Pressure sensor minimum output value	> 314 Pa (2.355 mmHg, 0.1 inHg)	P2404
or Judgment 2 Reference pressure for judgment	< Value of Map 7 or > Value of Map 8	P2404
or Judgment 3 Reference pressure for setting the target negative pressure – Reference pressure for judgment	> 0.9 kPa (7.058 mmHg, 0.3 inHg)	P2404

Map 7

Reference pressure kPa (mmHg, inHg)	70 (525, 20.7)	80 (600, 23.6)	90 (675, 26.6)	100 (750, 29.5)
Threshold Value kPa (mmHg, inHg)	-4.5 (-34.02, -1.3)	-4.6 (-34.815, -1.4)	-4.7 (-35.618, -1.4)	-4.9 (-36.42, -1.4)

Map 8

Reference pressure kPa (mmHg, inHg)	70 (525, 20.7)	80 (600, 23.6)	90 (675, 26.6)	100 (750, 29.5)
Threshold Value kPa (mmHg, inHg)	-0.8 (-6.18, -0.2)	-0.9 (-6.983, -0.3)	-1 (-7.785, -0.3)	-1.1 (-8.58, -0.3)

Time needed for diagnosis: 23 min

At next engine start, confirm whether the enable conditions are satisfied even though refueling has been done during soaking, and determine the malfunction.

Malfunction indicator light illumination: Illuminates when malfunction occurs in 2 continuous driving cycles.

CP:DTC P0456 EVAP SYSTEM (CPC) LEAK DETECTED (VERY SMALL LEAK)

NOTE:

For the diagnostic procedure, refer to DTC P0455. <Ref. to EN(H4DO)(diag)-331, DTC P0455 EVAP SYSTEM (CPC) LEAK DETECTED (LARGE LEAK), Diagnostic Procedure with Diagnostic Trouble Code (DTC).>

1. OUTLINE OF DIAGNOSIS

NOTE:

ENGINE (DIAGNOSTICS)

CQ:DTC P0458 EVAP SYSTEM (CPC) PURGE CONTROL VALVE "A" CIRCUIT LOW

DTC detecting condition:

Detected when two consecutive driving cycles with fault occur.

Trouble symptom:

Improper idling

CAUTION:

After servicing or replacing faulty parts, perform Clear Memory Mode <Ref. to EN(H4DO)(diag)-66, OPERATION, Clear Memory Mode.>, and Inspection Mode <Ref. to EN(H4DO)(diag)-50, PROCEDURE, Inspection Mode.>.

Wiring diagram:

Engine electrical system <Ref. to WI-102, Engine Electrical System.>

EN-11350

Diagnostic Procedure with Diagnostic Trouble Code (DTC)

ENGINE (DIAGNOSTICS)

Step	Check	Yes	No
1 CHECK OUTPUT SIGNAL OF ECM. 1) Turn the ignition switch to ON. 2) Measure the voltage between ECM connector and chassis ground. <i>Connector & terminal</i> <i>(B137) No. 6 (+) — Chassis ground (-):</i>	Is the voltage 10 V or more?	Go to step 2.	Go to step 3.
2 CHECK FOR POOR CONTACT. Check for poor contact of ECM connector.	Is there poor contact of ECM connector?	Repair the poor contact of ECM connector.	Even if DTC is detected, the circuit has returned to a normal condition at this time. Reproduce the failure, and then perform the diagnosis again. NOTE: In this case, temporary open or short circuit of harness or temporary poor contact of connector may be the cause.
3 CHECK POWER SUPPLY TO PURGE CONTROL SOLENOID VALVE. Measure the voltage between purge control solenoid valve connector and engine ground. <i>Connector & terminal</i> <i>(E4) No. 1 (+) — Engine ground (-):</i>	Is the voltage 10 V or more?	Go to step 4.	Repair the power supply circuit.
4 CHECK HARNESS BETWEEN ECM AND PURGE CONTROL SOLENOID VALVE CONNECTOR. 1) Turn the ignition switch to OFF. 2) Disconnect the connector from ECM. 3) Disconnect the connector from the purge control solenoid valve. 4) Measure the resistance between the purge control solenoid valve connector and engine ground. <i>Connector & terminal</i> <i>(E4) No. 2 — Engine ground:</i>	Is the resistance 1 M Ω or more?	Go to step 5.	Repair the short circuit to ground in harness between ECM connector and purge control solenoid valve connector.
5 CHECK HARNESS BETWEEN ECM AND PURGE CONTROL SOLENOID VALVE CONNECTOR. Measure the resistance of harness between ECM connector and purge control solenoid valve. <i>Connector & terminal</i> <i>(B134) No. 11 — (E4) No. 2:</i>	Is the resistance less than 1 Ω ?	Go to step 6.	Repair the harness and connector. NOTE: In this case, repair the following item: <ul style="list-style-type: none"> • Open circuit in harness between ECM connector and purge control solenoid valve connector • Poor contact of coupling connector

Diagnostic Procedure with Diagnostic Trouble Code (DTC)

ENGINE (DIAGNOSTICS)

Step	Check	Yes	No
6 CHECK PURGE CONTROL SOLENOID VALVE. 1) Remove the purge control solenoid valve. 2) Measure the resistance between purge control solenoid valve terminals. Terminals No. 1 — No. 2:	Is the resistance 10 — 100 Ω?	Repair the poor contact of purge control solenoid valve connector.	Replace the purge control solenoid valve. <Ref. to EC(H4DO)-18, Purge Control Solenoid Valve.>

1. OUTLINE OF DIAGNOSIS

Detect open or short circuit of the purge control solenoid valve.

Judge as NG when the ECM output level differs from the actual terminal level.

2. COMPONENT DESCRIPTION

EN-08988

(A) To canister

(B) To intake manifold

3. EXECUTION CONDITION

Secondary Parameters	Execution condition
12 V battery system voltage	$\geq 10.9 \text{ V}$
Purge control duty ratio	$< 75\%$

4. GENERAL DRIVING CYCLE

Always perform the diagnosis after starting the engine.

5. DIAGNOSTIC METHOD

If the duration of time while the following conditions are met is longer than the time indicated, judge as NG.

Judgment Value

Malfunction Criteria	Threshold Value
Measured solenoid valve for purge control voltage	$\leq 12 \text{ V battery system voltage} \times 0.34 \text{ V}$

Time Needed for Diagnosis: 2500 ms

Malfunction Indicator Light Illumination: Illuminates when malfunction occurs in 2 continuous driving cycles.

3 CHECK ELECTRONIC THROTTLE CONTROL. 1) Remove the electronic throttle control. <Ref. to FU(H4DO)-15, REMOVAL, Throttle Body.> 2) Check the electronic throttle control.	Are foreign matter found inside electronic throttle control?	Remove foreign matter from electronic throttle control.	Perform the diagnosis of DTC P2101. <Ref. to EN(H4DO)(diag)-452, DTC P2101 THROTTLE ACTUATOR "A" CONTROL MOTOR CIRCUIT RANGE/PERFORMANCE, Diagnostic Procedure with Diagnostic Trouble Code (DTC).>

Diagnostic Procedure with Diagnostic Trouble Code (DTC)

ENGINE (DIAGNOSTICS)

1. OUTLINE OF DIAGNOSIS

Detect the malfunction that actual engine speed is not close to target engine speed during idling. Judge as NG when actual engine speed is not close to target engine speed during idling.

2. EXECUTION CONDITION

Secondary parameters	Execution condition
Battery voltage	≥ 10.9 V
Barometric pressure	≥ 75.1 kPa (563 mmHg, 22.2 inHg)
Lambda value (left and right)	≥ 0.85 and < 1.151
Vehicle speed	0 km/h (0 MPH)
Engine coolant temperature	≥ 60 °C (140 °F)
Elapsed time after starting the engine	≥ 10 s
Accelerator pedal position	While idling
Elapsed time after gear position change (P \leftrightarrow D or N \leftrightarrow D)	> 5 s
Cold start diagnosis	Not in operation
Main feedback	In operation
Idle speed control feedback	In operation

3. GENERAL DRIVING CYCLE

Perform the diagnosis continuously at idling after warming up engine.

4. DIAGNOSTIC METHOD

If the duration of time while the following conditions are met is longer than the time indicated, judge as NG.

Judgment value

Malfunction Criteria	Threshold Value
Actual engine speed – Targeted engine speed	< -100 rpm

Time needed for diagnosis: 15 s \times 1 time(s)

Malfunction indicator light illumination: Illuminates when malfunction occurs in 2 continuous driving cycles.

Diagnostic Procedure with Diagnostic Trouble Code (DTC)

ENGINE (DIAGNOSTICS)

CU:DTC P0507 IDLE CONTROL SYSTEM RPM - HIGHER THAN EXPECTED

DTC DETECTING CONDITION:

Detected when two consecutive driving cycles with fault occur.

TROUBLE SYMPTOM:

Engine keeps running at higher speed than specified idle speed.

CAUTION:

After servicing or replacing faulty parts, perform Clear Memory Mode <Ref. to EN(H4DO)(diag)-66, OPERATION, Clear Memory Mode.>, and Inspection Mode <Ref. to EN(H4DO)(diag)-50, PROCEDURE, Inspection Mode.>.

Step	Check	Yes	No
1 CHECK FOR ANY OTHER DTC ON DISPLAY.	Is any other DTC displayed?	Check the appropriate DTC using the "List of Diagnostic Trouble Code (DTC)". <Ref. to EN(H4DO)(diag)-96, List of Diagnostic Trouble Code (DTC).>	Go to step 2.
2 CHECK AIR INTAKE SYSTEM. 1) Start and idle the engine. 2) Check the following items. • Loose installation of intake manifold and throttle body • Cracks of intake manifold gasket and throttle body gasket • Disconnection of vacuum hoses	Is there any fault in air intake system?	Repair air suction and leaks.	Go to step 3.
3 CHECK ELECTRONIC THROTTLE CONTROL. 1) Turn the ignition switch to OFF. 2) Remove the electronic throttle control. <Ref. to FU(H4DO)-15, REMOVAL, Throttle Body.> 3) Check the electronic throttle control.	Are foreign matter found inside electronic throttle control?	Remove foreign matter from electronic throttle control.	Perform the diagnosis of DTC P2101. <Ref. to EN(H4DO)(diag)-452, DTC P2101 THROTTLE ACTUATOR "A" CONTROL MOTOR CIRCUIT RANGE/PERFORMANCE, Diagnostic Procedure with Diagnostic Trouble Code (DTC).>

Diagnostic Procedure with Diagnostic Trouble Code (DTC)

ENGINE (DIAGNOSTICS)

1. OUTLINE OF DIAGNOSIS

Detect the malfunction that actual engine speed is not close to target engine speed during idling. Judge as NG when actual engine speed is not close to target engine speed during idling.

2. EXECUTION CONDITION

Secondary parameters	Execution condition
Battery voltage	≥ 10.9 V
Barometric pressure	≥ 75.1 kPa (563 mmHg, 22.2 inHg)
Lambda value (left and right)	≥ 0.85 and < 1.151
Vehicle speed	= 0 km/h (0 MPH)
Engine coolant temperature	≥ 60 °C (140 °F)
Elapsed time after starting the engine	≥ 10 s
Accelerator pedal position	While idling
Elapsed time after gear position change (P ↔ D or N ↔ D)	> 5 s
Cold start diagnosis	Not in operation
Main feedback	In operation
Idle speed control feedback	In operation

3. GENERAL DRIVING CYCLE

Perform the diagnosis continuously at idling after warming up engine.

4. DIAGNOSTIC METHOD

If the duration of time while the following conditions are met is longer than the time indicated, judge as NG.

Judgment Value

Malfunction Criteria	Threshold Value
Actual engine speed – Targeted engine speed	> 200 rpm

Time Needed for Diagnosis: 15 s × 1 time(s)

Malfunction Indicator Light Illumination: Illuminates when malfunction occurs in 2 continuous driving cycles.

Diagnostic Procedure with Diagnostic Trouble Code (DTC)

ENGINE (DIAGNOSTICS)

CV:DTC P050A COLD START IDLE CONTROL SYSTEM PERFORMANCE

DTC detecting condition:

Detected when two consecutive driving cycles with fault occur.

Trouble symptom:

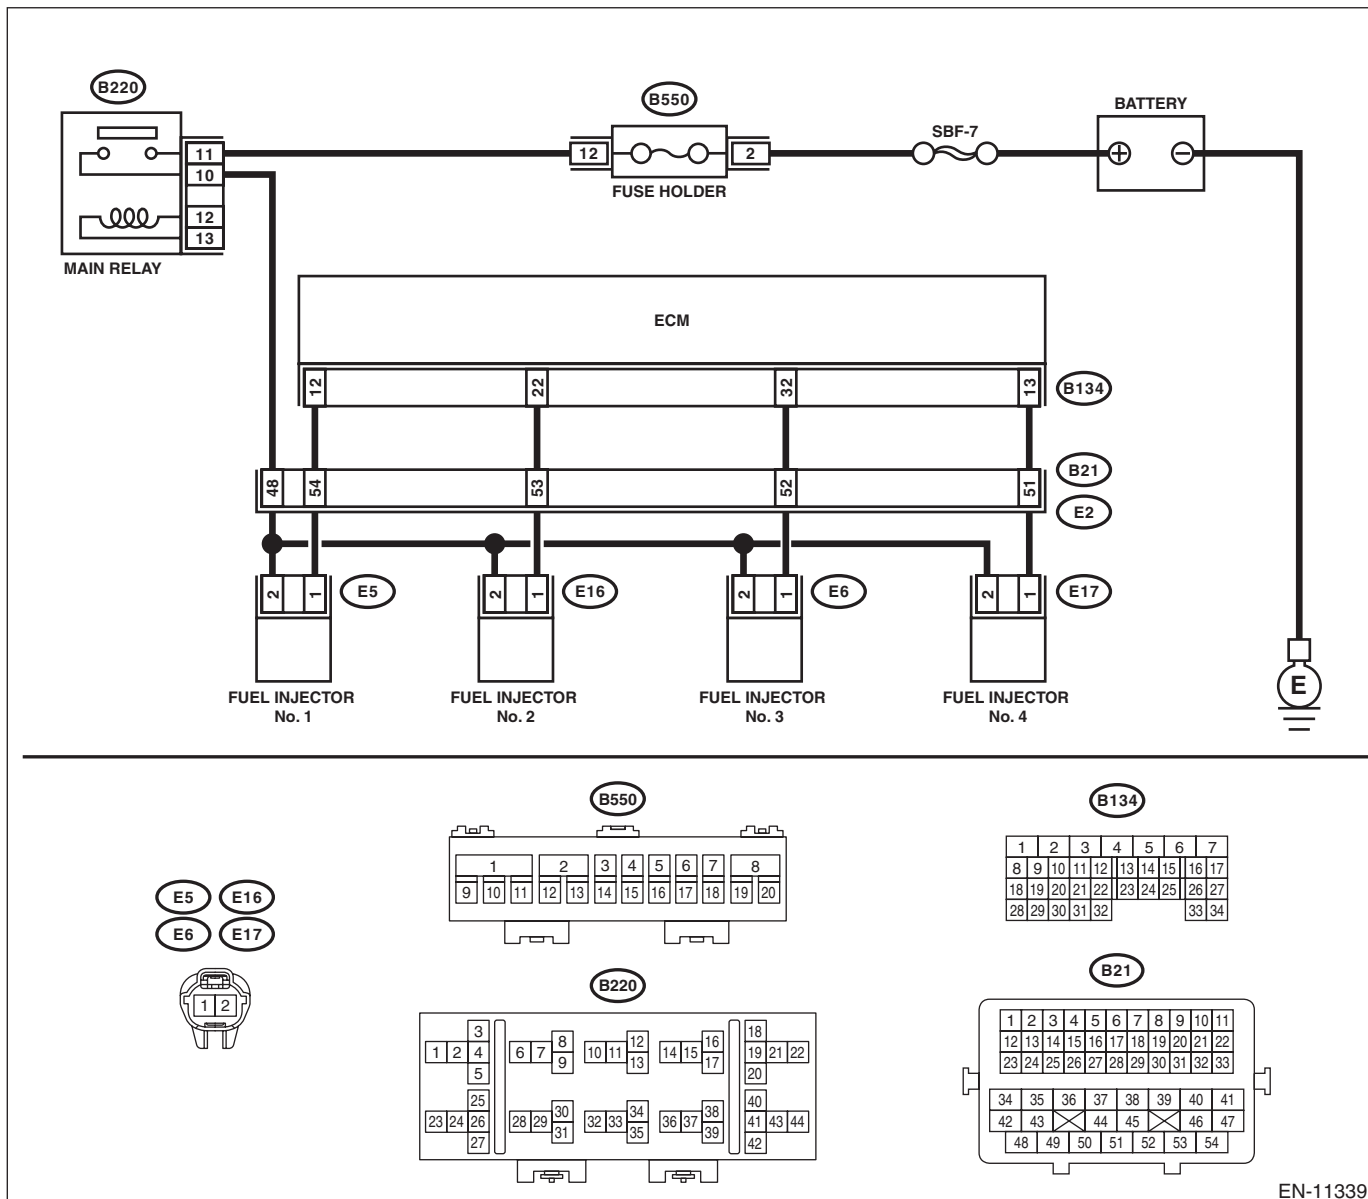

- Engine keeps running at higher speed than specified idle speed.
- Engine keeps running at a lower speed than the specified idle speed.
- Engine stall

CAUTION:

After servicing or replacing faulty parts, perform Clear Memory Mode <Ref. to EN(H4DO)(diag)-66, OPERATION, Clear Memory Mode.>, and Inspection Mode <Ref. to EN(H4DO)(diag)-50, PROCEDURE, Inspection Mode.>.

Wiring diagram:

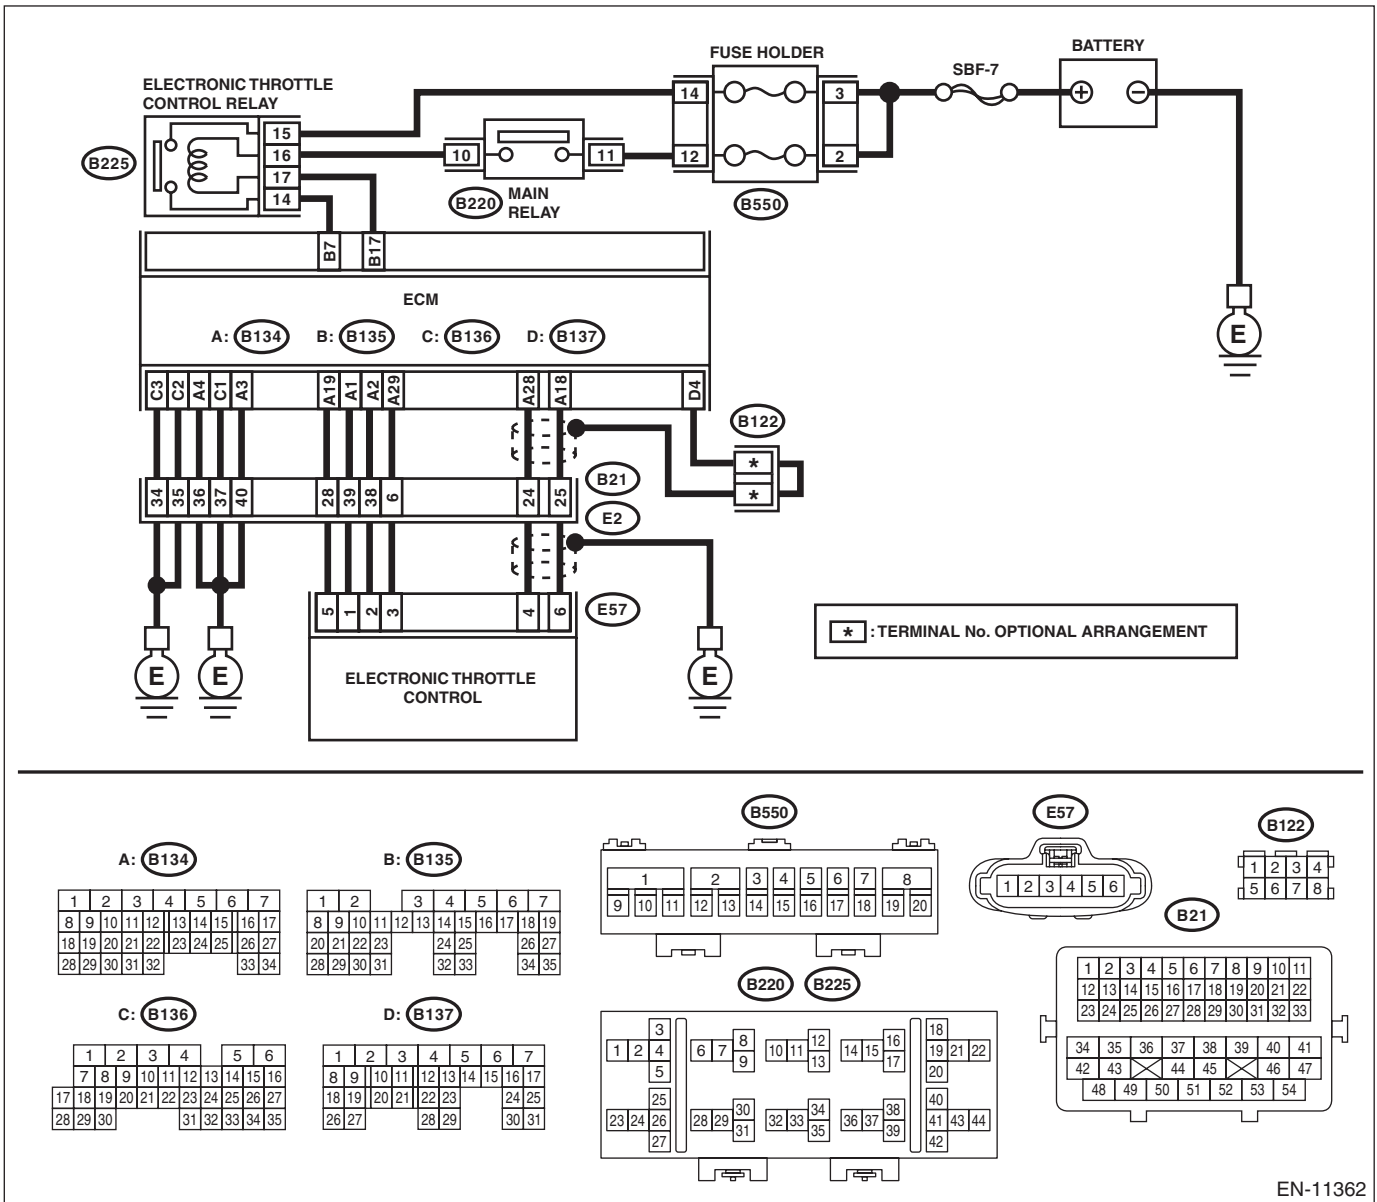

Engine electrical system <Ref. to WI-102, Engine Electrical System.>

EN-11339

Diagnostic Procedure with Diagnostic Trouble Code (DTC)

ENGINE (DIAGNOSTICS)

EN-11362

Step	Check	Yes	No
1	CHECK FOR ANY OTHER DTC ON DISPLAY. Is any other DTC displayed?	Check the appropriate DTC using the "List of Diagnostic Trouble Code (DTC)". <Ref. to EN(H4DO)(diag)-96, List of Diagnostic Trouble Code (DTC).>	Go to step 2.
2	CHECK ENGINE OIL. Is there a proper amount of engine oil?	Go to step 3.	Replace engine oil. <Ref. to LU(H4DO)-11, REPLACEMENT, Engine Oil.>
3	CHECK EXHAUST SYSTEM. Are there holes or loose bolts on exhaust system?	Repair the exhaust system.	Go to step 4.

Diagnostic Procedure with Diagnostic Trouble Code (DTC)

ENGINE (DIAGNOSTICS)

Step	Check	Yes	No
4 CHECK AIR INTAKE SYSTEM.	Are there holes, loose bolts or disconnection of hose on air intake system?	Repair the air intake system.	Go to step 5.
5 CHECK FUEL PRESSURE. WARNING: Place “NO OPEN FLAMES” signs near the working area. CAUTION: Be careful not to spill fuel. Measure the fuel pressure. <Ref. to ME(H4DO)-31, INSPECTION, Fuel Pressure.> CAUTION: Release fuel pressure before removing the fuel pressure gauge.	Is the measured value 340 — 400 kPa (3.5 — 4.1 kg/cm ² , 49 — 58 psi)?	Go to step 6.	Check the fuel pump and fuel delivery line. <Ref. to FU(H4DO)-141, INSPECTION, Fuel Pump.> <Ref. to FU(H4DO)-171, INSPECTION, Fuel Delivery and Evaporation Lines.>
6 CHECK ENGINE COOLANT TEMPERATURE SENSOR. 1) Start the engine and warm up completely. 2) Read the value of «Coolant Temp.» using the Subaru Select Monitor or a general scan tool. NOTE: • Subaru Select Monitor For detailed operation procedures, refer to “Current Data Display For Engine”. <Ref. to EN(H4DO)(diag)-36, Subaru Select Monitor.> • General scan tool For detailed operation procedures, refer to the general scan tool operation manual.	Is the value of «Coolant Temp.» 75°C (167°F) or more?	Go to step 7.	Replace the engine coolant temperature sensor. <Ref. to FU(H4DO)-49, Engine Coolant Temperature Sensor.>
7 CHECK MASS AIR FLOW AND INTAKE AIR TEMPERATURE SENSOR. 1) Start the engine and warm up engine until coolant temperature is higher than 75°C (167°F). 2) For CVT models, set the select lever to “P” range or “N” range, and for MT models, place the gear shift lever in the neutral position. 3) Turn the A/C switch to OFF. 4) Turn all the accessory switches to OFF. 5) Read the value of «Mass Air Flow» using the Subaru Select Monitor or a general scan tool. NOTE: • Subaru Select Monitor For detailed operation procedures, refer to “Current Data Display For Engine”. <Ref. to EN(H4DO)(diag)-36, Subaru Select Monitor.> • General scan tool For detailed operation procedures, refer to the general scan tool operation manual.	Is the value of «Mass Air Flow» 2.0 — 5.0 g/s (0.26 — 0.66 lb/m)?	Go to step 8.	Replace the mass air flow and intake air temperature sensor. <Ref. to FU(H4DO)-71, Mass Air Flow and Intake Air Temperature Sensor.>

Diagnostic Procedure with Diagnostic Trouble Code (DTC)

ENGINE (DIAGNOSTICS)

Step	Check	Yes	No
<p>8</p> <p>CHECK MASS AIR FLOW AND INTAKE AIR TEMPERATURE SENSOR.</p> <p>1) Start the engine and warm up engine until coolant temperature is higher than 75°C (167°F).</p> <p>2) For CVT models, set the select lever to “P” range or “N” range, and for MT models, place the gear shift lever in the neutral position.</p> <p>3) Turn the A/C switch to OFF.</p> <p>4) Turn all the accessory switches to OFF.</p> <p>5) Open the front hood.</p> <p>6) Measure the ambient temperature.</p> <p>7) Read the value of «Intake Air Temp.» using the Subaru Select Monitor or a general scan tool.</p> <p>NOTE:</p> <ul style="list-style-type: none"> • Subaru Select Monitor <p>For detailed operation procedures, refer to “Current Data Display For Engine”. <Ref. to EN(H4DO)(diag)-36, Subaru Select Monitor.></p> <ul style="list-style-type: none"> • General scan tool <p>For detailed operation procedures, refer to the general scan tool operation manual.</p>	<p>Subtract ambient temperature from «Intake Air Temp.». Is the obtained value -10 — 50°C (-18 — 90°F)?</p>	Go to step 9.	Check the mass air flow and intake air temperature sensor. <Ref. to FU(H4DO)-71, Mass Air Flow and Intake Air Temperature Sensor.>
<p>9</p> <p>CHECK OUTPUT SIGNAL OF ECM.</p> <p>1) Turn the ignition switch to ON.</p> <p>2) Measure the voltage between ECM and chassis ground on faulty cylinders.</p> <p>Connector & terminal</p> <p>#1 (B134) No. 12 (+) — Chassis ground (-):</p> <p>#2 (B134) No. 22 (+) — Chassis ground (-):</p> <p>#3 (B134) No. 32 (+) — Chassis ground (-):</p> <p>#4 (B134) No. 13 (+) — Chassis ground (-):</p>	Is the voltage 10 V or more?	Go to step 14.	Go to step 10.
<p>10</p> <p>CHECK HARNESS BETWEEN ECM AND FUEL INJECTOR CONNECTOR.</p> <p>1) Turn the ignition switch to OFF.</p> <p>2) Disconnect the connector from fuel injector on faulty cylinders.</p> <p>3) Measure the resistance between fuel injector connector and engine ground on faulty cylinders.</p> <p>Connector & terminal</p> <p>#1 (E5) No. 1 — Engine ground:</p> <p>#2 (E16) No. 1 — Engine ground:</p> <p>#3 (E6) No. 1 — Engine ground:</p> <p>#4 (E17) No. 1 — Engine ground:</p>	Is the resistance 1 MΩ or more?	Go to step 11.	Repair the short circuit to ground in harness between ECM connector and fuel injector connector.
<p>11</p> <p>CHECK HARNESS BETWEEN ECM AND FUEL INJECTOR CONNECTOR.</p> <p>Measure the resistance of harness between ECM and fuel injector connector on faulty cylinders.</p> <p>Connector & terminal</p> <p>#1 (B134) No. 12 — (E5) No. 1:</p> <p>#2 (B134) No. 22 — (E16) No. 1:</p> <p>#3 (B134) No. 32 — (E6) No. 1:</p> <p>#4 (B134) No. 13 — (E17) No. 1:</p>	Is the resistance less than 1 Ω?	Go to step 12.	Repair the harness and connector. NOTE: In this case, repair the following item: • Open circuit in harness between ECM connector and fuel injector connector • Poor contact of coupling connector

Diagnostic Procedure with Diagnostic Trouble Code (DTC)

ENGINE (DIAGNOSTICS)

Step	Check	Yes	No
12 CHECK FUEL INJECTOR. Measure the resistance between fuel injector terminals on faulty cylinder. <i>Terminals</i> <i>No. 1 — No. 2:</i>	Is the resistance 5 — 20 Ω?	Go to step 13.	Replace the faulty fuel injector. <Ref. to FU(H4DO)-77, Fuel Injector.>
13 CHECK POWER SUPPLY LINE. 1) Turn the ignition switch to ON. 2) Measure the voltage between fuel injector and engine ground on faulty cylinders. <i>Connector & terminal</i> <i>#1 (E5) No. 2 (+) — Engine ground (-):</i> <i>#2 (E16) No. 2 (+) — Engine ground (-):</i> <i>#3 (E6) No. 2 (+) — Engine ground (-):</i> <i>#4 (E17) No. 2 (+) — Engine ground (-):</i>	Is the voltage 10 V or more?	Repair the poor contact of all connectors in fuel injector circuit.	Repair the harness and connector. NOTE: In this case, repair the following item: <ul style="list-style-type: none"> • Open circuit in harness between the main relay connector and fuel injector connector on faulty cylinders • Poor contact of coupling connector • Poor contact of main relay connector
14 CHECK HARNESS BETWEEN ECM AND FUEL INJECTOR CONNECTOR. 1) Turn the ignition switch to OFF. 2) Disconnect the connector from fuel injector on faulty cylinders. 3) Turn the ignition switch to ON. 4) Measure the voltage between ECM and chassis ground on faulty cylinders. <i>Connector & terminal</i> <i>#1 (B134) No. 12 (+) — Chassis ground (-):</i> <i>#2 (B134) No. 22 (+) — Chassis ground (-):</i> <i>#3 (B134) No. 32 (+) — Chassis ground (-):</i> <i>#4 (B134) No. 13 (+) — Chassis ground (-):</i>	Is the voltage 10 V or more?	Repair the short circuit to power in harness between ECM connector and fuel injector.	Go to step 15.
15 CHECK FUEL INJECTOR. 1) Turn the ignition switch to OFF. 2) Measure the resistance between fuel injector terminals on faulty cylinder. <i>Terminals</i> <i>No. 1 — No. 2:</i>	Is the resistance 5 — 20 Ω?	Go to step 16.	Replace the faulty fuel injector. <Ref. to FU(H4DO)-77, Fuel Injector.>
16 CHECK INSTALLATION CONDITION OF CAMSHAFT POSITION SENSOR/CRANKSHAFT POSITION SENSOR.	Is the camshaft position sensor or crankshaft position sensor loosely installed?	Tighten the camshaft position sensor or crankshaft position sensor. <Ref. to FU(H4DO)-59, INSTALLATION, Camshaft Position Sensor.> <Ref. to FU(H4DO)-54, INSTALLATION, Crankshaft Position Sensor.>	Go to step 17.
17 CHECK CRANKSHAFT POSITION SENSOR PLATE.	Is the crankshaft position sensor plate rusted or does it have broken teeth?	Replace the crankshaft position sensor plate. <Ref. to ME(H4DO)-247, Cylinder Block.>	Go to step 18.

Diagnostic Procedure with Diagnostic Trouble Code (DTC)

ENGINE (DIAGNOSTICS)

Step	Check	Yes	No
18 CHECK INSTALLATION CONDITION OF TIMING CHAIN. Turn the crankshaft using ST, and align the alignment mark on crank sprocket with alignment mark on cylinder block. ST 18252AA000 CRANKSHAFT SOCKET	Is the timing chain dislocated from its proper position?	Correct the installation condition of timing chain. <Ref. to ME(H4DO)-115, Timing Chain Assembly.>	Go to step 19.
19 CHECK ELECTRONIC THROTTLE CONTROL RELAY. 1) Turn the ignition switch to OFF. 2) Remove the electronic throttle control relay. 3) Connect the battery to terminals No. 16 and No. 17 of electronic throttle control relay. 4) Measure the resistance between electronic throttle control relay terminals. <i>Terminals</i> <i>No. 14 — No. 15:</i>	Is the resistance less than 1 Ω?	Go to step 20.	Replace the electronic throttle control relay. <Ref. to FU(H4DO)-104, Electronic Throttle Control Relay.>
20 CHECK POWER SUPPLY OF ELECTRONIC THROTTLE CONTROL RELAY. Measure the voltage between electronic throttle control relay connector and chassis ground. <i>Connector & terminal</i> <i>(B225) No. 15 (+) — Chassis ground (-):</i>	Is the voltage 10 V or more?	Go to step 21.	Repair the open or short to ground in the power supply circuit.
21 CHECK HARNESS BETWEEN ECM AND ELECTRONIC THROTTLE CONTROL RELAY CONNECTOR. 1) Disconnect the connector from ECM. 2) Turn the ignition switch to ON. 3) Measure the voltage between electronic throttle control relay connector and chassis ground. <i>Connector & terminal</i> <i>(B225) No. 17 (+) — Chassis ground (-):</i>	Is the voltage 10 V or more?	Repair the short circuit to power in the harness between ECM connector and electronic throttle control relay connector.	Go to step 22.
22 CHECK HARNESS BETWEEN ECM AND ELECTRONIC THROTTLE CONTROL RELAY CONNECTOR. 1) Turn the ignition switch to OFF. 2) Measure the resistance between electronic throttle control relay connector and chassis ground. <i>Connector & terminal</i> <i>(B225) No. 14 — Chassis ground:</i> <i>(B225) No. 17 — Chassis ground:</i>	Is the resistance 1 MΩ or more?	Go to step 23.	Repair the short circuit to ground in harness between ECM connector and electronic throttle control relay connector.
23 CHECK HARNESS BETWEEN ECM AND ELECTRONIC THROTTLE CONTROL RELAY CONNECTOR. Measure the resistance of harness between ECM connector and electronic throttle control relay connector. <i>Connector & terminal</i> <i>(B135) No. 17 — (B225) No. 17:</i> <i>(B135) No. 7 — (B225) No. 14:</i>	Is the resistance less than 1 Ω?	Go to step 24.	Repair the open circuit in harness between ECM connector and electronic throttle control relay connector.

Diagnostic Procedure with Diagnostic Trouble Code (DTC)

ENGINE (DIAGNOSTICS)

Step	Check	Yes	No
<p>24 CHECK HARNESS BETWEEN ECM AND ELECTRONIC THROTTLE CONTROL CONNECTOR.</p> <p>1) Turn the ignition switch to OFF. 2) Disconnect the connector from ECM. 3) Disconnect the connectors from electronic throttle control. 4) Measure the resistance between ECM connector and chassis ground.</p> <p>Connector & terminal (B134) No. 19 — Chassis ground: (B134) No. 18 — Chassis ground: (B134) No. 18 — (B137) No. 4: (B134) No. 28 — Chassis ground: (B134) No. 28 — (B137) No. 4:</p>	Is the resistance 1 M Ω or more?	Go to step 25.	Repair the ground short circuit of harness between ECM connector and electronic throttle control connector.
<p>25 CHECK SHORT CIRCUIT INSIDE THE ECM.</p> <p>1) Connect the connector to ECM. 2) Measure the resistance between electronic throttle control connector and engine ground.</p> <p>Connector & terminal (E57) No. 6 — Engine ground: (E57) No. 4 — Engine ground:</p>	Is the resistance 1 M Ω or more?	Go to step 26.	Repair the ground short circuit of harness between ECM connector and electronic throttle control connector. Replace the ECM if defective. <Ref. to FU(H4DO)-98, Engine Control Module (ECM).>
<p>26 CHECK HARNESS BETWEEN ECM AND ELECTRONIC THROTTLE CONTROL CONNECTOR.</p> <p>1) Disconnect the connector from ECM. 2) Measure the resistance of harness between ECM connector and electronic throttle control connector.</p> <p>Connector & terminal (B134) No. 18 — (E57) No. 6: (B134) No. 28 — (E57) No. 4: (B134) No. 29 — (E57) No. 3:</p>	Is the resistance less than 1 Ω ?	Go to step 27.	Repair the harness and connector. NOTE: In this case, repair the following item: • Open circuit in harness between ECM connector and electronic throttle control connector • Poor contact of coupling connector
<p>27 CHECK HARNESS BETWEEN ECM AND ELECTRONIC THROTTLE CONTROL CONNECTOR.</p> <p>1) Connect the connector to ECM. 2) Measure the resistance between electronic throttle control connector and engine ground.</p> <p>Connector & terminal (E57) No. 3 — Engine ground:</p>	Is the resistance less than 5 Ω ?	Go to step 28.	Repair the harness and connector. NOTE: In this case, repair the following item: • Open circuit of harness between ECM connector and engine ground • Poor contact of ECM connector • Poor contact of coupling connector

Diagnostic Procedure with Diagnostic Trouble Code (DTC)

ENGINE (DIAGNOSTICS)

Step	Check	Yes	No
<p>28 CHECK HARNESS BETWEEN ECM AND ELECTRONIC THROTTLE CONTROL CONNECTOR. 1) Turn the ignition switch to ON. 2) Measure the voltage between electronic throttle control connector and engine ground. Connector & terminal (E57) No. 6 (+) — Engine ground (-): (E57) No. 4 (+) — Engine ground (-):</p>	<p>Is the voltage 5 V or more?</p>	<p>Repair the short circuit to power in the harness between ECM connector and electronic throttle control connector.</p>	<p>Go to step 29.</p>
<p>29 CHECK HARNESS BETWEEN ECM AND ELECTRONIC THROTTLE CONTROL CONNECTOR. 1) Turn the ignition switch to OFF. 2) Disconnect the connector from ECM. 3) Measure the resistance between ECM connectors. Connector & terminal (B134) No. 19 — (B134) No. 18: (B134) No. 19 — (B134) No. 28:</p>	<p>Is the resistance 1 MΩ or more?</p>	<p>Go to step 30.</p>	<p>Repair the short circuit to power in the harness between ECM connector and electronic throttle control connector.</p>
<p>30 CHECK SENSOR OUTPUT. 1) Connect all connectors. 2) Turn the ignition switch to ON. 3) Read the value of «Main-Throttle Sensor» using Subaru Select Monitor. NOTE: For detailed operation procedures, refer to «Current Data Display For Engine». <Ref. to EN(H4DO)(diag)-36, Subaru Select Monitor.></p>	<p>Is the value of «Main-Throttle Sensor» 0.81 — 0.87 V?</p>	<p>Go to step 31.</p>	<p>Repair the poor contact of electronic throttle control connector. Replace the electronic throttle control if defective. <Ref. to FU(H4DO)-15, Throttle Body.></p>
<p>31 CHECK SENSOR OUTPUT. Read the value of «Sub-Throttle Sensor» using Subaru Select Monitor. NOTE: For detailed operation procedures, refer to «Current Data Display For Engine». <Ref. to EN(H4DO)(diag)-36, Subaru Select Monitor.></p>	<p>Is the value of «Sub-Throttle Sensor» 1.64 — 1.70 V?</p>	<p>Go to step 32.</p>	<p>Repair the poor contact of electronic throttle control connector. Replace the electronic throttle control if defective. <Ref. to FU(H4DO)-15, Throttle Body.></p>
<p>32 CHECK HARNESS BETWEEN ECM AND ELECTRONIC THROTTLE CONTROL CONNECTOR. 1) Turn the ignition switch to OFF. 2) Disconnect the connector from ECM. 3) Disconnect the connectors from electronic throttle control. 4) Measure the resistance between ECM connector and electronic throttle control connector. Connector & terminal (B134) No. 2 — (E57) No. 2: (B134) No. 1 — (E57) No. 1:</p>	<p>Is the resistance less than 1 Ω?</p>	<p>Go to step 33.</p>	<p>Repair the harness and connector. NOTE: In this case, repair the following item: • Open circuit in harness between ECM connector and electronic throttle control connector • Poor contact of coupling connector</p>

Diagnostic Procedure with Diagnostic Trouble Code (DTC)

ENGINE (DIAGNOSTICS)

Step	Check	Yes	No
33 CHECK HARNESS BETWEEN ECM AND ELECTRONIC THROTTLE CONTROL CONNECTOR. 1) Connect the connector to ECM. 2) Turn the ignition switch to ON. 3) Measure the voltage between electronic throttle control connector and engine ground. Connector & terminal <i>(E57) No. 2 (+) — Engine ground (-):</i> <i>(E57) No. 1 (+) — Engine ground (-):</i>	Is the voltage 5 V or more?	Repair the short circuit to power in the harness between ECM connector and electronic throttle control connector.	Go to step 34 .
34 CHECK HARNESS BETWEEN ECM AND ELECTRONIC THROTTLE CONTROL CONNECTOR. 1) Turn the ignition switch to OFF. 2) Disconnect the connector from ECM. 3) Measure the resistance between electronic throttle control connector and engine ground. Connector & terminal <i>(E57) No. 2 — Engine ground:</i> <i>(E57) No. 1 — Engine ground:</i>	Is the resistance 1 M Ω or more?	Go to step 35 .	Repair the ground short circuit of harness between ECM connector and electronic throttle control connector.
35 CHECK HARNESS BETWEEN ELECTRONIC THROTTLE CONTROL CONNECTOR. Measure the resistance between electronic throttle control connectors. Connector & terminal <i>(E57) No. 2 — (E57) No. 1:</i>	Is the resistance 1 M Ω or more?	Go to step 36 .	Repair the short circuit in harness between ECM connector and electronic throttle control connector.
36 CHECK ELECTRONIC THROTTLE CONTROL GROUND CIRCUIT. Measure the resistance between ECM connector and chassis ground. Connector & terminal <i>(B134) No. 3 — Chassis ground:</i> <i>(B134) No. 4 — Chassis ground:</i> <i>(B136) No. 1 — Chassis ground:</i> <i>(B136) No. 2 — Chassis ground:</i> <i>(B136) No. 3 — Chassis ground:</i>	Is the resistance less than 5 Ω ?	Go to step 37 .	Repair the harness and connector. NOTE: In this case, repair the following item: • Open circuit of harness between ECM connector and engine ground • Poor contact of coupling connector
37 CHECK ELECTRONIC THROTTLE CONTROL. Measure the resistance between electronic throttle control terminals. Terminals <i>No. 2 — No. 1:</i>	Is the resistance 50 Ω or less?	Go to step 38 .	Replace the electronic throttle control. <Ref. to FU(H4DO)-15, Throttle Body.>
38 CHECK ELECTRONIC THROTTLE CONTROL. Move the throttle valve to the fully opened and fully closed positions with fingers. Check that the valve returns to the specified position when releasing fingers.	Does the valve return to the specified position? Standard value: 3 mm (0.12 in) from fully closed position	Repair the poor contact of ECM connector.	Replace the electronic throttle control. <Ref. to FU(H4DO)-15, Throttle Body.>

Diagnostic Procedure with Diagnostic Trouble Code (DTC)

ENGINE (DIAGNOSTICS)

1. OUTLINE OF DIAGNOSIS

• When cold, the abnormality in the control of target engine speed increase is detected. (P050A)

Judge as NG if the exhaust gas temperature diagnosis or idle speed diagnosis is NG.

• Exhaust gas temperature diagnosis

Judge as NG when the estimated exhausted gas temperature in 14 seconds after the cold start is below the specified value.

• Idle speed diagnosis

Judge as NG when actual engine speed is not close to target engine speed at cold start.

• Detect malfunctions of the catalyst advanced idling retard angle control. (P050B)

Judge as NG when ECM is not controlling the angle properly during catalyst advanced idling retard angle control.

• Final ignition timing diagnosis

Judge as NG when actual retard amount is under the specified value at cold start.

2. EXECUTION CONDITION

Secondary parameters	Execution condition
<Idle speed diagnosis>	
Battery voltage	≥ 10.9 V
Barometric pressure	≥ 75.1 kPa (563 mmHg, 22.2 inHg)
Vehicle speed	≤ 2 km/h (1.2 MPH)
Engine coolant temperature	≤ 70 °C (158 °F)
Throttle position	< 0.37 °
Integrated value of intake air amount	< Value of Map 1
Elapsed time after gear position change (P ↔ D or N ↔ D)	≥ 3000 ms
Elapsed time after starting the engine	≥ 2000 ms
<Final ignition timing diagnosis>	
Battery voltage	≥ 10.9 V
Barometric pressure	≥ 75.1 kPa (563 mmHg, 22.2 inHg)
Engine coolant temperature	≤ 70 °C (158 °F)
Throttle position	< 0.37 °
Integrated value of intake air amount	< Value of Map 2
Elapsed time after gear position change (P ↔ D or N ↔ D)	≥ 3000 ms
Target retard amount	≥ 5°CA

Diagnostic Procedure with Diagnostic Trouble Code (DTC)

3. GENERAL DRIVING CYCLE

Perform the diagnosis at cold start.

Diagnostic Procedure with Diagnostic Trouble Code (DTC)

ENGINE (DIAGNOSTICS)

4. DIAGNOSTIC METHOD

• Idle speed diagnosis

Judge as NG when the following conditions are established.

Judgment value

Malfunction Criteria	Threshold Value
Actual engine speed – Target engine speed	< – 300 rpm

Time needed for diagnosis: 7000 ms

Malfunction indicator light illumination: Illuminates when malfunction occurs in 2 continuous driving cycles.

• Final ignition timing diagnosis

Judge as NG when the following conditions are established.

Judgment value

Malfunction Criteria	Threshold Value
Final ignition timing – ignition timing during CSERS* *: Ignition timing during CSERS (Cold Start Emission Reduction Strategy) = Base ignition timing – retard amount	> Value of Map 3

Map 3

Engine coolant temperature °C (°F)	–40 (–40)	–30 (–22)	–20 (–4)	–10 (14)	0 (32)	10 (50)	20 (68)	30 (86)	40 (104)	50 (122)	60 (140)
Threshold value (CVT model)	6	6	6	6	6	6	6	6	6	6	6
Threshold value (MT model)	6	6	6	6	6	6	6	6	6	6	6

Time needed for diagnosis: 7000 ms

Malfunction indicator light illumination: Illuminates when malfunction occurs in 2 continuous driving cycles.

CW:DTC P050B COLD START IGNITION TIMING PERFORMANCE

NOTE:

For the diagnostic procedure, refer to DTC P050A. <Ref. to EN(H4DO)(diag)-350, DTC P050A COLD START IDLE CONTROL SYSTEM PERFORMANCE, Diagnostic Procedure with Diagnostic Trouble Code (DTC).>

1. OUTLINE OF DIAGNOSIS

NOTE:

For the detection standard, refer to DTC P050A. <Ref. to EN(H4DO)(diag)-350, DTC P050A COLD START IDLE CONTROL SYSTEM PERFORMANCE, Diagnostic Procedure with Diagnostic Trouble Code (DTC).>

Diagnostic Procedure with Diagnostic Trouble Code (DTC)

ENGINE (DIAGNOSTICS)

CX:DTC P0512 STARTER (SWITCH) REQUEST CIRCUIT

DTC detecting condition:

Immediately at fault recognition

Trouble symptom:

Failure of engine to start

CAUTION:

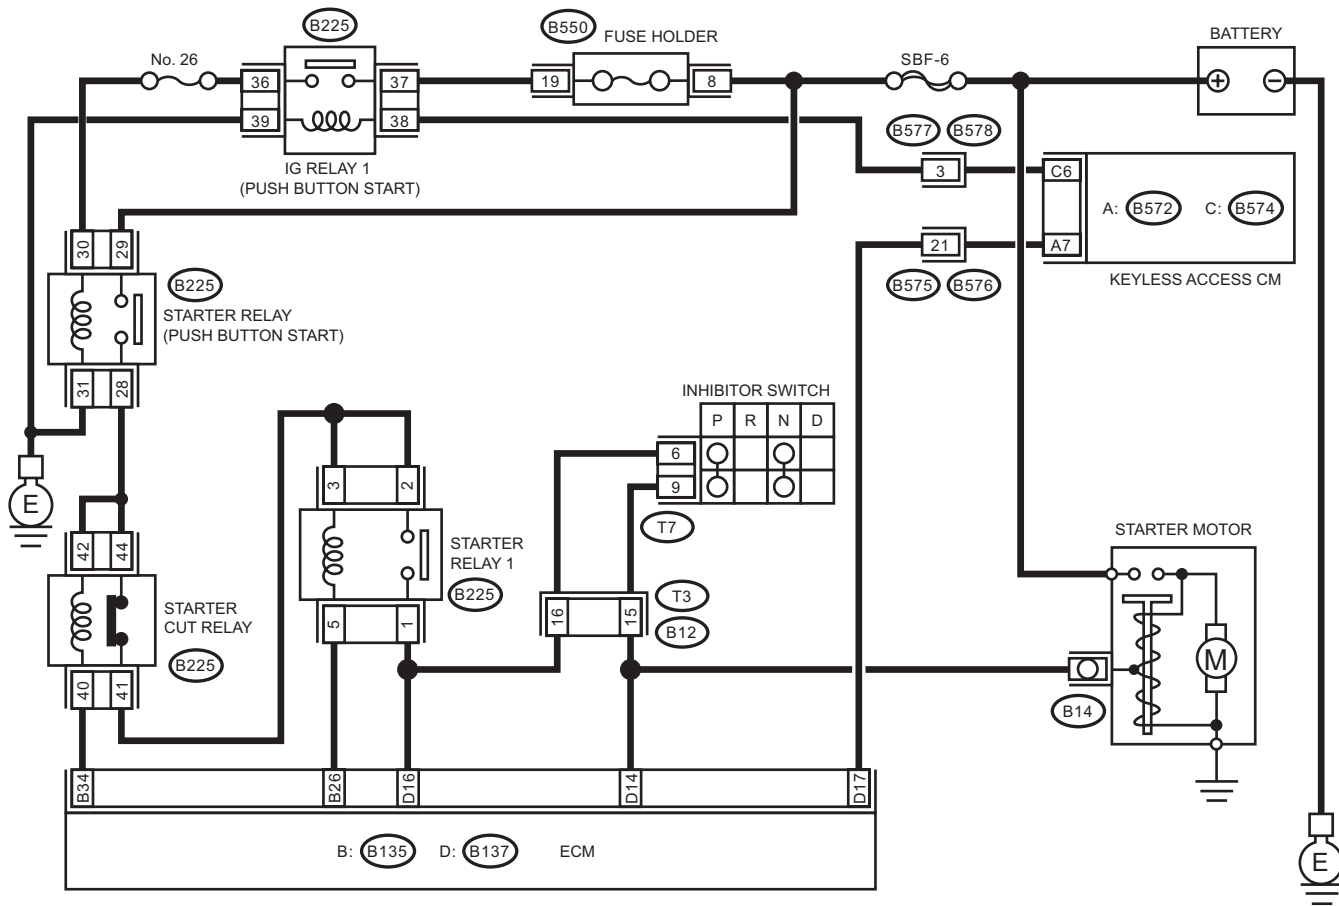

After servicing or replacing faulty parts, perform Clear Memory Mode <Ref. to EN(H4DO)(diag)-66, OPERATION, Clear Memory Mode.>, and Inspection Mode <Ref. to EN(H4DO)(diag)-50, PROCEDURE, Inspection Mode.>.

Diagnostic Procedure with Diagnostic Trouble Code (DTC)

ENGINE (DIAGNOSTICS)

Wiring diagram:

Engine electrical system <Ref. to WI-116, WITH PUSH BUTTON START, WIRING DIAGRAM, Engine Electrical System.>

EN-22029

Diagnostic Procedure with Diagnostic Trouble Code (DTC)

ENGINE (DIAGNOSTICS)

Step	Check	Yes	No
1 CHECK PUSH BUTTON IGNITION SWITCH. Operate the push button ignition switch.	Does it operate smoothly without catch?	Go to step 2.	Replace the push button ignition switch. <Ref. to SL-94, Push Button Ignition Switch.>
2 CHECK DTC. 1) Clear the memory using the Subaru Select Monitor. <Ref. to EN(H4DO)(diag)-66, Clear Memory Mode.> 2) Start and idle the engine for three minutes or more.	Is the same DTC as current diagnosis output?	Go to step 3.	Even if DTC is detected, the circuit has returned to a normal condition at this time. Reproduce the failure, and then perform the diagnosis again. NOTE: In this case, temporary poor contact of connector, temporary open or short circuit of harness may be the cause.
3 CHECK HARNESS BETWEEN ECM AND KEYLESS ACCESS CM. 1) Turn the ignition to OFF. 2) Disconnect the connector from ECM. 3) Turn the ignition to ON. 4) Measure the voltage between ECM connector and chassis ground. <i>Connector & terminal (B137) No. 17 (+) — Chassis ground (-):</i>	Is the voltage 10 V or more?	Repair the short circuit to power supply in harness between ECM connector and keyless access CM connector.	Repair the poor contact of ECM connector.

1. OUTLINE OF DIAGNOSIS

Detect abnormal continuity in the starter SW1.
 Judge as ON NG when the starter SW 1 signal remains ON.

2. EXECUTION CONDITION

Secondary parameters	Execution condition
Battery voltage	≥ 8 V
Engine speed	≥ 500 rpm

3. GENERAL DRIVING CYCLE

Perform the diagnosis continuously after starting the engine.

4. DIAGNOSTIC METHOD

If the duration of time while the following conditions are met is longer than the time indicated, judge as NG.

Judgment Value

Malfunction Criteria	Threshold Value
Starter SW1 voltage	≥ Battery voltage × 0.85

Time Needed for Diagnosis: 30000 ms

Malfunction Indicator Light Illumination: Illuminates as soon as a malfunction occurs.

CY:DTC P0516 BATTERY TEMPERATURE SENSOR CIRCUIT LOW

DTC detecting condition:

Immediately at fault recognition

CAUTION:

After servicing or replacing faulty parts, perform Clear Memory Mode <Ref. to EN(H4DO)(diag)-66, OPERATION, Clear Memory Mode.>, and Inspection Mode <Ref. to EN(H4DO)(diag)-50, PROCEDURE, Inspection Mode.>.

Wiring diagram:

Engine electrical system <Ref. to WI-102, Engine Electrical System.>

EN-11351

Diagnostic Procedure with Diagnostic Trouble Code (DTC)

ENGINE (DIAGNOSTICS)

Step	Check	Yes	No
<p>1</p> <p>CHECK CURRENT DATA.</p> <p>1) Start the engine.</p> <p>2) Read the value of «Battery temperature» using the Subaru Select Monitor.</p> <p>NOTE: For detailed operation procedures, refer to “Current Data Display For Engine”. <Ref. to EN(H4DO)(diag)-36, Subaru Select Monitor.></p>	<p>Is the value of «Battery temperature» 100°C (212°F) or more?</p>	<p>Go to step 2.</p>	<p>Even if DTC is detected, the circuit has returned to a normal condition at this time. Reproduce the failure, and then perform the diagnosis again.</p> <p>NOTE: In this case, temporary poor contact of connector, temporary open or short circuit of harness may be the cause.</p>
<p>2</p> <p>CHECK HARNESS BETWEEN ECM AND BATTERY TEMPERATURE SENSOR CONNECTOR.</p> <p>1) Turn the ignition switch to OFF.</p> <p>2) Disconnect the ECM connector.</p> <p>3) Disconnect the connector from the battery temperature sensor.</p> <p>4) Measure the resistance between ECM connector and chassis ground.</p> <p>Connector & terminal (B137) No. 24 — Chassis ground:</p>	<p>Is the resistance 1 MΩ or more?</p>	<p>Replace the battery temperature sensor. <Ref. to SC(H4DO)-59, Battery Current & Temperature Sensor.></p>	<p>Repair the short circuit to ground in the harness between the ECM connector and battery temperature sensor connector.</p>

1. OUTLINE OF DIAGNOSIS

Detect the open or short circuit of battery temperature sensor.
Judge as NG if out of specification.

2. COMPONENT DESCRIPTION

(1) Sensor element

3. EXECUTION CONDITION

Secondary Parameters	Execution condition
Battery voltage	$\geq 10.9 \text{ V}$
Elapsed time after starting the engine	$> 1000 \text{ ms}$
Engine speed	$> 500 \text{ rpm}$
Ignition switch	ON

4. GENERAL DRIVING CYCLE

Always perform the diagnosis continuously.

5. DIAGNOSTIC METHOD

If the duration of time while the following conditions are met is longer than the time indicated, judge as NG.

Judgment Value

Malfunction Criteria	Threshold Value
Output voltage	$< 0.1294 \text{ V}$

Time Needed for Diagnosis: 500 ms

Malfunction Indicator Light Illumination: Does not illuminate even when malfunction occurs.

Diagnostic Procedure with Diagnostic Trouble Code (DTC)

ENGINE (DIAGNOSTICS)

CZ:DTC P0517 BATTERY TEMPERATURE SENSOR CIRCUIT HIGH

DTC detecting condition:

Immediately at fault recognition

CAUTION:

After servicing or replacing faulty parts, perform Clear Memory Mode <Ref. to EN(H4DO)(diag)-66, OPERATION, Clear Memory Mode.>, and Inspection Mode <Ref. to EN(H4DO)(diag)-50, PROCEDURE, Inspection Mode.>.

Replace the battery temperature sensor. <Ref. to SC(H4DO)-59, Battery Current & Temperature Sensor.>

Diagnostic Procedure with Diagnostic Trouble Code (DTC)

ENGINE (DIAGNOSTICS)

1. OUTLINE OF DIAGNOSIS

Detect the open or short circuit of battery temperature sensor.
Judge as NG if out of specification.

2. COMPONENT DESCRIPTION

(1) Sensor element

3. EXECUTION CONDITION

Secondary Parameters	Execution condition
Battery voltage	$\geq 10.9 \text{ V}$
Elapsed time after starting the engine	$> 1000 \text{ ms}$
Engine speed	$> 500 \text{ rpm}$
Ignition switch	ON

4. GENERAL DRIVING CYCLE

Always perform the diagnosis continuously.

5. DIAGNOSTIC METHOD

If the duration of time while the following conditions are met is longer than the time indicated, judge as NG.

Judgment Value

Malfunction Criteria	Threshold Value
Output voltage	$\geq 4.668 \text{ V}$

Time Needed for Diagnosis: 500 ms

Malfunction Indicator Light Illumination: Does not illuminate even when malfunction occurs.

Diagnostic Procedure with Diagnostic Trouble Code (DTC)

ENGINE (DIAGNOSTICS)

DA:DTC P0560 SYSTEM VOLTAGE

DTC DETECTING CONDITION:

Immediately at fault recognition

CAUTION:

After servicing or replacing faulty parts, perform Clear Memory Mode <Ref. to EN(H4DO)(diag)-66, OPERATION, Clear Memory Mode.>, and Inspection Mode <Ref. to EN(H4DO)(diag)-50, PROCEDURE, Inspection Mode.>.

WIRING DIAGRAM:

Engine electrical system <Ref. to WI-102, Engine Electrical System.>

EN-11337

Step	Check	Yes	No
1 CHECK INPUT SIGNAL OF ECM. 1) Turn the ignition switch to OFF. 2) Measure the voltage between ECM connector and chassis ground. Connector & terminal (B137) No. 2 (+) — Chassis ground (-):	Is the voltage 10 V or more?	Repair the poor contact of ECM connector.	Go to step 2.

Diagnostic Procedure with Diagnostic Trouble Code (DTC)

ENGINE (DIAGNOSTICS)

Step	Check	Yes	No
2 CHECK HARNESS BETWEEN ECM AND MAIN FUSE BOX CONNECTOR. 1) Disconnect the connector from ECM. 2) Measure the resistance between ECM connector and chassis ground. Connector & terminal (B137) No. 2 — Chassis ground:	Is the resistance 1 MΩ or more?	Go to step 3.	Repair the short circuit to ground in harness between ECM connector and battery terminal.
3 CHECK FUSE NO. 13 (MAIN FUSE BOX).	Is the fuse blown out?	Replace the fuse.	Repair the harness and connector. NOTE: In this case, repair the following item: <ul style="list-style-type: none"> • Open circuit in harness between ECM connector and battery • Poor contact of ECM connector • Poor contact of battery terminal

1. OUTLINE OF DIAGNOSIS

Detect the open/short circuit of back-up power supply circuit.
 Judge as NG when the backup power voltage is low.

2. EXECUTION CONDITION

Secondary Parameters	Execution condition
Battery voltage	≥ 10.9 V

3. GENERAL DRIVING CYCLE

Always perform the diagnosis continuously.

4. DIAGNOSTIC METHOD

If the duration of time while the following conditions are met is longer than the time indicated, judge as NG.

Judgment Value

Malfunction Criteria	Threshold Value
Voltage of back-up power supply	≤ 3.5 V

Time Needed for Diagnosis: 2500 ms

Malfunction Indicator Light Illumination: Illuminates as soon as a malfunction occurs.

Diagnostic Procedure with Diagnostic Trouble Code (DTC)

ENGINE (DIAGNOSTICS)

DB:DTC P0604 INTERNAL CONTROL MODULE RANDOM ACCESS MEMORY (RAM) ERROR

DTC DETECTING CONDITION:

Immediately at fault recognition

TROUBLE SYMPTOM:

- Engine does not start
- Engine stall

CAUTION:

After servicing or replacing faulty parts, perform Clear Memory Mode <Ref. to EN(H4DO)(diag)-66, OPERATION, Clear Memory Mode.>, and Inspection Mode <Ref. to EN(H4DO)(diag)-50, PROCEDURE, Inspection Mode.>.

Step	Check	Yes	No
1 CHECK FOR ANY OTHER DTC ON DISPLAY.	Is any other DTC displayed?	Check the appropriate DTC using the "List of Diagnostic Trouble Code (DTC)". <Ref. to EN(H4DO)(diag)-96, List of Diagnostic Trouble Code (DTC).>	Even if DTC is detected, the circuit has returned to a normal condition at this time. Reproduce the failure, and then perform the diagnosis again. NOTE: In this case, temporary poor contact of connector, temporary open or short circuit of harness may be the cause.

1. OUTLINE OF DIAGNOSIS

Detect the malfunction of microcomputer (RAM).

If it is possible to write data to the whole area of RAM in the initial routine, and is possible to read the same data, it is judged as OK, and if not, NG.

2. EXECUTION CONDITION

Secondary Parameters	Execution condition
None	

Diagnosis with the initial routine.

3. GENERAL DRIVING CYCLE

Perform the diagnosis as soon as the ignition switch is turned to ON.

4. DIAGNOSTIC METHOD

Judge as NG when the following conditions are established.

Judgment Value

Malfunction Criteria	Threshold Value
Write the specified value into the RAM.	The written value cannot be read.

Time Needed for Diagnosis: Less than 0.512 seconds

Malfunction Indicator Light Illumination: Illuminates as soon as a malfunction occurs.

Diagnostic Procedure with Diagnostic Trouble Code (DTC)

ENGINE (DIAGNOSTICS)

DC:DTC P0605 INTERNAL CONTROL MODULE READ ONLY MEMORY (ROM) ERROR

NOTE:

For the diagnostic procedure, refer to DTC P0606. <Ref. to EN(H4DO)(diag)-375, DTC P0606 CONTROL MODULE PROCESSOR, Diagnostic Procedure with Diagnostic Trouble Code (DTC).>

1. OUTLINE OF DIAGNOSIS

Judge as NG when SUM value of ROM is outside the standard value.

2. EXECUTION CONDITION

Secondary Parameters	Execution condition
ECM initialization	Run

3. GENERAL DRIVING CYCLE

Always perform the diagnosis continuously.

4. DIAGNOSTIC METHOD

Judge as NG if the criteria below are met.

Judgment Value

Malfunction Criteria	Threshold Value
SUM value of ROM	Malfunction

Time Needed for Diagnosis: 0.512 seconds

Malfunction Indicator Light Illumination: Illuminates as soon as a malfunction occurs.

DD:DTC P0606 CONTROL MODULE PROCESSOR

DTC detecting condition:

Immediately at fault recognition

Trouble symptom:

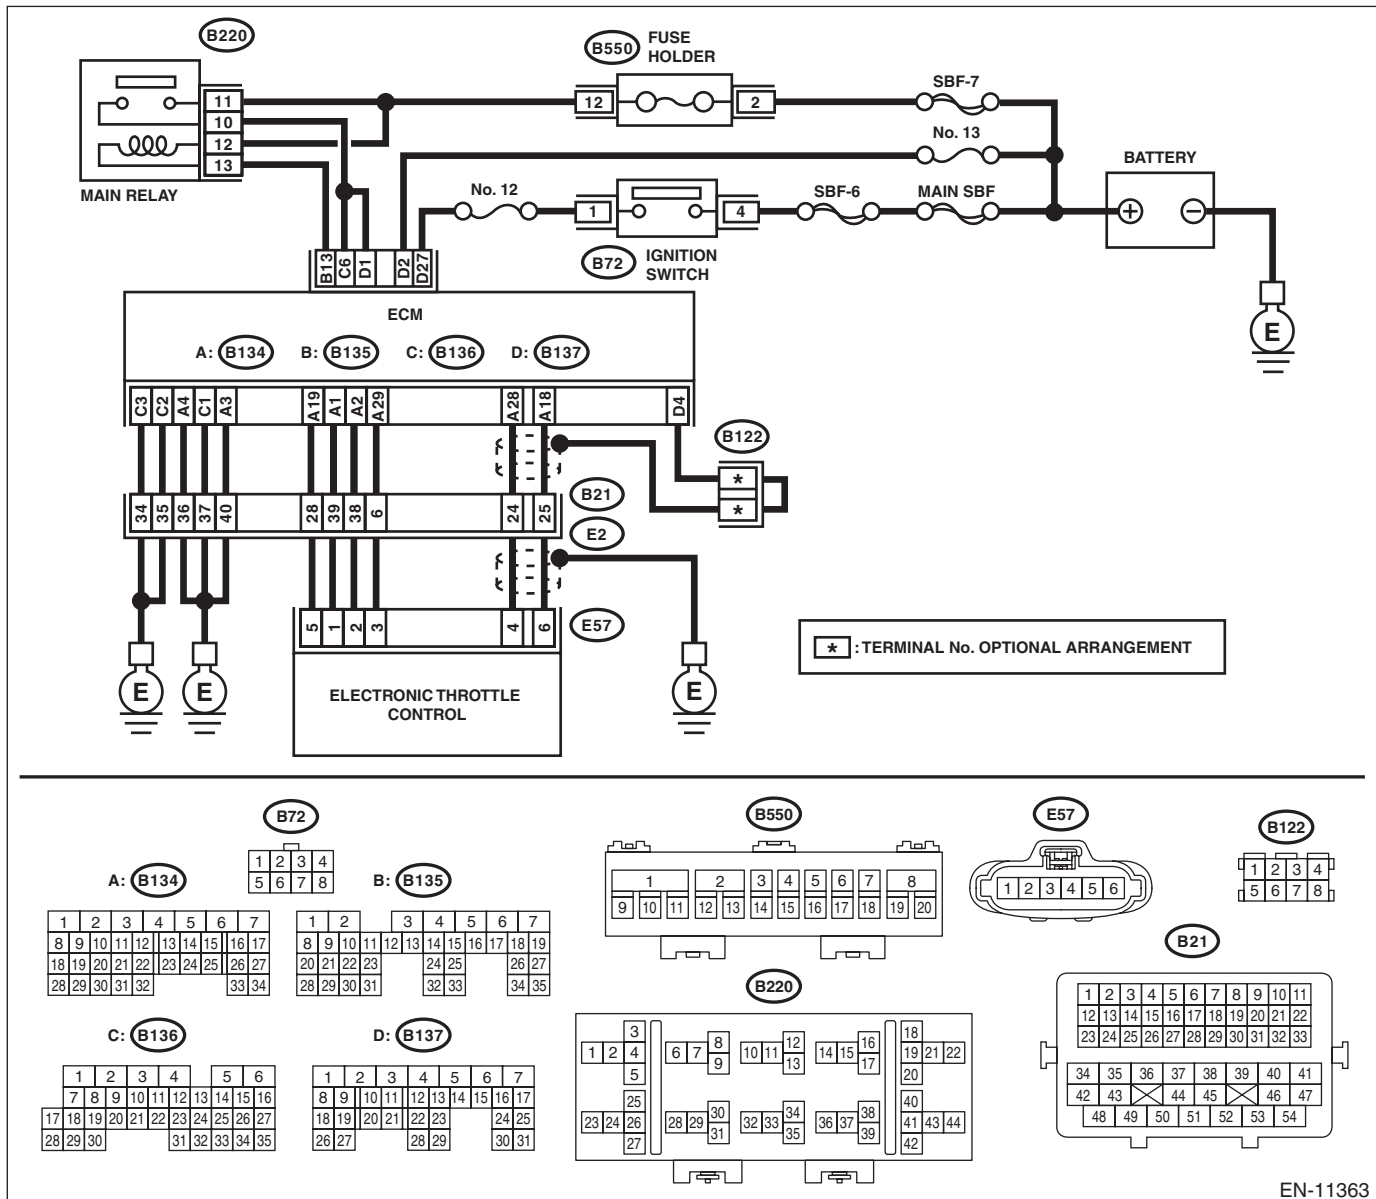

- Improper idling
- Poor driving performance

CAUTION:

After servicing or replacing faulty parts, perform Clear Memory Mode <Ref. to EN(H4DO)(diag)-66, OPERATION, Clear Memory Mode.>, and Inspection Mode <Ref. to EN(H4DO)(diag)-50, PROCEDURE, Inspection Mode.>.

Wiring diagram:

Engine electrical system <Ref. to WI-102, Engine Electrical System.>

EN-11363

Diagnostic Procedure with Diagnostic Trouble Code (DTC)

ENGINE (DIAGNOSTICS)

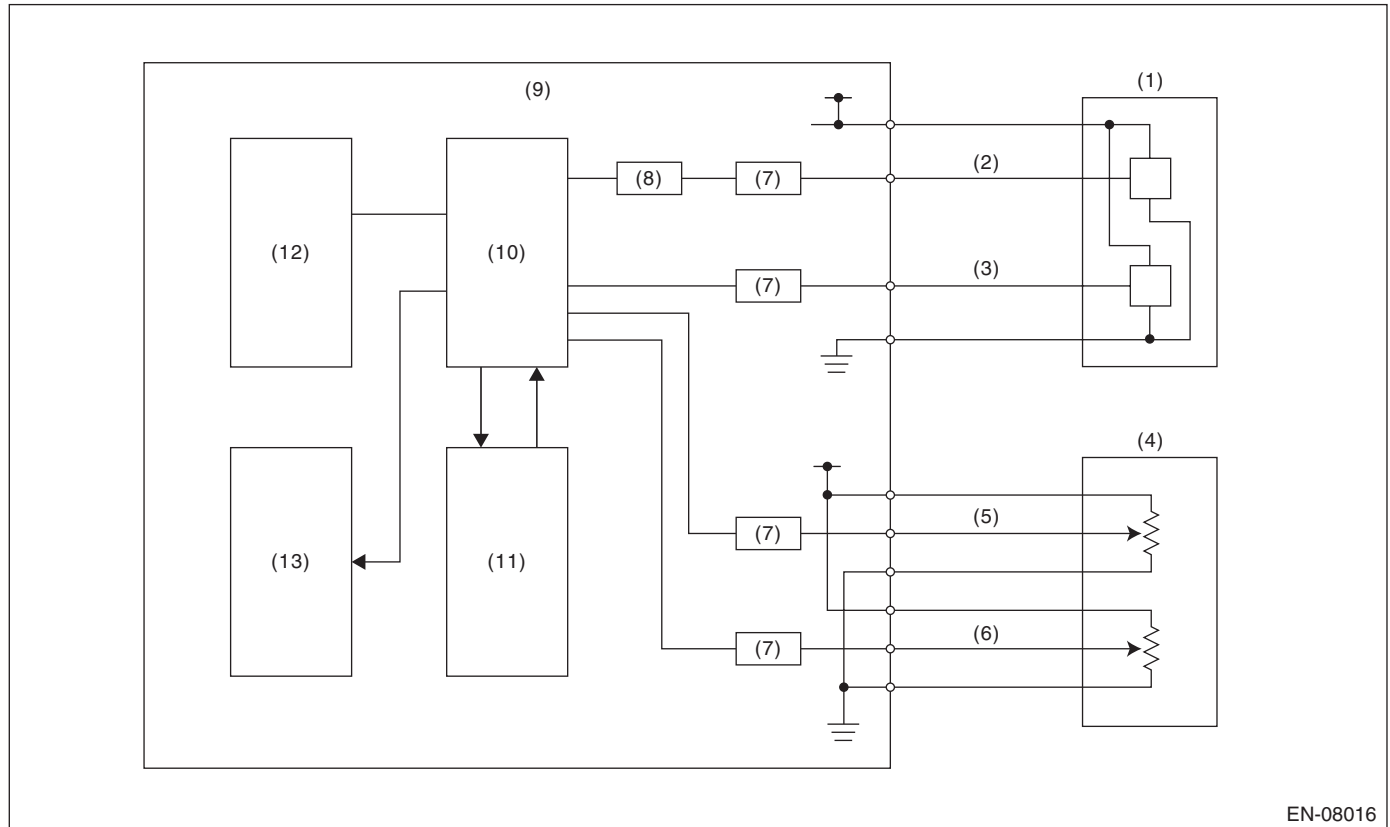

Step	Check	Yes	No
1 CHECK INPUT VOLTAGE OF ECM. 1) Turn the ignition switch to ON. 2) Measure the voltage between ECM connector and chassis ground. Connector & terminal <i>(B136) No. 6 (+) — Chassis ground (-):</i> <i>(B137) No. 1 (+) — Chassis ground (-):</i>	Is the voltage 10 — 13 V?	Go to step 2.	Repair the open or short to ground in the power supply circuit.
2 CHECK INPUT VOLTAGE OF ECM. 1) Start the engine. 2) Measure the voltage between ECM connector and chassis ground. Connector & terminal <i>(B136) No. 6 (+) — Chassis ground (-):</i> <i>(B137) No. 1 (+) — Chassis ground (-):</i>	Is the voltage 13 — 15 V?	Go to step 3.	Repair the open or short to ground in the power supply circuit.
3 CHECK HARNESS BETWEEN ECM AND ELECTRONIC THROTTLE CONTROL CONNECTOR. 1) Turn the ignition switch to OFF. 2) Disconnect the connector from ECM. 3) Disconnect the connectors from electronic throttle control. 4) Measure the resistance of harness between ECM connector and electronic throttle control connector. Connector & terminal <i>(B134) No. 19 — (E57) No. 5:</i> <i>(B134) No. 29 — (E57) No. 3:</i>	Is the resistance less than 1 Ω ?	Go to step 4.	Repair the harness and connector. NOTE: In this case, repair the following item: • Open circuit in harness between ECM connector and electronic throttle control connector • Poor contact of coupling connector
4 CHECK ECM GROUND HARNESS. 1) Connect all connectors. 2) Turn the ignition to ON. 3) Measure the voltage between ECM connector and chassis ground. Connector & terminal <i>(B134) No. 3 (+) — Chassis ground (-):</i> <i>(B134) No. 4 (+) — Chassis ground (-):</i> <i>(B136) No. 1 (+) — Chassis ground (-):</i> <i>(B136) No. 2 (+) — Chassis ground (-):</i> <i>(B136) No. 3 (+) — Chassis ground (-):</i>	Is the voltage less than 1 V?	Check the connector for poor contact and check the harness. Replace the ECM if no fault is found. <Ref. to FU(H4DO)-98, Engine Control Module (ECM).>	Repair the harness and connector. NOTE: In this case, repair the following item: • Open circuit in ground circuit • Further tightening of the engine ground terminal • Poor contact of coupling connector

1. OUTLINE OF DIAGNOSIS

Judge as NG when any one of the followings is established.

- (1) If the CPU operation is abnormal (instruction/flow check).
- (2) If the output IC operation is abnormal (output driver malfunction).

2. COMPONENT DESCRIPTION

EN-08016

- | | | |
|---|---|--------------------|
| (1) Throttle position sensor | (6) Accelerator pedal position sensor 2 | (10) CPU |
| (2) Throttle position sensor 1 | (7) I/F circuit | (11) Monitoring IC |
| (3) Throttle position sensor 2 | (8) Amplifier circuit | (12) EEPROM |
| (4) Accelerator pedal position sensor | (9) Engine control module (ECM) | (13) Output IC |
| (5) Accelerator pedal position sensor 1 | | |

3. EXECUTION CONDITION

Secondary Parameters	Execution condition
(1) Ignition switch	ON
(1) ETC control	Permission
(2) Ignition switch	ON
(2) Battery voltage	≥ 10.9 V

4. GENERAL DRIVING CYCLE

Always perform the diagnosis continuously.

Diagnostic Procedure with Diagnostic Trouble Code (DTC)

ENGINE (DIAGNOSTICS)

5. DIAGNOSTIC METHOD

Judge as OK and clear the NG if any of the followings is established.

Judgment Value

Malfunction Criteria	Threshold Value
(1) Main CPU calculation result	The result and expected value match
(2) Communication between output ICs	Possible to communicate
(3) Step of calculation	Expected step of calculation
(4)-1 Motor relay cut-off signal from observation IC	ON
(4)-2 As defined by Instruction error	Detect
or Instruction error	Detect
(5) Driver IC bus signal	Did not change
(6) Written data in the CAN register	≠ Read data

Time Needed for Diagnosis:

(1): 2 time(s)

(2): 512 ms

(3): 504 ms

(4): 48 ms

(5): 2500 ms

(6): Less than 1 second

Malfunction Indicator Light Illumination: Illuminates as soon as a malfunction occurs.

DE:DTC P060A INTERNAL CONTROL MODULE MONITORING PROCESSOR PERFORMANCE

NOTE:

For the diagnostic procedure, refer to DTC P0606. <Ref. to EN(H4DO)(diag)-375, DTC P0606 CONTROL MODULE PROCESSOR, Diagnostic Procedure with Diagnostic Trouble Code (DTC).>

1. OUTLINE OF DIAGNOSIS

Judge as NG when the monitoring IC operation is abnormal. (Monitoring IC malfunction)

2. COMPONENT DESCRIPTION

EN-08016

- | | | |
|---|---|--------------------|
| (1) Throttle position sensor | (6) Accelerator pedal position sensor 2 | (10) CPU |
| (2) Throttle position sensor 1 | (7) I/F circuit | (11) Monitoring IC |
| (3) Throttle position sensor 2 | (8) Amplifier circuit | (12) EEPROM |
| (4) Accelerator pedal position sensor | (9) Engine control module (ECM) | (13) Output IC |
| (5) Accelerator pedal position sensor 1 | | |

3. EXECUTION CONDITION

Secondary Parameters	Execution condition
(1) Battery voltage	≥ 6 V
(1) CPU intentionally sends a motor cut-off command to the observation IC	ON
(2) Battery voltage	≥ 6 V
(2) CPU intentionally sends an incorrect data	ON
(3) Battery voltage	≥ 6 V

4. GENERAL DRIVING CYCLE

Always perform the diagnosis continuously.

Diagnostic Procedure with Diagnostic Trouble Code (DTC)

ENGINE (DIAGNOSTICS)

5. DIAGNOSTIC METHOD

Judge as OK and clear the NG when the malfunction criteria below are met.

Judgment Value

Malfunction Criteria	Threshold Value
(1) Throttle position Memory throttle position when monitoring	$\geq 2^\circ$
(2) Motor cut-off signal from observation IC	= Not Detected
(3) Written data in the observation IC register	\neq Not Detected

Time Needed for Diagnosis:

(1): 24 ms

(2): 24 ms

(3): 200 ms

Malfunction Indicator Light Illumination: Illuminates as soon as a malfunction occurs.

DF:DTC P060B INTERNAL CONTROL MODULE A/D PROCESSING PERFORMANCE

NOTE:

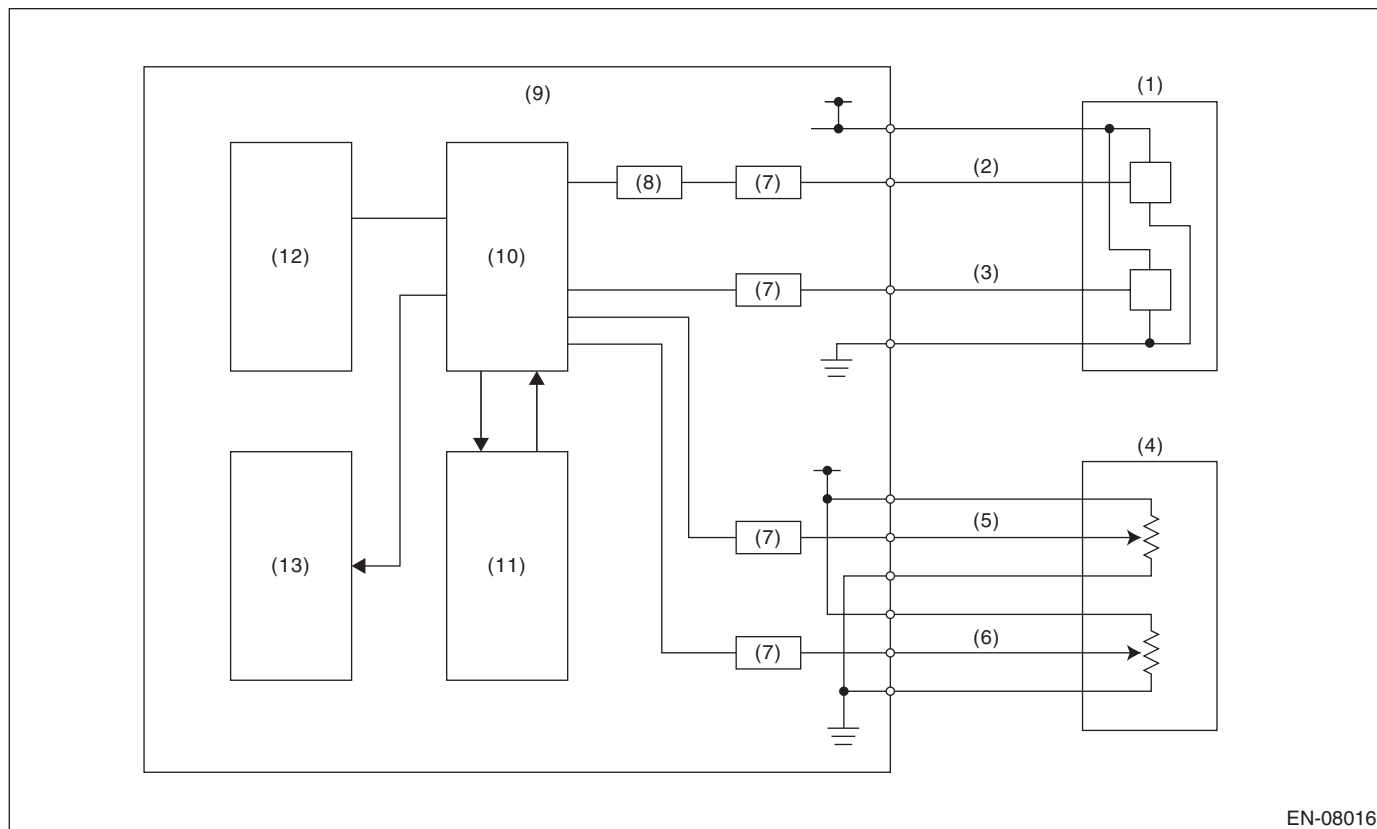

For the diagnostic procedure, refer to DTC P0606. <Ref. to EN(H4DO)(diag)-375, DTC P0606 CONTROL MODULE PROCESSOR, Diagnostic Procedure with Diagnostic Trouble Code (DTC).>

1. OUTLINE OF DIAGNOSIS

Judge as NG when any one of the followings is established.

- (1) If the input amplifier circuit of throttle position sensor 1 is abnormal (quadruple amplification problem).
- (2) If the A/D converter operation is abnormal (ADC malfunction).

2. COMPONENT DESCRIPTION

EN-08016

- | | | |
|---|---|--------------------|
| (1) Throttle position sensor | (6) Accelerator pedal position sensor 2 | (10) CPU |
| (2) Throttle position sensor 1 | (7) I/F circuit | (11) Monitoring IC |
| (3) Throttle position sensor 2 | (8) Amplifier circuit | (12) EEPROM |
| (4) Accelerator pedal position sensor | (9) Engine control module (ECM) | (13) Output IC |
| (5) Accelerator pedal position sensor 1 | | |

Diagnostic Procedure with Diagnostic Trouble Code (DTC)

ENGINE (DIAGNOSTICS)

3. EXECUTION CONDITION

Diagnosis 1

Secondary Parameters	Execution condition
Battery voltage	$\geq 6 \text{ V}$
Target voltage	$= 0 \text{ V}$

Diagnosis 2

Secondary Parameters	Execution condition
Battery voltage	$\geq 6 \text{ V}$
Target voltage	$= 5 \text{ V}$

4. GENERAL DRIVING CYCLE

Always perform the diagnosis continuously.

5. DIAGNOSTIC METHOD

Diagnosis 1

Judge as NG when the following conditions are established.

Judgment Value

Malfunction Criteria	Threshold Value
Actual voltage	$> 0.01953125 \text{ V}$

Time Needed for Diagnosis: 200 ms

Diagnosis 2

Judge as NG when the following conditions are established.

Judgment Value

Malfunction Criteria	Threshold Value
Actual voltage	$> 4.979248047 \text{ V}$

Time Needed for Diagnosis: 200 ms

Malfunction Indicator Light Illumination: Illuminates as soon as a malfunction occurs.

Diagnostic Procedure with Diagnostic Trouble Code (DTC)

ENGINE (DIAGNOSTICS)

DG:DTC P0616 STARTER RELAY "A" CIRCUIT LOW

DTC detecting condition:

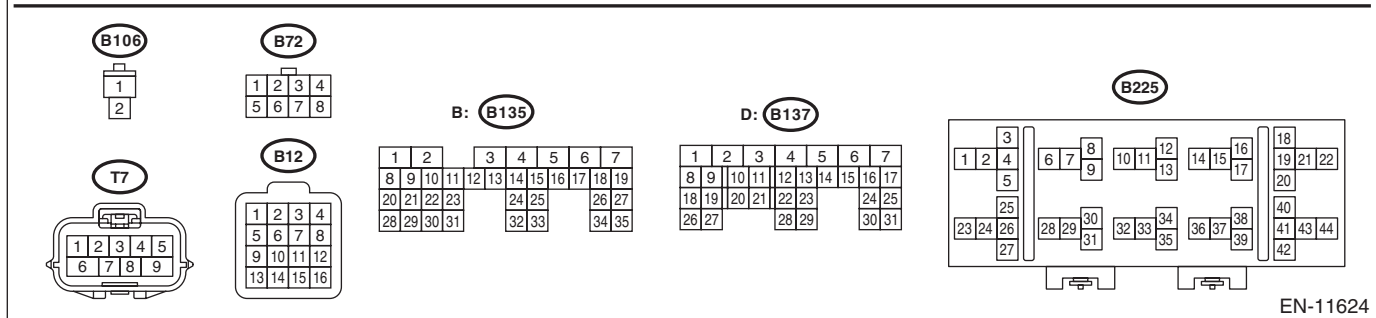

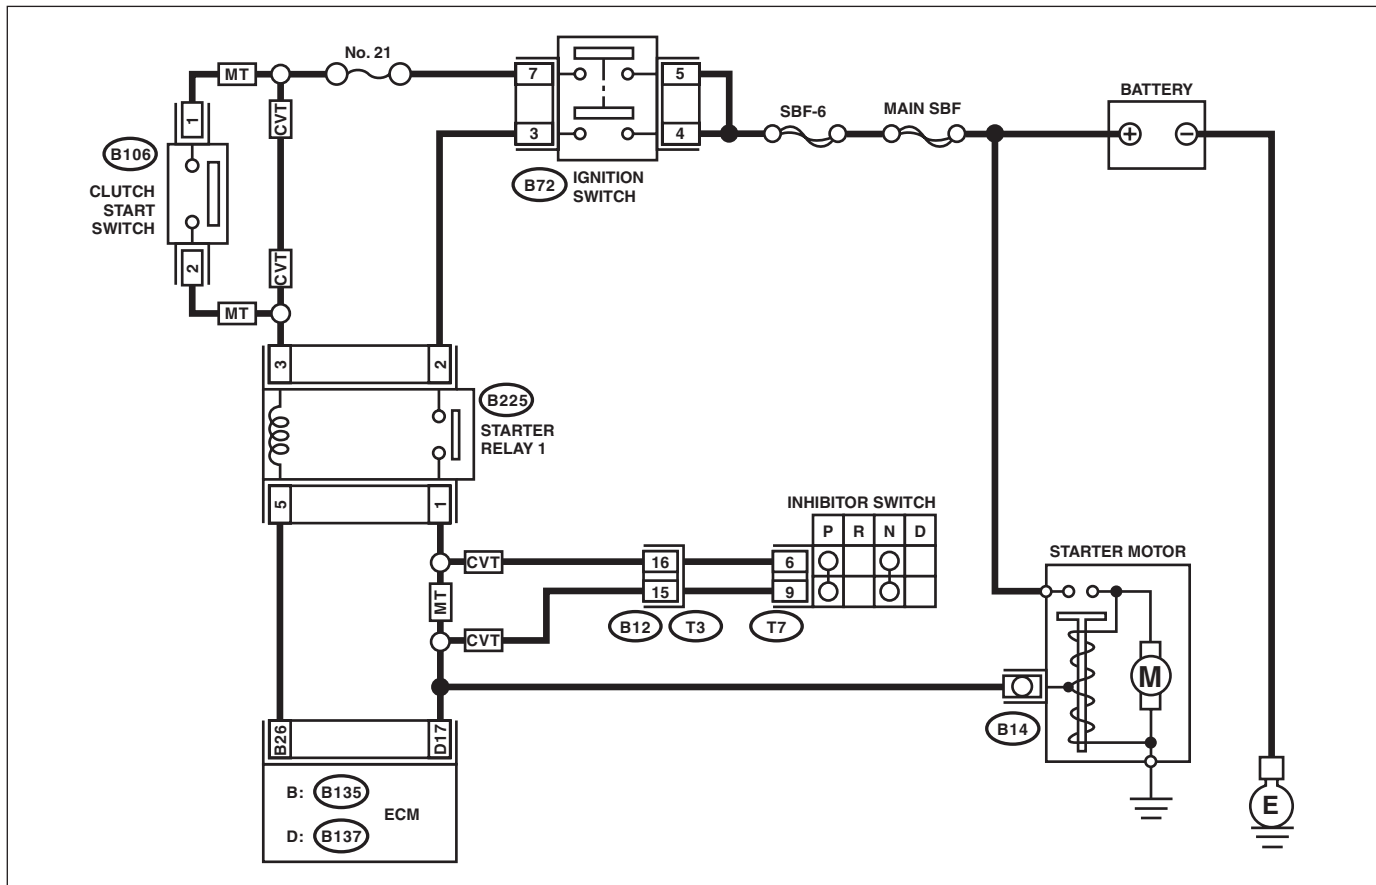

Immediately at fault recognition

CAUTION:

After servicing or replacing faulty parts, perform Clear Memory Mode <Ref. to EN(H4DO)(diag)-66, OPERATION, Clear Memory Mode.>, and Inspection Mode <Ref. to EN(H4DO)(diag)-50, PROCEDURE, Inspection Mode.>.

Wiring diagram:

Engine electrical system <Ref. to WI-102, Engine Electrical System.>

EN-11624

Step	Check	Yes	No
1	CHECK FOR ANY OTHER DTC ON DISPLAY. Is any other DTC displayed?	Check DTC using "List of Diagnostic Trouble Code (DTC)". <Ref. to EN(H4DO)(diag)-96, List of Diagnostic Trouble Code (DTC).>	Go to step 2.

Diagnostic Procedure with Diagnostic Trouble Code (DTC)

ENGINE (DIAGNOSTICS)

Step	Check	Yes	No
2 CHECK HARNESS BETWEEN ECM AND STARTER RELAY 1 CONNECTOR. 1) Turn the ignition switch to OFF. 2) Remove the starter relay 1. 3) Disconnect the connector from ECM. 4) Disconnect the connector from starter motor. 5) Measure the resistance of harness between ECM connector and starter relay 1 connector. Connector & terminal (B136) No. 16 — (B225) No. 1: NOTE: For CVT model, place the select lever in "P" range or "N" range.	Is the resistance less than 1 Ω ?	Go to step 3.	NOTE: Check the following item and repair or replace if necessary. • Open circuit of harness between ECM connector and starter relay 1 connector • Poor contact of coupling connector
3 CHECK HARNESS BETWEEN ECM AND STARTER RELAY 1 CONNECTOR. Measure the resistance between ECM connector and chassis ground. Connector & terminal (B137) No. 17 — Chassis ground:	Is the resistance 1 M Ω or more?	Repair the poor contact of ECM connector.	Repair the short circuit to ground in harness between ECM connector and starter relay 1 connector.

1. OUTLINE OF DIAGNOSIS

Detect abnormal continuity in the starter SW.

Judge as OFF NG when the starter SW signal remains OFF.

2. EXECUTION CONDITION

Secondary Parameters	Execution condition
Battery voltage	≥ 8 V
Engine speed increases from 0 to more than 500 rpm	
Vehicle speed	< 1 km/h
Starter relay command	ON

3. GENERAL DRIVING CYCLE

Always perform the diagnosis continuously.

4. DIAGNOSTIC METHOD

Judge as OFF NG when the following conditions are established.

Judgment Value

Malfunction Criteria	Threshold Value
The ECM did not detect the following. Measured ECM input voltage which is supplied from 12 V battery system through the starter relay	≥ 12 V battery system voltage $\times 0.85$ V

Time Needed for Diagnosis: Less than 1 second

Malfunction Indicator Light Illumination: Illuminates as soon as a malfunction occurs.

Diagnostic Procedure with Diagnostic Trouble Code (DTC)

ENGINE (DIAGNOSTICS)

DH:DTC P0617 STARTER RELAY "A" CIRCUIT HIGH

DTC DETECTING CONDITION:

Immediately at fault recognition

TROUBLE SYMPTOM:

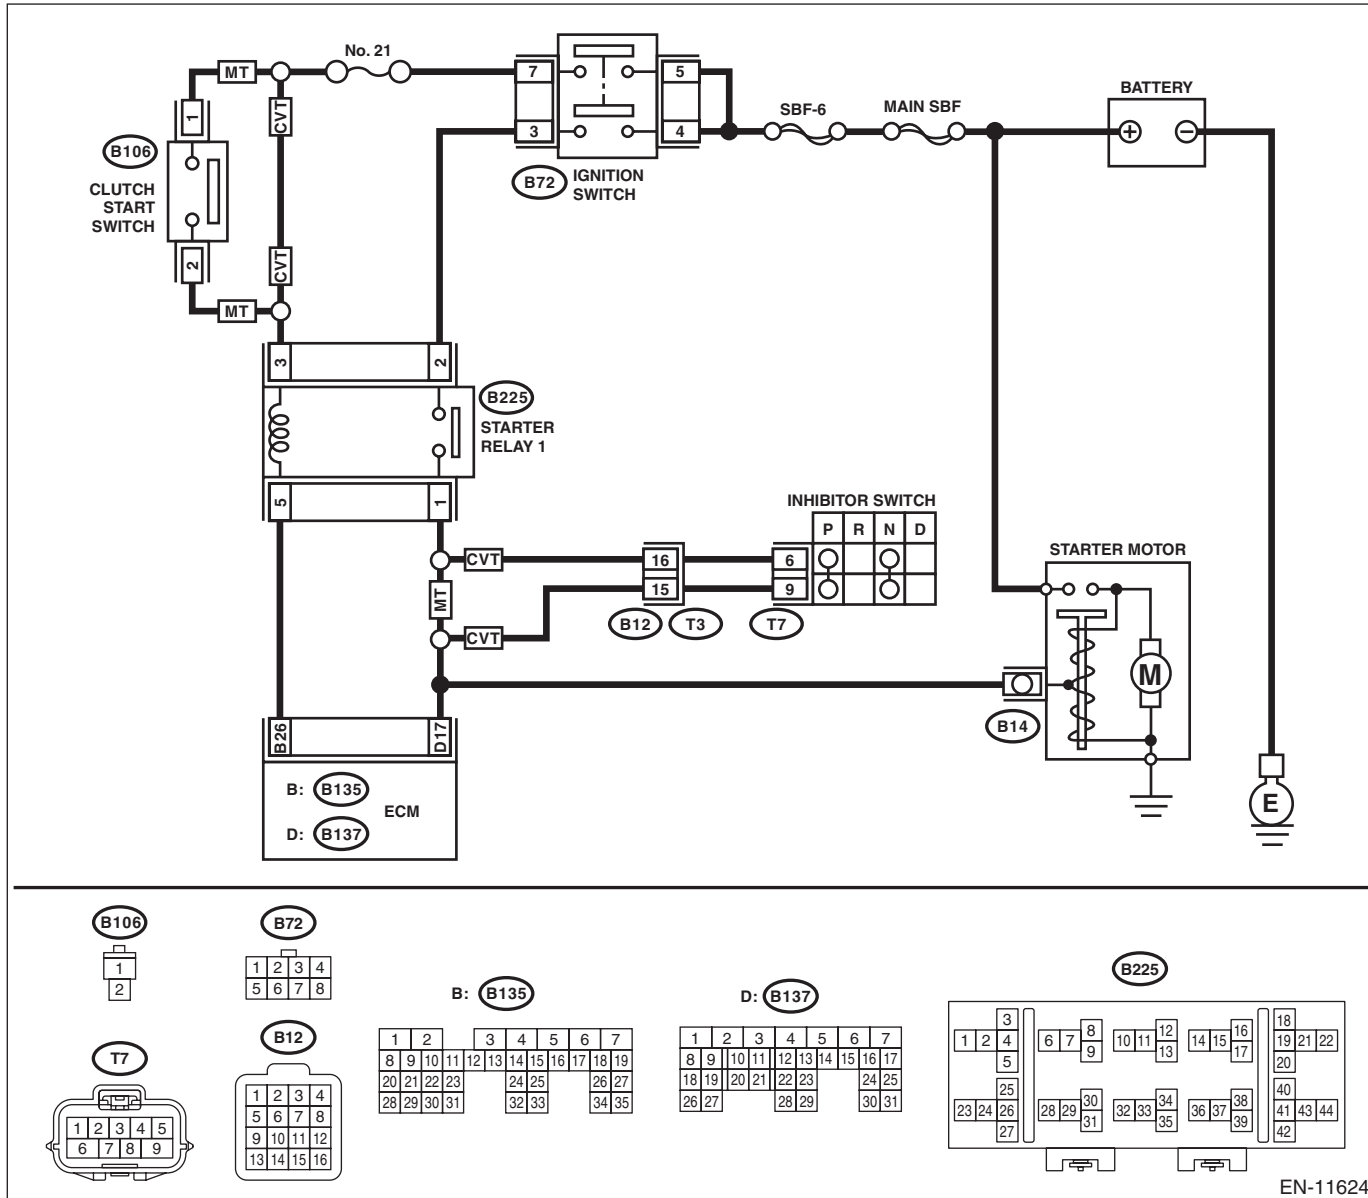

Failure of engine to start

CAUTION:

After servicing or replacing faulty parts, perform Clear Memory Mode <Ref. to EN(H4DO)(diag)-66, OPERATION, Clear Memory Mode.>, and Inspection Mode <Ref. to EN(H4DO)(diag)-50, PROCEDURE, Inspection Mode.>.

WIRING DIAGRAM:

Engine electrical system <Ref. to WI-102, Engine Electrical System.>

EN-11624

Diagnostic Procedure with Diagnostic Trouble Code (DTC)

ENGINE (DIAGNOSTICS)

Step	Check	Yes	No
1 CHECK FOR ANY OTHER DTC ON DISPLAY.	Is any other DTC displayed?	Check the appropriate DTC using the "List of Diagnostic Trouble Code (DTC)". <Ref. to EN(H4DO)(diag)-96, List of Diagnostic Trouble Code (DTC).>	Go to step 2.
2 CHECK HARNESS BETWEEN ECM AND STARTER RELAY 1 CONNECTOR. 1) Turn the ignition switch to OFF. 2) Disconnect the connector from ECM. 3) Turn the ignition switch to ON. 4) Measure the voltage between ECM connector and chassis ground. Connector & terminal (B136) No. 16 (+) — Chassis ground (-): NOTE: For CVT model, place the select lever in "P" range or "N" range.	Is the voltage 10 V or more?	Repair the short circuit to power in harness between ECM connector and starter relay 1 connector.	Repair the poor contact of ECM connector.

1. OUTLINE OF DIAGNOSIS

Detect abnormal continuity in the starter SW.
Judge as ON NG when the starter SW signal remains ON.

2. EXECUTION CONDITION

Secondary parameters	Execution condition
Battery voltage	≥ 8 V
Engine speed	≥ 500 rpm
Starter relay command	OFF

3. GENERAL DRIVING CYCLE

Always perform the diagnosis continuously.

4. DIAGNOSTIC METHOD

If the duration of time while the following conditions are met is longer than the time indicated, judge as NG.

Judgment Value

Malfunction Criteria	Threshold Value
Measured ECM input voltage which is supplied from 12 V battery system through the starter relay	≥ 12 V battery system voltage × 0.85 V

Time Needed for Diagnosis: 30000 ms

Malfunction Indicator Light Illumination: Illuminates as soon as a malfunction occurs.

DI: DTC P062F INTERNAL CONTROL MODULE EEPROM ERROR

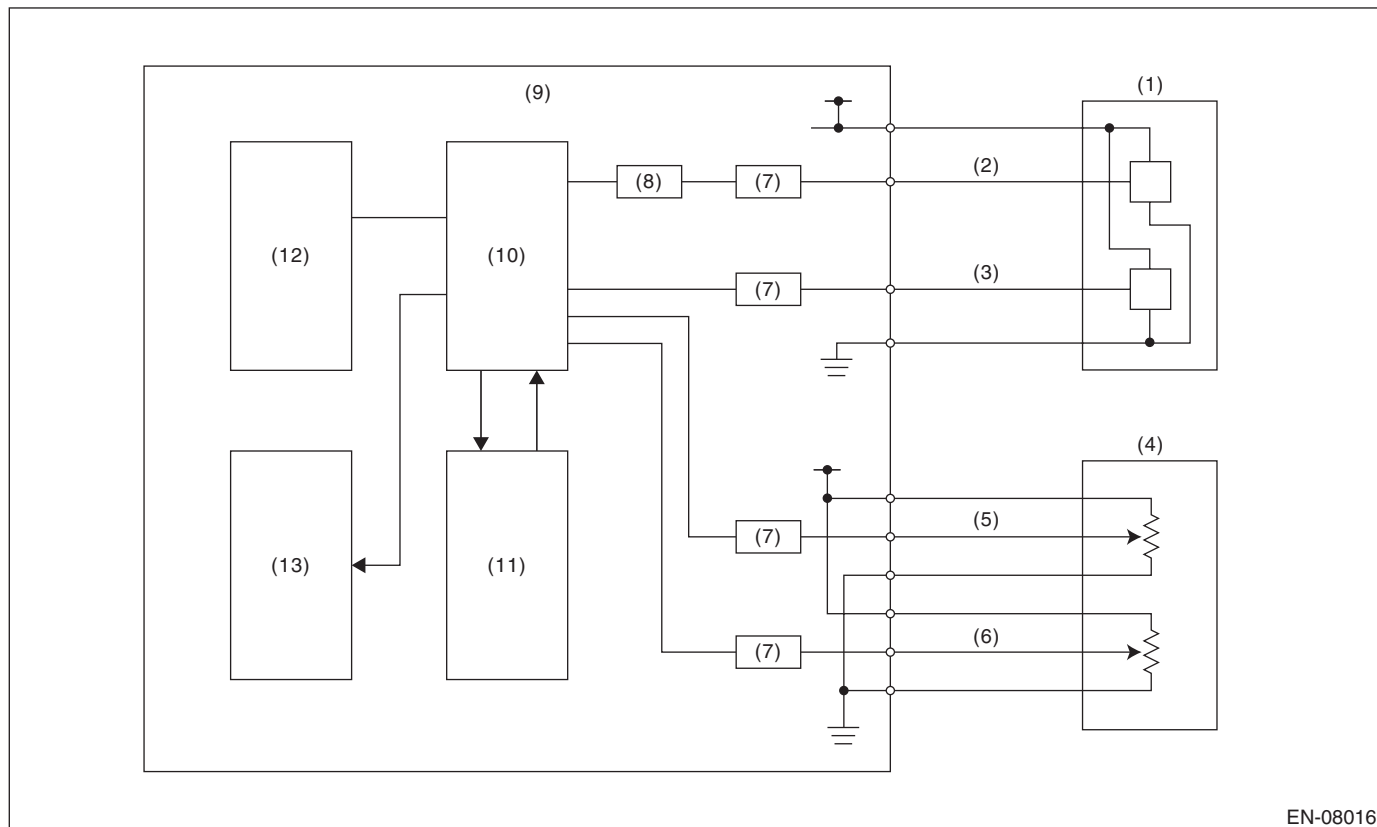

NOTE:

For the diagnostic procedure, refer to DTC P0606. <Ref. to EN(H4DO)(diag)-375, DTC P0606 CONTROL MODULE PROCESSOR, Diagnostic Procedure with Diagnostic Trouble Code (DTC).>

1. OUTLINE OF DIAGNOSIS

Judge as NG when the EEPROM operation is abnormal. (EEPROM malfunction)

2. COMPONENT DESCRIPTION

EN-08016

- | | | |
|---|---|--------------------|
| (1) Throttle position sensor | (6) Accelerator pedal position sensor 2 | (10) CPU |
| (2) Throttle position sensor 1 | (7) I/F circuit | (11) Monitoring IC |
| (3) Throttle position sensor 2 | (8) Amplifier circuit | (12) EEPROM |
| (4) Accelerator pedal position sensor | (9) Engine control module (ECM) | (13) Output IC |
| (5) Accelerator pedal position sensor 1 | | |

3. EXECUTION CONDITION

Secondary Parameters	Execution condition
None	

4. GENERAL DRIVING CYCLE

Always perform the diagnosis continuously.

Diagnostic Procedure with Diagnostic Trouble Code (DTC)

ENGINE (DIAGNOSTICS)

5. DIAGNOSTIC METHOD

Judge as OK and clear the NG when the malfunction criteria below are met.

Judgment Value

Malfunction Criteria	Threshold Value
Writing-check (EEPROM)	Error

Time Needed for Diagnosis: 2 times

Malfunction Indicator Light Illumination: Illuminates as soon as a malfunction occurs.

Diagnostic Procedure with Diagnostic Trouble Code (DTC)

ENGINE (DIAGNOSTICS)

DJ:DTC P0685 ECM/PCM POWER RELAY CONTROL CIRCUIT/OPEN

DTC DETECTING CONDITION:

Detected when two consecutive driving cycles with fault occur.

CAUTION:

After servicing or replacing faulty parts, perform Clear Memory Mode <Ref. to EN(H4DO)(diag)-66, OPERATION, Clear Memory Mode.>, and Inspection Mode <Ref. to EN(H4DO)(diag)-50, PROCEDURE, Inspection Mode.>.

WIRING DIAGRAM:

Engine electrical system <Ref. to WI-102, Engine Electrical System.>

EN-11337

Step	Check	Yes	No
1	CHECK ECM CONNECTOR. Check the connecting condition of ECM connector.	Go to step 2.	Connect the ECM connector correctly.

Diagnostic Procedure with Diagnostic Trouble Code (DTC)

ENGINE (DIAGNOSTICS)

Step	Check	Yes	No
2 CHECK HARNESS BETWEEN ECM AND MAIN RELAY CONNECTOR. 1) Turn the ignition switch to OFF. 2) Measure the voltage between ECM connector and engine ground. Connector & terminal (B136) No. 6 (+) — Engine ground (-): (B137) No. 1 (+) — Engine ground (-):	Is the voltage 10 V or more?	Repair the harness and connector. NOTE: In this case, repair the following item: • Short circuit to power supply in harness between ECM connector and main relay connector • Defective main relay	Go to step 3.
3 CHECK HARNESS BETWEEN ECM AND MAIN RELAY CONNECTOR. 1) Turn the ignition switch to OFF. 2) Remove the main relay. 3) Disconnect the connector from ECM. 4) Measure the resistance between the ECM connector and engine ground. Connector & terminal (B135) No. 13 — Engine ground:	Is the resistance 1 MΩ or more?	Repair the poor contact of ECM connector.	Repair the short circuit to ground in harness between ECM connector and main relay connector.

1. OUTLINE OF DIAGNOSIS

Detect the main relay stuck to ON.

Judge as NG when ECM keeps operating for more than predetermined time although the main relay does not turn to OFF after ignition switch is turned to OFF.

2. COMPONENT DESCRIPTION

The main relay controls the current in the coil section to switch ON/OFF the ECM by receiving instructions from the ignition switch and Evaporative Leak Check Module.

3. EXECUTION CONDITION

Secondary Parameters	Execution condition
Main relay	OFF instruction

4. GENERAL DRIVING CYCLE

Perform the diagnosis only once when the enable conditions are established with the ignition switch OFF → ON.

5. DIAGNOSTIC METHOD

If the duration of time while the following conditions are met is longer than the time indicated, judge as NG.

Judgment Value

Malfunction Criteria	Threshold Value
ECM status	In operation

Time Needed for Diagnosis: 2500 ms

Malfunction Indicator Light Illumination: Illuminates when malfunction occurs in 2 continuous driving cycles.

Diagnostic Procedure with Diagnostic Trouble Code (DTC)

ENGINE (DIAGNOSTICS)

DK:DTC P0700 TRANSMISSION CONTROL SYSTEM (MIL REQUEST)

NOTE:

For the diagnostic procedure, refer to CVT section. <Ref. to CVT(diag)-2, Basic Diagnostic Procedure.>

1. OUTLINE OF DIAGNOSIS

Judge as NG when there is CAN communication with the TCM and there is a MIL lighting request.

2. EXECUTION CONDITION

Secondary Parameters	Execution condition
MIL lighting request from TCM	Yes

3. GENERAL DRIVING CYCLE

Always perform the diagnosis continuously.

4. DIAGNOSTIC METHOD

If the duration of time while the following conditions are met is longer than the time indicated, judge as NG.

Judgment Value

Malfunction Criteria	Threshold Value
Battery voltage	≥ 10.9 V

Time Needed for Diagnosis: 128 ms

Malfunction Indicator Light Illumination: Illuminates as soon as a malfunction occurs.

Diagnostic Procedure with Diagnostic Trouble Code (DTC)

ENGINE (DIAGNOSTICS)

DL:DTC P081A STARTER DISABLE CIRCUIT LOW

DTC detecting condition:

Immediately at fault recognition

Trouble symptom:

Failure of engine to start

CAUTION:

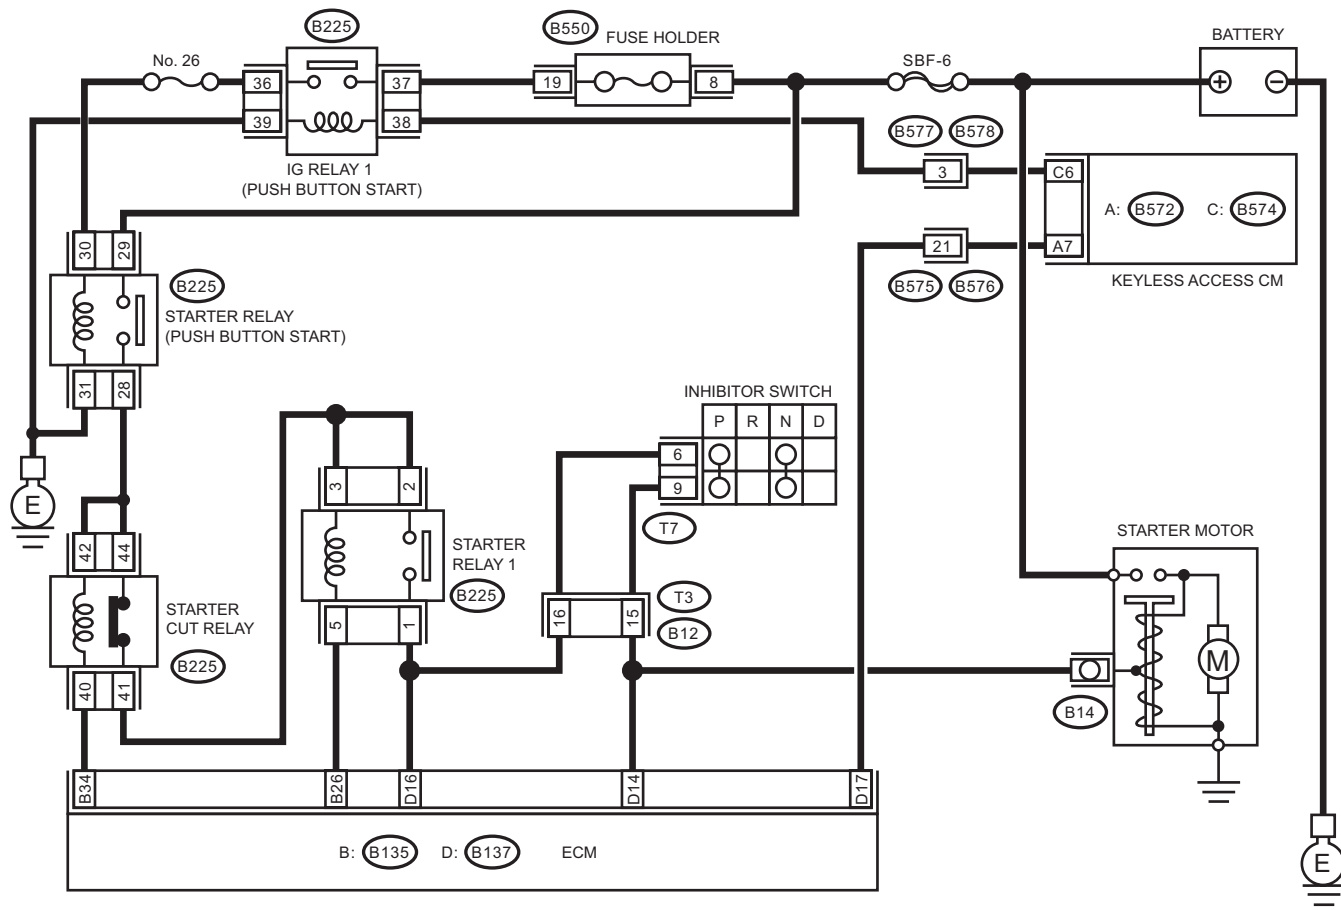

After servicing or replacing faulty parts, perform Clear Memory Mode <Ref. to EN(H4DO)(diag)-66, OPERATION, Clear Memory Mode.>, and Inspection Mode <Ref. to EN(H4DO)(diag)-50, PROCEDURE, Inspection Mode.>.

Diagnostic Procedure with Diagnostic Trouble Code (DTC)

ENGINE (DIAGNOSTICS)

Wiring diagram:

Engine electrical system <Ref. to WI-102, Engine Electrical System.>

EN-22029

Diagnostic Procedure with Diagnostic Trouble Code (DTC)

ENGINE (DIAGNOSTICS)

Step	Check	Yes	No
1 CHECK HARNESS BETWEEN STARTER RELAY (PUSH BUTTON START) CONNECTOR AND STARTER CUT RELAY CONNECTOR. 1) Turn the ignition to OFF. 2) Remove the starter relay (push button start). 3) Remove the starter cut relay. 4) Measure the resistance of harness between starter relay (push button start) connector and starter cut relay connector. Connector & terminal (B225) No. 28 — (B225) No. 42:	Is the resistance less than 1 Ω?	Go to step 2.	Repair the open circuit in harness between starter relay (push button start) connector and starter cut relay connector.
2 CHECK HARNESS BETWEEN ECM AND STARTER CUT RELAY CONNECTOR. 1) Disconnect the connector from ECM. 2) Measure the resistance of harness between ECM connector and starter cut relay connector. Connector & terminal (B135) No. 34 — (B225) No. 40:	Is the resistance less than 1 Ω?	Go to step 3.	Repair the open circuit of harness between ECM connector and starter cut relay connector.
3 CHECK STARTER CUT RELAY. 1) Connect the battery to starter cut relay terminals No. 40 and No. 42. 2) Measure the resistance between starter cut relay terminals. Terminals No. 41 — No. 44:	Is the resistance 1 MΩ or more?	Repair the poor contact of ECM connector.	Replace the starter cut relay. <Ref. to SL-104, Starter Cut Relay.>

1. OUTLINE OF DIAGNOSIS

Detect abnormal continuity in the starter cut relay.
 Judge as NG when the starter cut relay output line is open.

2. EXECUTION CONDITION

Secondary Parameters	Execution condition
Battery voltage	≥ 8 V
Engine speed	Increase from 0 rpm to 500 rpm or more
Vehicle speed	< 1 km/h (0.6 MPH)
Starter cut relay command	OFF

3. GENERAL DRIVING CYCLE

Perform the diagnosis only once after the enable conditions have been established.

4. DIAGNOSTIC METHOD

Judge as NG when the following conditions are established.

Judgment Value

Malfunction Criteria	Threshold Value
Starter cut relay control voltage that exceeds battery voltage × 0.34	Not detected

Time Needed for Diagnosis: Less than 1 second

Malfunction Indicator Light Illumination: Illuminates as soon as a malfunction occurs.

DM:DTC P0851 PARK/NEUTRAL SWITCH INPUT CIRCUIT LOW

1. AT MODEL

DTC detecting condition:

Detected when two consecutive driving cycles with fault occur.

Trouble symptom:

Improper idling

CAUTION:

After servicing or replacing faulty parts, perform Clear Memory Mode <Ref. to EN(H4DO)(diag)-66, OPERATION, Clear Memory Mode.>, and Inspection Mode <Ref. to EN(H4DO)(diag)-50, PROCEDURE, Inspection Mode.>.

Wiring diagram:

Engine electrical system <Ref. to WI-102, Engine Electrical System.>

EN-11352

Step	Check	Yes	No
1	CHECK SELECT CABLE. Is there any fault in select cable?	Repair or adjust the select cable. <Ref. to CS-50, Select Cable.>	Go to step 2.

Diagnostic Procedure with Diagnostic Trouble Code (DTC)

ENGINE (DIAGNOSTICS)

Step	Check	Yes	No
2 CHECK INPUT SIGNAL OF ECM. 1) Turn the ignition switch to ON. 2) Place the select lever in other than "P" range and "N" range. 3) Measure the voltage between ECM connector and chassis ground. Connector & terminal (B137) No. 16 (+) — Chassis ground (-):	Is the voltage 10 V or more?	Repair the poor contact of ECM connector.	Go to step 3.
3 CHECK HARNESS BETWEEN ECM AND TRANSMISSION HARNESS CONNECTOR. 1) Turn the ignition switch to OFF. 2) Disconnect the connector from ECM. 3) Disconnect the connectors from ECM and transmission harness connector (T3). 4) Measure the resistance between ECM connector and chassis ground. Connector & terminal (B137) No. 16 — Chassis ground:	Is the resistance 1 MΩ or more?	Go to step 4.	Repair the short circuit to ground in harness between ECM connector and transmission harness connector.
4 CHECK TRANSMISSION HARNESS CONNECTOR. 1) Disconnect the connector from inhibitor switch. 2) Measure the resistance between transmission harness connector and engine ground. Connector & terminal (T3) No. 16 — Engine ground:	Is the resistance 1 MΩ or more?	Replace the inhibitor switch. <Ref. to CVT(TR580)-97, Inhibitor Switch.>	Repair short circuit to ground in harness between transmission harness connector and inhibitor switch connector.

2. OUTLINE OF DIAGNOSIS

Detect the open or short circuit of neutral SW.

Judge as NG when the ECM neutral terminal input differs from the reception data from TCM.

3. EXECUTION CONDITION

Secondary Parameters	Execution condition
Battery voltage	≥ 10.9 V
Starter relay feedback voltage	< Battery voltage × 0.35
Data received from TCM	≠ "P" range/"N" range

4. GENERAL DRIVING CYCLE

Perform the diagnosis continuously in 2 seconds after starting the engine.

5. DIAGNOSTIC METHOD

If the duration of time while the following conditions are met is longer than the time indicated, judge as NG.

Judgment Value

Malfunction Criteria	Threshold Value
Neutral position switch voltage	≤ Battery voltage × 0.19

Time Needed for Diagnosis: 64 ms × 100 time(s)

Malfunction Indicator Light Illumination: Illuminates when malfunction occurs in 2 continuous driving cycles.

6. MT MODEL

DTC detecting condition:

Detected when two consecutive driving cycles with fault occur.

Trouble symptom:

Improper idling

CAUTION:

After servicing or replacing faulty parts, perform Clear Memory Mode <Ref. to EN(H4DO)(diag)-66, OPERATION, Clear Memory Mode.>, and Inspection Mode <Ref. to EN(H4DO)(diag)-50, PROCEDURE, Inspection Mode.>.

Wiring diagram:

Engine electrical system <Ref. to WI-102, Engine Electrical System.>

EN-11352

Diagnostic Procedure with Diagnostic Trouble Code (DTC)

ENGINE (DIAGNOSTICS)

Step	Check	Yes	No
1 CHECK INPUT SIGNAL OF ECM. 1) Turn the ignition switch to ON. 2) Place the gear shift lever in a position other than neutral. 3) Measure the voltage between ECM connector and chassis ground. Connector & terminal (B137) No. 16 (+) — Chassis ground (-):	Is the voltage 10 V or more?	Repair the poor contact of ECM connector.	Go to step 2.
2 CHECK HARNESS BETWEEN ECM AND NEUTRAL POSITION SWITCH 1 CONNECTOR. 1) Turn the ignition switch to OFF. 2) Disconnect the connector from ECM. 3) Disconnect the connector from neutral position switch 1. 4) Measure the resistance between ECM connector and chassis ground. Connector & terminal (B137) No. 16 — Chassis ground:	Is the resistance 1 MΩ or more?	Replace the neutral position switch 1. <Ref. to 5MT-35, Switches and Harness.>	Repair the short circuit to ground in harness between ECM connector and neutral position switch 1 connector.

7. OUTLINE OF DIAGNOSIS

Detect the open or short circuit of neutral SW.

Judge as NG when there is no change in the neutral SW even if the driving shift was applied. (There is neutral SW ON/OFF inversion from the vehicle speed and engine speed.)

8. EXECUTION CONDITION

Secondary parameters	Execution condition
Battery voltage	≥ 10.9 V
The number of driving condition change from a) to b)	= 3 time(s)
a)	
Vehicle speed and Engine speed	≤ 0 km/h (0 MPH) ≥ 550 rpm and ≤ 850 rpm
b)	
Vehicle speed and Engine speed	≥ 64 km/h (39.8 MPH) ≥ 1550 rpm and ≤ 2100 rpm

9. GENERAL DRIVING CYCLE

Perform the diagnosis continuously in 2 seconds after starting the engine.

Diagnostic Procedure with Diagnostic Trouble Code (DTC)

ENGINE (DIAGNOSTICS)

10. DIAGNOSTIC METHOD

Judge NG when the malfunction criteria below are completed determined times or more after the neutral SW change.

Judgment value

Malfunction Criteria	Threshold Value
Neutral switch output voltage	\leq Battery voltage \times 0.19 V

Time needed for diagnosis: 3 time(s)

Malfunction indicator light illumination: Illuminates when malfunction occurs in 2 continuous driving cycles.

Diagnostic Procedure with Diagnostic Trouble Code (DTC)

ENGINE (DIAGNOSTICS)

DN:DTC P0852 PARK/NEUTRAL SWITCH INPUT CIRCUIT HIGH

1. AT MODEL

DTC detecting condition:

Detected when two consecutive driving cycles with fault occur.

Trouble symptom:

Improper idling

CAUTION:

After servicing or replacing faulty parts, perform Clear Memory Mode <Ref. to EN(H4DO)(diag)-66, OPERATION, Clear Memory Mode.>, and Inspection Mode <Ref. to EN(H4DO)(diag)-50, PROCEDURE, Inspection Mode.>.

Wiring diagram:

Engine electrical system <Ref. to WI-102, Engine Electrical System.>

EN-11352

Step	Check	Yes	No
1	CHECK SELECT CABLE. Is there any fault in select cable?	Repair or adjust the select cable. <Ref. to CS-50, Select Cable.>	Go to step 2.

Diagnostic Procedure with Diagnostic Trouble Code (DTC)

ENGINE (DIAGNOSTICS)

Step	Check	Yes	No
2 CHECK INPUT SIGNAL OF ECM. 1) Turn the ignition switch to ON. 2) Measure the voltage between ECM and chassis ground with select lever at "P" range and "N" range. Connector & terminal (B137) No. 16 (+) — Chassis ground (-):	Is the voltage less than 1 V?	Repair the poor contact of ECM connector.	Go to step 3.
3 CHECK HARNESS BETWEEN ECM AND INHIBITOR SWITCH CONNECTOR. 1) Turn the ignition switch to OFF. 2) Disconnect the connector from ECM. 3) Disconnect the connector from inhibitor switch. 4) Measure the resistance of harness between ECM connector and inhibitor switch connector. Connector & terminal (B137) No. 16 — (T7) No. 6:	Is the resistance less than 1 Ω?	Go to step 4.	Repair the harness and connector. NOTE: In this case, repair the following item: <ul style="list-style-type: none"> • Open circuit in harness between ECM connector and inhibitor switch connector • Poor contact of coupling connector
4 CHECK INHIBITOR SWITCH GROUND LINE. Measure the resistance of harness between inhibitor switch connector and engine ground. Connector & terminal (T7) No. 9 — Engine ground:	Is the resistance less than 5 Ω?	Replace the inhibitor switch. <Ref. to CVT(TR580)-97, Inhibitor Switch.>	Repair the harness and connector. NOTE: In this case, repair the following item: <ul style="list-style-type: none"> • Open circuit of harness between inhibitor switch connector and starter motor ground line • Poor contact of coupling connector • Poor contact of starter motor connector • Poor contact of starter motor ground • Starter motor

2. OUTLINE OF DIAGNOSIS

Detect the open or short circuit of neutral SW.

Judge as NG when the ECM neutral terminal input differs from the reception data from TCM.

3. EXECUTION CONDITION

Secondary Parameters	Execution condition
Battery voltage	≥ 10.9 V
Starter relay feedback voltage	< Battery voltage × 0.35
Data received from TCM	≠ "P" range/"N" range

4. GENERAL DRIVING CYCLE

Perform the diagnosis continuously in 2 seconds after starting the engine.

Diagnostic Procedure with Diagnostic Trouble Code (DTC)

ENGINE (DIAGNOSTICS)

5. DIAGNOSTIC METHOD

If the duration of time while the following conditions are met is longer than the time indicated, judge as NG.

Judgment Value

Malfunction Criteria	Threshold Value
Neutral position switch voltage	\leq Battery voltage \times 0.6

Time Needed for Diagnosis: 64 ms \times 100 time(s)

Malfunction Indicator Light Illumination: Illuminates when malfunction occurs in 2 continuous driving cycles.

6. MT MODEL

DTC detecting condition:

Detected when two consecutive driving cycles with fault occur.

Trouble symptom:

Improper idling

CAUTION:

After servicing or replacing faulty parts, perform Clear Memory Mode <Ref. to EN(H4DO)(diag)-66, OPERATION, Clear Memory Mode.>, and Inspection Mode <Ref. to EN(H4DO)(diag)-50, PROCEDURE, Inspection Mode.>.

Diagnostic Procedure with Diagnostic Trouble Code (DTC)

ENGINE (DIAGNOSTICS)

Wiring diagram:

Engine electrical system <Ref. to WI-102, Engine Electrical System.>

EN-11352

Step	Check	Yes	No
1 CHECK INPUT SIGNAL OF ECM. 1) Turn the ignition switch to ON. 2) Place the gear shift lever in neutral. 3) Measure the voltage between ECM connector and chassis ground. Connector & terminal (B136) No. 35 (+) — Chassis ground (-):	Is the voltage less than 1 V?	Repair the poor contact of ECM connector.	Go to step 2.

Diagnostic Procedure with Diagnostic Trouble Code (DTC)

ENGINE (DIAGNOSTICS)

Step	Check	Yes	No
2 CHECK HARNESS BETWEEN ECM AND NEUTRAL POSITION SWITCH 1 CONNECTOR. 1) Turn the ignition switch to OFF. 2) Disconnect the connector from ECM. 3) Disconnect the connector from neutral position switch 1. 4) Measure the resistance of harness between ECM connector and neutral position switch 1 connector. Connector & terminal (B137) No. 16 — (B25) No. 2: (B137) No. 4 — (B25) No. 1:	Is the resistance less than 1 Ω?	Go to step 3.	Repair the harness and connector. NOTE: In this case, repair the following item: • Open circuit in harness between ECM connector and neutral position switch 1 connector • Poor contact of coupling connector
3 CHECK NEUTRAL POSITION SWITCH 1. 1) Place the gear shift lever in neutral. 2) Measure the resistance between neutral position switch 1 terminals. Terminals No. 1 — No. 2:	Is the resistance less than 1 Ω?	Repair the poor contact of neutral position switch 1 connector.	Replace the neutral position switch 1. <Ref. to 5MT-35, Switches and Harness.>

7. OUTLINE OF DIAGNOSIS

Detect the open or short circuit of neutral SW.

Judge as NG when there is no change in the neutral SW even if the driving shift was applied. (There is neutral SW ON/OFF inversion from the vehicle speed and engine speed.)

8. EXECUTION CONDITION

Secondary parameters	Execution condition
Battery voltage	≥ 10.9 V
The number of driving condition change from a) to b)	= 3 time(s)
a)	
Vehicle speed and Engine speed	≤ 0 km/h (0 MPH)
	≥ 550 rpm and ≤ 850 rpm
b)	
Vehicle speed and Engine speed	≥ 64 km/h (39.8 MPH)
	≥ 1550 rpm and ≤ 2100 rpm

9. GENERAL DRIVING CYCLE

Perform the diagnosis continuously in 2 seconds after starting the engine.

10. DIAGNOSTIC METHOD

Judge NG when the malfunction criteria below are completed determined times or more after the neutral SW change.

Judgment Value

Malfunction Criteria	Threshold Value
Neutral switch output voltage	≥ Battery voltage × 0.6 V

Time Needed for Diagnosis: 3 time(s)

Malfunction Indicator Light Illumination: Illuminates when malfunction occurs in 2 continuous driving cycles.

DO:DTC P1160 THROTTLE RETURN SPRING

NOTE:

For the diagnostic procedure, refer to DTC P2101. <Ref. to EN(H4DO)(diag)-452, DTC P2101 THROTTLE ACTUATOR "A" CONTROL MOTOR CIRCUIT RANGE/PERFORMANCE, Diagnostic Procedure with Diagnostic Trouble Code (DTC).>

1. OUTLINE OF DIAGNOSIS

Judge as NG when the valve is opened more than the default opening angle, but does not move to the close direction with the motor power stopped.

2. COMPONENT DESCRIPTION

- | | | |
|--------------------------|-------------------------|---|
| (1) Opener spring | (4) Full closed stopper | (7) DC motor |
| (2) Return spring | (5) Throttle valve | (8) Main and sub throttle position sensor |
| (3) Intermediate stopper | (6) Gear | |

3. EXECUTION CONDITION

Secondary Parameters	Execution condition
Battery voltage	$\geq 6 \text{ V}$
Elapsed time after throttle control power supply off	$= 1.6 \text{ s}$

4. GENERAL DRIVING CYCLE

- Ignition switch ON → OFF
- Ignition switch OFF → ON (Only after clearing memory)

5. DIAGNOSTIC METHOD

Judge as NG when the following conditions are established.

Judgment Value

Malfunction Criteria	Threshold Value
Throttle position (Main Sensor) at power supply off – Throttle position (Main Sensor)	$< 2^\circ$

Time Needed for Diagnosis: Less than 1 second

Malfunction Indicator Light Illumination: Illuminates as soon as a malfunction occurs.

Diagnostic Procedure with Diagnostic Trouble Code (DTC)

ENGINE (DIAGNOSTICS)

DP:DTC P1449 EVAP SYSTEM CLOG DETECTED (AIR FILTER)

DTC DETECTING CONDITION:

Detected when two consecutive driving cycles with fault occur.

CAUTION:

After servicing or replacing faulty parts, perform Clear Memory Mode <Ref. to EN(H4DO)(diag)-66, OPERATION, Clear Memory Mode.>, and Inspection Mode <Ref. to EN(H4DO)(diag)-50, PROCEDURE, Inspection Mode.>.

Step	Check	Yes	No	
1	CHECK FOR ANY OTHER DTC ON DISPLAY.	Is any other DTC displayed?	Check the appropriate DTC using the "List of Diagnostic Trouble Code (DTC)". <Ref. to EN(H4DO)(diag)-96, List of Diagnostic Trouble Code (DTC).>	Go to step 2.
2	CHECK DRAIN TUBE B OF LEAK CHECK VALVE ASSEMBLY.	Is the drain tube B of leak check valve assembly clogged?	Replace the drain tube B of leak check valve assembly. <Ref. to EC(H4DO)-43, Leak Check Valve Assembly.>	Go to step 3.
3	CHECK DRAIN HOSE AND DRAIN TUBE C BETWEEN LEAK CHECK VALVE ASSEMBLY AND DRAIN SEPARATOR.	Is the drain hose or the drain tube C between leak check valve assembly and drain separator clogged?	Replace the drain hose or the drain tube C between leak check valve assembly and drain separator. <Ref. to EC(H4DO)-62, Drain Separator.>	Go to step 4.
4	CHECK DRAIN SEPARATOR.	Is the drain separator clogged?	Replace the drain separator. <Ref. to EC(H4DO)-62, Drain Separator.>	Go to step 5.
5	CHECK INTAKE HOSE AND CONNECTOR BETWEEN DRAIN SEPARATOR AND VEHICLE BODY.	Is the intake hose or the connector between drain separator and vehicle body clogged?	Replace the intake hose or the connector between drain separator and vehicle body. <Ref. to EC(H4DO)-62, Drain Separator.>	Replace the leak check valve assembly. <Ref. to EC(H4DO)-43, Leak Check Valve Assembly.>

Diagnostic Procedure with Diagnostic Trouble Code (DTC)

ENGINE (DIAGNOSTICS)

1. OUTLINE OF DIAGNOSIS

Detect the drain filter clogging by the pressure change during purge introduction.

Judge as drain filter clogging malfunction if the pressure in the evaporative emission system piping suddenly decreases by the purging.

2. COMPONENT DESCRIPTION

- | | | |
|---|----------------------------------|---------------|
| (1) Leak check valve ASSY | (5) Vacuum pump | (9) Fuel tank |
| (2) Switching valve | (6) Drain filter | (10) Canister |
| (3) Reference orifice (0.02 inch orifice) | (7) Purge control solenoid valve | |
| (4) Pressure sensor | (8) Intake manifold | |

3. EXECUTION CONDITION

Secondary parameters	Execution condition
Battery voltage	≥ 10.9 V
Elapsed time after ignition switch ON	≥ 20000 ms
Evaporative Leak Check Module vacuum pump	Not in operation
Evaporative Leak Check Module switching valve	Open

4. GENERAL DRIVING CYCLE

Perform the diagnosis continuously when purging is performed after 20000 ms have passed since the engine started.

Diagnostic Procedure with Diagnostic Trouble Code (DTC)

ENGINE (DIAGNOSTICS)

5. DIAGNOSTIC METHOD

Calculate the difference between the Evaporative Leak Check Module pressure sensor output value of 5 seconds ago and the value at the present moment, and if the value is greater than the judgment value, detect as filter clogging trouble and judge as malfunction.

Judge as NG when the following conditions are established.

Judgment value

Malfunction Criteria	Threshold Value
$ \text{Pressure sensor output value as of 5 seconds ago} - \text{Current pressure sensor output value} $	> Value from Map

Map

Vehicle speed km/h (MPH)	0 (0)	20 (12.4)	40 (24.9)	60 (37.3)	80 (49.7)	100 (62.1)	120 (74.6)	300 (186.4)
$ \text{Pressure sensor output value as of 5 seconds ago} - \text{Current pressure sensor output value} $ kPa (mmHg, inHg)	1.4 (10.352, 0.4)	1.4 (10.352, 0.4)	1.4 (10.352, 0.4)	1.4 (10.352, 0.4)	1.4 (10.352, 0.4)	1.4 (10.352, 0.4)	1.4 (10.352, 0.4)	2.4 (18.287, 0.7)

Time needed for diagnosis: 1 seconds

Malfunction indicator light illumination: Illuminates when malfunction occurs in 2 continuous driving cycles.

Diagnostic Procedure with Diagnostic Trouble Code (DTC)

ENGINE (DIAGNOSTICS)

DQ:DTC P1451 EVAP SYSTEM CLOG DETECTED (PIPE)

DTC DETECTING CONDITION:

Detected when two consecutive driving cycles with fault occur.

CAUTION:

After servicing or replacing faulty parts, perform Clear Memory Mode <Ref. to EN(H4DO)(diag)-66, OPERATION, Clear Memory Mode.>, and Inspection Mode <Ref. to EN(H4DO)(diag)-50, PROCEDURE, Inspection Mode.>.

Step	Check	Yes	No
1 CHECK DRAIN TUBE BETWEEN CANISTER AND LEAK CHECK VALVE ASSEMBLY.	Is the drain tube between canister and leak check valve assembly clogged?	Replace the drain tube between the canister and leak check valve assembly. <Ref. to EC(H4DO)-10, Canister.>	Go to step 2.
2 CHECK HOSES BETWEEN CANISTER AND FUEL TANK.	Are the hoses between the canister and fuel tank clogged?	Replace the hoses between the canister and fuel tank. <Ref. to EC(H4DO)-10, Canister.> <Ref. to FU(H4DO)-113, Fuel Tank.>	Replace the canister. <Ref. to EC(H4DO)-10, Canister.> After the operation is complete, go to the next step. Go to step 3.
3 CHECK EVAPORATIVE EMISSION CONTROL SYSTEM. Perform drive cycle I. <Ref. to EN(H4DO)(diag)-60, DRIVE CYCLE I, PROCEDURE, Drive Cycle.>	Is DTC P1451 displayed on the display?	Replace the leak check valve assembly. <Ref. to EC(H4DO)-43, Leak Check Valve Assembly.>	End.

1. OUTLINE OF DIAGNOSIS

NOTE:

For the detection standard, refer to DTC P0455. <Ref. to EN(H4DO)(diag)-331, DTC P0455 EVAP SYSTEM (CPC) LEAK DETECTED (LARGE LEAK), Diagnostic Procedure with Diagnostic Trouble Code (DTC).>

Diagnostic Procedure with Diagnostic Trouble Code (DTC)

ENGINE (DIAGNOSTICS)

DR:DTC P1492 COIL 1 EGR "A" CONTROL CIRCUIT LOW

NOTE:

For the diagnostic procedure, refer to DTC P1498. <Ref. to EN(H4DO)(diag)-413, DTC P1498 COIL 4 EGR "A" CONTROL CIRCUIT LOW, Diagnostic Procedure with Diagnostic Trouble Code (DTC).>

1. OUTLINE OF DIAGNOSIS

- Detects open or short circuit of EGR.
- Judge as NG when the ECM output level differs from the actual terminal level.

2. COMPONENT DESCRIPTION

EN-09573

- | | | |
|---------------------------------|---------------------|-----------------------|
| (1) Engine control module (ECM) | (4) Switch circuit | (6) Main relay |
| (2) Computer unit (CPU) | (5) Battery voltage | (7) EGR control valve |
| (3) Detecting circuit | | |

3. EXECUTION CONDITION

Secondary Parameters	Execution condition
Battery voltage	$\geq 10.9 \text{ V}$
EGR control signal	OFF

4. GENERAL DRIVING CYCLE

Perform diagnosis continuously during EGR operation.

5. DIAGNOSTIC METHOD

If the duration of time while the following conditions are met is longer than the time indicated, judge as NG.

Judgment Value

Malfunction Criteria	Threshold Value
EGR control voltage	$\leq \text{Battery voltage} \times 0.34 \text{ V}$

Time Needed for Diagnosis: 2500 ms

Malfunction Indicator Light Illumination: Illuminates as soon as a malfunction occurs.

DS:DTC P1493 COIL 1 EGR "A" CONTROL CIRCUIT HIGH

NOTE:

For the diagnostic procedure, refer to DTC P1499. <Ref. to EN(H4DO)(diag)-415, DTC P1499 COIL 4 EGR "A" CONTROL CIRCUIT HIGH, Diagnostic Procedure with Diagnostic Trouble Code (DTC).>

1. OUTLINE OF DIAGNOSIS

- Detects open or short circuit of EGR.
- Judge as NG when the ECM output level differs from the actual terminal level.

2. COMPONENT DESCRIPTION

- | | | |
|---------------------------------|---------------------|-----------------------|
| (1) Engine control module (ECM) | (4) Switch circuit | (6) Main relay |
| (2) Computer unit (CPU) | (5) Battery voltage | (7) EGR control valve |
| (3) Detecting circuit | | |

3. EXECUTION CONDITION

Secondary Parameters	Execution condition
Battery voltage	≥ 10.9 V
EGR control signal	OFF

4. GENERAL DRIVING CYCLE

Always perform the diagnosis continuously.

5. DIAGNOSTIC METHOD

If the duration of time while the following conditions are met is longer than the time indicated, judge as NG.

Judgment Value

Malfunction Criteria	Threshold Value
EGR control current	≥ 6 A

Time Needed for Diagnosis: 2500 ms

Malfunction Indicator Light Illumination: Illuminates as soon as a malfunction occurs.

Diagnostic Procedure with Diagnostic Trouble Code (DTC)

ENGINE (DIAGNOSTICS)

DT:DTC P1494 COIL 2 EGR "A" CONTROL CIRCUIT LOW

NOTE:

Diagnostic Procedure with Diagnostic Trouble Code (DTC)

ENGINE (DIAGNOSTICS)

DX:DTC P1498 COIL 4 EGR "A" CONTROL CIRCUIT LOW

DTC DETECTING CONDITION:

Immediately at fault recognition

TROUBLE SYMPTOM:

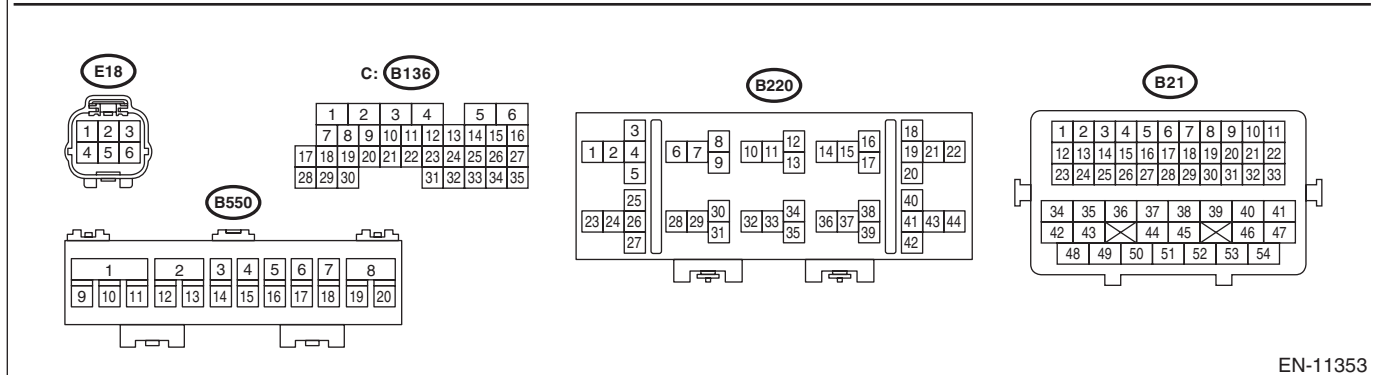

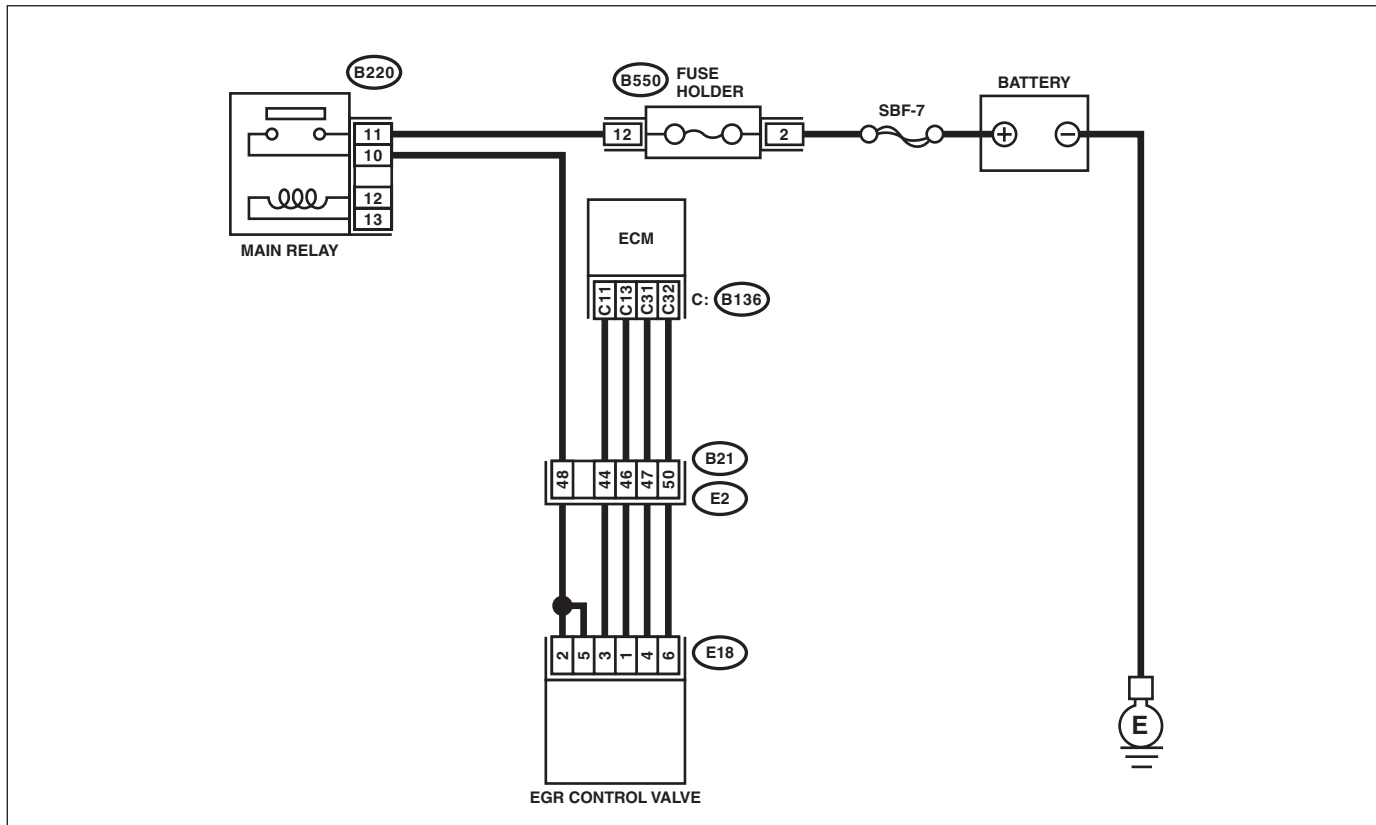

- Improper idling
- Poor driving performance
- Engine breathing

CAUTION:

After servicing or replacing faulty parts, perform Clear Memory Mode <Ref. to EN(H4DO)(diag)-66, OPERATION, Clear Memory Mode.>, and Inspection Mode <Ref. to EN(H4DO)(diag)-50, PROCEDURE, Inspection Mode.>.

WIRING DIAGRAM:

Engine electrical system <Ref. to WI-102, Engine Electrical System.>

EN-11353

Diagnostic Procedure with Diagnostic Trouble Code (DTC)

ENGINE (DIAGNOSTICS)

Step	Check	Yes	No
1 CHECK POWER SUPPLY TO EGR CONTROL VALVE. 1) Turn the ignition switch to OFF. 2) Disconnect the connector from the EGR control valve. 3) Turn the ignition switch to ON. 4) Measure the voltage between EGR control valve connector and engine ground. Connector & terminal (E18) No. 2 (+) — Engine ground (-): (E18) No. 5 (+) — Engine ground (-):	Is the voltage 10 V or more?	Go to step 2.	Repair the harness and connector. NOTE: In this case, repair the following item: <ul style="list-style-type: none"> • Open circuit in harness between EGR control valve and main relay connector • Poor contact of coupling connector
2 CHECK HARNESS BETWEEN ECM AND EGR CONTROL VALVE CONNECTOR. 1) Turn the ignition switch to OFF. 2) Disconnect the connector from ECM. 3) Measure the resistance between ECM connector and EGR control valve connector. Connector & terminal DTC P1492; (B136) No. 11 — (E18) No. 3: DTC P1494; (B136) No. 13 — (E18) No. 1: DTC P1496; (B136) No. 31 — (E18) No. 4: DTC P1498; (B136) No. 32 — (E18) No. 6:	Is the resistance less than 1 Ω ?	Go to step 3.	Repair the harness and connector. NOTE: In this case, repair the following item: <ul style="list-style-type: none"> • Open circuit of harness between ECM connector and EGR control valve connector • Poor contact of coupling connector
3 CHECK HARNESS BETWEEN ECM AND EGR CONTROL VALVE CONNECTOR. 1) Disconnect the connector from ECM. 2) Measure the resistance between ECM connector and chassis ground. Connector & terminal DTC P1492; (B136) No. 11 — Chassis ground: DTC P1494; (B136) No. 13 — Chassis ground: DTC P1496; (B136) No. 31 — Chassis ground: DTC P1498; (B136) No. 32 — Chassis ground:	Is the resistance 1 M Ω or more?	Go to step 4.	Repair ground short circuit of harness between ECM connector and EGR control valve connector.
4 CHECK FOR POOR CONTACT. Check for poor contact between ECM connector and EGR control valve connector.	Is there poor contact in ECM or EGR control valve connector?	Repair the poor contact of ECM or EGR control valve connector.	Replace EGR control valve. <Ref. to EC(H4DO)-23, EGR Control Valve.>

1. OUTLINE OF DIAGNOSIS

NOTE:

For the detection standard, refer to DTC P1492. <Ref. to EN(H4DO)(diag)-410, DTC P1492 COIL 1 EGR "A" CONTROL CIRCUIT LOW, Diagnostic Procedure with Diagnostic Trouble Code (DTC).>

Diagnostic Procedure with Diagnostic Trouble Code (DTC)

Diagnostic Procedure with Diagnostic Trouble Code (DTC)

ENGINE (DIAGNOSTICS)

Step	Check	Yes	No
<p>1 CHECK CURRENT DATA. 1) Start the engine. 2) Read the value of «Battery current value» using the Subaru Select Monitor. NOTE: For detailed operation procedures, refer to “Current Data Display For Engine”. <Ref. to EN(H4DO)(diag)-36, Subaru Select Monitor.></p>	<p>Is the value of «Battery current value» –100 A or less?</p>	<p>Go to step 2.</p>	<p>Even if DTC is detected, the circuit has returned to a normal condition at this time. Reproduce the failure, and then perform the diagnosis again. NOTE: In this case, temporary poor contact of connector, temporary open or short circuit of harness may be the cause.</p>
<p>2 CHECK HARNESS BETWEEN ECM AND BATTERY CURRENT SENSOR CONNECTOR. 1) Turn the ignition switch to OFF. 2) Disconnect the connector from ECM. 3) Disconnect the connector from the battery current sensor. 4) Measure the resistance of the harness between ECM connector and battery current sensor connector. Connector & terminal (B135) No. 22 — (B538) No. 3: (B137) No. 11 — (B538) No. 1:</p>	<p>Is the resistance less than 1 Ω?</p>	<p>Go to step 3.</p>	<p>Repair the open circuit in the harness between ECM connector and battery current sensor connector.</p>
<p>3 CHECK HARNESS BETWEEN ECM AND BATTERY CURRENT SENSOR CONNECTOR. Measure the resistance between ECM connector and chassis ground. Connector & terminal (B135) No. 22 — Chassis ground: (B137) No. 11 — Chassis ground:</p>	<p>Is the resistance 1 MΩ or more?</p>	<p>Go to step 4.</p>	<p>Repair the short circuit to ground in the harness between ECM connector and battery current sensor connector.</p>
<p>4 CHECK FOR POOR CONTACT. Check for poor contact between the ECM and battery current sensor connectors.</p>	<p>Is there poor contact of the ECM or battery current sensor connectors?</p>	<p>Repair any poor contact between the ECM and battery current sensor connectors.</p>	<p>Replace the battery current sensor. <Ref. to SC(H4DO)-59, Battery Current & Temperature Sensor.></p>

1. OUTLINE OF DIAGNOSIS

Detect the open or short circuit of battery current sensor.
Judge as NG if out of specification.

2. COMPONENT DESCRIPTION

(1) Hall IC

(2) Chip condenser

(3) Core

3. EXECUTION CONDITION

Secondary Parameters	Execution condition
Battery voltage	$\geq 10.9 \text{ V}$
Elapsed time after starting the engine	$> 1000 \text{ ms}$
Engine speed	$> 500 \text{ rpm}$
Ignition switch	ON

4. GENERAL DRIVING CYCLE

Always perform the diagnosis continuously.

5. DIAGNOSTIC METHOD

If the duration of time while the following conditions are met is longer than the time indicated, judge as NG.

Judgment Value

Malfunction Criteria	Threshold Value
Output voltage	$< 0.2148 \text{ V}$

Time Needed for Diagnosis: 500 ms

Malfunction Indicator Light Illumination: Does not illuminate even when malfunction occurs.

Diagnostic Procedure with Diagnostic Trouble Code (DTC)

ENGINE (DIAGNOSTICS)

Secondary Parameters	Execution condition
Battery voltage	$\geq 10.9 \text{ V}$
Elapsed time after starting the engine	$> 1000 \text{ ms}$
Engine speed	$> 500 \text{ rpm}$
Ignition switch	ON

4. GENERAL DRIVING CYCLE

Always perform the diagnosis continuously.

5. DIAGNOSTIC METHOD

If the duration of time while the following conditions are met is longer than the time indicated, judge as NG.

Judgment Value

Malfunction Criteria	Threshold Value
Output voltage	$\geq 4.717 \text{ V}$

Time Needed for Diagnosis: 500 ms

Malfunction Indicator Light Illumination: Does not illuminate even when malfunction occurs.

EB:DTC P1532 BATTERY CHARGING SYSTEM

DTC detecting condition:

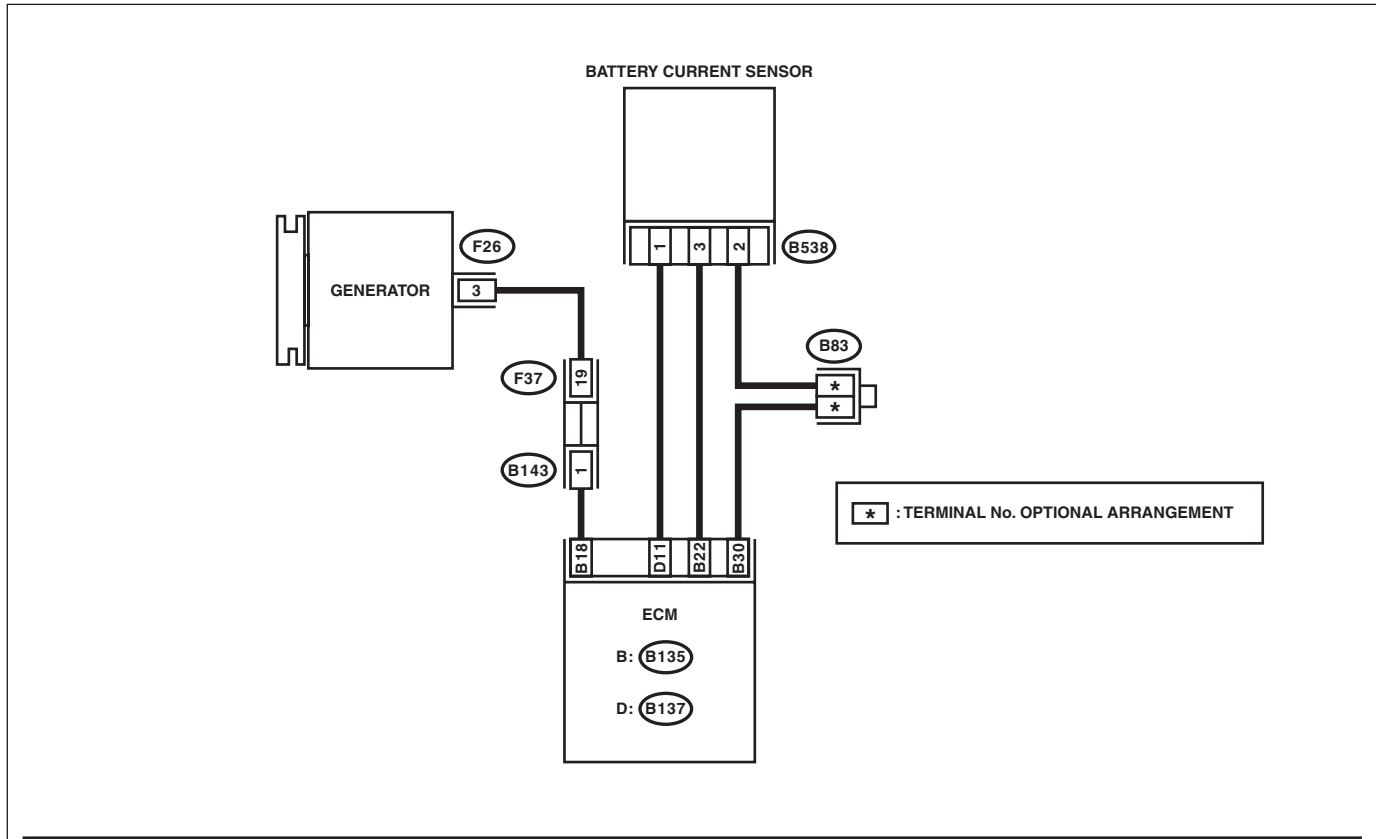

Immediately at fault recognition

CAUTION:

After servicing or replacing faulty parts, perform Clear Memory Mode <Ref. to EN(H4DO)(diag)-66, OPERATION, Clear Memory Mode.>, and Inspection Mode <Ref. to EN(H4DO)(diag)-50, PROCEDURE, Inspection Mode.>.

Wiring diagram:

Engine electrical system <Ref. to WI-102, Engine Electrical System.>

EN-11354

Step	Check	Yes	No	
1	CHECK INSTALLATION CONDITION OF BATTERY. Turn the ignition switch to OFF.	Are the positive and negative terminals of battery securely tightened?	Go to step 2.	Tighten the positive and negative terminals of battery securely.

Diagnostic Procedure with Diagnostic Trouble Code (DTC)

ENGINE (DIAGNOSTICS)

Step	Check	Yes	No
2	CHECK BATTERY TERMINAL.	Remove the wiring of electrical parts connected to the positive and negative terminals of battery. NOTE: Directly connecting electrical parts to the battery may cause erroneous operation of the battery current sensor.	Go to step 3.
3	CHECK INSTALLATION CONDITION OF V-BELT. Check the installation condition of V-belt. <Ref. to ME(H4DO)-90, INSPECTION, V-belt.>	Go to step 4.	Install the V-belt properly. <Ref. to ME(H4DO)-83, V-belt.>
4	CHECK BATTERY VOLTAGE. 1) Start the engine. 2) Select «High mode» in «Alternator control» from «Active Test» items, and measure the battery voltage after 10 seconds have passed. NOTE: For detailed operation procedures, refer to the “Active Test”. <Ref. to EN(H4DO)(diag)-67, Active Test.> 3) Select «Low mode» in «Alternator control» from «Active Test» items, and measure the battery voltage. CAUTION: Do not continue the “Low mode” operation for one minute or more. NOTE: For detailed operation procedures, refer to the “Active Test”. <Ref. to EN(H4DO)(diag)-67, Active Test.>	Go to step 7.	Go to step 5.
5	CHECK HARNESS BETWEEN ECM AND GENERATOR CONNECTOR. 1) Turn the ignition switch to OFF. 2) Disconnect the connector from ECM. 3) Disconnect the connector from the generator. 4) Measure the resistance of harness between ECM connector and generator connector. Connector & terminal (B135) No. 18 — (F26) No. 3:	Go to step 6.	Repair the open circuit of harness between ECM connector and generator connector.
6	CHECK HARNESS BETWEEN ECM AND GENERATOR CONNECTOR. Measure the resistance between generator connector and engine ground. Connector & terminal (F26) No. 3 — Engine ground:	Go to step 7.	Repair the ground short circuit of harness between ECM connector and generator connector.
7	CHECK BATTERY CURRENT SENSOR.	Completely remove any water inside.	Go to step 8.

Diagnostic Procedure with Diagnostic Trouble Code (DTC)

ENGINE (DIAGNOSTICS)

Step	Check	Yes	No
8 CHECK HARNESS BETWEEN ECM AND BATTERY CURRENT SENSOR CONNECTOR. 1) Disconnect the connector from ECM. 2) Disconnect the connector from the battery current sensor. 3) Measure the resistance of the harness between ECM connector and battery current sensor connector. <i>Connector & terminal</i> <i>(B135) No. 22 — (B538) No. 3:</i> <i>(B137) No. 11 — (B538) No. 1:</i>	Is the resistance less than 1 Ω ?	Go to step 9.	Repair the open circuit in the harness between ECM connector and battery current sensor connector.
9 CHECK HARNESS BETWEEN ECM AND BATTERY CURRENT SENSOR CONNECTOR. Measure the resistance between ECM connector and chassis ground. <i>Connector & terminal</i> <i>(B135) No. 22 — Chassis ground:</i> <i>(B137) No. 11 — Chassis ground:</i>	Is the resistance 1 M Ω or more?	Go to step 10.	Repair the short circuit to ground in the harness between ECM connector and battery current sensor connector.
10 CHECK HARNESS BETWEEN ECM AND BATTERY CURRENT SENSOR CONNECTOR. Measure the resistance between ECM connectors. <i>Connector & terminal</i> <i>(B135) No. 22 — (B136) No. 32:</i>	Is the resistance 1 M Ω or more?	Go to step 11.	Repair the short circuit to power in the harness between ECM connector and battery current sensor connector.
11 CHECK HARNESS BETWEEN ECM AND BATTERY CURRENT SENSOR CONNECTOR. 1) Connect the connector to ECM. 2) Measure the resistance of the harness between the battery current sensor connector and engine ground. <i>Connector & terminal</i> <i>(B538) No. 2 — Engine ground:</i>	Is the resistance less than 5 Ω ?	Go to step 12.	Repair the harness and connector. NOTE: In this case, repair the following item: • Open circuit in harness between ECM connector and battery current sensor connector • Poor contact of joint connector
12 CHECK FOR POOR CONTACT. Check for poor contact of the battery current sensor connector.	Is there poor contact of the battery current sensor connector?	Repair the poor contact of the battery current sensor connector.	Replace the battery current sensor. <Ref. to SC(H4DO)-59, Battery Current & Temperature Sensor.>

Diagnostic Procedure with Diagnostic Trouble Code (DTC)

ENGINE (DIAGNOSTICS)

1. OUTLINE OF DIAGNOSIS

Detect the output property and malfunction of battery current sensor.

Judge as NG when there is no variation (stuck) under a condition where the battery current sensor output should have changed or when difference between output and battery current value is larger than expected (characteristics malfunction).

2. COMPONENT DESCRIPTION

(1) Hall IC

(2) Chip condenser

(3) Core

3. EXECUTION CONDITION

- Stuck

Secondary Parameters	Execution condition
Ignition switch During switchover of regulating voltage	ON High condition judgment*1 ←→ Low condition judgment*2 However, the generator target duty has not experienced the following during switchover. $40\% \leq \text{Generator target duty} < 60\%$
*1 High condition judgment	
Continuous time during which all the conditions listed below are met	$\geq 5000 \text{ ms}$
• Battery voltage	$\geq 13.7 \text{ V}$
• Generator final output duty	$\geq 60\%$
• Engine speed	$\geq 600 \text{ rpm}$
*2 Low condition judgment	
Continuous time during which all the conditions listed below are met	$\geq 5000 \text{ ms}$
• Battery voltage	$< 13.2 \text{ V}$
• Generator final output duty	$< 40\%$
or	
• Engine speed	$< 600 \text{ rpm}$

Diagnostic Procedure with Diagnostic Trouble Code (DTC)

ENGINE (DIAGNOSTICS)

- Characteristics malfunction

Secondary Parameters	Execution condition
Ignition switch During switchover of regulating voltage	ON High condition judgment is established. Target duty $\geq 60\%$ \rightarrow target duty $< 40\%$ or Low condition judgment is established. Target duty $< 40\%$ \rightarrow target duty $\geq 60\%$

4. GENERAL DRIVING CYCLE

Always perform the diagnosis continuously.

5. DIAGNOSTIC METHOD

- Stuck

Judge as NG when the following conditions are repeated 10 time(s) or more.

Judgment value

Malfunction Criteria	Threshold Value
Difference between maximum value and minimum value in output voltage	$< 0.07\text{ V}$

Time needed for diagnosis: Less than 1 second

Malfunction indicator light illumination: Does not illuminate even when malfunction occurs.

- Characteristics malfunction (Charge side)

Within 30000 ms from “enable condition not met” to “enable condition met”, judge as NG when the time required for meeting the following conditions exceeds the predetermined time.

(When NG judgment is performed, NG status is retained during that driving cycle.)

Judgment value

Malfunction Criteria	Threshold Value
Output voltage and Battery voltage	$2.6\text{ V} \leq \text{Output voltage} < 5\text{ V}$ $< 13.2\text{ V}$

Time needed for diagnosis: 26000 ms

Malfunction indicator light illumination: Does not illuminate even when malfunction occurs.

- Characteristics malfunction (Discharge side)

Within 30000 ms from “enable condition not met” to “enable condition met”, judge as NG when the time required for meeting the following conditions exceeds the predetermined time.

(Within 30000 ms from “enable condition not met” to “enable condition met”, the target duty $\geq 60\%$ has not been experienced.)

Judgment value

Malfunction Criteria	Threshold Value
Output voltage and Battery voltage	$0\text{ V} \leq \text{Output voltage} < 2.4\text{ V}$ $\geq 13.7\text{ V}$

Time needed for diagnosis: 26000 ms

Malfunction indicator light illumination: Does not illuminate even when malfunction occurs.

Diagnostic Procedure with Diagnostic Trouble Code (DTC)

ENGINE (DIAGNOSTICS)

EC:DTC P2004 TGV CONTROL STUCK OPEN BANK 1

DTC DETECTING CONDITION:

Immediately at fault recognition

CAUTION:

After servicing or replacing faulty parts, perform Clear Memory Mode <Ref. to EN(H4DO)(diag)-66, OPERATION, Clear Memory Mode.>, and Inspection Mode <Ref. to EN(H4DO)(diag)-50, PROCEDURE, Inspection Mode.>.

Step	Check	Yes	No
1 CHECK FOR ANY OTHER DTC ON DISPLAY.	Is any other DTC displayed?	Check the appropriate DTC using the "List of Diagnostic Trouble Code (DTC)". <Ref. to EN(H4DO)(diag)-96, List of Diagnostic Trouble Code (DTC).>	Go to step 2.
2 CHECK TUMBLE GENERATOR VALVE RH. 1) Remove the tumble generator valve assembly RH. 2) Check the tumble generator valve.	Is there any dirt or clogging with foreign objects in the tumble generator valve?	Clean the tumble generator valve.	Replace the tumble generator valve RH. <Ref. to FU(H4DO)-83, Tumble Generator Valve Assembly.>

1. OUTLINE OF DIAGNOSIS

Detect the malfunction of tumble generator valve motor function.

Judge open fixing malfunction when the opening degree is large even after finishing the tumble generator valve closing driving.

2. EXECUTION CONDITION

Secondary Parameters	Execution condition
Battery voltage	≥ 10.9 V
Tumble generator valve "close" signal output time	≥ 1600 ms

3. GENERAL DRIVING CYCLE

Always perform the diagnosis continuously.

4. DIAGNOSTIC METHOD

If the duration of time while the following conditions are met is longer than the time indicated, judge as NG.

Judgment Value

Malfunction Criteria	Threshold Value
TGV position As defined by: TGV angle position sensor voltage > = 2.5 V	= Open

Time Needed for Diagnosis: 3000 ms

Malfunction Indicator Light Illumination: Illuminates as soon as a malfunction occurs.

Diagnostic Procedure with Diagnostic Trouble Code (DTC)

ENGINE (DIAGNOSTICS)

Secondary Parameters	Execution condition
Battery voltage	≥ 10.9 V
Elapsed time of TGV commanded* to "open"	≥ 1600 ms

3. GENERAL DRIVING CYCLE

Always perform the diagnosis continuously.

4. DIAGNOSTIC METHOD

If the duration of time while the following conditions are met is longer than the time indicated, judge as NG.

Judgment Value

Malfunction Criteria	Threshold Value
TGV position As defined by: TGV angle position sensor voltage < 2.5 V	= Closed

Time Needed for Diagnosis: 3000 ms

Malfunction Indicator Light Illumination: Illuminates as soon as a malfunction occurs.

Diagnostic Procedure with Diagnostic Trouble Code (DTC)

ENGINE (DIAGNOSTICS)

EG:DTC P2009 TGV CONTROL CIRCUIT LOW BANK 1

DTC DETECTING CONDITION:

Immediately at fault recognition

CAUTION:

After servicing or replacing faulty parts, perform Clear Memory Mode <Ref. to EN(H4DO)(diag)-66, OPERATION, Clear Memory Mode.>, and Inspection Mode <Ref. to EN(H4DO)(diag)-50, PROCEDURE, Inspection Mode.>.

WIRING DIAGRAM:

Engine electrical system <Ref. to WI-102, Engine Electrical System.>

EN-11355

Diagnostic Procedure with Diagnostic Trouble Code (DTC)

ENGINE (DIAGNOSTICS)

	Step	Check	Yes	No
1	CHECK HARNESS BETWEEN ECM AND TUMBLE GENERATOR VALVE ACTUATOR RH CONNECTOR. 1) Turn the ignition switch to OFF. 2) Disconnect the connector from ECM. 3) Measure the voltage between ECM connector and chassis ground. Connector & terminal (B134) No. 25 (+) — Chassis ground (-): (B134) No. 14 (+) — Chassis ground (-):	Is the voltage 5 V or more?	Repair the short circuit to power in harness between ECM connector and tumble generator valve actuator RH connector.	Replace the tumble generator valve actuator RH. <Ref. to FU(H4DO)-88, Tumble Generator Valve Actuator.>

Diagnostic Procedure with Diagnostic Trouble Code (DTC)

ENGINE (DIAGNOSTICS)

1. OUTLINE OF DIAGNOSIS

Detect the open or short circuit of tumble generator valve motor.

Judge as NG when the overcurrent signal is sent from IC after tumble generator valve driving IC diagnosis.

2. COMPONENT DESCRIPTION

EN-08959

(1) Engine control module (ECM)

(2) Tumble generator valve

(3) Battery

3. EXECUTION CONDITION

Secondary Parameters	Execution condition
Battery voltage	≥ 10.9 V
TGV command	= Open or = closed

4. GENERAL DRIVING CYCLE

Always perform the diagnosis continuously.

5. DIAGNOSTIC METHOD

If the duration of time while the following conditions are met is longer than the time indicated, judge as NG.

Judgment Value

Malfunction Criteria	Threshold Value
Overcurrent signal from driver IC Short circuit to GND is detected when IC current > 16 A or Short circuit to B+ is detected when IC current > 14 A	= ON

Time Needed for Diagnosis: 1 second

Malfunction Indicator Light Illumination: Illuminates as soon as a malfunction occurs.

Diagnostic Procedure with Diagnostic Trouble Code (DTC)

ENGINE (DIAGNOSTICS)

Step	Check	Yes	No
3 CHECK HARNESS BETWEEN ECM AND FRONT OXYGEN (A/F) SENSOR CONNECTOR. 1) Turn the ignition switch to OFF. 2) Disconnect the connector from ECM. 3) Disconnect the connectors from front oxygen (A/F) sensor. 4) Measure the resistance of harness between ECM connector and front oxygen (A/F) sensor connector. <i>Connector & terminal</i> <i>(B136) No. 19 — (E24) No. 3:</i> <i>(B136) No. 18 — (E24) No. 4:</i>	Is the resistance less than 1 Ω?	Go to step 4.	Repair the harness and connector. NOTE: In this case, repair the following item: <ul style="list-style-type: none"> • Open circuit in harness between ECM connector and front oxygen (A/F) sensor connector • Poor contact of coupling connector
4 CHECK HARNESS BETWEEN ECM AND FRONT OXYGEN (A/F) SENSOR CONNECTOR. Measure the resistance between ECM connector and chassis ground. <i>Connector & terminal</i> <i>(B136) No. 19 — Chassis ground:</i> <i>(B136) No. 18 — Chassis ground:</i>	Is the resistance 1 MΩ or more?	Go to step 5.	Repair the short circuit to ground in harness between ECM connector and front oxygen (A/F) sensor connector.
5 CHECK OUTPUT SIGNAL FOR ECM. 1) Connect the connector to ECM. 2) Turn the ignition switch to ON. 3) Measure the voltage between front oxygen (A/F) sensor connector and chassis ground. <i>Connector & terminal</i> <i>(E24) No. 3 (+) — Chassis ground (-):</i>	Is the voltage 4.5 V or more?	Go to step 7.	Go to step 6.
6 CHECK OUTPUT SIGNAL FOR ECM. Measure the voltage between front oxygen (A/F) sensor connector and chassis ground. <i>Connector & terminal</i> <i>(E24) No. 4 (+) — Chassis ground (-):</i>	Is the voltage 4.95 V or more?	Go to step 7.	Go to step 8.
7 CHECK OUTPUT SIGNAL FOR ECM. Measure the voltage between front oxygen (A/F) sensor connector and chassis ground. <i>Connector & terminal</i> <i>(E24) No. 3 (+) — Chassis ground (-):</i> <i>(E24) No. 4 (+) — Chassis ground (-):</i>	Is the voltage 8 V or more?	Repair the short circuit to power in the harness between ECM connector and front oxygen (A/F) sensor connector. After repair, replace the ECM. <Ref. to FU(H4DO)-98, Engine Control Module (ECM).>	Repair the poor contact of ECM connector.
8 CHECK EXHAUST SYSTEM.	Are there holes or loose bolts on exhaust system?	Repair the exhaust system.	Go to step 9.
9 CHECK AIR INTAKE SYSTEM.	Are there holes, loose bolts or disconnection of hose on air intake system?	Repair the air intake system.	Go to step 10.

Diagnostic Procedure with Diagnostic Trouble Code (DTC)

ENGINE (DIAGNOSTICS)

Step	Check	Yes	No
<p>10 CHECK FUEL PRESSURE.</p> <p>WARNING: Place “NO OPEN FLAMES” signs near the working area.</p> <p>CAUTION: Be careful not to spill fuel.</p> <p>1) Connect the front oxygen (A/F) sensor connector.</p> <p>2) Measure the fuel pressure. <Ref. to ME(H4DO)-31, INSPECTION, Fuel Pressure.></p> <p>CAUTION: Release fuel pressure before removing the fuel pressure gauge.</p>	<p>Is the measured value 340 — 400 kPa (3.5 — 4.1 kg/cm², 49 — 58 psi)?</p>	<p>Go to step 11.</p>	<p>Check the fuel pump and fuel delivery line. <Ref. to FU(H4DO)-141, INSPECTION, Fuel Pump.> <Ref. to FU(H4DO)-171, INSPECTION, Fuel Delivery and Evaporation Lines.></p>
<p>11 CHECK ENGINE COOLANT TEMPERATURE SENSOR.</p> <p>1) Start the engine and warm up completely.</p> <p>2) Read the value of «Coolant Temp.» using the Subaru Select Monitor or a general scan tool.</p> <p>NOTE:</p> <ul style="list-style-type: none"> • Subaru Select Monitor <p>For detailed operation procedures, refer to “Current Data Display For Engine”. <Ref. to EN(H4DO)(diag)-36, Subaru Select Monitor.></p> <ul style="list-style-type: none"> • General scan tool <p>For detailed operation procedures, refer to the general scan tool operation manual.</p>	<p>Is the value of «Coolant Temp.» 75°C (167°F) or more?</p>	<p>Go to step 12.</p>	<p>Replace the engine coolant temperature sensor. <Ref. to FU(H4DO)-49, Engine Coolant Temperature Sensor.></p>

<p>19 CHECK HARNESS BETWEEN ECM AND REAR OXYGEN SENSOR CONNECTOR.</p> <p>1) Connect the connector to ECM.</p> <p>2) Turn the ignition switch to ON.</p> <p>3) Measure the voltage between rear oxygen sensor connector and chassis ground.</p> <p>Connector & terminal (E25) No. 3 (+) — Chassis ground (-):</p>	<p>Is the voltage 0.2 — 0.5 V?</p>	<p>Replace the rear oxygen sensor. <Ref. to FU(H4DO)-94, Rear Oxygen Sensor.></p>	<p>Repair the harness and connector.</p> <p>NOTE:</p> <p>In this case, repair the following item:</p> <ul style="list-style-type: none"> • Open circuit in harness between ECM connector and rear oxygen sensor connector • Poor contact of ECM connector • Poor contact of coupling connector

Diagnostic Procedure with Diagnostic Trouble Code (DTC)

ENGINE (DIAGNOSTICS)

1. OUTLINE OF DIAGNOSIS

Detect the malfunction of fuel system from the size of the sub feedback learning value.
Control the sub feedback learning and judge as NG when the learning value is in the lean zone.

2. COMPONENT DESCRIPTION

EN-01696

- | | | |
|-------------------------|--------------------------------|-------------------------|
| (A) Electromotive force | (B) Air fuel ratio | (C) Lean |
| (D) Rich | (E) Theoretical air fuel ratio | (F) Comparative voltage |
| (1) Atmosphere | (2) Exhaust gas | (3) Electromotive force |

3. EXECUTION CONDITION

Secondary parameters	Execution condition
Sub feedback	In operation
Amount of intake air	≥ 10 g/s (0.35 oz/s)
Engine load change every 0.5 engine revs.	< 0.02 g/rev (0 oz/rev)

4. GENERAL DRIVING CYCLE

Perform the diagnosis continuously when the vehicle is idling or running at a constant speed of 80 km/h (50 MPH) or more.

5. DIAGNOSTIC METHOD

If the duration of time while the following conditions are met is longer than the time indicated, judge as NG.

Judgment value

Malfunction Criteria	Threshold Value
Sub feedback learning value	< -0.038 (CVT model) < -0.0415 (MT model)

Time needed for diagnosis: 1 s

Malfunction indicator light illumination: Illuminates when malfunction occurs in 2 continuous driving cycles.

Diagnostic Procedure with Diagnostic Trouble Code (DTC)

ENGINE (DIAGNOSTICS)

EJ: DTC P2097 POST CATALYST FUEL TRIM SYSTEM TOO RICH BANK 1

DTC detecting condition:

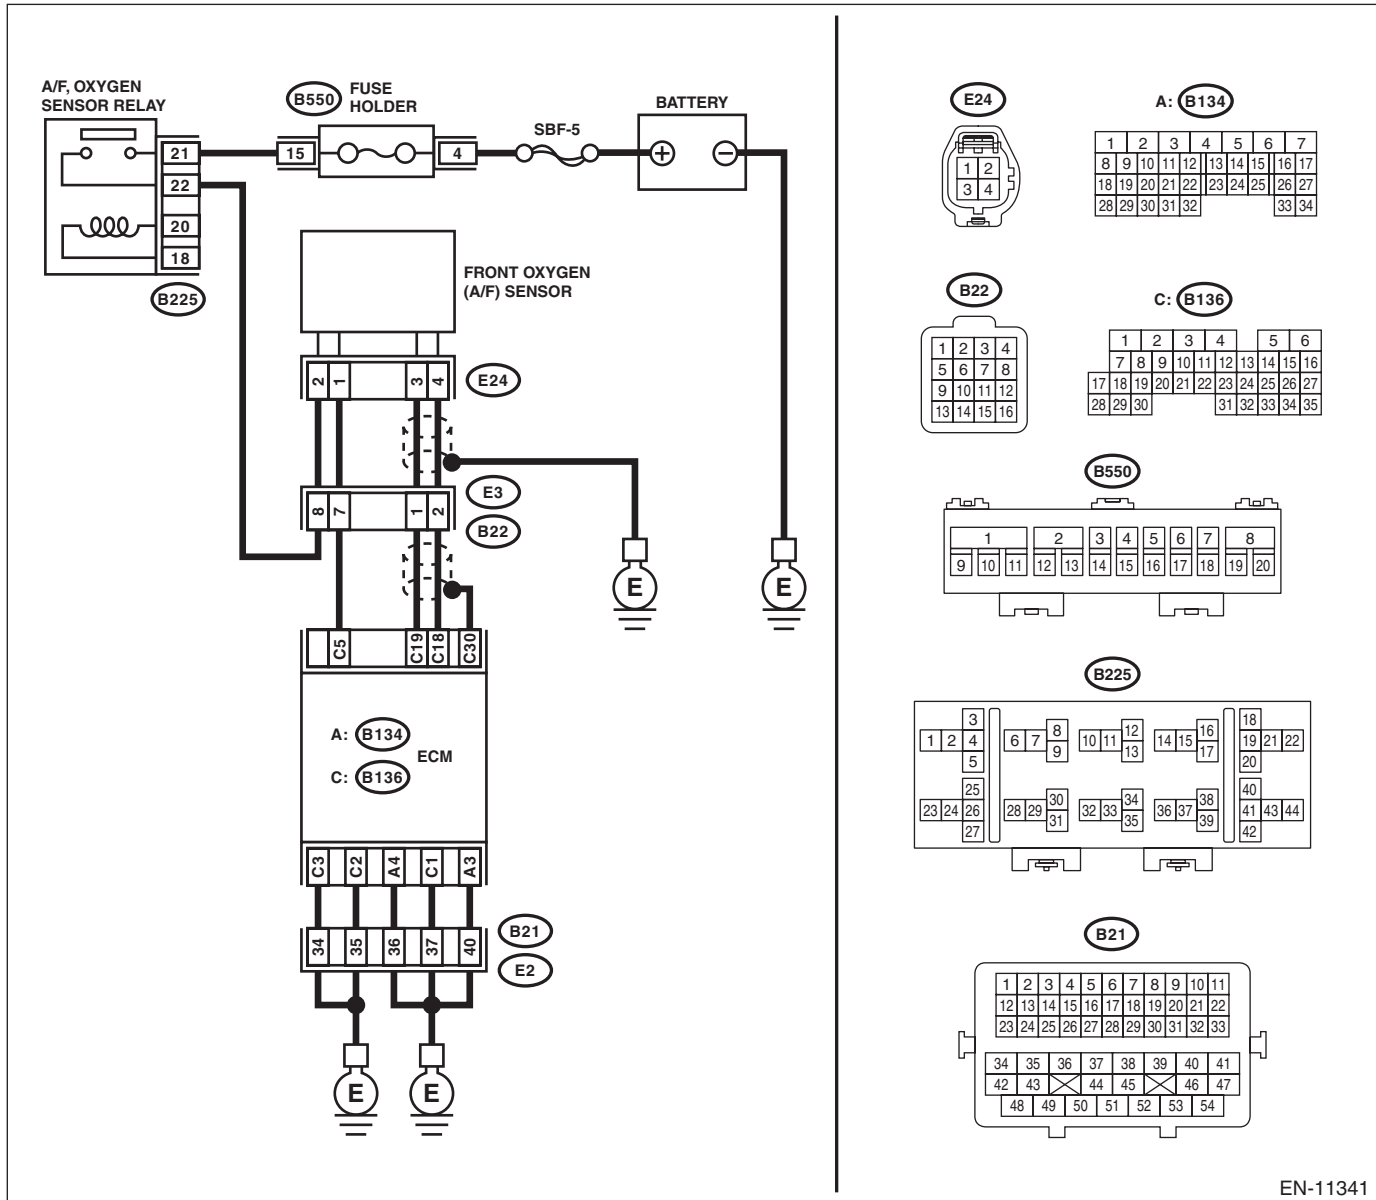

Detected when two consecutive driving cycles with fault occur.

CAUTION:

After servicing or replacing faulty parts, perform Clear Memory Mode <Ref. to EN(H4DO)(diag)-66, OPERATION, Clear Memory Mode.>, and Inspection Mode <Ref. to EN(H4DO)(diag)-50, PROCEDURE, Inspection Mode.>.

EN-11342

Step	Check	Yes	No
1	CHECK FOR ANY OTHER DTC ON DISPLAY. Is any other DTC displayed?	Check DTC using "List of Diagnostic Trouble Code (DTC)". <Ref. to EN(H4DO)(diag)-96, List of Diagnostic Trouble Code (DTC).>	Go to step 2.
2	CHECK FRONT OXYGEN (A/F) SENSOR CONNECTOR AND COUPLING CONNECTOR. Has water entered the connector?	Completely remove any water inside.	Go to step 3.

Diagnostic Procedure with Diagnostic Trouble Code (DTC)

ENGINE (DIAGNOSTICS)

Step	Check	Yes	No
3 CHECK HARNESS BETWEEN ECM AND FRONT OXYGEN (A/F) SENSOR CONNECTOR. 1) Turn the ignition switch to OFF. 2) Disconnect the connector from ECM. 3) Disconnect the connectors from front oxygen (A/F) sensor. 4) Measure the resistance of harness between ECM connector and front oxygen (A/F) sensor connector. <i>Connector & terminal</i> <i>(B136) No. 19 — (E24) No. 3:</i> <i>(B136) No. 18 — (E24) No. 4:</i>	Is the resistance less than 1 Ω?	Go to step 4.	Repair the harness and connector. NOTE: In this case, repair the following item: • Open circuit in harness between ECM connector and front oxygen (A/F) sensor connector • Poor contact of coupling connector
4 CHECK HARNESS BETWEEN ECM AND FRONT OXYGEN (A/F) SENSOR CONNECTOR. Measure the resistance between ECM connector and chassis ground. <i>Connector & terminal</i> <i>(B136) No. 19 — Chassis ground:</i> <i>(B136) No. 18 — Chassis ground:</i>	Is the resistance 1 MΩ or more?	Go to step 5.	Repair the short circuit to ground in harness between ECM connector and front oxygen (A/F) sensor connector.
5 CHECK OUTPUT SIGNAL FOR ECM. 1) Connect the connector to ECM. 2) Turn the ignition switch to ON. 3) Measure the voltage between front oxygen (A/F) sensor connector and chassis ground. <i>Connector & terminal</i> <i>(E24) No. 3 (+) — Chassis ground (-):</i>	Is the voltage 4.5 V or more?	Go to step 7.	Go to step 6.
6 CHECK OUTPUT SIGNAL FOR ECM. Measure the voltage between front oxygen (A/F) sensor connector and chassis ground. <i>Connector & terminal</i> <i>(E24) No. 4 (+) — Chassis ground (-):</i>	Is the voltage 4.95 V or more?	Go to step 7.	Go to step 8.
7 CHECK OUTPUT SIGNAL FOR ECM. Measure the voltage between front oxygen (A/F) sensor connector and chassis ground. <i>Connector & terminal</i> <i>(E24) No. 3 (+) — Chassis ground (-):</i> <i>(E24) No. 4 (+) — Chassis ground (-):</i>	Is the voltage 8 V or more?	Repair the short circuit to power in the harness between ECM connector and front oxygen (A/F) sensor connector. After repair, replace the ECM. <Ref. to FU(H4DO)-98, Engine Control Module (ECM).>	Repair the poor contact of ECM connector.
8 CHECK EXHAUST SYSTEM.	Are there holes or loose bolts on exhaust system?	Repair the exhaust system.	Go to step 9.
9 CHECK AIR INTAKE SYSTEM.	Are there holes, loose bolts or disconnection of hose on air intake system?	Repair the air intake system.	Go to step 10.

Diagnostic Procedure with Diagnostic Trouble Code (DTC)

ENGINE (DIAGNOSTICS)

Step	Check	Yes	No
10 CHECK FUEL PRESSURE. WARNING: Place “NO OPEN FLAMES” signs near the working area. CAUTION: Be careful not to spill fuel. 1) Connect the front oxygen (A/F) sensor connector. 2) Measure the fuel pressure. <Ref. to ME(H4DO)-31, INSPECTION, Fuel Pressure.> CAUTION: Release fuel pressure before removing the fuel pressure gauge.	Is the measured value 340 — 400 kPa (3.5 — 4.1 kg/cm ² , 49 — 58 psi)?	Go to step 11.	Check the fuel pump and fuel delivery line. <Ref. to FU(H4DO)-141, INSPECTION, Fuel Pump.> <Ref. to FU(H4DO)-171, INSPECTION, Fuel Delivery and Evaporation Lines.>
11 CHECK ENGINE COOLANT TEMPERATURE SENSOR. 1) Start the engine and warm up completely. 2) Read the value of «Coolant Temp.» using the Subaru Select Monitor or a general scan tool. NOTE: <ul style="list-style-type: none"> • Subaru Select Monitor For detailed operation procedures, refer to “Current Data Display For Engine”. <Ref. to EN(H4DO)(diag)-36, Subaru Select Monitor.> <ul style="list-style-type: none"> • General scan tool For detailed operation procedures, refer to the general scan tool operation manual.	Is the value of «Coolant Temp.» 75°C (167°F) or more?	Go to step 12.	Replace the engine coolant temperature sensor. <Ref. to FU(H4DO)-49, Engine Coolant Temperature Sensor.>
12 CHECK MASS AIR FLOW AND INTAKE AIR TEMPERATURE SENSOR. 1) Start the engine and warm up engine until coolant temperature is higher than 75°C (167°F). 2) For CVT models, set the select lever to “P” range or “N” range, and for MT models, place the gear shift lever in the neutral position. 3) Turn the A/C switch to OFF. 4) Turn all the accessory switches to OFF. 5) Read the value of «Mass Air Flow» using the Subaru Select Monitor or a general scan tool. NOTE: <ul style="list-style-type: none"> • Subaru Select Monitor For detailed operation procedures, refer to “Current Data Display For Engine”. <Ref. to EN(H4DO)(diag)-36, Subaru Select Monitor.> <ul style="list-style-type: none"> • General scan tool For detailed operation procedures, refer to the general scan tool operation manual.	Is the value of «Mass Air Flow» 2.0 — 5.0 g/s (0.26 — 0.66 lb/m)?	Go to step 13.	Replace the mass air flow and intake air temperature sensor. <Ref. to FU(H4DO)-71, Mass Air Flow and Intake Air Temperature Sensor.>

ENGINE (DIAGNOSTICS)

Step	Check	Yes	No
<p>17 CHECK FRONT OXYGEN (A/F) SENSOR USING REAR OXYGEN SENSOR SIGNAL.</p> <p>1) Warm up the engine until engine coolant temperature is higher than 75°C (167°F), then keep the engine idling for 5 minutes or more.</p> <p>2) Read the value of «Rear O2 Sensor Voltage» using the Subaru Select Monitor or a general scan tool.</p> <p>NOTE:</p> <ul style="list-style-type: none"> • Subaru Select Monitor <p>For detailed operation procedures, refer to “Current Data Display For Engine”. <Ref. to EN(H4DO)(diag)-36, Subaru Select Monitor.></p> <ul style="list-style-type: none"> • General scan tool <p>For detailed operation procedures, refer to the general scan tool operation manual.</p>	<p>Is the value in «Rear O2 Sensor Voltage» kept at 0.8 V or more for 5 minutes or more?</p>	<p>Replace the front oxygen (A/F) sensor. <Ref. to FU(H4DO)-90, Front Oxygen (A/F) Sensor.></p>	<p>Go to step 18.</p>
<p>18 CHECK HARNESS BETWEEN ECM AND REAR OXYGEN SENSOR CONNECTOR.</p> <p>1) Turn the ignition switch to OFF.</p> <p>2) Disconnect the connector from ECM.</p> <p>3) Disconnect the connector from rear oxygen sensor.</p> <p>4) Measure the resistance of harness between ECM connector and rear oxygen sensor connector.</p> <p>Connector & terminal (B136) No. 21 — (E25) No. 3: (B135) No. 30 — (E25) No. 4:</p>	<p>Is the resistance less than 1 Ω?</p>	<p>Go to step 19.</p>	<p>Repair the harness and connector.</p> <p>NOTE:</p> <p>In this case, repair the following item:</p> <ul style="list-style-type: none"> • Open circuit in harness between ECM connector and rear oxygen sensor connector • Poor contact of coupling connector
<p>19 CHECK HARNESS BETWEEN ECM AND REAR OXYGEN SENSOR CONNECTOR.</p> <p>1) Connect the connector to ECM.</p> <p>2) Turn the ignition switch to ON.</p> <p>3) Measure the voltage between rear oxygen sensor connector and chassis ground.</p> <p>Connector & terminal (E25) No. 3 (+) — Chassis ground (-):</p>	<p>Is the voltage 0.2 — 0.5 V?</p>	<p>Replace the rear oxygen sensor. <Ref. to FU(H4DO)-94, Rear Oxygen Sensor.></p>	<p>Repair the harness and connector.</p> <p>NOTE:</p> <p>In this case, repair the following item:</p> <ul style="list-style-type: none"> • Open circuit in harness between ECM connector and rear oxygen sensor connector • Poor contact of ECM connector • Poor contact of coupling connector

Diagnostic Procedure with Diagnostic Trouble Code (DTC)

ENGINE (DIAGNOSTICS)

1. OUTLINE OF DIAGNOSIS

Detect the malfunction of fuel system from the size of the sub feedback learning value.

Sub feedback learning is being performed. When the learning value goes to the rich side, judge as NG.

2. COMPONENT DESCRIPTION

EN-01696

- | | | |
|-------------------------|--------------------------------|-------------------------|
| (A) Electromotive force | (B) Air fuel ratio | (C) Lean |
| (D) Rich | (E) Theoretical air fuel ratio | (F) Comparative voltage |
| (1) Atmosphere | (2) Exhaust gas | (3) Electromotive force |

3. EXECUTION CONDITION

Secondary parameters	Execution condition
Sub feedback	In operation
Amount of intake air	≥ 10 g/s (0.35 oz/s)
Engine load change every 0.5 engine revs.	< 0.02 g/rev (0 oz/rev)

4. GENERAL DRIVING CYCLE

Perform the diagnosis continuously when the vehicle is idling or running at a constant speed of 80 km/h (50 MPH) or more.

5. DIAGNOSTIC METHOD

If the duration of time while the following conditions are met is longer than the time indicated, judge as NG.

Judgment value

Malfunction Criteria	Threshold Value
Sub feedback learning value	≥ 0.033 (CVT model) ≥ 0.032 (MT model)

Time needed for diagnosis: 1 s

Malfunction indicator light illumination: Illuminates when malfunction occurs in 2 continuous driving cycles.

Diagnostic Procedure with Diagnostic Trouble Code (DTC)

ENGINE (DIAGNOSTICS)

EK:DTC P2101 THROTTLE ACTUATOR "A" CONTROL MOTOR CIRCUIT RANGE/PERFORMANCE

DTC detecting condition:

Immediately at fault recognition

Trouble symptom:

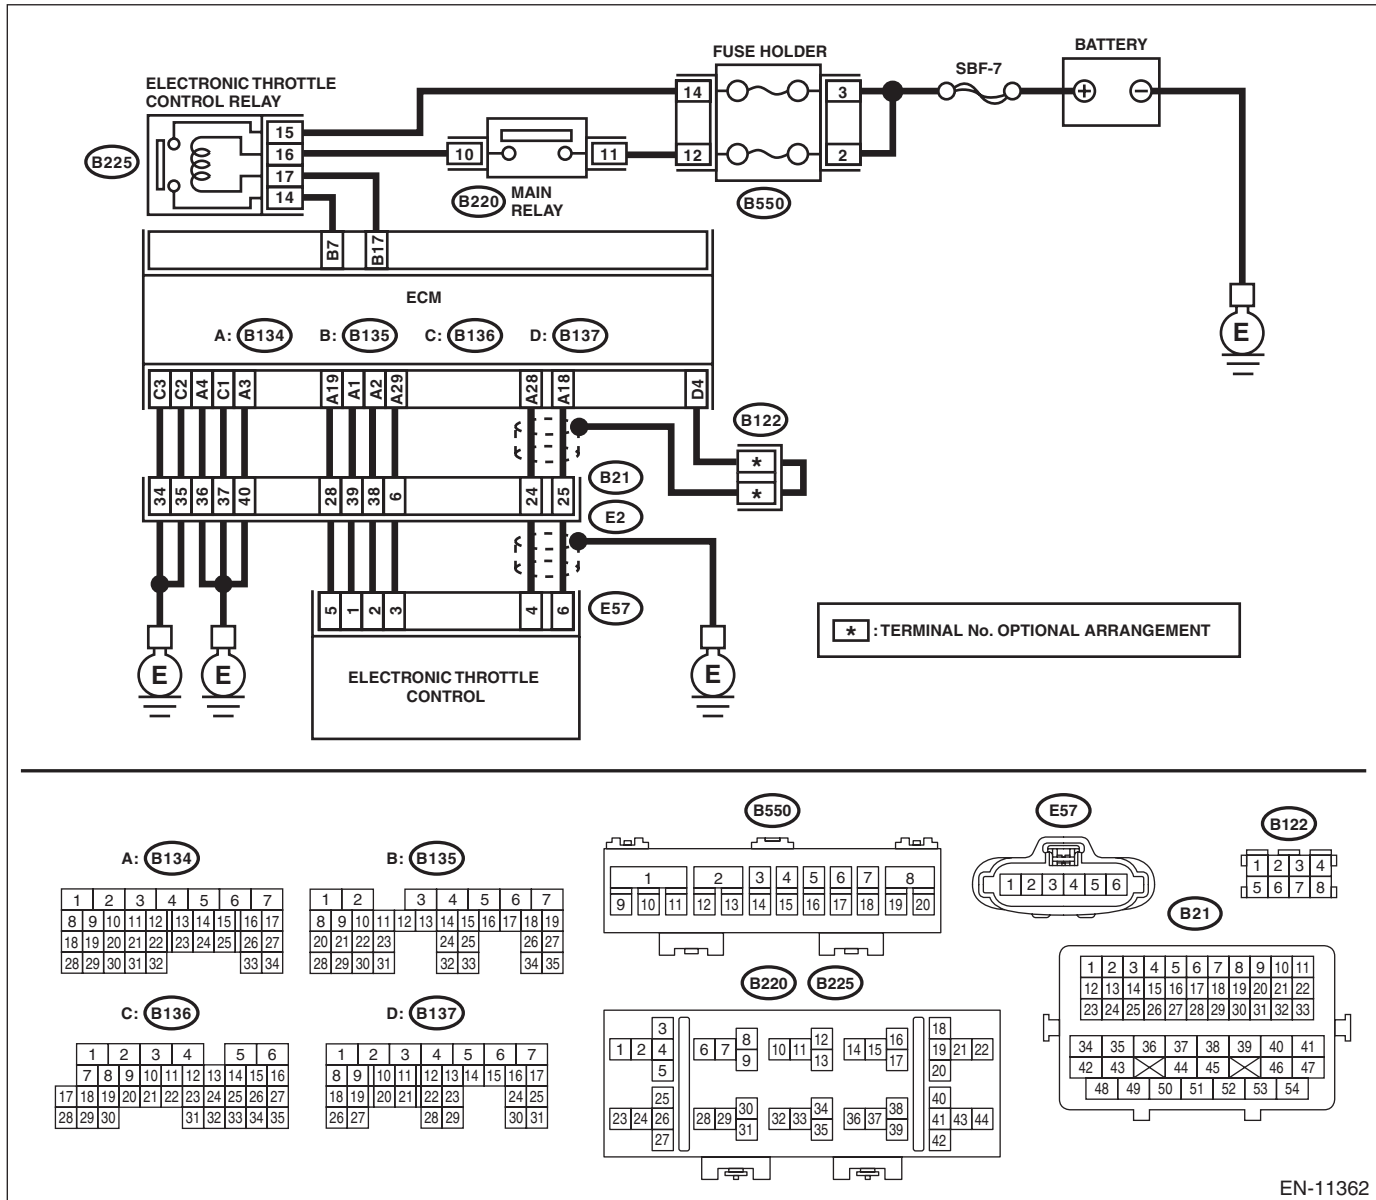

- Improper idling
- Poor driving performance
- Engine stall

CAUTION:

After servicing or replacing faulty parts, perform Clear Memory Mode <Ref. to EN(H4DO)(diag)-66, OPERATION, Clear Memory Mode.>, and Inspection Mode <Ref. to EN(H4DO)(diag)-50, PROCEDURE, Inspection Mode.>.

Wiring diagram:

Engine electrical system <Ref. to WI-102, Engine Electrical System.>

EN-11362

Diagnostic Procedure with Diagnostic Trouble Code (DTC)

ENGINE (DIAGNOSTICS)

Step	Check	Yes	No
<p>1 CHECK ELECTRONIC THROTTLE CONTROL RELAY.</p> <p>1) Turn the ignition switch to OFF. 2) Remove the electronic throttle control relay. 3) Connect the battery to terminals No. 16 and No. 17 of electronic throttle control relay. 4) Measure the resistance between electronic throttle control relay terminals.</p> <p>Terminals No. 14 — No. 15:</p>	Is the resistance less than 1 Ω ?	Go to step 2.	Replace the electronic throttle control relay. <Ref. to FU(H4DO)-104, Electronic Throttle Control Relay.>
<p>2 CHECK POWER SUPPLY OF ELECTRONIC THROTTLE CONTROL RELAY.</p> <p>Measure the voltage between electronic throttle control relay connector and chassis ground.</p> <p>Connector & terminal (B225) No. 15 (+) — Chassis ground (-):</p>	Is the voltage 10 V or more?	Go to step 3.	Repair the open or short to ground in the power supply circuit.
<p>3 CHECK HARNESS BETWEEN ECM AND ELECTRONIC THROTTLE CONTROL RELAY CONNECTOR.</p> <p>1) Disconnect the connector from ECM. 2) Turn the ignition switch to ON. 3) Measure the voltage between electronic throttle control relay connector and chassis ground.</p> <p>Connector & terminal (B225) No. 17 (+) — Chassis ground (-):</p>	Is the voltage 10 V or more?	Repair the short circuit to power in the harness between ECM connector and electronic throttle control relay connector.	Go to step 4.
<p>4 CHECK HARNESS BETWEEN ECM AND ELECTRONIC THROTTLE CONTROL RELAY CONNECTOR.</p> <p>1) Turn the ignition switch to OFF. 2) Measure the resistance between electronic throttle control relay connector and chassis ground.</p> <p>Connector & terminal (B225) No. 14 — Chassis ground: (B225) No. 17 — Chassis ground:</p>	Is the resistance 1 M Ω or more?	Go to step 5.	Repair the short circuit to ground in harness between ECM connector and electronic throttle control relay connector.
<p>5 CHECK HARNESS BETWEEN ECM AND ELECTRONIC THROTTLE CONTROL RELAY CONNECTOR.</p> <p>Measure the resistance between ECM connector and electronic throttle control relay connector.</p> <p>Connector & terminal (B135) No. 17 — (B225) No. 17: (B135) No. 7 — (B225) No. 14:</p>	Is the resistance less than 1 Ω ?	Go to step 6.	Repair the open circuit in harness between ECM connector and electronic throttle control relay connector.
<p>6 CHECK HARNESS BETWEEN ECM AND ELECTRONIC THROTTLE CONTROL CONNECTOR.</p> <p>1) Turn the ignition switch to OFF. 2) Disconnect the connectors from electronic throttle control. 3) Measure the resistance between ECM connector and chassis ground.</p> <p>Connector & terminal (B134) No. 19 — Chassis ground: (B134) No. 18 — Chassis ground: (B134) No. 18 — (B136) No. 4: (B134) No. 28 — Chassis ground: (B134) No. 28 — (B136) No. 4:</p>	Is the resistance 1 M Ω or more?	Go to step 7.	Repair the ground short circuit of harness between ECM connector and electronic throttle control connector.

Diagnostic Procedure with Diagnostic Trouble Code (DTC)

ENGINE (DIAGNOSTICS)

Step	Check	Yes	No
7 CHECK SHORT CIRCUIT INSIDE THE ECM. 1) Connect the connector to ECM. 2) Measure the resistance between electronic throttle control connector and engine ground. Connector & terminal <i>(E57) No. 6 — Engine ground:</i> <i>(E57) No. 4 — Engine ground:</i>	Is the resistance 200 k Ω or more?	Go to step 8.	Repair the ground short circuit of harness between ECM connector and electronic throttle control connector. Replace the ECM if defective. <Ref. to FU(H4DO)-98, Engine Control Module (ECM).>
8 CHECK HARNESS BETWEEN ECM AND ELECTRONIC THROTTLE CONTROL CONNECTOR. 1) Disconnect the connector from ECM. 2) Measure the resistance of harness between ECM connector and electronic throttle control connector. Connector & terminal <i>(B134) No. 18 — (E57) No. 6:</i> <i>(B134) No. 28 — (E57) No. 4:</i> <i>(B134) No. 29 — (E57) No. 3:</i>	Is the resistance less than 1 Ω ?	Go to step 9.	Repair the harness and connector. NOTE: In this case, repair the following item: <ul style="list-style-type: none"> • Open circuit in harness between ECM connector and electronic throttle control connector • Poor contact of coupling connector
9 CHECK HARNESS BETWEEN ECM AND ELECTRONIC THROTTLE CONTROL CONNECTOR. 1) Connect the connector to ECM. 2) Measure the resistance between electronic throttle control connector and engine ground. Connector & terminal <i>(E57) No. 3 — Engine ground:</i>	Is the resistance less than 5 Ω ?	Go to step 10.	Repair the harness and connector. NOTE: In this case, repair the following item: <ul style="list-style-type: none"> • Open circuit of harness between ECM connector and engine ground • Poor contact of ECM connector • Poor contact of coupling connector
10 CHECK HARNESS BETWEEN ECM AND ELECTRONIC THROTTLE CONTROL CONNECTOR. 1) Turn the ignition switch to ON. 2) Measure the voltage between electronic throttle control connector and engine ground. Connector & terminal <i>(E57) No. 6 (+) — Engine ground (-):</i> <i>(E57) No. 4 (+) — Engine ground (-):</i>	Is the voltage 5 V or more?	Repair the short circuit to power in the harness between ECM connector and electronic throttle control connector.	Go to step 11.
11 CHECK HARNESS BETWEEN ECM AND ELECTRONIC THROTTLE CONTROL CONNECTOR. 1) Turn the ignition switch to OFF. 2) Disconnect the connector from ECM. 3) Measure the resistance between ECM connectors. Connector & terminal <i>(B134) No. 19 — (B134) No. 18:</i> <i>(B134) No. 19 — (B134) No. 28:</i>	Is the resistance 1 M Ω or more?	Go to step 12.	Repair the short circuit to power in the harness between ECM connector and electronic throttle control connector.

Diagnostic Procedure with Diagnostic Trouble Code (DTC)

ENGINE (DIAGNOSTICS)

Step	Check	Yes	No
<p>12 CHECK SENSOR OUTPUT.</p> <p>1) Connect all connectors. 2) Start the engine and warm up completely. 3) Stop the engine, and then turn the ignition switch to ON (engine OFF). 4) Read the value of «Main-Throttle Sensor» using Subaru Select Monitor.</p> <p>NOTE: For detailed operation procedures, refer to “Current Data Display For Engine”. <Ref. to EN(H4DO)(diag)-36, Subaru Select Monitor.></p>	Is the value of «Main-Throttle Sensor» 0.81 — 0.87 V?	Go to step 13.	Repair the poor contact of electronic throttle control connector. Replace the electronic throttle control if defective. <Ref. to FU(H4DO)-15, Throttle Body.>
<p>13 CHECK SENSOR OUTPUT.</p> <p>Read the value of «Sub-Throttle Sensor» using Subaru Select Monitor.</p> <p>NOTE: For detailed operation procedures, refer to “Current Data Display For Engine”. <Ref. to EN(H4DO)(diag)-36, Subaru Select Monitor.></p>	Is the value of «Sub-Throttle Sensor» 1.64 — 1.70 V?	Go to step 14.	Repair the poor contact of electronic throttle control connector. Replace the electronic throttle control if defective. <Ref. to FU(H4DO)-15, Throttle Body.>
<p>14 CHECK HARNESS BETWEEN ECM AND ELECTRONIC THROTTLE CONTROL CONNECTOR.</p> <p>1) Turn the ignition switch to OFF. 2) Disconnect the connector from ECM. 3) Disconnect the connectors from electronic throttle control. 4) Measure the resistance between ECM connector and electronic throttle control connector.</p> <p>Connector & terminal (B134) No. 2 — (E57) No. 2: (B134) No. 1 — (E57) No. 1:</p>	Is the resistance less than 1 Ω?	Go to step 15.	Repair the harness and connector. NOTE: In this case, repair the following item: • Open circuit in harness between ECM connector and electronic throttle control connector • Poor contact of coupling connector
<p>15 CHECK HARNESS BETWEEN ECM AND ELECTRONIC THROTTLE CONTROL CONNECTOR.</p> <p>1) Connect the connector to ECM. 2) Turn the ignition switch to ON. 3) Measure the voltage between electronic throttle control connector and engine ground.</p> <p>Connector & terminal (E57) No. 2 (+) — Engine ground (-): (E57) No. 1 (+) — Engine ground (-):</p>	Is the voltage 5 V or more?	Repair the short circuit to power in the harness between ECM connector and electronic throttle control connector.	Go to step 16.
<p>16 CHECK HARNESS BETWEEN ECM AND ELECTRONIC THROTTLE CONTROL CONNECTOR.</p> <p>1) Turn the ignition switch to OFF. 2) Disconnect the connector from ECM. 3) Measure the resistance between electronic throttle control connector and engine ground.</p> <p>Connector & terminal (E57) No. 2 — Engine ground: (E57) No. 1 — Engine ground:</p>	Is the resistance 1 MΩ or more?	Go to step 17.	Repair the ground short circuit of harness between ECM connector and electronic throttle control connector.
<p>17 CHECK ELECTRONIC THROTTLE CONTROL CONNECTOR HARNESS.</p> <p>Measure the resistance between electronic throttle control connectors.</p> <p>Connector & terminal (E57) No. 2 — (E57) No. 1:</p>	Is the resistance 1 MΩ or more?	Go to step 18.	Repair the short circuit in harness between ECM connector and electronic throttle control connector.

Diagnostic Procedure with Diagnostic Trouble Code (DTC)

ENGINE (DIAGNOSTICS)

Step	Check	Yes	No
18 CHECK ELECTRONIC THROTTLE CONTROL GROUND CIRCUIT. Measure the resistance between ECM connector and chassis ground. Connector & terminal <i>(B134) No. 3 — Chassis ground:</i> <i>(B134) No. 4 — Chassis ground:</i> <i>(B136) No. 1 — Chassis ground:</i> <i>(B136) No. 2 — Chassis ground:</i> <i>(B136) No. 3 — Chassis ground:</i>	Is the resistance less than 5 Ω ?	Go to step 19 .	Repair the harness and connector. NOTE: In this case, repair the following item: • Open circuit of harness between ECM connector and engine ground • Poor contact of coupling connector
19 CHECK ELECTRONIC THROTTLE CONTROL. Measure the resistance between electronic throttle control terminals. Terminals No. 2 — No. 1:	Is the resistance 50 Ω or less?	Go to step 20 .	Replace the electronic throttle control. <Ref. to FU(H4DO)-15, Throttle Body.>
20 CHECK ELECTRONIC THROTTLE CONTROL. Move the throttle valve to the fully opened and fully closed positions with fingers. Check that the valve returns to the specified position when releasing fingers.	Does the valve return to the specified position? Standard value: 3 mm (0.12 in) from fully closed position	Repair the poor contact of ECM connector.	Replace the electronic throttle control. <Ref. to FU(H4DO)-15, Throttle Body.>

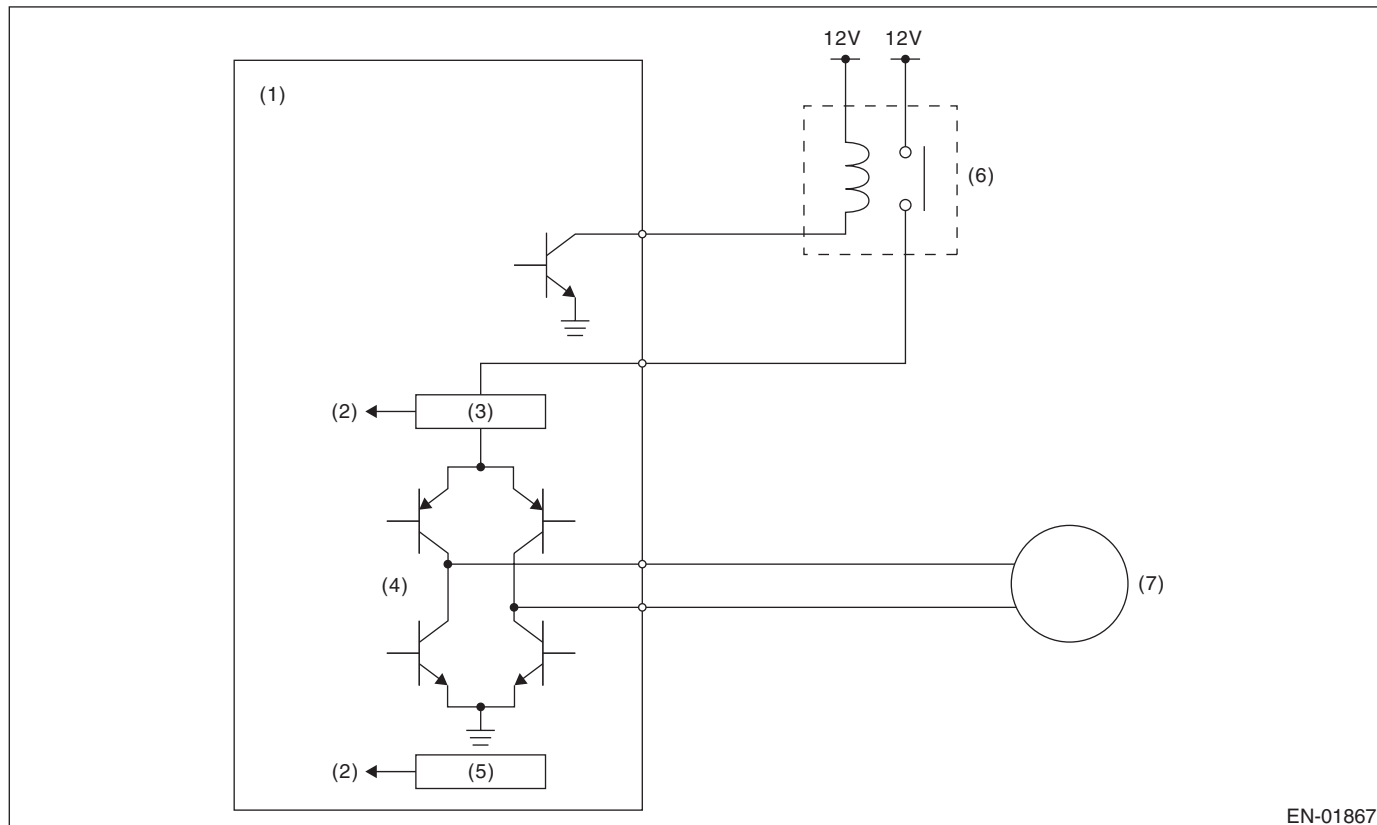

Diagnostic Procedure with Diagnostic Trouble Code (DTC)

ENGINE (DIAGNOSTICS)

1. OUTLINE OF DIAGNOSIS

Judge as NG when the motor current becomes large or drive circuit is heated.

2. COMPONENT DESCRIPTION

EN-01867

- | | | |
|-----------------------------------|-----------------------------------|---------------------------------------|
| (1) Engine control module (ECM) | (4) Drive circuit | (6) Electronic throttle control relay |
| (2) Detecting circuit | (5) Temperature detection circuit | (7) Motor |
| (3) Overcurrent detection circuit | | |

3. EXECUTION CONDITION

Secondary Parameters	Execution condition
Battery voltage	≥ 6.2 V
Electronic throttle control relay output	ON

4. GENERAL DRIVING CYCLE

Always perform the diagnosis continuously.

5. DIAGNOSTIC METHOD

If the duration of time while the following conditions are met is longer than the time indicated, judge as NG.

Judgment Value

Malfunction Criteria	Threshold Value
Overcurrent signal from the electronic throttle control drive IC	ON

Time Needed for Diagnosis: 512 ms

Malfunction Indicator Light Illumination: Illuminates as soon as a malfunction occurs.

Diagnostic Procedure with Diagnostic Trouble Code (DTC)

ENGINE (DIAGNOSTICS)

EL:DTC P2102 THROTTLE ACTUATOR "A" CONTROL MOTOR CIRCUIT LOW

DTC DETECTING CONDITION:

Immediately at fault recognition

TROUBLE SYMPTOM:

- Improper idling
- Poor driving performance
- Engine stall

CAUTION:

After servicing or replacing faulty parts, perform Clear Memory Mode <Ref. to EN(H4DO)(diag)-66, OPERATION, Clear Memory Mode.>, and Inspection Mode <Ref. to EN(H4DO)(diag)-50, PROCEDURE, Inspection Mode.>.

WIRING DIAGRAM:

For the diagnostic procedure, refer to DTC P2101. <Ref. to EN(H4DO)(diag)-452, DTC P2101 THROTTLE ACTUATOR "A" CONTROL MOTOR CIRCUIT RANGE/PERFORMANCE, Diagnostic Procedure with Diagnostic Trouble Code (DTC).>

1. OUTLINE OF DIAGNOSIS

Judge as NG when full close point learning cannot be conducted or an abnormal value is detected.

2. COMPONENT DESCRIPTION

EN-01869

- (1) Engine control module (ECM) (3) Motor (4) Throttle position sensor
(2) Drive circuit

3. EXECUTION CONDITION

Secondary parameters	Execution condition
Minimum stop position	< -4.020% or > -4.020%
Throttle default position - Throttle minimum stop position	< 1.162 °

4. GENERAL DRIVING CYCLE

Perform the diagnosis at full closed point learning.

5. DIAGNOSTIC METHOD

If the duration of time while the following conditions are met is longer than the time indicated, judge as NG.

Judgment Value

Malfunction Criteria	Threshold Value
12 V battery system voltage	< 6 V

Time Needed for Diagnosis: 8 ms — 80 ms

Malfunction Indicator Light Illumination: Illuminates as soon as a malfunction occurs.

EO:DTC P2119 THROTTLE ACTUATOR "A" CONTROL THROTTLE BODY RANGE/PERFORMANCE

NOTE:

For the diagnostic procedure, refer to DTC P2101. <Ref. to EN(H4DO)(diag)-452, DTC P2101 THROTTLE ACTUATOR "A" CONTROL MOTOR CIRCUIT RANGE/PERFORMANCE, Diagnostic Procedure with Diagnostic Trouble Code (DTC).>

1. OUTLINE OF DIAGNOSIS

Judge as NG when the target opening angle and actual opening angle is mismatched or the current to motor is the specified duty or more for specified time continuously.

2. COMPONENT DESCRIPTION

EN-01863

- (1) Motor
 (2) Throttle position sensor
 (3) Engine control module (ECM)
 (4) Drive circuit

3. EXECUTION CONDITION

Secondary Parameters	Execution condition
12 V battery system voltage	6.2 V
Throttle motor relay command	ON

4. GENERAL DRIVING CYCLE

Always perform the diagnosis continuously when the electronic throttle control is operating.

Diagnostic Procedure with Diagnostic Trouble Code (DTC)

ENGINE (DIAGNOSTICS)

5. DIAGNOSTIC METHOD

Judge as OK and clear the NG when the malfunction criteria below are met.

Diagnosis 1

Judgment Value

Malfunction Criteria	Threshold Value
Output duty to drive circuit	$\geq 95\%$

Time Needed for Diagnosis:

- Engine speed ≥ 500 rpm: 2000 ms
- Engine speed < 500 rpm: 5000 ms

Diagnosis 2

Judgment Value

Malfunction Criteria	Threshold Value
Difference between target opening angle and actual opening angle	Within NG range of Details of Judgment value

Time Needed for Diagnosis:

- Engine speed ≥ 500 rpm: Refer to **Details of Judgment time**.
- Engine speed < 500 rpm: 5000 ms

Replace the ECM if defective. <Ref. to FU(H4DO)-98, Engine Control Module (ECM).></p>

Diagnostic Procedure with Diagnostic Trouble Code (DTC)

ENGINE (DIAGNOSTICS)

1. OUTLINE OF DIAGNOSIS

Detect the open or short circuit of accelerator pedal position sensor 1.
Judge as NG if out of specification.

2. COMPONENT DESCRIPTION

- (1) Engine control module (ECM) (3) Accelerator pedal position sensor 2 signal (4) Accelerator pedal position sensor
- (2) Accelerator pedal position sensor 1 signal

3. EXECUTION CONDITION

Secondary Parameters	Execution condition
Battery voltage	$\geq 6 \text{ V}$

4. GENERAL DRIVING CYCLE

Always perform the diagnosis continuously.

5. DIAGNOSTIC METHOD

If the duration of time while the following conditions are met is longer than the time indicated, judge as NG.

Judgment Value

Malfunction Criteria	Threshold Value
Sensor 1 input voltage	$< 0.298 \text{ V}$

Time Needed for Diagnosis: 100 ms

Malfunction Indicator Light Illumination: Illuminates as soon as a malfunction occurs.

EQ:DTC P2123 THROTTLE/PEDAL POSITION SENSOR/SWITCH "D" CIRCUIT HIGH

DTC detecting condition:

Immediately at fault recognition

Trouble symptom:

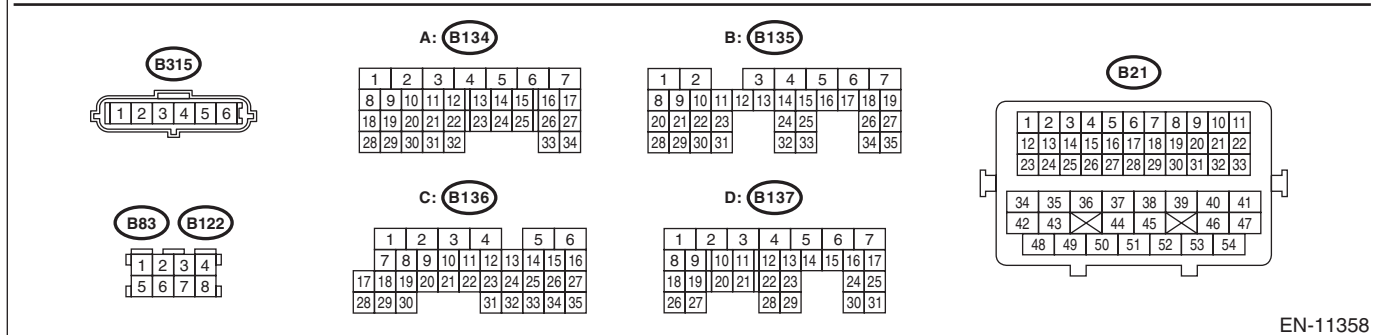

- Improper idling
- Poor driving performance

CAUTION:

After servicing or replacing faulty parts, perform Clear Memory Mode <Ref. to EN(H4DO)(diag)-66, OPERATION, Clear Memory Mode.>, and Inspection Mode <Ref. to EN(H4DO)(diag)-50, PROCEDURE, Inspection Mode.>.

Wiring diagram:

Engine electrical system <Ref. to WI-102, Engine Electrical System.>

Diagnostic Procedure with Diagnostic Trouble Code (DTC)

ENGINE (DIAGNOSTICS)

Step	Check	Yes	No
<p>1 CHECK HARNESS BETWEEN ECM AND ACCELERATOR PEDAL POSITION SENSOR CONNECTOR.</p> <p>1) Turn the ignition switch to OFF. 2) Disconnect the connector from ECM. 3) Disconnect the connector from the accelerator pedal position sensor. 4) Measure the resistance of harness between ECM connector and accelerator pedal position sensor connector.</p> <p>Connector & terminal (B135) No. 23 — (B315) No. 6: (B135) No. 29 — (B315) No. 5:</p>	Is the resistance less than 1 Ω ?	Go to step 2.	Repair the open circuit of harness between ECM connector and accelerator pedal position sensor connector.
<p>2 CHECK HARNESS BETWEEN ECM AND ACCELERATOR PEDAL POSITION SENSOR CONNECTOR.</p> <p>1) Connect the connector to ECM. 2) Measure the resistance between accelerator pedal position sensor connector and chassis ground.</p> <p>Connector & terminal (B315) No. 5 — Chassis ground:</p>	Is the resistance less than 5 Ω ?	Go to step 3.	Repair the harness and connector. NOTE: In this case, repair the following item: <ul style="list-style-type: none"> • Open circuit of harness between ECM connector and engine ground • Poor contact of ECM connector • Poor contact of coupling connector
<p>3 CHECK HARNESS BETWEEN ECM AND ACCELERATOR PEDAL POSITION SENSOR CONNECTOR.</p> <p>1) Turn the ignition switch to ON. 2) Measure the voltage between accelerator pedal position sensor connector and chassis ground.</p> <p>Connector & terminal (B315) No. 6 (+) — Chassis ground (-):</p>	Is the voltage 5 V or more?	Repair the short circuit to power supply in harness between ECM connector and accelerator pedal position sensor connector.	Go to step 4.
<p>4 CHECK HARNESS BETWEEN ECM AND ACCELERATOR PEDAL POSITION SENSOR CONNECTOR.</p> <p>1) Turn the ignition switch to OFF. 2) Disconnect the connector from ECM. 3) Measure the resistance between ECM connectors.</p> <p>Connector & terminal (B135) No. 21 — (B135) No. 23:</p>	Is the resistance 1 M Ω or more?	Repair the poor contact of accelerator pedal position sensor connector. Replace the accelerator pedal if defective. <Ref. to SP(H4DO)-4, Accelerator Pedal.>	Repair the short circuit to power supply in harness between ECM connector and accelerator pedal position sensor connector.

1. OUTLINE OF DIAGNOSIS

Detect the open or short circuit of accelerator pedal position sensor 1.
Judge as NG if out of specification.

2. COMPONENT DESCRIPTION

- (1) Engine control module (ECM) (3) Accelerator pedal position sensor 2 signal (4) Accelerator pedal position sensor 2 signal
- (2) Accelerator pedal position sensor 1 signal

3. EXECUTION CONDITION

Secondary Parameters	Execution condition
Battery voltage	$\geq 6 \text{ V}$

4. GENERAL DRIVING CYCLE

Always perform the diagnosis continuously.

5. DIAGNOSTIC METHOD

If the duration of time while the following conditions are met is longer than the time indicated, judge as NG.

Judgment Value

Malfunction Criteria	Threshold Value
Sensor 1 input voltage	$\geq 4.737 \text{ V}$

Time Needed for Diagnosis: 32 ms

Malfunction Indicator Light Illumination: Illuminates as soon as a malfunction occurs.

NOTE: In this case, repair the following item: • Open circuit in harness between ECM connector and front oxygen (A/F) sensor connector • Poor contact of coupling connector

Diagnostic Procedure with Diagnostic Trouble Code (DTC)

ENGINE (DIAGNOSTICS)

Step	Check	Yes	No
3 CHECK HARNESS BETWEEN ECM AND FRONT OXYGEN (A/F) SENSOR CONNECTOR. Measure the resistance between ECM connector and chassis ground. Connector & terminal <i>(B136) No. 19 — Chassis ground:</i> <i>(B136) No. 18 — Chassis ground:</i>	Is the resistance 1 MΩ or more?	Go to step 4.	Repair the short circuit to ground in harness between ECM connector and front oxygen (A/F) sensor connector.
4 CHECK OUTPUT SIGNAL FOR ECM. 1) Connect the connector to ECM. 2) Turn the ignition switch to ON. 3) Measure the voltage between front oxygen (A/F) sensor connector and chassis ground. Connector & terminal <i>(E24) No. 3 (+) — Chassis ground (-):</i>	Is the voltage 4.5 V or more?	Go to step 6.	Go to step 5.
5 CHECK OUTPUT SIGNAL FOR ECM. Measure the voltage between front oxygen (A/F) sensor connector and chassis ground. Connector & terminal <i>(E24) No. 4 (+) — Chassis ground (-):</i>	Is the voltage 4.95 V or more?	Go to step 6.	Go to step 7.
6 CHECK OUTPUT SIGNAL FOR ECM. Measure the voltage between front oxygen (A/F) sensor connector and chassis ground. Connector & terminal <i>(E24) No. 3 (+) — Chassis ground (-):</i> <i>(E24) No. 4 (+) — Chassis ground (-):</i>	Is the voltage 8 V or more?	Repair the short circuit to power in the harness between ECM connector and front oxygen (A/F) sensor connector. After repair, replace the ECM. <Ref. to FU(H4DO)-98, Engine Control Module (ECM).>	Repair the poor contact of ECM connector.
7 CHECK EXHAUST SYSTEM.	Are there holes or loose bolts on exhaust system?	Repair the exhaust system.	Go to step 8.
8 CHECK AIR INTAKE SYSTEM.	Are there holes, loose bolts or disconnection of hose on air intake system?	Repair the air intake system.	Go to step 9.
9 CHECK FUEL PRESSURE. WARNING: Place “NO OPEN FLAMES” signs near the working area. CAUTION: Be careful not to spill fuel. 1) Connect the front oxygen (A/F) sensor connector. 2) Measure the fuel pressure. <Ref. to ME(H4DO)-31, INSPECTION, Fuel Pressure.> CAUTION: Release fuel pressure before removing the fuel pressure gauge.	Is the measured value 340 — 400 kPa (3.5 — 4.1 kg/cm ² , 49 — 58 psi)?	Go to step 10.	Check the fuel pump and fuel delivery line. <Ref. to FU(H4DO)-141, INSPECTION, Fuel Pump.> <Ref. to FU(H4DO)-171, INSPECTION, Fuel Delivery and Evaporation Lines.>

Diagnostic Procedure with Diagnostic Trouble Code (DTC)

ENGINE (DIAGNOSTICS)

Step	Check	Yes	No
<p>10 CHECK ENGINE COOLANT TEMPERATURE SENSOR.</p> <p>1) Start the engine and warm up completely. 2) Read the value of «Coolant Temp.» using the Subaru Select Monitor or a general scan tool.</p> <p>NOTE: • Subaru Select Monitor For detailed operation procedures, refer to “Current Data Display For Engine”. <Ref. to EN(H4DO)(diag)-36, Subaru Select Monitor.> • General scan tool For detailed operation procedures, refer to the general scan tool operation manual.</p>	<p>Is the value of «Coolant Temp.» 75°C (167°F) or more?</p>	<p>Go to step 11.</p>	<p>Replace the engine coolant temperature sensor. <Ref. to FU(H4DO)-49, Engine Coolant Temperature Sensor.></p>
<p>11 CHECK MASS AIR FLOW AND INTAKE AIR TEMPERATURE SENSOR.</p> <p>1) Start the engine and warm up engine until coolant temperature is higher than 75°C (167°F). 2) For AT models, set the select lever to “P” range or “N” range, and for MT models, place the gear shift lever in the neutral position. 3) Turn the A/C switch to OFF. 4) Turn all the accessory switches to OFF. 5) Read the value of «Mass Air Flow» using the Subaru Select Monitor or a general scan tool.</p> <p>NOTE: • Subaru Select Monitor For detailed operation procedures, refer to “Current Data Display For Engine”. <Ref. to EN(H4DO)(diag)-36, Subaru Select Monitor.> • General scan tool For detailed operation procedures, refer to the general scan tool operation manual.</p>	<p>Is the value of «Mass Air Flow» 2.0 — 5.0 g/s (0.26 — 0.66 lb/m)?</p>	<p>Go to step 12.</p>	<p>Replace the mass air flow and intake air temperature sensor. <Ref. to FU(H4DO)-71, Mass Air Flow and Intake Air Temperature Sensor.></p>
<p>12 CHECK MASS AIR FLOW AND INTAKE AIR TEMPERATURE SENSOR.</p> <p>1) Start the engine and warm up engine until coolant temperature is higher than 75°C (167°F). 2) For AT models, set the select lever to “P” range or “N” range, and for MT models, place the gear shift lever in the neutral position. 3) Turn the A/C switch to OFF. 4) Turn all the accessory switches to OFF. 5) Open the front hood. 6) Measure the ambient temperature. 7) Read the value of «Intake Air Temp.» using the Subaru Select Monitor or a general scan tool.</p> <p>NOTE: • Subaru Select Monitor For detailed operation procedures, refer to “Current Data Display For Engine”. <Ref. to EN(H4DO)(diag)-36, Subaru Select Monitor.> • General scan tool For detailed operation procedures, refer to the general scan tool operation manual.</p>	<p>Subtract ambient temperature from «Intake Air Temp.». Is the obtained value -10 — 50°C (-18 — 90°F)?</p>	<p>Go to step 13.</p>	<p>Check the mass air flow and intake air temperature sensor. <Ref. to FU(H4DO)-71, Mass Air Flow and Intake Air Temperature Sensor.></p>

Diagnostic Procedure with Diagnostic Trouble Code (DTC)

ENGINE (DIAGNOSTICS)

Step	Check	Yes	No
<p>13 CHECK REAR OXYGEN SENSOR DATA. 1) Warm up the engine until engine coolant temperature is higher than 75°C (167°F), and keep the engine speed at 3,000 rpm. (2 minutes maximum) 2) Read the value of «Rear O2 Sensor Voltage» using the Subaru Select Monitor or a general scan tool. NOTE: • Depress the clutch pedal (MT model) • Subaru Select Monitor For detailed operation procedures, refer to “Current Data Display For Engine”. <Ref. to EN(H4DO)(diag)-36, Subaru Select Monitor.> • General scan tool For detailed operation procedures, refer to the general scan tool operation manual.</p>	<p>Is the value of «Rear O2 Sensor Voltage» 0.490 V or more?</p>	<p>Go to step 14.</p>	<p>Go to step 15.</p>
<p>14 CHECK REAR OXYGEN SENSOR DATA. 1) Warm up the engine until engine coolant temperature is higher than 75°C (167°F), and rapidly reduce the engine speed from 3,000 rpm. 2) Read the value of «Rear O2 Sensor Voltage» using the Subaru Select Monitor or a general scan tool. NOTE: • Depress the clutch pedal (MT model) • Subaru Select Monitor For detailed operation procedures, refer to “Current Data Display For Engine”. <Ref. to EN(H4DO)(diag)-36, Subaru Select Monitor.> • General scan tool For detailed operation procedures, refer to the general scan tool operation manual.</p>	<p>Is the value of «Rear O2 Sensor Voltage» 0.250 V or less?</p>	<p>Go to step 16.</p>	<p>Go to step 15.</p>
<p>15 CHECK REAR OXYGEN SENSOR CONNECTOR AND COUPLING CONNECTOR.</p>	<p>Has water entered the connector?</p>	<p>Completely remove any water inside.</p>	<p>Go to step 17.</p>
<p>16 CHECK FRONT OXYGEN (A/F) SENSOR USING REAR OXYGEN SENSOR SIGNAL. 1) Warm up the engine until engine coolant temperature is higher than 75°C (167°F), then keep the engine idling for 5 minutes or more. 2) Read the value of «Rear O2 Sensor Voltage» using the Subaru Select Monitor or a general scan tool. NOTE: • Subaru Select Monitor For detailed operation procedures, refer to “Current Data Display For Engine”. <Ref. to EN(H4DO)(diag)-36, Subaru Select Monitor.> • General scan tool For detailed operation procedures, refer to the general scan tool operation manual.</p>	<p>Is the value in «Rear O2 Sensor Voltage» kept at 0.250 V or less for 5 minutes or more?</p>	<p>Replace the front oxygen (A/F) sensor. <Ref. to FU(H4DO)-90, Front Oxygen (A/F) Sensor.></p>	<p>Go to step 17.</p>

Diagnostic Procedure with Diagnostic Trouble Code (DTC)

ENGINE (DIAGNOSTICS)

Step	Check	Yes	No
17 CHECK HARNESS BETWEEN ECM AND REAR OXYGEN SENSOR CONNECTOR. 1) Turn the ignition switch to OFF. 2) Disconnect the connector from ECM. 3) Disconnect the connector from rear oxygen sensor. 4) Measure the resistance of harness between ECM connector and rear oxygen sensor connector. <i>Connector & terminal</i> (B136) No. 21 — (E25) No. 3: (B135) No. 30 — (E25) No. 4:	Is the resistance less than 1 Ω?	Go to step 18.	Repair the harness and connector. NOTE: In this case, repair the following item: • Open circuit in harness between ECM connector and rear oxygen sensor connector • Poor contact of coupling connector
18 CHECK HARNESS BETWEEN ECM AND REAR OXYGEN SENSOR CONNECTOR. 1) Connect the connector to ECM. 2) Turn the ignition switch to ON. 3) Measure the voltage between rear oxygen sensor connector and chassis ground. <i>Connector & terminal</i> (E25) No. 3 (+) — Chassis ground (-):	Is the voltage 0.2 — 0.5 V?	Replace the rear oxygen sensor. <Ref. to FU(H4DO)-94, Rear Oxygen Sensor.>	Go to step 19.
19 CHECK OUTPUT SIGNAL OF ECM. 1) Turn the ignition switch to ON. 2) Measure the voltage between ECM and chassis ground on faulty cylinders. <i>Connector & terminal</i> #1 (B134) No. 12 (+) — Chassis ground (-): #2 (B134) No. 22 (+) — Chassis ground (-): #3 (B134) No. 32 (+) — Chassis ground (-): #4 (B134) No. 13 (+) — Chassis ground (-):	Is the voltage 10 V or more?	Go to step 24.	Go to step 20.
20 CHECK HARNESS BETWEEN ECM AND FUEL INJECTOR CONNECTOR. 1) Turn the ignition switch to OFF. 2) Disconnect the connector from fuel injector on faulty cylinders. 3) Measure the resistance between fuel injector connector and engine ground on faulty cylinders. <i>Connector & terminal</i> #1 (E5) No. 1 — Engine ground: #2 (E16) No. 1 — Engine ground: #3 (E6) No. 1 — Engine ground: #4 (E17) No. 1 — Engine ground:	Is the resistance 1 MΩ or more?	Go to step 21.	Repair the short circuit to ground in harness between ECM connector and fuel injector connector.
21 CHECK HARNESS BETWEEN ECM AND FUEL INJECTOR CONNECTOR. Measure the resistance of harness between ECM and fuel injector connector on faulty cylinders. <i>Connector & terminal</i> #1 (B134) No. 12 — (E5) No. 1: #2 (B134) No. 22 — (E16) No. 1: #3 (B134) No. 32 — (E6) No. 1: #4 (B134) No. 13 — (E17) No. 1:	Is the resistance less than 1 Ω?	Go to step 22.	Repair the harness and connector. NOTE: In this case, repair the following item: • Open circuit in harness between ECM connector and fuel injector connector • Poor contact of coupling connector
22 CHECK FUEL INJECTOR. Measure the resistance between fuel injector terminals on faulty cylinder. <i>Terminals</i> No. 1 — No. 2:	Is the resistance 5 — 20 Ω?	Go to step 23.	Replace the faulty fuel injector. <Ref. to FU(H4DO)-77, Fuel Injector.>

Diagnostic Procedure with Diagnostic Trouble Code (DTC)

ENGINE (DIAGNOSTICS)

Step	Check	Yes	No
23 CHECK POWER SUPPLY LINE. 1) Turn the ignition switch to ON. 2) Measure the voltage between fuel injector connector of faulty cylinders and engine ground. Connector & terminal #1 (E5) No. 2 (+) — Engine ground (-): #2 (E16) No. 2 (+) — Engine ground (-): #3 (E6) No. 2 (+) — Engine ground (-): #4 (E17) No. 2 (+) — Engine ground (-):	Is the voltage 10 V or more?	Repair the poor contact of all connectors in fuel injector circuit.	Repair the harness and connector. NOTE: In this case, repair the following item: <ul style="list-style-type: none"> • Open circuit in harness between the main relay and fuel injector connector on faulty cylinders • Poor contact of coupling connector • Poor contact of main relay connector
24 CHECK HARNESS BETWEEN ECM AND FUEL INJECTOR CONNECTOR. 1) Turn the ignition switch to OFF. 2) Disconnect the connector from fuel injector on faulty cylinders. 3) Turn the ignition switch to ON. 4) Measure the voltage between ECM and chassis ground on faulty cylinders. Connector & terminal #1 (B134) No. 12 (+) — Chassis ground (-): #2 (B134) No. 22 (+) — Chassis ground (-): #3 (B134) No. 32 (+) — Chassis ground (-): #4 (B134) No. 13 (+) — Chassis ground (-):	Is the voltage 10 V or more?	Repair the short circuit to power in harness between ECM connector and fuel injector connectors.	Go to step 25.
25 CHECK FUEL INJECTOR. 1) Turn the ignition switch to OFF. 2) Measure the resistance between fuel injector terminals on faulty cylinder. Terminals No. 1 — No. 2:	Is the resistance 5 — 20 Ω?	Go to step 26.	Replace the faulty fuel injector. <Ref. to FU(H4DO)-77, Fuel Injector.>
26 CHECK INSTALLATION CONDITION OF CAMSHAFT POSITION SENSOR/CRANKSHAFT POSITION SENSOR.	Is the camshaft position sensor or crankshaft position sensor loosely installed?	Tighten the camshaft position sensor or crankshaft position sensor. <Ref. to FU(H4DO)-59, INSTALLATION, Camshaft Position Sensor.> <Ref. to FU(H4DO)-54, INSTALLATION, Crankshaft Position Sensor.>	Go to step 27.
27 CHECK CRANKSHAFT POSITION SENSOR PLATE.	Is the crankshaft position sensor plate rusted or does it have broken teeth?	Replace the crankshaft position sensor plate. <Ref. to ME(H4DO)-247, Cylinder Block.>	Go to step 28.
28 CHECK INSTALLATION CONDITION OF TIMING CHAIN. Turn the crankshaft using ST, and align the alignment mark on crank sprocket with alignment mark on cylinder block. ST 18252AA000 CRANKSHAFT SOCKET	Is the timing chain dislocated from its proper position?	Correct the installation condition of timing chain. <Ref. to ME(H4DO)-115, Timing Chain Assembly.>	Go to step 29.

Diagnostic Procedure with Diagnostic Trouble Code (DTC)

ENGINE (DIAGNOSTICS)

Step	Check	Yes	No
29	CHECK FUEL LEVEL.	Go to step 30 .	Refill the fuel so that the fuel meter indication is higher than the "Lower" level, and proceed to the next step. Go to step 30 .
30	CHECK STATUS OF MALFUNCTION INDICATOR LIGHT. 1) Clear the memory using the Subaru Select Monitor or general scan tool. <Ref. to EN(H4DO)(diag)-66, Clear Memory Mode.> 2) Start the engine, and drive the vehicle 10 minutes or more.	Go to step 32 .	Go to step 31 .
31	CHECK CAUSE OF MISFIRE.	Finish diagnostics operation, if the engine has no abnormality.	Repair the poor contact of connector. NOTE: In this case, repair the following item: • Poor contact of ignition coil connector • Poor contact of fuel injector connector on faulty cylinders • Poor contact of ECM connector • Poor contact of coupling connector
32	CHECK AIR INTAKE SYSTEM.	Repair the air intake system. NOTE: Check the following items. • Are there air leaks or air suction caused by loose or dislocated nuts and bolts? • Are there cracks or any disconnection of hoses?	Go to step 33 .
33	CHECK MISFIRE SYMPTOM. 1) Turn the ignition switch to ON. 2) Check for DTC. <Ref. to EN(H4DO)(diag)-49, Read Diagnostic Trouble Code (DTC).>	Go to step 36 .	Go to step 34 .
34	CHECK DTC.	Go to step 37 .	Go to step 35 .
35	CHECK DTC.	Go to step 38 .	Go to step 39 .

Diagnostic Procedure with Diagnostic Trouble Code (DTC)

ENGINE (DIAGNOSTICS)

Step	Check	Yes	No
36 ONLY ONE CYLINDER.	Is there any fault in the cylinder?	Repair or replace faulty parts. NOTE: Check the following items. • Spark plug • Ignition coil • Fuel injector • Compression	Go to DTC P0171. <Ref. to EN(H4DO)(diag)-239, DTC P0171 SYSTEM TOO LEAN BANK 1, Diagnostic Procedure with Diagnostic Trouble Code (DTC).>
37 GROUP OF #1 AND #3 CYLINDERS.	Are there any faults in #1 and #3 cylinders?	Repair or replace faulty parts. NOTE: Check the following items. • Spark plug • Ignition coil • Fuel injector • Compression • Skipping timing belt teeth	Go to DTC P0171. <Ref. to EN(H4DO)(diag)-239, DTC P0171 SYSTEM TOO LEAN BANK 1, Diagnostic Procedure with Diagnostic Trouble Code (DTC).>
38 GROUP OF #2 AND #4 CYLINDERS.	Are there any faults in #2 and #4 cylinders?	Repair or replace faulty parts. NOTE: Check the following items. • Spark plug • Ignition coil • Fuel injector • Compression • Skipping timing belt teeth	Go to DTC P0171. <Ref. to EN(H4DO)(diag)-239, DTC P0171 SYSTEM TOO LEAN BANK 1, Diagnostic Procedure with Diagnostic Trouble Code (DTC).>
39 CYLINDER AT RANDOM.	Is the engine idle rough?	Go to DTC P0171. <Ref. to EN(H4DO)(diag)-239, DTC P0171 SYSTEM TOO LEAN BANK 1, Diagnostic Procedure with Diagnostic Trouble Code (DTC).>	Repair or replace faulty parts. NOTE: Check the following items. • Spark plug • Ignition coil • Fuel injector • Compression

1. OUTLINE OF DIAGNOSIS

This diagnostic monitor performs a functional check of the fuel system to determine an air-fuel ratio cylinder imbalance.

This diagnosis is composed of two monitors.

The outline of "monitor A1" is as follows. When an air-fuel ratio cylinder imbalance occurs, the primary oxygen sensor output signal will oscillate with increased amplitude. This monitor utilizes this behavior to make a diagnosis. The monitor integrates the difference between the amplification value and the mean value of the first oxygen sensor output signal and compares it to a threshold to make a judgment.

The outline of "monitor B1" is as follows. Similarly, when an imbalance occurs, the engine speed also fluctuates with increased amplitude. This monitor utilizes this behavior to make a diagnosis. For reference, it should be noted that this imbalance monitor method is actually similar to the current misfire diagnostic monitor, and the parameter "domg360" (units: degrees CA) is shared between the imbalance and misfire monitors. The imbalance monitor is performed during idle condition when the engine is warm. The monitor integrates the count of "domg360" which exceeds a threshold in 1000 revolution.

When both the "monitor A1" value and the "monitor B1" value exceed a predetermined threshold, this monitor determines a malfunction and stores a fault code.

Diagnostic Procedure with Diagnostic Trouble Code (DTC)

ENGINE (DIAGNOSTICS)

Monitor A1

When there is an air-fuel ratio cylinder imbalance malfunction, the primary oxygen sensor output fluctuates widely compared with a normal sensor, as shown by the chain line in Figure 1 below. This monitor makes a diagnosis based on this phenomenon. Each primary oxygen sensor signal (PS) and mean value of the primary oxygen sensor signal (MS) is calculated from the primary oxygen sensor signal. The absolute values of (PS – MS) are sampled every 4 ms as shown in the figure. Diagnostic value 1 (DV1) is obtained by integrating the absolute value of (PS – MS) for 2500 times. A malfunction is determined when DV1 exceeds the threshold. The judgment values are determined experimentally.

Figure 1. Compare malfunctioned primary oxygen sensor output with a normal sensor

Monitor B1

Method used: Difference method of 360 degrees CA

Monitor value: $domg360 = (omg\ 1 - omg\ 0) - (omg\ 3 - omg\ 2) = \text{angular speed}$

Each crankshaft angular speed is defined as Figure 2 below.

Figure 2. Description of domg360 output

This method uses the fact that the domg360 of lean conditioned cylinder caused by imbalance malfunction indicates big value, as shown by the chain line in Figure 3 below.

The number of times for domg360 to exceed the judgment value in 1000 revolutions (500 cycles) is calculated as diagnostic value 2 (DV2). A malfunction is determined when DV2 exceeds the threshold.

Figure 3. Compare malfunctioned domg360 output with a normal output

Diagnostic Procedure with Diagnostic Trouble Code (DTC)

ENGINE (DIAGNOSTICS)

2. EXECUTION CONDITION

Monitor A1: Primary oxygen sensor fluctuation

Secondary parameters	Execution condition
Battery voltage	≥ 10.9 V
Barometric pressure	≥ 75.1 kPa (563 mmHg, 22.2 inHg)
Main feedback	In operation
Engine speed	> 1400 rpm and < 3000 rpm
Engine load	> 0.7 g/rev (0.02 oz/rev) (CVT model) > 0.7 g/rev (0.02 oz/rev) (MT model)
Status where not under catalyst neutralization and Not under a gradual change process (duration time)	> 2 S
Dither control	Not under control

Monitor B1: Crankshaft speed fluctuation

Secondary parameters	Execution condition
Misfiring diagnosis monitoring	ON
Main feedback	In operation
Accelerator pedal position	≠ 0%
Vehicle speed	≤ 482.78 km/h (300 MPH)
Engine speed	> 1400 rpm and < 3000 rpm (CVT model) > 1400 rpm and < 3000 rpm (MT model)
Status where not under catalyst neutralization and Status where not under a gradual change	
Engine load	> 0.7 g/rev (0.02 oz/rev) (CVT model) > 0.7 g/rev (0.02 oz/rev) (MT model) and < 100 g/rev (3.53 oz/rev) (CVT model) < 100 g/rev (3.53 oz/rev) (MT model)

3. GENERAL DRIVING CYCLE

Always perform the diagnosis continuously.

4. DIAGNOSTIC METHOD

Judge as NG when Monitor A1 and Monitor B1 are both NG, and when either is OK, judge as OK.

Monitor A1

Judge as NG when the following conditions are established.

Judgment value

Malfunction Criteria	Threshold Value
Diagnostic value 1 (DV1)	> Threshold value 1 (TV1)

Threshold value 1 (TV1):

$$\sum_{k=0}^{n-1} \text{Map}_k \quad [n=2500]$$

Repair or replace faulty parts.	Replace the rear oxygen sensor. <Ref. to FU(H4DO)-94, Rear Oxygen Sensor.>

Diagnostic Procedure with Diagnostic Trouble Code (DTC)

ENGINE (DIAGNOSTICS)

1. OUTLINE OF DIAGNOSIS

Detect the stuck of rear oxygen sensor voltage in lean state.

When rear oxygen sensor voltage remains below the threshold value for predetermined time, diagnosis interrupts target air fuel ratio for control and raises output voltage.

Judge as NG detecting the stuck in lean state when rear oxygen sensor voltage remains below the threshold value even after the interrupt control.

Secondary parameters	Execution condition
Battery voltage	≥ 10.9 V
Sub feedback	In operation
Amount of intake air	≥ 8 g/s (0.28 oz/s)
Estimated temperature of the rear oxygen sensor element	≥ 500 °C (932 °F) (CVT model) ≥ 500 °C (932 °F) (MT model)
Enable conditions at interrupt control are as follows	
Continuous time when rear oxygen sensor output voltage is less than 0.55 V	≥ 5 s (CVT model) ≥ 15 s (MT model)
Air fuel ratio reduced from target air fuel ratio	= Value of Map

Map (CVT model)

Output voltage of rear oxygen sensor V	0.000	0.150	0.200	0.400	0.600
Air fuel ratio reduced from target air fuel ratio %	15	15	4	4	4

Map (MT model)

Output voltage of rear oxygen sensor V	0.000	0.150	0.200	0.400	0.600
Air fuel ratio reduced from target air fuel ratio %	15	15	4	4	4

Diagnostic Procedure with Diagnostic Trouble Code (DTC)

ENGINE (DIAGNOSTICS)

4. GENERAL DRIVING CYCLE

Perform the diagnosis only once after the enable conditions have been established.

5. DIAGNOSTIC METHOD

If the duration of time while the following conditions are met is longer than the time indicated, judge as NG.

Judgment value

Malfunction Criteria	Threshold Value
Output voltage of rear oxygen sensor	< 0.55 V

Time needed for diagnosis:

- 15 s (CVT model)
- 25 s (MT model)

Malfunction indicator light illumination: Illuminates when malfunction occurs in 2 continuous driving cycles.

Diagnostic Procedure with Diagnostic Trouble Code (DTC)

ENGINE (DIAGNOSTICS)

EZ:DTC P2271 O2 SENSOR SIGNAL BIASED/STUCK RICH BANK 1 SENSOR 2

DTC detecting condition:

Detected when two consecutive driving cycles with fault occur.

CAUTION:

After servicing or replacing faulty parts, perform Clear Memory Mode <Ref. to EN(H4DO)(diag)-66, OPERATION, Clear Memory Mode.>, and Inspection Mode <Ref. to EN(H4DO)(diag)-50, PROCEDURE, Inspection Mode.>.

Wiring diagram:

Engine electrical system <Ref. to WI-102, Engine Electrical System.>

EN-11342

Step	Check	Yes	No
1	CHECK REAR OXYGEN SENSOR CONNECTOR. Has water entered the connector?	Completely remove any water inside.	Go to step 2.

Diagnostic Procedure with Diagnostic Trouble Code (DTC)

ENGINE (DIAGNOSTICS)

Step	Check	Yes	No
2 CHECK HARNESS BETWEEN ECM AND REAR OXYGEN SENSOR CONNECTOR. 1) Turn the ignition switch to OFF. 2) Disconnect the connector from ECM. 3) Disconnect the connector from rear oxygen sensor. 4) Measure the resistance of harness between ECM connector and rear oxygen sensor connector. <i>Connector & terminal</i> <i>(E135) No. 30 — (E25) No. 4:</i> <i>(E136) No. 21 — (E25) No. 3:</i>	Is the resistance less than 1 Ω ?	Go to step 3.	Repair the open circuit of harness between ECM connector and rear oxygen sensor connector.
3 CHECK HARNESS BETWEEN ECM AND REAR OXYGEN SENSOR CONNECTOR. Measure the resistance between the ECM connector and engine ground. <i>Connector & terminal</i> <i>(E135) No. 30 — Engine ground:</i>	Is the resistance 1 M Ω or more?	Go to step 4.	Repair the short circuit to ground in harness between ECM connector and rear oxygen sensor connector.
4 CHECK EXHAUST SYSTEM. Check exhaust system parts. NOTE: Check the following items. <ul style="list-style-type: none"> • Looseness and improper fitting of exhaust system parts • Damage (crack, hole etc.) of parts • Damage (crack, hole etc.) between front oxygen (A/F) sensor and rear oxygen sensor 	Is there any fault in exhaust system?	Repair or replace faulty parts.	Replace the rear oxygen sensor. <Ref. to FU(H4DO)-94, Rear Oxygen Sensor.>

1. OUTLINE OF DIAGNOSIS

Detect the stuck of rear oxygen sensor voltage in rich state.

Detect the stuck in rich state and judge as NG if rear oxygen sensor voltage remains above the threshold value for predetermined time.

2. COMPONENT DESCRIPTION

EN-10447

(A) Electromotive force

(B) Air fuel ratio

(C) Lean

(D) Rich

(E) Theoretical air fuel ratio

(F) Comparative voltage

3. EXECUTION CONDITION

Secondary parameters	Execution condition
Battery voltage	≥ 10.9 V
Time of fuel cut	≥ 5000 ms
Estimated temperature of the rear oxygen sensor element	≥ 500 °C (932 °F) (CVT model) ≥ 500 °C (932 °F) (MT model)

4. GENERAL DRIVING CYCLE

Perform the diagnosis only once after the enable conditions have been established.

5. DIAGNOSTIC METHOD

If the duration of time while the following conditions are met is longer than the time indicated, judge as NG.

Judgment Value

Malfunction Criteria	Threshold Value
Output voltage of rear oxygen sensor	> 0.15 V

Time Needed for Diagnosis: 500 ms

Malfunction Indicator Light Illumination: Illuminates when malfunction occurs in 2 continuous driving cycles.

Diagnostic Procedure with Diagnostic Trouble Code (DTC)

ENGINE (DIAGNOSTICS)

FA:DTC P2401 EVAP SYSTEM LEAK DETECTION PUMP CONTROL CIRCUIT LOW

DTC detecting condition:

Immediately at fault recognition

CAUTION:

After servicing or replacing faulty parts, perform Clear Memory Mode <Ref. to EN(H4DO)(diag)-66, OPERATION, Clear Memory Mode.>, and Inspection Mode <Ref. to EN(H4DO)(diag)-50, PROCEDURE, Inspection Mode.>.

Wiring diagram:

Engine electrical system <Ref. to WI-102, Engine Electrical System.>

EN-11349

Diagnostic Procedure with Diagnostic Trouble Code (DTC)

ENGINE (DIAGNOSTICS)

Step	Check	Yes	No
<p>1 CHECK HARNESS BETWEEN ECM AND LEAK CHECK VALVE ASSEMBLY CONNECTOR. 1) Turn the ignition switch to ON. 2) Measure the voltage between ECM connector and chassis ground. <i>Connector & terminal</i> <i>(B135) No. 18 (+) — Chassis ground (-):</i></p>	Is the voltage 10 V or more?	Go to step 2.	Go to step 3.
<p>2 CHECK FOR POOR CONTACT. Check for poor contact of ECM connector.</p>	Is there poor contact of ECM connector?	Repair the poor contact of ECM connector.	Even if DTC is detected, the circuit has returned to a normal condition at this time. Reproduce the failure, and then perform the diagnosis again. NOTE: In this case, temporary open or short circuit of harness or temporary poor contact of connector may be the cause.
<p>3 CHECK POWER SUPPLY TO LEAK CHECK VALVE ASSEMBLY. Measure the voltage between the leak check valve assembly connector and engine ground. <i>Connector & terminal</i> <i>(R400) No. 3 (+) — Engine ground (-):</i></p>	Is the voltage 10 V or more?	Go to step 4.	Repair the power supply circuit.
<p>4 CHECK HARNESS BETWEEN ECM AND LEAK CHECK VALVE ASSEMBLY CONNECTOR. 1) Turn the ignition switch to OFF. 2) Disconnect the connector from ECM. 3) Disconnect the connector from the leak check valve assembly. 4) Measure the resistance between leak check valve assembly and chassis ground. <i>Connector & terminal</i> <i>(R400) No. 4 — Chassis ground:</i></p>	Is the resistance 1 M Ω or more?	Go to step 5.	Repair the short circuit to ground in harness between ECM connector and leak check valve assembly connector.
<p>5 CHECK HARNESS BETWEEN ECM AND LEAK CHECK VALVE ASSEMBLY CONNECTOR. Measure the resistance of harness between ECM connector and the leak check valve assembly connector. <i>Connector & terminal</i> <i>(B135) No. 18 — (R400) No. 4:</i></p>	Is the resistance less than 1 Ω ?	Go to step 6.	Repair the harness and connector. NOTE: In this case, repair the following item: <ul style="list-style-type: none"> • Open circuit in harness between ECM connector and the leak check valve assembly connector • Poor contact of coupling connector

Diagnostic Procedure with Diagnostic Trouble Code (DTC)

ENGINE (DIAGNOSTICS)

Step	Check	Yes	No
6 CHECK LEAK CHECK VALVE ASSEMBLY. Check the vacuum pump of the leak check valve assembly. <Ref. to EC(H4DO)-60, CHECK VACUUM PUMP, INSPECTION, Leak Check Valve Assembly.>	Is the check result OK?	Repair the poor contact in the leak check valve assembly connector.	Replace the leak check valve assembly. <Ref. to EC(H4DO)-43, Leak Check Valve Assembly.>

1. OUTLINE OF DIAGNOSIS

Detect the open or short circuit in Evaporative Leak Check Module vacuum pump.
 Judge as NG if out of specification.

2. COMPONENT DESCRIPTION

- | | | |
|---|----------------------------------|---------------|
| (1) Leak check valve ASSY | (5) Vacuum pump | (9) Fuel tank |
| (2) Switching valve | (6) Drain filter | (10) Canister |
| (3) Reference orifice (0.02 inch orifice) | (7) Purge control solenoid valve | |
| (4) Pressure sensor | (8) Intake manifold | |

3. EXECUTION CONDITION

Secondary Parameters	Execution condition
Battery voltage	≥ 10.9
Evaporative emission system leak detection pump command	= OFF

4. GENERAL DRIVING CYCLE

Always perform the diagnosis continuously.

5. DIAGNOSTIC METHOD

If the duration of time while the following conditions are met is longer than the time indicated, judge as NG.

Judgment Value

Malfunction Criteria	Threshold Value
Measured EVAP system leak detection pump voltage	≤ 12 V battery system voltage × 0.34 V

Time Needed for Diagnosis: 2500 ms

Malfunction Indicator Light Illumination: Illuminates as soon as a malfunction occurs.

FB:DTC P2402 EVAP SYSTEM LEAK DETECTION PUMP CONTROL CIRCUIT HIGH

DTC detecting condition:

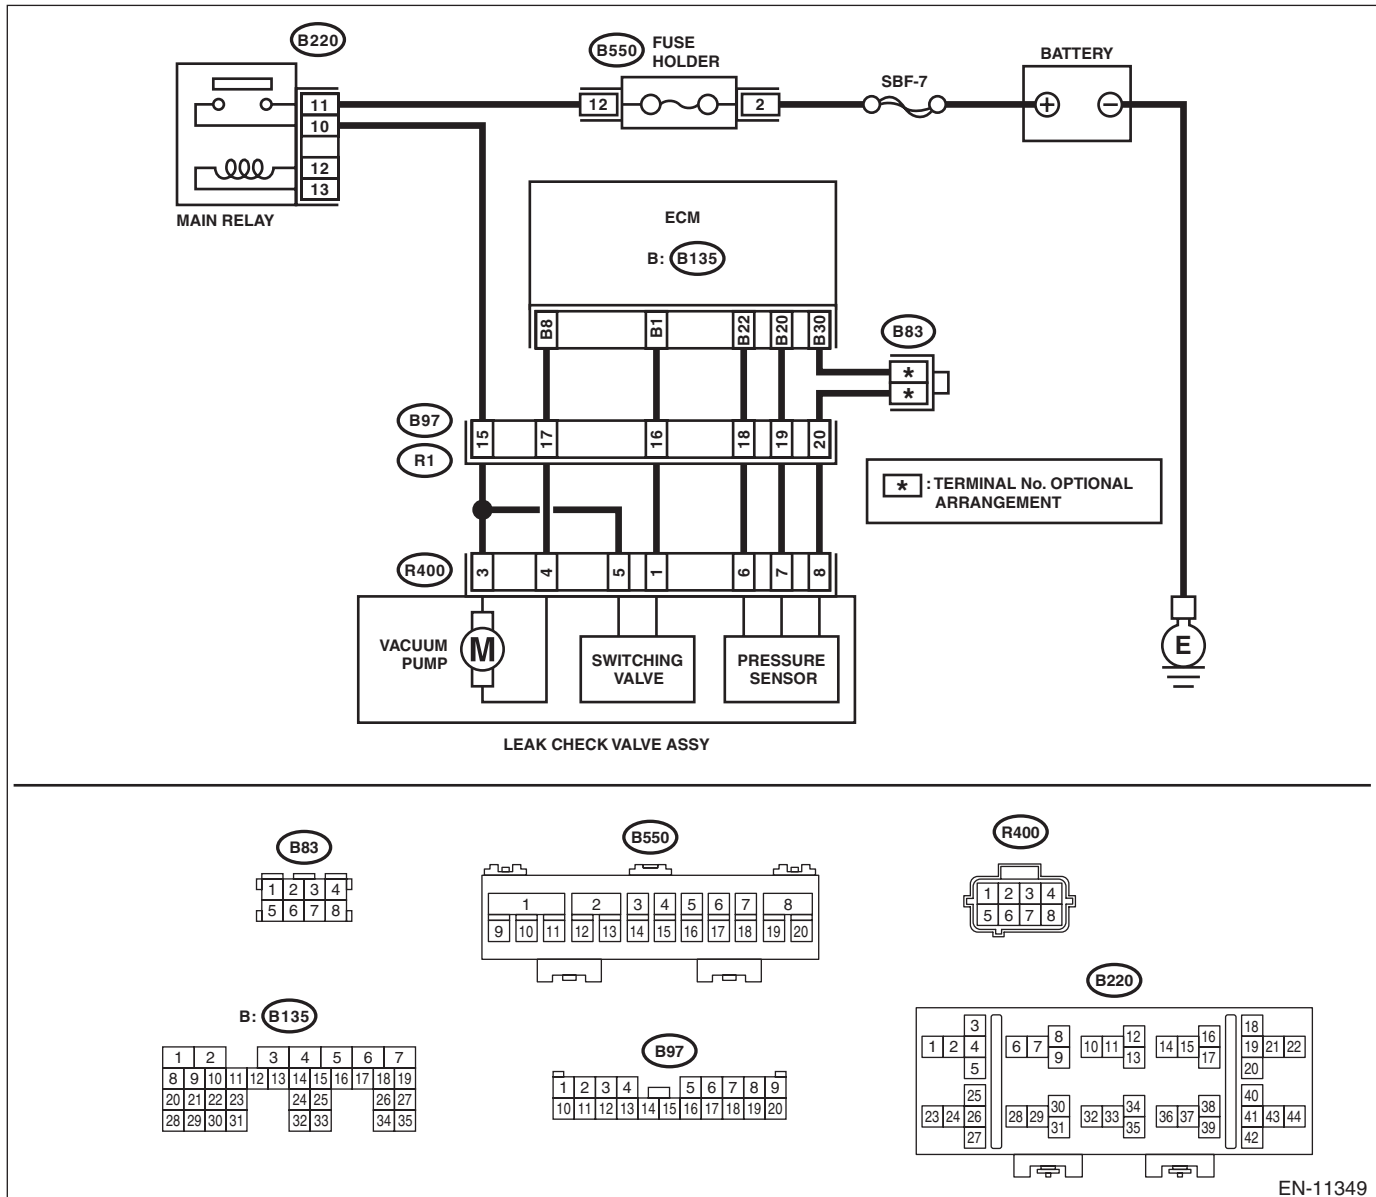

Immediately at fault recognition

CAUTION:

After servicing or replacing faulty parts, perform Clear Memory Mode <Ref. to EN(H4DO)(diag)-66, OPERATION, Clear Memory Mode.>, and Inspection Mode <Ref. to EN(H4DO)(diag)-50, PROCEDURE, Inspection Mode.>.

Engine electrical system <Ref. to WI-102, Engine Electrical System.>

EN-11349

Diagnostic Procedure with Diagnostic Trouble Code (DTC)

ENGINE (DIAGNOSTICS)

Step	Check	Yes	No
1	CHECK FOR ANY OTHER DTC ON DISPLAY. Is any other DTC displayed?	Check the appropriate DTC using the "List of Diagnostic Trouble Code (DTC)". <Ref. to EN(H4DO)(diag)-96, List of Diagnostic Trouble Code (DTC).>	Go to step 2.
2	CHECK LEAK CHECK VALVE ASSEMBLY PUMP. Using the Subaru Select Monitor, operate the leak check valve assembly pump. NOTE: For detailed operation procedures, refer to the "Active Test". <Ref. to EN(H4DO)(diag)-67, Active Test.>	Does the leak check valve assembly pump operate?	Go to step 6.
3	CHECK POWER SUPPLY OF LEAK CHECK VALVE ASSEMBLY. 1) Turn the ignition switch to OFF. 2) Disconnect the connector from the leak check valve assembly. 3) Turn the ignition switch to ON. 4) Measure the voltage between the leak check valve assembly connector and chassis ground. Connector & terminal (R400) No. 3 (+) — Chassis ground (-):	Is the voltage 10 V or more?	Go to step 4. Repair the harness and connector. NOTE: In this case, repair the following item: <ul style="list-style-type: none"> • Open circuit in harness between the main relay and the leak check valve assembly connector • Poor contact of main relay connector • Poor contact of coupling connector
4	CHECK HARNESS BETWEEN ECM AND LEAK CHECK VALVE ASSEMBLY CONNECTOR. 1) Turn the ignition switch to OFF. 2) Disconnect the connector from ECM. 3) Measure the resistance of harness between ECM connector and the leak check valve assembly connector. Connector & terminal (B135) No. 18 — (R400) No. 4:	Is the resistance less than 1 Ω?	Go to step 5. Repair the harness and connector. NOTE: In this case, repair the following item: <ul style="list-style-type: none"> • Open circuit in harness between ECM connector and the leak check valve assembly connector • Poor contact of coupling connector
5	CHECK HARNESS BETWEEN ECM AND LEAK CHECK VALVE ASSEMBLY CONNECTOR. 1) Measure the resistance of harness between ECM connector and chassis ground. Connector & terminal (B135) No. 18 — Chassis ground:	Is the resistance 1 MΩ or more?	Replace the leak check valve assembly. <Ref. to EC(H4DO)-43, Leak Check Valve Assembly.> Repair the short circuit to ground in harness between ECM connector and leak check valve assembly connector.

Diagnostic Procedure with Diagnostic Trouble Code (DTC)

ENGINE (DIAGNOSTICS)

Step	Check	Yes	No
<p>6 CHECK LEAK CHECK VALVE ASSEMBLY SWITCHING VALVE. Using the Subaru Select Monitor, operate the leak check valve assembly switching valve. NOTE: For detailed operation procedures, refer to the "Active Test". <Ref. to EN(H4DO)(diag)-67, Active Test.></p>	Does the leak check valve assembly switching valve operate?	Go to step 10.	Go to step 7.
<p>7 CHECK POWER SUPPLY OF LEAK CHECK VALVE ASSEMBLY. 1) Turn the ignition switch to OFF. 2) Disconnect the connector from the leak check valve assembly. 3) Turn the ignition switch to ON. 4) Measure the voltage between the leak check valve assembly connector and chassis ground. Connector & terminal (R400) No. 5 (+) — Chassis ground (-):</p>	Is the voltage 10 V or more?	Go to step 8.	<p>Repair the harness and connector. NOTE: In this case, repair the following item:</p> <ul style="list-style-type: none"> • Open circuit in harness between the main relay and the leak check valve assembly connector • Poor contact of main relay connector • Poor contact of coupling connector
<p>8 CHECK HARNESS BETWEEN ECM AND LEAK CHECK VALVE ASSEMBLY CONNECTOR. 1) Turn the ignition switch to OFF. 2) Disconnect the connector from ECM. 3) Measure the resistance of harness between ECM connector and the leak check valve assembly connector. Connector & terminal (B135) No. 1 — (R400) No. 1:</p>	Is the resistance less than 1 Ω ?	Go to step 9.	<p>Repair the harness and connector. NOTE: In this case, repair the following item:</p> <ul style="list-style-type: none"> • Open circuit in harness between ECM connector and the leak check valve assembly connector • Poor contact of coupling connector
<p>9 CHECK HARNESS BETWEEN ECM AND LEAK CHECK VALVE ASSEMBLY CONNECTOR. 1) Measure the resistance of harness between ECM connector and chassis ground. Connector & terminal (B135) No. 1 — Chassis ground:</p>	Is the resistance 1 M Ω or more?	Replace the leak check valve assembly. <Ref. to EC(H4DO)-43, Leak Check Valve Assembly.>	Repair the short circuit to ground in harness between ECM connector and leak check valve assembly connector.

Diagnostic Procedure with Diagnostic Trouble Code (DTC)

ENGINE (DIAGNOSTICS)

Step	Check	Yes	No
10 CHECK EVAPORATIVE EMISSION CONTROL SYSTEM. Perform drive cycle I. <Ref. to EN(H4DO)(diag)-60, DRIVE CYCLE I, PROCEDURE, Drive Cycle.>	Is DTC P2404 displayed on the display?	Replace the leak check valve assembly. <Ref. to EC(H4DO)-43, Leak Check Valve Assembly.>	Even if DTC is detected, the circuit has returned to a normal condition at this time. Reproduce the failure, and then perform the diagnosis again. NOTE: In this case, temporary poor contact of connector, temporary open or short circuit of harness may be the cause.

1. OUTLINE OF DIAGNOSIS

NOTE:

For the detection standard, refer to DTC P0455. <Ref. to EN(H4DO)(diag)-331, DTC P0455 EVAP SYSTEM (CPC) LEAK DETECTED (LARGE LEAK), Diagnostic Procedure with Diagnostic Trouble Code (DTC).>

Step	Check	Yes	No
1	CHECK ECM CONNECTOR. Check the connecting condition of ECM connector.	Go to step 2.	Connect the ECM connector correctly.

Diagnostic Procedure with Diagnostic Trouble Code (DTC)

ENGINE (DIAGNOSTICS)

Step	Check	Yes	No
2 CHECK INPUT VOLTAGE OF ECM. 1) Turn the ignition switch to ON. 2) Measure the voltage between ECM connector and engine ground while wiggling the harness between ECM connector and F/B connector. Connector & terminal (B137) No. 2 (+) — Engine ground (-):	Is the voltage 8 V or more all the time?	Even if DTC is detected, the circuit has returned to a normal condition at this time. Reproduce the failure, and then perform the diagnosis again. NOTE: In this case, the following items may be the cause of fault. • Open circuit or short circuit to ground in harness between ECM connector and F/B connector • Poor contact of fuse (F/B No. 5) • Poor contact of IG2 relay connector • Poor contact of IG2 relay	Repair the harness and connector. NOTE: In this case, repair the following item: • Open circuit or short circuit to ground in harness between ECM connector and F/B connector • Poor contact of fuse (F/B No. 5) • Poor contact of IG2 relay connector • Poor contact of IG2 relay

1. OUTLINE OF DIAGNOSIS

Detect instantaneous open in ignition switch input circuit to ECM.
 Judge as NG if out of specification.

2. COMPONENT DESCRIPTION

ECM monitors the voltage of the ignition switch input circuit. Judge as ignition switch ON when the voltage is the specified value or more.

3. EXECUTION CONDITION

Secondary Parameters	Execution condition
Battery voltage	≥ 10.9 V
Engine speed	≥ 500 rpm

4. GENERAL DRIVING CYCLE

Perform the diagnosis continuously after the enable conditions have been established.

5. DIAGNOSTIC METHOD

Judge as NG when the following conditions are established within the predetermined time.

Judgment Value

Malfunction Criteria	Threshold Value
Number of instantaneous opens in ignition switch input circuit	≥ 5 time(s)

Time Needed for Diagnosis: 5000 ms

Malfunction Indicator Light Illumination: Illuminates as soon as a malfunction occurs.

Diagnostic Procedure with Diagnostic Trouble Code (DTC)

ENGINE (DIAGNOSTICS)

FG:DTC P2610 ECM/PCM ENGINE OFF TIMER PERFORMANCE

DTC DETECTING CONDITION:

Detected when two consecutive driving cycles with fault occur.

CAUTION:

After servicing or replacing faulty parts, perform Clear Memory Mode <Ref. to EN(H4DO)(diag)-66, OPERATION, Clear Memory Mode.>, and Inspection Mode <Ref. to EN(H4DO)(diag)-50, PROCEDURE, Inspection Mode.>.

Step	Check	Yes	No
1 CHECK FOR ANY OTHER DTC ON DISPLAY.	Is any other DTC displayed?	Check DTC using "List of Diagnostic Trouble Code (DTC)". <Ref. to EN(H4DO)(diag)-96, List of Diagnostic Trouble Code (DTC).>	Replace the ECM. <Ref. to FU(H4DO)-98, Engine Control Module (ECM).> NOTE: The soaking timer IC is built into the ECM.

1. OUTLINE OF DIAGNOSIS

Detect malfunction of soaking timer IC by the five diagnoses below.

Monitor Number	Explanation	Time required for diagnosis
Monitor #1 <Timer diagnosis>	Perform diagnosis of the soaking timer IC accuracy	196 ms
Monitor #2 <Full count diagnosis>	Perform diagnosis of the soaking timer IC counter function	4000 ms
Monitor #3 <Soaking timer IC setting diagnosis>	Perform diagnosis of communication between ECM and soaking timer IC	196 ms
Monitor #4 <Timer diagnosis (during soaking)>	Perform diagnosis of the soaking timer IC accuracy during soaking	3000 ms
Monitor #5 <Wake-up diagnosis>	Perform diagnosis of wake-up function	64 ms

EN-09090

2. COMPONENT DESCRIPTION

The soaking timer IC is built into the ECM.

3. EXECUTION CONDITION

Secondary Parameters	Execution condition
<Timer diagnosis>	
Battery voltage	$\geq 10.9 \text{ V}$
Elapsed time after starting the engine	$> 600 \text{ s}$ and $< 61380 \text{ s}$
<Full count diagnosis>	
Battery voltage	$\geq 10.9 \text{ V}$
ECM counter	$\geq 4 \text{ s}$
<Soaking timer IC setting diagnosis>	
Battery voltage	$\geq 10.9 \text{ V}$
<Timer diagnosis (during soaking)>	
Battery voltage	$\geq 10.9 \text{ V}$
<Wake-up diagnosis>	
Soak time	$> 3600 \text{ s}$

4. GENERAL DRIVING CYCLE

Perform the diagnosis only once when the ignition switch is OFF and when the ignition switch is ON after the soaking of one hour or more.

Diagnostic Procedure with Diagnostic Trouble Code (DTC)

ENGINE (DIAGNOSTICS)

5. DIAGNOSTIC METHOD

<Timer diagnosis>

Start the count up operation of counters in ECM and in soaking timer IC when the engine is started. Judge as timer malfunction if the difference between the counter in ECM and counter in soaking timer IC exceeds the allowable limit when the ignition switch is OFF.

Judge as NG when the following conditions are established.

Judgment Value

Malfunction Criteria	Threshold Value
$ (\text{ECM counter}) - (\text{Soak timer IC counter}) $	> 0.24
$/ \text{ECM counter}$	

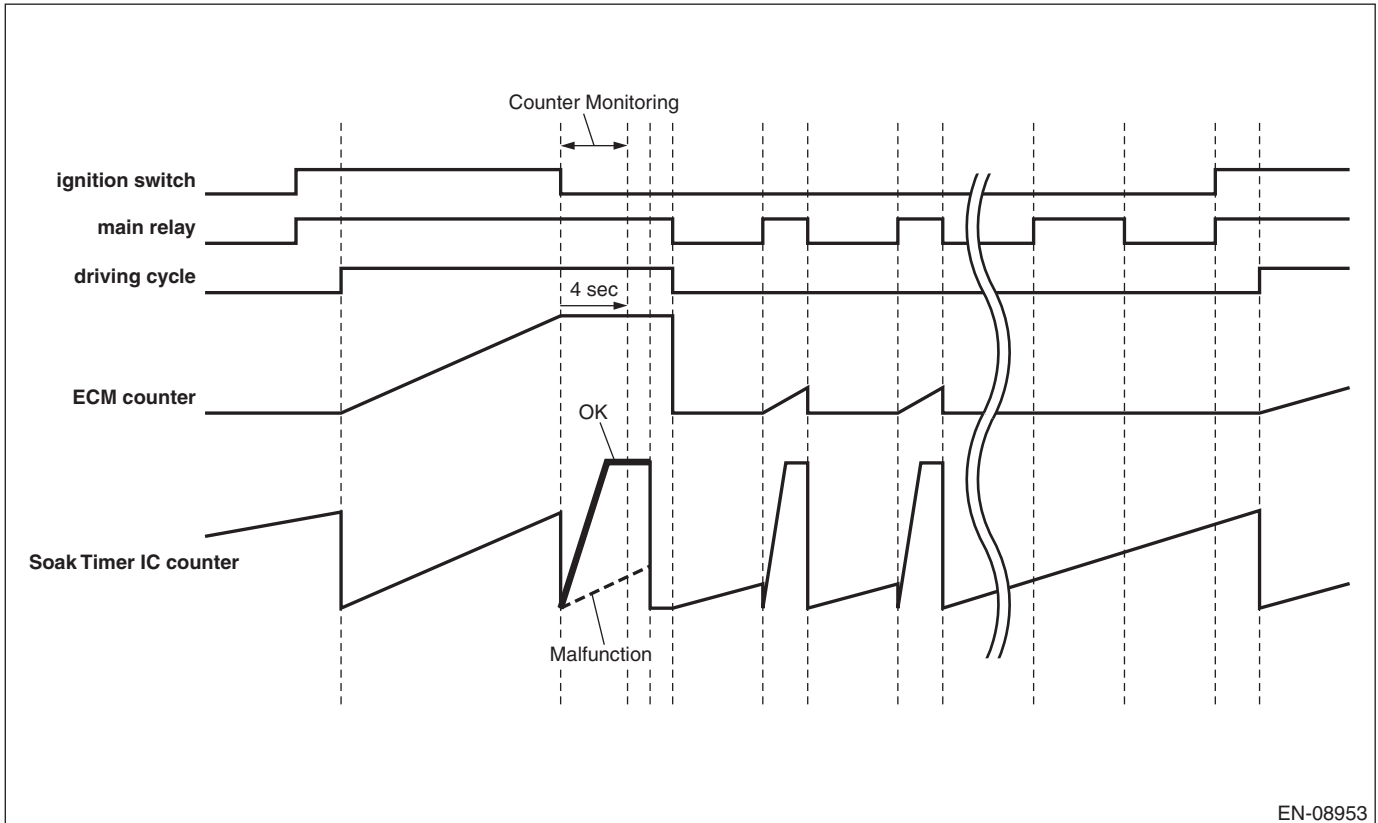

Diagnostic Procedure with Diagnostic Trouble Code (DTC)

ENGINE (DIAGNOSTICS)

<Full count diagnosis>

Reset the counter in soaking timer IC and start the count up operation.

Judge as full count diagnosis malfunction if counter in soaking timer IC is not \$3FF (1023 count) after 4 seconds.

EN-08953

Judge as NG when the following conditions are established.

Judgment Value

Malfunction Criteria	Threshold Value
Soak timer IC counter	≠ \$3FF (1023 count)

Diagnostic Procedure with Diagnostic Trouble Code (DTC)

ENGINE (DIAGNOSTICS)

<Soaking timer IC setting diagnosis>

When setting the activation setting time to soaking timer IC, compare the writing value to soaking timer IC with read out value. Judge as malfunction if the values do not match 3 times in a row.

EN-09338

Judge as NG when the following conditions are established.

Judgment Value

Malfunction Criteria	Threshold Value
Value commanded by the ECM	≠ Value received by the soak timer IC

Diagnostic Procedure with Diagnostic Trouble Code (DTC)

ENGINE (DIAGNOSTICS)

<Timer diagnosis (during soaking)>

Wake-up at the predetermined interval until 5 or 7 or 9.5 hours have passed after the ignition switch is OFF, and compare the counter in soaking timer IC with the counter in ECM.

Judge as malfunction if the counter in soaking timer IC is counted up to maximum value (1023 counts) when the counter in ECM is 1637 ms, or if the counter in soaking timer IC is not counted up to maximum value (1023 counts) when the counter in ECM is 2455 ms.

EN-08981

Diagnostic Procedure with Diagnostic Trouble Code (DTC)

ENGINE (DIAGNOSTICS)

Judge as NG when the following conditions are established.

Judgment Value

Malfunction Criteria	Threshold Value
Soak timer IC counter when ECM counter ≤ 1.636 sec	= 1023 count
Soak timer IC counter when ECM counter ≥ 2.456 sec	\neq 1023 count

<Wake-up diagnosis>

Store the number of wake-up activation when the ECM wakes up by the soaking timer IC.

Next time when the ignition switch is ON, if the number of wake-up activation does not reach the predetermined value even though the counter in soaking timer IC operates 1 hour or more, judge as wake-up malfunction.

EN-09339

Judge as NG when the following conditions are established.

Judgment Value

Malfunction Criteria	Threshold Value
Number of wake-up function commanded from ECM to Soak-timer IC	\neq Number of actual wake-up ECM

Time Needed for Diagnosis: Approx. 5 — 9.5 hours

Malfunction Indicator Light Illumination: Illuminates when malfunction occurs in 2 continuous driving cycles.

FH:DTC U0073 CONTROL MODULE COMMUNICATION BUS OFF

NOTE:

For the diagnostic procedure, refer to LAN section. <Ref. to LAN(diag)-2, Basic Diagnostic Procedure.>

1. OUTLINE OF DIAGNOSIS

Detect malfunction of CAN communication.

Judge as NG when CAN communication failure has occurred.

2. COMPONENT DESCRIPTION

(Common Specifications)

CAN Protocol 2.0 B (Active)

Frame Format: 11 Bit ID Frame (Standard Frame)

Conforms to ISO11898

Communication Speed: 500 kbps

3. EXECUTION CONDITION

Secondary Parameters	Execution condition
Battery voltage	≥ 10.9 V

4. GENERAL DRIVING CYCLE

Perform the diagnosis continuously after starting the engine.

5. DIAGNOSTIC METHOD

Judge as NG when the following conditions are established.

Judgment Value

Malfunction Criteria	Threshold Value
CAN bus condition	Bus off

Time Needed for Diagnosis: 436 ms

Malfunction Indicator Light Illumination: Illuminates as soon as a malfunction occurs.

Diagnostic Procedure with Diagnostic Trouble Code (DTC)

General Diagnostic Table

ENGINE (DIAGNOSTICS)

19. General Diagnostic Table

A: INSPECTION

1. ENGINE

NOTE:

Malfunction of parts other than those listed is also possible. <Ref. to ME(H4DO)-353, Engine Trouble in General.>

Symptoms	Faulty parts
1. Engine stalls during idling.	1) Manifold absolute pressure sensor 2) Mass air flow and intake air temperature sensor 3) Ignition parts (*1) 4) Engine coolant temperature sensor (*2) 5) Crankshaft position sensor (*3) 6) Camshaft position sensor (*3) 7) Fuel injection parts (*4) 8) Electronic throttle control
2. Rough idling	1) Manifold absolute pressure sensor 2) Mass air flow and intake air temperature sensor 3) Engine coolant temperature sensor (*2) 4) Ignition parts (*1) 5) Air intake system (*5) 6) Fuel injection parts (*4) 7) Electronic throttle control 8) Crankshaft position sensor (*3) 9) Camshaft position sensor (*3) 10) Oxygen sensor 11) Fuel pump and fuel pump relay 12) EGR control valve
3. Engine does not return to idle.	1) Engine coolant temperature sensor 2) Electronic throttle control 3) Manifold absolute pressure sensor 4) Mass air flow and intake air temperature sensor 5) EGR control valve 6) Accelerator pedal position sensor 7) Engine oil temperature sensor
4. Poor acceleration	1) Manifold absolute pressure sensor 2) Mass air flow and intake air temperature sensor 3) Electronic throttle control 4) Fuel injection parts (*4) 5) Fuel pump and fuel pump relay 6) Engine coolant temperature sensor (*2) 7) Crankshaft position sensor (*3) 8) Camshaft position sensor (*3) 9) Engine torque control signal circuit 10) Ignition parts (*1) 11) EGR control valve 12) Accelerator pedal position sensor 13) Engine oil temperature sensor
5. Engine stalls, hesitates, or sputters at acceleration.	1) Manifold absolute pressure sensor 2) Mass air flow and intake air temperature sensor 3) Engine coolant temperature sensor (*2) 4) Crankshaft position sensor (*3) 5) Camshaft position sensor (*3) 6) Purge control solenoid valve 7) Fuel injection parts (*4) 8) Electronic throttle control 9) Fuel pump and fuel pump relay 10) EGR control valve

General Diagnostic Table

ENGINE (DIAGNOSTICS)

Symptoms	Faulty parts
6. Surging	<ol style="list-style-type: none"> 1) Mass air flow and intake air temperature sensor 2) Manifold absolute pressure sensor 3) Engine coolant temperature sensor (*2) 4) Crankshaft position sensor (*3) 5) Camshaft position sensor (*3) 6) Fuel injection parts (*4) 7) Electronic throttle control 8) Fuel pump and fuel pump relay 9) EGR control valve
7. Spark knock	<ol style="list-style-type: none"> 1) Mass air flow and intake air temperature sensor 2) Manifold absolute pressure sensor 3) Engine coolant temperature sensor 4) Knock sensor 5) Fuel injection parts (*4) 6) Fuel pump and fuel pump relay 7) EGR control valve
8. After burning in exhaust system	<ol style="list-style-type: none"> 1) Mass air flow and intake air temperature sensor 2) Manifold absolute pressure sensor 3) Engine coolant temperature sensor (*2) 4) Fuel injection parts (*4) 5) Fuel pump and fuel pump relay

*1: Check ignition coil and spark plug.

*2: Indicate the symptom occurring only in cold temperatures.

*3: Ensure the secure installation.

*4: Check fuel injector and fuel filter.

*5: Inspect air leak in air intake system.

TRANSMISSION SECTION

This service manual has been prepared to provide SUBARU service personnel with the necessary information and data for the correct maintenance and repair of SUBARU vehicles.

This manual includes the procedures for maintenance, disassembling, reassembling, inspection and adjustment of components and diagnostics for guidance of experienced mechanics.

Please peruse and utilize this manual fully to ensure complete repair work for satisfying our customers by keeping their vehicle in optimum condition. When replacement of parts during repair work is needed, be sure to use SUBARU genuine parts.

All information, illustration and specifications contained in this manual are based on the latest product information available at the time of publication approval.

TOOL NAME	REMARKS
Circuit tester	Used for measuring resistance, voltage and current.
DST-i	Used together with Subaru Select Monitor 4.

D: CAUTION

- Wear appropriate work clothing, including a cap, protective goggles and protective shoes when performing any work.
- Remove contamination including dirt and corrosion before removal, installation or disassembly.
- Keep the disassembled parts in order and protect them from dust and dirt.
- Before removal, installation or disassembly, be sure to clarify the failure. Avoid unnecessary removal, installation, disassembly and replacement.
- Use SUBARU genuine fluid, grease etc. or equivalent. Do not mix fluid, grease, etc. of different grades or manufacturers.
- Be sure to tighten fasteners including bolts and nuts to the specified torque.
- Place shop jacks or rigid racks at the specified points.
- Apply grease onto sliding or revolving surfaces before installation.
- Before installing O-rings or snap rings, apply sufficient amount of fluid to avoid damage and deformation.
- Before securing a part in a vise, place cushioning material such as wood blocks, aluminum plate or cloth between the part and the vise.
- Before disconnecting electrical connectors, be sure to disconnect the negative terminal from battery.

B: ELECTRICAL SPECIFICATION

CS-01401

• Model without push button ignition switch

Item	Connector No.	Terminal No.	Input/Output signal
			Measured value and measuring conditions
Battery power supply	B281	6	9 — 16 V
	i84	6	
Ignition power supply	B280	32	10 — 15 V when ignition switch is at ACC.
	B281	3	10 — 15 V when ignition switch is at ON or START.
TCM ("P" range)	B281	20	Can not be measured because of digital communication
		28	
Stop light and brake switch	B280	10	9 — 16 V when the stop light & brake switch is ON. 0 V when the stop light & brake switch is OFF.
"P" range switch	B281	18	Less than 1.5 V when select lever is in "P" range 8 V or more when select lever is in positions other than "P" range.
Solenoid unit signal	B281	5	8.5 — 16 V when shift lock is released. 0 V when shift lock is operating.
Key warning switch signal	B280	4	9 — 16 V when key is inserted. 0 V when key is removed.
Key lock solenoid signal	B281	4	7.5 — 16 V when the key is inserted with the select lever shifted in positions other than "P" range. 0 V at other conditions than above.
Ground	B280	1	—
	i84	1	
Delivery (test) mode signal	i84	27	Can not be measured because of digital communication
		35

D: INSPECTION

1. SHIFT LOCK OPERATION

- Model without push button ignition switch

Step	Check	Yes	No
1 CHECK COMMUNICATION OF SUBARU SELECT MONITOR. 1) Turn the ignition switch to ON. 2) Using the Subaru Select Monitor, check whether communication to all systems can be executed normally.	Is the system name displayed?	Go to step 2.	Perform the inspection following the diagnostic procedure in BODY CONTROL SYSTEM (DIAGNOSTICS) section. <Ref. to BC(diag)-2, Basic Diagnostic Procedure.>
2 CHECK SHIFT LOCK. 1) Turn the ignition switch to ON. 2) Shift the select lever to "P" range.	While brake pedal is not depressed, is it possible to move the select lever from the "P" range to other ranges?	Perform the inspection of "SELECT LEVER CANNOT BE LOCKED OR RELEASED". <Ref. to CS-17, SELECT LEVER CANNOT BE LOCKED OR RELEASED, INSPECTION, AT Shift Lock Control System.>	Go to step 3.
3 CHECK SHIFT LOCK.	While brake pedal is depressed, is it possible to move the select lever from the "P" range to other ranges?	Go to step 4.	Perform the inspection of "SELECT LEVER CANNOT BE LOCKED OR RELEASED". <Ref. to CS-17, SELECT LEVER CANNOT BE LOCKED OR RELEASED, INSPECTION, AT Shift Lock Control System.>
4 CHECK SHIFT LOCK. Shift the select lever to "N" range.	Is it possible to move the select lever from the "N" range to the "P" range?	Go to step 5.	Perform the inspection of "SELECT LEVER CANNOT BE LOCKED OR RELEASED". <Ref. to CS-17, SELECT LEVER CANNOT BE LOCKED OR RELEASED, INSPECTION, AT Shift Lock Control System.>

AT Shift Lock Control System

CONTROL SYSTEMS

Step	Check	Yes	No
5 CHECK SHIFT LOCK. 1) Shift the select lever to "N" range. 2) Turn the ignition switch to ACC.	While brake pedal is depressed, is it possible to move the select lever from the "N" range to the "P" range?	Go to step 6.	Perform the inspection of "SELECT LEVER CANNOT BE LOCKED OR RELEASED". <Ref. to CS-17, SELECT LEVER CANNOT BE LOCKED OR RELEASED, INSPECTION, AT Shift Lock Control System.>
6 CHECK KEY INTERLOCK. 1) Turn the ignition switch to OFF. 2) Shift the select lever to other than "P" range.	Can the ignition key be removed?	Perform the inspection of "KEY INTERLOCK CANNOT BE LOCKED OR RELEASED". <Ref. to CS-20, KEY INTERLOCK CANNOT BE LOCKED OR RELEASED, INSPECTION, AT Shift Lock Control System.>	Go to step 7.
7 CHECK KEY INTERLOCK. Shift the select lever to "P" range.	Can the ignition key be removed?	AT shift lock system is normal.	Perform the inspection of "KEY INTERLOCK CANNOT BE LOCKED OR RELEASED". <Ref. to CS-20, KEY INTERLOCK CANNOT BE LOCKED OR RELEASED, INSPECTION, AT Shift Lock Control System.>

- Model with push button ignition switch

Step	Check	Yes	No
1 CHECK COMMUNICATION OF SUBARU SELECT MONITOR. 1) Turn the ignition switch to ON. 2) Using the Subaru Select Monitor, check whether communication to all systems can be executed normally.	Is the system name displayed?	Go to step 2.	Perform the inspection following the diagnostic procedure in BODY CONTROL SYSTEM (DIAGNOSTICS) section. <Ref. to BC(diag)-2, Basic Diagnostic Procedure.>

AT Shift Lock Control System

Step	Check	Yes	No
2 CHECK SHIFT LOCK. 1) Turn the ignition switch to ON. 2) Shift the select lever to "P" range.	While brake pedal is not depressed, is it possible to move the select lever from the "P" range to other ranges?	Perform the inspection of "SELECT LEVER CANNOT BE LOCKED OR RELEASED". <Ref. to CS-17, SELECT LEVER CANNOT BE LOCKED OR RELEASED, INSPECTION, AT Shift Lock Control System.>	Go to step 3.
3 CHECK SHIFT LOCK.	While brake pedal is depressed, is it possible to move the select lever from the "P" range to other ranges?	Go to step 4.	Perform the inspection of "SELECT LEVER CANNOT BE LOCKED OR RELEASED". <Ref. to CS-17, SELECT LEVER CANNOT BE LOCKED OR RELEASED, INSPECTION, AT Shift Lock Control System.>
4 CHECK SHIFT LOCK. Shift the select lever to "N" range.	Is it possible to move the select lever from the "N" range to the "P" range?	Go to step 5.	Perform the inspection of "SELECT LEVER CANNOT BE LOCKED OR RELEASED". <Ref. to CS-17, SELECT LEVER CANNOT BE LOCKED OR RELEASED, INSPECTION, AT Shift Lock Control System.>
5 CHECK SHIFT LOCK. 1) Shift the select lever to "N" range. 2) Turn the ignition switch to ACC.	While brake pedal is depressed, is it possible to move the select lever from the "N" range to the "P" range?	AT shift lock system is normal.	Perform the inspection of "SELECT LEVER CANNOT BE LOCKED OR RELEASED". <Ref. to CS-17, SELECT LEVER CANNOT BE LOCKED OR RELEASED, INSPECTION, AT Shift Lock Control System.>

AT Shift Lock Control System

CONTROL SYSTEMS

2. BODY INTEGRATED UNIT POWER SUPPLY AND GROUND CIRCUIT

NOTE:

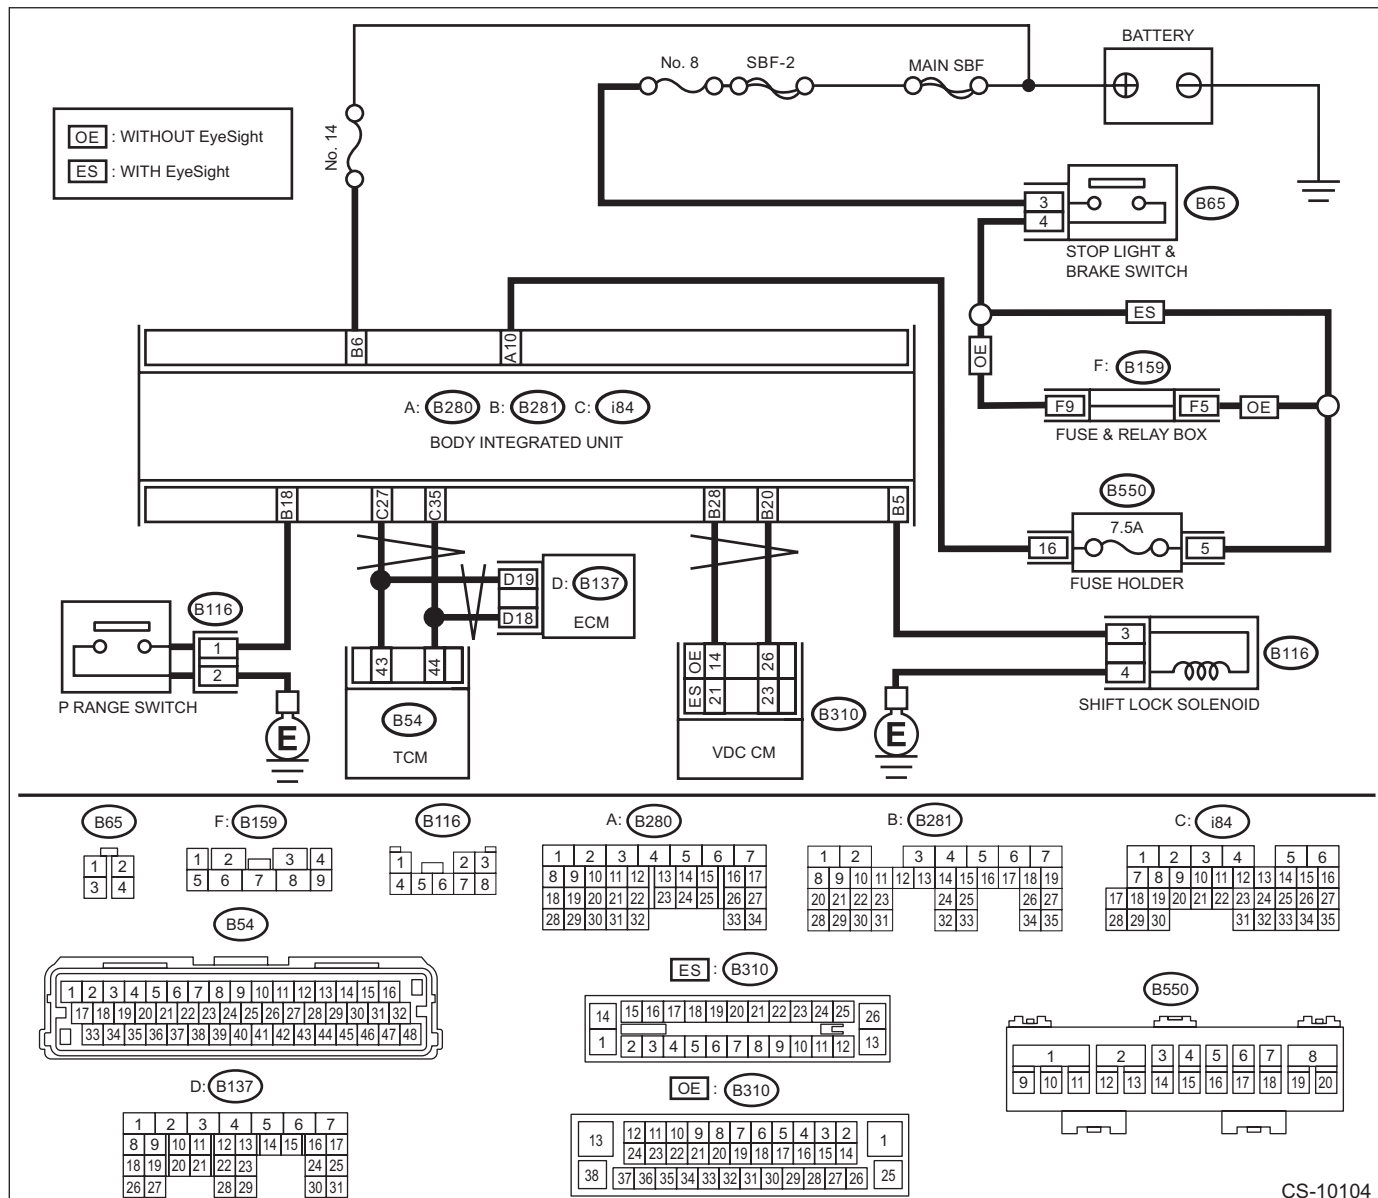

For the DC power supply circuit, refer to "WIRING DIAGRAMS". <Ref. to WI-15, Power Supply Circuit.>

Step	Check	Yes	No
1 CHECK DTC OF BODY INTEGRATED UNIT. Check DTC of body integrated unit. <Ref. to BC(diag)-10, Read Diagnostic Trouble Code (DTC).>	Is the DTC of power line displayed on body integrated unit?	Repair or replace it according to the DTC.	Go to step 2.
2 CHECK HARNESS BETWEEN BODY INTEGRATED UNIT AND BATTERY. 1) Turn the ignition switch to ON. 2) Measure the voltage between body integrated unit and chassis ground. Connector & terminal (B281) No. 3 (+) — Chassis ground (-): (B280) No. 32 (+) — Chassis ground (-): (B281) No. 6 (+) — Chassis ground (-): (B281) No. 7 (+) — Chassis ground (-): (i84) No. 6 (+) — Chassis ground (-):	Is the voltage 9 — 16 V?	Go to step 3.	Check harness for open circuit between the body integrated unit and the battery or a blown fuse.

Step	Check	Yes	No
3 CHECK HARNESS BETWEEN BODY INTEGRATED UNIT AND CHASSIS GROUND. 1) Turn the ignition switch to OFF. 2) Measure the harness resistance between the body integrated unit and chassis ground. Connector & terminal (B280) No. 1 — Chassis ground: (i84) No. 1 — Chassis ground:	Is the resistance less than 1 Ω?	Go to step 4.	Repair the open circuit of harness between the body integrated unit and chassis ground.
4 CHECK FOR POOR CONTACT.	Is there poor contact of connector?	Repair the poor contact.	Check body integrated unit.

3. SELECT LEVER CANNOT BE LOCKED OR RELEASED

CS-10104

Step	Check	Yes	No
1 CHECK BODY INTEGRATED UNIT POWER SUPPLY AND GROUND CIRCUIT. <Ref. to CS-16, BODY INTEGRATED UNIT POWER SUPPLY AND GROUND CIRCUIT, INSPECTION, AT Shift Lock Control System.>	Is there any fault?	Follow the procedures to perform inspection and repair.	Go to step 2.

AT Shift Lock Control System

CONTROL SYSTEMS

Step	Check	Yes	No
2 CHECK CURRENT DATA. 1) Connect the Subaru Select Monitor. 2) Shift the select lever to "P" range. 3) Turn the ignition switch to ON. 4) Select the current data display and display «P SW». <Ref. to BC(diag)-12, Read Current Data.>	Is the display "ON" in the P range and "OFF" in ranges other than P?	Go to step 3.	Go to step 8.
3 CHECK CURRENT DATA. Select the current data display and display «Stop Light Switch». <Ref. to BC(diag)-12, Read Current Data.>	Is "ON" displayed when the brake pedal is depressed and "OFF" displayed when the brake pedal is released?	Go to step 4.	Go to step 11.
4 CHECK BODY INTEGRATED UNIT DTC. Check the DTC of the body integrated unit when the brake pedal is pressed and when it is released. (Hold each condition for 5 seconds or more.)	Is there a DTC of a current malfunction?	Follow the DTC to perform inspection and repair.	Go to step 5.
5 CHECK CURRENT DATA. Select the current data display and display «Shift lock solenoid output». <Ref. to BC(diag)-12, Read Current Data.>	Is "ON" displayed when the brake pedal is depressed and "OFF" displayed when the brake pedal is released?	Go to step 6.	Replace the body integrated unit.
6 CHECK CURRENT DATA. Select the current data display and display «Shift Position». <Ref. to BC(diag)-12, Read Current Data.>	Is the display "P" in the P range and other than "P" in ranges other than P?	Go to step 7.	Check the following items. <ul style="list-style-type: none"> • Inhibitor switch • Harness between inhibitor switch and TCM • TCM input signal • TCM CAN communication • Body integrated unit CAN receive
7 CHECK CURRENT DATA. 1) Select the current data display and display «Front Wheel Speed». <Ref. to BC(diag)-12, Read Current Data.> 2) Start the engine. 3) Raise vehicle speed gradually up to approximately 20 km/h (12 MPH).	Is a figure equivalent to the speedometer being indicated?	Go to step 12.	Check the following items. <ul style="list-style-type: none"> • Wheel speed sensor • CAN communication by VDC unit • Body integrated unit CAN receive Replace the wheel speed sensor, VDC unit or body integrated unit, or both.
8 CHECK HARNESS BETWEEN BODY INTEGRATED UNIT AND "P" RANGE SWITCH. 1) Disconnect the connector from body integrated unit. 2) Disconnect the connector of "P" range switch. 3) Check for open circuit of harness, short circuit to battery or short circuit to ground between the body integrated unit and "P" range switch. Connector & terminal (B281) No. 18 — (B116) No. 1:	Is there any fault in the harness?	Repair or replace the harness between the body integrated unit and the "P" range switch.	Go to step 9.

AT Shift Lock Control System

CONTROL SYSTEMS

Step	Check	Yes	No
9 CHECK HARNESS BETWEEN “P” RANGE SWITCH AND CHASSIS GROUND. Measure the resistance of harness between “P” range switch and chassis ground. <i>Connector & terminal</i> <i>(B116) No. 2 — Chassis ground:</i>	Is it less than 10 Ω?	Go to step 10.	Repair or replace the harness between the “P” range switch and chassis ground.
10 CHECK “P” RANGE SWITCH. Measure the resistance between “P” range switch connector terminals. <i>Terminals</i> <i>No. 2 — No. 1:</i>	Is it less than 10 Ω in the “P” range, and 1 MΩ or more in ranges other than “P”?	Replace the body integrated unit.	Replace the “P” range switch.
11 CHECK STOP LIGHT SWITCH INPUT SIGNAL. 1) Disconnect the connector from body integrated unit. 2) Measure the voltage between the body integrated unit connector terminal and chassis ground. <i>Connector & terminal</i> <i>(B280) No. 10 (+) — Chassis ground (-):</i>	Is the voltage 9 V to 16 V when the brake pedal is depressed, and approx. 0 V when not depressed?	Replace the body integrated unit.	Check the stop light system.
12 CHECK SOLENOID UNIT OPERATION. Connect the battery to the solenoid unit connector terminal, and operate the solenoid unit. <i>Terminals</i> <i>No. 3 (+) — No. 4 (-):</i>	Does the solenoid unit operate normally?	Check the lock mechanism of the select lever body.	Replace the solenoid unit.

CONTROL SYSTEMS

4. KEY INTERLOCK CANNOT BE LOCKED OR RELEASED

NOTE:

Check of this item only applies to models without a push button ignition switch.

CS-10016

Step	Check	Yes	No
1	CHECK D CHECK FUSE. Check that the D check fuse is disconnected.	Go to step 2.	Remove the D check fuse and then turn the ignition switch to ON.

AT Shift Lock Control System

CONTROL SYSTEMS

Step	Check	Yes	No	
2	CHECK BODY INTEGRATED UNIT POWER SUPPLY AND GROUND CIRCUIT. <Ref. to CS-16, BODY INTEGRATED UNIT POWER SUPPLY AND GROUND CIRCUIT, INSPECTION, AT Shift Lock Control System.>	Is there any fault?	Follow the procedures to inspect and repair.	Go to step 3.
3	CHECK CURRENT DATA. 1) Connect the Subaru Select Monitor. 2) Shift the select lever to "P" range. 3) Turn the ignition switch to ON. 4) Select the current data display and display «P SW». <Ref. to BC(diag)-12, Read Current Data.>	Is the display "ON" in the P range and "OFF" in ranges other than P?	Go to step 4.	Go to step 7.
4	CHECK CURRENT DATA. 1) Select the current data display and display the «key-lock warning SW». <Ref. to BC(diag)-12, Read Current Data.> 2) Turn the ignition switch to OFF.	Does the display change from "ON" ↔ "OFF" when the key is inserted and removed?	Go to step 5.	Go to step 10.
5	CHECK CURRENT DATA. 1) Turn the ignition switch to ON. 2) Select the current data display and display «Key lock solenoid output». <Ref. to BC(diag)-12, Read Current Data.>	Is the display "OFF" in the P range and "ON" in ranges other than P?	Go to step 11.	Go to step 6.
6	CHECK DTC OF BODY INTEGRATED UNIT. 1) Set the select lever to other than "P" range. 2) Check DTC of body integrated unit.	Is B1015 (key interlock circuit abnormal) a current malfunction?	Follow the DTC to perform inspection and repair.	Go to step 11.
7	CHECK HARNESS BETWEEN BODY INTEGRATED UNIT AND "P" RANGE SWITCH. 1) Disconnect the connector from body integrated unit. 2) Disconnect the connector of "P" range switch. 3) Check for open circuit of harness, short circuit to battery or short circuit to ground between the body integrated unit and "P" range switch. Connector & terminal (B281) No. 18 — (B116) No. 1:	Is there any fault in the harness?	Repair or replace the harness between the body integrated unit and the "P" range switch.	Go to step 8.
8	CHECK HARNESS BETWEEN "P" RANGE SWITCH AND CHASSIS GROUND. Measure the resistance of harness between "P" range switch and chassis ground. Connector & terminal (B116) No. 2 — Chassis ground:	Is it less than 10 Ω?	Go to step 9.	Repair or replace the harness between the "P" range switch and chassis ground.
9	CHECK "P" RANGE SWITCH. Measure the resistance between "P" range switch connector terminals. Terminals No. 2 — No. 1:	Is it less than 10 Ω in the "P" range, and 1 MΩ or more in ranges other than "P"?	Replace the body integrated unit.	Replace the "P" range switch.
10	CHECK HARNESS BETWEEN BATTERY AND KEY WARNING SWITCH AND BODY INTEGRATED UNIT. 1) Disconnect the connector from body integrated unit. 2) Measure the voltage between body integrated unit and chassis ground. Connector & terminal (B280) No. 4 (+) — Chassis ground (-):	Is the display 9 V or more when the key is inserted, and less than 1.5 V with the key removed?	Replace the body integrated unit.	Check the following items. • Key warning switch • Harness/fuse • Ignition circuit

AT Shift Lock Control System

CONTROL SYSTEMS

Step	Check	Yes	No
11 CHECK HARNESS BETWEEN BODY INTEGRATED UNIT AND KEY LOCK SOLENOID. 1) Disconnect the connector from body integrated unit. 2) Disconnect the connector of key lock solenoid. 3) Check for open circuit of harness, short circuit to battery or short circuit to ground between the body integrated unit and key lock solenoid. Connector & terminal (B281) No. 4 — (B557) No. 1:	Is there any fault in the harness?	Repair or replace the harness between the body integrated unit and the key lock solenoid.	Go to step 12.
12 CHECK HARNESS BETWEEN KEY LOCK SOLENOID AND CHASSIS GROUND. Measure the resistance of harness between key lock solenoid and chassis ground. Connector & terminal (B557) No. 2 — Chassis ground:	Is it less than 10 Ω?	Go to step 13.	Repair or replace the harness between the key lock solenoid and chassis ground.
13 CHECK KEY LOCK SOLENOID OPERATION. Connect the battery to the key lock solenoid connector terminal, and operate the solenoid. Terminals No. 2 (+) — No. 1 (-):	Does the key lock solenoid operate normally?	Go to step 14.	Replace the key lock solenoid.
14 CHECK OUTPUT OF BODY INTEGRATED UNIT. 1) Connect all connectors. 2) Insert the key. 3) Measure the voltage between body integrated unit and chassis ground. Connector & terminal (B281) No. 4 (+) — Chassis ground (-):	Is it 7.5 V to 16 V in ranges other than "P", and approx. 0 V in the "P" range?	Check the lock mechanism of the steering lock body.	Replace the body integrated unit.

3. Select Lever

A: REMOVAL

- 1) Shift the select lever to "N" range.
- 2) Disconnect the ground cable from battery. <Ref. to NT-6, BATTERY, NOTE, Note.>

NOTE:

For model with battery sensor, disconnect the ground terminal from battery sensor.

- 3) Lift up the vehicle.
- 4) Remove the center exhaust pipe. <Ref. to EX(H4DO)-13, REMOVAL, Center Exhaust Pipe.>
- 5) Remove the center exhaust cover.

- (4) Tighten the bolt (A).
- (5) Tighten the bolts (C) and (D).

11) Install the harness clamp to the plate.

- 12) Install the boot and insulator assembly, and secure with a clamp.

- 13) Install the panel center LWR LH and RH. <Ref. to EI-60, INSTALLATION, Console Box.>
- 14) Install the cover - shift lever, and install the gear shift knob.
- 15) Install the console box. <Ref. to EI-60, INSTALLATION, Console Box.>
- 16) Make sure the gears can be shifted accurately into each gear.
- 17) Connect the battery ground terminal.

C: DISASSEMBLY

- 1) Remove the lock wires.

(A) Lock wire

MT Gear Shift Lever

CONTROL SYSTEMS

2) Remove the rod from gear shift lever.

- (A) Rod
- (B) Lever
- (C) Stay

3) Separate the rod and inner boot.

4) Remove the snap ring from the stay.

- (A) Snap ring

5) Separate the gear shift lever and the stay.

CS-01419

6) Remove the boot and bushing from the gear shift lever.

CS-01420

- (A) O-ring
- (B) Bushing

MT Gear Shift Lever

CONTROL SYSTEMS

7) Remove the spring pin, and then remove the bushing and snap ring.

- (A) Spring pin
- (B) Bushing
- (C) Snap ring

8) Remove the boss from the joint.

9) Remove the bushing and spacer from the boss.

- (A) Bushing
- (B) Spacer

10) Remove the bushing and cushion rubber from the stay.

- (A) Bushing B
- (B) Stay
- (C) Cushion rubber

MT Gear Shift Lever

CONTROL SYSTEMS

D: ASSEMBLY

NOTE:

- Clean all the parts before assembly.
- Apply NIGTIGHT LYW No. 2 grease or equivalent to each part. <Ref. to CS-4, 5MT GEAR SHIFT LEVER, COMPONENT, General Description.>

1) Mount the bushing and cushion rubber to the stay.

- (A) Bushing
- (B) Stay
- (C) Cushion rubber

2) Install the bushing and spacer to boss.

- (A) Bushing
- (B) Spacer

3) Install the boss to the joint.

NOTE:

Use a new self-locking nut.

Tightening torque:

12 N·m (1.2 kgf-m, 8.9 ft-lb)

CS-01392

4) Install the snap ring to gear shift lever and install the bushing.

NOTE:

Apply grease to the bushing.

CS-01418

- (A) Spring pin
- (B) Bushing
- (C) Snap ring

MT Gear Shift Lever

CONTROL SYSTEMS

5) Apply grease to the bushing and O-ring, and then install to gear shift lever.

- (A) O-ring
- (B) Bushing

6) Apply sufficient grease into boss, and then install the gear shift lever to the stay.

7) Install the snap ring.

(A) Snap ring

8) Insert the gear shift lever and rod into boot hole.

9) Install the rod.

NOTE:

Use a new self-locking nut.

Tightening torque:

12 N·m (1.2 kgf·m, 8.9 ft·lb)

(A) Rod

(B) Lever

(C) Stay

MT Gear Shift Lever

CONTROL SYSTEMS

10) Install the lock wire.

NOTE:

Use a new lock wire.

CS-01386

(A) Lock wire

NOTE:

- Install the lock wire to the stay groove.
- Bend the extra wire to the same direction of lock wire winding.

CS-01395

(A) Inner boot
(B) Lock wire
(C) Stay

E: INSPECTION

1) Check the parts (bushing, cushion rubber, spacer, boot, stay and rod, etc.) for deformation, damage and wear. If necessary, correct or replace faulty parts. Compare the removed parts with new parts to judge if there are damages or not.

- (A) Bushing
- (B) Cushion rubber
- (C) Spacer
- (D) Boot
- (E) Stay
- (F) Rod

MT Gear Shift Lever

CONTROL SYSTEMS

2) Check the swing torque of rod linked with the gear shift lever. If the torque exceeds the specifications, replace the bushing or retighten nuts.

Swing torque:

3.7 N (0.38 kgf, 0.83 lbf) or less

- (A) Pivot
- (B) Swing torque

8. General Diagnostic Table

A: INSPECTION

Symptoms	Possible cause	Corrective action
Select lever	Starter does not run.	Adjust the select cable and inhibitor switch, or inspect the circuit.
	Back-up light does not illuminate.	Adjust the select cable and inhibitor switch, or inspect the circuit.
	AT shift lock system does not operate normally.	Adjust the select cable and inhibitor switch, or inspect the circuit.
	Manual mode can not be set.	Inspect the mode switch and select lever, or inspect the circuit.
	Up-shift is not engaged at manual mode.	Check the shift-up switch and circuit.
	Down-shift is not engaged at manual mode.	Check the shift-down switch and circuit.

General Description

CONTINUOUSLY VARIABLE TRANSMISSION

1. General Description

A: SPECIFICATION

1. TORQUE CONVERTER

Model	DOHC non-turbo	
Type	Symmetric, 3-element, single stage, 2-phase torque converter	
Stall torque ratio	2.62	
Nominal	mm (in)	236 (9.29)
Stall speed (at sea level)	r/min	2,150 — 2,800 (D range) 1,950 — 2,550 (R range)
One-way clutch	Sprag type one-way clutch	

2. OIL PUMP

Type	Internal gear pump	
Driving method	Driven by chain	
Number of teeth	Inner rotor	8
	Outer rotor	9

3. TRANSMISSION CONTROL ELEMENT

Type	Forward continuously variable speed change, 1 reverse, planetary gear	
Multi-plate clutch	1 set	
Multi-plate brake	1 set	

4. TRANSMISSION GEAR RATIO

Forward	3.581 — 0.570
Rev	3.667

5. PLATE

Number of forward clutch drive plates	3
Number of reverse brake drive plates	4

General Description

CONTINUOUSLY VARIABLE TRANSMISSION

6. SELECTOR POSITION

P (Park)	Transmission neutral, output shaft locked, engine start enabled
R (Reverse)	Rev
N (Neutral)	Transmission neutral, engine start enabled
D (Drive)	Forward continuously variable speed change
M (Manual mode) (paddle shift +side)	Manual gear change 1st → 2nd → 3rd → 4th → 5th → 6th
M (Manual mode) (paddle shift -side)	Manual gear change 1st ← 2nd ← 3rd ← 4th ← 5th ← 6th
L (Low)	Forward continuously variable speed change (engine brake)

7. HYDRAULIC CONTROL AND LUBRICATION

Type	Electronic hydraulic control (gear ratio is changed by signals of vehicle speed and accelerator opening angle.)
Fluid	Specified fluid: SUBARU CVT FLUID LINEARTRONIC II CAUTION: Always use specified CVTF. Using other fluid will cause malfunction.
Fluid capacity L (US qt, Imp qt)	11.68 — 12.18 (12.3 — 12.9, 10.3 — 10.7)
Lubrication system	Forced feed lubrication with oil pump

8. COOLING AND HARNESS

Cooling system	CVTF cooler (with warmer feature)
Inhibitor switch harness	16 poles
Transmission harness	12 poles

9. TRANSFER

Transfer type	Multi-plate transfer (MP-T)
Number of transfer clutch drives & driven plates	4
Control method	Electronic hydraulic type
Reduction gear ratio	1.000 (43/43)

10. REDUCTION GEAR RATIO

Front final reduction gear ratio	3.700
----------------------------------	-------

11. RECOMMENDED GEAR OIL

Lubrication oil	SUBARU GEAR OIL EXTRA MT or equivalent
Front differential oil capacity L (US qt, Imp qt)	1.14 — 1.24 (1.2 — 1.3, 1.0 — 1.1)

T5: 70 (7.1, 51.6)

General Description

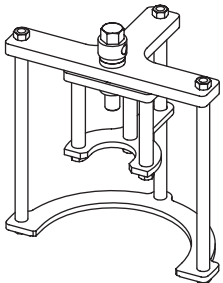

CONTINUOUSLY VARIABLE TRANSMISSION

C: CAUTION

- Remove contamination including dirt and corrosion before removal, installation or disassembly.
- Keep the disassembled parts in order and protect them from dust and dirt.
- Do not place the valve cover with its inner side facing up until it is installed, to prevent intrusion of foreign matter into the control valve body.
- Before removal, installation or disassembly, be sure to clarify the failure. Avoid unnecessary removal, installation, disassembly and replacement.
- When disassembling the case and other light alloy parts, use a plastic hammer to force it apart. Do not pry apart with screwdrivers or other tools.
- Vehicle components are extremely hot after driving. Be wary of receiving burns from heated parts.
- Use SUBARU genuine CVTF and recommended grease. Do not mix CVTF, grease etc. of different grades or manufacturers.
- Be sure to tighten bolts and nuts to the specified torque.
- Apply CVTF onto sliding or revolving surfaces before installation.
- Replace deformed or damaged snap rings with new parts.
- Before installing O-rings or oil seals, apply sufficient amount of CVTF or gear oil to appropriate locations in order to avoid damage and deformation.
- Be careful not to incorrectly install or fail to install O-rings, snap rings and other such parts.
- Before securing a part on a vise, place cushioning material such as wood blocks, aluminum plate, or cloth between the part and the vise.
- Avoid damaging the mating surface of the case.
- Before applying liquid gasket, completely remove and clean the old liquid gasket.
- After removing the sensors, breather hose and plugs, plug the holes to avoid foreign materials intruding as necessary.
- During disassembly or assembly, be sure to use nylon gloves or paper towels. Do not use cloth gloves or waste cloth.
- Be careful of handling the oil seal, O-ring and gasket. If the contact surface of them is damaged, oil leakage may occur.
- When replacing the taper roller bearing, replace the outer race and inner race as a set.
- When replacing the hypoid gear, replace the hypoid gear and drive pinion shaft as a set.
- Replace the bolts if the seating surface or the thread surface is excessively rusted.

 STSSM4	—	SUBARU SELECT MONITOR 4	Used for setting of each function and troubleshooting for electrical system. NOTE: For detailed operation procedures of Subaru Select Monitor 4, refer to “Application help”.

2. GENERAL TOOL

TOOL NAME	REMARKS
Circuit tester	Used for measuring resistance, voltage and current.
Thickness gauge	Used for measuring the clearance in reverse brake, forward clutch and transfer clutch.
Caliper	Used for measuring the dimension.
Spring scale	Used for measuring the starting torque of the drive pinion.
TORX® bit T70	Used for removing and installing differential gear oil drain plug.
Straight pin remover	Used for removing and installing the straight pin and spring pin.
Push/pull gauge	Used for measuring clutch clearance.
Angle gauge	Used for installing the drive plate.
DST-i	Used together with Subaru Select Monitor 4.

2. CVTF

A: INSPECTION

Check for leakage of CVTF from transmission.

B: ADJUSTMENT

CAUTION:

- CVTF level changes along with CVTF temperature. When inspecting CVTF level, observe the specified CVTF temperature.

- Always use specified CVTF. Using other fluid will cause malfunction.

1) Idle the engine to raise CVTF temperature to 35 — 45°C (95 — 113°F) on Subaru Select Monitor.

2) Operate the select lever in P → R → N → D and D → N → R → P to circulate CVTF with the engine idling.

3) With the engine running, lift up the vehicle and remove the filler plug.

CAUTION:

Pay special attention to the following operations as the engine is at idle.

NOTE:

CVTF is at the specified level when it is up to the filler plug hole lower section.

(A) Filler plug

CVTF

CONTINUOUSLY VARIABLE TRANSMISSION

4) When there is no CVTF leakage from the transmission, add the specified fluid up to the filler plug hole lower section.

Specified fluid:

<Ref. to CVT(TR580)-4, HYDRAULIC CONTROL AND LUBRICATION, SPECIFICATION, General Description.>

CAUTION:

Note that when CVTF is added up to the lower section of filler plug while the transmission is in cold condition, overfilling of CVTF occurs, causing the oil to spill out.

(A) Filler plug hole

5) Install the filler plug.

NOTE:

Use a new gasket.

Tightening torque:

50 N·m (5.1 kgf·m, 36.9 ft·lb)

C: REPLACEMENT

CAUTION:

- Directly after the vehicle has been running or the engine has been idling for a long time, the CVTF is hot. Be careful not to burn yourself.
- Be careful not to spill the CVTF on exhaust pipe to prevent it from emitting smoke or causing fires. If CVTF adheres, wipe it off completely.
- Always use specified CVTF. Using other fluid will cause malfunction.

1) Lift up the vehicle, and remove the CVTF drain plug.

AT-06574

(A) CVTF drain plug

2) Check the CVTF condition. <Ref. to CVT(TR580)-40, CONDITION CHECK, CVTF.>

3) Install the CVTF drain plug and gasket.

NOTE:

- Use a new gasket.

Tightening torque:

31 N·m (3.2 kgf-m, 22.9 ft-lb)

4) Remove the filler plug.

AT-06572

(A) Filler plug

CVTF

CONTINUOUSLY VARIABLE TRANSMISSION

5) Add the specified fluid up to the filler plug hole lower section.

Specified fluid:

<Ref. to CVT(TR580)-4, HYDRAULIC CONTROL AND LUBRICATION, SPECIFICATION, General Description.>

6) Temporarily tighten the filler plug.

7) Idle the engine to raise CVTF temperature to 35 — 45°C (95 — 113°F) on Subaru Select Monitor.

8) Operate the select lever in P → R → N → D and D → N → R → P to circulate CVTF with the engine idling.

CAUTION:

Pay special attention to the following operations as the engine is at idle.

9) With the select lever shifted to “P” range and the engine started, lift up the vehicle. Adjust the CVTF level and check for leakage. <Ref. to CVT(TR580)-37, ADJUSTMENT, CVTF.>

10) Replace with a new gasket, and attach the filler plug.

Tightening torque:

50 N·m (5.1 kgf·m, 36.9 ft·lb)

(A) Filler plug

D: CONDITION CHECK

NOTE:

When replacing CVTF, determine the condition inside the transmission body by inspecting the drained CVTF.

Fluid condition	Trouble and possible cause	Corrective action
Metal particles.	Excessive wear of the internal of the transmission body.	Replace CVTF and check if CVT operates correctly.
Thick and varnish-form fluid.	Burnt clutches	Replace CVTF and check the CVT body or vehicle for faulty.
Clouded CVTF or bubbles.	Water mixed in fluid.	Replace CVTF and check the water entering point.

3. Differential Gear Oil

A: INSPECTION

Check that there is no leakage of differential gear oil from the converter case.

B: ADJUSTMENT

NOTE:

Immediately after removing the overflow drain plug, remaining gear oil (approx. 8 cc) may come out of the overflow pipe. This is not included in the specified amount. When removing the overflow drain plug, make sure the gear oil flows out of the overflow drain plug hole by filling with gear oil.

- 1) Turn the ignition switch to OFF.
- 2) Lift up the vehicle.
- 3) Remove the filler plug.

(A) Filler plug

- 4) Remove the overflow drain plug.

(A) Overflow drain plug

Differential Gear Oil

CONTINUOUSLY VARIABLE TRANSMISSION

5) Fill in the differential gear oil through the filler plug hole up to where the oil flows out of the overflow drain plug.

Recommended gear oil:

<Ref. to CVT(TR580)-4, RECOMMENDED GEAR OIL, SPECIFICATION, General Description.>

6) When the flow of the differential gear oil turns into a narrow stream, install the overflow drain plug.

NOTE:

Use a new gasket.

Tightening torque:

50 N·m (5.1 kgf·m, 36.9 ft·lb)

7) Install the filler plug.

NOTE:

Use a new gasket.

Tightening torque:

50 N·m (5.1 kgf·m, 36.9 ft·lb)

C: REPLACEMENT

CAUTION:

- Immediately after the vehicle has been running or after idling for a long time, the differential gear oil will be hot. Be careful not to burn yourself.
- Be careful not to spill differential gear oil on the exhaust pipe to prevent it from emitting smoke or causing a fire. If gear oil adheres, wipe it off completely.

1) Lift up the vehicle.

2) Remove the differential gear oil drain plug using TORX® bit T70. Drain differential gear oil.

3) Install the differential gear oil drain plug using TORX® bit T70.

NOTE:

Use a new gasket.

Tightening torque:

70 N·m (7.1 kgf·m, 51.6 ft·lb)

4) Remove the filler plug.

(A) Filler plug

Differential Gear Oil

CONTINUOUSLY VARIABLE TRANSMISSION

5) Pour gear oil into the filler plug hole.

Recommended gear oil:

<Ref. to CVT(TR580)-4, RECOMMENDED GEAR OIL, SPECIFICATION, General Description.>

Gear oil capacity:

<Ref. to CVT(TR580)-4, RECOMMENDED GEAR OIL, SPECIFICATION, General Description.>

6) Adjust the level of differential gear oil. <Ref. to CVT(TR580)-41, ADJUSTMENT, Differential Gear Oil.>

4. AWD ON/OFF Switching Mode

A: GENERAL DESCRIPTION

- Follow the messages displayed on the Subaru Select Monitor when working.
- Perform as necessary in FWD mode.
- When switched to FWD, AWD light illuminates.

B: PROCEDURE

CAUTION:

- **Do not turn the power of the Subaru Select Monitor OFF during work, and do not disconnect the data link connector.**

- **On completing the work in FWD, switch back in AWD.**

- 1) Shift the select lever to “P” range.
- 2) Connect the Subaru Select Monitor to data link connector.
- 3) Turn the ignition switch to ON.
- 4) Turn off all switches causing an electrical load, such as headlights, A/C, seat heater and rear defogger.
- 5) Select «Diagnosis» in the «Start» screen of Subaru Select Monitor.
- 6) On «Vehicle selection» display, input the vehicle information and select «Confirmed».
- 7) On «Main Menu» display, select «Each System».
- 8) On «Select System» display, select «Transmission Control System».
- 9) On «Select Function» display, select «Work Support».
- 10) Select «AWD ON/OFF switching mode» in the «Work Support» screen.
- 11) Follow the messages displayed on the Subaru Select Monitor screen when working.

Switching completes successfully if any of the following messages is displayed.

- When switching from AWD to FWD: «Switched to FF. To return to AWD, perform basic mode again.»
- When switching from FWD to AWD: «Switched to AWD. To return to FF, perform basic mode again.»

NOTE:

- If communication error occurs during switching mode, start in the «AWD ON/OFF switching mode» again.
- If operation is interrupted before the successful end message is displayed, perform the «AWD ON/OFF switching mode» from the beginning until confirming the operation is successfully ended. If this mode fails to complete successfully, the cause is as follows.
 - Select lever is not in “P” range.
 - Engine is running.
- For detailed operation procedures, refer to “Application help”.

5. Road Test

A: INSPECTION

1. GENERAL PRECAUTION

Road tests should be conducted to properly diagnose the condition of CVT.

CAUTION:

Always observe the local traffic laws when performing the test.

2. D RANGE SHIFT FUNCTION

Make sure that the engine speed is 1,100 — 1,400 r/min while driving on the level road at 50 km/h (31 MPH) after accelerating from halting up to 1/4 of accelerator opening angle. Then stop the vehicle. Check normal gear change has occurred while the vehicle speed changes from a constant speed to zero.

3. KICK-DOWN FUNCTION

Check if engine speed will rise by operating the accelerator opening angle to the full from a constant speed of 50 km/h (31 MPH) or more.

4. ENGINE BRAKE OPERATION

• Model with manual mode

- Drive in “6th speed of manual mode” [70 — 80 km/h (43 — 50 MPH)], and shift down from 6th to 5th. Check if the indicator of combination meter switches “6” → “5”. At the same time, check the engine brake in 5th gear.
- Drive in “5th speed of manual mode” [60 — 70 km/h (37 — 43 MPH)], and shift down from 5th to 4th. Check if the indicator of combination meter switches “5” → “4”. At the same time, check the engine brake in 4th gear.
- Drive in “4th speed of manual mode” [50 — 60 km/h (31 — 37 MPH)], and shift down from 4th to 3rd. Check if the indicator of combination meter switches “4” → “3”. At the same time, check the engine brake in 3rd gear.
- Drive in “3rd speed of manual mode” [40 — 50 km/h (25 — 31 MPH)], and shift down from 3rd to 2nd. Check if the indicator of combination meter switches “3” → “2”. At the same time, check the engine brake in 2nd gear.
- Drive in “2nd speed of manual mode” [20 — 30 km/h (12 — 19 MPH)], and shift down from 2nd to 1st. Check if the indicator of combination meter switches “2” → “1”. At the same time, check the engine brake in 1st gear.

• Model without manual mode

Drive in D range at [50 — 60 km/h (31 — 37 MPH)], and shift to “L” range. Check if the indicator of combination meter switches “D” → “L”. At the same time, check the engine brake in L range.

5. LOCK-UP FUNCTION

When the accelerator is lightly depressed while driving on a flat road in “D” range, check that rpm does not change abruptly.

6. P RANGE OPERATION

Stop the vehicle on an uphill grade of 5% or more and shift to the “P” range and apply the parking brake. Check that the vehicle does not move when the parking brake is released.

7. NOISE AND VIBRATION

Check for noise and vibration during a constant driving, accelerating, decelerating and manual shift operation.

8. OIL LEAKAGE

After the driving test, inspect for leakage of CVTF and differential gear oil from the transmission body.

6. Stall Test

A: INSPECTION

CAUTION:

Make sure no other person is around the vehicle during stall test measurement.

NOTE:

Stall test is extremely important in diagnosing the condition of CVT and engine. The test is necessary to measure the engine stall speeds in “R” and “D” range.

Purposes of the stall test:

- Operational check of forward clutch and reverse brake
 - Operational check of the torque converter assembly
 - Engine performance check
- 1) Place wheel chocks at the front and rear of all wheels and engage the parking brake.
 - 2) Turn the A/C OFF.
 - 3) Using the Subaru Select Monitor, check if the throttle valve operates when you depress the accelerator pedal. <Ref. to EN(H4DO)(diag)-36, DISPLAY ENGINE CURRENT DATA, OPERATION, Subaru Select Monitor.>
 - 4) Check the engine oil level. <Ref. to LU(H4DO)-10, Engine Oil.>
 - 5) Check the coolant level. <Ref. to CO(H4DO)-13, Engine Coolant.>
 - 6) Adjust the CVTF level. <Ref. to CVT(TR580)-37, ADJUSTMENT, CVTF.>
 - 7) Increase the CVTF temperature to 60 — 80°C (140 — 176°F) with the engine running and the select lever shifted to “N” or “P” range.
 - 8) Hold down the pre-collision brake OFF switch to turn OFF the pre-collision brake function. (With EyeSight)
 - 9) Shift the select lever to “D” range.
 - 10) Depress the accelerator pedal to the full while fully depressing the foot brake pedal with your left foot.
 - 11) When the engine speed stabilizes, quickly record the engine speed and release accelerator pedal. Shift the select lever to “N” range. Let the engine idle for one minute or more to cool it down.
 - 12) Shift to “R” range and perform the same stall test.

NOTE:

- Do not perform a stall test for over 5 seconds at a time. (From closed throttle, fully open throttle to stall speed reading.) Failure to follow this instruction will cause the engine oil and CVTF to deteriorate and the clutch and brake to be adversely affected.
- Be sure to cool down the engine for at least one minute after each stall test with the select lever set in the “P” or “N” range and with the idle speed of 1,200 r/min or less.
- If the stall speed is higher than the specified range, attempt to finish the stall test in as short a time as possible, in order to prevent the CVT from sustaining damage.

Stall speed standard:

D range: 2,150 — 2,800 r/min

R range: 1,950 — 2,550 r/min

Stall test judgment

Stall speed (at sea level)	Range	Probable cause
Lower than standard value	D, R	<ul style="list-style-type: none"> • Insufficient engine output • Torque converter malfunction
Higher than standard value	D	<ul style="list-style-type: none"> • Forward clutch slippage • Secondary pressure (line pressure) is low. • Variator chain malfunction
	R	<ul style="list-style-type: none"> • Reverse brake slippage • Secondary pressure (line pressure) is low. • Variator chain malfunction
	D, R	<ul style="list-style-type: none"> • Torque converter malfunction • Control valve body malfunction • TCM malfunction • Damaged harness and harness connector

Time Lag Test

CONTINUOUSLY VARIABLE TRANSMISSION

7. Time Lag Test

A: INSPECTION

NOTE:

When the select lever is shifted while the engine is idling, there will be a certain time elapse or lag before shock is felt. This symptom helps to check the condition of forward clutch and reverse brake.

- Perform the test at normal operation CVTF temperature of 60 — 80°C (140 — 176°F).
- Be sure to allow one minute or more interval between tests.
- Make three measurements and take the average value.

1) Apply the parking brake.

2) Start the engine. Check the idle speed. (A/C OFF)

3) Shift the select lever from “N” to “D” range. Using a stop watch, measure the time elapsed from shifting the lever until the shock is felt.

Time lag standard:

1.5 seconds or less

If “N” → “D” time lag is longer than specified:

- Secondary pressure (line pressure) is too low.
- Forward clutch worn
- Forward clutch piston malfunction
- Control valve body malfunction
- Learning incomplete

4) In the same manner, measure the time lag when shifting from “N” range to “R” range.

Time lag standard:

1.5 seconds or less

If “N” → “R” time lag is longer than specified:

- Secondary pressure (line pressure) is too low.
- Reverse brake worn
- Reverse brake piston malfunction
- Control valve body malfunction
- Learning incomplete

Secondary Pressure (Line Pressure) Test

CONTINUOUSLY VARIABLE TRANSMISSION

8. Secondary Pressure (Line Pressure) Test

A: INSPECTION

CAUTION:

- Directly after the vehicle has been running or the engine has been idling for a long time, the CVTF is hot. Be careful not to burn yourself.
- Make sure no other person is around the vehicle during secondary pressure (line pressure) test measurement.
- After performing the secondary pressure (line pressure) test measurement, adjust the CVTF level.

NOTE:

- If the pulley and variator chain, clutch or brake show signs of slipping or shift feel is not correct, check the secondary pressure (line pressure).
 - Connect Subaru Select Monitor to vehicle so as to measure the engine speed and actual secondary pressure (secondary pressure (line pressure)).
 - In many cases, slippage or inability to operate the vehicle may be due to insufficient oil pressure for the operation of clutch, brake or control valve.
- 1) Lift up the vehicle.

Secondary Pressure (Line Pressure) Test

CONTINUOUSLY VARIABLE TRANSMISSION

2) Remove the secondary pressure (line pressure) test plug, and install ST1 and ST2.

CAUTION:

Removal of the test plug and installation of the ST shall be both performed quickly.

NOTE:

Use ST2 PRESSURE GAUGE ADAPTER with genuine O-ring (Part No. 806916050) attached.

ST1 18801AA000 OIL PRESSURE GAUGE ASSY

ST2 18681AA010 PRESSURE GAUGE ADAPTER

(A) O-ring (genuine part)

Secondary Pressure (Line Pressure) Test

CONTINUOUSLY VARIABLE TRANSMISSION

- 3) Lower the vehicle.
- 4) Set the gauge so that it can be seen from the driver's seat.
- 5) Using the Subaru Select Monitor, check if the throttle valve operates when you depress the accelerator pedal. <Ref. to EN(H4DO)(diag)-36, DISPLAY ENGINE CURRENT DATA, OPERATION, Subaru Select Monitor.>
- 6) Check the engine oil level. <Ref. to LU(H4DO)-10, Engine Oil.>
- 7) Check the coolant level. <Ref. to CO(H4DO)-13, Engine Coolant.>
- 8) Adjust the CVTF level. <Ref. to CVT(TR580)-37, ADJUSTMENT, CVTF.>
- 9) Increase the CVTF temperature to 60 — 80°C (140 — 176°F) with the engine running and the select lever shifted to "N" or "P" range.
- 10) Hold down the pre-collision brake OFF switch to turn OFF the pre-collision brake function. (With Eye-Sight)
- 11) Shift the select lever to "D" range.
- 12) Depress the accelerator pedal to the full while fully depressing the foot brake pedal with your left foot.
- 13) Immediately after the engine speed becomes steady, record the reading of the secondary pressure (line pressure), engine speed and actual secondary pressure on Subaru Select Monitor. And then release the accelerator pedal. Shift the select lever to "N" range. Let the engine idle for one minute or more to cool it down.

NOTE:

- Do not continue the stall test for 5 seconds or more at a time (from fully closed throttle, fully open throttle to secondary pressure (line pressure) reading). Failure to follow this instruction will cause the engine oil and CVTF to deteriorate and the clutch and brake to be adversely affected.
- After performing the secondary pressure (line pressure) test, be sure to cool down the engine for at least one minute with the select lever set in "P" or "N" range and with the idle speed at 1,200 r/min or less.
- Under each condition, check that the measured pressure matches almost totally with actual secondary pressure.
- When both measured pressure and actual secondary pressure are out of specification, judge as control valve malfunction.
- The value at stall is for reference because the pressure changes under different conditions or circumstances.
- The value at idling is steady because it is not affected by any condition or circumstance.
- When the engine is started with the select lever in the "P" range and the secondary pressure at idling is measured without shifting the select lever, the value may be higher than the standard. Shift the select lever to the "D" or "R" range, then measure the value.

Secondary pressure (line pressure) standard				
	Range	Throttle	Brake	Secondary pressure (line pressure) (MPa (kgf/cm ² , psi))
Stall	D, R	Full open	ON	4.5 — 6.0 (45.9 — 61.2, 652 — 870)
Idling	P, N	Full closed	OFF	0.5 — 1.5 (5.1 — 15.3, 72 — 218)

- 14) Remove the ST and install the plug after measurement.

CAUTION:

Removal of the ST and installation of the test plug shall be both performed quickly.

NOTE:

- Use new O-rings.
- Apply CVTF to the O-rings.

Tightening torque:

50 N·m (5.1 kgf·m, 36.9 ft·lb)

- 15) Adjust the CVTF level. <Ref. to CVT(TR580)-37, ADJUSTMENT, CVTF.>

Transfer Clutch Pressure Test

CONTINUOUSLY VARIABLE TRANSMISSION

9. Transfer Clutch Pressure Test

A: INSPECTION

CAUTION:

- Directly after the vehicle has been running or the engine has been idling for a long time, the CVTF is hot. Be careful not to burn yourself.
- Make sure no other person is around the vehicle during transfer clutch pressure test measurement.

- 1) Lift up the vehicle.
- 2) Remove the rear exhaust pipe from center exhaust pipe.

AT-06864

- 3) Remove the center exhaust cover.
- 4) Set the transmission jack under the transmission.
- 5) Remove the mounting bolt of rear crossmember.

AT-06985

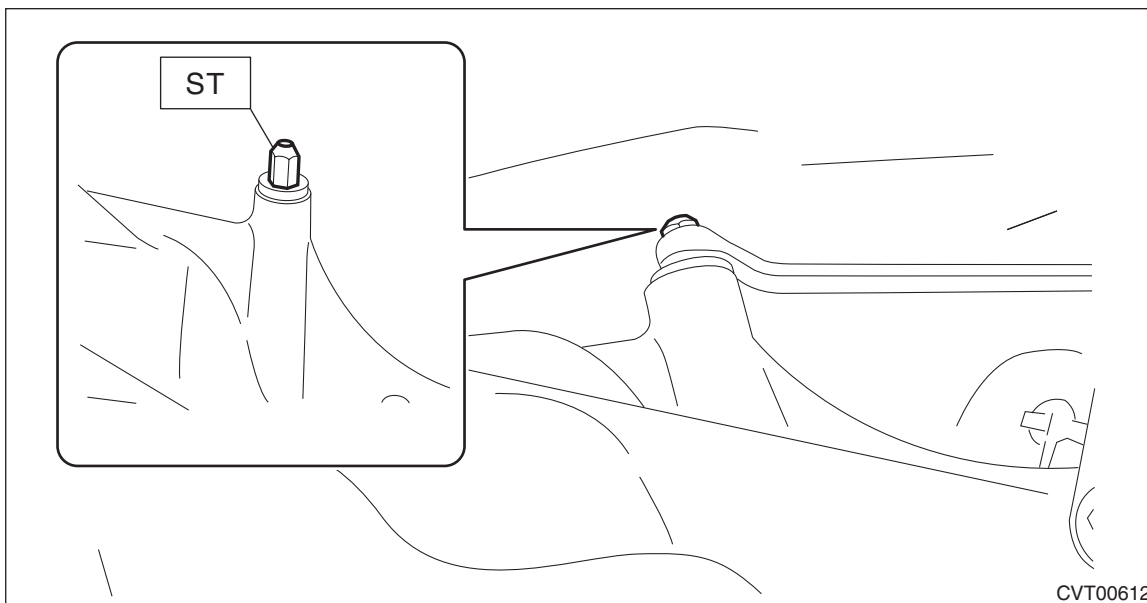

- 6) Lower the rear side of transmission until the transfer clutch pressure test plug can be removed.

Transfer Clutch Pressure Test

CONTINUOUSLY VARIABLE TRANSMISSION

7) Using the ST, remove the transfer clutch pressure test plug.

ST 18270AA040 SOCKET

8) Set the ST1, ST2, ST3 and ST4 to the transmission.

NOTE:

- Use ST1 ADAPTER HOSE B with genuine union screw (Part No. 801914010) and gasket (Part No. 803914060) attached.

- Use ST3 PRESSURE GAUGE ADAPTER with genuine O-ring (Part No. 806911080) attached.

ST1 34099AC020 ADAPTER HOSE B

20) Raise the transmission, and install the rear crossmember.

Tightening torque:

70 N·m (7.1 kgf·m, 51.6 ft·lb)

21) Install the center exhaust cover.

Tightening torque:

18 N·m (1.8 kgf·m, 13.3 ft·lb)

22) Install the rear exhaust pipe to center exhaust pipe.

NOTE:

Use a new gasket.

Tightening torque:

18 N·m (1.8 kgf·m, 13.3 ft·lb)

23) Lower the vehicle.

10. Automatic Transmission Assembly

A: REMOVAL

1) Disconnect the ground cable from battery. <Ref. to NT-6, BATTERY, NOTE, Note.>

NOTE:

For model with battery sensor, disconnect the ground terminal from battery sensor.

2) Remove the clip (A) from the air intake boot.

3) Loosen the clamp (B) connecting the air intake boot and air cleaner case (rear).

4) Loosen the clamp (C) which connects the air intake boot and throttle body.

5) Remove the air intake boot from the throttle body, and move it to the left side wheel apron.

Automatic Transmission Assembly

CONTINUOUSLY VARIABLE TRANSMISSION

6) Disconnect the following connectors.

- Transmission harness connectors
- Inhibitor harness connector
- Transmission radio ground terminal

- (A) Transmission harness connectors
- (B) Inhibitor harness connector
- (C) Transmission radio ground terminal

7) Remove the starter. <Ref. to SC(H4DO)-8, REMOVAL, Starter.>

8) Remove the pitching stopper.

Automatic Transmission Assembly

CONTINUOUSLY VARIABLE TRANSMISSION

9) Remove the harness bracket, and then remove the engine harness.

10) Disconnect the EGR control valve harness connector, throttle position sensor harness connector and manifold absolute pressure sensor harness connector.

11) Remove the engine hanger rear.

Automatic Transmission Assembly

CONTINUOUSLY VARIABLE TRANSMISSION

- 12) Remove the throttle valve body. <Ref. to FU(H4DO)-15, REMOVAL, Throttle Body.>
- 13) Remove the service hole plug.

CVT01163

- 14) Remove the four bolts combining the torque converter and drive plate while rotating the crank pulley a little at a time in the same direction as engine revolution.

CAUTION:

- Be careful not to drop bolts into the converter housing.
- Be careful not to damage the mounting bolts.

ME-08637

- 15) Make sure the torque converter moves freely by rotating with finger through the starter installation hole.

Automatic Transmission Assembly

CONTINUOUSLY VARIABLE TRANSMISSION

16) Attach the ST to the converter case.

ST 498277200 STOPPER SET

17) Remove the air breather hose from the pitching stopper bracket, and then remove the pitching stopper bracket and transmission radio ground cord.

Automatic Transmission Assembly

CONTINUOUSLY VARIABLE TRANSMISSION

18) Remove the engine ground terminal.

19) Remove the CVTF cooler (with warmer feature) from the transmission, and using a piece of wire, affix to a location of the body where it will not interfere with the removal/installation of the transmission.

Automatic Transmission Assembly

CONTINUOUSLY VARIABLE TRANSMISSION

20) Remove the CVTF inlet hose and outlet hose from the pipe.

AT-06589

21) Set the ST.

32) Remove the propeller shaft. <Ref. to DS-11, REMOVAL, Propeller Shaft.>

33) Remove the jack-up plate.

Automatic Transmission Assembly

CONTINUOUSLY VARIABLE TRANSMISSION

34) Remove the stabilizer bracket.

35) Remove the bolts which secure to the front housing, and separate the front arm and housing.

36) Using a tire lever or a crow bar, etc., pull out until the front drive shaft transmission side joint slides move smoothly.

NOTE:

Place cloth between the tire lever or bar and the transmission in order to avoid damaging the transmission side retainer.

37) Hold the transmission side joint of the front drive shaft by hand and extract the housing from the transmission while pressing the housing outward, so as not to stretch the boot.

NOTE:

- Before pulling the RH front drive shaft from transmission, turn the steering wheel to the right hand at full lock.
- Before pulling the LH front drive shaft from transmission, turn the steering wheel to the left hand at full lock.

Automatic Transmission Assembly

CONTINUOUSLY VARIABLE TRANSMISSION

38) Remove the two transmission connecting bolts and two nuts (lower side).

39) Set the transmission jack under the transmission.

NOTE:

Make sure that the support plates of transmission jack do not touch the oil pan.

40) Remove the hanger bracket.

41) Remove the transmission rear crossmember from the vehicle.

42) While lowering the transmission jack gradually, fully retract the engine support, and then tilt the engine rearward.

43) Remove the transmission assembly.

NOTE:

Remove it while moving the transmission jack up and down so that the engine and transmission remain directly aligned.

Automatic Transmission Assembly

CONTINUOUSLY VARIABLE TRANSMISSION

44) Remove the rear cushion rubber.

B: INSTALLATION

1) Attach the ST to converter case.
ST 498277200 STOPPER SET

2) When completely overhauling the transmission, refill CVTF through the transmission right side plug. <Ref. to CVT(TR580)-168, Preparation for Overhaul.>

3) Replace the front differential side retainer oil seal. <Ref. to CVT(TR580)-91, REPLACEMENT, Differential Side Retainer Oil Seal.>

NOTE:

- Be sure to replace the differential side retainer oil seal with a new part whenever the front drive shaft is removed from the transmission.
- When a new differential side retainer oil seal has been installed, replacement is not required.

Automatic Transmission Assembly

CONTINUOUSLY VARIABLE TRANSMISSION

4) Install the rear cushion rubber on the transmission.

Tightening torque:

40 N·m (4.1 kgf-m, 29.5 ft-lb)

5) Mount the transmission onto the transmission jack.

6) Strike and bend the transmission hanger of transmission rear with a rubber hammer etc. so that it gets in contact with the transmission case.

CAUTION:

Do not apply extra overload or impact to the transmission case.

7) Remove the pitching stopper bracket, if mounted.

8) Install the transmission onto the engine.

NOTE:

- While raising the transmission jack gradually, turn the screw of engine support, then tilt the engine forward.
- Temporarily attach the two engine connecting bolts and two nuts (lower side).

Automatic Transmission Assembly

CONTINUOUSLY VARIABLE TRANSMISSION

9) Install the transmission rear crossmember.

Tightening torque:

1) Disconnect the ground cable from battery. <Ref. to NT-6, BATTERY, NOTE, Note.>

NOTE:

For model with battery sensor, disconnect the ground terminal from battery sensor.

2) Remove the clip (A) from the air intake boot.

3) Loosen the clamp (B) connecting the air intake boot and air cleaner case (rear).

4) Loosen the clamp (C) which connects the air intake boot and throttle body.

5) Remove the air intake boot from the throttle body, and move it to the left side wheel apron.

Transmission Mounting System

CONTINUOUSLY VARIABLE TRANSMISSION

6) Remove the pitching stopper.

2. TRANSMISSION REAR CROSSMEMBER AND REAR CUSHION RUBBER

1) Disconnect the ground cable from battery. <Ref. to NT-6, BATTERY, NOTE, Note.>

NOTE:

For model with battery sensor, disconnect the ground terminal from battery sensor.

2) Lift up the vehicle.

3) Remove the center exhaust pipe. <Ref. to EX(H4DO)-13, REMOVAL, Center Exhaust Pipe.>

4) Remove the center exhaust cover.

5) Set the transmission jack under the transmission. Make sure that the support plate of transmission jack does not touch the oil pan.

Transmission Mounting System

CONTINUOUSLY VARIABLE TRANSMISSION

6) Remove the transmission rear crossmember.

7) Remove the rear cushion rubber.

Transmission Mounting System

CONTINUOUSLY VARIABLE TRANSMISSION

B: INSTALLATION

1. PITCHING STOPPER

1) Install the pitching stopper.

Tightening torque:

T1: 50 N·m (5.1 kgf-m, 36.9 ft-lb)

T2: 58 N·m (5.9 kgf-m, 42.8 ft-lb)

- 2) Install the air intake boot assembly. <Ref. to IN(H4DO)-12, INSTALLATION, Air Intake Boot.>
- 3) Connect the battery ground terminal.

2. TRANSMISSION REAR CROSSMEMBER AND REAR CUSHION RUBBER

1) Attach the rear cushion rubber to the transmission.

Tightening torque:

40 N·m (4.1 kgf-m, 29.5 ft-lb)

Transmission Mounting System

CONTINUOUSLY VARIABLE TRANSMISSION

2) Install the crossmember.

Tightening torque:

T1: 35 N·m (3.6 kgf-m, 25.8 ft-lb)

T2: 70 N·m (7.1 kgf-m, 51.6 ft-lb)

3) Remove the transmission jack.

4) Install the center exhaust cover.

Tightening torque:

18 N·m (1.8 kgf-m, 13.3 ft-lb)

5) Install the center exhaust pipe. <Ref. to EX(H4DO)-14, INSTALLATION, Center Exhaust Pipe.>

6) Connect the battery ground terminal.

C: INSPECTION

- Check the crossmember for bends or damage.
- Check that the cushion rubber is not stiff, cracked or otherwise damaged.
- Check the pitching stopper for bends or damage.

12.Extension Case Oil Seal

A: INSPECTION

Check for leakage of CVTF from the joint section of transmission and propeller shaft. If a leak is found, inspect the propeller shaft and replace the oil seal.

B: REPLACEMENT

CAUTION:

Immediately after the vehicle has been running or after idling for a long time, the CVTF will be hot. Be careful not to burn yourself.

- 1) Lift up the vehicle.
- 2) Remove the center exhaust pipe. <Ref. to EX(H4DO)-13, REMOVAL, Center Exhaust Pipe.>
- 3) Remove the center exhaust cover.

- 4) Clean the transmission exterior.
- 5) Remove the propeller shaft. <Ref. to DS-11, REMOVAL, Propeller Shaft.>
- 6) Using a screwdriver or ST, remove the oil seal trying not to damage the extension case.
ST 398527700 PULLER ASSY
- 7) Using the ST, install the oil seal.

NOTE:

- Use a new oil seal.
- Apply CVTF to the oil seal lip and press-fitting surface.

ST 498057300 OIL SEAL INSTALLER

- 8) Install the propeller shaft. <Ref. to DS-13, INSTALLATION, Propeller Shaft.>

Extension Case Oil Seal

CONTINUOUSLY VARIABLE TRANSMISSION

9) Install the center exhaust cover.

Tightening torque:

18 N·m (1.8 kgf·m, 13.3 ft·lb)

10) Install the center exhaust pipe. <Ref. to EX(H4DO)-14, INSTALLATION, Center Exhaust Pipe.>

11) Adjust the CVTF level and check there is no leakage. <Ref. to CVT(TR580)-37, ADJUSTMENT, CVTF.>

13. Differential Side Retainer Oil Seal

A: INSPECTION

Check for leakage of gear oil from differential side retainer oil seal part. If there is an oil leak, inspect the front drive shaft and replace the oil seal.

B: REPLACEMENT

CAUTION:

- Immediately after the vehicle has been running or after idling for a long time, the differential gear oil will be hot. Be careful not to burn yourself.
- Be careful not to spill the differential gear oil on exhaust pipe to prevent it from emitting smoke or fire. If differential gear oil is spilled on the exhaust pipe, wipe it off completely.

- 1) Remove the front tires. <Ref. to WT-5, REMOVAL, Tire and Wheel.>
- 2) Remove the center exhaust pipe. <Ref. to EX(H4DO)-13, REMOVAL, Center Exhaust Pipe.>
- 3) Remove the differential gear oil drain plug using TORX® bit T70, and then drain differential gear oil.

AT-06578

- 4) Tighten the differential gear oil drain plug.

NOTE:

Use a new gasket.

Tightening torque:

70 N·m (7.1 kgf·m, 51.6 ft·lb)

Differential Side Retainer Oil Seal

CONTINUOUSLY VARIABLE TRANSMISSION

5) Remove the jack-up plate.

6) Remove the stabilizer bracket.

Differential Side Retainer Oil Seal

CONTINUOUSLY VARIABLE TRANSMISSION

- 7) Remove the bolts which secure to the front housing, and separate the front arm and housing.

- 8) Using a crowbar, etc., pull out until the front drive shaft transmission side joint slides move smoothly.

NOTE:

Place cloth between the crowbar and the transmission in order to avoid damaging the transmission side retainer.

- 9) Hold the transmission side joint of the front drive shaft by hand and extract the housing from the transmission while pressing the housing outward, so as not to stretch the boot.

NOTE:

- Before pulling the RH front drive shaft from transmission, turn the steering wheel to the right hand at full lock.
- Before pulling the LH front drive shaft from transmission, turn the steering wheel to the left hand at full lock.

- 10) Remove the differential side retainer oil seal using driver wrapped with vinyl tape etc.

Differential Side Retainer Oil Seal

CONTINUOUSLY VARIABLE TRANSMISSION

11) Using the ST, install the differential side retainer oil seal by lightly tapping with a hammer.

NOTE:

- Apply differential gear oil to the lip surface, so that the oil seal lip is not deformed.
- Apply differential gear oil to the press-fitting surface of oil seal and the differential side retainer.
- Oil seal has an identification mark (R, L). When installing oil seals, do not confuse the left and right.

ST 18675AA000 DIFFERENTIAL SIDE OIL SEAL INSTALLER

12) Set the ST to side retainer.

ST 28399SA010 OIL SEAL PROTECTOR

13) Replace the circlip of the drive shaft with a new part.

14) Insert the front drive shaft spline section into transmission and remove the ST (DIFFERENTIAL SIDE OIL SEAL INSTALLER).

NOTE:

- Before inserting the RH front drive shaft into transmission, turn the steering wheel to the right hand at full lock.
- Before inserting the LH front drive shaft into transmission, turn the steering wheel to the left hand at full lock.

15) Insert the drive shaft into the transmission securely by pressing the housing from outside of the vehicle.

Differential Side Retainer Oil Seal

CONTINUOUSLY VARIABLE TRANSMISSION

16) Insert the ball joint into housing and secure with bolt.

Tightening torque:

50 N-m (5.1 kgf-m, 36.9 ft-lb)

CAUTION:

- Do not apply grease to the tapered portion of ball stud.
- Before tightening, make sure the lower side of housing and stepped section of ball joint are in contact.

17) Install the stabilizer bracket.

Tightening torque:

25 N-m (2.5 kgf-m, 18.4 ft-lb)

Differential Side Retainer Oil Seal

CONTINUOUSLY VARIABLE TRANSMISSION

18) Install the jack-up plate.

Tightening torque:

60 N·m (6.1 kgf·m, 44.3 ft·lb)

19) Install the center exhaust pipe. <Ref. to EX(H4DO)-14, INSTALLATION, Center Exhaust Pipe.>

20) Fill differential gear oil. <Ref. to CVT(TR580)-41, Differential Gear Oil.>

21) Adjust the differential gear oil level, and check for leakage. <Ref. to CVT(TR580)-41, ADJUSTMENT, Differential Gear Oil.>

22) Install the front tires. <Ref. to WT-5, INSTALLATION, Tire and Wheel.>

14. Inhibitor Switch

A: INSPECTION

When the driving condition or starter motor operation is improper, first check the shift linkage for improper operation. If the shift linkage is functioning properly, check the inhibitor switch.

- 1) Remove the clip (A) from the air intake boot.
- 2) Loosen the clamp (B) connecting the air intake boot and air cleaner case (rear).
- 3) Loosen the clamp (C) which connects the air intake boot and throttle body.

- 4) Remove the air intake boot from the throttle body, and move it to the left side wheel apron.

Inhibitor Switch

CONTINUOUSLY VARIABLE TRANSMISSION

5) Disconnect the inhibitor harness connector.

6) Check for continuity in inhibitor switch circuit by shifting the select lever in “P”, “R”, “N” and “D” respectively.

NOTE:

- Check that there is no continuity in the starter circuit when the select lever is in the “R” and “D” ranges.
- When inhibitor switch is normal, check there is no poor contact in vehicle side connector and no open circuit in harness.

	Range	Terminal No.
Signal sent to TCM	P	1 — 7
	R	2 — 7
	N	3 — 7
	D	4 — 7
Starter circuit	P/N	15 — 16
Back-up light circuit	R	13 — 14

(A) Inhibitor harness connector

Inhibitor Switch

CONTINUOUSLY VARIABLE TRANSMISSION

7) Check that there is continuity at equal points when the select lever is moved 1.5° in both directions from the "N" range.

If there is continuity in only one direction or in other points, adjust the inhibitor switch. <Ref. to CVT(TR580)-100, ADJUSTMENT, Inhibitor Switch.>

- (A) Continuity does not exist.
- (B) Continuity exists.
- (C) 1.5°

8) Repeat the above inspection in other gear ranges. If there is fault, adjust the inhibitor switch and select cable. <Ref. to CVT(TR580)-100, ADJUSTMENT, Inhibitor Switch.> <Ref. to CS-57, ADJUSTMENT, Select Cable.>

Inhibitor Switch

CONTINUOUSLY VARIABLE TRANSMISSION

B: ADJUSTMENT

- 1) Shift the select lever to "N" range.
- 2) Loosen the two bolts holding the inhibitor switch.
- 3) Insert the ST vertically into the holes of the shifter arm and switch body.

ST 499267300 STOPPER PIN

- 4) Tighten the two bolts holding the inhibitor switch.

Tightening torque:

5 N·m (0.5 kgf·m, 3.7 ft·lb)

- 5) Repeat the inspection of the inhibitor switch. If the inhibitor switch is determined to be "faulty", replace it.

Inhibitor Switch

CONTINUOUSLY VARIABLE TRANSMISSION

C: REMOVAL

- 1) Shift the select lever to "N" range.
- 2) Disconnect the ground cable from battery. <Ref. to NT-6, BATTERY, NOTE, Note.>

NOTE:

For model with battery sensor, disconnect the ground terminal from battery sensor.

- 3) Lift up the vehicle.
- 4) Remove the center exhaust pipe. <Ref. to EX(H4DO)-13, REMOVAL, Center Exhaust Pipe.>
- 5) Remove the snap pin and washer from the shifter arm.

CAUTION:

Do not apply extra overload while holding the part (A).

- (A) Shifter arm
- (B) Snap pin
- (C) Select cable
- (D) Washer

Inhibitor Switch

CONTINUOUSLY VARIABLE TRANSMISSION

6) Remove the spring pin and shifter arm.

- (A) Spring pin
- (B) Shifter arm

7) Remove the inhibitor harness connector from inhibitor switch.

8) Remove the two inhibitor switch securing bolts.

9) Remove the inhibitor switch from the transmission case.

Inhibitor Switch

CONTINUOUSLY VARIABLE TRANSMISSION

D: INSTALLATION

- 1) Install the inhibitor switch to the transmission case temporarily.

- 2) Connect the inhibitor harness connector to the inhibitor switch.
- 3) Install the shifter arm and fix with the spring pin.

NOTE:

Use new spring pin.

- (A) Spring pin
- (B) Shifter arm

Inhibitor Switch

CONTINUOUSLY VARIABLE TRANSMISSION

- 4) Shift the shifter arm to "N" range.
- 5) Install the ST vertically in the cutout of shifter arm and the hole of switch body.
ST 499267300 STOPPER PIN

- 6) Tighten the two bolts holding the inhibitor switch.

Tightening torque:

5 N·m (0.5 kgf·m, 3.7 ft·lb)

- 7) Install the select cable to the shifter arm.
- 8) Install the washer and snap pin to the shifter arm.

CAUTION:

Do not apply extra overload while holding the part (A).

Inhibitor Switch

CONTINUOUSLY VARIABLE TRANSMISSION

- (A) Shifter arm
- (B) Snap pin
- (C) Select cable
- (D) Washer

- 9) Install the center exhaust pipe. <Ref. to EX(H4DO)-14, INSTALLATION, Center Exhaust Pipe.>
- 10) Lower the vehicle.
- 11) Connect the battery ground terminal.
- 12) Check the inhibitor switch. <Ref. to CVT(TR580)-97, INSPECTION, Inhibitor Switch.>

Turbine Speed Sensor

CONTINUOUSLY VARIABLE TRANSMISSION

15. Turbine Speed Sensor

A: REMOVAL

CAUTION:

Be sure to prevent water or oil from contacting the connector terminal of turbine speed sensor. If adhesion occurs, replace with a new part.

- 1) Lift up the vehicle.
- 2) Remove the harness connector from turbine speed sensor.
- 3) Remove the turbine speed sensor.

B: INSTALLATION

CAUTION:

Be sure to prevent water or oil from contacting the connector terminal of turbine speed sensor. If adhesion occurs, replace with a new part.

Install in the reverse order of removal.

NOTE:

- Use new O-rings.
- Apply CVTF to the O-ring.

Tightening torque:

7 N·m (0.7 kgf·m, 5.2 ft·lb)

Turbine Speed Sensor

CONTINUOUSLY VARIABLE TRANSMISSION

C: INSPECTION

- 1) Set the ST between the TCM and bulkhead harness.
ST 18460AA040 CHECK BOARD
- 2) Set the probe of oscilloscope to the check board connector.

Connector & terminal

No. 12 (+) — No. 42 (-):

(A) + probe

(B) - probe

- 3) Start and warm up the engine.
- 4) Check the waveform and output voltage of the turbine speed sensor with engine idling.

NOTE:

The waveform cycle changes as the speed changes.

AT-08071

Secondary Speed Sensor

CONTINUOUSLY VARIABLE TRANSMISSION

16. Secondary Speed Sensor

A: REMOVAL

CAUTION:

- Be sure to prevent water or oil from contacting the connector terminal of secondary speed sensor. If adhesion occurs, replace with a new part.
- When secondary speed sensor is removed, CVTF leaks. After installing the secondary speed sensor, adjust the CVTF level.

- 1) Lift up the vehicle.
- 2) Remove the harness connector from secondary speed sensor.
- 3) Remove the secondary speed sensor.

B: INSTALLATION

CAUTION:

- Be sure to prevent water or oil from contacting the connector terminal of secondary speed sensor. If adhesion occurs, replace with a new part.
- After installing the secondary speed sensor, adjust the CVTF level.

Install in the reverse order of removal.

NOTE:

- Use new O-rings.
- Apply CVTF to the O-ring.

Tightening torque:

7 N·m (0.7 kgf·m, 5.2 ft·lb)

C: INSPECTION

- 1) Set the ST between the TCM and bulkhead harness.
ST 18460AA040 CHECK BOARD

Secondary Speed Sensor

CONTINUOUSLY VARIABLE TRANSMISSION

2) Set the probe of oscilloscope to the check board connector.

Connector & terminal

No. 13 (+) — No. 42 (-):

CVT00716

(A) + probe

(B) - probe

3) Start and warm up the engine.

4) Lift up the vehicle.

CAUTION:

Lift up the vehicle until the tire bottom is 0.3 m (0.98 ft) or more above the ground.

5) Shift the select lever to "D" range.

6) Check the waveform and output voltage of the secondary speed sensor with engine idling.

NOTE:

The waveform cycle changes as the speed changes.

AT-08072

Primary Speed Sensor

CONTINUOUSLY VARIABLE TRANSMISSION

17.Primary Speed Sensor

A: REMOVAL

CAUTION:

Be sure to prevent water or oil from contacting the connector terminal of primary speed sensor. If adhesion occurs, replace with a new part.

- 1) Remove the transmission assembly. <Ref. to CVT(TR580)-59, REMOVAL, Automatic Transmission Assembly.>
- 2) Remove the primary speed sensor.

- 3) Remove the harness connector from primary speed sensor.

Primary Speed Sensor

CONTINUOUSLY VARIABLE TRANSMISSION

B: INSTALLATION

CAUTION:

Be sure to prevent water or oil from contacting the connector terminal of primary speed sensor. If adhesion occurs, replace with a new part.

Install in the reverse order of removal.

NOTE:

- Use new O-rings.
- Apply CVTF to the O-ring.

Tightening torque:

7 N·m (0.7 kgf-m, 5.2 ft-lb)

C: INSPECTION

1) Set the ST between the TCM and bulkhead harness.

ST 18460AA040 CHECK BOARD

2) Set the probe of oscilloscope to the check board connector.

Connector & terminal

No. 14 (+) — No. 42 (-):

(A) + probe

(B) - probe

3) Start and warm up the engine.

4) Lift up the vehicle.

CAUTION:

Lift up the vehicle until the tire bottom is 0.3 m (0.98 ft) or more above the ground.

5) Shift the select lever to "D" range.

Primary Speed Sensor

CONTINUOUSLY VARIABLE TRANSMISSION

6) Check the waveform of primary speed sensor with engine idling running.

NOTE:

The waveform cycle changes as the speed changes.

18.Secondary Pressure Sensor

A: REMOVAL

CAUTION:

- Be sure to prevent water or oil from contacting the connector terminal of secondary pressure sensor. If adhesion occurs, replace with a new part.
- When secondary pressure sensor is removed, CVTF leaks. After installing the secondary pressure sensor, adjust the CVTF level.

1) Disconnect the ground cable from battery. <Ref. to NT-6, BATTERY, NOTE, Note.>

NOTE:

For model with battery sensor, disconnect the ground terminal from battery sensor.

- 2) Lift up the vehicle.
- 3) Remove the secondary pressure sensor connector.
- 4) Remove the secondary pressure sensor.

B: INSTALLATION

CAUTION:

- Be sure to prevent water or oil from contacting the connector terminal of secondary pressure sensor. If adhesion occurs, replace with a new part.
- After installing the secondary pressure sensor, adjust the CVTF level.

Install in the reverse order of removal.

NOTE:

Use new O-rings.

Tightening torque:

39 N·m (4.0 kgf·m, 28.8 ft·lb)

Secondary Pressure Sensor

CONTINUOUSLY VARIABLE TRANSMISSION

C: INSPECTION

- 1) Start and warm up the engine.
- 2) Depress the brake pedal, and shift the select lever to “D” range.
- 3) Shift the select lever to “P” or “N” range.
- 4) Depress the brake pedal and hold it.
- 5) Check «secondary pressure sensor voltage» by using Subaru Select Monitor while the engine is idling. <Ref. to CVT(diag)-15, OPERATION, Subaru Select Monitor.>

Standard

Approx. 0.8 V

- 6) Check «secondary pressure sensor voltage» by using Subaru Select Monitor while the engine is stopped and the ignition switch is turned on. <Ref. to CVT(diag)-15, OPERATION, Subaru Select Monitor.>

Specification:

Approx. 0.5 V

19.Oil Pan and Strainer

A: REMOVAL

CAUTION:

- Directly after the vehicle has been running or the engine has been idling for a long time, the CVTF is hot. Be careful not to burn yourself.
- Be careful not to spill CVTF on the exhaust pipe to prevent it from emitting smoke or causing a fire. If the CVTF adheres, wipe it off completely.

- 1) Lift up the vehicle.
- 2) Clean the transmission exterior.
- 3) Remove the CVTF drain plug to drain CVTF.
- 4) Remove the oil pan.

CAUTION:

Be careful not to allow foreign matter such as dust or dirt to enter the oil pan.

- 5) Remove the magnet.
- 6) Remove the oil strainer.

Oil Pan and Strainer

CONTINUOUSLY VARIABLE TRANSMISSION

7) Remove the O-ring from oil strainer.

CVT00634

B: INSTALLATION

- 1) Clean the mating surface of oil pan and transmission case.
- 2) Install the O-ring to the oil strainer.

NOTE:

- Use new O-rings.
- Apply CVTF to the O-rings.

CVT00634

Oil Pan and Strainer

CONTINUOUSLY VARIABLE TRANSMISSION

3) Install the oil strainer.

Tightening torque:

9 N·m (0.9 kgf-m, 6.6 ft-lb)

CVT00633

4) Clean the magnet.

5) Attach the magnet at the specified position of the oil pan.

6) Apply liquid gasket all around the oil pan mating surface seamlessly.

Liquid gasket:

THREE BOND 1217B (Part No. K0877YA020) or equivalent

AT-06621

Oil Pan and Strainer

CONTINUOUSLY VARIABLE TRANSMISSION

7) Install the oil pan by equally tightening the bolts.

Tightening torque:

5 N·m (0.5 kgf-m, 3.7 ft-lb)

8) Refill CVTF and adjust the level. <Ref. to CVT(TR580)-38, REPLACEMENT, CVTF.>

C: INSPECTION

- Check each part for damage or dust.
- Check oil strainer for clogging.

20. Control Valve Body

A: REMOVAL

CAUTION:

- Directly after the vehicle has been running or the engine has been idling for a long time, the CVTF is hot. Be careful not to burn yourself.
- Be careful not to spill CVTF on the exhaust pipe to prevent it from emitting smoke or causing a fire. If the CVTF adheres, wipe it off completely.
- Always clean the engine compartment before removal.

NOTE:

The control valve body is replaced as an assembly only, because it is a non-disassembly part.

1) Disconnect the ground cable from battery. <Ref. to NT-6, BATTERY, NOTE, Note.>

NOTE:

For model with battery sensor, disconnect the ground terminal from battery sensor.

- 2) Remove the clip (A) from the air intake boot.
- 3) Loosen the clamp (B) connecting the air intake boot and air cleaner case (rear).
- 4) Loosen the clamp (C) which connects the air intake boot and throttle body.

Control Valve Body

CONTINUOUSLY VARIABLE TRANSMISSION

5) Remove the air intake boot from the throttle body, and move it to the left side wheel apron.

6) Disconnect the following connectors.

- Transmission harness connectors
- Inhibitor harness connector
- Transmission radio ground terminal

- (A) Transmission harness connectors
- (B) Inhibitor harness connector
- (C) Transmission radio ground terminal

Control Valve Body

CONTINUOUSLY VARIABLE TRANSMISSION

7) Remove the pitching stopper.

8) Remove the air breather hose from the pitching stopper bracket, and then remove the pitching stopper bracket and transmission radio ground cord.

Control Valve Body

CONTINUOUSLY VARIABLE TRANSMISSION

9) Remove the transmission case cover.

10) Remove the transmission harness stay and ground terminal.

Control Valve Body

CONTINUOUSLY VARIABLE TRANSMISSION

- 11) Remove the transmission harness connector from the harness stay.
- 12) Remove the throttle body, and move it aside so that it will not interfere with the removal of the control valve. <Ref. to FU(H4DO)-15, REMOVAL, Throttle Body.>

NOTE:

Do not remove the preheater hose.

- 13) Clean the transmission exterior.

- 14) Fix the ST with tape, and set the ST to the vehicle.

NOTE:

When replacing the control valve body, the sheet is included in the control valve body for repairs.

ST 18761AA010 SHEET SPECIAL TOOL

- 15) Remove the valve cover and gasket.

Control Valve Body

CONTINUOUSLY VARIABLE TRANSMISSION

16) Remove the transmission harness from the valve cover.

AT-06795

17) Remove the O-ring from the transmission harness.

AT-06796

Control Valve Body

CONTINUOUSLY VARIABLE TRANSMISSION

- 18) Disconnect the harness connector from the control valve body.
- 19) Remove the control valve body.

CVT01259

- 20) Remove the O-ring from the transmission.

CVT01260

Control Valve Body

CONTINUOUSLY VARIABLE TRANSMISSION

B: INSTALLATION

1) Clean the mating surface of valve cover and transmission side.

CAUTION:

When cleaning the mating surface of the transmission side, be careful not to allow any dust, foreign matter and used liquid gasket to enter the transmission.

2) Check the control valve body for dust and other foreign matter.

3) Install the O-rings.

NOTE:

- Use new O-rings.
- Apply CVTF to the O-rings.

4) Install the control valve body.

(1) Install the control valve body to the transmission.

CAUTION:

- **Do not damage the O-ring.**
- **Perform installation so that the O-ring is not displaced.**

(2) Temporarily tighten the bolt (A: silver).

Control Valve Body

CONTINUOUSLY VARIABLE TRANSMISSION

(3) Attach the bolt (B).

Tightening torque:

9 N·m (0.9 kgf·m, 6.6 ft·lb)

CVT01261

(4) Tighten the bolt (A: silver).

Tightening torque:

9 N·m (0.9 kgf·m, 6.6 ft·lb)

CVT01265

Control Valve Body

CONTINUOUSLY VARIABLE TRANSMISSION

5) Install the O-ring to the transmission harness.

NOTE:

- Use new O-rings.
- Apply CVTF to the O-rings.

AT-06796

6) Install the transmission harness to the valve cover.

Tightening torque:

7 N·m (0.7 kgf·m, 5.2 ft·lb)

AT-06795

Control Valve Body

CONTINUOUSLY VARIABLE TRANSMISSION

7) Install the gasket to the transmission.

NOTE:

Use a new gasket.

8) Apply liquid gasket to the oval hole of gasket.

Liquid gasket:

THREE BOND 1215B or equivalent

CVT01263

9) Connect the transmission harness connector to the control valve body, and install the valve cover.

CAUTION:

Be careful not to catch the sheet of the ST.

Tightening torque:

8 N·m (0.8 kgf·m, 5.9 ft·lb)

AT-06791

Control Valve Body

CONTINUOUSLY VARIABLE TRANSMISSION

- 10) Remove the ST (SHEET SPECIAL TOOL).
- 11) Install the throttle body. <Ref. to FU(H4DO)-17, INSTALLATION, Throttle Body.>
- 12) Install the transmission harness connector to the harness stay.
- 13) Install the transmission harness stay and transmission ground terminal.

NOTE:

Install the transmission ground terminal in the direction within the range of approx. 30° (A).

Tightening torque:

T1: 7 N·m (0.7 kgf-m, 5.2 ft-lb)

T2: 14 N·m (1.4 kgf-m, 10.3 ft-lb)

- 14) Insert the transmission case cover (small) between transmission case cover (large) and transmission to install.

Tightening torque:

8 N·m (0.8 kgf-m, 5.9 ft-lb)

Control Valve Body

CONTINUOUSLY VARIABLE TRANSMISSION

AT-06789

15) Install the pitching stopper bracket and transmission radio ground cord.

CAUTION:

Be careful not to deform or damage the terminal of transmission radio ground cord.

Tightening torque:

41 N·m (4.2 kgf-m, 30.2 ft-lb)

AT-07791

16) Install the air breather hose to the pitching stopper bracket.

Control Valve Body

CONTINUOUSLY VARIABLE TRANSMISSION

17) Install the pitching stopper.

Tightening torque:

T1: 50 N·m (5.1 kgf·m, 36.9 ft·lb)

T2: 58 N·m (5.9 kgf·m, 42.8 ft·lb)

18) Connect the following harness connectors.

- Transmission harness connectors
- Inhibitor harness connector
- Transmission radio ground terminal

Tightening torque:

13 N·m (1.3 kgf·m, 9.6 ft·lb)

- (A) Transmission harness connectors
- (B) Inhibitor harness connector
- (C) Transmission radio ground terminal

19) Install the air intake boot assembly. <Ref. to IN(H4DO)-12, INSTALLATION, Air Intake Boot.>

20) Adjust the CVTF level. <Ref. to CVT(TR580)-37, ADJUSTMENT, CVTF.>

21) Perform the operation of AT learning mode. <Ref. to CVT(diag)-27, Learning Control.>

Control Valve Body

CONTINUOUSLY VARIABLE TRANSMISSION

C: INSPECTION

- Check each part for damage or dust.
- Measure the resistance of each solenoid, sensor and ground wire.

NOTE:

Measurement should be performed at a temperature of 20°C (68°F).

CVT01262

• Solenoid

Solenoid	Terminal No.	Standard
Primary UP solenoid	No. 2 — control valve body	Approx. 10 — 13.5 Ω
Secondary solenoid	No. 3 — control valve body	Approx. 5 — 7 Ω
F&R clutch solenoid	No. 4 — control valve body	Approx. 4 — 6 Ω
Primary DOWN solenoid	No. 7 — control valve body	Approx. 10 — 13.5 Ω
Lock-up duty solenoid	No. 9 — control valve body	Approx. 10 — 13.5 Ω
AWD solenoid	No. 10 — control valve body	Approx. 2 — 4.5 Ω

• Oil temperature sensor

Sensor	Terminal No.	Standard At 20°C (68°F)
Oil temperature sensor	No. 1 — No. 6	Approx. 2.5 k Ω

• Transmission ground

Terminal No.	Standard
No. 8 — control valve body	Less than 1 Ω

Transmission Harness

CONTINUOUSLY VARIABLE TRANSMISSION

21. Transmission Harness

A: REMOVAL

1. INHIBITOR HARNESS

- 1) Remove the transmission from the vehicle. <Ref. to CVT(TR580)-59, REMOVAL, Automatic Transmission Assembly.>
- 2) Remove the transmission case cover.

AT-08047

- 3) Remove the harness connector from the ground terminal, turbine speed sensor, primary speed sensor, secondary speed sensor and secondary pressure sensor.

CVT01156

Transmission Harness

CONTINUOUSLY VARIABLE TRANSMISSION

- 4) Remove the harness connector from inhibitor switch.

CVT00921

- 5) Remove the inhibitor harness connector from the transmission harness stay.

AT-06755

- 6) Remove the harness clip from the transmission, and remove the inhibitor harness.

Transmission Harness

CONTINUOUSLY VARIABLE TRANSMISSION

2. TRANSMISSION HARNESS

1) Disconnect the ground cable from battery. <Ref. to NT-6, BATTERY, NOTE, Note.>

NOTE:

For model with battery sensor, disconnect the ground terminal from battery sensor.

2) Remove the clip (A) from the air intake boot.

3) Loosen the clamp (B) connecting the air intake boot and air cleaner case (rear).

4) Loosen the clamp (C) which connects the air intake boot and throttle body.

5) Remove the air intake boot from the throttle body, and move it to the left side wheel apron.

Transmission Harness

CONTINUOUSLY VARIABLE TRANSMISSION

- 6) Disconnect the following connectors.
- Transmission harness connectors
 - Inhibitor harness connector
 - Transmission radio ground terminal

- (A) Transmission harness connectors
(B) Inhibitor harness connector
(C) Transmission radio ground terminal

- 7) Remove the pitching stopper.

Transmission Harness

CONTINUOUSLY VARIABLE TRANSMISSION

8) Remove the air breather hose from the pitching stopper bracket, and then remove the pitching stopper bracket and transmission radio ground cord.

9) Remove the transmission case cover.

Transmission Harness

CONTINUOUSLY VARIABLE TRANSMISSION

- 10) Remove the transmission harness stay and ground terminal.

- 11) Remove the transmission harness connector from the harness stay.
12) Clean the transmission exterior.
13) Set the ST on the vehicle.

ST 18761AA010 SHEET SPECIAL TOOL

Transmission Harness

CONTINUOUSLY VARIABLE TRANSMISSION

14) Remove the valve cover and gasket.

AT-06791

15) Remove the transmission harness connector from the control valve body.

16) Remove the transmission harness from the valve cover.

AT-06795

Transmission Harness

CONTINUOUSLY VARIABLE TRANSMISSION

17) Remove the O-ring from the transmission harness.

AT-06796

B: INSTALLATION

1. INHIBITOR HARNESS

Install in the reverse order of removal.

NOTE:

Install the transmission ground terminal in the direction within the range of approx. 30° (A).

Tightening torque:

T1: 7 N·m (0.7 kgf-m, 3.7 ft-lb)

T2: 14 N·m (1.4 kgf-m, 10.3 ft-lb)

CVT01155

Transmission Harness

CONTINUOUSLY VARIABLE TRANSMISSION

2. TRANSMISSION HARNESS

1) Clean the mating surface of valve cover and transmission side.

CAUTION:

When cleaning the mating surface of the transmission side, be careful not to allow any dust, foreign matter and used liquid gasket to enter the transmission.

2) Check the control valve body for dust and other foreign matter.

3) Install the O-ring to the transmission harness.

NOTE:

- Use new O-rings.
- Apply CVTF to the O-rings.

4) Install the transmission harness to the valve cover.

Tightening torque:

7 N·m (0.7 kgf-m, 5.2 ft-lb)

5) Install the gasket to the transmission.

NOTE:

Use a new gasket.

Transmission Harness

CONTINUOUSLY VARIABLE TRANSMISSION

6) Apply liquid gasket to the oval hole of gasket.

Liquid gasket:
THREE BOND 1215B or equivalent

7) Connect the transmission harness connector to the control valve body, and install the valve cover.

CAUTION:
Be careful not to catch the sheet of the ST.

Tightening torque:
8 N·m (0.8 kgf·m, 5.9 ft·lb)

Transmission Harness

CONTINUOUSLY VARIABLE TRANSMISSION

- 8) Remove the ST (SHEET SPECIAL TOOL).
- 9) Install the transmission harness connector to the harness stay.
- 10) Install the transmission harness stay and transmission ground terminal.

NOTE:

Install the transmission ground terminal in the direction within the range of approx. 30° (A).

Tightening torque:

T1: 7 N·m (0.7 kgf-m, 5.2 ft-lb)

T2: 14 N·m (1.4 kgf-m, 10.3 ft-lb)

- 11) Insert the transmission case cover (small) between the transmission case cover (large) and the transmission to install.

Tightening torque:

8 N·m (0.8 kgf-m, 5.9 ft-lb)

Transmission Harness

CONTINUOUSLY VARIABLE TRANSMISSION

12) Install the pitching stopper bracket and transmission radio ground cord.

CAUTION:

Be careful not to deform or damage the terminal of transmission radio ground cord.

Tightening torque:

41 N·m (4.2 kgf-m, 30.2 ft-lb)

13) Install the air breather hose to the pitching stopper bracket.

Transmission Harness

CONTINUOUSLY VARIABLE TRANSMISSION

14) Install the pitching stopper.

Tightening torque:

T1: 50 N·m (5.1 kgf·m, 36.9 ft·lb)

T2: 58 N·m (5.9 kgf·m, 42.8 ft·lb)

15) Connect the following harness connectors.

- Transmission harness connectors
- Inhibitor harness connector
- Transmission radio ground terminal

Tightening torque:

13 N·m (1.3 kgf·m, 9.6 ft·lb)

- (A) Transmission harness connectors
- (B) Inhibitor harness connector
- (C) Transmission radio ground terminal

16) Install the air intake boot assembly. <Ref. to IN(H4DO)-12, INSTALLATION, Air Intake Boot.>

17) Adjust the CVTF level. <Ref. to CVT(TR580)-37, ADJUSTMENT, CVTF.>

Transmission Harness

CONTINUOUSLY VARIABLE TRANSMISSION

C: INSPECTION

- 1) Visually check the harness and connector for damage or crack.
- 2) Check the harness terminal for rust, disconnection or poor contact.
- 3) Check the continuity between harness terminals.

NOTE:

For details of transmission harness circuit, refer to wiring diagram. <Ref. to WI-94, WIRING DIAGRAM, CVT Control System.>

Harness continuity standard
Less than 1 Ω

Transmission Control Module (TCM)

CONTINUOUSLY VARIABLE TRANSMISSION

22. Transmission Control Module (TCM)

A: REMOVAL

1) Disconnect the ground cable from battery. <Ref. to NT-6, BATTERY, NOTE, Note.>

NOTE:

For model with battery sensor, disconnect the ground terminal from battery sensor.

2) Remove the instrument panel lower cover. <Ref. to EI-54, REMOVAL, Instrument Panel Lower Cover.>

3) Move the lock lever in the arrow direction while pressing the lock button, and disconnect the connector.

(A) Lock button

(B) Lock lever

4) Remove the TCM.

Transmission Control Module (TCM)

CONTINUOUSLY VARIABLE TRANSMISSION

- 5) Remove the TCM from the bracket.

CVT01236

B: INSTALLATION

- 1) Install the bracket to the TCM.
- 2) Install the TCM to the bracket.

Tightening torque:

7.5 N·m (0.8 kgf-m, 5.5 ft-lb)

- 3) Install the TCM.

Tightening torque:

7.5 N·m (0.8 kgf-m, 5.5 ft-lb)

CVT01235

Transmission Control Module (TCM)

CONTINUOUSLY VARIABLE TRANSMISSION

4) Install the harness connector to TCM.

NOTE:

Move the lock lever in the arrow direction, and confirm that a clicking sound is heard.

CVT01240

(A) Lock button

(B) Lock lever

5) Install the instrument panel lower cover. <Ref. to EI-55, INSTALLATION, Instrument Panel Lower Cover.>

6) Perform the operation of AT learning mode. <Ref. to CVT(diag)-27, Learning Control.>

23.CVTF Cooler (With Warmer Function)

A: REMOVAL

CAUTION:

If the CVTF and engine coolant is spilt over exhaust pipe, wipe it off with cloth to avoid emitting smoke or causing a fire.

1) Disconnect the ground cable from battery. <Ref. to NT-6, BATTERY, NOTE, Note.>

NOTE:

For model with battery sensor, disconnect the ground terminal from battery sensor.

2) Drain engine coolant. <Ref. to CO(H4DO)-13, REPLACEMENT, Engine Coolant.>

3) Remove the clip (A) from the air intake boot.

4) Loosen the clamp (B) connecting the air intake boot and air cleaner case (rear).

5) Loosen the clamp (C) which connects the air intake boot and throttle body.

6) Remove the air intake boot from the throttle body, and move it to the left side wheel apron.

CVTF Cooler (With Warmer Function)

CONTINUOUSLY VARIABLE TRANSMISSION

7) Remove the harness bracket, and then remove the engine harness.

8) Disconnect the EGR control valve harness connector, throttle position sensor harness connector and manifold absolute pressure sensor harness connector.

9) Remove the engine hanger rear.

CVTF Cooler (With Warmer Function)

CONTINUOUSLY VARIABLE TRANSMISSION

10) Remove the engine coolant outlet hose.

CVT10112

11) Remove the CVTF inlet hose and outlet hose.

CVT10113

CVTF Cooler (With Warmer Function)

CONTINUOUSLY VARIABLE TRANSMISSION

12) Remove the engine coolant inlet hose.

13) Remove the CVTF cooler (with warmer feature) from the transmission.

CVTF Cooler (With Warmer Function)

CONTINUOUSLY VARIABLE TRANSMISSION

B: INSTALLATION

1) Install the CVTF cooler (with warmer feature) to the transmission.

Tightening torque:

23 N·m (2.3 kgf-m, 17.0 ft-lb)

CVT10115

2) Install the engine coolant inlet hose.

NOTE:

With the triangle mark on the engine coolant inlet hose facing the vehicle outside, install the hose to the EGR cooler.

CVT10131

CVTF Cooler (With Warmer Function)

CONTINUOUSLY VARIABLE TRANSMISSION

3) Install the CVTF inlet hose and CVTF outlet hose to transmission.

NOTE:

Use the new CVTF inlet hose and CVTF outlet hose.

CVT10113

4) Connect the engine coolant outlet hose.

CVT10112

CVTF Cooler (With Warmer Function)

CONTINUOUSLY VARIABLE TRANSMISSION

5) Check installation condition of each hose.

- Make sure the hoses do not interfere with each other or with other components.
- Check each hose for bent, excess curve, and twisting conditions.

- (A) CVTF cooler inlet hose
- (B) CVTF cooler outlet hose
- (C) Engine coolant outlet hose
- (D) Engine coolant inlet hose

6) Install the engine hanger rear.

Tightening torque:

21 N·m (2.1 kgf·m, 15.5 ft·lb)

7) Connect the EGR control valve harness connector, throttle position sensor harness connector and manifold absolute pressure sensor harness connector.

8) Connect the engine harness connectors, then install the harness connector bracket.

Tightening torque:

7.5 N·m (0.8 kgf·m, 5.5 ft·lb)

9) Install the air intake boot assembly. <Ref. to IN(H4DO)-12, INSTALLATION, Air Intake Boot.>

CVTF Cooler (With Warmer Function)

CONTINUOUSLY VARIABLE TRANSMISSION

- 10) Connect the battery ground terminal.
- 11) Fill engine coolant. <Ref. to CO(H4DO)-13, REPLACEMENT, Engine Coolant.>
- 12) Adjust the CVTF level. <Ref. to CVT(TR580)-37, ADJUSTMENT, CVTF.>

C: DISASSEMBLY

- 1) Remove the bracket from the CVTF cooler (with warmer feature).

D: ASSEMBLY

- 1) Attach the bracket.

Tightening torque:

23 N·m (2.3 kgf·m, 17.0 ft·lb)

CVTF Cooler (With Warmer Function)

CONTINUOUSLY VARIABLE TRANSMISSION

E: INSPECTION

Replace any faulty CVTF cooler hoses, CVTF cooler pipes and clamps found in the inspection below.

- 1) Check that there are no CVTF or engine coolant leaks from the connections.
- 2) Check the clamp for deformation.
- 3) Lightly bend the CVTF cooler hose and check for cracks in the surface or other damages.
- 4) Pinch the CVTF cooler hose with your fingers and check for poor elasticity. Also check for poor elasticity in the parts where the clamp was installed by pressing with your fingernail.
- 5) Check for peeling, cracks, and deformation at the tip of the hose.
- 6) Check the CVTF cooler (with warmer feature) for any damage.

Air Breather Hose

CONTINUOUSLY VARIABLE TRANSMISSION

24. Air Breather Hose

A: REMOVAL

1. FRONT DIFFERENTIAL SIDE

- 1) Remove the clip (A) from the air intake boot.
- 2) Loosen the clamp (B) connecting the air intake boot and air cleaner case (rear).
- 3) Loosen the clamp (C) which connects the air intake boot and throttle body.

- 4) Remove the air intake boot from the throttle body, and move it to the left side wheel apron.

Air Breather Hose

CONTINUOUSLY VARIABLE TRANSMISSION

5) Remove the air breather hose.

CVT01239

2. TRANSMISSION CASE SIDE

1) Remove the transmission assembly. <Ref. to CVT(TR580)-59, REMOVAL, Automatic Transmission Assembly.>

2) Remove the transmission case cover.

AT-08047

Air Breather Hose

CONTINUOUSLY VARIABLE TRANSMISSION

3) Remove the air breather hose.

CVT00762

4) Remove the air breather cap.

B: INSTALLATION

1. FRONT DIFFERENTIAL SIDE

Install in the reverse order of removal.

NOTE:

Securely insert the air breather hose until the hose end contacts the catch of the pitching stopper bracket.

AT-07630

2. TRANSMISSION CASE SIDE

Install in the reverse order of removal.

Tightening torque:

Transmission case cover:

8 N·m (0.8 kgf-m, 5.9 ft-lb)

Air breather hose:

5 N·m (0.5 kgf-m, 3.7 ft-lb)

NOTE:

After the transmission case cover (large) is installed, insert the transmission case cover (small) between the transmission case cover (large) and the transmission to install.

CVT00859

C: INSPECTION

Check the hose for peeling, crack or clogging.

Drive Plate

CONTINUOUSLY VARIABLE TRANSMISSION

25. Drive Plate

A: REMOVAL

1) Remove the transmission assembly from the vehicle. <Ref. to CVT(TR580)-59, REMOVAL, Automatic Transmission Assembly.>

2) Set the ST.

ST 498497300 CRANKSHAFT STOPPER

AT-07761

3) Remove the drive plate and reinforcement drive plate.

B: INSTALLATION

1) Temporarily install the drive plate and reinforcement drive plate.

NOTE:

Align the knock pin hole of the crankshaft position sensor plate to the knock pin of the crankshaft to secure the knock pin.

2) Set the ST.

ST 498497300 CRANKSHAFT STOPPER

AT-07762

3) Tighten the drive plate mounting bolt in two stages.

(1) Tighten the drive plate mounting bolt.

Tightening torque:

30 N·m (3.1 kgf·m, 22.1 ft·lb)

(2) While checking the tightening angle with the angle gauge, tighten the drive plate mounting bolts to the specified angle.

Tightening angle:

30° — 35°

CVT01346

4) Install the transmission assembly to the vehicle. <Ref. to CVT(TR580)-71, INSTALLATION, Automatic Transmission Assembly.>

C: INSPECTION

Check the drive cable for damage.

Torque Converter Assembly

CONTINUOUSLY VARIABLE TRANSMISSION

26. Torque Converter Assembly

A: REMOVAL

- 1) Remove the transmission assembly from the vehicle. <Ref. to CVT(TR580)-59, REMOVAL, Automatic Transmission Assembly.>
- 2) Pull out the torque converter assembly horizontally.

CAUTION:

Do not scratch the inside of engaging parts.

- 3) Remove the O-ring from the input shaft.

Torque Converter Assembly

CONTINUOUSLY VARIABLE TRANSMISSION

B: INSTALLATION

1) Install the O-ring to the input shaft.

NOTE:

- Use new O-rings.
- Apply CVTF to the O-ring.

2) While holding the torque converter assembly by hand, carefully install it into the torque converter case.

NOTE:

- Apply CVTF to the oil seal lip.
- Do not damage the oil seal and O-ring.

3) Engage the splines while gently rotating the torque converter assembly by hand, and securely insert the assembly.

4) Measure depth "A", from converter case end surface to drive plate contacting surface.

Standard (reference):

6.8 mm (0.268 in) or less

5) Install the transmission assembly to the vehicle. <Ref. to CVT(TR580)-71, INSTALLATION, Automatic Transmission Assembly.>

C: INSPECTION

- Check the protrusion of torque converter center (front boss) is not deformed or damaged.
- Check the ring gear and exterior for break or damage.

Preparation for Overhaul

CONTINUOUSLY VARIABLE TRANSMISSION

27.Preparation for Overhaul

A: GENERAL DESCRIPTION

Before disassembling and assembling the transmission, follow the following procedures to prepare.

B: PROCEDURE

- 1) Clean the transmission exterior.
- 2) Remove the torque converter assembly. <Ref. to CVT(TR580)-166, Torque Converter Assembly.>
- 3) Attach the ST on the transmission.

ST 18632AA000 STAND ASSY

AT-06760

- 4) Remove the transmission case cover on the transmission upper side.

NOTE:

After the transmission case cover (large) is installed, insert the transmission case cover (small) between the transmission case cover (large) and the transmission to install.

Tightening torque:

8 N·m (0.8 kgf·m, 5.9 ft·lb)

AT-08047

Preparation for Overhaul

CONTINUOUSLY VARIABLE TRANSMISSION

5) Place the transmission assembly on end.

6) When completely overhauling the transmission, refill approx. 10 L (2.6 US qt, 8.8 Imp qt) of CVTF through the transmission right side plug, and install the plug. Finally, install the transmission case cover.

CAUTION:

Always use specified CVTF. Using other fluid will cause malfunction. <Ref. to CVT(TR580)-4, HYDRAULIC CONTROL AND LUBRICATION, SPECIFICATION, General Description.>

NOTE:

Use a new gasket.

Tightening torque:

50 N·m (5.1 kgf-m, 36.9 ft-lb)

Extension Case

CONTINUOUSLY VARIABLE TRANSMISSION

28.Extension Case

A: REMOVAL

1) Remove the transmission assembly from the vehicle. <Ref. to CVT(TR580)-59, REMOVAL, Automatic Transmission Assembly.>

2) Remove the extension case and transmission hanger.

NOTE:

The total number of extension case mounting bolts is 13.

3) Remove the O-ring.

Extension Case

CONTINUOUSLY VARIABLE TRANSMISSION

B: INSTALLATION

- 1) Clean the mating surface of extension case and transmission case.
- 2) Select the transfer drive gear shim. <Ref. to CVT(TR580)-229, ADJUSTMENT, Reduction Drive Gear.>
- 3) Select the transfer driven gear shim. <Ref. to CVT(TR580)-186, ADJUSTMENT, Transfer Clutch.>
- 4) Attach the selected transfer drive gear shim to extension case with vaseline.
- 5) Attach the selected transfer driven gear shim to extension case with vaseline.
- 6) Install the O-ring to the transmission case.

NOTE:

- Use new O-rings.
- Apply CVTF to the O-ring.

- 7) Apply liquid gasket to extension case seamlessly.

Liquid gasket:

THREE BOND 1215B or equivalent

Extension Case

CONTINUOUSLY VARIABLE TRANSMISSION

8) Install the extension case to transmission hanger.

Tightening torque:

25 N·m (2.5 kgf·m, 18.4 ft·lb)

CVT00721

9) Install the transmission assembly. <Ref. to CVT(TR580)-71, INSTALLATION, Automatic Transmission Assembly.>

C: DISASSEMBLY

- 1) Remove the dust cover from extension case.
- 2) Remove the extension case oil seal from the extension case. <Ref. to CVT(TR580)-91, REPLACEMENT, Differential Side Retainer Oil Seal.>
- 3) Remove all plugs.

D: ASSEMBLY

- 1) Press-fit the dust cover into extension case.
- 2) Install the extension case oil seal to extension case. <Ref. to CVT(TR580)-91, REPLACEMENT, Differential Side Retainer Oil Seal.>
- 3) Install all plugs.

NOTE:

- Use a new O-ring or a gasket.
- Apply CVTF to the O-rings.

Tightening torque:

T1: 22 N·m (2.2 kgf-m, 16.2 ft-lb)

T2: 35 N·m (3.6 kgf-m, 25.8 ft-lb)

AT-06406

E: INSPECTION

- Check there is no leak of CVTF from the joint between extension case and transmission case.
- Check there is no damage or cracks on the extension case and other parts.

F: ADJUSTMENT

NOTE:

When replacing the extension case, select the transfer drive gear shim and transfer driven gear shim. <Ref. to CVT(TR580)-229, ADJUSTMENT, Reduction Drive Gear.> <Ref. to CVT(TR580)-186, ADJUSTMENT, Transfer Clutch.>

Transfer Clutch

CONTINUOUSLY VARIABLE TRANSMISSION

29. Transfer Clutch

A: REMOVAL

- 1) Remove the transmission assembly from the vehicle. <Ref. to CVT(TR580)-59, REMOVAL, Automatic Transmission Assembly.>
- 2) Remove the extension case. <Ref. to CVT(TR580)-170, REMOVAL, Extension Case.>
- 3) Remove the transfer clutch assembly.

AT-06407

- 4) Remove the thrust bearing.

CVT01070

Transfer Clutch

CONTINUOUSLY VARIABLE TRANSMISSION

5) Remove the seal ring from transfer clutch assembly.

6) Remove the seal ring from the transfer driven gear assembly.

Transfer Clutch

CONTINUOUSLY VARIABLE TRANSMISSION

B: INSTALLATION

1) Install the thrust bearing.

NOTE:

Make sure to install in the right direction.

2) Install the transfer clutch assembly.

3) Select the transfer driven gear shim. <Ref. to CVT(TR580)-186, ADJUSTMENT, Transfer Clutch.>

4) Attach the selected transfer driven gear shim to extension case with vaseline.

5) Remove the transfer clutch assembly.

Transfer Clutch

CONTINUOUSLY VARIABLE TRANSMISSION

6) Install the seal ring to the transfer clutch assembly.

NOTE:

- Use a new seal ring.
- When installing the seal ring, do not expand the seal ring too much.
- Apply CVTF to the seal rings.

7) Install the seal ring to the transfer driven gear assembly.

NOTE:

- Use a new seal ring.
- When installing the seal ring, do not expand the seal ring too much.
- Apply CVTF to the seal rings.

8) Install the transfer clutch assembly.

9) Install the extension case. <Ref. to CVT(TR580)-171, INSTALLATION, Extension Case.>

10) Install the transmission assembly to the vehicle. <Ref. to CVT(TR580)-71, INSTALLATION, Automatic Transmission Assembly.>

Transfer Clutch

CONTINUOUSLY VARIABLE TRANSMISSION

C: DISASSEMBLY

1) Remove the snap ring, and then remove the pressure plate, drive plate and driven plate.

(A) Snap ring

2) Compress the return spring using the ST to remove the snap ring.

ST 18762AA001 COMPRESSOR SPECIAL TOOL

(A) Snap ring

(B) Transfer clutch piston seal

Transfer Clutch

CONTINUOUSLY VARIABLE TRANSMISSION

- 3) Remove the transfer clutch piston seal.
- 4) Remove the return spring.

AT-06413

- 5) Remove the transfer clutch piston by blowing compressed air through transfer clutch assembly hole.

NOTE:

Plug the holes through which the compressed air is not blown.

AT-06414

Transfer Clutch

CONTINUOUSLY VARIABLE TRANSMISSION

- 6) Remove the ball bearing using ST.
ST1 18767AA010 BEARING REMOVER
ST2 18723AA000 REMOVER

D: ASSEMBLY

- 1) Install the transfer clutch piston.

NOTE:

Apply CVTF to the transfer clutch piston lip.

- 2) Install the return spring.

Transfer Clutch

CONTINUOUSLY VARIABLE TRANSMISSION

3) Install the transfer clutch piston seal.

NOTE:

Apply CVTF to the lip section of transfer clutch piston seal.

AT-06421

4) Compress the return spring using the ST to install the snap ring.

ST 18762AA001 COMPRESSOR SPECIAL TOOL

AT-06412

(A) Snap ring

(B) Transfer clutch piston seal

Transfer Clutch

CONTINUOUSLY VARIABLE TRANSMISSION

5) Install the pressure plate, driven plate, drive plate and snap ring.

AT-06411

(A) Snap ring

6) Blow compressed air through transfer clutch assembly hole, and check the transfer clutch piston operation.

NOTE:

Plug the holes through which the compressed air is not blown.

AT-06414

Transfer Clutch

CONTINUOUSLY VARIABLE TRANSMISSION

7) Before measuring clearance “A”, place same thickness shims on both sides to prevent the plate from tilting.

8) When the clearance “A” exceeds the limit for use, select the transfer clutch plate set and pressure plate, and adjust the clearance “A” within the initial specified value.

Initial standard:

0.7 — 1.1 mm (0.028 — 0.043 in)

Limit thickness:

1.3 mm (0.051 in)

(1) Measure the thickness of the pressure plate for the transfer clutch plate set that has been used before replacement.

(2) Select the transfer clutch plate set that uses the pressure plate of which the value is close to the measured value in (1), and check the clearance “A”.

Transfer clutch plate set	
Part No.	Pressure plate thickness mm (in)
31523AA370	3.3 (0.130)
31523AA380	3.7 (0.146)
31523AA390	4.1 (0.161)
31523AA400	4.5 (0.177)

(3) When the clearance “A” exceeds the limit for use in step (2), replace the pressure plate installed on the lower side of the transfer clutch plate set, and check the clearance “A” again.

Pressure plate	
Part No.	Thickness mm (in)
31593AA151	3.3 (0.130)
31593AA161	3.7 (0.146)

(4) When the clearance “A” exceeds the limit for use in step (3), select the transfer clutch plate set that was not used in step (2), and adjust the clearance “A” again.

Transfer Clutch

CONTINUOUSLY VARIABLE TRANSMISSION

9) Check the clearance between snap ring and pressure plate. <Ref. to CVT(TR580)-184, INSPECTION, Transfer Clutch.>

10) Using the ST, install the ball bearing.

NOTE:

Use a new ball bearing.

ST1 398177700 INSTALLER

ST2 499277000 INSTALLER

E: INSPECTION

- Inspect the drive plate facing for wear and damage.
- Driven plate for discoloration (burned color)
- Make sure the snap ring is not worn and the return spring has no permanent distortion, damage, or deformation.
- Check the lip seal for damage.
- Inspect the extension end play, and adjust it to within the standard value. <Ref. to CVT(TR580)-186, ADJUSTMENT, Transfer Clutch.>

1) Before measuring clearance "A" between snap ring and driven plate, place same thickness shims on both sides to prevent the plate from tilting.

Transfer Clutch

CONTINUOUSLY VARIABLE TRANSMISSION

2) When clearance “A” exceeds the limit for use, replace the drive plate and driven plate as a set, and select the pressure plate within the initial specified value.

Initial standard:

0.7 — 1.1 mm (0.028 — 0.043 in)

Limit thickness:

1.3 mm (0.051 in)

3) Check for tight corner braking phenomenon when the vehicle is moved forward with the steering fully turned. If tight corner braking occurs, perform the following procedures.

- (1) With the steering wheel held at fully turned position, drive the vehicle in “D” range and with vehicle speed at approx. 5 km/h (3 MPH) in both clockwise and counterclockwise directions for approx. ten times each, while repeating acceleration and braking intermittently.
- (2) If the tight corner braking phenomenon still persists, drive the vehicle again in a circle for several laps.

Transfer Clutch

CONTINUOUSLY VARIABLE TRANSMISSION

F: ADJUSTMENT

1) Install the transfer clutch assembly to the extension case with the transfer driven gear shims and thrust bearings removed.

2) Install the thrust bearing to the transfer driven gear.

NOTE:

Make sure to install in the right direction.

Transfer Clutch

CONTINUOUSLY VARIABLE TRANSMISSION

3) Using the ST, measure the height "A" from the ST end face to the thrust bearing catch surface of the transfer clutch assembly.

ST 499575500 GAUGE

AT-06419

4) Using the ST, measure the height "B" from the transmission case mating surface to the end of ST.

ST 499575500 GAUGE

AT-06420

Transfer Clutch

CONTINUOUSLY VARIABLE TRANSMISSION

5) Obtain the thickness of transfer driven gear shim using the following formula to select one to three transfer driven gear shims.

$$T \text{ (mm)} = A - B - (0.05 \text{ — } 0.25)$$

$$[T \text{ (in)} = A - B - (0.002 \text{ — } 0.01)]$$

T: Transfer driven gear shim thickness

A: Height from the ST end face to the transfer clutch assembly thrust bearing catch surface

B: Height from the mating surface of the transmission case to the end of the ST

0.05 — 0.25 mm (0.002 — 0.01 in): Clearance

Transfer driven gear shim	
Part No.	Thickness mm (in)
33280AA030	0.3 (0.012)
33280AA040	0.4 (0.016)
33280AA050	0.5 (0.020)

30. Transfer Driven Gear

A: REMOVAL

- 1) Remove the transmission assembly from the vehicle. <Ref. to CVT(TR580)-59, REMOVAL, Automatic Transmission Assembly.>
- 2) Remove the extension case. <Ref. to CVT(TR580)-170, REMOVAL, Extension Case.>
- 3) Remove the transfer clutch assembly. <Ref. to CVT(TR580)-174, REMOVAL, Transfer Clutch.>
- 4) Remove the transfer driven gear assembly.

- 5) Remove the seal ring from the transfer driven gear assembly.

Transfer Driven Gear

CONTINUOUSLY VARIABLE TRANSMISSION

B: INSTALLATION

1) Install the transfer driven gear assembly.

2) Install the transfer clutch assembly. <Ref. to CVT(TR580)-176, INSTALLATION, Transfer Clutch.>

3) Select the transfer driven gear shim. <Ref. to CVT(TR580)-186, ADJUSTMENT, Transfer Clutch.>

4) Install the extension case. <Ref. to CVT(TR580)-171, INSTALLATION, Extension Case.>

5) Install the transmission assembly to the vehicle. <Ref. to CVT(TR580)-71, INSTALLATION, Automatic Transmission Assembly.>

C: DISASSEMBLY

1) Remove the ball bearing using ST.

ST1 498077400 BEARING REMOVER

ST2 899864100 REMOVER

D: ASSEMBLY

- 1) Using the ST, install the ball bearing.
ST 899580100 INSTALLER

E: INSPECTION

- Check the ball bearing for smooth rotation.
- Check the ball bearing for excessive looseness.
- Check the transfer driven gear for breakage or damage.

F: ADJUSTMENT

NOTE:

When the transfer driven gear or bearing is replaced, select the transfer driven gear shim. <Ref. to CVT(TR580)-186, ADJUSTMENT, Transfer Clutch.>

Parking Pawl

CONTINUOUSLY VARIABLE TRANSMISSION

31. Parking Pawl

A: REMOVAL

- 1) Remove the transmission assembly from the vehicle. <Ref. to CVT(TR580)-59, REMOVAL, Automatic Transmission Assembly.>
- 2) Shift the range select lever to "N" range.
- 3) Remove the extension case. <Ref. to CVT(TR580)-170, REMOVAL, Extension Case.>
- 4) Remove the parking pawl shaft, return spring and parking pawl.

- (A) Parking pawl shaft
- (B) Return spring
- (C) Parking pawl

B: INSTALLATION

- 1) Set the range select lever to the "N" range.
- 2) Install the parking pawl shaft, return spring and parking pawl.

NOTE:

Make sure that the end of return spring sticks out of parking pawl as shown in (a). Make sure that the other end contacts the rib of transmission case as shown in (b).

- (A) Parking pawl shaft
- (B) Return spring
- (C) Parking pawl

- 3) Install the extension case. <Ref. to CVT(TR580)-171, INSTALLATION, Extension Case.>
- 4) Install the transmission assembly to the vehicle. <Ref. to CVT(TR580)-71, INSTALLATION, Automatic Transmission Assembly.>

C: INSPECTION

- Check the parking pawl for breakage or damage.
- Check for worn, broken and/or damaged return spring.

Reduction Driven Gear

CONTINUOUSLY VARIABLE TRANSMISSION

32.Reduction Driven Gear

A: REMOVAL

- 1) Remove the transmission assembly from the vehicle. <Ref. to CVT(TR580)-59, REMOVAL, Automatic Transmission Assembly.>
- 2) Remove the extension case. <Ref. to CVT(TR580)-170, REMOVAL, Extension Case.>
- 3) Remove the transfer clutch assembly. <Ref. to CVT(TR580)-174, REMOVAL, Transfer Clutch.>
- 4) Remove the transfer driven gear assembly. <Ref. to CVT(TR580)-189, REMOVAL, Transfer Driven Gear.>
- 5) Remove the parking pawl. <Ref. to CVT(TR580)-192, REMOVAL, Parking Pawl.>
- 6) Remove the reduction driven gear assembly and spacer oil.

B: INSTALLATION

- 1) Install the reduction driven gear assembly and spacer oil.

Tightening torque:

17 N·m (1.7 kgf·m, 12.5 ft·lb)

- 2) Select the transfer drive gear shim. <Ref. to CVT(TR580)-229, ADJUSTMENT, Reduction Drive Gear.>
- 3) Install the parking pawl. <Ref. to CVT(TR580)-193, INSTALLATION, Parking Pawl.>

CVT(TR580)-194

Reduction Driven Gear

CONTINUOUSLY VARIABLE TRANSMISSION

- 4) Attach the selected transfer drive gear shim to extension case with vaseline.
- 5) Install the transfer driven gear assembly. <Ref. to CVT(TR580)-190, INSTALLATION, Transfer Driven Gear.>

Use a new lock nut.

ST1 18355AA000 PULLEY WRENCH

ST2 18334AA000 PIN SET

ST3 499987003 SOCKET WRENCH (35)

Tightening torque:

95 N·m (9.7 kgf·m, 70.1 ft·lb)

6) Crimp the lock nut at four locations so that the dimension of A becomes 18.9 mm (0.74 in) or less.

CAUTION:

Do not allow the lock nut to be cracked during crimping operation.

Reduction Driven Gear

CONTINUOUSLY VARIABLE TRANSMISSION

E: INSPECTION

- Check the ball bearing for smooth rotation.
- Check the ball bearing for excessive looseness.
- Make sure each gear is not broken or damaged.

F: ADJUSTMENT

1) Measure the height "A" from the ST upper face to the ball bearing catch surface.

ST 499575600 GAUGE

2) Measure the height "B" from the ST to the mating surface of the transmission case.

ST 499575600 GAUGE

Reduction Driven Gear

CONTINUOUSLY VARIABLE TRANSMISSION

3) Obtain the thickness of transfer drive gear shim using the following formula to select one to three transfer drive gear shims.

$$T \text{ (mm)} = A - B - (0.05 \text{ — } 0.25)$$

$$[T \text{ (in)} = A - B - (0.002 \text{ — } 0.01)]$$

T: Shim thickness

A: Height from the ST upper face to the ball bearing catch surface

B: Height from ST to transmission case mating surface

0.05 — 0.25 mm (0.002 — 0.01 in): Clearance

Transfer drive gear shim	
Part No.	Thickness mm (in)
33279AA090	0.3 (0.012)
33279AA100	0.4 (0.016)
33279AA110	0.5 (0.020)

Transmission Control Device

CONTINUOUSLY VARIABLE TRANSMISSION

33. Transmission Control Device

A: REMOVAL

- 1) Remove the transmission assembly from the vehicle. <Ref. to CVT(TR580)-59, REMOVAL, Automatic Transmission Assembly.>
- 2) Remove the inhibitor switch. <Ref. to CVT(TR580)-101, REMOVAL, Inhibitor Switch.>
- 3) Remove the oil pan and oil strainer. <Ref. to CVT(TR580)-115, REMOVAL, Oil Pan and Strainer.>
- 4) Shift the manual plate to "N" range, and remove the spring pin.

NOTE:

Prevent the spring pin from dropping in the transmission using paper towel etc.

CVT00264

- 5) Remove the detent spring.

CVT00265

Transmission Control Device

CONTINUOUSLY VARIABLE TRANSMISSION

6) Remove the bolt, and remove the shifter arm shaft.

NOTE:

Do not damage the lip of oil seal press-fitted in the case.

CVT00267

7) Remove the manual plate from the shifter arm shaft, and remove the shift connecting rod of the manual valve.

CVT00268

- (A) Parking rod
- (B) Manual plate
- (C) Shift connecting rod

Transmission Control Device

CONTINUOUSLY VARIABLE TRANSMISSION

- 8) Remove the manual plate and parking rod.
- 9) Remove the manual valve.

- 10) Remove the extension case. <Ref. to CVT(TR580)-170, REMOVAL, Extension Case.>
- 11) Remove the parking support.

B: INSTALLATION

1) Install the parking support.

Tightening torque:

25 N·m (2.5 kgf·m, 18.4 ft·lb)

2) Install the extension case. <Ref. to CVT(TR580)-171, INSTALLATION, Extension Case.>

3) Install the manual valve.

4) Install the parking rod to the manual plate.

Transmission Control Device

CONTINUOUSLY VARIABLE TRANSMISSION

5) Insert the parking rod into the transmission case, and install the shift connecting rod of the manual valve to the manual plate.

- (A) Parking rod
- (B) Manual plate
- (C) Shift connecting rod

6) Insert the shifter arm shaft to the transmission assembly, install the manual plate to the shifter arm shaft, and secure the shifter arm shaft with a bolt.

NOTE:

Do not damage the lip of oil seal press-fitted in the case.

Tightening torque:

7 N·m (0.7 kgf-m, 5.2 ft-lb)

Transmission Control Device

CONTINUOUSLY VARIABLE TRANSMISSION

7) Install the detent spring.

Tightening torque:

7 N·m (0.7 kgf·m, 5.2 ft·lb)

CVT00265

8) Install the spring pin.

NOTE:

Use new spring pin.

CVT00264

9) Install the inhibitor switch. <Ref. to CVT(TR580)-103, INSTALLATION, Inhibitor Switch.>

10) Adjust the inhibitor switch. <Ref. to CVT(TR580)-100, ADJUSTMENT, Inhibitor Switch.>

11) Install the oil strainer and oil pan. <Ref. to CVT(TR580)-116, INSTALLATION, Oil Pan and Strainer.>

12) Install the transmission assembly to the vehicle. <Ref. to CVT(TR580)-71, INSTALLATION, Automatic Transmission Assembly.>

C: INSPECTION

Make sure that the manual plate and detent spring are not worn or otherwise damaged.

Transmission Case

CONTINUOUSLY VARIABLE TRANSMISSION

34. Transmission Case

A: REMOVAL

- 1) Remove the transmission assembly from the vehicle. <Ref. to CVT(TR580)-59, REMOVAL, Automatic Transmission Assembly.>
- 2) Remove the air breather hose. <Ref. to CVT(TR580)-160, REMOVAL, Air Breather Hose.>
- 3) Remove the control valve body. <Ref. to CVT(TR580)-119, REMOVAL, Control Valve Body.>
- 4) Remove the transmission harness. <Ref. to CVT(TR580)-134, REMOVAL, Transmission Harness.>
- 5) Remove the turbine speed sensor. <Ref. to CVT(TR580)-106, REMOVAL, Turbine Speed Sensor.>
- 6) Remove the secondary speed sensor. <Ref. to CVT(TR580)-108, REMOVAL, Secondary Speed Sensor.>
- 7) Remove the primary speed sensor. <Ref. to CVT(TR580)-110, REMOVAL, Primary Speed Sensor.>
- 8) Remove the inhibitor switch. <Ref. to CVT(TR580)-101, REMOVAL, Inhibitor Switch.>
- 9) Remove the extension case. <Ref. to CVT(TR580)-170, REMOVAL, Extension Case.>
- 10) Remove the transfer clutch assembly. <Ref. to CVT(TR580)-174, REMOVAL, Transfer Clutch.>
- 11) Remove the transfer driven gear assembly. <Ref. to CVT(TR580)-189, REMOVAL, Transfer Driven Gear.>
- 12) Remove the parking pawl. <Ref. to CVT(TR580)-192, REMOVAL, Parking Pawl.>
- 13) Remove the reduction driven gear assembly. <Ref. to CVT(TR580)-194, REMOVAL, Reduction Driven Gear.>
- 14) Remove the oil pan and oil strainer. <Ref. to CVT(TR580)-115, REMOVAL, Oil Pan and Strainer.>
- 15) Remove the transmission control device. <Ref. to CVT(TR580)-202, REMOVAL, Transmission Control Device.>
- 16) Remove the oil baffle securing bolt.

CVT00729

Transmission Case

CONTINUOUSLY VARIABLE TRANSMISSION

17) Remove the oil cooler pipe.

AT-06736

18) Remove the transmission case.

NOTE:

The total number of transmission case mounting bolts is 15.

19) Remove the oil baffle.

CVT00989

Transmission Case

CONTINUOUSLY VARIABLE TRANSMISSION

20) Remove the O-ring.

AT-06754

21) Remove the seal ring from the transmission case.

AT-07616

B: INSTALLATION

- 1) Clean the mating surface of transmission case and converter case.
- 2) Select the reduction gear shim. <Ref. to CVT(TR580)-229, ADJUSTMENT, Reduction Drive Gear.>
- 3) Remove the transmission case, and install the selected reduction gear shim to the reduction drive gear.
- 4) Install the O-rings to the reverse clutch housing and drive pinion retainer.

NOTE:

- Use new O-rings.
- Apply CVTF to the O-rings.

- 5) Install the seal ring to the transmission case.

NOTE:

- Use new seal rings.
- When installing the seal rings, do not expand the seal rings too much.
- Apply CVTF to the seal rings.

Transmission Case

CONTINUOUSLY VARIABLE TRANSMISSION

6) Cover the secondary pulley with the oil baffle, and temporarily install it with bolts.

7) Apply liquid gasket seamlessly to the mating surface of transmission case.

Liquid gasket:
THREE BOND 1215B or equivalent

8) Install the transmission case.

NOTE:

The total number of transmission case mounting bolts is 15.

Tightening torque:
22 N·m (2.2 kgf·m, 16.2 ft·lb)

Transmission Case

CONTINUOUSLY VARIABLE TRANSMISSION

9) Install the oil cooler pipe.

NOTE:

Use new O-rings.

Tightening torque:

25 N·m (2.5 kgf·m, 18.4 ft·lb)

AT-06736

10) Install the oil baffle securing bolt.

Tightening torque:

16 N·m (1.6 kgf·m, 11.8 ft·lb)

CVT00729

11) Install the transmission control device. <Ref. to CVT(TR580)-205, INSTALLATION, Transmission Control Device.>

12) Install the oil pan and oil strainer. <Ref. to CVT(TR580)-116, INSTALLATION, Oil Pan and Strainer.>

13) Install the reduction driven gear assembly. <Ref. to CVT(TR580)-194, INSTALLATION, Reduction Driven Gear.>

14) Install the parking pawl. <Ref. to CVT(TR580)-193, INSTALLATION, Parking Pawl.>

15) Install the transfer driven gear assembly. <Ref. to CVT(TR580)-190, INSTALLATION, Transfer Driven Gear.>

16) Install the transfer clutch assembly. <Ref. to CVT(TR580)-176, INSTALLATION, Transfer Clutch.>

CVT(TR580)-213

Transmission Case

CONTINUOUSLY VARIABLE TRANSMISSION

- 17) Install the extension case. <Ref. to CVT(TR580)-171, INSTALLATION, Extension Case.>
- 18) Install the inhibitor switch. <Ref. to CVT(TR580)-103, INSTALLATION, Inhibitor Switch.>
- 19) Install the secondary speed sensor. <Ref. to CVT(TR580)-108, INSTALLATION, Secondary Speed Sensor.>
- 20) Install the primary speed sensor. <Ref. to CVT(TR580)-111, INSTALLATION, Primary Speed Sensor.>
- 21) Install the turbine speed sensor. <Ref. to CVT(TR580)-106, INSTALLATION, Turbine Speed Sensor.>
- 22) Install the transmission harness. <Ref. to CVT(TR580)-141, INSTALLATION, Transmission Harness.>
- 23) Install the control valve body. <Ref. to CVT(TR580)-126, INSTALLATION, Control Valve Body.>
- 24) Install the air breather hose. <Ref. to CVT(TR580)-162, INSTALLATION, Air Breather Hose.>
- 25) Install the transmission assembly to the vehicle. <Ref. to CVT(TR580)-71, INSTALLATION, Automatic Transmission Assembly.>

C: DISASSEMBLY

- 1) Remove the oil stopper plate.

CVT00728

- 2) Remove all plugs from the transmission case.

CVT00993

Transmission Case

CONTINUOUSLY VARIABLE TRANSMISSION

3) Remove the oil seal using a screwdriver wrapped with cloth etc.

CVT00991

4) Using the ST, remove the ball bearing of the secondary pulley.

(1) Remove the claw of ST1, and attach the claw of ST2.

ST1 398527700 PULLER ASSY

ST2 18760AA000 CLAW

AT-06447

(A) Claw

5) Remove the oil guide.

AT-06450

Transmission Case

CONTINUOUSLY VARIABLE TRANSMISSION

- 6) Remove the ball bearing from reduction driven gear using ST.
ST 398527700 PULLER ASSY

- 7) Remove the CVTF filter cover and gasket.

Transmission Case

CONTINUOUSLY VARIABLE TRANSMISSION

8) Remove the CVTF filter.

D: ASSEMBLY

1) Face the O-ring side of the CVTF filter to the transmission case side, and install the CVTF filter.

NOTE:

Apply CVTF to the O-ring of CVTF filter.

Transmission Case

CONTINUOUSLY VARIABLE TRANSMISSION

2) Install the CVTF filter cover and gasket.

NOTE:

Use a new gasket.

Tightening torque:

17 N·m (1.7 kgf·m, 12.5 ft·lb)

AT-06451

3) Using the ST, install the oil seal.

NOTE:

- Use a new oil seal.
- Apply CVTF to the oil seal lip and press-fitting surface.

ST 18657AA000 INSTALLER

AT-06651

Transmission Case

CONTINUOUSLY VARIABLE TRANSMISSION

4) Using ST1 and ST2, install the ball bearing on the reduction driven gear side.

NOTE:

Use a new ball bearing.

ST2 28499TC010 PRESS SNAP RING

5) Install the oil guide.

Transmission Case

CONTINUOUSLY VARIABLE TRANSMISSION

6) Press-fit the roll pin into the ball bearing on the secondary pulley side.

(1) Hold the roll pin with a knock pin punch or the like, and press-fit with a hammer.

NOTE:

- Use a new ball bearing.
- When securing the ball bearing with a vise, place a wood piece therebetween to avoid scratching the bearing race.

CVT10224

(2) Measure the height "A" of the roll pin.

Specification:

4.4 mm (0.173 in) or less

CVT10225

Transmission Case

CONTINUOUSLY VARIABLE TRANSMISSION

7) Using ST1, ST2 and ST3, install the ball bearing on the secondary pulley side.

NOTE:

- Align the roll pin to the cutout of the transmission case.
- Press-fit the pin so that it is positioned on near side (the retainer should be seen on your side).

ST3 28499TC010 PRESS SNAP RING

(A) Retainer

(B) Roll pin

Transmission Case

CONTINUOUSLY VARIABLE TRANSMISSION

8) Install all plugs.

NOTE:

- Use new O-rings.
- Apply CVTF to the O-rings.
- For the plug (A), fill the CVTF, and then tighten the plug using a new O-ring.

Tightening torque:

T1: 13 N·m (1.3 kgf-m, 9.6 ft-lb)

T2: 22 N·m (2.2 kgf-m, 16.2 ft-lb)

T3: 50 N·m (5.1 kgf-m, 36.9 ft-lb)

CVT00994

9) Install the oil stopper plate.

NOTE:

Use a new bolt.

Tightening torque:

9 N·m (0.9 kgf-m, 6.6 ft-lb)

CVT00728

Transmission Case

CONTINUOUSLY VARIABLE TRANSMISSION

E: INSPECTION

- Check the transmission case for damage.
- Check for leakage of CVTF from the connection between converter case and transmission case.
- Check the bearing for smooth operation.
- Check the bearing for seizure or wear.

F: ADJUSTMENT

NOTE:

When replacing the transmission case with a new part, perform the following check and adjustment for the selection.

- Select the transfer driven gear shim. <Ref. to CVT(TR580)-186, ADJUSTMENT, Transfer Clutch.>
- Select the transfer drive gear shim. <Ref. to CVT(TR580)-200, ADJUSTMENT, Reduction Driven Gear.>
- Select the reduction drive gear shim. <Ref. to CVT(TR580)-229, ADJUSTMENT, Reduction Drive Gear.>

35. CVTF Filter

A: REMOVAL

NOTE:

- Although CVTF filter is a maintenance-free part, replace it if a large quantity of wear debris and metal particles are found in CVTF and CVTF filter.
- For removal of CVTF filter, refer to “Transmission Case”. <Ref. to CVT(TR580)-208, REMOVAL, Transmission Case.> <Ref. to CVT(TR580)-214, DISASSEMBLY, Transmission Case.>

B: INSTALLATION

NOTE:

For installation of CVTF filter, refer to “Transmission Case”. <Ref. to CVT(TR580)-218, ASSEMBLY, Transmission Case.> <Ref. to CVT(TR580)-211, INSTALLATION, Transmission Case.>

C: INSPECTION

- Check if a large quantity of wear debris or metal particles are in CVTF and CVTF filter.
- Check for broken part or damaged O-ring.

Reduction Drive Gear

CONTINUOUSLY VARIABLE TRANSMISSION

36.Reduction Drive Gear

A: REMOVAL

- 1) Remove the transmission assembly from the vehicle. <Ref. to CVT(TR580)-59, REMOVAL, Automatic Transmission Assembly.>
- 2) Remove the air breather hose. <Ref. to CVT(TR580)-160, REMOVAL, Air Breather Hose.>
- 3) Remove the control valve body. <Ref. to CVT(TR580)-119, REMOVAL, Control Valve Body.>
- 4) Remove the transmission harness. <Ref. to CVT(TR580)-134, REMOVAL, Transmission Harness.>
- 5) Remove the turbine speed sensor. <Ref. to CVT(TR580)-106, REMOVAL, Turbine Speed Sensor.>
- 6) Remove the secondary speed sensor. <Ref. to CVT(TR580)-108, REMOVAL, Secondary Speed Sensor.>
- 7) Remove the primary speed sensor. <Ref. to CVT(TR580)-110, REMOVAL, Primary Speed Sensor.>
- 8) Remove the inhibitor switch. <Ref. to CVT(TR580)-101, REMOVAL, Inhibitor Switch.>
- 9) Remove the extension case. <Ref. to CVT(TR580)-170, REMOVAL, Extension Case.>
- 10) Remove the transfer clutch assembly. <Ref. to CVT(TR580)-174, REMOVAL, Transfer Clutch.>
- 11) Remove the transfer driven gear assembly. <Ref. to CVT(TR580)-189, REMOVAL, Transfer Driven Gear.>
- 12) Remove the parking pawl. <Ref. to CVT(TR580)-192, REMOVAL, Parking Pawl.>
- 13) Remove the reduction driven gear assembly. <Ref. to CVT(TR580)-194, REMOVAL, Reduction Driven Gear.>
- 14) Remove the oil pan and oil strainer. <Ref. to CVT(TR580)-115, REMOVAL, Oil Pan and Strainer.>
- 15) Remove the transmission control device. <Ref. to CVT(TR580)-202, REMOVAL, Transmission Control Device.>
- 16) Remove the transmission case. <Ref. to CVT(TR580)-208, REMOVAL, Transmission Case.>
- 17) Remove the reduction drive gear shims, spring retainers, and dish plates.

Reduction Drive Gear

CONTINUOUSLY VARIABLE TRANSMISSION

18) Remove the reduction drive gear.

B: INSTALLATION

1) Install the reduction drive gear to secondary pulley.

Reduction Drive Gear

CONTINUOUSLY VARIABLE TRANSMISSION

- 2) Select the reduction drive gear shim. <Ref. to CVT(TR580)-229, ADJUSTMENT, Reduction Drive Gear.>
- 3) Install the dish plates, spring retainers, and selected reduction drive gear shims.

NOTE:

Install the dish plate in the correct direction.

- (A) Reduction drive gear shim
- (B) Spring retainer
- (C) Dish plate

- 4) Install the transmission case. <Ref. to CVT(TR580)-211, INSTALLATION, Transmission Case.>
- 5) Install the transmission control device. <Ref. to CVT(TR580)-205, INSTALLATION, Transmission Control Device.>
- 6) Install the oil strainer and oil pan. <Ref. to CVT(TR580)-116, INSTALLATION, Oil Pan and Strainer.>
- 7) Install the reduction driven gear assembly. <Ref. to CVT(TR580)-194, INSTALLATION, Reduction Driven Gear.>
- 8) Install the parking pawl. <Ref. to CVT(TR580)-193, INSTALLATION, Parking Pawl.>
- 9) Install the transfer driven gear assembly. <Ref. to CVT(TR580)-190, INSTALLATION, Transfer Driven Gear.>
- 10) Install the transfer clutch assembly. <Ref. to CVT(TR580)-176, INSTALLATION, Transfer Clutch.>
- 11) Install the extension case. <Ref. to CVT(TR580)-171, INSTALLATION, Extension Case.>
- 12) Install the inhibitor switch. <Ref. to CVT(TR580)-103, INSTALLATION, Inhibitor Switch.>
- 13) Install the secondary speed sensor. <Ref. to CVT(TR580)-108, INSTALLATION, Secondary Speed Sensor.>
- 14) Install the primary speed sensor. <Ref. to CVT(TR580)-111, INSTALLATION, Primary Speed Sensor.>
- 15) Install the turbine speed sensor. <Ref. to CVT(TR580)-106, INSTALLATION, Turbine Speed Sensor.>
- 16) Install the transmission harness. <Ref. to CVT(TR580)-141, INSTALLATION, Transmission Harness.>
- 17) Install the control valve body. <Ref. to CVT(TR580)-126, INSTALLATION, Control Valve Body.>
- 18) Install the air breather hose. <Ref. to CVT(TR580)-162, INSTALLATION, Air Breather Hose.>
- 19) Install the transmission assembly to the vehicle. <Ref. to CVT(TR580)-71, INSTALLATION, Automatic Transmission Assembly.>

C: INSPECTION

Check the reduction drive gear for breakage or damage.

Reduction Drive Gear

CONTINUOUSLY VARIABLE TRANSMISSION

D: ADJUSTMENT

- 1) Remove the retaining springs and reduction drive gear shims.
- 2) Install the transmission case, and secure it with four or five bolts.

Tightening torque:

22 N·m (2.2 kgf·m, 16.2 ft·lb)

- 3) Measure depth "A" from the ST upper face to the reduction drive gear end face.

ST 499575400 GAUGE

- 4) Raise and hold the reduction drive gear.

Reduction Drive Gear

CONTINUOUSLY VARIABLE TRANSMISSION

5) Measure depth "B" from the ST upper face to the reduction drive gear end face.

ST 499575400 GAUGE

6) Calculate the following formula.

$$T \text{ mm} = A - B - 1.0$$

$$[T \text{ in} = A - B - 0.039]$$

T: Moving distance of reduction drive gear shim

A: Depth from the ST upper face to the reduction drive gear end surface

B: Depth from the ST upper face to the reduction drive gear end surface

1.0 mm (0.039 in): Thickness of spring retainer

Moving distance of transfer drive gear [T]	Total shim thickness mm (in)
0.420 — 0.519 (0.0165 — 0.0204)	0.3 (0.012)
0.520 — 0.619 (0.0205 — 0.0242)	0.4 (0.016)
0.620 — 0.719 (0.0244 — 0.0283)	0.5 (0.020)
0.720 — 0.819 (0.0283 — 0.0322)	0.6 (0.024)
0.820 — 0.919 (0.0323 — 0.0362)	0.7 (0.028)
0.920 — 1.019 (0.0362 — 0.0401)	0.8 (0.031)
1.020 — 1.119 (0.0402 — 0.0441)	0.9 (0.035)
1.120 — 1.219 (0.0441 — 0.0480)	1.0 (0.039)
1.220 — 1.319 (0.0480 — 0.0519)	1.1 (0.043)
1.320 — 1.419 (0.0520 — 0.0559)	1.2 (0.047)
1.420 — 1.519 (0.0559 — 0.0598)	1.3 (0.051)
1.520 — 1.619 (0.0598 — 0.0637)	1.4 (0.055)
1.620 — 1.719 (0.0638 — 0.0677)	1.5 (0.059)
1.720 — 1.819 (0.0677 — 0.0716)	1.6 (0.063)
1.820 — 1.920 (0.0717 — 0.0756)	1.7 (0.067)

7) Select one to three reduction drive gear shims so that the total thickness meets the value obtained from step 6).

Part No.	Reduction drive gear shim thickness mm (in)
31288AA260	0.3 (0.012)
31288AA270	0.4 (0.016)
31288AA280	0.5 (0.020)
31288AA290	0.6 (0.024)

37.Primary Pulley and Secondary Pulley

A: REMOVAL

NOTE:

Always replace primary pulley and secondary pulley as an assembly because they are non-disassembled parts.

- 1) Remove the transmission assembly from the vehicle. <Ref. to CVT(TR580)-59, REMOVAL, Automatic Transmission Assembly.>
- 2) Remove the air breather hose. <Ref. to CVT(TR580)-160, REMOVAL, Air Breather Hose.>
- 3) Remove the control valve body. <Ref. to CVT(TR580)-119, REMOVAL, Control Valve Body.>
- 4) Remove the transmission harness. <Ref. to CVT(TR580)-134, REMOVAL, Transmission Harness.>
- 5) Remove the turbine speed sensor. <Ref. to CVT(TR580)-106, REMOVAL, Turbine Speed Sensor.>
- 6) Remove the secondary speed sensor. <Ref. to CVT(TR580)-108, REMOVAL, Secondary Speed Sensor.>
- 7) Remove the primary speed sensor. <Ref. to CVT(TR580)-110, REMOVAL, Primary Speed Sensor.>
- 8) Remove the inhibitor switch. <Ref. to CVT(TR580)-101, REMOVAL, Inhibitor Switch.>
- 9) Remove the extension case. <Ref. to CVT(TR580)-170, REMOVAL, Extension Case.>
- 10) Remove the transfer clutch assembly. <Ref. to CVT(TR580)-174, REMOVAL, Transfer Clutch.>
- 11) Remove the transfer driven gear assembly. <Ref. to CVT(TR580)-189, REMOVAL, Transfer Driven Gear.>
- 12) Remove the parking pawl. <Ref. to CVT(TR580)-192, REMOVAL, Parking Pawl.>
- 13) Remove the reduction driven gear assembly. <Ref. to CVT(TR580)-194, REMOVAL, Reduction Driven Gear.>
- 14) Remove the oil pan and oil strainer. <Ref. to CVT(TR580)-115, REMOVAL, Oil Pan and Strainer.>
- 15) Remove the transmission control device. <Ref. to CVT(TR580)-202, REMOVAL, Transmission Control Device.>
- 16) Remove the transmission case. <Ref. to CVT(TR580)-208, REMOVAL, Transmission Case.>
- 17) Remove the reduction drive gear. <Ref. to CVT(TR580)-226, REMOVAL, Reduction Drive Gear.>
- 18) Set the ST to secondary pulley, expand the V groove of pulley, and then completely loosen the variator chain.

ST 18769AA010 EXPANDER PULLEY

AT-06454

Primary Pulley and Secondary Pulley

CONTINUOUSLY VARIABLE TRANSMISSION

- 19) Remove the chain guide.
- (1) Remove the chain guide from lubrication pipe.
 - (2) Detach the four claws to remove the chain guide.

- (3) Remove the lubrication pipe.

Primary Pulley and Secondary Pulley

CONTINUOUSLY VARIABLE TRANSMISSION

- (4) Remove the support rod mounting bolts.

- (5) Raise the support rod to remove the chain guide.

Primary Pulley and Secondary Pulley

CONTINUOUSLY VARIABLE TRANSMISSION

(6) Move the chain guide to the secondary pulley side.

(7) Detach the four claws to remove the chain guide.

Primary Pulley and Secondary Pulley

CONTINUOUSLY VARIABLE TRANSMISSION

(8) Remove the support rod.

CAUTION:

Protect the both pulleys and variator chain from scratching.

AT-06678

20) Remove the primary pulley mounting bolt.

AT-06679

Primary Pulley and Secondary Pulley

CONTINUOUSLY VARIABLE TRANSMISSION

21) Remove the primary pulley from the reverse brake housing and intersect the V groove of secondary pulley and the V groove of primary pulley. Remove the variator chain from primary pulley, and remove the primary pulley.

CAUTION:

Cover the V grooves of secondary pulley and primary pulley with cloth to protect the both pulleys and variator chain from scratching.

22) Remove the ST (EXPANDER PULLEY) from the secondary pulley.

23) Remove the variator chain from secondary pulley.

24) Remove the secondary pulley mounting bolts, and remove the secondary pulley.

Primary Pulley and Secondary Pulley

CONTINUOUSLY VARIABLE TRANSMISSION

25) Remove the seal ring from drive pinion retainer.

26) Remove the seal ring from the input shaft.

Primary Pulley and Secondary Pulley

CONTINUOUSLY VARIABLE TRANSMISSION

B: INSTALLATION

1) Select shims for pulley alignment. <Ref. to CVT(TR580)-245, ADJUSTMENT, Primary Pulley and Secondary Pulley.>

2) Install the seal ring to the input shaft.

NOTE:

- Use new seal rings.
- When installing the seal rings, do not expand the seal rings too much.
- Apply CVTF to the seal rings.

CVT10183

3) Install the seal ring to drive pinion retainer.

NOTE:

- Use new seal rings.
- Apply CVTF to the seal rings.

AT-06713

Primary Pulley and Secondary Pulley

CONTINUOUSLY VARIABLE TRANSMISSION

- 4) Install the selected shims to the primary pulley bearing catch surface.
- 5) Install the secondary pulley to the drive pinion retainer.

CVT00818

- 6) Install and tighten the secondary pulley securing bolts.
 - (1) Tighten the three bolts until the seating surfaces contact the bearing retainer.

NOTE:

- Be careful not to tilt the bearing retainer of the secondary pulley.
- Apply CVTF to the bolt.

AT-06716

- (A) Secondary pulley
(B) Bearing retainer

Primary Pulley and Secondary Pulley

CONTINUOUSLY VARIABLE TRANSMISSION

(2) Tighten the bolts in the order of (A) → (B) → (C) → (B).

Tightening torque:

67.5 N·m (6.9 kgf·m, 49.8 ft·lb)

CVT00819

7) Place the variator chain on the V groove of the secondary pulley, and set the ST.
ST 18769AA010 EXPANDER PULLEY

AT-06883

8) Expand the V groove of the secondary pulley.

Primary Pulley and Secondary Pulley

CONTINUOUSLY VARIABLE TRANSMISSION

9) Install the primary pulley to the reverse brake housing together with the variator chain.

CAUTION:

Cover the V grooves of primary pulley and secondary pulley with cloth to protect the both pulleys and variator chain from scratching.

(1) Intersect the V groove of primary pulley and the V groove of secondary pulley and install the secondary pulley while placing the variator chain on secondary pulley.

AT-06879

(2) Install the primary pulley to the reverse brake housing so that the bolt hole of primary bearing retainer and the bolt hole of reverse brake housing are aligned.

10) Install the primary pulley bolt.

Tightening torque:

21 N·m (2.1 kgf·m, 15.5 ft·lb)

AT-06679

Primary Pulley and Secondary Pulley

CONTINUOUSLY VARIABLE TRANSMISSION

11) Install the chain guide.

(1) Place the support rod inside of the variator chain.

CAUTION:

Protect the both pulleys and variator chain from scratching.

(2) Install the chain guide to the variator chain.

Primary Pulley and Secondary Pulley

CONTINUOUSLY VARIABLE TRANSMISSION

(3) Move the chain guide to the support rod side.

(4) While holding the support rod, press the chain guide so that the support rod runs through between the protrusions of chain guide and install the chain guide to the support rod.

AT-06680

(5) Install the support rod.

Tightening torque:

21 N·m (2.1 kgf·m, 15.5 ft·lb)

AT-06657

Primary Pulley and Secondary Pulley

CONTINUOUSLY VARIABLE TRANSMISSION

(6) Install the lubrication pipe.

Tightening torque:

21 N·m (2.1 kgf·m, 15.5 ft·lb)

(7) Install the chain guide so that the lubrication pipe runs through between the protrusions of each chain guide. Then remove the ST (PULLEY EXPANDER).

- 12) Install the reduction drive gear. <Ref. to CVT(TR580)-227, INSTALLATION, Reduction Drive Gear.>
- 13) Select the reduction drive gear shim. <Ref. to CVT(TR580)-229, ADJUSTMENT, Reduction Drive Gear.>
- 14) Install the transmission case. <Ref. to CVT(TR580)-211, INSTALLATION, Transmission Case.>
- 15) Install the transmission control device. <Ref. to CVT(TR580)-205, INSTALLATION, Transmission Control Device.>
- 16) Install the oil strainer and oil pan. <Ref. to CVT(TR580)-116, INSTALLATION, Oil Pan and Strainer.>
- 17) Install the reduction driven gear assembly. <Ref. to CVT(TR580)-194, INSTALLATION, Reduction Driven Gear.>
- 18) Install the transfer driven gear assembly. <Ref. to CVT(TR580)-190, INSTALLATION, Transfer Driven Gear.>
- 19) Install the transfer clutch assembly. <Ref. to CVT(TR580)-176, INSTALLATION, Transfer Clutch.>
- 20) Install the parking pawl. <Ref. to CVT(TR580)-193, INSTALLATION, Parking Pawl.>
- 21) Install the extension case. <Ref. to CVT(TR580)-171, INSTALLATION, Extension Case.>

Primary Pulley and Secondary Pulley

CONTINUOUSLY VARIABLE TRANSMISSION

- 22) Install the inhibitor switch. <Ref. to CVT(TR580)-103, INSTALLATION, Inhibitor Switch.>
- 23) Install the secondary speed sensor. <Ref. to CVT(TR580)-108, INSTALLATION, Secondary Speed Sensor.>
- 24) Install the primary speed sensor. <Ref. to CVT(TR580)-111, INSTALLATION, Primary Speed Sensor.>
- 25) Install the turbine speed sensor. <Ref. to CVT(TR580)-106, INSTALLATION, Turbine Speed Sensor.>
- 26) Install the transmission harness. <Ref. to CVT(TR580)-141, INSTALLATION, Transmission Harness.>
- 27) Install the control valve body. <Ref. to CVT(TR580)-126, INSTALLATION, Control Valve Body.>
- 28) Install the air breather hose. <Ref. to CVT(TR580)-162, INSTALLATION, Air Breather Hose.>
- 29) Install the transmission assembly to the vehicle. <Ref. to CVT(TR580)-71, INSTALLATION, Automatic Transmission Assembly.>

C: INSPECTION

- Check the surface of primary and secondary pulley cones for damage or wear.
- Check the primary and secondary pulley for damage.
- Check the bearing for seizure or wear.
- Apply CVTF to bearing and rotate the bearing to check for noise or dragging etc.

D: ADJUSTMENT

1. PROCEDURE IN REPLACEMENT OF PRIMARY AND SECONDARY PULLEY, OR IN REPLACEMENT OF PRIMARY PULLEY, SECONDARY PULLEY AND VARIATOR CHAIN

- 1) Measure depth "Lp" from the ST upper face to the primary pulley bearing catch surface at several points and calculate the average.

ST 499575400 GAUGE

Primary Pulley and Secondary Pulley

CONTINUOUSLY VARIABLE TRANSMISSION

2) Measure the depth “Ls” from the ST upper face to the secondary pulley bearing catch surface at several points and calculate the average.

ST 499575400 GAUGE

AT-06884

3) Calculate the following formula.

Calculation formula:

$$T \text{ (mm)} = B - A + Lp - Ls - 28.602$$

$$[T \text{ (in)} = B - A + Lp - Ls - 1.126]$$

T: Pulley alignment

A: Specified primary pulley dimension

B: Specified secondary pulley dimension

Lp: Depth from the ST upper face to the primary pulley bearing catch surface

Ls: Depth from the ST upper face to the secondary pulley bearing catch surface

28.602 mm (1.126 in): Constant

Pulley alignment T mm (in)	Thickness of shim mm (in)
-0.05 — 0.049 (-0.002 — 0.002)	No shims
0.050 — 0.149 (0.002 — 0.006)	0.1 (0.004)
0.150 — 0.249 (0.006 — 0.010)	0.2 (0.008)
0.250 — 0.349 (0.010 — 0.014)	0.3 (0.012)
0.350 — 0.449 (0.014 — 0.018)	0.4 (0.016)
0.450 — 0.549 (0.018 — 0.022)	0.5 (0.020)
0.550 — 0.649 (0.022 — 0.026)	0.6 (0.024)
0.650 — 0.749 (0.026 — 0.029)	0.7 (0.028)
0.750 — 0.849 (0.029 — 0.033)	0.8 (0.031)
0.850 — 0.949 (0.033 — 0.037)	0.9 (0.035)
0.950 — 1.049 (0.037 — 0.041)	1.0 (0.039)
1.050 — 1.149 (0.041 — 0.045)	1.1 (0.043)

Primary Pulley and Secondary Pulley

CONTINUOUSLY VARIABLE TRANSMISSION

4) Select one to two shims so that the total thickness meets the value obtained from step 3).

Part No.	Shim thickness mm (in)
32451AA050	0.1 (0.004)
32451AA060	0.2 (0.008)
32451AA070	0.3 (0.012)
32451AA080	0.4 (0.016)
32451AA090	0.5 (0.020)
32451AA100	0.6 (0.024)

2. PROCEDURE WHEN REPLACING ONLY DRIVE PINION RETAINER OR REVERSE BRAKE HOUSING

- 1) Clean the mating surface of current drive pinion retainer and converter case.
- 2) Measure and record the shim thickness that is attached on the current reverse brake housing.
- 3) Using the current drive pinion retainer, measure depth "Lp1" from the ST upper face to the primary pulley bearing catch surface at several points and calculate the average.

ST 499575400 GAUGE

Primary Pulley and Secondary Pulley

CONTINUOUSLY VARIABLE TRANSMISSION

4) Using the current drive pinion retainer or current reverse brake housing, measure the depth “Ls1” from the ST upper face to the secondary pulley bearing catch surface at several points and calculate the average.

ST 499575400 GAUGE

5) Calculate the “LD1” using the following formula and record it.

Calculation formula:

$$LD1 \text{ mm (in)} = Ls1 - Lp1$$

LD1: Height from the primary pulley bearing catch surface to the secondary pulley bearing catch surface

Lp1: Depth from the ST upper face to the primary pulley bearing catch surface

Ls1: Depth from the ST upper face to the secondary pulley bearing catch surface

6) Using the new drive pinion retainer or new reverse brake housing, measure the depth “Lp2” from the ST upper face to the primary pulley bearing catch surface at several points and calculate the average.

ST 499575400 GAUGE

Primary Pulley and Secondary Pulley

CONTINUOUSLY VARIABLE TRANSMISSION

7) Using the new drive pinion retainer or new reverse brake housing, measure the depth “Ls2” from the ST upper face to the secondary pulley bearing catch surface at several points and calculate the average.

ST 499575400 GAUGE

8) Calculate the “LD2” using the following formula and record it.

Calculation formula:

$$LD2 \text{ mm (in)} = Ls2 - Lp2$$

LD2: Height from the primary pulley bearing catch surface to the secondary pulley bearing catch surface

Lp2: Depth from the ST upper face to the primary pulley bearing catch surface

Ls2: Depth from the ST upper face to the secondary pulley bearing catch surface

Primary Pulley and Secondary Pulley

CONTINUOUSLY VARIABLE TRANSMISSION

9) Calculate the recorded values of “LD1” and “LD2” to obtain the positive number to select the shims.

Calculation formula: $T1 \text{ mm (in)} = LD1 - LD2$ or $T2 \text{ mm (in)} = LD2 - LD1$

T1, T2: Difference between new drive pinion retainer or new reverse brake housing and current drive pinion retainer or current reverse brake housing

LD1: Calculated value of current drive pinion retainer or current reverse brake housing

LD2: Calculated value of new drive pinion retainer or new reverse brake housing

Difference of the case (T1) mm (in)	Shim selection procedure
0 — 0.050 (0 — 0.00197)	Select a new shim of the same thickness with the shim that is used on the primary pulley side of the current reverse brake housing.
0.051 — 0.150 (0.00201 — 0.00591)	Select a shim which is 0.1 mm (0.004 in) thicker than the shim that is used on the primary pulley side of the current reverse brake housing.
0.151 — 0.250 (0.00594 — 0.00984)	Select a shim which is 0.2 mm (0.008 in) thicker than the shim that is used on the primary pulley side of the current reverse brake housing.
0.251 — 0.350 (0.00988 — 0.01378)	Select a shim which is 0.3 mm (0.012 in) thicker than the shim that is used on the primary pulley side of the current reverse brake housing.
0.351 — 0.450 (0.01382 — 0.01772)	Select a shim which is 0.4 mm (0.016 in) thicker than the shim that is used on the primary pulley side of the current reverse brake housing.
0.451 — 0.550 (0.01776 — 0.02165)	Select a shim which is 0.5 mm (0.020 in) thicker than the shim that is used on the primary pulley side of the current reverse brake housing.
0.551 — 0.600 (0.02169 — 0.02362)	Select a shim which is 0.6 mm (0.024 in) thicker than the shim that is used on the primary pulley side of the current reverse brake housing.

Difference of the case (T2) mm (in)	Shim selection procedure
0 — 0.050 (0 — 0.00197)	Select a new shim of the same thickness with the shim that is used on the primary pulley side of the current reverse brake housing.
0.051 — 0.150 (0.00201 — 0.00591)	Select a shim which is 0.1 mm (0.004 in) thinner than the shim that is used on the primary pulley side of the current reverse brake housing.
0.151 — 0.250 (0.00594 — 0.00984)	Select a shim which is 0.2 mm (0.008 in) thinner than the shim that is used on the primary pulley side of the current reverse brake housing.
0.251 — 0.350 (0.00988 — 0.01378)	Select a shim which is 0.3 mm (0.012 in) thinner than the shim that is used on the primary pulley side of the current reverse brake housing.
0.351 — 0.450 (0.01382 — 0.01772)	Select a shim which is 0.4 mm (0.016 in) thinner than the shim that is used on the primary pulley side of the current reverse brake housing.
0.451 — 0.550 (0.01776 — 0.02165)	Select a shim which is 0.5 mm (0.020 in) thinner than the shim that is used on the primary pulley side of the current reverse brake housing.
0.551 — 0.600 (0.02169 — 0.02362)	Select a shim which is 0.6 mm (0.024 in) thinner than the shim that is used on the primary pulley side of the current reverse brake housing.

Part No.	Shim thickness mm (in)
32451AA050	0.1 (0.004)
32451AA060	0.2 (0.008)
32451AA070	0.3 (0.012)
32451AA080	0.4 (0.016)
32451AA090	0.5 (0.020)
32451AA100	0.6 (0.024)

38. Variator Chain

A: REMOVAL

For removal of variator chain, refer to “Primary Pulley and Secondary Pulley”. <Ref. to CVT(TR580)-231, REMOVAL, Primary Pulley and Secondary Pulley.>

B: INSTALLATION

For installation of variator chain, refer to “Primary Pulley and Secondary Pulley”. <Ref. to CVT(TR580)-238, INSTALLATION, Primary Pulley and Secondary Pulley.>

C: INSPECTION

Check the variator chain for damage and wear.

Reverse Brake Assembly

CONTINUOUSLY VARIABLE TRANSMISSION

39.Reverse Brake Assembly

A: REMOVAL

- 1) Remove the transmission assembly from the vehicle. <Ref. to CVT(TR580)-59, REMOVAL, Automatic Transmission Assembly.>
- 2) Remove the air breather hose. <Ref. to CVT(TR580)-160, REMOVAL, Air Breather Hose.>
- 3) Remove the control valve body. <Ref. to CVT(TR580)-119, REMOVAL, Control Valve Body.>
- 4) Remove the transmission harness. <Ref. to CVT(TR580)-134, REMOVAL, Transmission Harness.>
- 5) Remove the turbine speed sensor. <Ref. to CVT(TR580)-106, REMOVAL, Turbine Speed Sensor.>
- 6) Remove the secondary speed sensor. <Ref. to CVT(TR580)-108, REMOVAL, Secondary Speed Sensor.>
- 7) Remove the primary speed sensor. <Ref. to CVT(TR580)-110, REMOVAL, Primary Speed Sensor.>
- 8) Remove the inhibitor switch. <Ref. to CVT(TR580)-101, REMOVAL, Inhibitor Switch.>
- 9) Remove the extension case. <Ref. to CVT(TR580)-170, REMOVAL, Extension Case.>
- 10) Remove the transfer clutch assembly. <Ref. to CVT(TR580)-174, REMOVAL, Transfer Clutch.>
- 11) Remove the transfer driven gear assembly. <Ref. to CVT(TR580)-189, REMOVAL, Transfer Driven Gear.>
- 12) Remove the parking pawl. <Ref. to CVT(TR580)-192, REMOVAL, Parking Pawl.>
- 13) Remove the reduction driven gear assembly. <Ref. to CVT(TR580)-194, REMOVAL, Reduction Driven Gear.>
- 14) Remove the oil pan and oil strainer. <Ref. to CVT(TR580)-115, REMOVAL, Oil Pan and Strainer.>
- 15) Remove the transmission control device. <Ref. to CVT(TR580)-202, REMOVAL, Transmission Control Device.>
- 16) Remove the transmission case. <Ref. to CVT(TR580)-208, REMOVAL, Transmission Case.>
- 17) Remove the reduction drive gear. <Ref. to CVT(TR580)-226, REMOVAL, Reduction Drive Gear.>
- 18) Remove the primary pulley, secondary pulley and variator chain. <Ref. to CVT(TR580)-231, REMOVAL, Primary Pulley and Secondary Pulley.>
- 19) Remove the manual valve assembly.

Reverse Brake Assembly

CONTINUOUSLY VARIABLE TRANSMISSION

20) Remove the oil guide and lubrication pipe.

(A) Lubrication pipe

(B) Oil guide

21) Remove the O-ring from lubrication pipe.

Reverse Brake Assembly

CONTINUOUSLY VARIABLE TRANSMISSION

22) Remove the reverse brake assembly.

23) Remove the O-ring.

Reverse Brake Assembly

CONTINUOUSLY VARIABLE TRANSMISSION

B: INSTALLATION

- 1) Select a washer. <Ref. to CVT(TR580)-285, ADJUSTMENT, Forward Clutch Assembly.>
- 2) Install the selected washer to the reverse brake housing.

- 3) Install the thrust bearing to the reverse brake housing.

NOTE:

Face the temper color surface to the reverse brake side.

Reverse Brake Assembly

CONTINUOUSLY VARIABLE TRANSMISSION

4) Remove the internal gear from the forward clutch assembly, and install it to the reverse brake housing.

5) Install the O-rings.

NOTE:

- Install a new O-ring.
- Apply CVTF to the O-rings.

Reverse Brake Assembly

CONTINUOUSLY VARIABLE TRANSMISSION

6) Install the reverse brake assembly and internal gear as a unit to the drive pinion retainer.

NOTE:

Slowly rotate the input shaft by hand to engage the internal gear and pinion gear of planetary carrier.

Tightening torque:

37 N·m (3.8 kgf·m, 27.3 ft·lb)

7) Install the O-ring to the lubrication pipe.

NOTE:

- Install a new O-ring.
- Apply CVTF to the O-rings.

Reverse Brake Assembly

CONTINUOUSLY VARIABLE TRANSMISSION

8) Install the lubrication pipe and oil guide.

Tightening torque:

16 N·m (1.6 kgf·m, 11.8 ft·lb)

(A) Lubrication pipe

(B) Oil guide

9) Install the manual valve assembly and separator plate.

Tightening torque:

9 N·m (0.9 kgf·m, 6.6 ft·lb)

Reverse Brake Assembly

CONTINUOUSLY VARIABLE TRANSMISSION

- 10) Install the primary pulley, secondary pulley and variator chain. <Ref. to CVT(TR580)-238, INSTALLATION, Primary Pulley and Secondary Pulley.>
- 11) Select shims for pulley alignment. <Ref. to CVT(TR580)-245, ADJUSTMENT, Primary Pulley and Secondary Pulley.>
- 12) Install the reduction drive gear. <Ref. to CVT(TR580)-227, INSTALLATION, Reduction Drive Gear.>
- 13) Install the transmission case. <Ref. to CVT(TR580)-211, INSTALLATION, Transmission Case.>
- 14) Install the transmission control device. <Ref. to CVT(TR580)-205, INSTALLATION, Transmission Control Device.>
- 15) Install the oil strainer and oil pan. <Ref. to CVT(TR580)-116, INSTALLATION, Oil Pan and Strainer.>
- 16) Install the reduction driven gear assembly. <Ref. to CVT(TR580)-194, INSTALLATION, Reduction Driven Gear.>
- 17) Install the transfer driven gear assembly. <Ref. to CVT(TR580)-190, INSTALLATION, Transfer Driven Gear.>
- 18) Install the transfer clutch assembly. <Ref. to CVT(TR580)-176, INSTALLATION, Transfer Clutch.>
- 19) Install the parking pawl. <Ref. to CVT(TR580)-193, INSTALLATION, Parking Pawl.>
- 20) Install the extension case. <Ref. to CVT(TR580)-171, INSTALLATION, Extension Case.>
- 21) Install the inhibitor switch. <Ref. to CVT(TR580)-103, INSTALLATION, Inhibitor Switch.>
- 22) Install the secondary speed sensor. <Ref. to CVT(TR580)-108, INSTALLATION, Secondary Speed Sensor.>
- 23) Install the primary speed sensor. <Ref. to CVT(TR580)-111, INSTALLATION, Primary Speed Sensor.>
- 24) Install the turbine speed sensor. <Ref. to CVT(TR580)-106, INSTALLATION, Turbine Speed Sensor.>
- 25) Install the transmission harness. <Ref. to CVT(TR580)-141, INSTALLATION, Transmission Harness.>
- 26) Install the control valve body. <Ref. to CVT(TR580)-126, INSTALLATION, Control Valve Body.>
- 27) Install the air breather hose. <Ref. to CVT(TR580)-162, INSTALLATION, Air Breather Hose.>
- 28) Install the transmission assembly to the vehicle. <Ref. to CVT(TR580)-71, INSTALLATION, Automatic Transmission Assembly.>

C: DISASSEMBLY

- 1) Remove the snap ring.
- 2) Remove the retaining plate, drive plate, driven plate and dish plate.

CVT00821

Reverse Brake Assembly

CONTINUOUSLY VARIABLE TRANSMISSION

- 3) Compress the return spring using the ST to remove the snap ring.
ST 18762AA001 COMPRESSOR SPECIAL TOOL

- 4) Using the ST, remove the snap ring and spring retainer.

Reverse Brake Assembly

CONTINUOUSLY VARIABLE TRANSMISSION

5) Remove the return spring.

AT-06469

6) Remove the reverse brake piston by blowing compressed air intermittently from reverse brake housing hole.

CVT01455

Reverse Brake Assembly

CONTINUOUSLY VARIABLE TRANSMISSION

D: ASSEMBLY

1) Install the reverse brake piston.

NOTE:

Apply CVTF to the sealing area of reverse brake piston.

2) Install the return spring.

Reverse Brake Assembly

CONTINUOUSLY VARIABLE TRANSMISSION

3) Install the spring retainer.

AT-06468

4) Compress the return spring using the ST to install the snap ring.
ST1 18762AA001 COMPRESSOR SPECIAL TOOL

CVT00829

Reverse Brake Assembly

CONTINUOUSLY VARIABLE TRANSMISSION

5) Check the operation of reverse brake piston by blowing compressed air intermittently from reverse brake housing hole.

CVT01455

6) Place the driven plate, drive plate and retaining plate neatly in this order on surface table.

7) Set the dial gauge to retaining plate, and read its scale.

NOTE:

The value, which is read in the gauge at this time, is zero point.

8) Scale and record the weight "Z" of a flat board which will be put on retaining plate.

NOTE:

- Use a stiff board which does not bend against load as a flat board to be put on retaining plate.
- Use a flat board weighing less than 29 N (3.0 kgf, 6.5 lb).

9) Put the flat board on retaining plate.

AT-05234

Reverse Brake Assembly

CONTINUOUSLY VARIABLE TRANSMISSION

10) Using the following formula, read the push/pull gauge and calculate "N".

$$N = 29 \text{ N (3.0 kgf, 6.5 lb)} - Z$$

29 N (3.0 kgf, 6.5 lb): Load applied to clutch plate

Z: Flat board weight

11) Press the center of retaining plate by applying a force of "N" using push/pull gauge, and then measure and record the compression amount "A".

NOTE:

Measure at four points with a 90° interval and calculate the average.

- (A) Drive plate
- (B) Driven plate
- (C) Retaining plate

12) Install the dish plate, drive plate, driven plate, retaining plate and snap ring to the reverse brake housing.

NOTE:

Install the dish plate in the correct direction.

Reverse Brake Assembly

CONTINUOUSLY VARIABLE TRANSMISSION

13) Measure and record the clearance “B” between the retaining plate and snap ring.

14) Piston stroke calculation

Calculate with A and B dimensions recorded before. If it exceeds the limit, replace with a new drive plate and adjust within the initial standard value.

$$S \text{ mm (in)} = A + B$$

S: Piston stroke

A: Compression amount of drive plate and dish plate

B: Clearance between retaining plate and snap ring

Initial standard:

2.3 — 2.7 mm (0.091 — 0.106 in)

Limit thickness:

2.9 mm (0.114 in)

Retaining plate	
Part No.	Thickness mm (in)
31567AB750	4.2 (0.165)
31567AB800	4.4 (0.173)
31567AB810	4.6 (0.181)
31567AB820	4.8 (0.189)

E: INSPECTION

- Inspect the drive plate facing for wear and damage.
- Check the driven plate for discoloration (burnt color).
- Check for worn snap ring, fatigue or damaged return spring or deformed spring retainer.
- Make sure the clearance between retaining plate and snap ring of reverse brake is within the limit. If it exceeds the limit, replace with a new drive plate and select and adjust the retaining plate within the initial standard value. <Ref. to CVT(TR580)-262, ASSEMBLY, Reverse Brake Assembly.>

40. Forward Clutch Assembly

A: REMOVAL

- 1) Remove the transmission assembly from the vehicle. <Ref. to CVT(TR580)-59, REMOVAL, Automatic Transmission Assembly.>
- 2) Remove the air breather hose. <Ref. to CVT(TR580)-160, REMOVAL, Air Breather Hose.>
- 3) Remove the control valve body. <Ref. to CVT(TR580)-119, REMOVAL, Control Valve Body.>
- 4) Remove the transmission harness. <Ref. to CVT(TR580)-134, REMOVAL, Transmission Harness.>
- 5) Remove the turbine speed sensor. <Ref. to CVT(TR580)-106, REMOVAL, Turbine Speed Sensor.>
- 6) Remove the secondary speed sensor. <Ref. to CVT(TR580)-108, REMOVAL, Secondary Speed Sensor.>
- 7) Remove the primary speed sensor. <Ref. to CVT(TR580)-110, REMOVAL, Primary Speed Sensor.>
- 8) Remove the inhibitor switch. <Ref. to CVT(TR580)-101, REMOVAL, Inhibitor Switch.>
- 9) Remove the extension case. <Ref. to CVT(TR580)-170, REMOVAL, Extension Case.>
- 10) Remove the transfer clutch assembly. <Ref. to CVT(TR580)-174, REMOVAL, Transfer Clutch.>
- 11) Remove the transfer driven gear assembly. <Ref. to CVT(TR580)-189, REMOVAL, Transfer Driven Gear.>
- 12) Remove the parking pawl. <Ref. to CVT(TR580)-192, REMOVAL, Parking Pawl.>
- 13) Remove the reduction driven gear assembly. <Ref. to CVT(TR580)-194, REMOVAL, Reduction Driven Gear.>
- 14) Remove the oil pan and oil strainer. <Ref. to CVT(TR580)-115, REMOVAL, Oil Pan and Strainer.>
- 15) Remove the transmission control device. <Ref. to CVT(TR580)-202, REMOVAL, Transmission Control Device.>
- 16) Remove the transmission case. <Ref. to CVT(TR580)-208, REMOVAL, Transmission Case.>
