AIRBAG SYSTEM (DIAGNOSTICS)

Step	Check	Yes	No
4 CHECK PASSENGER'S AIRBAG MODULE. 1) Turn the ignition switch to OFF, disconnect the battery ground cable, and wait for 60 seconds or more. 2) Release the short circuit of connector (AB9). 3) Connect the passenger's airbag module connector (AB9). 4) Connect the connectors (AB7) and (AB2). 5) Connect the connector (AB66) to the driver's knee airbag module. 6) Connect the battery ground terminal and turn the ignition switch to ON. 7) Perform the Inspection Mode. <Ref. to AB(diag)-22, Inspection Mode.> 8) Read the DTC. (Current malfunction) <Ref. to AB(diag)-21, Read Diagnostic Trouble Code (DTC).>	Is DTC B1818 displayed?	Replace the passenger's airbag module. <Ref. to AB-35, REMOVAL, Passenger's Airbag Module.>	Go to step 5.
5 CHECK FOR ANY OTHER DTC ON DISPLAY.	Is any other DTC displayed?	Check DTC using "List of Diagnostic Trouble Code (DTC)". <Ref. to AB(diag)-29, List of Diagnostic Trouble Code (DTC).>	Finish the diagnosis.

Diagnostic Chart with Trouble Code

AIRBAG SYSTEM (DIAGNOSTICS)

CR:DTC B1820 SHORT IN SIDE AIRBAG RH

Diagnosis start condition:

Ignition voltage is 10 V to 16 V.

DTC detecting condition:

- Side airbag harness (RH) circuit is shorted.
- Side airbag module (RH) is faulty.
- Airbag control module is faulty.

CAUTION:

Before performing diagnosis, refer to “CAUTION” in “General Description”. <Ref. to AB(diag)-4, CAUTION, General Description.>

Wiring diagram:

Airbag system <Ref. to WI-39, WIRING DIAGRAM, Airbag System.>

Step	Check	Yes	No
1 CHECK POOR CONTACT OF CONNECTORS. Check for poor contact of the connectors between the airbag control module, side airbag module RH and the side airbag sensor RH.	Is there poor contact?	Replace the airbag rear harness along with body harness.	Go to step 2.
2 CHECK SIDE AIRBAG MODULE. 1) Turn the ignition switch to OFF, disconnect the battery ground cable, and wait for 60 seconds or more. 2) Disconnect the connector (AB24) from the side airbag module (RH), and connect the connector (1AJ) in the test harness AJ to connector (AB24). 3) Connect the airbag resistor to the test harness AJ connector (3AJ). 4) Connect the battery ground terminal and turn the ignition switch to ON.	Does the airbag warning light illuminate for 6 seconds and go off?	Replace the side airbag module (RH). <Ref. to AB-41, REMOVAL, Side Airbag Module.>	Go to step 3.

Diagnostic Chart with Trouble Code

AIRBAG SYSTEM (DIAGNOSTICS)

Step	Check	Yes	No
3 CHECK AIRBAG REAR HARNESS (SIDE AIRBAG MODULE HARNESS RH). 1) Turn the ignition switch to OFF, disconnect the battery ground cable, and wait for 60 seconds or more. 2) Disconnect the connector (AB26) from seat belt pretensioner (RH). 3) Disconnect the connector (AB33) from curtain airbag module (RH). 4) Disconnect the airbag resistor from test harness AJ. 5) Disconnect the connectors (AB6, AB17, AB18) from airbag control module. 6) Connect the connector (1AG) in the test harness AG to the connectors (AB6, AB17, AB18). 7) Measure the resistance between connector (5AG) in the test harness AG and chassis ground. Connector & terminal (5AG) No. 5 — (5AG) No. 7:	Is the resistance 1 MΩ or more?	Go to step 4.	Replace the airbag rear harness along with body harness.
4 CHECK AIRBAG CONTROL MODULE. 1) Connect all connectors. 2) Clear the memory. <Ref. to AB(diag)-23, Clear Memory Mode.> 3) Perform the Inspection Mode. <Ref. to AB(diag)-22, Inspection Mode.> 4) Read the DTC. (Current malfunction) <Ref. to AB(diag)-21, Read Diagnostic Trouble Code (DTC).>	Is DTC B1820 displayed?	Replace the airbag control module. <Ref. to AB-46, Airbag Control Module.>	Go to step 5.
5 CHECK FOR ANY OTHER DTC ON DISPLAY.	Is any other DTC displayed?	Check DTC using "List of Diagnostic Trouble Code (DTC)". <Ref. to AB(diag)-29, List of Diagnostic Trouble Code (DTC).>	Finish the diagnosis.

Diagnostic Chart with Trouble Code

AIRBAG SYSTEM (DIAGNOSTICS)

CS:DTC B1821 OPEN IN SIDE AIRBAG RH

Diagnosis start condition:

Ignition voltage is 10 V to 16 V.

DTC detecting condition:

- Side airbag harness (RH) circuit is open.
- Side airbag module (RH) is faulty.
- Airbag control module is faulty.

CAUTION:

Before performing diagnosis, refer to “CAUTION” in “General Description”. <Ref. to AB(diag)-4, CAUTION, General Description.>

Wiring diagram:

Airbag system <Ref. to WI-39, WIRING DIAGRAM, Airbag System.>

AB-10268

Step	Check	Yes	No
1 CHECK POOR CONTACT OF CONNECTORS. Check for poor contact of the connectors between the airbag control module, side airbag module RH and the side airbag sensor RH.	Is there poor contact?	Replace the airbag rear harness along with body harness.	Go to step 2.
2 CHECK SIDE AIRBAG MODULE. 1) Turn the ignition switch to OFF, disconnect the battery ground cable, and wait for 60 seconds or more. 2) Disconnect the connector (AB24) from the side airbag module (RH), and connect the connector (1AJ) in the test harness AJ to connector (AB24). 3) Connect the airbag resistor to the test harness AJ connector (3AJ). 4) Connect the battery ground terminal and turn the ignition switch to ON.	Does the airbag warning light illuminate for 6 seconds and go off?	Replace the side airbag module (RH). <Ref. to AB-41, REMOVAL, Side Airbag Module.>	Go to step 3.

Connector & terminal (6AG) No. 6 — (6AG) No. 8:	Is the resistance 1 MΩ or more?	Go to step 4.	Replace the airbag rear harness along with body harness.
4 CHECK AIRBAG CONTROL MODULE. 1) Connect all connectors. 2) Clear the memory. <Ref. to AB(diag)-23, Clear Memory Mode.> 3) Perform the Inspection Mode. <Ref. to AB(diag)-22, Inspection Mode.> 4) Read the DTC. (Current malfunction) <Ref. to AB(diag)-21, Read Diagnostic Trouble Code (DTC).>	Is DTC B1830 displayed?	Replace the airbag control module. <Ref. to AB-46, Airbag Control Module.>	Go to step 5.
5 CHECK FOR ANY OTHER DTC ON DISPLAY.	Is any other DTC displayed?	Check DTC using "List of Diagnostic Trouble Code (DTC)". <Ref. to AB(diag)-29, List of Diagnostic Trouble Code (DTC).>	Finish the diagnosis.

Diagnostic Chart with Trouble Code

AIRBAG SYSTEM (DIAGNOSTICS)

DA:DTC B1831 OPEN IN CURTAIN AIRBAG RH SQUIB CIRCUIT

Diagnosis start condition:

Ignition voltage is 10 V to 16 V.

DTC detecting condition:

- Curtain airbag harness (RH) circuit is open.
- Curtain airbag module (RH) is faulty.
- Airbag control module is faulty.

CAUTION:

Before performing diagnosis, refer to “CAUTION” in “General Description”. <Ref. to AB(diag)-4, CAUTION, General Description.>

Wiring diagram:

Airbag system <Ref. to WI-39, WIRING DIAGRAM, Airbag System.>

AB-10270

Step	Check	Yes	No
1 CHECK POOR CONTACT OF CONNECTORS. Check for poor contact of the connectors between the airbag control module, curtain airbag module RH and the curtain airbag sensor RH.	Is there poor contact?	Replace the airbag rear harness along with body harness.	Go to step 2.
2 CHECK CURTAIN AIRBAG MODULE. 1) Turn the ignition switch to OFF, disconnect the battery ground cable, and wait for 60 seconds or more. 2) Disconnect the connector (AB33) from curtain airbag module (RH). 3) Connect the connector (1N) in the test harness N to the connector (AB33). 4) Connect the airbag resistor to the connector (2N) of test harness N. 5) Connect the battery ground terminal and turn the ignition switch to ON.	Does the airbag warning light illuminate for 6 seconds and go off?	Replace the curtain airbag module (RH). <Ref. to AB-44, Curtain Airbag Module.>	Go to step 3.

Diagnostic Chart with Trouble Code

AIRBAG SYSTEM (DIAGNOSTICS)

Step	Check	Yes	No
3 CHECK AIRBAG REAR HARNESS (CURTAIN AIRBAG MODULE HARNESS RH). 1) Turn the ignition switch to OFF, disconnect the battery ground cable, and wait for 60 seconds or more. 2) Disconnect the connector (AB26) from seat belt pretensioner (RH). 3) Disconnect connector (AB24) from side airbag module (RH). 4) Disconnect the airbag resistor from test harness N. 5) Disconnect the connectors (AB6, AB17, AB18) from airbag control module. 6) Connect the connector (1AG) in the test harness AG to the connectors (AB6, AB17, AB18). 7) Measure the resistance between connector (6AG) in the test harness AG and connector (2N) in the test harness N. Connector & terminal (6AG) No. 8 — (2N) No. 2: (6AG) No. 6 — (2N) No. 1:	Is the resistance less than 10 Ω ?	Go to step 4.	Replace the airbag rear harness along with body harness.
4 CHECK AIRBAG CONTROL MODULE. 1) Connect all connectors. 2) Clear the memory. <Ref. to AB(diag)-23, Clear Memory Mode.> 3) Perform the Inspection Mode. <Ref. to AB(diag)-22, Inspection Mode.> 4) Read the DTC. (Current malfunction) <Ref. to AB(diag)-21, Read Diagnostic Trouble Code (DTC).>	Is DTC B1831 displayed?	Replace the airbag control module. <Ref. to AB-46, Airbag Control Module.>	Go to step 5.
5 CHECK FOR ANY OTHER DTC ON DISPLAY.	Is any other DTC displayed?	Check DTC using "List of Diagnostic Trouble Code (DTC)". <Ref. to AB(diag)-29, List of Diagnostic Trouble Code (DTC).>	Finish the diagnosis.

Diagnostic Chart with Trouble Code

AIRBAG SYSTEM (DIAGNOSTICS)

DB:DTC B1832 SHORT IN CURTAIN AIRBAG RH SQUIB CIRCUIT (TO GROUND)

Diagnosis start condition:

Ignition voltage is 10 V to 16 V.

DTC detecting condition:

- Curtain airbag harness (RH) circuit is shorted to ground.
- Curtain airbag module (RH) is faulty.
- Airbag control module is faulty.

CAUTION:

Before performing diagnosis, refer to “CAUTION” in “General Description”. <Ref. to AB(diag)-4, CAUTION, General Description.>

Wiring diagram:

Airbag system <Ref. to WI-39, WIRING DIAGRAM, Airbag System.>

1 CHECK POOR CONTACT OF CONNECTORS. Check for poor contact of the connectors between the airbag control module and the knee airbag module.	Is there poor contact?	Replace the airbag harness.	Go to step 2.
2 CHECK KNEE AIRBAG MODULE. 1) Turn the ignition switch to OFF, disconnect the battery ground cable, and wait for 60 seconds or more. 2) Disconnect the connector (AB66) from knee airbag module. 3) Connect the connector (1N) in the test harness N to the connector (AB66). 4) Connect the airbag resistor to the connector (2N) of test harness N. 5) Connect the battery ground terminal and turn the ignition switch to ON.	Does the airbag warning light illuminate for six seconds and go off?	Replace the knee airbag module. <Ref. to AB-34, REMOVAL, Knee Airbag Module.>	Go to step 3.

Diagnostic Chart with Trouble Code

AIRBAG SYSTEM (DIAGNOSTICS)

Step	Check	Yes	No
3 CHECK AIRBAG MAIN HARNESS (KNEE AIRBAG HARNESS). 1) Turn the ignition switch to OFF, disconnect the battery ground cable, and wait for 60 seconds or more. 2) Disconnect the airbag resistor from test harness N. 3) Remove the instrument panel lower cover and column cover, and disconnect the connector (AB7) from (AB2). 4) Remove the console front panel and disconnect the connector (AB9). 5) Disconnect the connectors (AB6, AB17, AB18) from the airbag control module, and connect the connector (1AG) in the test harness AG to connectors (AB6, AB17, AB18). 6) Measure the resistance between connector (3AG) in the test harness AG and chassis ground. Connector & terminal (3AG) No. 14 — Chassis ground: (3AG) No. 16 — Chassis ground:	Is the resistance 1 MΩ or more?	Go to step 4.	Replace the airbag main harness along with body harness.
4 CHECK AIRBAG CONTROL MODULE. 1) Connect all connectors. 2) Clear the memory. <Ref. to AB(diag)-23, Clear Memory Mode.> 3) Perform the Inspection Mode. <Ref. to AB(diag)-22, Inspection Mode.> 4) Read the DTC. (Current malfunction) <Ref. to AB(diag)-21, Read Diagnostic Trouble Code (DTC).>	Is DTC B1862 displayed?	Replace the airbag control module. <Ref. to AB-46, Airbag Control Module.>	Go to step 5.
5 CHECK FOR ANY OTHER DTC ON DISPLAY.	Is any other DTC displayed?	Check DTC using "List of Diagnostic Trouble Code (DTC)". <Ref. to AB(diag)-29, List of Diagnostic Trouble Code (DTC).>	Finish the diagnosis.

Diagnostic Chart with Trouble Code

AIRBAG SYSTEM (DIAGNOSTICS)

DK:DTC B1863 SHORT IN DRIVER'S KNEE AIRBAG (TO +B)

Diagnosis start condition:

Ignition voltage is 10 V to 16 V.

DTC detecting condition:

- Airbag main harness circuit is shorted to power supply.
- Knee airbag module harness circuit is shorted to power supply.
- Knee airbag module is faulty.
- Airbag control module is faulty.

CAUTION:

Before performing diagnosis, refer to "CAUTION" in "General Description". <Ref. to AB(diag)-4, CAUTION, General Description.>

Wiring diagram:

Airbag system <Ref. to WI-39, WIRING DIAGRAM, Airbag System.>

Step	Check	Yes	No
1 CHECK POOR CONTACT OF CONNECTORS. Check for poor contact of the connectors between the airbag control module and the knee airbag module.	Is there poor contact?	Replace the airbag harness.	Go to step 2.
2 CHECK KNEE AIRBAG MODULE. 1) Turn the ignition switch to OFF, disconnect the battery ground cable, and wait for 60 seconds or more. 2) Disconnect the connector (AB66) from knee airbag module. 3) Connect the connector (1N) in the test harness N to the connector (AB66). 4) Connect the airbag resistor to the connector (2N) of test harness N. 5) Connect the battery ground terminal and turn the ignition switch to ON.	Does the airbag warning light illuminate for six seconds and go off?	Replace the knee airbag module. <Ref. to AB-34, REMOVAL, Knee Airbag Module.>	Go to step 3.

Diagnostic Chart with Trouble Code

AIRBAG SYSTEM (DIAGNOSTICS)

Step	Check	Yes	No
3 CHECK AIRBAG REAR HARNESS (PRE-TENSIONER HARNESS LH). 1) Turn the ignition switch to OFF, disconnect the battery ground cable, and wait for 60 seconds or more. 2) Disconnect the airbag resistor from the connector (2N) of test harness N. 3) Disconnect connector (AB19) from side airbag module (LH). 4) Disconnect the connector (AB31) from curtain airbag module (LH). 5) Disconnect the connectors (AB6, AB17, AB18) from airbag control module. 6) Connect the connector (1AG) in the test harness AG to the connectors (AB6, AB17, AB18). 7) Connect the battery ground terminal and turn the ignition switch to ON. 8) Measure the voltage between connector (3AG) in the test harness AG and chassis ground. Connector & terminal (3AG) No. 10 (+) — Chassis ground (-): (3AG) No. 12 (+) — Chassis ground (-):	Is the voltage less than 1 V?	Go to step 4.	Replace the airbag rear harness along with body harness.
4 CHECK AIRBAG CONTROL MODULE. 1) Connect all connectors. 2) Clear the memory. <Ref. to AB(diag)-23, Clear Memory Mode.> 3) Perform the Inspection Mode. <Ref. to AB(diag)-22, Inspection Mode.> 4) Read the DTC. (Current malfunction) <Ref. to AB(diag)-21, Read Diagnostic Trouble Code (DTC).>	Is DTC B1908 displayed?	Replace the airbag control module. <Ref. to AB-46, Airbag Control Module.>	Go to step 5.
5 CHECK FOR ANY OTHER DTC ON DISPLAY.	Is any other DTC displayed?	Check DTC using "List of Diagnostic Trouble Code (DTC)". <Ref. to AB(diag)-29, List of Diagnostic Trouble Code (DTC).>	Finish the diagnosis.

Diagnostic Chart with Trouble Code

AIRBAG SYSTEM (DIAGNOSTICS)

DT:DTC B19F0 SHORT IN FRONT P/T 2 RH

Diagnosis start condition:

Ignition voltage is 10 V to 16 V.

DTC detecting condition:

- Lap seat belt pretensioner (RH) circuit is shorted.
- Lap seat belt pretensioner (RH) is faulty.
- Lap seat belt pretensioner harness (RH) is shorted.
- Airbag control module is faulty.

CAUTION:

Before performing diagnosis, refer to “CAUTION” in “General Description”. <Ref. to AB(diag)-4, CAUTION, General Description.>

Wiring diagram:

Airbag system <Ref. to WI-39, WIRING DIAGRAM, Airbag System.>

AB-03040

Step	Check	Yes	No
1 CHECK POOR CONTACT OF CONNECTORS. Check for poor contact of the connectors between the airbag control module and the lap seat belt pretensioner (RH).	Is there poor contact?	Replace the airbag rear harness along with body harness.	Go to step 2.
2 CHECK LAP SEAT BELT PRETENSIONER. 1) Turn the ignition switch to OFF, disconnect the battery ground cable, and wait for 60 seconds or more. 2) Disconnect the connector (AB30) from lap seat belt pretensioner (RH). 3) Connect the connector (1N) in the test harness N to the connector (AB30). 4) Connect the airbag resistor to the connector (2N) of test harness N. 5) Connect the battery ground terminal and turn the ignition switch to ON.	Does the airbag warning light illuminate for 6 seconds and go off?	Replace the lap seat belt pretensioner (RH). <Ref. to SB-17, SEAT BELT INNER - FRONT, REMOVAL, Front Seat Belt.>	Go to step 3.

Diagnostic Chart with Trouble Code

AIRBAG SYSTEM (DIAGNOSTICS)

Step	Check	Yes	No
3 CHECK AIRBAG REAR HARNESS (LAP SEAT BELT PRETENSIONER HARNESS RH). 1) Turn the ignition switch to OFF, disconnect the battery ground cable, and wait for 60 seconds or more. 2) Disconnect the airbag resistor from test harness N. 3) Disconnect the connector (AB33) from curtain airbag module (RH). 4) Disconnect connector (AB24) from side airbag module (RH). 5) Disconnect the connector (AB26) from seat belt pretensioner. 6) Disconnect the connectors (AB6, AB17, AB18) from airbag control module. 7) Connect the connector (1AG) in the test harness AG to the connectors (AB6, AB17, AB18). 8) Measure the resistance between connector (3AG) terminals in test harness AG. Connector & terminal (3AG) No. 17 — (3AG) No. 19:	Is the resistance less than 10 Ω?	Go to step 4.	Replace the airbag rear harness along with body harness.
4 CHECK AIRBAG CONTROL MODULE. 1) Connect all connectors. 2) Clear the memory. <Ref. to AB(diag)-23, Clear Memory Mode.> 3) Perform the Inspection Mode. <Ref. to AB(diag)-22, Inspection Mode.> 4) Read the DTC. (Current malfunction) <Ref. to AB(diag)-21, Read Diagnostic Trouble Code (DTC).>	Is DTC B19F0 displayed?	Replace the airbag control module. <Ref. to AB-46, Airbag Control Module.>	Go to step 5.
5 CHECK FOR ANY OTHER DTC ON DISPLAY.	Is any other DTC displayed?	Check DTC using "List of Diagnostic Trouble Code (DTC)". <Ref. to AB(diag)-29, List of Diagnostic Trouble Code (DTC).>	Finish the diagnosis.

Diagnostic Chart with Trouble Code

AIRBAG SYSTEM (DIAGNOSTICS)

DU:DTC B19F1 OPEN IN FRONT P/T 2 RH

Diagnosis start condition:

Ignition voltage is 10 V to 16 V.

DTC detecting condition:

- Lap seat belt pretensioner (RH) circuit is open.
- Lap seat belt pretensioner (RH) is faulty.
- Lap seat belt pretensioner harness (RH) is open.
- Airbag control module is faulty.

CAUTION:

Before performing diagnosis, refer to “CAUTION” in “General Description”. <Ref. to AB(diag)-4, CAUTION, General Description.>

Wiring diagram:

Airbag system <Ref. to WI-39, WIRING DIAGRAM, Airbag System.>

Step	Check	Yes	No
1 CHECK POOR CONTACT OF CONNECTORS. Check for poor contact of the connectors between the airbag control module and the lap seat belt pretensioner (RH).	Is there poor contact?	Replace the airbag rear harness along with body harness.	Go to step 2.
2 CHECK LAP SEAT BELT PRETENSIONER. 1) Turn the ignition switch to OFF, disconnect the battery ground cable, and wait for 60 seconds or more. 2) Disconnect the connector (AB30) from lap seat belt pretensioner (RH). 3) Connect the connector (1N) in the test harness N to the connector (AB30). 4) Connect the airbag resistor to the connector (2N) of test harness N. 5) Connect the battery ground terminal and turn the ignition switch to ON.	Does the airbag warning light illuminate for 6 seconds and go off?	Replace the lap seat belt pretensioner (RH). <Ref. to SB-17, SEAT BELT INNER - FRONT, REMOVAL, Front Seat Belt.>	Go to step 3.

Diagnostic Chart with Trouble Code

AIRBAG SYSTEM (DIAGNOSTICS)

Step	Check	Yes	No
3 CHECK AIRBAG REAR HARNESS (SIDE AIRBAG HARNESS RH). 1) Turn the ignition switch to OFF, disconnect the battery ground cable, and wait for 60 seconds or more. 2) Disconnect the airbag resistor from test harness N. 3) Disconnect the connector (AB33) from curtain airbag module (RH). 4) Disconnect connector (AB24) from side airbag module (RH). 5) Disconnect the connector (AB26) from seat belt pretensioner. 6) Disconnect the connectors (AB6, AB17, AB18) from airbag control module. 7) Connect the connector (1AG) in the test harness AG to the connectors (AB6, AB17, AB18). 8) Measure the resistance between connector (3AG) in the test harness AG and connector (2N) in the test harness N. Connector & terminal (3AG) No. 17 — (2N) No. 2: (3AG) No. 19 — (2N) No. 1:	Is the resistance less than 10 Ω ?	Go to step 4.	Replace the airbag rear harness along with body harness.
4 CHECK AIRBAG CONTROL MODULE. 1) Connect all connectors. 2) Clear the memory. <Ref. to AB(diag)-23, Clear Memory Mode.> 3) Perform the Inspection Mode. <Ref. to AB(diag)-22, Inspection Mode.> 4) Read the DTC. (Current malfunction) <Ref. to AB(diag)-21, Read Diagnostic Trouble Code (DTC).>	Is DTC B19F1 displayed?	Replace the airbag control module. <Ref. to AB-46, Airbag Control Module.>	Go to step 5.
5 CHECK FOR ANY OTHER DTC ON DISPLAY.	Is any other DTC displayed?	Check DTC using "List of Diagnostic Trouble Code (DTC)". <Ref. to AB(diag)-29, List of Diagnostic Trouble Code (DTC).>	Finish the diagnosis.

Diagnostic Chart with Trouble Code

AIRBAG SYSTEM (DIAGNOSTICS)

Basic Diagnostic Procedure

OCCUPANT DETECTION SYSTEM (DIAGNOSTICS)

1. Basic Diagnostic Procedure

A: PROCEDURE

	Step	Check	Yes	No
1	CHECK WARNING LIGHT. Check whether the airbag warning light in the combination meter is lit.	Does the airbag warning light illuminate?	Go to step 2.	Perform the diagnosis according to phenomenon of the problem.
2	READ DTC. 1) Turn the ignition switch to OFF. 2) Connect the Subaru Select Monitor to data link connector. 3) Turn the ignition switch to ON and run the Subaru Select Monitor. 4) Read the DTC. <Ref. to OD(diag)-16, OPERATION, Read Diagnostic Trouble Code (DTC).> NOTE: If the communication function of the Subaru Select Monitor cannot be executed properly, check the communication circuit. <Ref. to OD(diag)-15, INSPECTION, Subaru Select Monitor.> 5) Record all DTCs and freeze frame data.	Is DTC displayed?	Go to step 3.	Go to "Airbag Warning Light Failure" <Ref. to AB(diag)-28, Airbag Warning Light Failure.>.
3	PERFORM DIAGNOSIS. 1) Determine the possible cause from "List of Diagnostic Trouble Code (DTC)" <Ref. to OD(diag)-22, List of Diagnostic Trouble Code (DTC).>. 2) Inspect the DTC using "List of Diagnostic Trouble Code (DTC)". 3) Repair the trouble cause. 4) Perform the Clear Memory Mode. <Ref. to OD(diag)-18, Clear Memory Mode.> 5) Perform the Inspection Mode. <Ref. to OD(diag)-17, Inspection Mode.> 6) Read any other DTCs displayed.	Is DTC displayed?	Perform the procedure 1) to 5) in step 3.	Finish the diagnosis.

No. 6	When the electronic components were placed on the passenger's seat (no occupant on the seat)	<input type="checkbox"/> Electronic components placed (personal computer, tablet device, mobile phone, smartphone, portable music player, portable game device, portable radio, portable navigation, other:) <input type="checkbox"/> Above-listed device connected to power supply inside the vehicle such as a cigarette lighter socket <input type="checkbox"/> Above-listed device not connected to power supply inside the vehicle such as a cigarette lighter socket <input type="checkbox"/> Above-listed device connected to other power supply

Check List for Interview

OCCUPANT DETECTION SYSTEM (DIAGNOSTICS)

3. INDICATOR LIGHT ILLUMINATION PATTERN

When all the systems are normal.

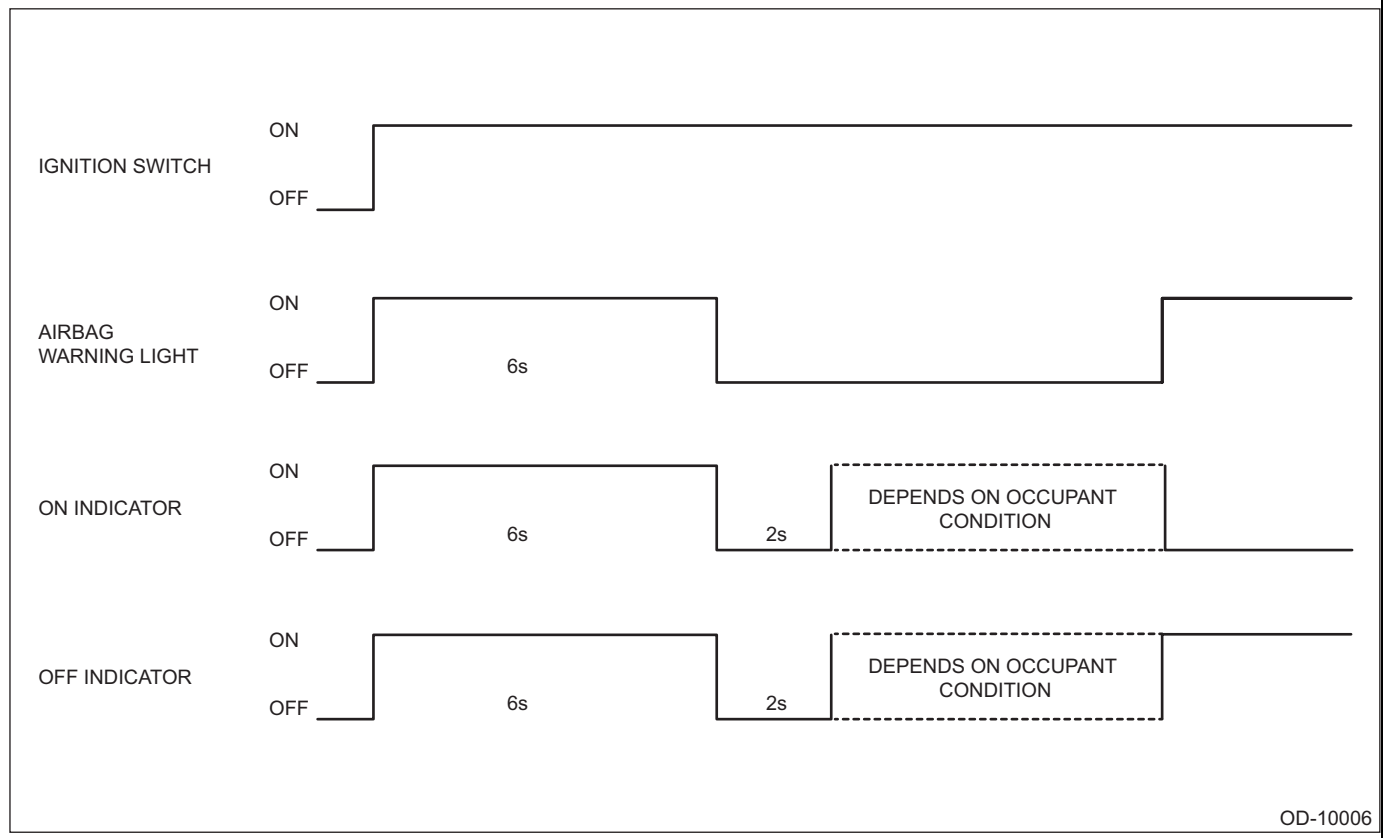

When there has been a failure on the occupant detection control module since the ignition switch was turned ON.

Check List for Interview

OCCUPANT DETECTION SYSTEM (DIAGNOSTICS)

Arbitrary length of time has elapsed after the ignition switch was turned ON → A failure occurred on the occupant detection control module.

OD-10006

General Description

OCCUPANT DETECTION SYSTEM (DIAGNOSTICS)

3. General Description

A: CAUTION

- 1) The occupant detection system (passenger seat only) control module and the occupant detection sensor are fixed to the seat cushion frame. Never remove the occupant detection control module or the occupant detection sensor from the seat cushion frame.
- 2) Do not replace the seat cushion pad by itself. Always replace the seat cushion pad and frame assembly as a set. The seat cushion pad and cushion frame are adjusted as a set at the time of manufacture. If cushion pads and cushion frames are combined from those of other vehicles or other sets, the occupant detection system may not operate properly.
- 3) If the seat cushion cover is removed, make sure to replace the hang wire on the seat cushion side with a new wire.
- 4) Never connect the battery in reverse polarity. Occupant detection system may be destroyed instantly.
- 5) Do not disconnect the battery cables while the engine is running. A large counter electromotive force will be generated in the generator, and this voltage may damage electronic parts such as occupant detection control module.
- 6) Before disconnecting the connectors of each sensor and control module, be sure to turn the ignition switch to OFF and wait for 60 seconds or more. Occupant detection control module may be damaged.
- 7) Every occupant detection system-related part is a precision part. Do not drop them.

CAUTION:

- Do not use electrical test equipment on wiring harness and connector circuits of the airbag system.
- Be careful not to damage the airbag system wiring harness when servicing the occupant detection system.
- Refer to CAUTION in Airbag System when repairing the occupant detection system. <Ref. to AB-9, CAUTION, General Description.>

B: INSPECTION

Check the battery. <Ref. to SC(H4DO)-51, Battery.>

General Description

- (2) Occupant detection sensor
- (3) Airbag ON/OFF indicator light
- (4) Buckle switch (passenger's seat)

Airbag Connector

OCCUPANT DETECTION SYSTEM (DIAGNOSTICS)

5. Airbag Connector

A: PROCEDURE

1. OCCUPANT DETECTION SYSTEM (BETWEEN AIRBAG REAR HARNESS AND SEAT HARNESS)

1) How to disconnect:

Press the lock arm (A) and disconnect the connector.

CAUTION:

When pulling the slide lock or disconnecting connector, be sure to hold the connector, not the harness.

2) How to connect:

Holding the connector, push it in securely until a clicking sound is heard.

CAUTION:

Be sure to insert the connector in until it is locked. Then pull it gently to make sure that it is locked.

2. AIRBAG CONTROL MODULE

Refer to the airbag system section. <Ref. to AB-17, AIRBAG CONTROL MODULE, PROCEDURE, Airbag Connector.>

3. BUCKLE SWITCH RH

Refer to the airbag system section. <Ref. to AB-23, BUCKLE SWITCH RH, PROCEDURE, Airbag Connector.>

Control Module I/O Signal

OCCUPANT DETECTION SYSTEM (DIAGNOSTICS)

6. Control Module I/O Signal

A: ELECTRICAL SPECIFICATION

CAUTION:

Never remove the occupant detection control module, occupant detection sensor or seat frame because they are integrated into one unit.

Terminal No.	Terminal name	Input/Output value	Note
1	Airbag CM communication (FSR+)	—	Communication line
2	Not used	—	—
3	Not used	—	—
4	Buckle switch - (BER-)	0 V	Switch ground
5	Not used	—	—
6	IG power supply (IG)	8 — 16 V	When ignition SW is ON
7	Not used	—	—
8	Buckle switch+	0 — IG voltage	Ignition voltage when the switch is ON
9	Airbag CM communication (FSR-)	0 V	GND
10	Not used	—	—

B: WIRING DIAGRAM

Refer to “Occupant Detection System” in the wiring diagram. <Ref. to WI-179, WIRING DIAGRAM, Occupant Detection System.>

7. Subaru Select Monitor

A: OPERATION

For detailed operation procedures, refer to “Application help”.

B: INSPECTION

1. COMMUNICATION FOR INITIALIZING THE AIRBAG SYSTEM IS IMPOSSIBLE

DETECTING CONDITION:

Defective harness connector

TROUBLE SYMPTOM:

Communication is impossible between the airbag control module and the Subaru Select Monitor.

NOTE:

Refer to “Communication for Initializing Impossible” in AIRBAG SYSTEM (DIAGNOSTICS). <Ref. to AB(diag)-18, COMMUNICATION FOR INITIALIZING IMPOSSIBLE, INSPECTION, Subaru Select Monitor.>

2. COMMUNICATION FOR INITIALIZING ONLY THE OCCUPANT DETECTION SYSTEM IS IMPOSSIBLE

NOTE:

The occupant detection system communicates with the Subaru Select Monitor via the airbag control module.

DETECTING CONDITION:

Defective harness connector between airbag control module and occupant detection control module

TROUBLE SYMPTOM:

Communication is impossible between the airbag control module and the occupant detection control module. Perform the diagnosis from step 2 in “DTC B1650 OCCUPANT DETECTION SYSTEM MALFUNCTION”. <Ref. to OD(diag)-23, DTC B1650 OCCUPANT DETECTION SYSTEM MALFUNCTION, Diagnostic Procedure with Diagnostic Trouble Code (DTC).>

Read Diagnostic Trouble Code (DTC)

OCCUPANT DETECTION SYSTEM (DIAGNOSTICS)

8. Read Diagnostic Trouble Code (DTC)

A: OPERATION

Read out DTCs stored in the airbag system and the occupant detection system.

1. AIRBAG SYSTEM

- 1) On «Start» display, select «Diagnosis».
- 2) On «Vehicle selection» display, input the target vehicle information and select «Confirmed».
- 3) On «Main Menu» display, select «Each System».
- 4) On «Select System» display, select «Airbag» and select «Enter».
- 5) On «Airbag» display, select «DTC».

NOTE:

- For detailed operation procedures, refer to “Application help”.
- For details concerning DTC, refer to List of Diagnostic Trouble Code (DTC) in AIRBAG SYSTEM. <Ref. to AB(diag)-29, List of Diagnostic Trouble Code (DTC).>

2. OCCUPANT DETECTION SYSTEM

- 1) On «Start» display, select «Diagnosis».
- 2) On «Vehicle selection» display, input the target vehicle information and select «Confirmed».
- 3) On «Main Menu» display, select «Each System».
- 4) On «Select System» display, select «Occupant Detection» and then select «Enter».
- 5) On «Occupant Detection» display, select «DTC».

NOTE:

- For detailed operation procedures, refer to “Application help”.
- For details concerning DTC, refer to “List of Diagnostic Trouble Code (DTC)”. <Ref. to OD(diag)-22, List of Diagnostic Trouble Code (DTC).>

9. Inspection Mode

A: PROCEDURE

Recreate the circumstance by referring to the conditions described in the checklist.

Clear Memory Mode

OCCUPANT DETECTION SYSTEM (DIAGNOSTICS)

10. Clear Memory Mode

A: OPERATION

After repairing the occupant detection system, clear the DTCs stored in the airbag control module and the occupant detection control module.

1. AIRBAG SYSTEM

- 1) On «Start» display, select «Diagnosis».
- 2) On «Vehicle selection» display, input the target vehicle information and select «Confirmed».
- 3) On «Main Menu» display, select «Each System».
- 4) On «Select System» display, select «Airbag» and select «Enter».
- 5) On «Airbag» display, select «DTC».
- 6) On «DTC» display, select «Clear Memory».

NOTE:

For detailed operation procedures, refer to “Application help”.

2. OCCUPANT DETECTION SYSTEM

- 1) On «Start» display, select «Diagnosis».
- 2) On «Vehicle selection» display, input the target vehicle information and select «Confirmed».
- 3) On «Main Menu» display, select «Each System».
- 4) On «Select System» display, select «Occupant Detection» and then select «Enter».
- 5) On «Occupant Detection» display, select «DTC».
- 6) On «DTC» display, select «Clear Memory».

NOTE:

For detailed operation procedures, refer to “Application help”.

11. Read Current Data

A: OPERATION

Check the operating condition of each sensor in the event of malfunction in the seat belt buckle switch, or when the seat belt buckle switch has been replaced.

NOTE:

For detailed operation procedures, refer to “Application help”.

- 1) On «Start» display, select «Diagnosis».
- 2) On «Vehicle selection» display, input the target vehicle information and select «Confirmed».
- 3) On «Main Menu» display, select «Each System».
- 4) On «Select System» display, select «Occupant Detection».
- 5) On «Occupant Detection» display, select «Data Monitor».

The following table is for support data.

Item	Display	Note
Front Passenger Seat Status	Empty or Child/Adult or Child	“Adult or Child” when the seat is occupied “Empty or Child” when the seat is unoccupied or when child restraint seat is installed CAUTION: When checking the operating status, be careful of the followings. <ul style="list-style-type: none"> • When the seat is unoccupied: Do not place anything on the seat. • Child restraint seat: Install the seat according to its instruction manual. • When the seat is occupied: Someone who weighs at least approx. 70 kg (155 lb) must be seated during the check.

Airbag Warning Light Illumination Pattern

OCCUPANT DETECTION SYSTEM (DIAGNOSTICS)

12. Airbag Warning Light Illumination Pattern

A: INSPECTION

Turn the ignition switch to ON, and confirm that the airbag warning light remains on for approx. 6 seconds then turns off afterwards.

- (1) Airbag warning light
- (2) Approx. 6 seconds
- (3) Ignition switch ON

Passenger's Airbag ON/OFF Indicator Light Illumination Pattern

OCCUPANT DETECTION SYSTEM (DIAGNOSTICS)

13. Passenger's Airbag ON/OFF Indicator Light Illumination Pattern

A: INSPECTION

OD-00010

- | | | |
|--|--------------|---------------------|
| (1) Passenger's airbag ON indicator light | (6) Light ON | (10) OFF |
| (2) Passenger's airbag OFF indicator light | (7) Empty | (11) ON |
| (3) Occupant seating | (8) Child | (12) Approx. 6 sec. |
| (4) Ignition switch | (9) Adult | (13) Approx. 2 sec. |
| (5) Light OFF | | |

List of Diagnostic Trouble Code (DTC)

OCCUPANT DETECTION SYSTEM (DIAGNOSTICS)

14. List of Diagnostic Trouble Code (DTC)

A: LIST

DTC	Item	Content of diagnosis	Reference
B1650	OCCUPANT DETECTION SYSTEM MALFUNCTION	<ul style="list-style-type: none"> • Occupant detection sensor is faulty. • Occupant detection control module is faulty. • Occupant detection harness is faulty. • Fuse No. 25 is blown. • Rear airbag harness is faulty. 	<Ref. to OD(diag)-23, DTC B1650 OCCUPANT DETECTION SYSTEM MALFUNCTION, Diagnostic Procedure with Diagnostic Trouble Code (DTC).>
B1655	FRONT BUCKLE SWITCH RH FAILURE	<ul style="list-style-type: none"> • Passenger's buckle switch circuit is open, shorted or shorted to ground. • Occupant detection system is faulty. • Occupant detection harness is faulty. 	<Ref. to OD(diag)-25, DTC B1655 FRONT BUCKLE SWITCH RH FAILURE, Diagnostic Procedure with Diagnostic Trouble Code (DTC).>
B1760	OCCUPANT DETECTION SENSOR MAT	<ul style="list-style-type: none"> • Occupant detection sensor is faulty. • Occupant detection sensor is open, shorted between terminals, shorted to power supply or shorted to ground. • Seat heater is open. • Occupant detection control module is faulty. 	<Ref. to OD(diag)-26, DTC B1760 OCCUPANT DETECTION SENSOR MAT, Diagnostic Procedure with Diagnostic Trouble Code (DTC).>
B1761	OCCUPANT DETECTION SENSOR MAT LIQUID COATING	<ul style="list-style-type: none"> • Detected that the occupant detection sensor is spattered with fluid. • Occupant detection sensor is faulty. • Occupant detection control module is faulty. 	<Ref. to OD(diag)-26, DTC B1761 OCCUPANT DETECTION SENSOR MAT LIQUID COATING, Diagnostic Procedure with Diagnostic Trouble Code (DTC).>
B1771	BUCKLE SWITCH	<ul style="list-style-type: none"> • Passenger's buckle switch is faulty. • Passenger's buckle switch circuit is open, shorted or shorted to ground. • Occupant detection system is faulty. • Occupant detection harness is faulty. 	<Ref. to OD(diag)-27, DTC B1771 BUCKLE SWITCH, Diagnostic Procedure with Diagnostic Trouble Code (DTC).>
B1795	OCCUPANT DETECTION MODULE INTERNAL CIRCUIT	Occupant detection control module is faulty.	<Ref. to OD(diag)-27, DTC B1795 OCCUPANT DETECTION MODULE INTERNAL CIRCUIT, Diagnostic Procedure with Diagnostic Trouble Code (DTC).>

Diagnostic Procedure with Diagnostic Trouble Code (DTC)

OCCUPANT DETECTION SYSTEM (DIAGNOSTICS)

15. Diagnostic Procedure with Diagnostic Trouble Code (DTC)

A: DTC B1650 OCCUPANT DETECTION SYSTEM MALFUNCTION

Diagnosis start condition:

Ignition voltage is 8 V to 16 V.

DTC detecting condition:

- Occupant detection sensor is faulty.
- Occupant detection control module is faulty.
- Occupant detection harness is faulty.
- Fuse No. 25 is blown out.
- Rear airbag harness is faulty.

CAUTION:

Before performing diagnosis, refer to “CAUTION” in “General Description”. <Ref. to AB(diag)-4, CAUTION, General Description.>

Wiring diagram:

Occupant detection system <Ref. to WI-179, WIRING DIAGRAM, Occupant Detection System.>

OD-10020

Step	Check	Yes	No	
1	CHECK DTC. Read the DTC of the occupant detection system. <Ref. to OD(diag)-16, OCCUPANT DETECTION SYSTEM, OPERATION, Read Diagnostic Trouble Code (DTC).>	Is any of DTC B1760, B1761, B1771 and B1795 detected?	Perform the diagnosis according to DTC.	Go to step 2.
2	CHECK POOR CONTACT OF CONNECTORS. Check for poor contact of the connectors between the occupant detection control module and airbag control module.	Is there poor contact?	When the connector is not fully connected, reconnect the connector correctly. Replace the faulty harness if the connector is faulty. (Replace the airbag rear harness along with body harness. Or replace the occupant detection harness (seat harness).)	Go to step 3.

Diagnostic Procedure with Diagnostic Trouble Code (DTC)

OCCUPANT DETECTION SYSTEM (DIAGNOSTICS)

Step	Check	Yes	No
<p>3</p> <p>CHECK AIRBAG REAR HARNESS.</p> <p>1) Turn the ignition switch to OFF, disconnect the battery ground cable, and wait for 60 seconds or more.</p> <p>2) Disconnect the connectors (AB59) and (AB53) under the passenger's seat.</p> <p>3) Disconnect the connectors (AB6, AB17, AB18) from the airbag control module, and connect the connector (1AG) in the test harness AG to connectors (AB6, AB17, AB18).</p> <p>4) Connect the connector (1AP) in the test harness AP to the connector (AB53).</p> <p>5) Measure the resistance between connector (6AG) in the test harness AG and connector (2AP) in the test harness AP.</p> <p>Connector & terminal (6AG) No. 9 — (2AP) No. 2: (6AG) No. 11 — (2AP) No. 1:</p>	<p>Is the resistance less than 10 Ω?</p>	<p>Go to step 4.</p>	<p>Replace the airbag rear harness along with body harness.</p>
<p>4</p> <p>CHECK AIRBAG REAR HARNESS.</p> <p>Measure the resistance between connector (6AG) in the test harness AG and chassis ground.</p> <p>Connector & terminal (6AG) No. 9 — Chassis ground: (6AG) No. 11 — Chassis ground: (6AG) No. 9 — (6AG) No. 11:</p>	<p>Is the resistance 1 MΩ or more?</p>	<p>Go to step 5.</p>	<p>Replace the airbag rear harness along with body harness.</p>
<p>5</p> <p>CHECK OCCUPANT DETECTION HARNESS.</p> <p>1) Turn the ignition switch to ON.</p> <p>2) Measure the voltage between connector (2AP) in the test harness AP and chassis ground.</p> <p>Connector & terminal (2AP) No. 3 (+) — Chassis ground (-):</p>	<p>Is the voltage 10 V or more?</p>	<p>Replace the occupant detection harness (seat harness). If defective is not improved, replace the occupant detection system (seat cushion & frame assembly), and then the airbag control module in this order. <Ref. to SE-17, PASSENGER'S SEAT, DISASSEMBLY, Front Seat.></p>	<p>Check the battery voltage and fuse. If there is no fault, replace the airbag rear harness together with body harness.</p>

Diagnostic Procedure with Diagnostic Trouble Code (DTC)

OCCUPANT DETECTION SYSTEM (DIAGNOSTICS)

B: DTC B1655 FRONT BUCKLE SWITCH RH FAILURE

Diagnosis start condition:

Ignition voltage is 8 V to 16 V.

DTC detecting condition:

- Passenger's buckle switch circuit is open, shorted or shorted to ground.
- Occupant detection system is faulty.
- Occupant detection harness is faulty.

Wiring diagram:

Occupant detection system <Ref. to WI-179, WIRING DIAGRAM, Occupant Detection System.>

OD-00111

Step	Check	Yes	No
1 CHECK DTC. Read the DTC of the occupant detection system. <Ref. to OD(diag)-16, OCCUPANT DETECTION SYSTEM, OPERATION, Read Diagnostic Trouble Code (DTC).>	Is any of DTC B1760, B1761, B1771 and B1795 detected?	Perform the diagnosis according to DTC.	Go to step 2.
2 CHECK POOR CONTACT OF CONNECTORS. Check for poor contact of the connectors between the occupant detection control module and buckle switch.	Is there poor contact?	When the connector is not fully connected, reconnect the connector correctly. Replace the airbag harness if the connector is faulty.	Go to step 3.
3 CHECK BUCKLE SWITCH. 1) Turn the ignition switch to OFF, disconnect the battery ground terminal, and wait for 60 seconds. 2) Disconnect the buckle switch connector (AB60). 3) Connect the test harness AE and test harness connector Y to buckle switch connector (AB60). 4) Connect the battery ground terminal and turn the ignition switch to ON.	Does the airbag warning light illuminate for 6 seconds and go off?	Replace the buckle switch. <Ref. to SB-15, SEAT BELT OUTER - FRONT, REMOVAL, Front Seat Belt.>	Check the seat harness, and if any fault is found, replace the seat harness. If the fault is not fixed, replace the occupant detection system. <Ref. to SE-17, PASSENGER'S SEAT, DISASSEMBLY, Front Seat.>

Diagnostic Procedure with Diagnostic Trouble Code (DTC)

OCCUPANT DETECTION SYSTEM (DIAGNOSTICS)

C: DTC B1760 OCCUPANT DETECTION SENSOR MAT

Diagnosis start condition:

Ignition voltage is 8 V to 16 V.

DTC detecting condition:

- Occupant detection sensor is faulty.
- Occupant detection sensor circuit is open, shorted between terminals, shorted to power supply or shorted to ground.
- Seat heater circuit is open.
- Occupant detection control module is faulty.

Step	Check	Yes	No
1 CHECK POOR CONTACT OF CONNECTORS. Check for poor contact of connectors between the occupant detection control module and the occupant detection sensor.	Is there poor contact of connector?	When the connector is not fully connected, reconnect the connector correctly. Replace the faulty harness if the connector is faulty. (Replace the occupant detection harness or replace the occupant detection system (passenger's & frame assembly)). <Ref. to SE-17, PASSENGER'S SEAT, DISASSEMBLY, Front Seat.>	Replace the occupant detection system (passenger's & frame assembly). <Ref. to SE-17, PASSENGER'S SEAT, DISASSEMBLY, Front Seat.>

D: DTC B1761 OCCUPANT DETECTION SENSOR MAT LIQUID COATING

DIAGNOSIS START CONDITION:

Ignition voltage is 8 V to 16 V.

DTC DETECTING CONDITION:

- Occupant detection sensor is spattered with fluid.
- Occupant detection sensor is faulty.
- Occupant detection control module is faulty.

Step	Check	Yes	No
1 DRY THE SEAT. 1) Open the vehicle windows in a well-ventilated place indoors and dry the seat for 24 hours. 2) Check that the seat is not wet. If the seat is wet, extend the drying time to dry the seat well. 3) Read the DTC of the occupant detection system. <Ref. to OD(diag)-16, OCCUPANT DETECTION SYSTEM, OPERATION, Read Diagnostic Trouble Code (DTC).>	Is DTC detected?	When DTC B1761 is detected again, replace the occupant detection system (passenger's & frame assembly). <Ref. to SE-17, PASSENGER'S SEAT, DISASSEMBLY, Front Seat.> When any other DTC is detected, perform the diagnosis according to the DTC.	Clear the memory. <Ref. to OD(diag)-18, OCCUPANT DETECTION SYSTEM, OPERATION, Clear Memory Mode.>

Diagnostic Procedure with Diagnostic Trouble Code (DTC)

OCCUPANT DETECTION SYSTEM (DIAGNOSTICS)

E: DTC B1771 BUCKLE SWITCH

DIAGNOSIS START CONDITION:

Ignition voltage is 8 V to 16 V.

DTC DETECTING CONDITION:

- Passenger's seat buckle switch is faulty.
- Passenger's buckle switch circuit is open, shorted or shorted to ground.
- Occupant detection system is faulty.
- Occupant detection harness is faulty.

Perform the diagnosis from step 2 in "DTC B1655 FRONT BUCKLE SWITCH RH FAILURE". <Ref. to OD(diag)-25, DTC B1655 FRONT BUCKLE SWITCH RH FAILURE, Diagnostic Procedure with Diagnostic Trouble Code (DTC).>

F: DTC B1795 OCCUPANT DETECTION MODULE INTERNAL CIRCUIT

DIAGNOSIS START CONDITION:

Ignition voltage is 8 V to 16 V.

DTC DETECTING CONDITION:

Occupant detection control module is faulty.

When "DTC B1795 OCCUPANT DETECTION MODULE INTERNAL CIRCUIT" is displayed, the occupant detection control module is faulty. Replace the occupant detection system (passenger's & frame assembly). <Ref. to SE-17, PASSENGER'S SEAT, DISASSEMBLY, Front Seat.>

General Description

SEAT BELT SYSTEM

B: CAUTION

For details of the following precautions for seat belt pretensioner, refer to “AIRBAG SYSTEM” section. <Ref. to AB-9, CAUTION, General Description.>

- Before performing vehicle maintenance, turn the ignition switch to OFF and wait for 60 seconds or more after disconnecting the negative terminal from battery. <Ref. to NT-6, BATTERY, NOTE, Note.>
- The airbag system (including pretensioner) is fitted with a backup power supply. After disconnecting the battery ground cable, the airbag may operate if you do not wait for 60 seconds or more before starting the service of airbag system.
- Do not drop or apply any impact to the pretensioner.
- Do not allow oil, grease or water to come in contact with the pretensioner.
- Do not expose the pretensioner to high temperature or flame.
- Do not allow current to flow through or voltage to reach the pretensioner. Do not use a circuit tester to check resistance of the pretensioner.
- Do not disassemble or attempt to repair the pretensioner. If it is dented, cracked or deformed, replace it with a new genuine part.
- Do not use the airbag or pretensioner parts from other vehicles. Always replace parts with new genuine parts.
- When handling a seat belt with deployed pretensioner, wear gloves and goggles. Wash your hands afterwards.
- Do not reuse a seat belt with deployed pretensioner.
- Before disposal, make sure to perform an operation process to the pretensioners. <Ref. to SB-27, PROCEDURE, Disposal of Pretensioner.>
- If material from the pretensioner enters the eyes or contacts skin during operation process, wash it away with clean water, and then consult a doctor.

Pretensioner Connector

SEAT BELT SYSTEM

2. Pretensioner Connector

A: PROCEDURE

For connectors of seat belt pretensioner, lap seat belt pretensioner and buckle switch RH, refer to “Airbag Connector” of “AIRBAG SYSTEM” section or “OCCUPANT DETECTION SYSTEM” section.

- Airbag system: <Ref. to AB-16, PROCEDURE, Airbag Connector.>
- Occupant detection system: <Ref. to OD(diag)-13, PROCEDURE, Airbag Connector.>

3. Inspection Locations after a Collision

A: INSPECTION

Refer to “Inspection Locations after a Collision” of “AIRBAG SYSTEM” section. <Ref. to AB-25, Inspection Locations after a Collision.>

Seat Belt Warning System

SEAT BELT SYSTEM

4. Seat Belt Warning System

A: WIRING DIAGRAM

Refer to “Seat Belt Warning System” in the wiring diagram. <Ref. to WI-203, WIRING DIAGRAM, Seat Belt Warning System.>

B: INSPECTION

CAUTION:

- Before handling the airbag system components, refer to “CAUTION” of “General Description” in “AIRBAG SYSTEM”. <Ref. to AB-9, CAUTION, General Description.>
- When inspecting the airbag main harness, disconnect the connectors of the driver’s airbag module, passenger’s airbag module and knee airbag module for safety reasons.
- When inspecting the airbag rear harness, disconnect the side airbag module connector, curtain airbag module connector and seat belt pretensioner connector for safety reasons.

Step	Check	Yes	No
1 CHECK FUNCTION. 1) Sit on the driver’s seat and passenger’s seat and disconnect the seat belts of the both. 2) Turn the ignition switch to ON (engine OFF). 3) Check the illumination of the driver’s seat belt warning light in the combination meter, and the passenger’s seat belt warning light in the MFD, and the sounding of the buzzer.	Do the driver’s warning light and passenger’s warning light blink and the buzzer sound while blinking?	Go to step 2.	Go to step 12.
2 CHECK FUNCTION. 1) Wait until the buzzer sound stops in step 1. (For approximately six seconds after starting sounding) 2) Connect and disconnect the seat belts of the driver’s and passenger’s. 3) Check the illumination of the driver’s seat belt warning light in the combination meter and the passenger’s seat belt warning light in the MFD.	Do the seat belts warning light illuminate ←→ go off according to the operation?	Go to step 3.	Go to step 8.
3 CHECK FUNCTION. 1) Wait until the buzzer sound stops in step 2. (For approximately six seconds after starting sounding) 2) Start the engine, and set the vehicle speed at 20 km/h (12 MPH) or more. 3) Check the seat belt warning lights of the driver’s and the passenger’s, and if the warning buzzer sounds.	Do the driver’s warning light and passenger’s warning light blink and the buzzer sound while blinking?	Go to step 4.	Go to step 14.
4 CHECK HARNESS. 1) Disconnect the negative terminal from the battery, and wait for 60 seconds or more. 2) Disconnect the connectors of the combination meter and the seat belt buckle switch LH. 3) Check for short circuit to battery, open circuit and short circuit to ground between the combination meter and the seat belt buckle switch LH. Connector & terminal (i10) No. 15 — (R107) No. 2:	Is the harness normal?	Go to step 5.	Repair or replace the harness.
5 CHECK HARNESS. Measure the resistance between the seat belt buckle switch LH and chassis ground. Connector & terminal (R107) No. 1 — Chassis ground:	Is the resistance less than 10 Ω?	Go to step 6.	Repair or replace the harness.

Seat Belt Warning System

SEAT BELT SYSTEM

Step	Check	Yes	No
6 CHECK SEAT BELT BUCKLE SWITCH LH. Measure the resistance between the connector terminals of the driver's seat belt switch when the driver's seat belt is fastened and detached. Connector & terminal (R107) No. 2 — (R107) No. 1:	Is the resistance when the belt is fastened 1 MΩ or more, and less than 10 Ω when the belt is detached?	Go to step 7.	Replace the seat belt inner - front LH. <Ref. to SB-15, SEAT BELT OUTER - FRONT, REMOVAL, Front Seat Belt.>
7 CHECK COMBINATION METER. Perform the self-diagnosis of combination meter. <Ref. to IDI-7, SELF-DIAGNOSIS DISPLAY MODE, OPERATION, Combination Meter System.>	At the start of combination meter self diagnosis, did the buzzer sound and the seat belt warning light illuminate?	Replace the combination meter. There may be a reception failure of the combination meter.	Replace the combination meter. <Ref. to IDI-18, REMOVAL, Combination Meter.>
8 CHECK DATA MONITOR. 1) Sit in the passenger's seat. 2) Select «Data monitor» and display the data of «Passenger seat seat-belt wearing state». NOTE: For detailed operation procedures, refer to “Application help”. 3) Fasten and detach the passenger's side seat belt buckle, and read the data of the seat belt switch. <Ref. to IDI(diag)-14, LIST, Read Current Data.>	Does the seat belt switch display turn ON ←→ OFF according to the operation of the seat belt buckle?	Go to step 12.	Go to step 9.
9 CHECK AIRBAG SYSTEM AND OCCUPANT DETECTION SYSTEM. Perform the check in accordance with the diagnostic procedure DTC B1650 of the airbag system. <Ref. to OD(diag)-23, DTC B1650 OCCUPANT DETECTION SYSTEM MALFUNCTION, Diagnostic Procedure with Diagnostic Trouble Code (DTC).>	Is the inspection result normal?	Go to step 10.	Repair or replace with new parts according to DTC B1650.
10 CHECK BUCKLE SWITCH RH. Perform the check in accordance with the diagnostic procedure DTC B1655 of the occupant detection system. <Ref. to OD(diag)-25, DTC B1655 FRONT BUCKLE SWITCH RH FAILURE, Diagnostic Procedure with Diagnostic Trouble Code (DTC).>	Is the inspection result normal?	Go to step 11.	Repair or replace with new parts according to DTC B1655.
11 CHECK AIRBAG CONTROL MODULE AND COMBINATION METER. Check the airbag control module, occupant detection sensor and seat belt buckle switch RH. Perform the check in accordance with the diagnostic procedure DTC B16F1 of the airbag system. <Ref. to AB(diag)-87, DTC B16F1 PASSENGER'S SEAT BELT WARNING FAILURE, Diagnostic Chart with Trouble Code.>	Is the inspection result normal?	Replace the combination meter. <Ref. to IDI-18, REMOVAL, Combination Meter.>	Repair or replace with new parts according to DTC B16F1.
12 CHECK MFD POWER SUPPLY VOLTAGE. 1) Disconnect the MFD connector. 2) Turn the ignition switch to ON. 3) Measure the voltage between the ignition power supply and the MFD. Connector & terminal (i122) No. 3 (+) — Chassis ground (-):	Is the voltage 10 V or more?	Go to step 13.	Check the harness for open or short between the fuse and MFD.

Seat Belt Warning System

SEAT BELT SYSTEM

Step	Check	Yes	No
13 CHECK MFD GROUND CIRCUIT. 1) Turn the ignition switch to OFF. 2) Measure the resistance between MFD and chassis ground. <i>Connector & terminal</i> <i>(i122) No. 2 — Chassis ground:</i>	Is the resistance less than 10 Ω ?	Go to step 14.	Repair or replace the harness.
14 CHECK HARNESS BETWEEN MFD AND COMBINATION METER. 1) Disconnect the harness of the MFD and the combination meter. 2) Measure the resistance between MFD and combination meter. <i>Connector & terminal</i> <i>(i122) No. 9 — (i10) No. 28:</i>	Is the resistance less than 10 Ω ?	Go to step 15.	Repair or replace the harness.
15 CHECK COMMUNICATION STATUS BETWEEN MFD AND COMBINATION METER. 1) Remove the MFD, and install a properly operating MFD (new MFD). 2) Connect the connector and then turn the ignition switch to ON. <i>Connector & terminal</i> <i>(i122) No. 9 — (i10) No. 28:</i>	Is the MFD properly displayed?	Replace the MFD.	Replace the combination meter case assembly.

5. Front Seat Belt

A: REMOVAL

1. SEAT BELT OUTER - FRONT

CAUTION:

- Before handling the airbag system components, refer to “CAUTION” of “General Description” in “AIRBAG SYSTEM”. <Ref. to AB-9, CAUTION, General Description.>
- Airbag system satellite safing sensor is located in the lower of the rear seat cushion center. Be careful not to apply strong impact to the sensor when working with the rear seat cushion removed.
- Do not drop or subject the pretensioner to any impact.
- Since the pretensioner and bracket are integrated as a unit, do not disassemble them.

- 1) Turn the ignition switch to OFF.
- 2) Disconnect the ground terminal from the battery sensor, and wait for at least 60 seconds before starting work. <Ref. to NT-6, BATTERY, NOTE, Note.>
- 3) Tilt the front seat backrest assembly forward, and move the front seat all the way forward.
- 4) Remove the rear seat cushion assembly. <Ref. to SE-24, REMOVAL, Rear Seat.>
- 5) Remove the cover side sill - front INN, cover side sill - rear INN, and trim panel - center pillar LWR. (On the side where seat belt assembly is removed) <Ref. to EI-73, REMOVAL, Lower Inner Trim.>
- 6) Remove the trim panel - center pillar UPR. (On the side where seat belt assembly is removed)
 - (1) Remove the cover through (a), and remove the seat belt anchor bolt.
 - (2) Remove the bolt on the lower side of the trim panel - center pillar UPR.
 - (3) Remove the clip by pulling the upper part of the trim toward you, and while lowering the entire trim, remove the trim panel - center pillar UPR.

CAUTION:

Do not reuse the upper clips of the trim panel - center pillar UPR. Once the clip is removed, its holding force is reduced. Be sure to replace it with a new clip.

EI-03454

Front Seat Belt

SEAT BELT SYSTEM

7) Remove the seat belt outer - front.

(1) Turn over the floor mat to disconnect the belt tension sensor connector. <Ref. to AB-18, DRIVER'S AIRBAG MODULE, CURTAIN AIRBAG MODULE & PRETENSIONER, PROCEDURE, Airbag Connector.>

NOTE:

On the passenger's side, also disconnect the connector of the lap seat belt pretensioner.

- (2) Remove the bolt to remove the seat belt retractor.
 - (3) Remove the lower anchor bolt, and remove the seat belt outer - front.
- Driver's side

- Passenger's side

8) Remove the bolts, and then remove the adjuster assembly - seat belt.

2. SEAT BELT INNER - FRONT

CAUTION:

Before handling the airbag system components, refer to “CAUTION” of “General Description” in “AIRBAG SYSTEM”. <Ref. to AB-9, CAUTION, General Description.>

- 1) Turn the ignition switch to OFF.
- 2) Disconnect the ground cable from battery and wait for at least 60 seconds before starting work. <Ref. to NT-6, BATTERY, NOTE, Note.>
- 3) Remove the front seats. <Ref. to SE-8, REMOVAL, Front Seat.>
- 4) Remove the seat belt inner - front.
 - (1) Remove the nut, and remove the seat belt inner - front.
 - (2) Remove the clip for the inner seat belt harness located under the seat cushion.

Front Seat Belt

SEAT BELT SYSTEM

B: INSTALLATION

1. SEAT BELT OUTER - FRONT

CAUTION:

- The parts of the driver and passenger sides are not the same. Before installation, make sure that the correct part is used.
- During installation, make sure that the seat belts are not twisted.
- After installation, make sure that the seat belt can be pulled out and retracted smoothly.
- Make sure that the seat belt harness is not caught anywhere. Wrong harness routing may cause the harness short from pinch.
- Do not reuse the upper clips of the trim panel - center pillar UPR. Once the clip is removed, its holding force is reduced. Be sure to replace it with a new clip.

- 1) Before installation, perform a unit inspection of retractor. <Ref. to SB-20, INSPECTION, Front Seat Belt.>
- 2) Install the adjuster assembly - seat belt and the seat belt outer - front.

Tightening torque:

Front seat belt: <Ref. to SB-2, FRONT SEAT BELT, COMPONENT, General Description.>

- 3) Install the remaining parts in the reverse order of removal.

Tightening torque

Trim panel - center pillar UPR: 7.5 N·m (0.76 kgf-m, 5.5 ft-lb)

NOTE:

Assemble the trim panel - center pillar LWR to the trim panel - center pillar UPR securely.

EI-03453

- 4) After installation, check the following points.

- The seat belt is not twisted.
- The seat belt can be pulled out and retracted smoothly.
- The adjuster assembly - seat belt can be moved smoothly.
- Check that the airbag warning light lights up for approximately 6 seconds and then turns off when connecting the battery ground cable and turning the ignition switch to ON.

2. SEAT BELT INNER - FRONT

CAUTION:

- Before installation, make sure that the correct part is used.
- During installation, make sure that the seat belts are not twisted.
- Check that there is no pinching of the seat belt harness. Wrong harness routing may cause the harness short from pinch.
- Do not forget the wave washer, when installing front seat inner belt assembly.

1) Install the seat belt inner - front.

Tightening torque:

Front seat belt: <Ref. to SB-2, FRONT SEAT BELT, COMPONENT, General Description.>

2) Locate the seat belt harness and retain it with a harness clip.

3) Install the seat assembly to the body. <Ref. to SE-9, INSTALLATION, Front Seat.>

4) Check that no harness is caught by sliding the seat back and forth.

5) Connect the battery ground terminal. <Ref. to NT-6, BATTERY, NOTE, Note.>

3. ADJUSTABLE ANCHOR ASSY

Referring to the installation procedure for seat belt outer - front, install the parts in the reverse order of removal.

Tightening torque:

Front seat belt: <Ref. to SB-2, FRONT SEAT BELT, COMPONENT, General Description.>

Trim panel - center pillar UPR: 7.5 N·m (0.76 kgf-m, 5.5 ft-lb)

Front Seat Belt

SEAT BELT SYSTEM

C: INSPECTION

1. VISUAL INSPECTION

Check for the following, and replace with new parts if necessary.

- Pretensioner is cracked or deformed.
- Adjuster assembly - seat belt is cracked or deformed.
- Seat belt is slackened, bent or worn.
- Seat belt is abnormally wound or extended.
- Seat belt inner - front is deformed or damaged.
- Seat belt buckle cannot be engaged properly.

2. ELR LOCK MECHANISM INSPECTION

1) Hold the retractor upright (as installed in the vehicle) and check the ELR lock mechanism.

2) Tilt the retractor from the upright posture and check the following points.

- It does not lock if the inclination angle is 15° or less.

- It remains locked if the inclination angle is 27° or more.

3) If the ELR lock mechanism does not operate properly, replace the seat belt outer - front with a new part.

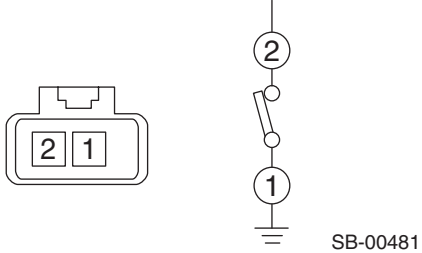

3. SEAT BELT SWITCH INSPECTION

Preparation tool:

Circuit tester

- Driver's seat

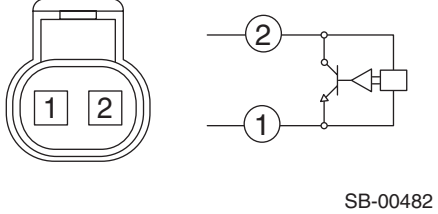

Check the resistance between the terminals when the seat belt inner - front is in each of the following operation conditions.

Terminal No.	Inspection conditions	Standard	Circuit
2 — 1	Tongue plate inserted	1 MΩ or more	 <p style="text-align: right;">SB-00481</p>
2 — 1	Tongue plate detached	1 Ω or less	

Replace the seat belt inner - front if the inspection result is not within the standard.

- Passenger's seat

Check the current between the terminals when the seat belt inner - front is in each of the following operation conditions.

Terminal No.	Inspection conditions	Standard	Circuit
1 — 2	Tongue plate inserted	12 — 18 mA	 <p style="text-align: right;">SB-00482</p>
1 — 2	Tongue plate detached	4 — 7 mA	

Replace the seat belt inner - front if the inspection result is not within the standard.

Rear Seat Belt

SEAT BELT SYSTEM

6. Rear Seat Belt

A: REMOVAL

1. SEAT BELT OUTER - REAR RH & LH

CAUTION:

- Airbag system satellite safing sensor is located in the lower of the rear seat cushion center. Be careful not to apply strong impact to the sensor when working with the rear seat cushion removed.
- Before handling the airbag system components, refer to “CAUTION” of “General Description” in “AIRBAG SYSTEM”. <Ref. to AB-9, CAUTION, General Description.>

- 1) Turn the ignition switch to OFF.
- 2) Disconnect the ground cable from battery and wait for at least 60 seconds before starting work. <Ref. to NT-6, BATTERY, NOTE, Note.>
- 3) Remove the rear seat cushion assembly. <Ref. to SE-24, REMOVAL, Rear Seat.>
- 4) Remove the screws and clips, and remove the trim panel - rear quarter pillar UPR. (On the side where seat belt assembly is removed)

- 5) Remove the bolts, and remove the seat belt outer - rear.

2. SEAT BELT - REAR SHOULDER CTR

CAUTION:

- Airbag system satellite safing sensor is located in the lower of the rear seat cushion center. Be careful not to apply strong impact to the sensor when working with the rear seat cushion removed.
- Before handling the airbag system components, refer to "CAUTION" of "General Description" in "AIRBAG SYSTEM". <Ref. to AB-9, CAUTION, General Description.>

- 1) Turn the ignition switch to OFF.
- 2) Disconnect the ground cable from battery and wait for at least 60 seconds before starting work. <Ref. to NT-6, BATTERY, NOTE, Note.>
- 3) Remove the rear seat cushion assembly. <Ref. to SE-24, REMOVAL, Rear Seat.>
- 4) Release the clips and claws, and then remove the cover side sill - rear INN RH.

CAUTION:

Do not pull with excessive force. Doing so may damage the claws of the cover side sill - rear INN.

EI-03497

Rear Seat Belt

SEAT BELT SYSTEM

5) Remove the clips, and remove the trim panel - rear skirt.

6) Remove the trim panel - rear quarter pillar UPR RH and trim panel - rear apron RH. <Ref. to EI-80, CROSSTREK MODEL, REMOVAL, Rear Quarter Trim.>

7) Remove the bolts, and remove the seat belt - rear shoulder CTR.

3. SEAT BELT - CTR RH AND LH

CAUTION:

- Before handling the airbag system components, refer to “CAUTION” of “General Description” in “AIRBAG SYSTEM”. <Ref. to AB-9, CAUTION, General Description.>
 - Airbag system satellite safing sensor is located in the lower of the rear seat cushion center. Be careful not to apply strong impact to the sensor when working with the rear seat cushion removed.
- 1) Turn the ignition switch to OFF.
 - 2) Disconnect the ground cable from battery and wait for at least 60 seconds before starting work. <Ref. to NT-6, BATTERY, NOTE, Note.>
 - 3) Remove the rear seat cushion assembly. <Ref. to SE-24, REMOVAL, Rear Seat.>
 - 4) Remove the bolts, and remove the seat belt - CTR RH and LH.

B: INSTALLATION

1. SEAT BELT OUTER - REAR RH & LH

- 1) Before installation, perform a unit inspection of retractor. <Ref. to SB-26, INSPECTION, Rear Seat Belt.>
- 2) Install the seat belt outer - rear.

CAUTION:

- During installation, make sure that the seat belts are not twisted.
- After installation, make sure that the seat belts are smoothly extended and wound.

Tightening torque:

Rear seat belt: <Ref. to SB-3, REAR SEAT BELT, COMPONENT, General Description.>

- 3) Install the trim panel - rear quarter trim UPR.
- 4) Install the remaining parts in the reverse order of removal.
- 5) After installation, check the following points.
 - The seat belt is not twisted.
 - The seat belt can be pulled out and retracted smoothly.

2. SEAT BELT - REAR SHOULDER CTR

- 1) Install the seat belt - rear shoulder CTR.

Tightening torque:

Rear seat belt: <Ref. to SB-3, REAR SEAT BELT, COMPONENT, General Description.>

- 2) Install the remaining parts in the reverse order of removal.
- 3) After installation, check the following points.
 - The seat belt is not twisted.
 - The seat belt can be pulled out and retracted smoothly.

Rear Seat Belt

SEAT BELT SYSTEM

3. SEAT BELT - CTR RH AND LH

1) Install the seat belt - CTR RH/LH.

Tightening torque:

Rear seat belt: <Ref. to SB-3, REAR SEAT BELT, COMPONENT, General Description.>

2) Install the rear seat cushion.

3) Install the remaining parts in the reverse order of removal.

4) After installation, check the following points.

- The seat belt is not twisted.
- Check that the airbag warning light lights up for approximately 6 seconds and then turns off when connecting the battery ground cable and turning the ignition switch to ON.

C: INSPECTION

1. VISUAL INSPECTION

Check for the following, and replace with new parts if necessary.

- Seat belt is slackened, bent or worn.
- Seat belt is abnormally wound or extended.
- Seat belt inner - rear is deformed or damaged.
- Seat belt buckle cannot be engaged properly.

2. ELR LOCK MECHANISM INSPECTION

1) Hold the retractor upright (as installed in the vehicle) and check the ELR lock mechanism.

2) Tilt the retractor from the upright posture and check the following points.

- It does not lock if the inclination angle is 15° or less.

- It remains locked if the inclination angle is 27° or more.

3) If the ELR lock mechanism does not operate properly, replace the seat belt outer - rear with a new part.

7. Disposal of Pretensioner

A: PROCEDURE

WARNING:

Make sure to follow the instructions below. Otherwise, personal injuries may occur.

- Before discarding a pretensioner, always perform an activation process to prevent any false activation.
- Wear protective gloves, safety goggles and earplugs during this operation. Wash your hands afterwards.
- Do not touch the pretensioner just after activation because it is very hot. Before handling it for disposal, wait for 40 minutes.

CAUTION:

- Perform a pretensioner operation process in a safe, level place. Do not perform the process outdoors when there is a strong rain or wind.
- Do not drop or damage the pretensioner.
- A large explosive noise will occur when the pretensioner is deployed. Warn persons in the area, and do not allow anyone to approach a radius of 5 m (16 ft) from the discard location.
- After activating the pretensioner, smoke may arise. Therefore, always perform an operation process in a well-ventilated place without any smoke sensor.
- Do not expose the activated pretensioner to water.
- Wrap the activated pretensioner in a sealed vinyl bag when discarding.
- If it is impossible to perform a pretensioner activation process due to some situational reasons, consult SUBARU dealership or one of the authorized workshops.

- 1) Fold the backrest all the way forward, and move the front seat all the way forward.
- 2) Turn the ignition switch to OFF.
- 3) Disconnect the ground cable from battery and wait for at least 60 seconds before starting work. <Ref. to NT-6, BATTERY, NOTE, Note.>
- 4) Disconnect connector of the pretensioner.

SB-00495

Disposal of Pretensioner

SEAT BELT SYSTEM

5) Short the alligator clip and terminal of the airbag deployment tool together.

CAUTION:

Short the airbag deployment tool terminals until just before the pretensioner operation process.

Preparation tool:

ST: AIRBAG DEPLOYMENT TOOL (98299PA030)

6) Connect the airbag deployment tool (A) and test harness adapter D (B).

Preparation tool:

ST: TEST HARNESS ADAPTER D (98299SA010)

7) Connect the test harness adapter D connector to the pretensioner.

8) Make sure there is no one inside the vehicle.

9) Extend the wiring of the airbag deployment tool to its limit, and completely close all the windows and sun-roof.

10) Move the battery 5 m (16 ft) or more from the vehicle, and affix nearby.

11) Connect the airbag deployment tool alligator clip to the battery negative (-) terminal.

12) Connect the other cable of airbag deployment tool to the battery positive (+) terminal, and activate the pretensioner.

CAUTION:

- After activation, the pretensioner will be extremely hot. Let it cool down for at least 40 minutes in an area with no one around.
- Do not expose the activated pretensioner to water.

13) Perform operation process of lap seat belt pretensioner from steps 14) to 22) for the passenger's side.

14) Disconnect the connector from the lap seat belt pretensioner.

15) Short the alligator clip and terminal of the airbag deployment tool together.

CAUTION:

Short the airbag deployment tool terminals until just before the pretensioner operation process.

Preparation tool:

ST: AIRBAG DEPLOYMENT TOOL (98299PA030)

16) Connect the airbag deployment tool (A) and test harness adapter D (B).

Preparation tool:

ST: TEST HARNESS ADAPTER D (98299SA010)

17) Connect the test harness adapter D connector to the lap seat belt pretensioner.

18) Make sure there is no one inside the vehicle.

19) Extend the wiring of airbag deployment tool to the limit, and close all the windows and sunroof completely.

20) Move the battery 5 m (16 ft) or more from the vehicle, and affix nearby.

21) Connect the airbag deployment tool alligator clip to the battery negative (-) terminal.

22) Connect the other cable of airbag deployment tool to the battery positive (+) terminal, and activate the pretensioner.

CAUTION:

- **After activation, the pretensioner will be extremely hot. Let it cool down for at least 40 minutes in an area with no one around.**
- **Do not expose the activated pretensioner to water.**

23) Remove the seat belt outer - front. <Ref. to SB-15, REMOVAL, Front Seat Belt.>

Disposal of Pretensioner

SEAT BELT SYSTEM

24) Cut the seat belt at a position as close as possible to the seat belt retractor.

25) Cut the seat belt at a position as close as possible to the lap seat belt pretensioner.

26) Place the activated pretensioner in a sealed vinyl bag, then discard.

(10)	Glove box light	12 V — 1.4 W	*	

*: Non-disassembly type

B: CAUTION

- Before disassembling or reassembling parts, always disconnect the battery ground cable from battery. When replacing the audio, control module and other parts provided with memory functions, record the memory contents before disconnecting the battery ground cable. Otherwise, the memory is cleared.
- Reassemble the parts in the reverse order of disassembly procedure unless otherwise indicated.
- Connect the connectors securely during reassembly.
- After reassembly, make sure that the each component operates normally.
- Yellow connectors and harnesses with yellow tapes around them are the connectors and harnesses for the airbag system. Using a tester above such circuits may cause malfunction of airbag system. Follow the cautions of "AIRBAG SYSTEM" in this case. <Ref. to AB-9, CAUTION, General Description.>
- Be careful not to damage the airbag system wiring harness when servicing electrical parts and switches.
- When removing, installing or replacing the VDCCM&H/U, VDCCM&H/U bracket, steering wheel or steering angle sensor (steering roll connector), perform the VDC setting mode. <Ref. to VDC-23, ADJUSTMENT, VDC Control Module and Hydraulic Control Unit (VDCCM&H/U).>
- When removing and installing the bulb, use a dry and clean cloth so that no grease or water adheres to the glass portion.
- Always replace with a bulb that is the same model and wattage as those of the old one.

C: PREPARATION TOOL

1. SPECIAL TOOL

ILLUSTRATION	TOOL NUMBER	DESCRIPTION	REMARKS
 STSSM4	—	SUBARU SELECT MONITOR 4	Used for setting of each function and troubleshooting for electrical system. NOTE: For detailed operation procedures of Subaru Select Monitor 4, refer to "Application help".

2. GENERAL TOOL

TOOL NAME	REMARKS
Circuit tester	Used for measuring resistance, voltage and current.
DST-i	Used together with Subaru Select Monitor 4.

Relay and Fuse

LIGHTING SYSTEM

2. Relay and Fuse

A: LOCATION

Main fuse box	Headlight relay (HI)	(A)
	Headlight relay (LO)	(B)
	Fuse 15 A (daytime running light relay)	(C)
	Fuse 30 A (combination light LH/RH)	(D)
	Fuse 20 A (spot map light, room light, ignition switch illumination (immobilizer antenna))	(E)
	Fuse 15 A (tail and illumination relay, daytime running light relay)	(F)
	Daytime running light relay	(G)
Relay & fuse box	Fuse 10 A (stop light and brake switch, brake relay)	(H)
	Fuse 10A (inhibitor switch, back-up light switch, auto headlight beam leveler CU)	(I)

	Fuse 7.5 A (turn signal & hazard unit)	(K)
Relay holder LH (passenger room)	Tail & illumination relay	(L)
Relay holder RH (passenger room)	Front fog light relay*1	(M)
Relay holder (engine compartment)	Front fog light relay RH*2	(N)
	Front fog light relay LH*2	(O)

*1: Model without SRF

*2: Model with SRF

NOTE:

For other related fuses, refer to the wiring diagram. <Ref. to WI-15, Power Supply Circuit.>

B: INSPECTION

1. CHECK FUSE

- 1) Remove the fuse and inspect visually.
- 2) If the fuse is blown out, replace the fuse.

NOTE:

If the fuse is blown again, check the system wiring harness.

2. CHECK RELAY

- 1) Check the resistance between relay terminals.

Terminal No.	Inspection conditions	Standard	Circuit
1 — 2	Always	1 MΩ or more	
1 — 2	Apply battery voltage between terminals 4 and 3.	Less than 1 Ω	

LI-01273

Terminal No.	Inspection conditions	Standard	Circuit
1 — 2	Always	1 MΩ or more	
1 — 4	Always	Less than 1 Ω	
1 — 2	Apply battery voltage between terminals 3 and 5.	Less than 1 Ω	

LI-01274

- 2) Replace the relay if the inspection result is not within the standard value.

Headlight System

LIGHTING SYSTEM

3. Headlight System

A: WIRING DIAGRAM

Refer to “Headlight System” in the wiring diagram. <Ref. to WI-142, WIRING DIAGRAM, Headlight System.>

B: INSPECTION

1. AUTO HEADLIGHT SYSTEM CHECK

Step	Check	Yes	No	
1	CHECK HEADLIGHT ILLUMINATION. Set the lighting switch to the switch 1 (TAIL/PARKING) and switch 2 (HEAD).	Do the tail and headlight illuminate?	Go to step 2.	Check the combination switch (light) and headlight bulb.
2	CHECK CURRENT DATA. Using the Subaru Select Monitor, display the data of «Lighting AUTO input». NOTE: For detailed operation procedures, refer to “Application help”.	Does the display switch between OFF ←→ ON when the lighting switch is moved to AUTO position?	Go to step 3.	Go to step 8.
3	CHECK CURRENT DATA. 1) Using the Subaru Select Monitor, display the data of «Illumination Sensor Output». 2) Measure the voltage when the area around the light control sensor, which was dark, becomes bright. Illumination sensor output Dark condition: Approx. 0.6 V or less Bright condition: Approx. 3.0 V or more	Is the voltage output according to the brightness?	Check and replace the body integrated unit. • Inspection: <Ref. to BC(diag)-2, Basic Diagnostic Procedure.> • Replacement: <Ref. to SL-72, Body Integrated Unit.>	Go to step 4.
4	CHECK HARNESS. 1) Disconnect the connectors from body integrated unit and light control sensor. 2) Check the harness between body integrated unit and light control sensor. Connector & terminal (B280) No. 19 — (i226) No. 2: (B280) No. 29 — (i226) No. 1: (B281) No. 1 — (i226) No. 3:	Is harness normal?	Go to step 5.	Repair or replace the harness.
5	CHECK HARNESS. 1) Connect the connector of body integrated unit. 2) Turn the ignition switch to ON. 3) Measure the voltage between light control sensor connector and chassis ground. Connector & terminal (i226) No. 3 (+) — Chassis ground (-):	Is the voltage 4.5 — 5.5 V?	Go to step 6.	Replace the body integrated unit. <Ref. to SL-72, Body Integrated Unit.>
6	CHECK BODY INTEGRATED UNIT. Measure the resistance between the body integrated unit and chassis ground. Connector & terminal (B280) No. 29 — Chassis ground:	Is the resistance less than 10 Ω?	Go to step 7.	Replace the body integrated unit. <Ref. to SL-72, Body Integrated Unit.>
7	CHECK LIGHT CONTROL SENSOR. 1) Connect the light control sensor connector. 2) Check the light control sensor. <Ref. to LI-23, INSPECTION, Light Control Sensor.>	Is the light control sensor normal?	Go to step 8.	Replace the light control sensor.
8	CHECK COMBINATION SWITCH (LIGHT). Check the combination switch (light). <Ref. to LI-21, INSPECTION, Combination Switch (Light).>	Is the combination switch (light) normal?	Go to step 9.	Replace the combination switch (light).

Headlight System

LIGHTING SYSTEM

Step	Check	Yes	No
9 CHECK HARNESS. 1) Disconnect the connectors of body integrated unit and combination switch (light). 2) Check the harness between body integrated unit and combination switch (light). Connector & terminal (B71) No. 19 — (B281) No. 16:	Is harness normal?	Check and replace the body integrated unit. • Inspection: <Ref. to BC(diag)-2, Basic Diagnostic Procedure.> • Replacement: <Ref. to SL-72, Body Integrated Unit.>	Repair or replace the harness.

2. CHECK OF WELCOME LIGHTING SYSTEM

TROUBLE SYMPTOM:

Welcome lighting does not illuminate.

Step	Check	Yes	No
1 CHECK BODY INTEGRATED UNIT SETTING. Display the data of «Welcome Light Off Delay Time(Approaching)» or «Welcome Light Off Delay Time(Exiting)» using the Subaru Select Monitor. NOTE: For detailed operation procedures, refer to “Application help”.	Is the setting ON?	Go to step 2.	Turn the setting to ON.
2 CHECK BODY INTEGRATED UNIT SETTING. Display the data of «Illumination Sensor Setting» using Subaru Select Monitor.	Is the setting “ON”?	Go to step 3.	Turn the setting to “ON”.
3 CHECK AUTO HEADLIGHT. 1) Set the lighting switch to AUTO position. 2) Make the light control sensor vicinity dark. 3) Turn the ignition switch to ON.	Do the parking light, tail and headlight illuminate?	Go to step 4.	Check the auto headlight system. <Ref. to LI-6, AUTO HEADLIGHT SYSTEM CHECK, INSPECTION, Headlight System.>
4 CHECK DOOR LOCK. Operate the door lock using the keyless transmitter or the access key.	Do the lock and unlock operate properly?	Go to step 5.	• Check keyless entry system. <Ref. to SL-17, INSPECTION, Keyless Entry System.> • Check the keyless access with push button start system. <Ref. to KPS(diag)-2, Basic Diagnostic Procedure.>
5 CHECK BODY INTEGRATED UNIT. 1) Display the data of «IG power supply voltage» using Subaru Select Monitor. 2) Turn the ignition switch to ON.	Is the voltage 10 — 15 V?	Replace the body integrated unit. <Ref. to SL-72, Body Integrated Unit.>	Repair or replace the harness.

Headlight System

LIGHTING SYSTEM

3. CHECK OF WELCOME LIGHTING SYSTEM

Trouble symptom:

Welcome lighting does not go off.

Step	Check	Yes	No
1 CHECK BODY INTEGRATED UNIT SETTING. Display the data of «Welcome Light Off Delay Time(Approaching)» or «Welcome Light Off Delay Time(Exiting)» using the Subaru Select Monitor. NOTE: For detailed operation procedures, refer to “Application help”.	Is the illumination time setting correct?	Go to step 2.	Set the illumination time.
2 CHECK THE LIGHTS. Set the lighting switch to the switch 1 (TAIL/PARKING) and switch 2 (HEAD).	Do the parking light, tail light and headlight illuminate?	Go to step 3.	Check the combination switch (light) and each light circuit.
3 CHECK BODY INTEGRATED UNIT. Using the Subaru Select Monitor, display the data of «Driver's door SW input».	Does the display switch between OFF ↔ ON when driver's door is opened/closed?	Go to step 4.	Check the door switch. <Ref. to SL-20, CHECK DOOR SWITCH, INSPECTION, Keyless Entry System.>
4 CHECK DOOR LOCK. Operate the door lock using the keyless transmitter or the access key.	Do the lock and unlock operate properly?	Replace the body integrated unit. <Ref. to SL-72, Body Integrated Unit.>	<ul style="list-style-type: none"> • Check keyless entry system. <Ref. to SL-17, INSPECTION, Keyless Entry System.> • Check the keyless access with push button start system. <Ref. to KPS(diag)-2, Basic Diagnostic Procedure.>

4. CHECK LIGHTING SWITCH

Refer to the “INSPECTION” of the “Combination Switch (Light)”. <Ref. to LI-21, INSPECTION, Combination Switch (Light).>

5. CHECK DIMMER & PASSING SWITCH

Refer to the “INSPECTION” of the “Combination Switch (Light)”. <Ref. to LI-21, INSPECTION, Combination Switch (Light).>

C: NOTE

For operation procedures of each component of the headlight system, refer to the respective section.

- Headlight Assembly: <Ref. to LI-24, Headlight Assembly.>
- Headlight bulb: <Ref. to LI-30, Headlight Bulb.>
- Combination switch (light): <Ref. to LI-19, Combination Switch (Light).>
- Light control sensor: <Ref. to LI-22, Light Control Sensor.>

4. Day Time Running Light System

A: WIRING DIAGRAM

Refer to “Headlight System” in the wiring diagram. <Ref. to WI-142, WIRING DIAGRAM, Headlight System.>

B: INSPECTION

1. DAYTIME RUNNING LIGHT SYSTEM CHECK

Step	Check	Yes	No
1 CHECK FUSE. 1) Turn the ignition switch to OFF. 2) Check the headlight HI fuse.	Is the fuse OK?	Go to step 2.	Replace the fuse.
2 CHECK RELAY. Check the daytime running light relay and headlight HI relay.	Is the relay OK?	Go to step 3.	Replace the relay.
3 CHECK BODY INTEGRATED UNIT. Read the DTC of body integrated unit using Subaru Select Monitor. NOTE: For detailed operation procedures, refer to “Application help”.	Is DTC displayed?	Perform the diagnosis according to DTC.	Go to step 4.
4 CHECK CURRENT DATA. Display the following items using Subaru Select Monitor. <ul style="list-style-type: none"> • «Parking Brake Switch Input» • «Shift position» • «Lighting II Switch Input» 	Is the input signal normal?	Go to step 5.	Check the defective part.
5 CHECK HEADLIGHT ILLUMINATION. 1) Turn the ignition switch to ON. 2) Turn the lighting switch to the switch II (HEAD) position. 3) Turn the dimmer & passing switch to the switch UP position.	Does the headlight (high beam) illuminate?	Go to step 6.	Check the combination switch (light) and headlight bulb.
6 CHECK DAYTIME RUNNING LIGHT RESISTOR. 1) Turn the ignition switch to OFF. 2) Check the daytime running light resistor. <Ref. to LI-79, INSPECTION, Day Time Running Resistor.>	Does the daytime running light resistor normal?	Go to step 7.	Replace the daytime running light resistor.
7 CHECK HARNESS. 1) Disconnect the connectors of body integrated unit, daytime running light relay, daytime running light resistor, and headlight. 2) Check each harness.	Is harness normal?	Replace the body integrated unit. <Ref. to SL-72, Body Integrated Unit.>	Repair or replace the harness.

C: NOTE

For operation procedures of each component of the daytime running light system, refer to the respective section.

- Headlight Assembly: <Ref. to LI-24, Headlight Assembly.>
- Headlight bulb: <Ref. to LI-30, Headlight Bulb.>
- Combination switch (light): <Ref. to LI-19, Combination Switch (Light).>
- Daytime running resistor: <Ref. to LI-78, Day Time Running Resistor.>

Clearance Light and Illumination Light System

LIGHTING SYSTEM

5. Clearance Light and Illumination Light System

A: WIRING DIAGRAM

Refer to “Clearance Light and Illumination Light System” in the wiring diagram. <Ref. to WI-71, WIRING DIAGRAM, Clearance Light and Illumination Light System.>

B: INSPECTION

1. CHECK LIGHTING SWITCH

Refer to the “INSPECTION” of the “Combination Switch (Light)”. <Ref. to LI-21, INSPECTION, Combination Switch (Light).>

C: NOTE

For operation procedures of each component of the clearance light & illumination light system, refer to the respective sections.

- Combination switch (light): <Ref. to LI-19, Combination Switch (Light).>
- Parking light bulb: <Ref. to LI-42, Clearance/Parking Light Bulb.>
- Front side marker light bulb: <Ref. to LI-43, Front Side Marker Light Bulb.>
- Rear combination light assembly: <Ref. to LI-51, Rear Combination Light Assembly.>
- Tail light/stop light bulb: <Ref. to LI-52, Tail/Stop Light Bulb.>
- Rear side marker light bulb: <Ref. to LI-56, Rear Side Marker Light Bulb.>
- License plate light: <Ref. to LI-60, License Plate Light.>
- Ignition switch illumination: <Ref. to LI-72, Ignition Switch Illumination.>

6. Front Fog Light System

A: WIRING DIAGRAM

Refer to “Front Fog Light System” in the wiring diagram.

- Model without SRF: <Ref. to WI-135, WITHOUT SRF, WIRING DIAGRAM, Front Fog Light System.>
- Model with SRF: <Ref. to WI-136, WITH SRF, WIRING DIAGRAM, Front Fog Light System.>

B: INSPECTION

1. CHECK FRONT FOG LIGHT SWITCH

Refer to the “INSPECTION” of the “Combination Switch (Light)”. <Ref. to LI-21, INSPECTION, Combination Switch (Light).>

C: NOTE

For operation procedures of each component of the front fog light system, refer to the respective section.

- Combination switch (light): <Ref. to LI-19, Combination Switch (Light).>
- Front fog light assembly: <Ref. to LI-44, Front Fog Light Assembly.>
- Front fog light bulb: <Ref. to LI-48, Front Fog Light Bulb.>

Turn Signal Light and Hazard Light System

LIGHTING SYSTEM

7. Turn Signal Light and Hazard Light System

A: WIRING DIAGRAM

Refer to “Turn Signal Light and Hazard Light System” in the wiring diagram. <Ref. to WI-225, WIRING DIAGRAM, Turn Signal Light and Hazard Light System.>

B: INSPECTION

1. CHECK TURN SIGNAL SWITCH

Refer to the “INSPECTION” of the “Combination Switch (Light)”. <Ref. to LI-21, INSPECTION, Combination Switch (Light).>

2. CHECK HAZARD SWITCH

Refer to the “INSPECTION” of the “Hazard Switch”. <Ref. to LI-38, INSPECTION, Hazard Switch.>

3. CHECK TURN SIGNAL & HAZARD UNIT

Refer to “INSPECTION” of the “Turn Signal Light & Hazard Light Unit”. <Ref. to LI-40, INSPECTION, Turn Signal Light & Hazard Light Unit.>

4. CHECK ONE-TOUCH TURN SIGNAL SYSTEM

Trouble symptom:

The lane change signal function of the turn signal indicator does not operate.

Step	Check	Yes	No
1 CHECK CUSTOMIZATION. Display the data of «Lane change signal setting» and «One-touch Turn Signal System Setup» using Subaru Select Monitor. NOTE: For detailed operation procedures, refer to “Application help”.	Is the setting “Support” and “ON”?	Go to step 2.	Change the setting to “Support” and “ON”.
2 CHECK CURRENT DATA. 1) Turn the ignition switch to ON. 2) Display the data of «Left turn signal input» and «Right turn signal input» using Subaru Select Monitor.	Does the display change to OFF ↔ ON, when the combination switch is operated?	Replace the body integrated unit. <Ref. to SL-72, Body Integrated Unit.>	Go to step 3.
3 CHECK HARNESS. 1) Turn the ignition switch to OFF. 2) Disconnect the connectors of the body integrated unit and turn signal & hazard unit. 3) Check the harness between body integrated unit and turn signal & hazard unit. Connector & terminal (B281) No. 21 — (B32) No. 5: (B281) No. 9 — (B32) No. 6:	Is the resistance less than 1 Ω?	Go to step 4.	Repair or replace the harness.
4 CHECK HARNESS. Measure the resistance between the body integrated unit connector and chassis ground. Connector & terminal (B281) No. 21 — Chassis ground: (B281) No. 9 — Chassis ground: NOTE: Check with the combination switch in the OFF position.	Is the resistance 1 MΩ or more?	Go to step 5.	Repair or replace the harness.

Turn Signal Light and Hazard Light System

LIGHTING SYSTEM

Step	Check	Yes	No
5 CHECK HARNESS. 1) Disconnect the connector of the combination switch. 2) Measure the resistance between the combination switch connector and chassis ground. Connector & terminal (B71) No. 12 — Chassis ground:	Is the resistance less than 1 Ω ?	Replace the body integrated unit. <Ref. to SL-72, Body Integrated Unit.>	Repair or replace the harness.

C: NOTE

For operation procedures of each component of the turn signal and hazard light system, refer to the respective sections.

- Combination switch (light): <Ref. to LI-19, Combination Switch (Light).>
- Front turn signal light bulb: <Ref. to LI-41, Front Turn Signal Light Bulb.>
- Side turn signal light assembly: <Ref. to LI-50, Side Turn Signal Light Assembly.>
- Rear combination light assembly: <Ref. to LI-51, Rear Combination Light Assembly.>
- Rear turn signal light bulb: <Ref. to LI-54, Rear Turn Signal Light Bulb.>
- Hazard switch: <Ref. to LI-37, Hazard Switch.>
- Turn signal & hazard unit: <Ref. to LI-39, Turn Signal Light & Hazard Light Unit.>

Back-up Light System

LIGHTING SYSTEM

8. Back-up Light System

A: WIRING DIAGRAM

Refer to “Back-up Light System” in the wiring diagram. <Ref. to WI-64, WIRING DIAGRAM, Back-up Light System.>

B: INSPECTION

1. CHECK BACK-UP LIGHT SWITCH (MT MODEL)

Refer to “INSPECTION” of the “Switches and Harness” in “MANUAL TRANSMISSION AND DIFFERENTIAL” section. <Ref. to 5MT-36, BACK-UP LIGHT SWITCH, INSPECTION, Switches and Harness.>

2. CHECK INHIBITOR SWITCH (CVT MODEL)

Refer to “INSPECTION” of the “Inhibitor Switch” in “CONTINUOUSLY VARIABLE TRANSMISSION” section. <Ref. to CVT(TR580)-97, INSPECTION, Inhibitor Switch.>

C: NOTE

For operation procedures of each component of the back-up light system, refer to the respective section.

- Rear combination light assembly: <Ref. to LI-51, Rear Combination Light Assembly.>
- Back-up light bulb: <Ref. to LI-58, Back-up Light Bulb.>

9. Stop Light System

A: WIRING DIAGRAM

Refer to “Stop Light System” in the wiring diagram.

- Model without EyeSight: <Ref. to WI-217, WITHOUT EyeSight, WIRING DIAGRAM, Stop Light System.>
- Model with EyeSight: <Ref. to WI-218, WITH EyeSight, WIRING DIAGRAM, Stop Light System.>

B: INSPECTION

1. CHECK STOP LIGHT SWITCH

Refer to “INSPECTION” of the “Stop Light Switch” in “BRAKE” section. <Ref. to BR-74, INSPECTION, Stop Light Switch.>

C: NOTE

For operation procedures of each component of the stop light system, refer to the respective section.

- Rear combination light assembly: <Ref. to LI-51, Rear Combination Light Assembly.>
- Tail light/stop light bulb: <Ref. to LI-52, Tail/Stop Light Bulb.>
- High-mounted stop light: <Ref. to LI-61, High-mounted Stop Light.>

10. Interior Light System

A: WIRING DIAGRAM

Refer to “Interior Light System” in the wiring diagram.

- Model without EyeSight: <Ref. to WI-151, WITHOUT EyeSight, WIRING DIAGRAM, Interior Light System.>
- Model with EyeSight: <Ref. to WI-154, WITH EyeSight, WIRING DIAGRAM, Interior Light System.>

B: INSPECTION

1. CHECK DOOR SWITCH

Refer to the “INSPECTION” of the “Door Switch”. <Ref. to LI-81, INSPECTION, Door Switch.>

2. CHECK REAR GATE LATCH SWITCH

Refer to “INSPECTION” of the “Rear Gate Latch and Actuator Assembly” in “SECURITY AND LOCKS” section. <Ref. to SL-51, ACTUATOR, INSPECTION, Rear Gate Latch and Actuator Assembly.>

C: NOTE

For operation procedures of each component of the interior light system, refer to the respective section.

- Spot map light: <Ref. to LI-63, Spot Map Light.>
- Room light: <Ref. to LI-66, Room Light.>
- Luggage room light: <Ref. to LI-68, Luggage Room Light.>
- Glove box light: <Ref. to LI-70, Glove Box Light.>
- Door switch: <Ref. to LI-81, Door Switch.>

11. Auto Headlight Beam Leveler System

A: WIRING DIAGRAM

Refer to “Headlight Beam Leveler System” in the wiring diagram. <Ref. to WI-140, WIRING DIAGRAM, Headlight Beam Leveler System.>

B: SPECIFICATION

1. AUTO HEADLIGHT BEAM LEVELER CM

Refer to “Control Module I/O Signal” of “AUTO HEADLIGHT BEAM LEVELER SYSTEM (DIAGNOSTICS)” section. <Ref. to AL(diag)-6, ELECTRICAL SPECIFICATION, Control Module I/O Signal.>

C: INSPECTION

Refer to “Basic Diagnostic Procedure” of “AUTO HEADLIGHT BEAM LEVELER SYSTEM (DIAGNOSTICS)” section. <Ref. to AL(diag)-2, Basic Diagnostic Procedure.>

Auto Headlight Beam Leveler System

LIGHTING SYSTEM

D: PROCEDURE

When parts related to the auto headlight beam leveler system are removed or replaced, perform the following procedures to initialize or reinitialize.

NOTE:

Before performing initialization or reinitialization, check the following:

- The vehicle is parked on a level surface.
- The inflation pressure of tires is correct.
- The vehicle does not have load.
- Vehicle's fuel tank is fully filled.
- Refer to the following chart to determine whether to initialize or reinitialize.

Initialization	When the auto headlight beam leveler CM was replaced with a new module.
Reinitialization	<ul style="list-style-type: none">• When the auto headlight beam leveler CM was replaced with a part from another vehicle.• When suspension parts have been removed or replaced. (Crossmember, front arm, sub frame, lateral link, housing, strut etc.)• When the vehicle height sensor has been replaced or removed.

CAUTION:

If the indicator does not flash three times or the headlight beam does not operate, it can be assumed that there is an open circuit or faulty wiring in the harness of the auto headlight beam leveler CM, vehicle height sensors or headlight assembly. Perform inspection and repair according to the inspection results, then perform initialization/reinitialization again.

- **Initialization:** <Ref. to LI-18, INITIALIZATION, PROCEDURE, Auto Headlight Beam Leveler System.>
- **Reinitialization:** <Ref. to LI-18, REINITIALIZATION, PROCEDURE, Auto Headlight Beam Leveler System.>

1. INITIALIZATION

- 1) Check that the indicator in the meter is flashing twice repeatedly.
- 2) Bounce the vehicle several times to normalize the suspension.
- 3) Make certain that someone is seated in the driver's seat.
- 4) Turn the ignition switch to ON, and within 1.5 — 20 seconds, turn the headlight switch OFF → ON for three successive times.
- 5) Make sure that the indicator in the meter flashes three times and then turns OFF, indicating that initialization has been successfully completed. (At this time, the headlight beam drops once, and then returns to the original position.)
- 6) Perform beam adjustment for the headlight. <Ref. to LI-28, ADJUSTMENT, Headlight Assembly.>

2. REINITIALIZATION

- 1) Bounce the vehicle several times to normalize the suspension.
- 2) Make certain that someone is seated in the driver's seat.
- 3) Turn the ignition switch to ON, and, within 1.5 — 10 seconds, turn the headlight switch OFF → ON five or more successive times.
- 4) Check that the headlight beam drops once, then returns to normal.
- 5) After confirming 4), turn the ignition switch to OFF within 30 seconds.
- 6) Turn the ignition switch to ON again, and, within 1.5 — 10 seconds, turn the headlight switch OFF → ON five or more successive times.
- 7) Make sure that the indicator in the meter flashes three times and then turns OFF, indicating that reinitialization has been successfully completed. (At this time, the headlight beam drops once, and then returns to the original position.)
- 8) Perform beam adjustment for the headlight. <Ref. to LI-28, ADJUSTMENT, Headlight Assembly.>

E: NOTE

For operation procedures of each component of the auto headlight beam leveler system, refer to the respective section.

- Auto headlight beam leveler CM: <Ref. to LI-74, Auto Headlight Beam Leveler Control Module.>
- Vehicle height sensor: <Ref. to LI-76, Rear Height Sensor.>

12. Combination Switch (Light)

A: REMOVAL

CAUTION:

Before handling the airbag system components, refer to “CAUTION” of “General Description” in “AIRBAG SYSTEM”. <Ref. to AB-9, CAUTION, General Description.>

- 1) Set the tire to the straight-ahead position.
- 2) Disconnect the ground cable from battery and wait for at least 60 seconds before starting work. <Ref. to NT-6, BATTERY, NOTE, Note.>
- 3) Remove the driver’s airbag module. <Ref. to AB-32, REMOVAL, Driver’s Airbag Module.>
- 4) Remove the steering wheel. <Ref. to PS-8, REMOVAL, Steering Wheel.>
- 5) Remove the cover assembly - column.
 - (1) Release the screws and claws.
 - (2) Remove the cap - key cylinder (a).
 - (3) Release the claw, and remove the cover assembly - column UPR and the cover assembly - column LWR.

A Model without keyless access with push button start

B Model with keyless access with push button start

- 6) Remove the steering roll connector. <Ref. to AB-59, REMOVAL, Roll Connector.>
- 7) Remove the switch assembly - combination wiper select. <Ref. to WW-11, REMOVAL, Combination Switch (Wiper).>
- 8) Remove the switch assembly - combination turn dimmer.
 - (1) Disconnect the connector, and loosen the clamp to release the claws.

Combination Switch (Light)

LIGHTING SYSTEM

(2) Pull out the switch assembly - combination turn dimmer from the column assembly - steering.

B: INSTALLATION

CAUTION:

- Before handling the airbag system components, refer to “CAUTION” of “General Description” in “AIRBAG SYSTEM”. <Ref. to AB-9, CAUTION, General Description.>
- Do not allow harness and connectors to interfere or get tangled up with other parts.
- If the steering wheel has been removed, make sure that the steering roll connector is not turned from the original position.
- If the steering wheel and steering angle sensor (steering roll connector) are removed, perform the VDC setting mode. <Ref. to VDC-23, ADJUSTMENT, VDC Control Module and Hydraulic Control Unit (VDCCM&H/U).>

- 1) Align the center position of the steering roll connector. <Ref. to AB-62, ADJUSTMENT, Roll Connector.>
- 2) Install each part in the reverse order of removal.

NOTE:

Align the alignment marks on the steering wheel and the column assembly - steering.

Tightening torque:

Steering wheel: 39 N·m (3.98 kgf·m, 28.8 ft·lb)

Clearance:

Between cover assembly - column and steering wheel: 4 — 6 mm (0.16 — 0.24 in)

C: INSPECTION

Measure the resistance between connector terminals. If it is not within the standard value, replace the switch assembly - combination turn dimmer.

Preparation tool:
Circuit tester

1. LIGHTING SWITCH

Terminal No.	Inspection conditions	Standard
18 — 12 19 — 12 20 — 12	Switch OFF	1 MΩ or more
19 — 12	Switch AUTO	Less than 1 Ω
18 — 12	Switch 1 (TAIL/PARKING)	Less than 1 Ω
18 — 12 20 — 12	Switch 2 (HEAD)	Less than 1 Ω

2. DIMMER & PASSING SWITCH

Terminal No.	Inspection conditions	Standard
11 — 12 17 — 12	Switch PASS	Less than 1 Ω
11 — 12	Switch UP	Less than 1 Ω

3. TURN SIGNAL SWITCH

Terminal No.	Inspection conditions	Standard
13 — 12	Switch TURN (RH)	Less than 1 Ω
15 — 12	Switch TURN (LH)	Less than 1 Ω

4. FRONT FOG LIGHT SWITCH

Terminal No.	Inspection conditions	Standard
4 — 3	Switch OFF	1 MΩ or more
	Switch ON	Less than 1 Ω

Light Control Sensor

LIGHTING SYSTEM

13. Light Control Sensor

A: REMOVAL

- 1) Disconnect the ground cable from battery. <Ref. to NT-6, BATTERY, NOTE, Note.>
- 2) Remove the sensor - automatic light.

CAUTION:

Be careful not to damage the sensors and interior trims when removing.

- (1) Release the connectors and claws, and remove the grille front defroster.

- (2) Release the claws, and then remove the sensor - automatic light from the grille front defroster.

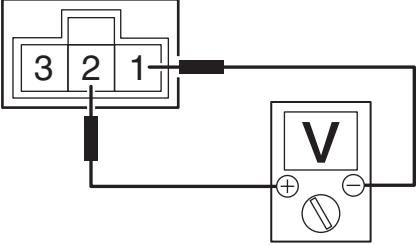

B: INSTALLATION

Install each part in the reverse order of removal.

C: INSPECTION

- 1) Turn the ignition switch to ON.
- 2) Set the lighting switch to AUTO position.
- 3) Check the voltage between the sensor terminals.

Preparation tool:
Circuit tester

Terminal No.	Inspection conditions	Standard	Connection diagram
2 (+) — 1 (-)	Measure the voltage when the area around the sensor - automatic light, which was dark, becomes bright.	Dark condition: Approx. 0.6 V or less Bright condition: Approx. 3.0 V or more	

LI-01280

- 4) Replace the sensor - automatic light if the inspection result is not within the standard value.

Headlight Assembly

LIGHTING SYSTEM

14. Headlight Assembly

A: REMOVAL

CAUTION:

- Do not perform work with wet hands, because there is a possibility of electrical shock.
- The HID type uses very high voltages for the lighting circuit. Make sure that the power supply is turned OFF before working.

- 1) Disconnect the ground cable from battery. <Ref. to NT-6, BATTERY, NOTE, Note.>
- 2) Remove the air intake duct. (When removing RH side) <Ref. to IN(H4DO)-13, REMOVAL, Air Intake Duct.>
- 3) Remove the clip, and remove the bracket - grille.

CAUTION:

To prevent damage to the bracket - grille, make sure to remove all clips.

- 4) Remove the bumper face - front. <Ref. to EI-27, REMOVAL, Front Bumper.>
- 5) Remove the bolts and clips, and remove the bracket - front bumper corner.

- 6) Remove the light assembly - head.
 - (1) Disconnect the connector.

(2) Remove the bolts and clips, and remove the light assembly - head.

B: INSTALLATION

CAUTION:

Install so that the front end of the under cover (b) comes inside the bumper face - front (a), and the front end of the mud guard (c) comes outside the bumper face - front (a).

1) Install each part in the reverse order of removal.

Tightening torque:

Light assembly - head: 7.5 N·m (0.76 kgf-m, 5.5 ft-lb)

2) Secure the flange section of the bumper face - front to the bracket - front bumper side.

3) Adjust the headlight beam and fog light beam.

- Adjust the headlight beam. <Ref. to LI-28, HEADLIGHT BEAM ADJUSTMENT, ADJUSTMENT, Headlight Assembly.>
- Adjust the fog light beam. <Ref. to LI-46, FOG LIGHT AIMING, ADJUSTMENT, Front Fog Light Assembly.>

Headlight Assembly

LIGHTING SYSTEM

C: DISASSEMBLY

1. HID HEADLIGHT BALLAST

CAUTION:

Do not leave the light assembly - head without the ballast - headlight for a long time. Dust, moisture, etc. entering the light assembly - head may affect its performance.

1) Remove the cover - headlight.

LI-01192

2) Disconnect the bulb socket.

LI-01193

3) Remove the ballast - headlight.

(1) Disconnect the connector.

(2) Remove the screws and remove the ballast - headlight.

(3) Guiding the bulb socket through the gap between housing and reflector, pull out the ballast - headlight.

D: ASSEMBLY

1. HID HEADLIGHT BALLAST

CAUTION:

- When installing the ballast - headlight, be sure to install the gasket.
- After installing the ballast to the vehicle, be sure to perform beam adjustment.

Assemble each part in the reverse order of disassembly.

Headlight Assembly

LIGHTING SYSTEM

E: ADJUSTMENT

1. HEADLIGHT BEAM ADJUSTMENT

CAUTION:

- Turn off the light before adjusting the beam level of the light assembly - head. If it is necessary to inspect the beam level, do not keep the light on for two minutes or more.

- When blocking the light emitted from the headlight, use a light shield or equivalent.

Do not apply the tape on the lens or place the cloth over it. It may raise the temperature in the light and cause deformation/bubble formations of the plastic lens.

1) Before checking the beam level of the light assembly - head, be sure of the following:

- The area around the light assembly - head has not sustained any scratches, damage or other type of deformation.
- The vehicle is parked on a level surface.
- The inflation pressure of tires is correct.
- The vehicle does not have load.
- Vehicle's fuel tank is fully filled.

2) Bounce the vehicle several times to normalize the suspension.

3) Make certain that someone is seated in the driver's seat.

4) Measure the distance between the low beam bulb centers and the height of the bulb center.

LI-10290

(a) High beam

(b) Low beam

Headlight Assembly

5) Adjust the beam level of the light assembly - head (low beam).

(1) Place the vehicle with the front end facing to the measurement panel, then illuminate the low beam.

LI-01265

- (A) Vehicle center
- (B) Bulb center marking

(C) 3 m (10 ft)

(D) Height of headlight center

W mm (in)
1,281 (50.44)

(2) Adjust the low beam by turning the aiming screw.

LI-10308

Headlight Bulb

LIGHTING SYSTEM

15. Headlight Bulb

A: REMOVAL

1. HIGH BEAM

CAUTION:

- Do not perform work with wet hands, because there is a possibility of electrical shock.
- Do not leave the light assembly - head without the bulb for a long time. Dust, moisture, etc. entering the light may affect its performance.

1) Disconnect the ground cable from battery. <Ref. to NT-6, BATTERY, NOTE, Note.>

2) Remove the air intake duct. (When removing RH side) <Ref. to IN(H4DO)-13, REMOVAL, Air Intake Duct.>

3) Disconnect the connector and remove the high beam bulb.

CAUTION:

Use a dry clean cloth so that no grease or water adheres to the glass portion of the bulb.

2. HALOGEN TYPE LOW BEAM

CAUTION:

- Do not perform work with wet hands, because there is a possibility of electrical shock.
- Do not leave the light assembly - head without the bulb for a long time. Dust, moisture, etc. entering the light may affect its performance.

- 1) Disconnect the ground cable from battery. <Ref. to NT-6, BATTERY, NOTE, Note.>
- 2) Remove the air intake duct. (When removing RH side) <Ref. to IN(H4DO)-13, REMOVAL, Air Intake Duct.>
- 3) Turn the filler neck of the tank - washer front clockwise. (When removing LH side)

- 4) Disconnect the connector and remove the low beam bulb.

CAUTION:

- Make sure to check if any bulb O-ring is remained on the housing side as this may sometimes happen.
- Use a dry clean cloth so that no grease or water adheres to the glass portion of the bulb.

Headlight Bulb

LIGHTING SYSTEM

3. HID TYPE LOW BEAM

When removing RH side

CAUTION:

- Do not perform work with wet hands, because there is a possibility of electrical shock.
- Because the lighting circuit uses high voltage, be sure to confirm that the power supply is turned off before operation.

• Do not leave the light assembly - head without the bulb and cover - headlight for a long time. Dust, moisture, etc. entering the light may affect its performance.

1) Disconnect the ground cable from battery. <Ref. to NT-6, BATTERY, NOTE, Note.>

2) Remove the air intake duct. <Ref. to IN(H4DO)-13, REMOVAL, Air Intake Duct.>

3) Remove the clip, and remove the bracket - grille.

CAUTION:

To prevent damage to the bracket - grille, make sure to remove all clips.

4) Remove the bumper face - front. <Ref. to EI-27, REMOVAL, Front Bumper.>

5) Remove the light assembly - head. <Ref. to LI-24, REMOVAL, Headlight Assembly.>

6) Remove the low beam bulb.

(1) Remove the cover - headlight.

(2) Remove the bulb socket.

(3) Unlock the bulb spring, and remove the low beam bulb.

CAUTION:

Use a dry clean cloth so that no grease or water adheres to the glass portion of the bulb.

Headlight Bulb

LIGHTING SYSTEM

When removing LH side

CAUTION:

- Do not perform work with wet hands, because there is a possibility of electrical shock.
- Because the lighting circuit uses high voltage, be sure to confirm that the power supply is turned off before operation.
- Do not leave the light assembly - head without the bulb and cover - headlight for a long time. Dust, moisture, etc. entering the light may affect its performance.

1) Remove the battery. <Ref. to SC(H4DO)-51, REMOVAL, Battery.>

2) Remove the low beam bulb.

(1) Remove the cover - headlight.

LI-01192

(2) Remove the bulb socket.

LI-01193

(3) Unlock the bulb spring, and remove the low beam bulb.

CAUTION:

Use a dry clean cloth so that no grease or water adheres to the glass portion of the bulb.

LI-01198

B: INSTALLATION

CAUTION:

Install so that the front end of the under cover (b) comes inside the bumper face - front (a), and the front end of the mud guard (c) comes outside the bumper face - front (a).

COM00138

- 1) Install each part in the reverse order of removal.
- 2) When performing the work of HID type low beam RH, secure the flange section of the bumper face - front to the bracket - front bumper side.
- 3) When performing the work of HID type low beam RH, adjust the fog light beam. <Ref. to LI-46, FOG LIGHT AIMING, ADJUSTMENT, Front Fog Light Assembly.>

Headlight Bulb

LIGHTING SYSTEM

C: INSPECTION

1. HALOGEN TYPE

CAUTION:

- **Do not perform work with wet hands, because there is a possibility of electrical shock.**
- **Do not leave the light assembly - head without the bulb and cover - headlight for a long time. Dust, moisture, etc. entering the headlight may affect its performance.**

- 1) Visually check the bulb for blow out.
- 2) Check the bulb specification. <Ref. to LI-2, SPECIFICATION, General Description.>
- 3) Replace the bulb if it is found defective.

2. HID TYPE

CAUTION:

- **Do not perform work with wet hands, because there is a possibility of electrical shock.**
- **Do not leave the light assembly - head without the bulb and cover - headlight for a long time. Dust, moisture, etc. entering the headlight may affect its performance.**
- **When lit (lighting switch is ON), do not touch the harness, light internals, or metal parts of the light.**
- **When performing a lighting test, make sure that the headlight is mounted on the vehicle, and the power supply is connected to the connector on the vehicle's side.**

- 1) Check the bulb specification. <Ref. to LI-2, SPECIFICATION, General Description.>
- 2) Install the factory HID bulb to check whether it lights properly.
- 3) If it does not light properly, replace with a new bulb.
- 4) Inspect the HID ballast.

Inspect the ballast in the following manner, and determine whether or not to reuse.

- (1) Perform cold starts (light the headlight after turning off for 10 minutes or more), and hot starts (light the headlight for 15 minutes or more, then turn off for 1 minute and relight) several times, to make sure that the headlight lights properly.
- (2) Monitor the lighting condition right after a cold start up to a stable state (approx. 5 min.), to see if there are any unstable conditions such as flickering.
- (3) Install bulbs with the same number of operating hours on both headlights, and light for approximately 30 minutes. Check for whether there is a difference in brightness on the right and left sides.
- 5) Replace the ballast if it is found defective.

16.Hazard Switch

A: REMOVAL

- 1) Disconnect the ground cable from battery. <Ref. to NT-6, BATTERY, NOTE, Note.>
- 2) Remove the center grille assembly. <Ref. to AC-86, CENTER GRILLE ASSEMBLY, REMOVAL, Air Vent Grille.>
- 3) Release the claws, and remove the switch - hazard from the center grille assembly.

B: INSTALLATION

CAUTION:

After installing the center grille assembly, check that the air vent grille of the center grille assembly is inserted correctly into the air vent duct.

Install each part in the reverse order of removal.

Hazard Switch

LIGHTING SYSTEM

C: INSPECTION

1) Measure the resistance between connector terminals.

Preparation tool:

Circuit tester

Terminal No.	Inspection conditions	Standard
2 — 3	Switch OFF	1 M Ω or more
	Switch ON	Less than 1 Ω

2) Apply battery voltage between the connector terminals to check the lighting condition of the light.

Terminal No.	Inspection conditions	Specification
4 (+) — 1 (-)	Apply battery voltage.	Light ON

3) Replace the switch - hazard if the inspection result is not within the standard value.

17. Turn Signal Light & Hazard Light Unit

A: REMOVAL

CAUTION:

Before handling the airbag system components, refer to “CAUTION” of “General Description” in “AIRBAG SYSTEM”. <Ref. to AB-9, CAUTION, General Description.>

- 1) Disconnect the ground cable from battery and wait for at least 60 seconds before starting work. <Ref. to NT-6, BATTERY, NOTE, Note.>
- 2) Remove the instrument panel lower cover. <Ref. to EI-54, REMOVAL, Instrument Panel Lower Cover.>
- 3) Remove the knee airbag module. <Ref. to AB-34, REMOVAL, Knee Airbag Module.>
- 4) Remove the turn signal & hazard unit.
 - (1) Disconnect the connector.
 - (2) Release the claws and remove the turn signal & hazard unit from the beam COMPL - steering.

LI-01203

B: INSTALLATION

CAUTION:

Before handling the airbag system components, refer to “CAUTION” of “General Description” in “AIRBAG SYSTEM”. <Ref. to AB-9, CAUTION, General Description.>

Install each part in the reverse order of removal.

Turn Signal Light & Hazard Light Unit

LIGHTING SYSTEM

C: INSPECTION

- 1) Disconnect the connector of the turn signal & hazard unit.
- 2) Measure the voltage between the turn signal & hazard unit connector and the chassis ground.

Preparation tool:
Circuit tester

Terminal No.	Inspection conditions	Standard	Connection diagram
4 (+) — Chassis ground (-)	Always	10 — 14 V	
1 (+) — Chassis ground (-)	IG OFF → ON	Less than 1 V → 10 — 14 V	

LI-01281

Repair or replace the harness if the inspection result is not within the standard value.

- 3) Measure the resistance between the turn signal & hazard unit connector and the chassis ground.

Terminal No.	Inspection conditions	Standard	Connection diagram
7 — Chassis ground	Always	Less than 1 Ω	

LI-01282

Repair or replace the harness if the inspection result is not within the standard value.

- 4) Connect the turn signal & hazard unit connector.
- 5) Measure the voltage between turn signal & hazard unit and chassis ground.

Terminal No.	Input/Output	Inspection conditions	Standard
6 (+) — Chassis ground (-)	Input	Turn signal switch (right) OFF → ON	9 V or more → less than 1 V
5 (+) — Chassis ground (-)	Input	Turn signal switch (left) OFF → ON	9 V or more → less than 1 V
8 (+) — Chassis ground (-)	Input	Hazard switch OFF → ON	9 V or more → less than 1 V
2 (+) — Chassis ground (-)	Output	Turn signal switch (right) OFF → ON	Repeat less than 1 V → less than 1 V ↔ more than 9 V at 60 to 120 times per minute.
3 (+) — Chassis ground (-)	Output	Turn signal switch (left) OFF → ON	Repeat less than 1 V → less than 1 V ↔ more than 9 V at 60 to 120 times per minute.
2 (+) — Chassis ground (-)	Output	Hazard switch OFF → ON	Repeat less than 1 V → less than 1 V ↔ more than 9 V at 60 to 120 times per minute.
3 (+) — Chassis ground (-)	Output	Hazard switch OFF → ON	Repeat less than 1 V → less than 1 V ↔ more than 9 V at 60 to 120 times per minute.

Replace the turn signal & hazard unit if the inspection result is not within the standard value.

18. Front Turn Signal Light Bulb

A: REMOVAL

- 1) Disconnect the ground cable from battery. <Ref. to NT-6, BATTERY, NOTE, Note.>
- 2) Turn the steering wheel in the opposite direction from the parts to be removed. Then remove the clips and turn over the mud guard - front.

- 3) Remove the bulb socket and front turn signal light bulb.

CAUTION:

Use a dry clean cloth so that no grease or water adheres to the glass portion of the bulb.

B: INSTALLATION

Install each part in the reverse order of removal.

C: INSPECTION

- 1) Visually check the bulb for blow out.
- 2) Check the bulb specification. <Ref. to LI-2, SPECIFICATION, General Description.>
- 3) Replace the bulb if it is found defective.

Clearance/Parking Light Bulb

LIGHTING SYSTEM

19. Clearance/Parking Light Bulb

A: REMOVAL

- 1) Disconnect the ground cable from battery. <Ref. to NT-6, BATTERY, NOTE, Note.>
- 2) Turn the steering wheel in the opposite direction from the parts to be removed. Then remove the clips and turn over the mud guard - front.

- 3) Remove the bulb socket and parking light bulb.

CAUTION:

Use a dry clean cloth so that no grease or water adheres to the glass portion of the bulb.

B: INSTALLATION

Install each part in the reverse order of removal.

C: INSPECTION

- 1) Visually check the bulb for blow out.
- 2) Check the bulb specification. <Ref. to LI-2, SPECIFICATION, General Description.>
- 3) Replace the bulb if it is found defective.

20.Front Side Marker Light Bulb

A: REMOVAL

- 1) Disconnect the ground cable from battery. <Ref. to NT-6, BATTERY, NOTE, Note.>
- 2) Turn the steering wheel in the opposite direction from the parts to be removed. Then remove the clips and turn over the mud guard - front.

- 3) Remove the bulb socket and front side marker light bulb.

CAUTION:

Use a dry clean cloth so that no grease or water adheres to the glass portion of the bulb.

B: INSTALLATION

Install each part in the reverse order of removal.

C: INSPECTION

- 1) Visually check the bulb for blow out.
- 2) Check the bulb specification. <Ref. to LI-2, SPECIFICATION, General Description.>
- 3) Replace the bulb if it is found defective.

Front Fog Light Assembly

LIGHTING SYSTEM

21. Front Fog Light Assembly

A: REMOVAL

- 1) Disconnect the ground cable from battery. <Ref. to NT-6, BATTERY, NOTE, Note.>
- 2) Lift up the vehicle.
- 3) Remove the screw and clips, and turn over the front side of the mud guard - front.

- 4) From the bottom of the bumper face - front, remove the fog light assembly - front.
 - (1) Disconnect the connector.
 - (2) Remove the bolts and clips, and remove the fog light assembly - front.
- Model without SRF

- Model with SRF

B: INSTALLATION

CAUTION:

Install the mud guard - front so that the front end of the mud guard (b) comes outside the bumper face - front (a).

1) Install each part in the reverse order of removal.

Tightening torque:

Fog light assembly - front: 7.5 N·m (0.76 kgf·m, 5.5 ft·lb)

2) Adjust the fog light beam. <Ref. to LI-46, FOG LIGHT AIMING, ADJUSTMENT, Front Fog Light Assembly.>

Front Fog Light Assembly

LIGHTING SYSTEM

C: ADJUSTMENT

1. FOG LIGHT AIMING

1) Before checking the fog light assembly - front beam level, be sure of the following:

- The area around the fog light assembly - front has not sustained any scratches, damage or other type of deformation.
- The vehicle is parked on a level surface.
- The inflation pressure of tires is correct.
- The vehicle does not have load.
- Vehicle's fuel tank is fully filled.

2) Bounce the vehicle several times to normalize the suspension.

3) Make certain that someone is seated in the driver's seat.

4) Place the vehicle with the front end facing to the measurement panel.

(A) Vehicle center

(C) 3 m (10 ft)

(D) Height of fog light center

(B) Bulb center marking

h mm (in) at 3 m (10 ft)
40 (1.58)

5) Adjust the fog light assembly - front beam.

(1) Remove the screw and clips, and turn over the front side of the mud guard - front.

(2) Adjust the beam direction by turning the aiming screw from the bottom of the bumper face - front.

Front Fog Light Bulb

LIGHTING SYSTEM

22.Front Fog Light Bulb

A: REMOVAL

- 1) Disconnect the ground cable from battery. <Ref. to NT-6, BATTERY, NOTE, Note.>
- 2) Remove the screw and clips, and turn over the front side of the mud guard - front.

- 3) From the bottom of the bumper face - front, remove the front fog light bulb.

CAUTION:

Use a dry clean cloth so that no grease or water adheres to the glass portion of the bulb.

- (1) Disconnect the connector.
 - (2) Remove the bulb.
- Model without SRF

- Model with SRF

B: INSTALLATION

CAUTION:

- After connecting the connector, make sure that the bulb is locked securely.
- Install the mud guard - front so that the front end of the mud guard (b) comes outside the bumper face - front (a).

Install each part in the reverse order of removal.

C: INSPECTION

- 1) Visually check the bulb for blow out.
- 2) Check the bulb specification. <Ref. to LI-2, SPECIFICATION, General Description.>
- 3) Replace the bulb if it is found defective.

Side Turn Signal Light Assembly

LIGHTING SYSTEM

23.Side Turn Signal Light Assembly

A: REMOVAL

- 1) Disconnect the ground cable from battery. <Ref. to NT-6, BATTERY, NOTE, Note.>
- 2) Remove the light assembly - side turn mirror. <Ref. to GW-24, DISASSEMBLY, Outer Mirror Assembly.>

B: INSTALLATION

Install each part in the reverse order of removal.

C: INSPECTION

- 1) Install the light to check if it blinks normally.
- 2) If it fails to blink normally, replace the light assembly - side turn mirror with a new part.

NOTE:

Since LED (Light Emitting Diode) is used for the light, replace the light assembly - side turn mirror if the LED burns out.

24. Rear Combination Light Assembly

A: REMOVAL

1. CROSSTREK MODEL

- 1) Disconnect the ground cable from battery. <Ref. to NT-6, BATTERY, NOTE, Note.>
- 2) Remove the light assembly - rear combination.

CAUTION:

Be careful not to damage the clips.

- (1) Release the bolts and clips, then pull out the light assembly - rear combination to the vehicle rear.
- (2) Disconnect the connector and remove the light assembly - rear combination.

EI-10443

B: INSTALLATION

Install each part in the reverse order of removal.

Tightening torque:

Light assembly - rear combination: 7.5 N·m (0.76 kgf-m, 5.5 ft-lb)

C: INSPECTION

- 1) Apply battery voltage between the connector terminals to check the lighting condition of the light.

LI-10039

Terminal No.	Inspection conditions	Specification
6 (+) — 3 (-)	Apply battery voltage.	Stop light on
2 (+) — 3 (-)		Tail (small) / side marker light on
4 (+) — 3 (-)		Turn signal light on
1 (+) — 3 (-)		Back-up light on

- 2) Replace the harness and bulb if it is found defective.

Tail/Stop Light Bulb

LIGHTING SYSTEM

25. Tail/Stop Light Bulb

A: REMOVAL

1. CROSSTREK MODEL

- 1) Disconnect the ground cable from battery. <Ref. to NT-6, BATTERY, NOTE, Note.>
- 2) Remove the light assembly - rear combination.

CAUTION:

Be careful not to damage the clips.

- (1) Release the bolts and clips, then pull out the light assembly - rear combination to the vehicle rear.
- (2) Disconnect the connector and remove the light assembly - rear combination.

- 3) Remove the bulb socket and tail light/stop light bulb.

CAUTION:

Use a dry clean cloth so that no grease or water adheres to the glass portion of the bulb.

B: INSTALLATION

Install each part in the reverse order of removal.

Tightening torque:

Light assembly - rear combination: 7.5 N·m (0.76 kgf-m, 5.5 ft-lb)

C: INSPECTION

- 1) Visually check the bulb for blow out.
- 2) Check the bulb specification. <Ref. to LI-2, SPECIFICATION, General Description.>
- 3) Replace the bulb if it is found defective.

Rear Turn Signal Light Bulb

LIGHTING SYSTEM

26.Rear Turn Signal Light Bulb

A: REMOVAL

1. CROSSTREK MODEL

- 1) Disconnect the ground cable from battery. <Ref. to NT-6, BATTERY, NOTE, Note.>
- 2) Remove the light assembly - rear combination.

CAUTION:

Be careful not to damage the clips.

- (1) Release the bolts and clips, then pull out the light assembly - rear combination to the vehicle rear.
- (2) Disconnect the connector and remove the light assembly - rear combination.

- 3) Remove the bulb socket and rear turn signal light bulb.

CAUTION:

Use a dry clean cloth so that no grease or water adheres to the glass portion of the bulb.

B: INSTALLATION

Install each part in the reverse order of removal.

Tightening torque:

Light assembly - rear combination: 7.5 N·m (0.76 kgf-m, 5.5 ft-lb)

C: INSPECTION

- 1) Visually check the bulb for blow out.
- 2) Check the bulb specification. <Ref. to LI-2, SPECIFICATION, General Description.>
- 3) Replace the bulb if it is found defective.

Rear Side Marker Light Bulb

LIGHTING SYSTEM

27.Rear Side Marker Light Bulb

A: REMOVAL

1. CROSSTREK MODEL

- 1) Disconnect the ground cable from battery. <Ref. to NT-6, BATTERY, NOTE, Note.>
- 2) Remove the light assembly - rear combination.

CAUTION:

Be careful not to damage the clips.

- (1) Release the bolts and clips, then pull out the light assembly - rear combination to the vehicle rear.
- (2) Disconnect the connector and remove the light assembly - rear combination.

- 3) Remove the bulb socket and rear side marker light bulb.

CAUTION:

Use a dry clean cloth so that no grease or water adheres to the glass portion of the bulb.

B: INSTALLATION

Install each part in the reverse order of removal.

Tightening torque:

Light assembly - rear combination: 7.5 N·m (0.76 kgf-m, 5.5 ft-lb)

C: INSPECTION

- 1) Visually check the bulb for blow out.
- 2) Check the bulb specification. <Ref. to LI-2, SPECIFICATION, General Description.>
- 3) Replace the bulb if it is found defective.

Back-up Light Bulb

LIGHTING SYSTEM

28.Back-up Light Bulb

A: REMOVAL

1. CROSSTREK MODEL

- 1) Disconnect the ground cable from battery. <Ref. to NT-6, BATTERY, NOTE, Note.>
- 2) Remove the light assembly - rear combination.

CAUTION:

Be careful not to damage the clips.

- (1) Release the bolts and clips, then pull out the light assembly - rear combination to the vehicle rear.
- (2) Disconnect the connector and remove the light assembly - rear combination.

- 3) Remove the bulb socket and rear turn signal light bulb.

CAUTION:

Use a dry clean cloth so that no grease or water adheres to the glass portion of the bulb.

B: INSTALLATION

Install each part in the reverse order of removal.

Tightening torque:

Light assembly - rear combination: 7.5 N·m (0.76 kgf-m, 5.5 ft-lb)

C: INSPECTION

- 1) Visually check the bulb for blow out.
- 2) Check the bulb specification. <Ref. to LI-2, SPECIFICATION, General Description.>
- 3) Replace the bulb if it is found defective.

License Plate Light

LIGHTING SYSTEM

29. License Plate Light

A: REMOVAL

- 1) Disconnect the ground cable from battery. <Ref. to NT-6, BATTERY, NOTE, Note.>
- 2) Remove the license plate light.
 - (1) Release the claws and pull out the license plate light.
 - (2) Disconnect the connector and remove the bulb socket and bulb from the license plate light.

CAUTION:

Use a dry clean cloth so that no grease or water adheres to the glass portion of the bulb.

LI-10294

B: INSTALLATION

Install each part in the reverse order of removal.

C: INSPECTION

- 1) Visually check the bulb for blow out.
- 2) Check the bulb specification. <Ref. to LI-2, SPECIFICATION, General Description.>
- 3) Replace the bulb if it is found defective.

30.High-mounted Stop Light

A: REMOVAL

1. CROSSTREK MODEL

- 1) Disconnect the ground cable from battery. <Ref. to NT-6, BATTERY, NOTE, Note.>
- 2) Remove the trim panel - rear gate UPR. <Ref. to EI-93, REMOVAL, Rear Gate Trim.>
- 3) Remove the light assembly - high-mounted.
 - (1) Remove the nut.

- (2) From the inside of the rear gate, push the claws on both side of the light assembly - high-mounted to take it out toward vehicle rear.
- (3) Disconnect the connector and remove the light assembly - high-mounted.

High-mounted Stop Light

LIGHTING SYSTEM

B: INSTALLATION

Install each part in the reverse order of removal.

Tightening torque:

Light assembly - high-mounted: 4.5 N·m (0.46 kgf-m, 3.3 ft-lb)

C: INSPECTION

- 1) Install the light to test if it illuminates normally.
- 2) If it fails to illuminate normally, replace the light assembly - high-mounted with a new part.

NOTE:

Since LED (Light Emitting Diode) is used for the light, replace the light assembly - high-mounted if the LED burns out.

31. Spot Map Light

A: REMOVAL

1. MODELS WITHOUT EyeSight

- 1) Disconnect the ground cable from battery. <Ref. to NT-6, BATTERY, NOTE, Note.>
- 2) Remove the light assembly - map.

CAUTION:

When using a flat tip screwdriver, use an appropriate sized tool for the insertion opening, apply protective tape or cloth around the tool, and be careful not to cause damage.

- (1) Release the claws and remove the lens.
 - (2) Remove the screws and pull out the light assembly - map.
- Model without sunroof

- Model with sunroof

- (3) Disconnect the connector and remove the light assembly - map and the bulb.

CAUTION:

Use a dry clean cloth so that no grease or water adheres to the glass portion of the bulb.

Spot Map Light

LIGHTING SYSTEM

2. MODELS WITH EyeSight

NOTE:

The spot map light is a single unit with the stereo camera cover.

1) Disconnect the ground cable from battery. <Ref. to NT-6, BATTERY, NOTE, Note.>

2) Remove the stereo camera cover. <Ref. to ES-7, REMOVAL, Stereo Camera.>

CAUTION:

When using a flat tip screwdriver, use an appropriate sized tool for the insertion opening, apply protective tape or cloth around the tool, and be careful not to cause damage.

3) Release the claws and remove the lens.

4) Remove the bulb.

CAUTION:

Use a dry clean cloth so that no grease or water adheres to the glass portion of the bulb.

B: INSTALLATION

Install each part in the reverse order of removal.

C: INSPECTION

1. SPOT MAP LIGHT BULB

- 1) Visually check the bulb for blow out.
- 2) Check the bulb specification. <Ref. to LI-2, SPECIFICATION, General Description.>
- 3) Replace the bulb if it is found defective.

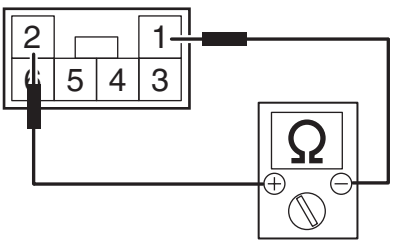

2. SPOT MAP LIGHT SWITCH

- 1) Check the resistance between switch terminals.

Preparation tool:

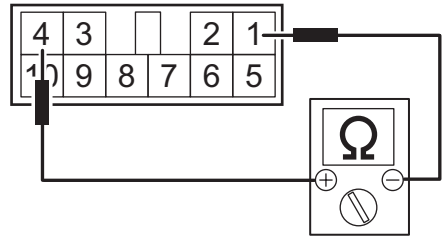

Circuit tester

- Models without EyeSight
 - Model without sunroof

Terminal No.	Inspection conditions	Standard	Connection diagram
1 — 2	Switch OFF	1 MΩ or more	
	Switch ON	Approx. 18 Ω	

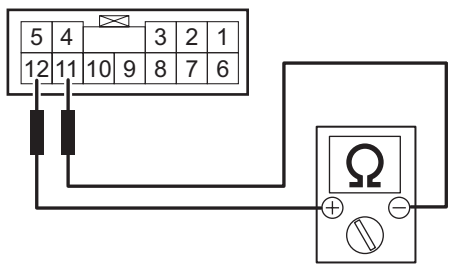

LI-01955

– Model with sunroof

Terminal No.	Inspection conditions	Standard	Connection diagram
1 — 4	Switch OFF	1 MΩ or more	
	Switch ON	Approx. 18 Ω	

LI-10028

- Models with EyeSight

Terminal No.	Inspection conditions	Standard	Connection diagram
11 — 12	Switch OFF	1 MΩ or more	
	Switch ON	Approx. 18 Ω	

LI-01341

- 2) Replace the light assembly - map if the inspection result is not within the standard value.

Room Light

LIGHTING SYSTEM

32.Room Light

A: REMOVAL

- 1) Disconnect the ground cable from battery. <Ref. to NT-6, BATTERY, NOTE, Note.>
- 2) Remove the light assembly - room.

CAUTION:

When using a flat tip screwdriver, apply protective tape or cloth and be careful not to cause damage.

- (1) Release the claws and remove the lens.
- (2) Remove the screws and pull out the light assembly - room.

- (3) Disconnect the connector and remove the light assembly - room and the bulb.

CAUTION:

Use a dry clean cloth so that no grease or water adheres to the glass portion of the bulb.

B: INSTALLATION

Install each part in the reverse order of removal.

C: INSPECTION

1. ROOM LIGHT BULB

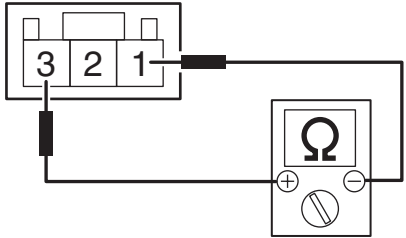

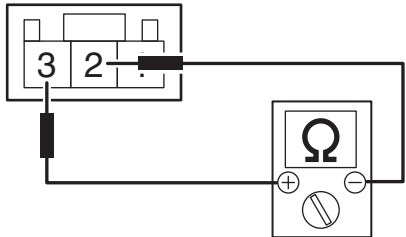

- 1) Visually check the bulb for blow out.
- 2) Check the bulb specification. <Ref. to LI-2, SPECIFICATION, General Description.>
- 3) Replace the bulb if it is found defective.

2. ROOM LIGHT SWITCH

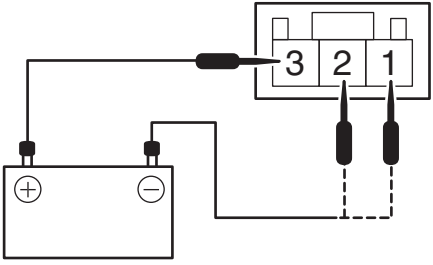

- 1) Check the resistance between switch terminals.

Preparation tool:

Circuit tester

Terminal No.	Inspection conditions	Standard	Connection diagram
1 — 3	Switch OFF	1 MΩ or more	 <p style="text-align: right; font-size: small;">LI-01254</p>
	Switch ON	Less than 1 Ω	
2 — 3	Switch door	Less than 1 Ω	 <p style="text-align: right; font-size: small;">LI-01255</p>

- 2) Apply battery voltage to check the lighting condition of the light.

Terminal No.	Inspection conditions	Specification	Connection diagram
3 (+) — 1, 2 (-)	Switch OFF	Light OFF	 <p style="text-align: right; font-size: small;">LI-01256</p>
	Switch ON	Light ON	
	Switch door	Light ON	

- 3) Replace the light assembly - room if the inspection result is not within the standard value.

Luggage Room Light

LIGHTING SYSTEM

33.Luggage Room Light

A: REMOVAL

- 1) Disconnect the ground cable from battery. <Ref. to NT-6, BATTERY, NOTE, Note.>
- 2) Remove the light assembly - luggage room.

CAUTION:

When using a flat tip screwdriver, apply protective tape or cloth and be careful not to cause damage.

- (1) Release the claws and remove the main body of the light assembly - luggage room.
- (2) Disconnect the connector and remove the light assembly - luggage room and the bulb.

CAUTION:

Use a dry clean cloth so that no grease or water adheres to the glass portion of the bulb.

B: INSTALLATION

Install each part in the reverse order of removal.

C: INSPECTION

1. LUGGAGE ROOM LIGHT BULB

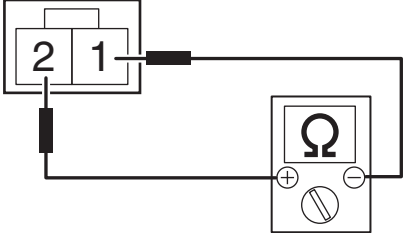

- 1) Visually check the bulb for blow out.
- 2) Check the bulb specification. <Ref. to LI-2, SPECIFICATION, General Description.>
- 3) Replace the bulb if it is found defective.

2. LUGGAGE ROOM LIGHT SWITCH

- 1) Check the resistance between switch terminals.

Preparation tool:

Circuit tester

Terminal No.	Inspection conditions	Specification	Connection diagram
1 — 2	Switch OFF	1 MΩ or more	
	Switch ON	Less than 1 Ω	

LI-01253

- 2) Replace the light assembly - luggage room if the inspection result is not within the standard value.

Glove Box Light

LIGHTING SYSTEM

34. Glove Box Light

A: REMOVAL

- 1) Disconnect the ground cable from battery. <Ref. to NT-6, BATTERY, NOTE, Note.>
- 2) Remove the pocket assembly.
 - (1) Attach the protective tape (a) to the panel center LWR.
 - (2) Remove the damper COMPL - pocket.
 - (3) Release the stoppers and remove the pocket assembly by pulling it toward you.

EI-03419

- 3) Remove the light - pocket.
 - (1) Release the claws and remove the light - pocket cover from the back panel - pocket.
 - (2) Disconnect the connector and remove the light - pocket from the cover.

LI-01680

B: INSTALLATION

Install each part in the reverse order of removal.

C: INSPECTION

- 1) Install the light to test if it illuminates normally.
- 2) If it fails to illuminate normally, replace the light - pocket with a new part.

NOTE:

Since LED (Light Emitting Diode) is used for the light, replace the light - pocket if the LED burns out.

Ignition Switch Illumination

LIGHTING SYSTEM

35. Ignition Switch Illumination

A: REMOVAL

NOTE:

The ignition switch illumination is integrated into the immobilizer antenna assembly.

1) Disconnect the ground cable from battery. <Ref. to NT-6, BATTERY, NOTE, Note.>

2) Remove the cover assembly - column.

(1) Remove the screws by turning the steering wheel to right and left.

(2) Release the claw, and remove the cover assembly - column UPR and the cover assembly - column LWR.

3) Remove the ignition switch illumination.

(1) Disconnect the connector.

(2) Release the claw using a flat tip screwdriver or similar tool wrapped with a protection tape, and remove the ignition switch illumination.

CAUTION:

Do not apply excessive force to remove the ignition switch illumination lock. Otherwise they may be broken because those parts are the products made of a plastic.

Ignition Switch Illumination

LIGHTING SYSTEM

B: INSTALLATION

Install each part in the reverse order of removal.

C: INSPECTION

	Step	Check	Yes	No
1	CHECK THE IGNITION SWITCH ILLUMINATION. Make sure the ignition switch illumination illuminates when driver's side door is open.	Does the ignition switch illumination illuminate?	Ignition switch illumination is normal.	Go to step 2.
2	CHECK THE IGNITION SWITCH ILLUMINATION. Make sure the ignition switch illumination blinks when the ignition switch is turned to ON.	Does the ignition switch illumination blink?	Check the function setting of body integrated unit. <Ref. to BC(diag)-2, Basic Diagnostic Procedure.>	Check the ignition switch illumination circuit. <Ref. to SL-24, CHECK IGNITION SWITCH ILLUMINATION, INSPECTION, Keyless Entry System.>

Auto Headlight Beam Leveler Control Module

LIGHTING SYSTEM

36. Auto Headlight Beam Leveler Control Module

A: REMOVAL

CAUTION:

Before handling the airbag system components, refer to “CAUTION” of “General Description” in “AIRBAG SYSTEM”. <Ref. to AB-9, CAUTION, General Description.>

- 1) Disconnect the ground cable from battery and wait for at least 60 seconds before starting work. <Ref. to NT-6, BATTERY, NOTE, Note.>
- 2) Remove the cover assembly instrument panel LWR driver. <Ref. to EI-54, REMOVAL, Instrument Panel Lower Cover.>
- 3) Remove the knee airbag module. <Ref. to AB-34, REMOVAL, Knee Airbag Module.>
- 4) Release the lock and remove the fuse holder.

- 5) Remove the relay & fuse box.
 - (1) Disconnect the connector.
 - (2) Remove the bolts and nuts, and remove the relay & fuse box.

6) Disconnect the connector of body integrated unit.

NOTE:

On model with keyless access with push button start, disconnect the keyless access CM connector.

SL-01532

7) Remove the auto headlight beam leveler CM.

(1) Disconnect the connector.

(2) Release the claws and pull out the auto headlight beam leveler CM.

LI-01260

B: INSTALLATION

CAUTION:

Before handling the airbag system components, refer to “CAUTION” of “General Description” in “AIRBAG SYSTEM”. <Ref. to AB-9, CAUTION, General Description.>

Install each part in the reverse order of removal.

Tightening torque:

Relay & fuse box: 7.5 N·m (0.76 kgf-m, 5.5 ft-lb)

NOTE:

When the auto headlight beam leveler CM is removed, perform initialization or reinitialization. <Ref. to LI-18, PROCEDURE, Auto Headlight Beam Leveler System.>

37.Rear Height Sensor

A: REMOVAL

CAUTION:

Always remove the sensor assembly - headlight beam leveler before removing any parts related to the suspension.

- 1) Disconnect the ground cable from battery. <Ref. to NT-6, BATTERY, NOTE, Note.>
- 2) Lift up the vehicle, and remove the left rear wheel.
- 3) Remove the sensor assembly - headlight beam leveler.

CAUTION:

Do not disassemble the sensor and lever.

- (1) Disconnect the connector.
- (2) Remove the nuts, and remove the sensor assembly - headlight beam leveler.

B: INSTALLATION

- 1) Install each part in the reverse order of removal.

Tightening torque:

Sensor assembly - headlight beam leveler: 7.5 N·m (0.76 kgf-m, 5.5 ft-lb)

Rear wheel: Except for C4 model

120 N·m (12.24 kgf-m, 88.5 ft-lb)

Rear wheel: C4 model

100 N·m (10.20 kgf-m, 73.8 ft-lb)

- 2) Perform reinitialization of the sensor assembly - headlight beam leveler. <Ref. to LI-18, REINITIALIZATION, PROCEDURE, Auto Headlight Beam Leveler System.>

NOTE:

When replacing the sensor assembly - headlight beam leveler with a new part, perform the initialization. <Ref. to LI-18, INITIALIZATION, PROCEDURE, Auto Headlight Beam Leveler System.>

C: INSPECTION

1) Connect three dry cell batteries (1.5 V) in series.

NOTE:

- Use new dry-cell batteries.
 - Using a circuit tester, check that the initial voltage of each dry-cell battery is 1.6 V or more. And also check that the voltage of three batteries in series is between 4.8 V and 5.2 V.
 - For power supply, 5 V DC constant voltage power source can also be used.
- 2) Connect the cell battery positive terminal to the connector terminal No. 3, and the cell battery negative terminal to the connector terminal No. 1.
- 3) With voltage applied, check the voltage between terminals when the sensor link is moved slowly up and down.

Preparation tool:
Circuit tester

LI-01283

Terminal No.	Inspection conditions	Standard
2 (+) — 1 (-)	Move the link within the operation range.	Approx. 0.5 — 4.1 V

NOTE:

When the link is moved upward from the standard output position, the sensor output varies to the 0.5 V side. When the link is moved downward, the sensor output varies to the 4.1 V side.

4) Replace the sensor assembly - headlight beam leveler if the inspection result is not within the standard value.

Day Time Running Resistor

LIGHTING SYSTEM

38. Day Time Running Resistor

A: REMOVAL

- 1) Disconnect the ground cable from battery. <Ref. to NT-6, BATTERY, NOTE, Note.>
- 2) Lift up the vehicle.
- 3) Remove the screw and clips, and turn over the front side of the mud guard - front.

- 4) Remove the resistor assembly - daytime running light.

CAUTION:

The resistor may become hot. Be careful not to burn yourself when removing it.

- (1) Disconnect the connector.
- (2) Remove the bolts, then remove the resistor assembly - daytime running light.

B: INSTALLATION

Install each part in the reverse order of removal.

Tightening torque:

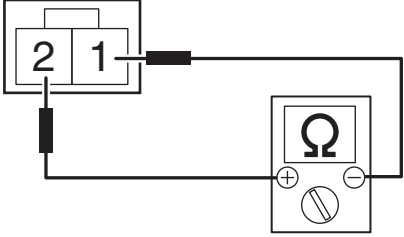

Resistor assembly - daytime running light: 7.5 N·m (0.76 kgf-m, 5.5 ft-lb)

C: INSPECTION

1) Measure the resistance between connector terminals.

Preparation tool:

Circuit tester

Terminal No.	Inspection conditions	Specification	Connection diagram
1 — 2	Always	1.13±0.05 Ω	 <p style="text-align: right; font-size: small;">LI-01253</p>

2) Replace the resistor assembly - daytime running light if the inspection result is not within the standard.

Reflex Reflector

LIGHTING SYSTEM

39. Reflex Reflector

A: REMOVAL

From behind the bumper face - rear, release the claws and remove the reflex reflector assembly.

B: INSTALLATION

Install each part in the reverse order of removal.

40. Door Switch

A: REMOVAL

- 1) Disconnect the ground cable from battery. <Ref. to NT-6, BATTERY, NOTE, Note.>
- 2) Remove the switch assembly - door.
 - (1) Remove the screws, and pull out the switch assembly - door toward you.
 - (2) Disconnect the connector and remove the switch assembly - door.

B: INSTALLATION

Install each part in the reverse order of removal.

C: INSPECTION

- 1) Check the resistance between switch terminals.

Preparation tool:

Circuit tester

Terminal No.	Inspection conditions	Standard	Connection diagram
1 — 3	When door is opened	Less than 1 Ω	
	When door is closed	1 MΩ or more	

LI-01327

- 2) Replace the switch assembly - door if the inspection result is not within the standard value.

SRF OFF Switch

LIGHTING SYSTEM

41.SRF OFF Switch

A: REMOVAL

- 1) Disconnect the ground cable from battery. <Ref. to NT-6, BATTERY, NOTE, Note.>
- 2) Remove the cover assembly - instrument panel LWR driver OUT. <Ref. to EI-54, REMOVAL, Instrument Panel Lower Cover.>
- 3) Release the claws, and then remove the cover.

- 4) Release the claws and remove the SRF OFF switch.

B: INSTALLATION

Install each part in the reverse order of removal.

C: INSPECTION

1) Measure the resistance between connector terminals.

Preparation tool:
Circuit tester

Terminal No.	Inspection conditions	Standard
2 — 3	OFF	1 MΩ or more
	ON	Less than 1 Ω

2) Apply battery voltage between the connector terminals to check lighting condition of illumination inside the switch.

Terminal No.	Inspection conditions	Specification
1 (+) — 4 (-)	Apply battery voltage.	Light ON

3) Replace the SRF OFF switch if the inspection result is not within the standard value.

SRF OFF Switch

LIGHTING SYSTEM

AUTO HEADLIGHT BEAM LEVELER SYSTEM (DIAGNOSTICS)

Basic Diagnostic Procedure

AUTO HEADLIGHT BEAM LEVELER SYSTEM (DIAGNOSTICS)

1. Basic Diagnostic Procedure

A: PROCEDURE

	Step	Check	Yes	No
1	PERFORM CUSTOMER INTERVIEW. Using the Check List for Interview, ask the customer the condition of how the trouble occurred. <Ref. to AL(diag)-3, CHECK, Check List for Interview.>	Did you interview the customer?	Go to step 2.	Interview the customer. <Ref. to AL(diag)-3, CHECK, Check List for Interview.>
2	CHECK LAN SYSTEM. Inspect LAN system. <Ref. to LAN(diag)-2, PROCEDURE, Basic Diagnostic Procedure.>	Is there any fault?	Perform the inspection according to the diagnosis for LAN system.	Go to step 3.
3	CHECK AUTO HEADLIGHT BEAM LEVELER SYSTEM. Using the Subaru Select Monitor, read DTC of the auto headlight beam leveler system inspection. <Ref. to AL(diag)-9, OPERATION, Read Diagnostic Trouble Code (DTC).> NOTE: If the communication function of the Subaru Select Monitor cannot be executed properly, check the communication circuit. <Ref. to AL(diag)-7, COMMUNICATION FOR INITIALIZING IMPOSSIBLE, INSPECTION, Subaru Select Monitor.>	Is DTC displayed?	Record DTC and time stamp, and perform the diagnosis according to DTC. <Ref. to AL(diag)-12, LIST, List of Diagnostic Trouble Code (DTC).> For time stamp, refer to "LAN SYSTEM". <Ref. to LAN(diag)-6, TIME STAMP, CAUTION, General Description.>	Go to step 4.
4	CHECK DIAGNOSTICS WITH PHENOMENON. Check "Diagnostics with Phenomenon". <Ref. to AL(diag)-17, Diagnostics with Phenomenon.>	Does the symptom apply?	Perform diagnosis according to the procedures in the diagnostics with phenomenon.	Go to step 5.
5	CHECK TROUBLE PHENOMENON. 1) Perform the basic inspection and function check. <Ref. to AL(diag)-4, INSPECTION, General Description.> 2) Check the auto headlight beam leveler CM. <Ref. to AL(diag)-6, Control Module I/O Signal.> 3) Perform check of current data. <Ref. to AL(diag)-11, Read Current Data.> 4) Perform a unit check.	Was the trouble cause found?	Repair or replace the cause of trouble.	System is normal.

Check List for Interview

AUTO HEADLIGHT BEAM LEVELER SYSTEM (DIAGNOSTICS)

2. Check List for Interview

A: CHECK

- Inspect the following items regarding the vehicle's state.
- Print out this page for interviewing customers.

Auto Headlight Beam Leveler System Check List for Interview				
Date the Vehicle is Received		Year	Month	Day
Customer's name		Registration No.	Initial year of registration Year Month Date	
		Vehicle model	Frame number

Customer specified content • • •				
Date and time when the trouble occurred		Frequency of trouble occurrence	Always occurs Sometimes occurs (times per day, times per month)	
Condition of trouble occurrence (How the trouble occurs)		Weather	Fine • Cloudy • Rainy • Snowy • Others ()	
		Temperature	°C (°F) — °C (°F)	
Road conditions		Occurrence location		
Accessory installation condition				
Confirmation of trouble condition				
<input type="checkbox"/> Diagnostic code				

General Description

AUTO HEADLIGHT BEAM LEVELER SYSTEM (DIAGNOSTICS)

3. General Description

A: CAUTION

1. AIRBAG SYSTEM

CAUTION:

- Do not use the electrical test equipment on the airbag system wiring harnesses and connector circuits.
- Be careful not to damage the airbag system wiring harness.

B: INSPECTION

1. BASIC INSPECTION

Before performing the diagnosis, check the following items which may cause problems relating the wiper or light.

- 1) Check the battery. <Ref. to SC(H4DO)-51, Battery.>
- 2) Check the relay and fuse condition. <Ref. to LI-4, Relay and Fuse.>
- 3) Check the connecting condition of harness and harness connector.

2. FUNCTION CHECK

With the ignition switch ON and the lighting switch set at low beam, change the vehicle posture while the vehicle is stopped. Check that the beam moves, when the vehicle condition is kept for three seconds or more.

C: PREPARATION TOOL

1. SPECIAL TOOL

ILLUSTRATION	TOOL NUMBER	DESCRIPTION	REMARKS
 STSSM4	—	SUBARU SELECT MONITOR 4	Used for setting of each function and troubleshooting for electrical system. NOTE: For detailed operation procedures of Subaru Select Monitor 4, refer to "Application help".

2. GENERAL TOOL

TOOL NAME	REMARKS
Circuit tester	Used for measuring resistance, voltage and current.
DST-i	Used together with Subaru Select Monitor 4.

Electrical Component Location

AUTO HEADLIGHT BEAM LEVELER SYSTEM (DIAGNOSTICS)

(8) Fuse 10 A (auto headlight beam leveler CM)

(9) Data link connector

Control Module I/O Signal

AUTO HEADLIGHT BEAM LEVELER SYSTEM (DIAGNOSTICS)

5. Control Module I/O Signal

A: ELECTRICAL SPECIFICATION

1. AUTO HEADLIGHT BEAM LEVELER CM

LI-00975

Content	Terminal No.	Measuring condition	Standard
IG power supply	1 ↔ Chassis ground	Ignition switch ON	8 — 16 V
GND	2 ↔ Chassis ground	Always	Less than 1 Ω
Rr vehicle height sensor GND	3 ↔ Chassis ground	Always	Less than 1 Ω
Indicator output	6 ↔ Chassis ground	After turning the ignition switch to ON, for 3 seconds (warning light on) → after 3 seconds (warning light off)	Less than 1.35 V → 8 — 16 V
Leveling actuator power supply	10 ↔ Chassis ground	Ignition switch ON	10 — 16 V
Leveling actuator GND	11 ↔ Chassis ground	Always	Less than 1 Ω
Rr vehicle height sensor power supply	12 ↔ 3	Ignition switch ON	4.75 — 5.25 V
Leveling actuator signal	17 ↔ Chassis ground	Headlight off → on Headlight on, no vehicle height change → change and hold vehicle height for 3 seconds or more	Less than 1 V → 1.0 — 14.4 V (for 17 seconds)
Rr sensor signal	19 ↔ Chassis ground	IG ON (with no passenger, no load and vehicle stopped)	Approx. 2.5 V (changes according to vehicle condition)
CAN-H	23	Cannot be measured (CAN communication line)	—
CAN-L	24	Cannot be measured (CAN communication line)	—

B: WIRING DIAGRAM

Refer to “Headlight Beam Leveler System” in the wiring diagram. <Ref. to WI-140, WIRING DIAGRAM, Headlight Beam Leveler System.>

Subaru Select Monitor

AUTO HEADLIGHT BEAM LEVELER SYSTEM (DIAGNOSTICS)

6. Subaru Select Monitor

A: OPERATION

- For detailed operation procedures, refer to “Application help”.
- If the auto headlight beam leveler CM can not communicate with Subaru Select Monitor, perform “COMMUNICATION FOR INITIALIZING IMPOSSIBLE”. <Ref. to AL(diag)-7, INSPECTION, Subaru Select Monitor.>

B: INSPECTION

1. COMMUNICATION FOR INITIALIZING IMPOSSIBLE

Communication error with auto headlight beam leveler CM

Detecting condition:

- Defective harness connector
- Power supply circuit malfunction
- Defective auto headlight beam leveler CM
- Defective CAN communication circuit
- Defective Subaru Select Monitor

Trouble symptom:

Communication is impossible between auto headlight beam leveler CM and Subaru Select Monitor.

CAUTION:

Initialization is required after replacing the auto headlight beam leveler CM.

Wiring diagram:

Headlight beam leveler system <Ref. to WI-140, WIRING DIAGRAM, Headlight Beam Leveler System.>

LI-01400

Step	Check	Yes	No
1 CHECK OTHER COMMUNICATION. Communicate with the system other than the auto headlight beam leveler CM using the Subaru Select Monitor.	Is the communication to other control module possible?	Go to step 2.	Perform the “Communication for Initializing Impossible” of LAN system. <Ref. to LAN(diag)-11, COMMUNICATION FOR INITIALIZING IMPOSSIBLE, Subaru Select Monitor.>

Subaru Select Monitor

AUTO HEADLIGHT BEAM LEVELER SYSTEM (DIAGNOSTICS)

Step	Check	Yes	No
2 CHECK LAN SYSTEM. Inspect LAN system. <Ref. to LAN(diag)-2, PROCEDURE, Basic Diagnostic Procedure.>	Is there any fault?	Perform the inspection according to the diagnosis for LAN system.	Go to step 3 .
3 CHECK FOR POOR CONTACT. 1) Turn the ignition switch to OFF. 2) Disconnect the auto headlight beam leveler CM connector. 3) Connect the disconnected connectors. 4) Communicate with the auto headlight beam leveler CM using the Subaru Select Monitor.	Is communication possible?	It is possible that temporary poor communication occurs.	Replace the auto headlight beam leveler CM. <Ref. to LI-74, Auto Headlight Beam Leveler Control Module.>

Read Diagnostic Trouble Code (DTC)

AUTO HEADLIGHT BEAM LEVELER SYSTEM (DIAGNOSTICS)

7. Read Diagnostic Trouble Code (DTC)

A: OPERATION

- 1) On «Start» display, select «Diagnosis».
- 2) On «Vehicle selection» display, input the target vehicle information and select «Confirmed».
- 3) On «Main Menu» display, select «Each System».
- 4) On «Select System» display, select «Headlight / Foglight» and then select «Enter».
- 5) On «Select Function» display, select «DTC».

NOTE:

- For detailed operation procedures, refer to “Application help”.
- For details concerning DTC, refer to “List of Diagnostic Trouble Code (DTC)”. <Ref. to AL(diag)-12, List of Diagnostic Trouble Code (DTC).>

Clear Memory Mode

AUTO HEADLIGHT BEAM LEVELER SYSTEM (DIAGNOSTICS)

8. Clear Memory Mode

A: OPERATION

- 1) On «Start» display, select «Diagnosis».
- 2) On «Vehicle selection» display, input the target vehicle information and select «Confirmed».
- 3) On «Main Menu» display, select «Each System».
- 4) On «Select System» display, select «Headlight / Foglight» and then select «Enter».
- 5) On «Select Function» display, select «DTC».
- 6) On «DTC» display, select «Clear Memory».

NOTE:

For detailed operation procedures, refer to “Application help”.

Read Current Data

AUTO HEADLIGHT BEAM LEVELER SYSTEM (DIAGNOSTICS)

9. Read Current Data

A: OPERATION

- 1) On «Start» display, select «Diagnosis».
- 2) On «Vehicle selection» display, input the target vehicle information and select «Confirmed».
- 3) On «Main Menu» display, select «Each System».
- 4) On «Select System» display, select «Headlight / Foglight» and then select «Enter».
- 5) On «Select Function» display, select «Data Monitor».

NOTE:

For detailed operation procedures, refer to “Application help”.

B: LIST

Item Name	Content	Standard	Note
Trip Count [count]	Time stamp information, trip counter	—	—
Count	Time stamp information, original counter identification information	—	—
Time Count [msec]	Time stamp information, time counter	—	—
F Sensor Signal	Output voltage value from front vehicle height sensor Display range: 0.00 — 5.00 V	5 V	Fixed at 5 V because front vehicle height sensor is not equipped.
R Sensor Signal	Output voltage value from rear vehicle height sensor Display range: 0.00 — 5.00 V	Approx. 2.5 V	Changes according to vehicle condition.
Actuator Signal	Power supply voltage value to headlight beam leveler actuator Display range: 0% — 100%	Not in operation: 0% In operation: 10 — 90% (17 Sec)	Changes according to vehicle condition.
ECU ACC	IG voltage condition of auto headlight beam leveler CM Display range: 0.00 — 25.76 V	8 — 16 V	—
Indicator Signal	Meter indicator condition Display range: Light off/ Light up/Flashing	Light off: Normal Light up: Abnormal Flashing: Not initialized	—
Vehicle Speed Signal	Vehicle speed condition Display range: 0.00 — 3686.34 km/h	Shows vehicle speed	—
H/L Lo Signal	Headlight lighting condition Display range: Light off/ Light up	Light off: Light switch is OFF Light up: Light sensor in operation when light switch is in HEAD or AUTO position	—

List of Diagnostic Trouble Code (DTC)

AUTO HEADLIGHT BEAM LEVELER SYSTEM (DIAGNOSTICS)

10. List of Diagnostic Trouble Code (DTC)

A: LIST

DTC	Item	Content of diagnosis	Reference
U0073	CONTROL MODULE COMMUNICATION BUS OFF	Detected when CAN line abnormality is detected.	<Ref. to AL(diag)-13, DTC U0073 CONTROL MODULE COMMUNICATION BUS OFF, Diagnostic Procedure with Diagnostic Trouble Code (DTC).>
U0122	LOST COMMUNICATION WITH VEHICLE DYNAMICS CONTROL MODULE	Detected when CAN data from VDC (vehicle speed signal) does not arrive.	<Ref. to AL(diag)-13, DTC U0122 LOST COMMUNICATION WITH VEHICLE DYNAMICS CONTROL MODULE, Diagnostic Procedure with Diagnostic Trouble Code (DTC).>
U0140	LOST COMMUNICATION WITH BODY CONTROL MODULE	Detected when CAN data from body integrated unit (headlight ON signal) does not arrive.	<Ref. to AL(diag)-13, DTC U0140 LOST COMMUNICATION WITH BODY CONTROL MODULE, Diagnostic Procedure with Diagnostic Trouble Code (DTC).>
B2900	AHL CONTROL	Detected when an error occurred in auto headlight beam leveler CM.	<Ref. to AL(diag)-14, DTC B2900 AHL CONTROL, Diagnostic Procedure with Diagnostic Trouble Code (DTC).>
B2902	REAR HEIGHT SENSOR CIRCUIT	Detected when an error occurred in rear vehicle height sensor.	<Ref. to AL(diag)-15, DTC B2902 REAR HEIGHT SENSOR CIRCUIT, Diagnostic Procedure with Diagnostic Trouble Code (DTC).>
B2903	VDC DATA ERROR	Detected when data from VDC (vehicle speed signal) is abnormal.	<Ref. to AL(diag)-16, DTC B2903 VDC DATA ERROR, Diagnostic Procedure with Diagnostic Trouble Code (DTC).>

Diagnostic Procedure with Diagnostic Trouble Code (DTC)

AUTO HEADLIGHT BEAM LEVELER SYSTEM (DIAGNOSTICS)

11. Diagnostic Procedure with Diagnostic Trouble Code (DTC)

A: DTC U0073 CONTROL MODULE COMMUNICATION BUS OFF

Detected when CAN line abnormality is detected.

NOTE:

Perform the diagnosis for LAN system. <Ref. to LAN(diag)-2, PROCEDURE, Basic Diagnostic Procedure.>

B: DTC U0122 LOST COMMUNICATION WITH VEHICLE DYNAMICS CONTROL MODULE

Detected when CAN data (vehicle speed signal) is not received from VDC.

NOTE:

Perform the diagnosis for LAN system. <Ref. to LAN(diag)-2, PROCEDURE, Basic Diagnostic Procedure.>

C: DTC U0140 LOST COMMUNICATION WITH BODY CONTROL MODULE

Detected when CAN data (headlights ON signal) is not received from the body integrated unit.

NOTE:

Perform the diagnosis for LAN system. <Ref. to LAN(diag)-2, PROCEDURE, Basic Diagnostic Procedure.>

Diagnostic Procedure with Diagnostic Trouble Code (DTC)

AUTO HEADLIGHT BEAM LEVELER SYSTEM (DIAGNOSTICS)

D: DTC B2900 AHL CONTROL

DTC DETECTING CONDITION:

Detected when internal malfunction occurs in the auto headlight beam leveler CM.

TROUBLE SYMPTOM:

The auto headlight beam leveler does not operate.

CAUTION:

Initialization is required after replacing the auto headlight beam leveler CM.

	Step	Check	Yes	No
1	CHECK DTC. 1) Turn the ignition switch to OFF → ON. 2) Turn on the headlight low beam. 3) Using the Subaru Select Monitor, clear the auto headlight beam leveler system memory. <Ref. to AL(diag)-10, Clear Memory Mode.> 4) Turn the ignition switch to OFF → ON. 5) Use the Subaru Select Monitor and read DTCs. <Ref. to AL(diag)-9, Read Diagnostic Trouble Code (DTC).>	Is DTC B2900 displayed? (current malfunction)	Replace the auto headlight beam leveler CM. <Ref. to LI-74, Auto Headlight Beam Leveler Control Module.>	Even if DTC is displayed, the circuit has returned to a normal condition at this time. Reproduce the failure, and then perform the diagnosis again. NOTE: In this case, temporary poor contact of connector, temporary open or short circuit of harness may be the cause.

Diagnostic Procedure with Diagnostic Trouble Code (DTC)

AUTO HEADLIGHT BEAM LEVELER SYSTEM (DIAGNOSTICS)

E: DTC B2902 REAR HEIGHT SENSOR CIRCUIT

DTC detecting condition:

Detected when error occurs in the rear height sensor.

Trouble symptom:

The auto headlight beam leveler does not operate.

CAUTION:

Initialization is required after replacing the auto headlight beam leveler CM.

Wiring diagram:

Headlight beam leveler system <Ref. to WI-140, WIRING DIAGRAM, Headlight Beam Leveler System.>

LI-01401

Step	Check	Yes	No
1 CHECK DTC. 1) Turn the ignition switch to OFF → ON. 2) Turn on the headlight low beam. 3) Using the Subaru Select Monitor, clear the auto headlight beam leveler system memory. <Ref. to AL(diag)-10, Clear Memory Mode.> 4) Turn the ignition switch to OFF → ON. 5) Use the Subaru Select Monitor and read DTCs. <Ref. to AL(diag)-9, Read Diagnostic Trouble Code (DTC).>	Is DTC B2902 displayed? (current malfunction)	Go to step 2.	Even if DTC is displayed, the circuit has returned to a normal condition at this time. Reproduce the failure, and then perform the diagnosis again. NOTE: In this case, temporary poor contact of connector, temporary open or short circuit of harness may be the cause.
2 CHECK CURRENT DATA. Display «R Sensor Signal» using Subaru Select Monitor. <Ref. to AL(diag)-11, Read Current Data.>	Does the data indicate the standard value (approx. 2.5 V when on a level road with one person in the vehicle)?	Replace the auto headlight beam leveler CM. <Ref. to LI-74, Auto Headlight Beam Leveler Control Module.>	Go to step 3.

Diagnostic Procedure with Diagnostic Trouble Code (DTC)

AUTO HEADLIGHT BEAM LEVELER SYSTEM (DIAGNOSTICS)

Step	Check	Yes	No
3 CHECK CURRENT DATA. 1) Display «R Sensor Signal» using Subaru Select Monitor. <Ref. to AL(diag)-11, Read Current Data.> 2) Change the vehicle posture.	Does the data change?	Go to step 6.	Go to step 4.
4 CHECK OUTPUT VOLTAGE BETWEEN AUTO HEADLIGHT BEAM LEVELER CM AND VEHICLE HEIGHT SENSOR. 1) Disconnect the vehicle height sensor connector. 2) Turn the ignition switch to ON. 3) Measure the voltage between the vehicle height sensor connector and chassis ground. Connector & terminal (R29) No. 3 (+) — Chassis ground (-):	Is the voltage 5 ± 0.25 V?	Go to step 5.	Replace the auto headlight beam leveler CM. <Ref. to LI-74, Auto Headlight Beam Leveler Control Module.>
5 CHECK REAR HEIGHT SENSOR. 1) Remove the rear vehicle height sensor. 2) Perform the inspection of rear height sensor unit. <Ref. to LI-77, INSPECTION, Rear Height Sensor.>	Is the rear height sensor normal?	Go to step 6.	Replace the rear height sensor. <Ref. to LI-76, Rear Height Sensor.>
6 CHECK HARNESS (OPEN CIRCUIT). 1) Disconnect the auto headlight beam leveler CM connector. 2) Using a tester, measure the resistance between the auto headlight beam leveler CM connector and rear height sensor connector. Connector & terminal (B150) No. 3 — (R29) No. 1: (B150) No. 19 — (R29) No. 2: (B150) No. 12 — (R29) No. 3:	Is there continuity?	Go to step 7.	Repair or replace the open circuit of harness.
7 CHECK HARNESS (GROUND SHORT CIRCUIT). Using a tester, measure the resistance between the auto headlight beam leveler CM connector and chassis ground. Connector & terminal (B150) No. 3 — Chassis ground: (B150) No. 19 — Chassis ground: (B150) No. 12 — Chassis ground:	Is the resistance 10 kΩ or more?	Replace the auto headlight beam leveler CM. <Ref. to LI-74, Auto Headlight Beam Leveler Control Module.>	Repair or replace the short circuit of the harness.

F: DTC B2903 VDC DATA ERROR

DTC DETECTING CONDITION:

Detected when data (vehicle speed signal) from VDC CM is abnormal.

TROUBLE SYMPTOM:

The auto headlight beam leveler does not operate.

NOTE:

Perform the diagnosis for VDC. <Ref. to VDC(diag)-2, PROCEDURE, Basic Diagnostic Procedure.>

Diagnostics with Phenomenon

AUTO HEADLIGHT BEAM LEVELER SYSTEM (DIAGNOSTICS)

12. Diagnostics with Phenomenon

A: INSPECTION

1. BEAM LEVEL CONTROL DOES NOT FUNCTION

CAUTION:

- Before performing diagnosis, check the fuse in this circuit.
- Initialization is required after replacing the auto headlight beam leveler CM.

Wiring diagram:

Headlight beam leveler system <Ref. to WI-140, WIRING DIAGRAM, Headlight Beam Leveler System.>

LI-01677

Step	Check	Yes	No	
1	CHECK CURRENT DATA. Display «Control module voltage» using Subaru Select Monitor. <Ref. to AL(diag)-11, Read Current Data.>	Does the current data indicate the standard value?	Go to step 3.	Go to step 2.

Diagnostics with Phenomenon

AUTO HEADLIGHT BEAM LEVELER SYSTEM (DIAGNOSTICS)

Step	Check	Yes	No
<p>2 CHECK HARNESS BETWEEN POWER SUPPLY — AUTO HEADLIGHT BEAM LEVELER CM. 1) Disconnect the auto headlight beam leveler CM connector. 2) Turn the ignition switch to ON. 3) Measure the voltage between the auto headlight beam leveler CM connector and chassis ground. Connector & terminal (B150) No. 1 (+) — Chassis ground (-):</p>	Is the voltage 8 — 16 V?	Replace the auto headlight beam leveler CM. <Ref. to LI-74, Auto Headlight Beam Leveler Control Module.>	Repair or replace the harness.
<p>3 CHECK INDICATOR OUTPUT. Turn the ignition switch to ON.</p>	Does the warning indicator turn on for three seconds?	Go to step 5.	Go to step 4.
<p>4 CHECK CURRENT DATA. 1) Display «Indicator Signal» using Subaru Select Monitor. <Ref. to AL(diag)-11, Read Current Data.> 2) Turn the ignition switch to ON.</p>	Is it set as ON for 3 seconds?	Go to step 6.	Replace the auto headlight beam leveler CM. <Ref. to LI-74, Auto Headlight Beam Leveler Control Module.>
<p>5 CHECK INDICATOR OUTPUT. Leave the ignition switch to ON for 10 seconds.</p>	Does the warning indicator light go off?	Go to step 9.	Go to step 13.
<p>6 CHECK HARNESS BETWEEN BATTERY — INDICATOR BULB — AUTO HEADLIGHT BEAM LEVELER CM. 1) Disconnect the auto headlight beam leveler CM connector. 2) Turn the ignition switch to ON. 3) Measure the voltage between the auto headlight beam leveler CM (indicator bulb) connector and chassis ground. Connector & terminal (B150) No. 6 (+) — Chassis ground (-):</p>	Is the voltage 12 V?	Replace the auto headlight beam leveler CM. <Ref. to LI-74, Auto Headlight Beam Leveler Control Module.>	Go to step 7.
<p>7 CHECK INDICATOR BULB. Perform system operation check mode on the combination meter. <Ref. to IDI(diag)-18, System Operation Check Mode.></p>	Does the warning indicator illuminate?	Go to step 8.	Replace the meter case assembly. <Ref. to IDI-18, Combination Meter.>
<p>8 CHECK HARNESS BETWEEN AUTO HEADLIGHT BEAM LEVELER CM AND INDICATOR BULB (OPEN CIRCUIT). 1) Turn the ignition switch to OFF. 2) Measure the continuity between the auto headlight beam leveler CM and the combination meter. Connector & terminal (B150) No. 6 — (i10) No. 8:</p>	Is there continuity?	Replace the auto headlight beam leveler CM. <Ref. to LI-74, Auto Headlight Beam Leveler Control Module.>	Repair the open circuit and poor contact of the connector in the harness between the auto headlight beam leveler CM and indicator.
<p>9 CHECK HEADLIGHT ASSEMBLY (ACTUATOR) DRIVE. 1) Connect the auto headlight beam leveler CM connector. 2) Turn the ignition switch to ON, and within 10 seconds, repeat the OFF → Low beam of headlight switch 5 times. 3) Check that the headlight beam drops once, then returns to normal. 4) Then, after waiting for 30 seconds or more with the ignition ON, turn the ignition switch to OFF.</p>	Does the headlight beam drop down once, and then return?	Replace the auto headlight beam leveler CM. <Ref. to LI-74, Auto Headlight Beam Leveler Control Module.>	Go to step 10.

Diagnostics with Phenomenon

AUTO HEADLIGHT BEAM LEVELER SYSTEM (DIAGNOSTICS)

Step	Check	Yes	No
10 CHECK HEADLIGHT ASSEMBLY (ACTUATOR) OUTPUT. 1) Display «Actuator Signal» using Subaru Select Monitor. <Ref. to AL(diag)-11, Read Current Data.> 2) Turn the ignition switch to ON, and within 10 seconds, repeat the OFF → Low beam of headlight switch 5 times. 3) Check that the headlight beam drops once, then returns to normal. 4) Then, after waiting for 30 seconds or more with the ignition ON, turn the ignition switch to OFF.	Does the current data indicate the standard value? (Does the value change at 10 — 90%?)	Go to step 11.	Replace the auto headlight beam leveler CM. <Ref. to LI-74, Auto Headlight Beam Leveler Control Module.>
11 CHECK OUTPUT VOLTAGE BETWEEN HEADLIGHT ASSEMBLY (ACTUATOR). 1) Disconnect the auto headlight beam leveler CM connector. 2) Turn the ignition switch to ON. 3) Measure the voltage between the auto headlight beam leveler CM connector and chassis ground. Connector & terminal (B150) No. 10 (+) — Chassis ground (-):	Is the voltage 12 V?	Replace the headlight assembly. <Ref. to LI-24, Headlight Assembly.>	Go to step 12.
12 CHECK HARNESS BETWEEN AUTO HEADLIGHT BEAM LEVELER CM AND HEADLIGHT ASSEMBLY (ACTUATOR) (OPEN CIRCUIT). 1) Disconnect the connector of headlight assembly. 2) Measure the continuity between the auto headlight beam leveler CM connector and headlight assembly (actuator) connector. Connector & terminal • Headlight beam leveler RH (B150) No. 10 — (F126) No. 6: (B150) No. 17 — (F126) No. 8: (B150) No. 11 — (F126) No. 7: • Headlight beam leveler LH (B150) No. 10 — (F125) No. 6: (B150) No. 17 — (F125) No. 8: (B150) No. 11 — (F125) No. 7:	Is there continuity?	Replace the auto headlight beam leveler CM. <Ref. to LI-74, Auto Headlight Beam Leveler Control Module.>	Repair the open circuit or poor contact of the connector in the harness between headlight assembly and auto headlight beam leveler CM.
13 CHECK DTC. Display DTC using the Subaru Select Monitor. <Ref. to AL(diag)-9, Read Diagnostic Trouble Code (DTC).>	Is DTC displayed?	Perform the diagnosis according to DTC. <Ref. to AL(diag)-12, LIST, List of Diagnostic Trouble Code (DTC).>	Replace the auto headlight beam leveler CM. <Ref. to LI-74, Auto Headlight Beam Leveler Control Module.>

C: CAUTION

- Connect the connectors and hoses securely during reassembly.
- After reassembly, make sure that the each component or each function operates normally.
- Be careful with the airbag system wiring harness which passes near electrical parts and switches.
- Be careful of the following items. Failing to do so may cause the airbag system malfunction.
 - Yellow connectors and harnesses with yellow tapes around them are the connectors and harnesses for the airbag system. When using a tester on these circuits, follow the cautions of “AIRBAG SYSTEM”. <Ref. to AB-9, CAUTION, General Description.>
 - Be careful not to damage the airbag system wiring harness when servicing the electrical parts around the steering column.
- When connecting the pipe hoses, be careful not to cause bend or blockage.
- If even a small amount of silicon oil or grease enters the tank - washer and the washer fluid passages, an oil film will be formed on the glass and will cause the wiper to chatter and judder. Make sure that no oil comes into contact with the system.

D: PREPARATION TOOL

1. SPECIAL TOOL

ILLUSTRATION	TOOL NUMBER	DESCRIPTION	REMARKS
 STSSM4	—	SUBARU SELECT MONITOR 4	Used for setting of each function and trouble-shooting for electrical system. NOTE: For detailed operation procedures of Subaru Select Monitor 4, refer to “Application help”.

2. GENERAL TOOL

TOOL NAME	REMARKS
Circuit tester	Used for measuring resistance, voltage and current.
DST-i	Used together with Subaru Select Monitor 4.

Relay and Fuse

WIPER AND WASHER SYSTEMS

2. Relay and Fuse

A: LOCATION

WW-10212

Main fuse box	Fuse 30 A (wiper)	(A)
Relay & fuse box	Fuse 7.5 A (wiper)	(B)
Relay holder	Wiper relay	(C)

NOTE:

For other related fuses, refer to the wiring diagram. <Ref. to WI-15, Power Supply Circuit.>

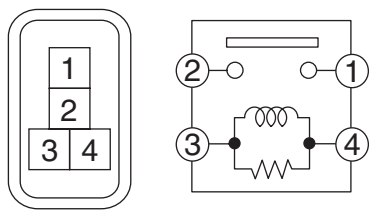

B: INSPECTION

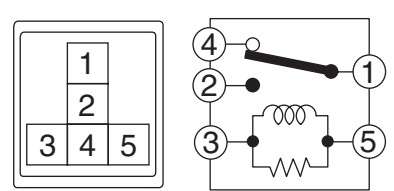

1. CHECK FUSE

- 1) Remove the fuse and inspect visually.
- 2) If the fuse is blown out, replace the fuse.

2. CHECK RELAY

- 1) Check the resistance between relay terminals.

Terminal No.	Inspection conditions	Standard	Circuit
1 — 2	Always	1 MΩ or more	 <p style="text-align: right; margin-top: 10px;">SR-00180</p>
1 — 2	Apply battery voltage between terminals 4 and 3.	Less than 1 Ω	

Terminal No.	Inspection conditions	Standard	Circuit
1 — 2	Always	1 MΩ or more	 <p style="text-align: right; margin-top: 10px;">SL-01085</p>
1 — 4	Always	Less than 1 Ω	
1 — 2	Apply battery voltage between terminals 3 and 5.	Less than 1 Ω	

- 2) Replace the relay if the inspection result is not within the standard.

Wiper and Washer System

WIPER AND WASHER SYSTEMS

3. Wiper and Washer System

A: WIRING DIAGRAM

1. WIPER AND WASHER (FRONT)

Refer to “Front Wiper and Washer System” in the wiring diagram. <Ref. to WI-137, WIRING DIAGRAM, Front Wiper and Washer System.>

2. WIPER AND WASHER (REAR)

Refer to “Rear Wiper and Washer System” in the wiring diagram. <Ref. to WI-196, WIRING DIAGRAM, Rear Wiper and Washer System.>

B: INSPECTION

Symptoms	Repair order
Wiper and washers do not operate.	1. Wiper fuse (F/B No. 14, 15) 2. Combination switch 3. Motor assembly - wiper 4. Wiring harness
Wipers do not operate in LO or HI.	1. Combination switch 2. Motor assembly - wiper 3. Wiring harness
Wipers do not operate in INT.	1. Combination switch 2. Motor assembly - wiper 3. Wiring harness
Washer motor does not operate.	1. Combination switch 2. Motor pump assembly - washer 3. Wiring harness
Wipers do not operate when washer switch is ON.	1. Motor assembly - wiper 2. Wiring harness
Washer fluid spray does not operate properly.	1. Motor pump assembly - washer 2. Hose assembly - washer 3. Nozzle - washer
Wiper chatters or judders during operation.	1. Oil film and dirt on the glass 2. Arm assembly - windshield wiper 3. Motor assembly - wiper

C: NOTE

For procedure of each component of the wiper and washer system, refer to the respective sections.

- Combination switch (wiper): <Ref. to WW-11, Combination Switch (Wiper).>
- Wiper blade: <Ref. to WW-18, Wiper Blade.>
- Front wiper arm: <Ref. to WW-26, Front Wiper Arm.>
- Front wiper motor and link: <Ref. to WW-31, Front Wiper Motor and Link.>
- Rear wiper arm: <Ref. to WW-42, Rear Wiper Arm.>
- Rear wiper motor: <Ref. to WW-44, Rear Wiper Motor.>
- Washer tank and motor: <Ref. to WW-22, Washer Tank and Motor.>
- Front washer nozzle and hose: <Ref. to WW-35, Front Washer Nozzle and Hose.>
- Rear washer nozzle: <Ref. to WW-47, Rear Washer.>

4. Combination Switch (Wiper)

A: REMOVAL

- 1) Disconnect the ground cable from battery. <Ref. to NT-6, BATTERY, NOTE, Note.>
- 2) Remove the cover assembly - column.
 - (1) Release the clips, and remove the cover assembly - steering UPR.

- (2) Remove the screws by turning the steering wheel to right and left.
- (3) Remove the cap - key cylinder (a). (Model with keyless access with push button start)
- (4) Release the claw, and remove the cover assembly - column UPR and the cover assembly - column LWR.

A Model without keyless access with push button start

B Model with keyless access with push button start

Combination Switch (Wiper)

WIPER AND WASHER SYSTEMS

3) Remove the switch assembly - combination wiper select.

(1) Disconnect the connector.

(2) Release the claws, and pull out the switch assembly - combination wiper select.

CAUTION:

Do not press the claws with excessive force. They may be damaged.

WW-01165

B: INSTALLATION

Install each part in the reverse order of removal.

C: INSPECTION

1. INSPECTION OF SWITCH UNIT

1) Operate the switches to check the continuity between terminals.

WW-00815

	Switch position	Terminal No.	Standard
Front	OFF	A1 and A3	Less than 1 Ω
	INT	A1 and A3	Less than 1 Ω
	LO	A2 and A3	Less than 1 Ω
	HI	A2 and A4	Less than 1 Ω
	Washer ON	B2 and B3	Less than 1 Ω
Rear	OFF	A5 and B2 B6 and B2 B7 and B2	1 M Ω or more
	LO	B6 and B2	Less than 1 Ω
	HI	B7 and B2	Less than 1 Ω
	Washer ON	A5 and B2	Less than 1 Ω

2) Replace the switch if the inspection result is not within the standard.

Combination Switch (Wiper)

WIPER AND WASHER SYSTEMS

2. FRONT WIPER

1) Check with Subaru Select Monitor

NOTE:

For detailed operation procedures, refer to "Application help".

(1) Check the input signal when the switch assembly - combination wiper select is turned to LO or HI, using the «Data monitor» display.

(2) Does the input signal change corresponding to the switch operation?

- **Yes** → Finish the diagnosis.
- **No** → Check the harness.

2) Check the intermittent operation (inspection of the wiper switch alone)

(1) Set the voltmeter between terminals No. A2 (+) and No. B2 (-).

(2) Connect the battery to connector. (Terminal No. A2 (+), terminal No. B2 & A3 (-))

(3) Turn the switch assembly - combination wiper select to INT.

(4) Connect the battery (+) to the terminal No. A2 for 5 seconds.

(5) Connect the battery (-) to the terminal No. B2, and check the voltage between terminals No. A2 and No. A3 during intermittent operation.

(6) Perform step (1) to (5) above when intermittent control switch is in MIN or MAX, and replace the switch if the operation is not as specified.

Intermittent stationary time

MIN: Approx. 2 seconds

MAX: Approx. 16 seconds

(A): Connect the battery (-) to the terminal No. B2.

S: Intermittent downtime (sec.)

3. REAR WIPER

1) Check input of body integrated unit

Check the input signal when the rear wiper switch is operated using Subaru Select Monitor.

NOTE:

For detailed operation procedures, refer to "Application help".

(1) Turn the ignition switch to ON.

(2) Operate the rear wiper switch to each position of ON, INT and Washer ON.

(3) Does the input signal change corresponding to the switch operation?

- **Yes** → Go to step 4.

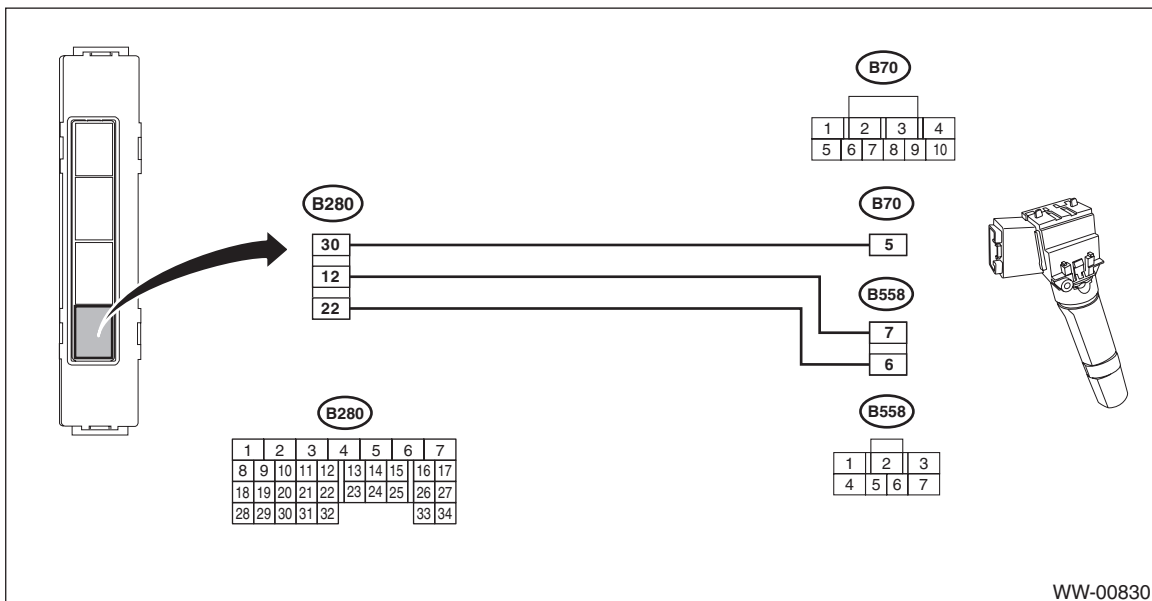

- **No** → Go to step 2.

2) Check harness

(1) Turn the ignition switch to OFF, disconnect the ground cable from battery. <Ref. to NT-6, BATTERY, NOTE, Note.>

(2) Disconnect the connector of body integrated unit and wiper switch.

(3) Measure the resistance between body integrated unit and wiper switch.

WW-00830

Connector & terminal

(B280) No. 30 — (B70) No. 5:

(B280) No. 22 — (B558) No. 6:

(B280) No. 12 — (B558) No. 7:

(4) Is the resistance less than 10 Ω?

- **Yes** → Go to step 3.

- **No** → Repair the harness between the body integrated unit and wiper switch.

3) Check input voltage of body integrated unit

(1) Connect the ground cable to battery.

(2) Turn the ignition switch to ON and check the input voltage of body integrated unit.

Connector & terminal

(i84) No. 6 (+) — Chassis ground (-):

(B281) No. 3 (+) — Chassis ground (-):

(3) Is the voltage 10 V or more?

- **Yes** → Go to step 4.

- **No** → Check the harness and fuse.

4) Check output of body integrated unit

Check the output signal when the rear wiper switch is operated using Subaru Select Monitor.

(1) Turn the ignition switch to ON.

(2) Operate the rear wiper switch to ON and Washer ON.

Combination Switch (Wiper)

WIPER AND WASHER SYSTEMS

(3) When the operation in step (2) is performed, check the output signal of body integrated unit to rear wiper motor.

(4) When the rear wiper switch is set to ON, is ON output continuous? Also, when the washer is set to ON, is ON output?

- **Yes** → Go to step 5.

- **No** → Replace the body integrated unit. <Ref. to SL-72, Body Integrated Unit.>

5) Check output of body integrated unit

Check the output signal when the rear wiper switch is operated using Subaru Select Monitor.

(1) Turn the ignition switch to ON.

(2) Set the rear wiper switch to INT.

(3) When the operation in step (2) is performed, check the output signal of body integrated unit.

(4) When the rear wiper switch is set to INT, is ON/OFF output repeated? (INT OFF time (when vehicle parked): 12 seconds)

- **Yes** → Go to step 8.

- **No** → Go to step 6.

6) Check harness between body integrated unit and rear wiper motor

(1) Turn the ignition switch to OFF, disconnect the ground cable from battery. <Ref. to NT-6, BATTERY, NOTE, Note.>

(2) Disconnect the connector of body integrated unit and wiper switch.

(3) Measure the resistance between the harness connector terminals of the body integrated unit and rear wiper motor.

Connector & terminal

(B280) No. 6 — (B97) No. 11:

(4) Is the resistance less than 10 Ω?

- **Yes** → Go to step 7.

- **No** → Repair the open circuit of the harness between body integrated unit and rear wiper motor.

7) Check stop position circuit of the rear wiper motor

(1) Disconnect the harness connector of the motor assembly - rear wiper.

(2) Check the continuity of the circuit of rear wiper motor stop position.

Connector & terminal

(D43) No. 1 (+) — (D43) No. 4 (-):

(3) Is there continuity between terminals?

- **Yes** → Go to step 8.

- **No** → Replace the motor assembly - rear wiper.

8) Check power supply circuit of the rear wiper motor

(1) Disconnect the harness connector of the motor assembly - rear wiper.

(2) Turn the ignition switch to ON.

(3) Measure the voltage between the rear wiper motor harness connector terminal and chassis ground.

Connector & terminal

(D43) No. 3 (+) — Chassis ground (-):

(4) Is the voltage 10 V or more?

- **Yes** → Go to step 9.

- **No** → Check the fuse (No. 27 in main fuse box).

9) Check ground circuit of rear wiper motor

(1) Turn the ignition switch to OFF.

(2) Measure the resistance between the rear wiper motor harness connector terminal and chassis ground.

Connector & terminal

(D43) No. 4 — Chassis ground:

(3) Is the resistance less than 10 Ω?

- **Yes** → Go to step 10.

- **No** → Repair the open circuit of the rear wiper motor ground circuit.

Combination Switch (Wiper)

- 10) Check harness between body integrated unit and rear wiper motor
- (1) Turn the ignition switch to OFF.
 - (2) Disconnect the harness connector of body integrated unit.
 - (3) Disconnect the harness connector of the motor assembly - rear wiper.
 - (4) Measure the resistance between the harness connector terminals of the body integrated unit and rear wiper motor.

Connector & terminal

(B280) No. 7 — (D43) No. 2:

- (5) Is the resistance less than 10 Ω ?
- **Yes** → Go to step 11.
 - **No** → Repair the open circuit of the harness between body integrated unit and rear wiper motor.
- 11) Check output of body integrated unit
- (1) Connect the harness connector of body integrated unit.
 - (2) Disconnect the connector of the motor assembly - rear wiper.
 - (3) Turn the ignition switch to ON.
 - (4) Measure the voltage between rear wiper motor connector and chassis ground.

Connector & terminal

(D43) No. 2 (+) — Chassis ground (-):

- (5) Is the voltage less than 1.5 V when the rear wiper switch is OFF, and is the voltage 10 V or more when the rear wiper switch is ON?
- **Yes** → Go to step 12.
 - **No** → Replace the body integrated unit. <Ref. to SL-72, Body Integrated Unit.>
- 12) Check operation of rear wiper motor
- (1) Remove the motor assembly - rear wiper.
 - (2) Check the rear wiper motor. <Ref. to WW-46, INSPECTION, Rear Wiper Motor.>
 - (3) Does the rear wiper motor rotate normally?
- **Yes** → Finished.
 - **No** → Replace the motor assembly - rear wiper.

NOTE:

Rear wiper intermittent time

Select lever position	Vehicle speed (km/h (MPH))	Intermittent stopping time (sec.)
Rev.	—	Continuous operation
Except for reverse mode	80 — (50 —)	3
	50 — 80 (31 — 50)	6
	20 — 50 (12 — 31)	9
	0 — 20 (0 — 12)	12

Wiper Blade

WIPER AND WASHER SYSTEMS

5. Wiper Blade

A: REMOVAL

1. FRONT

While pushing the locking clip (A) up, pull out the blade assembly - windshield wiper in the direction of the arrow, and remove it from the arm assembly - windshield wiper.

2. REAR

Turn the blade assembly - rear wiper in the direction of arrow (A) and remove it from the arm assembly - rear wiper.

(A) Turn the wiper blade.

(a) Arm ASSY - rear wiper

(b) Blade ASSY - rear wiper

(c) Wiper blade attachment section

B: INSTALLATION

- 1) Install each part in the reverse order of removal.
- 2) Confirm that the clip is locked securely.

C: DISASSEMBLY

1. FRONT

Pull the side (a) of the wiper rubber stopper, and remove the rubber assembly - windshield wiper from the blade assembly - windshield wiper.

2. REAR

Slightly pull the top of the rubber assembly - rear wiper from the stopper (a), and pull out completely.

D: ASSEMBLY

1. FRONT

1) Insert the rubber assembly - windshield wiper onto the blade - windshield wiper so that the stopper is in the position shown in the figure.

Wiper Blade

WIPER AND WASHER SYSTEMS

2) Make sure the rubber assembly - windshield wiper is securely fastened to the pull stopper (a).

2. REAR

1) Insert the rubber assembly - rear wiper into claw (B).

2) Insert the rubber assembly - rear wiper until its top end protrudes approx. 20 mm (0.79 in) from stopper (D).

3) Insert the rubber assembly - rear wiper into claw (A).

E: INSPECTION

1) Check and clean the rubber assembly - wiper.

CAUTION:

- **Do not use organic solvent-based cleaner when cleaning rubber parts in order to avoid rubber part deterioration.**
- **Clean rubber parts using a soft cloth or paper towel dampened with windshield washer fluid or mild synthetic detergent.**

Replace the rubber assembly - wiper if rubber part hardening, deformation or damage is found.

2) Operate the washer system to check if a chattering sound or insufficient wiping occurs.

3) If a chattering sound or insufficient wiping occurs, perform the following procedures.

- (1) Make sure that the blade assembly - wiper is not deformed and the movable part moves smoothly.
- (2) Remove oil film and dirt from the glass.

CAUTION:

- **When powder-type glass cleaner is used, use after having been dissolved in water sufficiently. If it is used in less water, the glass surface may be damaged.**
- **Clean the glass surface using a soft cloth or sponge with glass cleaner.**

(3) Operate the windshield wiper again. If a chattering sound or insufficient wiping occurs, perform the procedures again.

4) If defective is not improved after performing step 1) to step 3), replace the rubber assembly - wiper with a new part.

Washer Tank and Motor

WIPER AND WASHER SYSTEMS

6. Washer Tank and Motor

A: REMOVAL

1. WASHER TANK

- 1) Open the hood COMPL - front.
- 2) Disconnect the ground cable from battery. <Ref. to NT-6, BATTERY, NOTE, Note.>
- 3) Remove the bumper face - front. <Ref. to EI-27, REMOVAL, Front Bumper.>
- 4) Remove the tank - washer assembly.
 - (1) Remove the clip of the holder - windshield washer tank.

- (2) Disconnect the connector from the motor pump assembly - washer and the sensor - washer tank, and then remove the harness clip.
- (3) Prepare a container before disconnecting the hose - washer, and drain all washer fluid in the tank - washer.
- (4) Remove the bolt and nuts and remove the tank - washer assembly.

2. WASHER MOTOR

- 1) Open the hood COMPL - front.
- 2) Disconnect the ground cable from battery. <Ref. to NT-6, BATTERY, NOTE, Note.>
- 3) Remove the screws and clips, turn over the mud guard - front LH, and disconnect the connector of the fog light assembly - front. (Model with fog light)

- 4) Disconnect the connector from the motor pump assembly - washer and remove the harness clip.
- 5) Prepare a container before disconnecting the hose - washer, and drain all washer fluid in the tank - washer.
- 6) Remove the motor pump assembly - washer from the tank - washer.

Washer Tank and Motor

WIPER AND WASHER SYSTEMS

B: INSTALLATION

1) Install each part in the reverse order of removal.

CAUTION:

- Install so that the front end of the under cover (b) comes inside the bumper face - front (a), and the front end of the mud guard (c) comes outside the bumper face - front (a).

- Before installing the bumper face, match the claws on the bracket - front bumper with the engaging position of flange section on the bumper face side. If the engaging position is not correct, the flange section may be broken or the clearance between fender panel and bumper face may not be uniform.

Tightening torque:

6.0 N·m (0.61 kgf-m, 4.4 ft-lb)

2) Add new washer fluid.

3) Adjust the fog light beam. (Model with fog light) <Ref. to LI-46, FOG LIGHT AIMING, ADJUSTMENT, Front Fog Light Assembly.>

C: INSPECTION

1. WASHER PUMP

Apply battery voltage to the connector terminal of the motor pump assembly - washer, and make sure that the motor operates.

2. WASHER FLUID LEVEL SENSOR

- 1) Check the connection status of washer fluid level sensor connector.
- 2) Does the low washer fluid warning light illuminate after draining the washer fluid? And does the low washer fluid warning light go off after refilling the washer fluid?
 - **Yes** → **Normal operation.**
 - **No** → **Perform step 3.**
- 3) Using a tester, measure the voltage of the washer fluid level sensor connector.
 - (1) Is the voltage approx. 8.5 V or more?
 - **Yes** → **Perform step 4.**
 - **No** → **Check harness, meter and integrated unit, and replace if necessary.**
- 4) Does the meter indicator illuminate if you short the washer fluid level sensor connector?
 - **Yes** → **Perform step 5.**
 - **No** → **Check meter and integrated unit, and replace if necessary.**
- 5) Using a tester, measure the resistance of the washer fluid level sensor.
 - (1) Turn over the mud guard.
 - (2) Measure the resistance of the washer fluid level sensor.

WW-01099

Amount of washer fluid in the tank	Standard
No remaining quantity (ON)	Less than 10 Ω
There is remaining quantity (OFF)	1 MΩ or more

- (3) Is the resistance within the standard?
 - **Yes** → **Normal operation.**
 - **No** → **Replace the washer fluid level sensor along with the washer tank.**

Front Wiper Arm

WIPER AND WASHER SYSTEMS

7. Front Wiper Arm

A: REMOVAL

1. MODELS WITHOUT EyeSight

- 1) Remove the cover - windshield wiper arm.
- 2) Remove the nuts, and remove the arm assembly - windshield wiper.

2. MODELS WITH EyeSight

- 1) Remove the cover - windshield wiper arm.
- 2) Remove the arm assembly - windshield wiper.
 - (1) Remove the nuts, and remove the arm assembly - windshield wiper.

(2) Add the alignment mark (a), and remove the hose from the arm assembly - windshield wiper assistor.

3) When removing the hose from the joint - washer hose, refer to the removal of “Nozzle - wiper arm washer & hose”. <Ref. to WW-36, NOZZLE - WIPER ARM WASHER & HOSE (MODEL WITH EyeSight), REMOVAL, Front Washer Nozzle and Hose.>

CAUTION:

Do not remove the nozzle - wiper arm washer from the arm assembly - windshield wiper assistor. If nozzle replacement is required, replace the arm assembly - windshield wiper assistor as a unit.

B: INSTALLATION

1. MODELS WITHOUT EyeSight

1) Install the arm assembly - windshield wiper.

(1) Assemble the arm assembly - windshield wiper so that the blade assembly - windshield wiper is aligned to the ceramic print point mark of the windshield glass.

(2) Tighten the arm assembly - windshield wiper to specified torque and install the cap.

Tightening torque:

26 N·m (2.65 kgf·m, 19.2 ft·lb)

2) Operate the windshield wiper to check that the stop position is aligned with the point mark.

If it is not aligned with the point mark, perform the removal and installation of the windshield wiper over again. <Ref. to WW-26, REMOVAL, Front Wiper Arm.>

Front Wiper Arm

WIPER AND WASHER SYSTEMS

2. MODELS WITH EyeSight

CAUTION:

Install firmly so that the hose is not bent, compressed or flattened.

1) When the hose is removed from the joint - washer hose, refer to "Installation" of "Front washer nozzle & hose". <Ref. to WW-38, INSTALLATION, Front Washer Nozzle and Hose.>

2) Install the arm assembly - windshield wiper.

(1) Align the alignment mark (a), and install the hose to the arm assembly - windshield wiper assistor.

(2) Assemble the arm assembly - windshield wiper so that the blade assembly - windshield wiper is aligned to the ceramic print point mark of the windshield glass.

(3) Tighten the arm assembly - windshield wiper to specified torque and install the cap.

Tightening torque:

26 N·m (2.65 kgf·m, 19.2 ft·lb)

3) Operate the windshield wiper to check that the stop position is aligned with the point mark.

If it is not aligned with the point mark, perform the removal and installation of the windshield wiper over again.
<Ref. to WW-26, REMOVAL, Front Wiper Arm.>

4) Make sure that there is a gap of 1 mm (0.04 in) or more between the hose and the cover - joint and between the hose and the joint - washer hose during windshield wiper operation.

WW-10132

- (A) Gap between hose and cover - joint outer side
- (B) Gap between hose and cover - joint upper side

- (C) Gap between hose and cover - joint inner side

- (D) Gap between hose and cover - joint lower side

Front Wiper Arm

WIPER AND WASHER SYSTEMS

C: ADJUSTMENT

- 1) Operate the windshield wiper once.
- 2) Check that the wiper blade is aligned with the point mark.

- 3) Make sure that there is a gap of 1 mm (0.04 in) or more between the hose and the cover - joint and between the hose and the joint - washer hose during windshield wiper operation.

- (A) Gap between hose and cover - joint outer side (C) Gap between hose and cover - joint inner side (D) Gap between hose and cover - joint lower side
- (B) Gap between hose and cover - joint upper side

- 4) If there is a gap between the hose and the cover - joint, a gap between the hose and the joint - washer hose and misalignment of the point mark, remove and install the windshield wiper. <Ref. to WW-26, REMOVAL, Front Wiper Arm.>

8. Front Wiper Motor and Link

A: REMOVAL

- 1) Disconnect the ground cable from battery. <Ref. to NT-6, BATTERY, NOTE, Note.>
- 2) Remove the arm assembly - windshield wiper. <Ref. to WW-26, REMOVAL, Front Wiper Arm.>
- 3) Remove the cowl panel assembly. <Ref. to EI-42, REMOVAL, Cowl Panel.>

CAUTION:

Before removing the cowl panel, use an air blower and nylon brush to sweep gravel from the lower area of the front side of the glass.

- 4) Remove the link assembly - windshield wiper.
 - (1) Disconnect the connector of the motor assembly - windshield wiper.
 - (2) Remove the bolts and harness clips, and remove the link assembly - windshield wiper.

WW-01149

- 5) Remove the motor assembly - windshield wiper.
 - (1) Using a crowbar wrapped with protective tape, disconnect the link assembly - windshield wiper from the link plate.
 - (2) Remove the bolts, and remove the motor assembly - windshield wiper.

WW-10010

Front Wiper Motor and Link

WIPER AND WASHER SYSTEMS

B: INSTALLATION

CAUTION:

- If the cowl panel assembly cannot be installed properly, do not hit or set it forcibly. The claws of the cowl panel or the windshield glass may be damaged.
- Before installing the windshield glass and cowl panel, make sure there are no gravel in the installing area.

1) Connect the battery ground terminal. <Ref. to NT-6, BATTERY, NOTE, Note.>

2) To confirm that the motor assembly - windshield wiper is at the auto stop position, connect the harness to the motor and turn the wiper switch to ON/OFF once.

CAUTION:

During motor operation, do not touch the movable part.

3) Disconnect the ground cable from battery again. <Ref. to NT-6, BATTERY, NOTE, Note.>

4) Install the motor assembly - windshield wiper.

(1) Align the link plate position.

CAUTION:

Install the motor assembly - windshield wiper at the position where the rod (B) and link plate (A) are aligned in a straight line.

(2) Install the motor assembly - windshield wiper.

Tightening torque:

5.5 N·m (0.56 kgf-m, 4.1 ft-lb)

5) Install the cowl panel - side and the cowl panel assembly. <Ref. to EI-44, INSTALLATION, Cowl Panel.>

6) Install the arm assembly - windshield wiper. <Ref. to WW-27, INSTALLATION, Front Wiper Arm.>

7) Connect the battery ground terminal. <Ref. to NT-6, BATTERY, NOTE, Note.>

8) Operate the windshield wiper to check that the stop position is aligned with the point mark.

If it is not aligned with the point mark, perform the removal and installation of the windshield wiper over again. <Ref. to WW-26, REMOVAL, Front Wiper Arm.>

9) Make sure that there is a gap of 1 mm (0.04 in) or more between the hose and the cover - joint and between the hose and the joint - washer hose during windshield wiper operation. (Models with EyeSight)

WW-10132

- (A) Gap between hose and cover - joint outer side
- (B) Gap between hose and cover - joint upper side
- (C) Gap between hose and cover - joint inner side
- (D) Gap between hose and cover - joint lower side

C: INSPECTION

1) Check that the following operations perform normally.

CAUTION:

Fix the motor to prevent the motor from being shorted by moving during operation.

(1) When the battery is connected to the terminal of connectors, confirm that the motor operates at low speed.

WW-01262

(2) When the battery is connected to the terminal of connectors, confirm that the motor operates at high speed.

WW-01263

Front Wiper Motor and Link

WIPER AND WASHER SYSTEMS

(3) Connect the battery to terminals of the connector, and remove the terminal connection with motor rotating at low speed, and stop the motor assembly - windshield wiper in mid-operation.

(4) Connect the battery and check that the motor stops at the automatic stop position after the motor operates at low speed again.

NOTE:

Replace the motor assembly - windshield wiper if the inspection result is not within the standard.

2) Install the motor assembly - windshield wiper. <Ref. to WW-32, INSTALLATION, Front Wiper Motor and Link.>

9. Front Washer Nozzle and Hose

A: REMOVAL

1. NOZZLE - WINDSHIELD WASHER & HOSE

- 1) Remove the arm assembly - windshield wiper. <Ref. to WW-26, REMOVAL, Front Wiper Arm.>
- 2) Remove the cowl panel - side and the cowl panel assembly. <Ref. to EI-42, REMOVAL, Cowl Panel.>

CAUTION:

Before removing the cowl panel, use an air blower and nylon brush to sweep gravel from the lower area of the front side of the glass.

- 3) Remove the nozzle - windshield washer.
 - (1) Push the claw using a flat tip screwdriver, etc.
 - (2) When the nozzle - windshield washer lifts up, pull out the nozzle - windshield washer using a clip remover, etc.
 - (3) Disconnect the hose - windshield washer, and remove the nozzle - windshield washer.

WW-00851

- 4) Disconnect the hose - windshield washer as necessary.

- Models without EyeSight

WW-10066

Front Washer Nozzle and Hose

WIPER AND WASHER SYSTEMS

- Models with EyeSight

2. NOZZLE - WIPER ARM WASHER & HOSE (MODEL WITH EyeSight)

CAUTION:

Do not remove the nozzle - wiper arm washer from the arm assembly - windshield wiper assistor. If nozzle replacement is required, replace the arm assembly - windshield wiper assistor as a unit.

- 1) Remove the arm assembly - windshield wiper. <Ref. to WW-26, REMOVAL, Front Wiper Arm.>
- 2) Remove the cowl panel - side and the cowl panel assembly. <Ref. to EI-42, REMOVAL, Cowl Panel.>

CAUTION:

Before removing the cowl panel, use an air blower and nylon brush to sweep gravel from the lower area of the front side of the glass.

- 3) Release the claws, and remove the cover - joint from cowl panel assembly.

Front Washer Nozzle and Hose

4) Remove the hose - wiper arm washer.

Front Washer Nozzle and Hose

WIPER AND WASHER SYSTEMS

B: INSTALLATION

CAUTION:

Before installing the windshield glass and cowl panel, make sure there are no gravel in the installing area.

- 1) Install the nozzle - windshield washer.
 - (1) Install the nozzle - windshield washer.
 - (2) Install the hose - windshield washer.
- 2) Install the cowl panel - side and the cowl panel assembly. <Ref. to EI-44, INSTALLATION, Cowl Panel.>
- 3) Install the arm assembly - windshield wiper. <Ref. to WW-27, INSTALLATION, Front Wiper Arm.>
- 4) Install the hose to the joint - washer hose. (Models with EyeSight)

- 5) Install the cover - joint to the cowl panel assembly. (Models with EyeSight)
- 6) Adjust the position of the nozzle - windshield washer. <Ref. to WW-39, ADJUSTMENT, Front Washer Nozzle and Hose.>
- 7) Operate the windshield wiper to check that the stop position is aligned with the point mark. If it is not aligned with the point mark, perform the removal and installation of the windshield wiper over again. <Ref. to WW-26, REMOVAL, Front Wiper Arm.>
- 8) Make sure that there is a gap of 1 mm (0.04 in) or more between the hose and the cover - joint and between the hose and the joint - washer hose during windshield wiper operation. (Models with EyeSight)

(A) Gap between hose and cover - joint outer side

(C) Gap between hose and cover - joint inner side

(D) Gap between hose and cover - joint lower side

(B) Gap between hose and cover - joint upper side

C: INSPECTION

- Make sure the nozzle - windshield washer and the hose - windshield washer are not clogged.
- Make sure the hose - windshield washer is not bent.
- Check the position of the nozzle - windshield washer. <Ref. to WW-39, ADJUSTMENT, Front Washer Nozzle and Hose.>

D: ADJUSTMENT

1. NOZZLE - WINDSHIELD WASHER

- 1) Turn the wiper switch to OFF position.
- 2) While the vehicle is at a standstill, insert a precision screwdriver (A) or equivalent wrapped with protective tape into the clearance on the upper/lower side or the right/left side of the nozzle - windshield washer to perform necessary adjustment.

CAUTION:

- The nozzle - windshield washer is made of resin. If precision screwdriver (A) or equivalent is inserted into discharge port for adjustment, the discharge port can be deformed, and washer fluid cannot be sprayed.
- Do not rotate the discharge port of the nozzle - windshield washer, otherwise it may be damaged.

Front Washer Nozzle and Hose

WIPER AND WASHER SYSTEMS

3) Adjust the washer injection position as shown in the figure.

(A) Nozzle - windshield washer

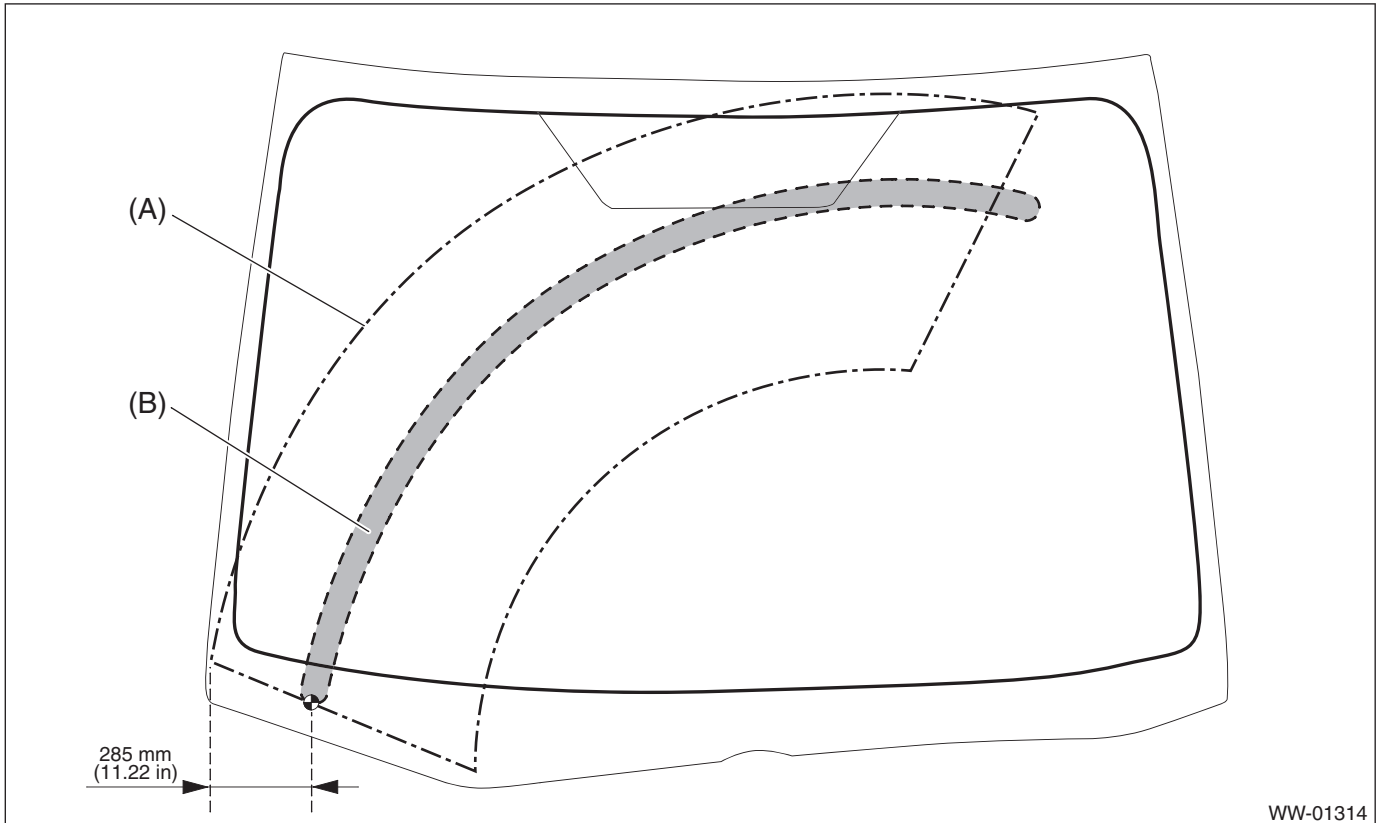

(B) Ceramic line

2. NOZZLE - WIPER ARM WASHER (MODEL WITH EyeSight)

CAUTION:

Check and adjust the spray position of the nozzle - wiper arm at the position where the wiper arm stops.

- 1) Turn the wiper switch to OFF position.
- 2) While the vehicle is stopped, check that the washer spray position is as shown in the figure.
- 3) After inspection, if the spray position is really out of the specified range, replace with a new arm assembly - windshield wiper assistor.

- (A) Wiping area of arm ASSY - wind-
shield wiper assistor
- (B) Spray area

Rear Wiper Arm

WIPER AND WASHER SYSTEMS

10.Rear Wiper Arm

A: REMOVAL

- 1) Pull up the cover - rear wiper arm.
- 2) Remove the nut, and remove the arm assembly - rear wiper.

WW-00818

B: INSTALLATION

- 1) Install in the reverse order of removal.
- 2) Operate the rear wiper once.
- 3) Align the blade assembly - rear wiper with the marking on the glass, and then tighten the nut to the specified torque.

WW-10211

Tightening torque:

8 N·m (0.82 kgf·m, 5.9 ft·lb)

- 4) Operate the wiper to check whether the wiper blade aligns with the point mark. If not, perform installation over again.

C: ADJUSTMENT

- 1) Operate the rear wiper once.
- 2) Align the blade assembly - rear wipe with the marking on the glass.

- 3) If the wiper blade is not aligned with the point mark, perform the removal of the rear wiper to align with the marking. <Ref. to WW-42, REMOVAL, Rear Wiper Arm.>

Rear Wiper Motor

WIPER AND WASHER SYSTEMS

11.Rear Wiper Motor

A: REMOVAL

- 1) Disconnect the ground cable from battery. <Ref. to NT-6, BATTERY, NOTE, Note.>
- 2) Remove the trim panel - rear gate. <Ref. to EI-93, REMOVAL, Rear Gate Trim.>
- 3) Remove the arm assembly - rear wiper.
 - (1) Remove the cover - rear wiper arm.
 - (2) Remove the nut, and remove the arm assembly - rear wiper.

WW-00818

- 4) Remove the motor assembly - rear wiper.
 - (1) Disconnect the harness connector of the motor assembly - rear wiper.
 - (2) Remove the bolts, and remove the motor assembly - rear wiper.

WW-00819

B: INSTALLATION

- 1) Install each part in the reverse order of removal.
- 2) Check that the mark on the cap - pivot wiper faces up, as shown in the figure.

Tightening torque:

Refer to "COMPONENT" of "General Description". <Ref. to WW-4, REAR WIPER, COMPONENT, General Description.>

Rear Wiper Motor

WIPER AND WASHER SYSTEMS

C: INSPECTION

CAUTION:

Fix the motor to prevent the motor from being shorted by moving during operation.

1) Connect the battery to the motor assembly - rear wiper connector, and check that the motor assembly - rear wiper operates.

2) Connect the battery to terminals of the connector, and remove the terminal connection with motor rotating, and stop the motor in mid-operation.

3) Connect the battery and check that the motor stops at the automatic stop position after the motor operates at low speed again.

12.Rear Washer

A: REMOVAL

- 1) Disconnect the ground cable from battery. <Ref. to NT-6, BATTERY, NOTE, Note.>
- 2) Remove the trim panel - rear gate UPR.
 - (1) Remove the claws on the trim edge.
 - (2) Release the claws in the center of trim, and remove the trim panel - rear gate UPR.

- 3) Remove the roof spoiler assembly. (Model with roof spoiler) <Ref. to EI-49, REMOVAL, Roof Spoiler.>
- 4) Remove the light assembly - high-mounted.
 - (1) Remove the nut.
 - (2) Disconnect the connector and remove the light assembly - high-mounted.

Rear Washer

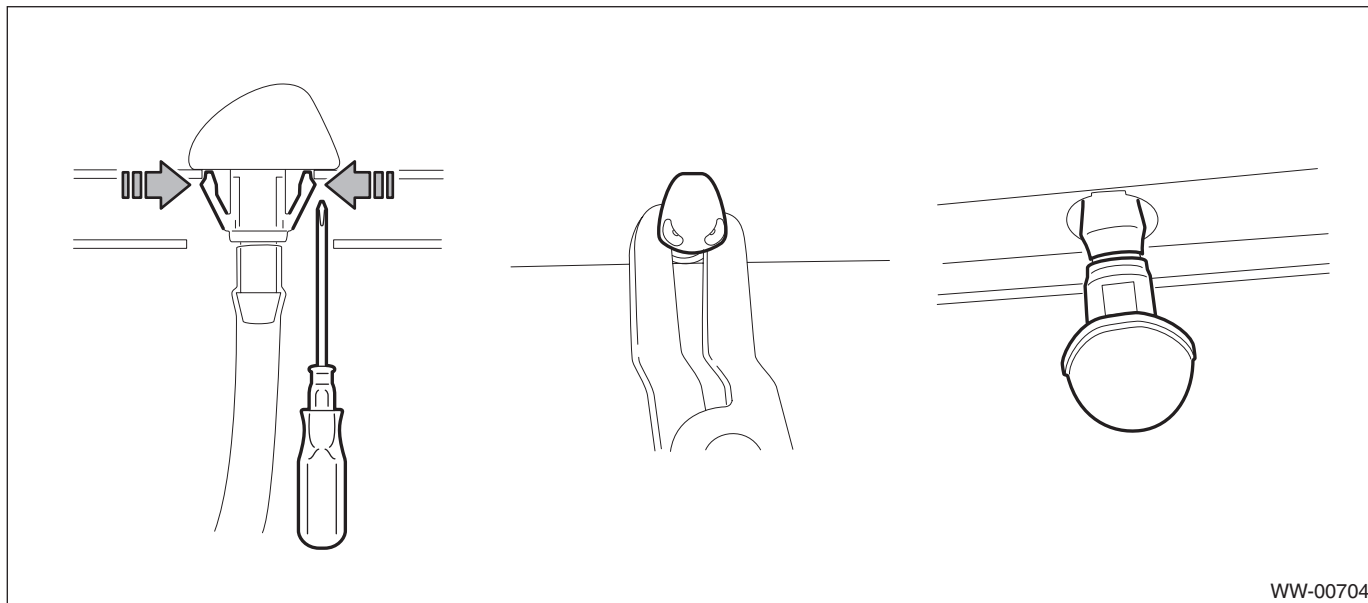

WIPER AND WASHER SYSTEMS

5) Remove the nozzle - rear washer.

CAUTION:

Before removing, apply protective tape to the body panel and used tools not to damage the panel - rear gate.

- (1) Push the claw using a flat tip screwdriver, etc.
- (2) When the nozzle - rear washer lifts up, pull out the nozzle - rear washer using a clip remover, etc.
- (3) Disconnect the hose - rear washer, and remove the nozzle - rear washer.

B: INSTALLATION

1) Install each part in the reverse order of removal.

Tightening torque:

Light assembly - high-mounted: 4.5 N·m (0.46 kgf-m, 3.3 ft-lb)

Roof spoiler assembly: 7.5 N·m (0.76 kgf-m, 5.5 ft-lb)

2) Check the nozzle - rear washer position. <Ref. to WW-49, VISUAL INSPECTION, INSPECTION, Rear Washer.>

C: INSPECTION**1. VISUAL INSPECTION**

Check for the following items, and if any malfunction is found, replace the corresponding part.

- Make sure the nozzle - rear washer and the hose - rear washer are not clogged.
- Make sure the hose - rear washer is not bent.

2. INSPECTING THE SPRAY POSITION

- 1) Turn the wiper switch to OFF position.
- 2) While the vehicle is stopped, check that the washer spray position is as shown in the figure.
- 3) After inspection, if the spray position is significantly out of the specified range, replace the nozzle - rear washer with a new part.

- (3) Circlip

- (4) Backup battery
- (5) Data communication module

Tightening torque: N·m (kgf·m, ft·lb)
T: 0.3 (0.03, 0.2)

C: CAUTION

- Before disassembling or reassembling parts, always disconnect the battery ground cable from battery. When replacing the audio, control module and other parts provided with memory functions, record the memory contents before disconnecting the battery ground cable. Otherwise, the memory is cleared.
- Reassemble the parts in the reverse order of disassembly procedure unless otherwise indicated.
- Adjust parts to the given specifications.
- Connect the connectors securely during reassembly.
- After reassembly, make sure that the each component operates smoothly.
- Yellow connectors and harnesses with yellow tapes around them are the connectors and harnesses for the airbag system. Using a tester above such circuits may cause malfunction of airbag system. Follow the cautions of "AIRBAG SYSTEM" in this case. <Ref. to AB-9, CAUTION, General Description.>
- Be careful not to damage the airbag system wiring harness when servicing electrical parts and switches.
- When removing, installing or replacing the VDCCM&H/U, VDCCM&H/U bracket, steering wheel or steering angle sensor (steering roll connector), perform the VDC setting mode. <Ref. to VDC-23, ADJUSTMENT, VDC Control Module and Hydraulic Control Unit (VDCCM&H/U).>

For other related fuses, refer to the wiring diagram. <Ref. to WI-15, Power Supply Circuit.>

B: INSPECTION

1. CHECK FUSE

- 1) Remove the fuse and inspect visually.
- 2) If the fuse is blown out, replace the fuse.

NOTE:

If the fuse is blown again, check the system wiring harness.

4. Audio System

A: WIRING DIAGRAM

1. AUDIO

Refer to “Audio System” in the wiring diagram.

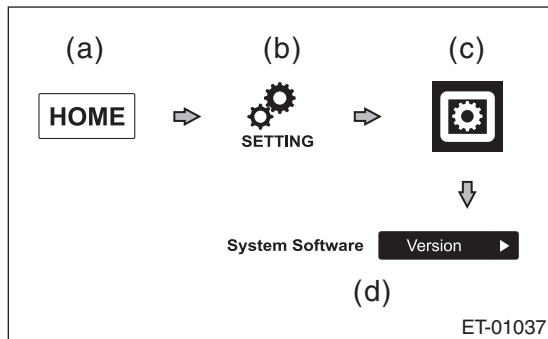

- 6.2 inch display: <Ref. to WI-51, 6.2-INCH DISPLAY, WIRING DIAGRAM, Audio System.>
- 7 inch display (model without telematics): <Ref. to WI-55, 7 INCH DISPLAY (WITHOUT TELEMATICS), WIRING DIAGRAM, Audio System.>
- 7 inch display (model with telematics): <Ref. to WI-59, 7 INCH DISPLAY (WITH TELEMATICS), WIRING DIAGRAM, Audio System.>

B: OPERATION

1. SUBARU STARLINK CONNECTION ID DISPLAY

Model with 6.2 inch display

- 1) Turn the ignition switch to ACC.
- 2) Press the HOME button (a) to display the {HOME} screen.
- 3) Touch the {SETTINGS} (b) to display the {SETTINGS} screen.
- 4) Touch the {Settings General} (c) to display the {Settings General} screen.
- 5) Touch the {Version} (d) in {System Software}.

- 6) Confirm the Serial Number (8 digits).

Model with 7 inch display

Operation is the same as that of navigation assembly, therefore, refer to “Navigation System”. <Ref. to ET-20, SUBARU STARLINK CONNECTION ID DISPLAY, OPERATION, Navigation System.>

2. SOFTWARE VERSION DISPLAY

Model with 6.2 inch display

- 1) Perform the same procedure as for the SUBARU STARLINK connection ID display. <Ref. to ET-11, SUBARU STARLINK CONNECTION ID DISPLAY, OPERATION, Audio System.>
- 2) Confirm the Software Ver.

Model with 7 inch display

Operation is the same as that of navigation assembly, therefore, refer to “Navigation System”. <Ref. to ET-20, SOFTWARE VERSION DISPLAY, OPERATION, Navigation System.>

3. INITIALIZATION (FACTORY DEFAULT)

Model with 6.2 inch display

- 1) Turn the ignition switch to ACC.
- 2) Press the HOME button (a) to display the {HOME} screen.
- 3) Touch the {SETTINGS} (b) to display the {SETTINGS} screen.
- 4) Touch the {Settings General} (c) to display the {Settings General} screen.
- 5) Touch the {Restore} (d) in {Reset to Factory Settings}.

- 6) Touch {OK} after {Are you sure you want to delete All Data?} is displayed.
- 7) {DO NOT OPERATE. Initializing now.} is displayed, and all data deletion is initiated.
- 8) When all data is deleted, {All date has been deleted. Start up the engine to reboot.} is displayed.

Model with 7 inch display

Operation is the same as that of navigation assembly, therefore, refer to "Navigation System". <Ref. to ET-20, INITIALIZATION (FACTORY DEFAULT), OPERATION, Navigation System.>

4. CHECK CONNECTIONS WITH LINE DIAG MODE

Model with 6.2 inch display

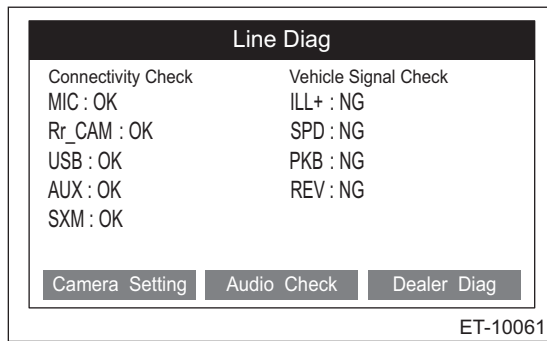

- 1) Turn the ignition switch to ACC.
- 2) Press the button (a) to display the Audio OFF screen.
- 3) Touch the screen in order from (b) to (e).

NOTE:

Pressing the button (a) or turning the ignition switch from the OFF to ACC position can exit the Line Diag mode.

- 4) {Line Diag} screen is displayed.
- 5) Check the connection status with the {Connectivity Check} in the {Line Diag} screen.

OK: Each connection device is connected properly.
 NG: No connection or abnormal connection is detected.

NOTE:

Check the external connection terminals (USB 1, 2 and AUX) by connecting a memory for check or a pin jack.

Model with 7 inch display

Operation is the same as that of navigation assembly, therefore, refer to "Navigation System". <Ref. to ET-21, CHECK CONNECTIONS WITH LINE DIAG MODE, OPERATION, Navigation System.>

5. CHECK VEHICLE SIGNALS WITH LINE DIAG MODE

Model with 6.2 inch display

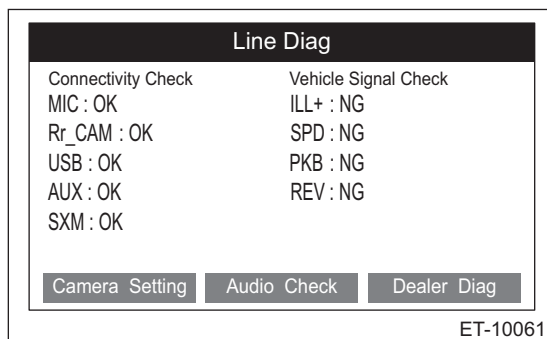

- 1) Turn the ignition switch to ACC.
- 2) Press the button (a) to display the Audio OFF screen.
- 3) Touch the screen in order from (b) to (e).

NOTE:

Pressing the button (a) or turning the ignition switch from the OFF to ACC position can exit the diagnostic mode.

- 4) {Line Diag} screen is displayed.
- 5) Check the connection status with the {Vehicle Signal Check} in the {Line Diag} screen.

Audio System

ENTERTAINMENT

- Check illumination

NOTE:

Make sure that the bright switch is not ON.

1. Set the lighting switch to the parking position.
2. Make sure that {OK} lights in ILL+ and then the screen becomes dim.

OK: Normal.

NG: Abnormal. Check the signal line connector. If there are no problems, the unit could be faulty.

- Check speed sensor

NOTE:

- Before starting inspections, check the safety around the vehicle.
- Lift up the vehicle as necessary.
- When the diagnostic trouble code is input in the VDC CM, perform the Clear Memory Mode.

1. Drive the vehicle at 8 km/h (5 MPH) or more.
2. Check that {OK} is displayed in SPD.

OK: Normal.

NG: Vehicle speed is less than 8 km/h (5 MPH), or malfunction is detected in the signal line. Check the signal line connector. If there are no problems, the unit could be faulty.

- Check parking brake signal

1. Pull parking brake lever.
2. Check that {OK} is displayed in PKB.

OK: Normal.

NG: Abnormal. Check the signal line connector. If there are no problems, the unit could be faulty.

- Check back sensor

NOTE:

Before starting inspections, check the safety behind the vehicle.

1. Turn the ignition to ON.
2. Pull the parking brake lever and depress the brake pedal, then place the select lever or gear shift lever in reverse.
3. Make sure that {OK} is displayed in REV.

OK: Normal.

NG: Abnormal. Check the signal line connector. If there are no problems, the unit could be faulty.

Model with 7 inch display

Operation is the same as that of navigation assembly, therefore, refer to “Navigation System”. <Ref. to ET-22, CHECK VEHICLE SIGNALS WITH LINE DIAG MODE, OPERATION, Navigation System.>

6. CHECK SPEAKER OUTPUT WITH LINE DIAG MODE

Model with 6.2 inch display

- 1) Turn the ignition switch to ACC.
- 2) Press the button (a) to display the Audio OFF screen.
- 3) Touch the screen in order from (b) to (e).

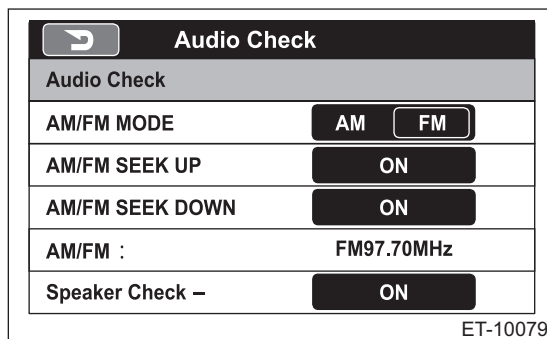

NOTE:

Pressing the button (a) or turning the ignition switch from the OFF to ACC position can exit the Line Diag mode.

- 4) {Line Diag} screen is displayed.

- 5) Touch {Audio Check} on the {Line Diag} screen.
- 6) {Audio Check} screen is displayed.

- 7) Touch the {ON} key of {Speaker Check} to check speaker output.

NOTE:

- The speaker front left → front right → rear right → rear left will sound in order for 2 seconds each.
- The speaker sounds at the maximum volume during speaker check.
- Press the {BACK} key to return to the {Line Diag} screen.

Model with 7 inch display

Operation is the same as that of navigation assembly, therefore, refer to “Navigation System”. <Ref. to ET-23, CHECK SPEAKER OUTPUT WITH LINE DIAG MODE, OPERATION, Navigation System.>

Audio System

ENTERTAINMENT

7. CHECK RADIO FREQUENCY RANGE SWITCH-OVER

NOTE:

- Displayed only for model with 6.2 inch display.
 - Some items are not displayed according to destination.
- 1) Turn the ignition switch to ACC.
 - 2) Press the button (a) to display the Audio OFF screen.
 - 3) Touch the screen in order from (b) to (e).

NOTE:

Pressing the button (a) or turning the ignition switch from the OFF to ACC position can exit the Line Diag mode.

- 4) {Line Diag} screen is displayed.

- 5) Touch {Dealer Diag} on the {Line Diag} screen.

- 6) The {Dealer Diag} screen is displayed.

- 7) Touch the {9kHz} or {10kHz} key to switch the AM radio frequency range.

Display key	Frequency range
9 kHz	Set the AM frequency range to 531 — 1629 kHz.
10 kHz	Set the AM frequency range to 530 — 1710 kHz.

NOTE:

- When the setting is changed, reboot confirmation for frequency switch-over is displayed. Select {OK} to reboot. When {cancel} is pressed, the {Dealer Diag} screen is displayed.
- The initial settings is at 9 kHz.

C: INSPECTION

1. BASIC INSPECTION

Model with 6.2 inch display

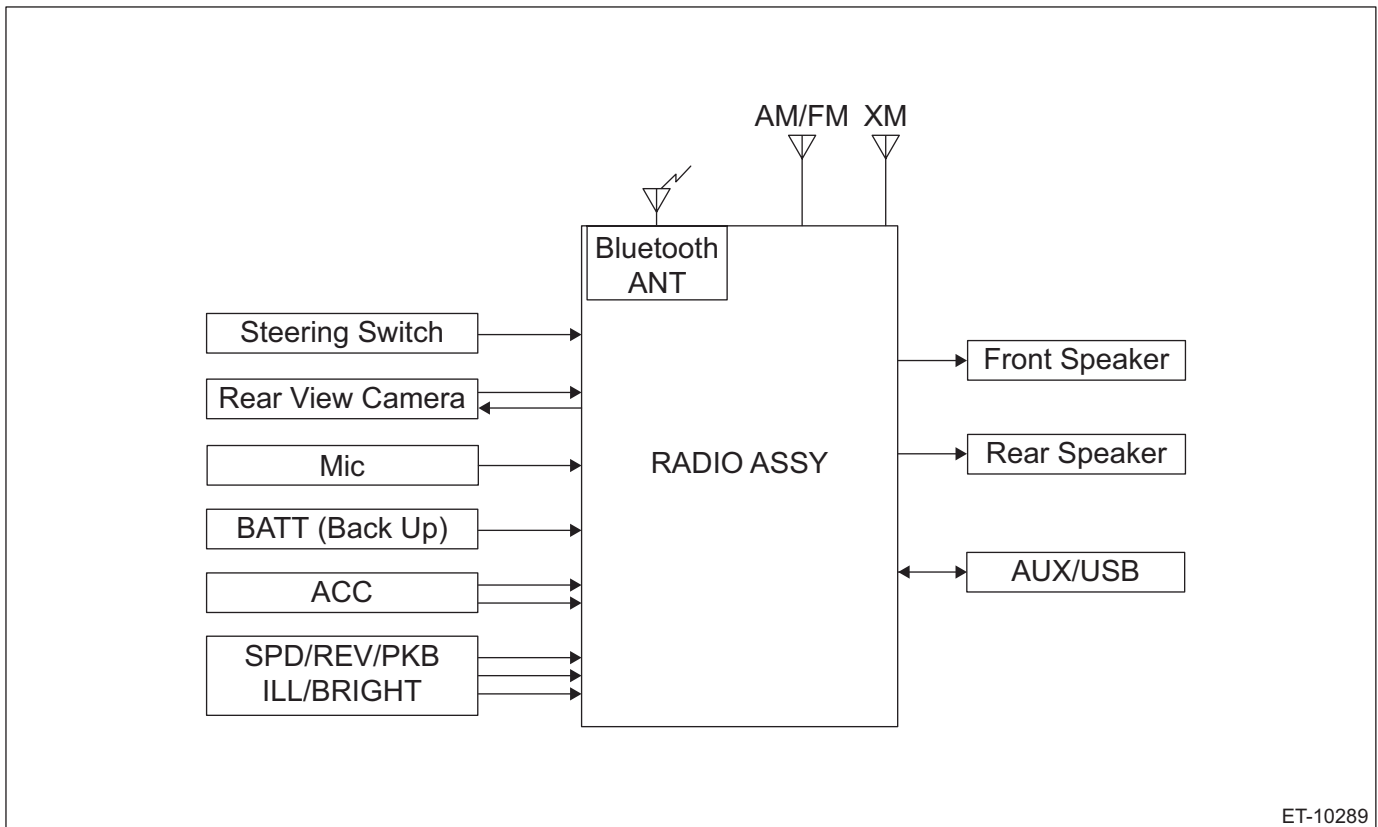

- 1) Using the Check List for Interview, ask the customer the condition of how the trouble occurred. <Ref. to ET-6, MODEL WITH 6.2 INCH DISPLAY, CHECK, Check List for Interview.>
- 2) Check the battery. <Ref. to SC(H4DO)-52, INSPECTION, Battery.>
- 3) Check the list of Diagnostics with Phenomenon, and perform diagnosis according to the procedures. <Ref. to ET-54, AUDIO SYSTEM, LIST, Diagnostics with Phenomenon.>

Model with 7 inch display

Refer to “BASIC INSPECTION” in “Navigation System”. <Ref. to ET-24, BASIC INSPECTION, INSPECTION, Navigation System.>

2. SYSTEM BLOCK DIAGRAM

Model with 6.2 inch display

Model with 7 inch display

5. Navigation System

A: WIRING DIAGRAM

Refer to “Navigation System” in the wiring diagram.

- Model without telematics: <Ref. to WI-170, WITHOUT TELEMATICS, WIRING DIAGRAM, Navigation System.>
- Model with telematics: <Ref. to WI-174, WITH TELEMATICS, WIRING DIAGRAM, Navigation System.>

B: OPERATION

1. SUBARU STARLINK CONNECTION ID DISPLAY

- 1) Turn the ignition switch to ACC.
- 2) Press the AUDIO/TUNE knob (b) five times with the HOME button (a) pressed to display the {Service Menu} screen.
- 3) Touch the {Product Information} (c) to display the {Product Information} screen.

- 4) Confirm the connectivity ID (16 digits).

2. SOFTWARE VERSION DISPLAY

- 1) Turn the ignition switch to ACC.
- 2) Press the AUDIO/TUNE knob (b) five times with the HOME button (a) pressed to display the {Service Menu} screen.
- 3) Touch the {Service Information} (c).
- 4) Touch the {Version Information} (d) to display the {Version Information} screen.
- 5) Touch the {AVN or DA} (e) to display the {Unit Version Information} screen.

- 6) Confirm the version.

3. INITIALIZATION (FACTORY DEFAULT)

- 1) Turn the ignition switch to ACC.
- 2) Press the HOME button to display the {HOME} screen.
- 3) Touch the {SETTINGS} to display the {SETTINGS} screen.
- 4) Touch the {General} to display the {General Setting} screen.
- 5) Touch the {Delete Personal Data}, and touch the {Delete}.
- 6) {Deleting personal date. Please do not turn the vehicle off.} is displayed, and all data deletion is initiated.
- 7) When all data is deleted, {Initialization Complete.} is displayed.

4. CHECK CONNECTIONS WITH LINE DIAG MODE

- 1) Turn the ignition switch to ACC.
- 2) Press the button (b) twice with the button (a) pressed.

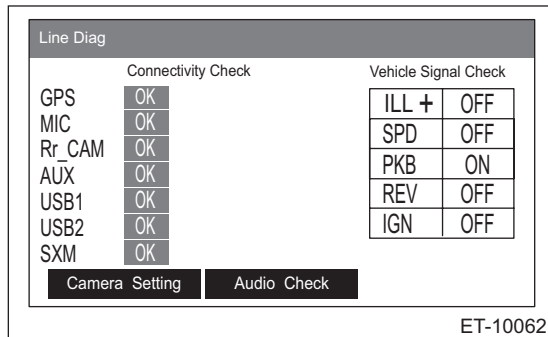

ET-01008

NOTE:

Pressing the button (c) for 3 seconds or more, or turning the ignition switch from the OFF to ACC position can exit the diagnostic mode.

- 3) {Line Diag} screen is displayed.
- 4) Check the connection status with the {Connectivity Check} in the {Line Diag} screen.

ET-10062

NOTE:

GPS is displayed only for the navigation system.

OK: Each connection device is connected properly.

NG: No connection or abnormal connection is detected.

NOTE:

Check the external connection terminals (USB 1, 2 and AUX) by connecting a memory for check or a pin jack.

Navigation System

ENTERTAINMENT

5. CHECK VEHICLE SIGNALS WITH LINE DIAG MODE

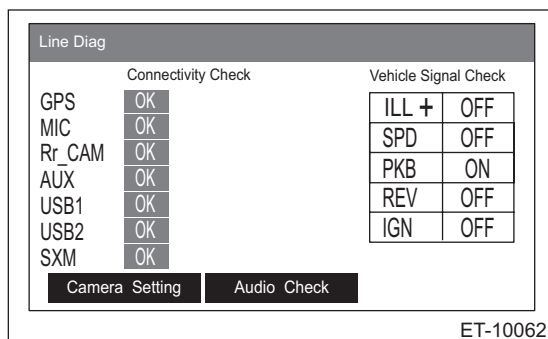

- 1) Turn the ignition switch to ACC.
- 2) Press the button (b) twice with the button (a) pressed.

NOTE:

Pressing the button (c) for 3 seconds or more, or turning the ignition switch from the OFF to ACC position can exit the diagnostic mode.

- 3) {Line Diag} screen is displayed.
- 4) Check the connection status with the {Vehicle Signal Check} in the {Line Diag} screen.

NOTE:

GPS is displayed only for the navigation system.

- Check illumination

NOTE:

Make sure that the bright switch is not ON.

1. Turn the ignition to ON.
2. Set the lighting switch to the parking position.
3. Make sure that {ON} lights in ILL+ and then the screen becomes dim.

ON: Normal.

OFF: Abnormal. Check the signal line connector. If there are no problems, the unit could be faulty.

- Check speed sensor

NOTE:

- Before starting inspections, check the safety around the vehicle.
- Lift up the vehicle as necessary.
- When the diagnostic trouble code is input in the VDC CM, perform the Clear Memory Mode.

1. Drive the vehicle at 9 km/h (6 MPH) or more.
2. Check that {ON} is displayed in SPD.

ON: Normal.

OFF: Vehicle speed is less than 7 km/h (4 MPH), or malfunction is detected in the signal line. Check the signal line connector. If there are no problems, the unit could be faulty.

- Check parking brake signal

1. Pull parking brake lever.

2. Check that {ON} is displayed in PKB.

ON: Normal.

OFF: Abnormal. Check the signal line connector. If there are no problems, the unit could be faulty.

- Check back sensor

NOTE:

Before starting inspections, check the safety behind the vehicle.

1. Turn the ignition to ON.

2. Pull the parking brake lever and depress the brake pedal, then place the select lever or gear shift lever in reverse.

3. Make sure that {ON} is displayed in REV.

ON: Normal.

OFF: Abnormal. Check the signal line connector. If there are no problems, the unit could be faulty.

6. CHECK SPEAKER OUTPUT WITH LINE DIAG MODE

1) Turn the ignition switch to ACC.

2) Press the button (b) twice with the button (a) pressed.

NOTE:

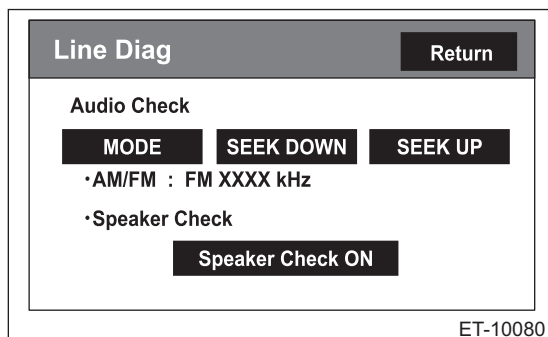

Pressing the button (c) for 3 seconds or more, or turning the ignition switch from the OFF to ACC position can exit the diagnostic mode.

3) {Line Diag} screen is displayed.

4) Touch {Audio Check} on the {Line Diag} screen.

5) {Audio Check} screen is displayed.

Navigation System

ENTERTAINMENT

6) Touch the {ON} key of {Speaker Check} to check speaker output.

NOTE:

- The speaker front left → front right → rear right → rear left will sound in order for 2 seconds each.
- The speaker sounds at the maximum volume during speaker check.
- Press the {Return} key to return to the {Line Diag} screen.

C: INSPECTION

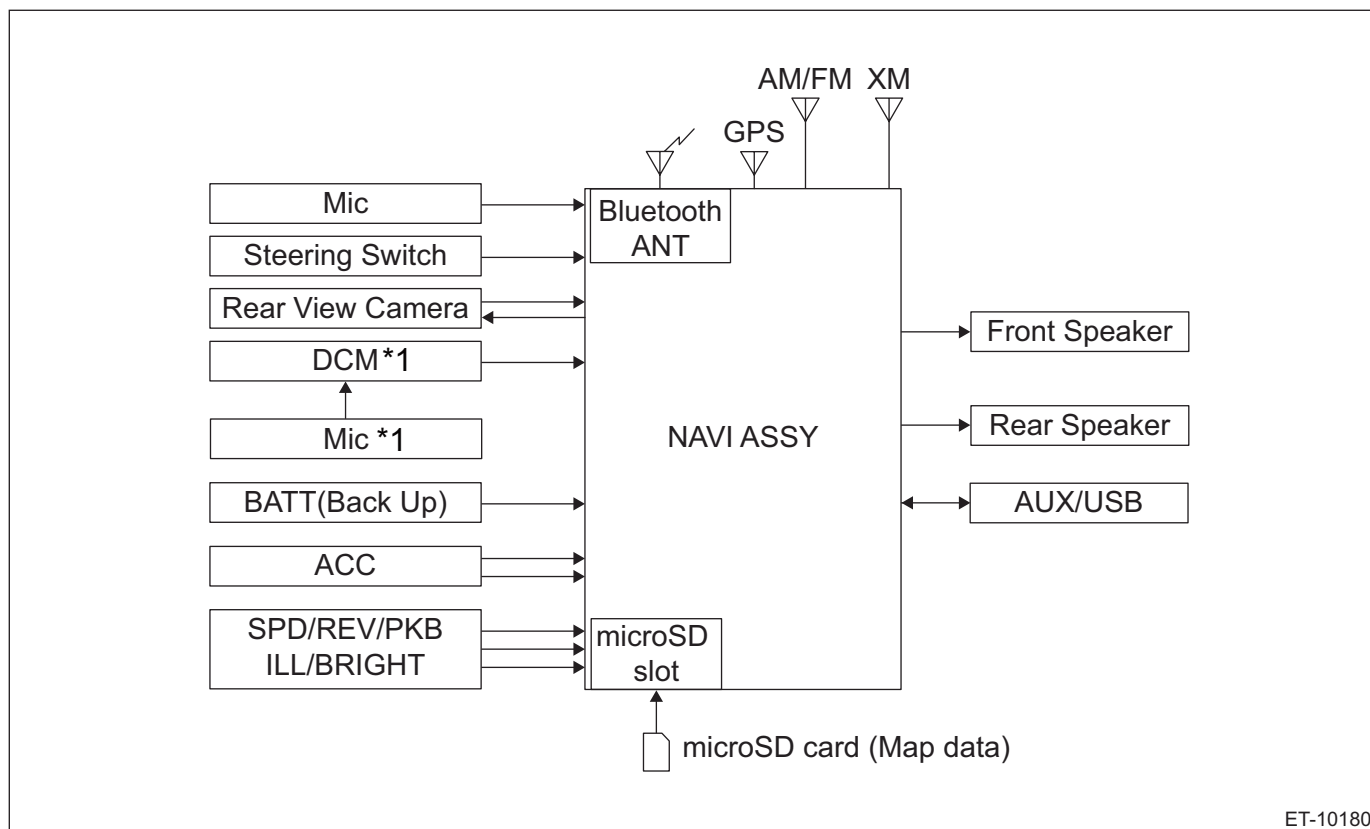

1. BASIC INSPECTION

1) Using the Check List for Interview, ask the customer the condition of how the trouble occurred. <Ref. to ET-6, MODEL WITH 6.2 INCH DISPLAY, CHECK, Check List for Interview.>

D: NOTE

For procedure of each component in the navigation system, refer to the respective section.

- Navigation unit: <Ref. to ET-41, Navigation Body.>
- GPS antenna: <Ref. to ET-42, GPS Antenna.>

6. Telematics System

A: WIRING DIAGRAM

Refer to “Telematics System” in the wiring diagram. <Ref. to WI-170, WIRING DIAGRAM, Navigation System.>

B: OPERATION

1. REGISTRATION (COMM CHECK)

CAUTION:

Because it will go back to Factory mode when the signal is weak, that you do not press the i button more than 2 seconds during a communication check. If it had returned to Factory mode, carrying out the CommCheck again. Each mode state can be confirmed in the “Subscription Status” in the current data display of SSM.

- 1) Replace the data communication module with a new part.
- 2) Check the LED of overhead console or stereo camera cover assembly illuminates in green.
- 3) Press and hold the i-button for 2 seconds or more.

NOTE:

When the subscription is completed, the telematics system will automatically activate.

C: INSPECTION

Refer to “Basic Diagnostic Procedure” in “TELEMATICS SYSTEM (DIAGNOSTICS)”. <Ref. to TEL(diag)-2, Basic Diagnostic Procedure.>

D: NOTE

For procedure of each component in the telematics system, refer to the respective section.

- Data communication module: <Ref. to ET-44, Data Communication Module.>
- Antenna: <Ref. to ET-34, Antenna.>
- GPS antenna: <Ref. to ET-42, GPS Antenna.>
- Switches and harness: <Ref. to ET-37, Switches and Harness.>

7. Audio

A: REMOVAL

CAUTION:

Before handling the airbag system components, refer to “CAUTION” of “General Description” in “AIRBAG SYSTEM”. <Ref. to AB-9, CAUTION, General Description.>

- 1) Disconnect the ground cable from battery and wait for at least 60 seconds before starting work. <Ref. to NT-6, BATTERY, NOTE, Note.>
- 2) Remove the cover assembly - instrument panel LWR driver and the knee airbag module. <Ref. to AB-34, REMOVAL, Knee Airbag Module.>
- 3) Remove the glove box. <Ref. to EI-56, REMOVAL, Glove Box.>
- 4) Remove the center grille assembly. <Ref. to AC-86, CENTER GRILLE ASSEMBLY, REMOVAL, Air Vent Grille.>
- 5) Remove the audio assembly.
 - (1) On manual A/C models, disconnect the control cables from both sides of the heater & cooling unit.

- (2) Attach the protective tape (a) to the cover - shift lever.
- (3) Remove the bolts, release the claws, and partially pull out the audio assembly.

NOTE:

- Release the claw by using a clip remover wrapped with protective tape.
 - If the antenna cable interferes with the removal operation of the side attachment bolts (for model with telematics), move the antenna cable aside before service as necessary.
- (4) Disconnect the connectors, and remove the audio assembly.

- 6) Remove the screws, and then remove the audio bracket.

Audio

ENTERTAINMENT

NOTE:

- The model with telematics is equipped with the data communication module under the audio assembly.
- When sending the audio for repair, remove the audio bracket and heater control assembly, and install on the vehicle as shown in the figure below. <Ref. to AC-45, REMOVAL, Control Panel.>

ET-01052

B: INSTALLATION

CAUTION:

- After installing the center grille assembly, check that the air vent grille of the center grille assembly is inserted correctly into the air vent duct.
- Before handling the airbag system components, refer to “CAUTION” of “General Description” in “AIRBAG SYSTEM”. <Ref. to AB-9, CAUTION, General Description.>
- Do not allow harness and cables to interfere with or get caught by other parts.

Install each part in the reverse order of removal.

Tightening torque:

Audio assembly: 7.5 N·m (0.76 kgf·m, 5.5 ft·lb)

8. Front Speaker

A: REMOVAL

1. TWEETER

- 1) Disconnect the ground cable from battery. <Ref. to NT-6, BATTERY, NOTE, Note.>
- 2) Remove the speaker assembly - tweeter.
 - (1) Release the clips and claws, then detach the grille speaker side.

NOTE:

Remove the grille speaker side by using a plastic remover.

- (2) Remove the screws.

Preparation tool:

Stubby screwdriver

- (3) Disconnect the connector and remove the speaker assembly - tweeter.

Front Speaker

ENTERTAINMENT

2. DOOR SPEAKER

- 1) Disconnect the ground cable from battery and wait for at least 60 seconds before starting work. <Ref. to NT-6, BATTERY, NOTE, Note.>
- 2) Remove the trim panel - front door. <Ref. to EI-50, FRONT DOOR, REMOVAL, Door Trim.>
- 3) Remove the front door speaker assembly.
 - (1) Disconnect the connector.
 - (2) Remove the screws to remove the front door speaker assembly.

B: INSTALLATION

Install each part in the reverse order of removal.

9. Rear Speaker

A: REMOVAL

- 1) Disconnect the ground cable from battery. <Ref. to NT-6, BATTERY, NOTE, Note.>
- 2) Remove the trim panel - rear door. <Ref. to EI-51, REAR DOOR, REMOVAL, Door Trim.>
- 3) Remove the rear speaker assembly.
 - (1) Remove the screws.
 - (2) Disconnect the connector behind the speaker and remove the rear speaker assembly.

B: INSTALLATION

Install each part in the reverse order of removal.

10. Antenna

A: REMOVAL

1. RADIO/TELEMATICS ANTENNA

CAUTION:

Before handling the airbag system components, refer to “CAUTION” of “General Description” in “AIRBAG SYSTEM”. <Ref. to AB-9, CAUTION, General Description.>

- 1) Disconnect the ground cable from battery and wait for at least 60 seconds before starting work. <Ref. to NT-6, BATTERY, NOTE, Note.>
- 2) Remove the trim panel - roof assembly. <Ref. to EI-85, REMOVAL, Roof Trim.>
- 3) Remove the antenna assembly - radio or telematics.
 - (1) Disconnect the connector and terminal, and remove the mounting nut (A).
 - (2) Pull out the antenna assembly - radio or telematics from the roof panel top.

(a) Radio antenna

(b) XM radio antenna

(c) Telematics antenna

2. ANTENNA FEEDER CORD

CAUTION:

Before handling the airbag system components, refer to “CAUTION” of “General Description” in “AIRBAG SYSTEM”. <Ref. to AB-9, CAUTION, General Description.>

- 1) Disconnect the ground cable from battery and wait for at least 60 seconds before starting work. <Ref. to NT-6, BATTERY, NOTE, Note.>
- 2) Remove the trim panel - roof assembly. <Ref. to EI-85, REMOVAL, Roof Trim.>
- 3) Remove the cover assembly - instrument panel LWR driver and the knee airbag module. <Ref. to AB-34, REMOVAL, Knee Airbag Module.>
- 4) Remove the glove box. <Ref. to EI-56, REMOVAL, Glove Box.>
- 5) Remove the center grille assembly. <Ref. to AC-86, CENTER GRILLE ASSEMBLY, REMOVAL, Air Vent Grille.>
- 6) Remove the audio assembly or navigation assembly. <Ref. to ET-28, REMOVAL, Audio.>

- 7) Turn over the floor mat. <Ref. to EI-95, REMOVAL, Floor Mat.>
- 8) Remove the cord assembly - antenna feeder.

3. TELEMATICS SUB ANTENNA

CAUTION:

Before handling the airbag system components, always refer to “CAUTION” of “General Description” in “AIRBAG SYSTEM”.

- 1) Disconnect the ground cable from battery and wait for at least 60 seconds before starting work. <Ref. to NT-6, BATTERY, NOTE, Note.>
- 2) Remove the cover assembly - instrument panel LWR driver and the knee airbag module. <Ref. to AB-34, REMOVAL, Knee Airbag Module.>
- 3) Remove the glove box. <Ref. to EI-56, REMOVAL, Glove Box.>
- 4) Remove the center grille assembly. <Ref. to AC-86, CENTER GRILLE ASSEMBLY, REMOVAL, Air Vent Grille.>
- 5) Remove the audio assembly or navigation assembly. <Ref. to ET-28, REMOVAL, Audio.>

NOTE:

The data communication module will be removed at the same time.

- 6) Remove the combination meter assembly. <Ref. to IDI-18, REMOVAL, Combination Meter.>
- 7) Remove the GPS antenna.

NOTE:

Remove the antenna only. Do not pull the cord.

- 8) Remove the telematics sub antenna.

- (1) Disconnect the telematics sub antenna connector on the data communication module side, and tie a string to the connector.

NOTE:

A string makes operation easier during installation.

- (2) Remove the screw and harness clamp, and pull out the telematics sub antenna from the combination meter side.

- (3) After the telematics sub antenna has been pulled out, remove the string attached to the connector in step (1).

B: INSTALLATION

CAUTION:

- After installing the center grille assembly, check that the air vent grille of the center grille assembly is inserted correctly into the air vent duct.
- Before handling the airbag system components, always refer to “CAUTION” of “General Description” in “AIRBAG SYSTEM”.
- Do not allow harness and cables to interfere with or get caught by other parts.

Install each part in the reverse order of removal.

Tightening torque:

Antenna assembly - radio or antenna assembly - telematics: 4.5 N·m (0.46 kgf-m, 3.3 ft-lb)

11. Switches and Harness

A: REMOVAL

1. SATELLITE SWITCH ASSEMBLY

CAUTION:

Before handling the airbag system components, refer to “CAUTION” of “General Description” in “AIRBAG SYSTEM”. <Ref. to AB-9, CAUTION, General Description.>

- 1) Set the tire to the straight-ahead position.
- 2) Disconnect the ground cable from battery and wait for at least 60 seconds before starting work. <Ref. to NT-6, BATTERY, NOTE, Note.>
- 3) Remove the driver’s airbag module. <Ref. to AB-32, REMOVAL, Driver’s Airbag Module.>
- 4) Remove the steering wheel. <Ref. to PS-8, REMOVAL, Steering Wheel.>
- 5) Remove the satellite switch assembly. <Ref. to PS-9, DISASSEMBLY, Steering Wheel.>

2. TELEMATICS BUTTON

The telematics button is a single unit with the spot map light or stereo camera cover assembly. For operation procedures, refer to “LIGHTING SYSTEM” section. <Ref. to LI-63, REMOVAL, Spot Map Light.>

B: INSTALLATION

1. SATELLITE SWITCH ASSEMBLY

CAUTION:

- Before handling the airbag system components, refer to “CAUTION” of “General Description” in “AIRBAG SYSTEM”. <Ref. to AB-9, CAUTION, General Description.>
 - Do not allow harness and connectors to interfere or get tangled up with other parts.
 - If the steering wheel has been removed, make sure that the steering roll connector is not turned from the original position.
 - If the steering wheel and steering angle sensor (steering roll connector) are removed, perform “VSC(VDC) Centering Mode” of the VDC. <Ref. to VDC-23, VDC SENSOR MIDPOINT SETTING MODE (MODELS WITHOUT EyeSight), ADJUSTMENT, VDC Control Module and Hydraulic Control Unit (VD-CCM&H/U).>
 - Securely install the switch. Improper insertion of the pin or claw of the switch may cause improper installation.
- 1) Align the center position of the steering roll connector. <Ref. to AB-62, ADJUSTMENT, Roll Connector.>
 - 2) Install each part in the reverse order of removal.

NOTE:

Align the alignment marks on the steering wheel and the column assembly - steering.

Tightening torque:

Steering wheel: 39 N·m (3.98 kgf·m, 28.8 ft·lb)

Clearance:

Between cover assembly - column and steering wheel: 4 — 6 mm (0.16 — 0.24 in)

2. TELEMATICS BUTTON

The telematics button is a single unit with the spot map light or stereo camera cover assembly. For operation procedures, refer to “LIGHTING SYSTEM” section. <Ref. to LI-64, INSTALLATION, Spot Map Light.>

Switches and Harness

ENTERTAINMENT

C: INSPECTION

1. SATELLITE SWITCH ASSEMBLY

1) Measure the resistance between connector terminals.

Preparation tool:
Circuit tester

ET-10230

Terminal No.	Inspection conditions		Standard
6 — 2	VOL (+) VOL (-) SEEK (▷) SEEK (◁) LIST RETURN	A circuit is all OFF.	Approx. 100 kΩ
	VOL (+)	ON	Less than 1 Ω
	VOL (-)	ON	Approx. 50 Ω
	Preset CH UP/SEEK (▷)	ON	Approx. 120 Ω
	Preset CH DOWN/SEEK (◁)	ON	Approx. 230 Ω
	LIST	ON	Approx. 430 Ω
12 — 2	MUTE/ENTER TALK SOURCE ON HOOK OFF HOOK	B circuit is all OFF.	Approx. 100 kΩ
	MUTE/ENTER	ON	Less than 1 Ω
	TALK	ON	Approx. 50 Ω
	SOURCE	ON	Approx. 120 Ω
	ON HOOK	ON	Approx. 230 Ω
	OFF HOOK	ON	Approx. 430 Ω

2) Apply battery voltage between the connector terminals to check lighting condition of illumination inside the switch.

Terminal No.	Inspection conditions	Specification
10 (+) — 11 (-)	Apply battery voltage.	Light ON

3) If the result of the measurement is not at the standard, replace the satellite switch assembly.

2. TELEMATICS BUTTON

1) Check the button.

(1) Measure the resistance between connector terminals.

Preparation tool:

Circuit tester

- SOS button

Terminal No.	Inspection conditions	Standard
6 — 1	OFF	Approx. 1.6 k Ω
	ON	Less than 1 Ω

- i-button

Terminal No.	Inspection conditions	Standard
3 — 1	OFF	Approx. 1.6 k Ω
	ON	Less than 1 Ω

(2) Apply battery voltage between the connector terminals to check lighting condition of illumination inside the switch.

Terminal No.	Inspection conditions	Specification
8 (+) — 2 (-)	Apply battery voltage.	Light ON

2) Check the indicator.

(1) Check the continuity between the connectors.

Terminal No.	Indicator	Specification
4 — 1	Green	Continuity exists
7 — 1	Red	Continuity exists

3) Replace the spot map light or stereo camera cover assembly if the inspection result is not within the standard value.

12. Microphone

A: NOTE

The microphone is integrated in the spot map light or stereo camera cover.

For operation procedures, refer to "LIGHTING SYSTEM" section. <Ref. to LI-63, Spot Map Light.>

13.Navigation Body

A: NOTE

For the operation procedures for navigation assembly, refer to “Audio” section. <Ref. to ET-28, Audio.>

14.GPS Antenna

A: REMOVAL

CAUTION:

Before handling the airbag system components, always refer to “CAUTION” of “General Description” in “AIRBAG SYSTEM”.

- 1) Disconnect the ground cable from battery and wait for at least 60 seconds before starting work. <Ref. to NT-6, BATTERY, NOTE, Note.>
- 2) Remove the cover assembly - instrument panel LWR driver and the knee airbag module. <Ref. to AB-34, REMOVAL, Knee Airbag Module.>
- 3) Remove the glove box. <Ref. to EI-56, REMOVAL, Glove Box.>
- 4) Remove the center grille assembly. <Ref. to AC-86, CENTER GRILLE ASSEMBLY, REMOVAL, Air Vent Grille.>
- 5) Remove the audio assembly or navigation assembly. <Ref. to ET-28, REMOVAL, Audio.>
- 6) Remove the combination meter assembly. <Ref. to IDI-18, REMOVAL, Combination Meter.>
- 7) Remove the GPS antenna assembly.
 - (1) Tie a string to the GPS antenna assembly harness connector on the navigation unit side.

NOTE:

- A string makes operation easier during installation.
- For the model with telematics, also tie a string to the connector on the data communication module side.
 - (2) Remove the screw and harness clamp, and pull out the GPS antenna assembly harness from the combination meter side.
- Model without telematics

- Model with telematics

ET-10240

- (3) When the GPS antenna assembly is pulled out, remove the string attached to the connector in step (1).

B: INSTALLATION

CAUTION:

- After installing the center grille assembly, check that the air vent grille of the center grille assembly is inserted correctly into the air vent duct.
- Before handling the airbag system components, always refer to “CAUTION” of “General Description” in “AIRBAG SYSTEM”.
- Do not allow harness and cables to interfere with or get caught by other parts.

Install each part in the reverse order of removal.

15.Data Communication Module

A: REMOVAL

1. DATA COMMUNICATION MODULE

CAUTION:

Before handling the airbag system components, always refer to “CAUTION” of “General Description” in “AIRBAG SYSTEM”.

- 1) Disconnect the ground cable from battery and wait for at least 60 seconds before starting work. <Ref. to NT-6, BATTERY, NOTE, Note.>
- 2) Remove the cover assembly - instrument panel LWR driver and the knee airbag module. <Ref. to AB-34, REMOVAL, Knee Airbag Module.>
- 3) Remove the glove box. <Ref. to EI-56, REMOVAL, Glove Box.>
- 4) Remove the center grille assembly. <Ref. to AC-86, CENTER GRILLE ASSEMBLY, REMOVAL, Air Vent Grille.>
- 5) Remove the audio assembly or navigation assembly. <Ref. to ET-28, REMOVAL, Audio.>
- 6) Remove the data communication module.
 - (1) Remove the screws.
 - (2) Remove the audio bracket or navigation bracket, and then remove the data communication module.

CAUTION:

Do not drop or apply any impact to the data communication module.

2. BACKUP BATTERY

CAUTION:

Before handling the airbag system components, always refer to “CAUTION” of “General Description” in “AIRBAG SYSTEM”.

- 1) Disconnect the ground cable from battery and wait for at least 60 seconds before starting work. <Ref. to NT-6, BATTERY, NOTE, Note.>
- 2) Remove the data communication module. <Ref. to ET-44, DATA COMMUNICATION MODULE, REMOVAL, Data Communication Module.>
- 3) Remove the backup battery.
 - (1) Remove the screws, and then remove the battery cover.

Preparation tool:

TORX® T10

- (2) Disconnect the connector and remove the backup battery.

ET-10070

B: INSTALLATION

1. DATA COMMUNICATION MODULE

CAUTION:

- After installing the center grille assembly, check that the air vent grille of the center grille assembly is inserted correctly into the air vent duct.
- Before handling the airbag system components, always refer to “CAUTION” of “General Description” in “AIRBAG SYSTEM”.

1) Install each part in the reverse order of removal.

NOTE:

Align the positioning pin (a) of the data communication module with the positioning hole of the audio assembly or navigation assembly.

2) Perform the registration if the data communication module is replaced with a new part. <Ref. to ET-27, OPERATION, Telematics System.>

3) Check LED lighting status of overhead console or stereo camera cover assembly. <Ref. to TEL(diag)-4, LED ILLUMINATION STATUS LIST, CHECK, Check List for Interview.>

2. BACKUP BATTERY

CAUTION:

- After installing the center grille assembly, check that the air vent grille of the center grille assembly is inserted correctly into the air vent duct.
- Before handling the airbag system components, always refer to “CAUTION” of “General Description” in “AIRBAG SYSTEM”.

Install each part in the reverse order of removal.

Tightening torque:

Battery cover: 0.3 N·m (0.03 kgf-m, 0.2 ft-lb)

C: INSPECTION

1. BACKUP BATTERY

1) Measure the voltage between connector terminals.

Preparation tool:

Circuit tester

Terminal No.	Standard
1 (+) — 2 (-)	2 V or more

2) Replace the backup battery if the inspection result is not within the standard value.

Rearview Camera System

ENTERTAINMENT

16. Rearview Camera System

A: WIRING DIAGRAM

Refer to "Rearview Camera System" in the wiring diagram.

- 6.2 inch display: <Ref. to WI-193, 6.2-INCH DISPLAY, WIRING DIAGRAM, Rearview Camera System.>
- 7 inch display: <Ref. to WI-194, 7-INCH DISPLAY, WIRING DIAGRAM, Rearview Camera System.>

B: REMOVAL

1. CROSSTREK MODEL

- 1) Disconnect the ground cable from battery. <Ref. to NT-6, BATTERY, NOTE, Note.>
- 2) Remove the trim panel - rear gate. <Ref. to EI-93, REMOVAL, Rear Gate Trim.>
- 3) Remove the arm assembly - rear wiper. <Ref. to WW-42, REMOVAL, Rear Wiper Arm.>
- 4) Remove the motor assembly - rear wiper. <Ref. to WW-44, REMOVAL, Rear Wiper Motor.>
- 5) Remove the garnish assembly - rear gate. <Ref. to EI-97, REMOVAL, Rear Gate Garnish.>
- 6) Remove the rearview camera assembly.

CAUTION:

Do not drop or apply any impact to the rearview camera because it is a precision equipment.

- (1) Disconnect the rearview camera connector.
- (2) Disconnect the claws and then remove the rearview camera assembly.

C: INSTALLATION

CAUTION:

Be sure to confirm the marker position, whenever the rearview camera is removed/installed/replaced.
Install each part in the reverse order of removal.

D: INSPECTION

- 1) Park the vehicle at the level place where there are enough area at the rear of the vehicle.
- 2) Attach the tape as the target point for standard at the floor rearward of the vehicle as shown in the figure below.

NOTE:

Standard tape width is about 30 — 50 mm (1.18 — 1.97 in) and brilliant color shall be used.

- (A) Vehicle body center line
- (B) Rear edge of bumper
- (C) Target point

- 3) Confirm the following before checking the corresponding items.
 - (1) Rearview camera image is not displayed. (Audio and navigation screens are displayed normally.)
 1. Check the condition of back sensor connection.
 - Audio system: <Ref. to ET-13, CHECK VEHICLE SIGNALS WITH LINE DIAG MODE, OPERATION, Audio System.>
 - Navigation system: <Ref. to ET-22, CHECK VEHICLE SIGNALS WITH LINE DIAG MODE, OPERATION, Navigation System.>
 2. Check the condition of rearview camera connection.
 - Audio system: <Ref. to ET-12, CHECK CONNECTIONS WITH LINE DIAG MODE, OPERATION, Audio System.>
 - Navigation system: <Ref. to ET-21, CHECK CONNECTIONS WITH LINE DIAG MODE, OPERATION, Navigation System.>
 - (2) Marker position is not aligned or displayed.
The rearview camera or its installation location on the vehicle may be deformed. Check the rearview camera and its installation location on the vehicle, and repair or replace if necessary.

Front Accessory Power Supply Socket

ENTERTAINMENT

17. Front Accessory Power Supply Socket

A: WIRING DIAGRAM

Refer to “Front Accessory Power Supply Socket System” in the wiring diagram. <Ref. to WI-134, WIRING DIAGRAM, Front Accessory Power Supply Socket System.>

B: REMOVAL

CAUTION:

Before handling the airbag system components, always refer to “CAUTION” of “General Description” in “AIRBAG SYSTEM”.

- 1) Disconnect the ground cable from battery and wait for at least 60 seconds before starting work. <Ref. to NT-6, BATTERY, NOTE, Note.>
- 2) Remove the cover assembly - instrument panel LWR driver and the knee airbag module. <Ref. to AB-34, REMOVAL, Knee Airbag Module.>
- 3) Remove the glove box. <Ref. to EI-56, REMOVAL, Glove Box.>
- 4) Remove the center grille assembly. <Ref. to AC-86, CENTER GRILLE ASSEMBLY, REMOVAL, Air Vent Grille.>
- 5) Remove the audio assembly or navigation assembly. <Ref. to ET-28, REMOVAL, Audio.>
- 6) Remove the socket assembly.
 - (1) Disconnect the connector.
 - (2) While releasing the claw inside, press it in from the rear to remove the socket assembly.

- (3) Remove the clip - socket.

C: INSTALLATION

CAUTION:

- After installing the center grille assembly, check that the air vent grille of the center grille assembly is inserted correctly into the air vent duct.
- Before handling the airbag system components, always refer to “CAUTION” of “General Description” in “AIRBAG SYSTEM”.

Install each part in the reverse order of removal.

NOTE:

Align the grooves of the holder with the claws of accessory power supply socket.

ET-00716

Rear Accessory Power Supply Socket

ENTERTAINMENT

18.Rear Accessory Power Supply Socket

A: WIRING DIAGRAM

Refer to "Rear Accessory Power Supply Socket System" in the wiring diagram. <Ref. to WI-191, WIRING DIAGRAM, Rear Accessory Power Supply Socket System.>

B: REMOVAL

- 1) Disconnect the ground cable from battery and wait for at least 60 seconds before starting work. <Ref. to NT-6, BATTERY, NOTE, Note.>
- 2) Remove the console box assembly. <Ref. to EI-59, REMOVAL, Console Box.>
- 3) Remove the socket assembly.
 - (1) While releasing the claw inside, press it in from the rear to remove the socket assembly.

- (2) Remove the cap - socket.

C: INSTALLATION

Install each part in the reverse order of removal.

NOTE:

Align the grooves of the holder with the claws of accessory power supply socket.

19.External Connection Terminal

A: REMOVAL

- 1) Disconnect the ground cable from battery and wait for at least 60 seconds before starting work. <Ref. to NT-6, BATTERY, NOTE, Note.>
- 2) Remove the console box assembly. <Ref. to EI-59, REMOVAL, Console Box.>
- 3) While pressing the claw, press it in from the rear to remove the unit assembly - AUX.

B: INSTALLATION

Install each part in the reverse order of removal.

Wrong location of vehicle, or no GPS reception.	<Ref. to ET-69, WRONG LOCATION OF VEHICLE, NO GPS RECEPTION, INSPECTION, Diagnostics with Phenomenon.>
Error message is displayed.	<Ref. to ET-58, ERROR MESSAGE IS DISPLAYED, LIST, Diagnostics with Phenomenon.>
SUBARU STARLINK is faulty.	<Ref. to ET-55, CHECK ABNORMALITY OF SUBARU STARLINK, LIST, Diagnostics with Phenomenon.>

3. CHECK ABNORMALITY OF SUBARU STARLINK

Symptoms	Counter-measure
SUBARU STARLINK app was terminated.	Perform the procedures described on “Check connection between smartphone and unit”. <Ref. to ET-70, CHECK CONNECTION BETWEEN SMARTPHONE AND UNIT, INSPECTION, Diagnostics with Phenomenon.>
Smartphone was powered off while connecting via the SUBARU STARLINK.	
Bluetooth connection stops while connecting via the SUBARU STARLINK.	
Communication gets out of service while connecting via the SUBARU STARLINK.	
Radio wave reception becomes worse while connecting via the SUBARU STARLINK.	

NOTE:

Possible error messages with relation to the above symptoms. When the message below is displayed, perform inspection according to “Inspection when an error message is displayed (SUBARU STARLINK)”. <Ref. to ET-55, INSPECTION WHEN AN ERROR MESSAGE IS DISPLAYED (SUBARU STARLINK), LIST, Diagnostics with Phenomenon.>

Details of message
Please disconnect mobile device and install the STARLINK application on your mobile device and try again. Bluetooth disconnected, please reconnect and try again. Smartphone data connection is poor, please try to connect again.

4. INSPECTION WHEN AN ERROR MESSAGE IS DISPLAYED (SUBARU STARLINK)

No.	Inspection	Possible cause	Action 1	Action 2
1	Check internet connection of smartphone	Check that the Internet sites can be viewed with a web browser of the smartphone. NOTE: Make sure that the displayed contents are not from previously loaded screen (cache) and that new contents can be reloaded.	When connection to the Internet fails, confirm that connection can be established where the radio wave condition is good, and go to No. 2.	Check that the smartphone can perform communication.
2	Activate SUBARU STARLINK application for the smartphone	Activate the “SUBARU STARLINK” application for the smartphone.	Check that the SUBARU STARLINK application is activated, and go to No. 5.	If the SUBARU STARLINK application is not installed, go to No. 3 and 4.
3	Install the SUBARU STARLINK application (Android)	Search the SUBARU STARLINK on Google Play, and install the application.	After installation, go to No. 2.	When installation cannot be completed, check the setting of the smartphone. (Communication environment, account, etc.)

Diagnostics with Phenomenon

ENTERTAINMENT

No.	Inspection	Possible cause	Action 1	Action 2
4	Install the SUBARU STARLINK application (iPhone)	Search the SUBARU STARLINK on APP Store, and install the app.	After installation, go to No. 2.	When installation cannot be completed, check the setting of the smartphone. (Communication environment, account, etc.)
5	Check connection to the SUBARU STARLINK server	Select "SETTING" tab from the SUBARU STARLINK application for the smartphone, and select "Press to check network status".	When "The network connection is good" is displayed, go to No. 8.	For the case other than shown on the left, go to No. 6 or No. 7.
6		When "NETWORK PROBLEMS" is displayed.	Move to a location where the radio wave condition is good, and go to No. 5.	—
7		When "SERVER MAINTENANCE" is displayed.	Wait until the server maintenance completes, and go to No. 5.	—
8	Check the smartphone type	Check the phone type (iPhone or Android).	For iPhone, go to No. 12.	For Android, go to No. 10.
9	Check Bluetooth connection between smartphone and on-vehicle device	On the on-vehicle device, select [HOME]-[SETTINGS]-Bluetooth tab-"BT devices Connection", and check that Bluetooth setting at the upper right is ON.	When the setting is OFF, switch to ON and go to No. 10.	When the setting is ON, switch to OFF once and to ON again, then go to No. 10.
10		From the Setting app for the smartphone, select Bluetooth and check that it is set to ON. (Note that procedures vary depending on a device.)	When the setting is OFF, switch to ON and go to No. 11.	When the setting is ON, switch to OFF once and to ON again, then go to No. 11.
11		Check that Bluetooth pairing is established between the smartphone and on-vehicle device. <ul style="list-style-type: none"> • The selected smartphone icon is displayed on the on-vehicle device. • The smartphone BT is connected to the on-vehicle device. 	If the connection cannot be confirmed, go to No. 9.	—
12	Check USB connection between smartphone and on-vehicle device (with iPhone)	Check that the smartphone and on-vehicle device are connected via USB.	After connecting via USB, go to No. 13.	—
13	Check the SUBARU STARLINK initial screen	On the on-vehicle device, press down [APPS] - [SUBARU STARLINK], and check that the SUBARU STARLINK initial screen is displayed.	If the activation cannot be confirmed, go to No. 14.	—

Diagnostics with Phenomenon

ENTERTAINMENT

No.	Inspection	Possible cause	Action 1	Action 2
14	Delete the SUBARU STARLINK connection information inside the on-vehicle device.	Clear the Browser cache on the on-vehicle device. (Select the tool tab from the SETTING menu, select Browser cache "Delete", and select "OK". Then, press [SETTINGS] from the APPS screen. From SETTING, select the Bluetooth - tab, and select BT Devices Connection. Select the "Trash can" icon of the registered device. Select "OK" on the confirmation pop-up screen.)	For Android, go to No. 15. For iPhone, go to No. 17.	—
15		Clear the Bluetooth connection information inside the on-vehicle device.	Go to No. 16.	—
16		Turn OFF the power supply of the on-vehicle device, and wait for 30 seconds or more before turning ON the power supply again.	Go to No. 17.	—
17	Delete the SUBARU STARLINK connection information inside the smartphone.	Delete data in the SUBARU STARLINK app. (Click the "SETTING" icon of the "SUBARU STARLINK" application. Then, press [CONFIG] from the APPS list screen. Select "Delete the SUBARU STARLINK application data" to delete the data in the application. Activate the Setting app for the smartphone. From SETTING, select the Bluetooth - tab, and select BT Devices Connection. Select the Bluetooth setting item. Select the connection information. Select the "Trash can" icon of the registered device. Select "Forget This Device" to delete the connection information.)	Go to No. 18.	—
18		Delete the Bluetooth connection information.	Go to No. 19.	—
19		Turn OFF the power of the smartphone, then turn it ON again.	Go to No. 20.	—
20	Re-connect SUBARU STARLINK	Establish connection according to the SUBARU STARLINK connection procedure.	—	—

B: INSPECTION

1. POWER WILL NOT TURN ON

Wiring diagram:

- Audio system: <Ref. to WI-51, WIRING DIAGRAM, Audio System.>
- Navigation system: <Ref. to WI-170, WIRING DIAGRAM, Navigation System.>

Step	Check	Yes	No
1	CHECK CONNECTOR CONNECTION. Check that the connector is connected to the unit.	Go to step 2.	Connect the connector.
2	CHECK CONNECTOR. Check for poor contact of connectors or terminals.	Go to step 3.	Repair or replace the harness.
3	CHECK POWER SUPPLY VOLTAGE. 1) Disconnect the connector. 2) Turn the ignition switch to ACC. 3) Using a tester, measure the voltage between connector and chassis ground. NOTE: Turn the electrical parts to OFF. Connector & terminal (i85) No. 4 (+) — Chassis ground (-):	Go to step 8.	Go to step 4.
4	CHECK FUSE. 1) Turn the ignition to OFF. 2) Check the fuse No. 8 inside the main fuse box.	Go to step 5.	Replace the fuse. If the fuse is blown again, check or replace the short circuit of the power supply harness.
5	CHECK HARNESS (POWER SUPPLY). Measure the resistance between main fuse box and connector. Connector & terminal F/B fuse No. 8 — (i85) No. 4:	Go to step 6.	Repair or replace the open circuit of harness.
6	CHECK HARNESS (GROUND). Measure the resistance between connector and chassis ground. Connector & terminal (i85) No. 7 — Chassis ground:	Go to step 7.	Repair or replace the open circuit of harness.

Step	Check	Yes	No
7 CHECK BATTERY. Check the battery. <Ref. to SC(H4DO)-51, Battery.>	Is the battery OK?	Go to step 8.	Charge or replace the battery.
8 CHECK OPERATION. 1) Connect all connectors. 2) Turn the ignition switch to ACC and the power supply switch of the unit to ON.	Does the power turn ON?	Currently no failure is found.	Replace the unit. <Ref. to ET-28, Audio.>

2. THE SCREEN FREEZES AND DOES NOT ACCEPT ANY OPERATION ENTRY

Step	Check	Yes	No
1 CHECK RESTARTING DISPLAY. Turn the ignition switch OFF → ACC.	Is the screen freeze eliminated?	Go to step 5.	Go to step 2.
2 REMOVE OTHER MEDIA OR EXTERNAL DEVICES. Remove the CD, SD card (model with SD card slot) or external devices connected to USB. Also, remove the external devices with Bluetooth.	Is the screen freeze eliminated?	Go to step 3.	Go to step 6.
3 CHECK OTHER EXTERNAL DEVICE CONNECTION. When screen freeze is eliminated, connect external devices one by one to identify the device that causes screen freeze.	Is the device that reproduces screen freeze identified?	Go to step 4.	Go to step 5.
4 CHECK OTHER EXTERNAL DEVICE CONNECTION. 1) Replace the identified device with the one that has the same performance. 2) Turn the ignition switch to ACC.	Does the screen freeze occur?	Replace the unit. <Ref. to ET-28, Audio.>	The external device may be defective.
5 CHECK OPERATION PROCEDURE. Ask how the user operates when screen freeze occurs, and perform using the same procedure.	Are the operation and screen normal?	Currently no failure is found.	Go to step 6.
6 CHECK ENVIRONMENTAL CONDITION. Check if any external devices which emit strong electromagnetic waves and noises, such as a radio antenna, is installed inside the vehicle.	Is an external device installed?	Remove the external device and perform the inspection from step 2 again. If the fault is not fixed: Go to step 7.	Go to step 7.
7 PERFORM INITIALIZATION PROCEDURE. Perform the initialization procedure for the unit. CAUTION: When the initialization procedure is performed, the data, telephone directory, etc. recorded in the unit body will be deleted. Before initialization, obtain permission from the user. <ul style="list-style-type: none"> • Audio system: <Ref. to ET-12, INITIALIZATION (FACTORY DEFAULT), OPERATION, Audio System.> • Navigation system: <Ref. to ET-20, INITIALIZATION (FACTORY DEFAULT), OPERATION, Navigation System.> 	Is the screen freeze eliminated?	Go to step 5. If the screen freeze occurs again, replace the unit. <Ref. to ET-28, Audio.>	Replace the unit. <Ref. to ET-28, Audio.>

Diagnostics with Phenomenon

ENTERTAINMENT

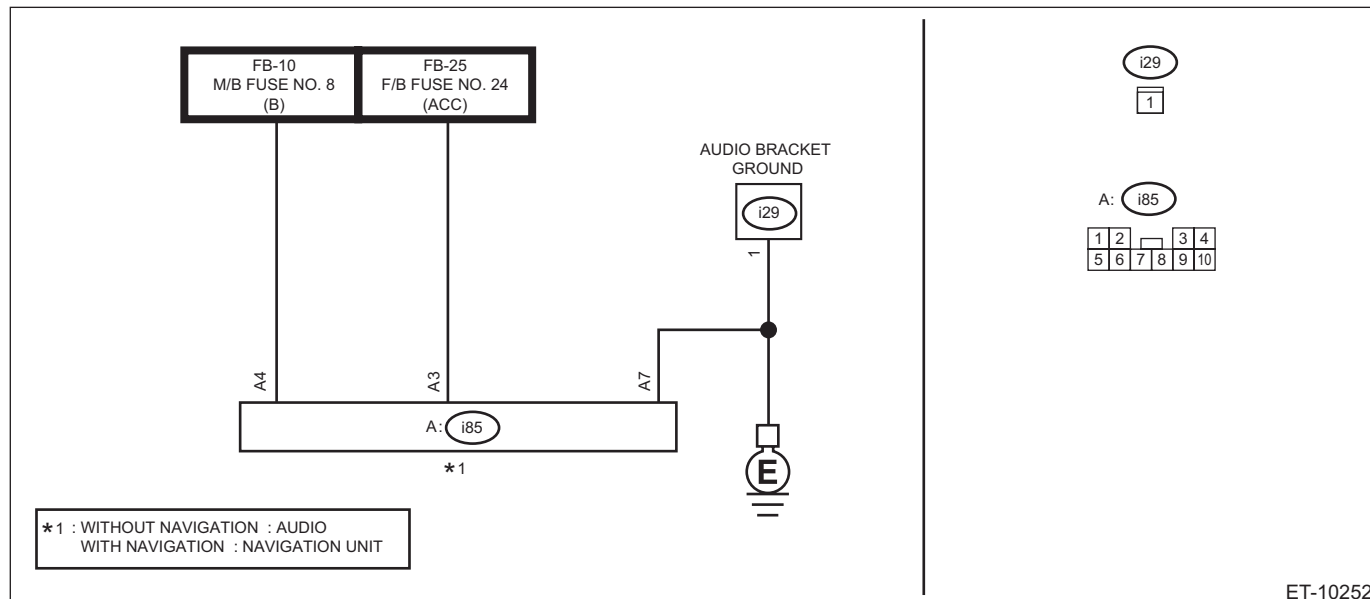

3. THE SCREEN IS BLACKED OUT, OR THE SCREEN IS NOT DISPLAYED

	Step	Check	Yes	No
1	CHECK RESTARTING DISPLAY. Turn the ignition switch OFF → ACC.	Is the screen properly displayed?	Currently no failure is found.	Go to step 2.
2	CHECK POWER SUPPLY BUTTON. Check if the screen OFF mode is turned on by pressing the power supply button of the unit body.	Is the screen properly displayed?	The screen OFF mode might be activated. Currently no failure is found.	Go to step 3.
3	CHECK BUTTON ILLUMINATION. Turn the ignition switch to ACC.	Do the buttons located beside the screen illuminate?	Go to step 4.	Perform "Power will not turn ON" in Diagnostics with Phenomenon. <Ref. to ET-60, POWER WILL NOT TURN ON, INSPECTION, Diagnostics with Phenomenon.>
4	CHECK INDICATION WITH ILLUMINATION ON. Turn the lighting switch to ON.	Does the screen brightness change?	Go to step 7.	Go to step 5.
5	CHECK HARNESS. Check for poor contact of the harnesses, connectors and terminals that are connected to the unit body.	Is harness normal?	Go to step 6.	Repair or replace the harness.
6	CHECK BODY INTEGRATED UNIT. Display the data of «Lighting I Switch input» using Subaru Select Monitor. NOTE: For detailed operation procedures, refer to "Application help".	Is the input signal normal?	Go to step 7.	Replace the body integrated unit. <Ref. to SL-72, Body Integrated Unit.>
7	CHECK UNDER OVERLOAD CONDITION. 1) Turn the ignition to OFF. 2) Leave as is for 10 minutes (cooling down), and then turn the ignition to ACC to check the operation.	Is the screen properly displayed?	Go to step 8.	Replace the unit. <Ref. to ET-28, Audio.>
8	OPERATIONAL CHECK. Obtain the information about the audio device that the user used (SD, Bluetooth, CD, etc.), and connect the same device. Then play the device for 10 minutes or more.	Is the screen properly displayed?	Currently no failure is found.	Go to step 9.
9	CHECK EXTERNAL DEVICE. 1) Replace the external device that might cause trouble with another device. (If trouble occurs while using a CD, replace the CD with another one. If trouble occurs while using an external device that is connected via USB, replace the external device with another device.) 2) Operate for 10 minutes or more.	Is the screen properly displayed?	The external device might have trouble, resulting in the overload state.	Replace the unit. <Ref. to ET-28, Audio.>

4. SYSTEM IS RESET

Wiring diagram:

- Audio system: <Ref. to WI-51, WIRING DIAGRAM, Audio System.>
- Navigation system: <Ref. to WI-170, WIRING DIAGRAM, Navigation System.>

Step	Check	Yes	No
1	CHECK ENVIRONMENTAL CONDITION. Check if any external devices which emit strong electromagnetic waves and noises, such as a radio antenna, is installed inside the vehicle.	Is an external device installed?	Remove the external device to check the operation. If the fault is not fixed: Go to step 2.
2	CHECK CONNECTOR CONNECTION. Check that the connector is connected to the unit.	Is the connector connected?	Go to step 3. Connect the connector.
3	CHECK CONNECTOR. Check for poor contact of connectors or terminals.	Is the connector OK?	Go to step 4. Repair or replace the harness.
4	CHECK POWER SUPPLY VOLTAGE. 1) Turn the ignition switch to ACC. 2) Using a tester, measure the voltage between connector and chassis ground. NOTE: Turn the electrical parts to OFF. Connector & terminal (i85) No. 4 (+) — Chassis ground (-):	Is the voltage 12 V or more?	Go to step 8. Go to step 5.
5	CHECK OPEN CIRCUIT IN HARNESS (POWER SUPPLY). Using the tester, measure the resistance between connector and chassis ground while shaking the harness. Connector & terminal (i85) No. 4 — Chassis ground:	Is the resistance 1 Ω or less?	Go to step 6. Repair or replace the open circuit of harness.
6	CHECK OPEN CIRCUIT IN HARNESS (GROUND). Using the tester, measure the resistance between connector and chassis ground while shaking the harness. Connector & terminal (i85) No. 7 — Chassis ground:	Is the resistance 1 Ω or less?	Go to step 7. Repair or replace the open circuit of harness.

Diagnostics with Phenomenon

ENTERTAINMENT

Step	Check	Yes	No
7 CHECK BATTERY. Check the battery. <Ref. to SC(H4DO)-51, Battery.>	Is the battery OK?	Go to step 8 .	Replace the unit. <Ref. to ET-28, Audio.>
8 CHECK UNIT OPERATION. 1) Connect all connectors. 2) Turn the ignition switch to ACC and the power supply switch of the unit to ON.	Is the reset eliminated?	Currently no failure is found.	Replace the unit. <Ref. to ET-28, Audio.>

5. CDS CANNOT BE PLAYED BACK

Step	Check	Yes	No
1 CONFIRM CD INSERTION CONDITION. Check that the CD is inserted properly.	Is the CD normal?	Go to step 2 .	Insert the CD properly.
2 CHECK CD. Check the CD surfaces are free from scratches or dirt.	Is the CD normal?	Go to step 3 .	The CD is defective.
3 CHECK CD. Replace the CD with another one. (Use a playable CD. Refer to owner's manual for details.)	Is the CD played back?	The CD is defective.	Go to step 4 .
4 CHECK DEW CONDENSATION IN UNIT. 1) After starting the engine, turn ON the air conditioner and dry inside the vehicle for 10 minutes or more. 2) Check the CD operation.	Is the CD played back?	Dew condensation occurred inside the unit.	Replace the unit. <Ref. to ET-28, Audio.>

6. SOUND DOES NOT COME OUT FROM THE SPEAKER

Step	Check	Yes	No
1 CHECK THE MODE IN WHICH NO SOUND COME OUT. Check if sound comes out in each mode such as CD, radio, etc.	Does it have no sound in all modes?	Go to step 2 .	Check each mode in which no sound come out. For CD: <Ref. to ET-64, CDS CANNOT BE PLAYED BACK, INSPECTION, Diagnostics with Phenomenon.> For radio: <Ref. to ET-68, RADIO VOLUME IS LOW OR INTERFERENCE NOISE OCCURS, INSPECTION, Diagnostics with Phenomenon.> For Bluetooth audio: <Ref. to ET-66, BLUETOOTH CONNECTION CANNOT BE ESTABLISHED, INSPECTION, Diagnostics with Phenomenon.>

Diagnostics with Phenomenon

ENTERTAINMENT

Step	Check	Yes	No
2 CHECK DIAGNOSTIC MODE. Perform {Audio Check} on the {Line Diag} screen. • Audio system: <Ref. to ET-15, CHECK SPEAKER OUTPUT WITH LINE DIAG MODE, OPERATION, Audio System.> • Navigation system: <Ref. to ET-23, CHECK SPEAKER OUTPUT WITH LINE DIAG MODE, OPERATION, Navigation System.>	Does it have no sound in all speakers?	Go to step 3.	Check the harness between the unit and speaker for open circuit or short circuit. If no fault is found, replace the speaker.
3 CHECK MUTE MODE. Check if the MUTE mode is turned on when the MUTE button is installed.	Is the volume level set to the minimum?	Since the MUTE mode is on or the volume level is set to the minimum, sound does not come out.	Go to step 4.
4 CHECK DTC (MODEL WITH TELEMATICS). Read DTCs of the Telematics. <Ref. to TEL(diag)-15, Diagnostic Code(s) Display.>	Are B2A0E (mute line circuit), B2A05 (left speaker/audio circuit) and B2A06 (right speaker/audio circuit) displayed?	Perform the diagnosis according to DTC. <Ref. to TEL(diag)-47, DTC B2A0E MUTE LINE CIRCUIT, Diagnostic Procedure with Diagnostic Trouble Code (DTC).>	Go to step 5.
5 CHECK CONNECTOR. Check for poor contact in the connector of the unit and the connector of each speaker.	Are the connectors and terminals normal?	Replace the unit. <Ref. to ET-28, Audio.>	Repair or replace the harness.

Diagnostics with Phenomenon

ENTERTAINMENT

7. BLUETOOTH CONNECTION CANNOT BE ESTABLISHED

Step	Check	Yes	No
1 CHECK BLUETOOTH DEVICE. Restart the Bluetooth device, and connect again.	Does it start properly?	Currently no failure is found.	Go to step 2.
2 CHECK BLUETOOTH DEVICE. Re-register the Bluetooth device, and connect again.	Is communication successful?	Currently no failure is found.	Go to step 3.
3 CHECK BLUETOOTH DEVICE. 1) Connect another Bluetooth device. NOTE: For Bluetooth supported standard, refer to the Notes in the margin.	Is connection established?	Bluetooth device which cannot be connected might be faulty.	Go to step 4.
4 CHECK ENVIRONMENTAL CONDITION. Check if any external devices which emit strong electromagnetic waves and noises, such as a radio antenna, is installed inside the vehicle.	Is an external device installed?	Remove the external device and perform the inspection from step 1 again.	Replace the unit. <Ref. to ET-28, Audio.>

NOTE:

8. BLUETOOTH DOES NOT OPERATE

Step	Check	Yes	No
1	CHECK BLUETOOTH DEVICE. Restart the Bluetooth device, and connect again.	Does it start properly?	Currently no failure is found. Go to step 2.
2	CHECK BLUETOOTH DEVICE. Re-register the Bluetooth device, and connect again.	Is communication successful?	Currently no failure is found. Go to step 3.
3	CHECK BLUETOOTH DEVICE. 1) Connect another Bluetooth device. NOTE: For Bluetooth supported standard, refer to the Notes in the margin.	Is connection established?	Bluetooth device which cannot be connected might be faulty. Go to step 4.
4	CHECK ENVIRONMENTAL CONDITION. Check if any external devices which emit strong electromagnetic waves and noises, such as a radio antenna, is installed inside the vehicle.	Is an external device installed?	Remove the external device and perform the inspection from step 1 again. Replace the unit. <Ref. to ET-28, Audio.>

Diagnostics with Phenomenon

ENTERTAINMENT

9. RADIO VOLUME IS LOW OR INTERFERENCE NOISE OCCURS

CAUTION:

- If non-genuine electrical parts are installed, they may cause interference noise.
- Refer to the following diagnostic procedure if equipped with the digital radio using the Internet connection.
 - Check SUBARU STARLINK service: <Ref. to ET-71, CHECK SUBARU STARLINK SERVICE, INSPECTION, Diagnostics with Phenomenon.>
 - Bluetooth connection cannot be established: <Ref. to ET-66, BLUETOOTH CONNECTION CANNOT BE ESTABLISHED, INSPECTION, Diagnostics with Phenomenon.>
 - Check connection between smartphone and unit: <Ref. to ET-70, CHECK CONNECTION BETWEEN SMARTPHONE AND UNIT, INSPECTION, Diagnostics with Phenomenon.>

Wiring diagram:

- Audio system: <Ref. to WI-51, WIRING DIAGRAM, Audio System.>
- Navigation system: <Ref. to WI-170, WIRING DIAGRAM, Navigation System.>

Step	Check	Yes	No	
1	CHECK SYMPTOM. Check in which condition (place) the noise occurs.	Does it occur in any places?	Go to step 2.	Radio wave reception condition is poor. (In tunnel, buildings, etc.) There is no failure on the vehicle.
2	CHECK ANTENNA. Check for poor contact of connectors or terminals.	Is the connector OK?	Go to step 3.	Repair or replace the harness.
3	CHECK HARNESS. Check the antenna harness for an open or short circuit, and check the booster.	Is harness normal?	Go to step 4.	Repair or replace the harness.
4	CHECK UNIT GROUND CIRCUIT. Check the unit ground connector (1P on back side).	Is the engine ground circuit normal?	Go to step 5.	Repair or replace the ground circuit.
5	CHECK ENVIRONMENTAL CONDITION. Check if any external devices which emit strong electromagnetic waves and noises, such as a radio antenna, is installed inside the vehicle.	Is an external device installed?	Remove the external device. There is no failure if it returns to normal. If the fault is not fixed: Go to step 6.	Go to step 6.

Step	Check	Yes	No
6	CHECK NOISE OCCURRENCE CONDITION. Stop the engine, and turn the ignition switch to ON to check for noise occurrence.	Does the noise occur while the engine stops?	Replace the unit. <Ref. to ET-28, Audio.>
			Check that the engine ignition system, generator, engine ground circuit and chassis ground circuit are connected securely.

NOTE:

When the volume of Aha and Pandora is low, connect the smartphone to the Internet, and check that Aha and Pandora is audible on the smartphone itself. When it is inaudible, or the volume is too low, there is a problem with the smartphone, Internet connection or service provider. When it is audible with the smartphone without any troubles, there is a problem with connection to the vehicle (USB connection or Bluetooth connection).

10. WRONG LOCATION OF VEHICLE, NO GPS RECEPTION

Step	Check	Yes	No
1	CHECK SYMPTOM. Check in which condition (place) the vehicle is located out of position.	Does it occur in any places?	Go to step 2.
2	CHECK EXTERNAL DEVICE INSTALLATION. Check if an external device is installed near the GPS antenna or unit.	Is an external device installed?	Go to step 4.
3	CHECK DIAGNOSTIC MODE. Check the GPS item on the {Line Diag} screen.	Is the display OK?	Remove the external device. There is no failure if it returns to normal. If the fault is not fixed: Go to step 3.
4	CHECK GPS ANTENNA. Check that the GPS antenna connector is connected.	Is the connector connected?	Go to step 5.
5	INSPECTION OF VEHICLE SPEED SENSOR. Read the DTC of VDC CM using Subaru Select Monitor. NOTE: For detailed operation procedures, refer to "Application help".	Is DTC displayed?	Go to step 6.
6	CHECK VEHICLE SPEED SIGNAL. Check the vehicle speed pulse using an oscilloscope.	Is the pulse normal?	Replace the navigation assembly. <Ref. to ET-41, Navigation Body.>
7	CHECK VEHICLE SPEED PULSE SIGNAL HARNESS. 1) Disconnect the VDC CM connector. 2) Check the vehicle speed pulse with VDC CM connector using an oscilloscope.	Is there any noise while the vehicle stops?	Go to step 7.
			Repair or replace the harness.

Diagnostics with Phenomenon

ENTERTAINMENT

11.CHECK CONNECTION BETWEEN SMARTPHONE AND UNIT

Step	Check	Yes	No
1 CHECK COMPATIBILITY OF SMARTPHONE. Check that the customer's smartphone is compatible with the system. <ul style="list-style-type: none"> • iPhone: iOS 4.3.5 or later • Android: Android 4.0 or later 	Is it compatible?	Go to step 2.	The smartphone is not compatible; therefore, it does not work with the system.
2 ACTIVATION OF APP. Check the SUBARU STARLINK app of the smartphone.	Is it installed?	Go to step 4.	Go to step 3.
3 INSTALLATION OF APP. Install SUBARU STARLINK app to smartphone.	Is installation successful?	Go to step 4.	Reboot the smartphone, and install the SUBARU STARLINK.
4 ACTIVATION OF APP. Activate SUBARU STARLINK app.	Is SUBARU STARLINK app activated?	Go to step 5.	Reinstall the app and activate it. If you still fail to activate it, the smartphone may be defective.
5 CHECK BLUETOOTH CONNECTION. NOTE: For model with 6.2-inch display and iPhone (with USB connection): Go to step 6. Confirm the Bluetooth connection with the unit.	Is Bluetooth connection established?	Go to step 7.	Check that the unit can connect with other smartphones. If successful, the smartphone may be defective. If the unit cannot communicate with other smartphones, replace the unit. <Ref. to ET-28, Audio.>
6 CHECK USB (FOR MODEL WITH 6.2-INCH DISPLAY AND IPHONE). Check that the USB cable is connected to the unit.	Is USB connection successful?	Go to step 7.	Check that the unit can connect with other smartphones. If successful, the smartphone may be defective. If the unit cannot communicate with other smartphones, replace the unit. <Ref. to ET-28, Audio.>
7 REBOOT THE SMARTPHONE. 1) Reboot the smartphone. 2) Reinstall the SUBARU STARLINK app.	Is it operating normally?	The system has returned to a normal condition at this time. Reproduce the failure, and then perform the diagnosis again.	Go to step 8.

Step	Check	Yes	No
8 CHECK POWER SUPPLY. Turn the ignition to OFF → ACC ON.	Is it operating normally?	The system has returned to a normal condition at this time. Reproduce the failure, and then perform the diagnosis again.	Go to step 9.
9 DELETE CACHE INFORMATION OF THE UNIT. Delete cache information of the unit. Refer to the Notes in the margin.	Is it operating normally?	Cache information temporarily stored in the unit was corrupted. Currently, it is normal.	Perform the procedures described on “Check SUBARU STARLINK service”. <Ref. to ET-71, CHECK SUBARU STARLINK SERVICE, INSPECTION, Diagnostics with Phenomenon.>

NOTE:

- 7-inch display
 1. Select SUBARU STARLINK from the APPS screen.
 2. On the SUBARU STARLINK display (including an error message screen), press and hold the right bottom corner of the screen for 30 seconds or more.
 3. Lift your finger off the screen. If the message [Select Audio Source] appears when you lift your finger off the screen, the cache information is successfully deleted.
- 6.2-inch display
 1. Press the HOME button to display the HOME screen.
 2. Press the SETTINGS key to display the SETTINGS screen. (The most recent set entry is displayed.)
 3. Press the Settings General key to display the Settings General screen.
 4. Press the System Software key to display the System Software screen.
 5. Press the Delete key, and press OK on the confirmation message display. Then the cache information is successfully deleted.

12.CHECK SUBARU STARLINK SERVICE

Step	Check	Yes	No
1 CHECK SMARTPHONE. Check the smartphone connection.	Can the smartphone connect the Internet?	Go to step 4.	Go to step 2.
2 CHECK RADIO WAVE CONDITION. Move to a location where the radio wave condition is good, and confirm the connection.	Can the smartphone connect the Internet?	Go to step 4.	Go to step 3.
3 CHECK RADIO WAVE CONDITION. Communication network gets busy at times even in a good radio wave location. In this case, wait for some time and then try again.	Can the smartphone connect the Internet?	Go to step 4.	The smartphone may be defective.
4 CHECK SUBARU STARLINK. Check service provision status with SUBARU STARLINK.	Is there any problem in the service provision status?	Try to connect after the problem in service provision is solved.	Replace the unit. <Ref. to ET-28, Audio.>

21. Service Diagnostics Mode

A: OPERATION

NOTE:

Installed only to model with 7 inch display.

1. PROCEDURE TO SWITCH TO SERVICE DIAGNOSTICS MODE

- 1) Turn the ignition switch to ACC.
- 2) After turning the ignition switch to ACC and wait for 20 seconds or more, press the button (b) five times with the button (a) pressed.

NOTE:

Pressing the button (a) for 3 seconds or more, or turning the ignition switch from the OFF to ACC position can exit the diagnostic mode.

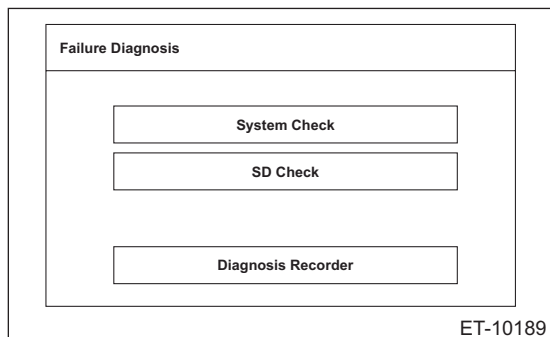

2. SERVICE INSPECTION

Upon entering the service diagnostics mode, the following screen is displayed.

Failure Diagnosis menu

On Service Menu, click Failure Diagnosis to display the following screen.

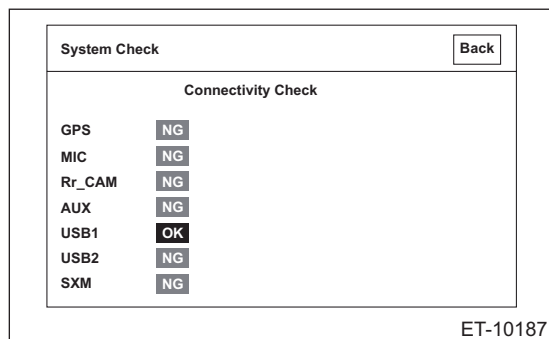

NOTE:

SD Check is displayed only for the navigation system.

1) System Check

On the Failure Diagnosis screen, click System Check to display the following screen.

OK: Each connection device is connected properly.

NG: Connection is not established, or connection status (including harness) is faulty.

Check the connection status of the connector and harness. If there are no problems, the connection device or unit could be faulty.

NOTE:

- Check the external connection terminals (USB 1, USB 2 and AUX) by connecting memory or a pin jack for inspection.
- The following shows information to be displayed and its description.

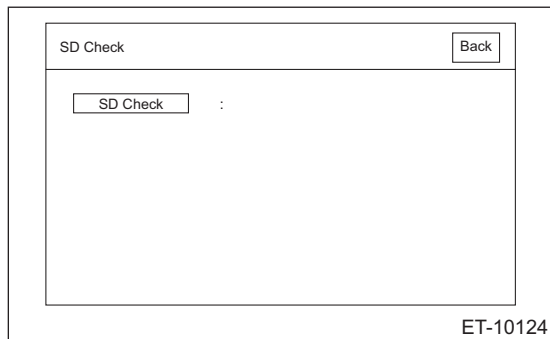

Item	Item detection method	OK judgment condition	Note
GPS	Direct line	GPS antenna is connected. (NG is displayed when short circuit is detected.)	Only model with navigation system
MIC	Direct line	(i87) No. 6 falls to GND level.	—
Rr_CAM	Direct line	Synchronized signals from the camera are input to (i146) No. 3.	—
AUX	Direct line	(i87) No. 25 falls to GND level.	—
USB1	Communication	USB device is connected to USB-HUB to obtain USB device information properly. (Should be recognizable as a supported USB device.)	—
USB2	Communication	USB device is connected to USB-HUB to obtain USB device information properly. (Should be recognizable as a supported USB device.)	—
SXM	Direct line	XM-ANT is connected. (NG is displayed when short circuit is detected.)	It takes approx. 30 seconds to become recognizable.

Service Diagnostics Mode

ENTERTAINMENT

2) SD Check

On the Failure Diagnosis screen, click SD Check to display the following screen.

On the SD Check screen, click SD Check to display a diagnostic result.

OK: There is no defect on the SD card.

NG: There is defect on the SD card.

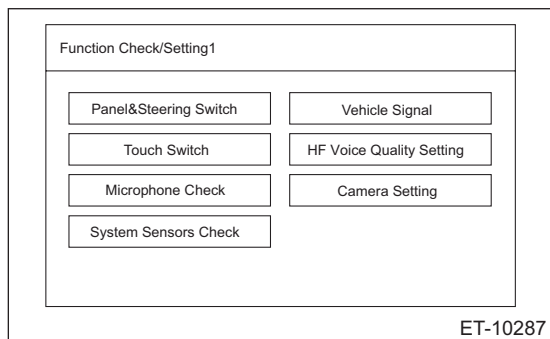

NOTE:

The following shows information to be displayed and its description.

Item	Content
OK	SD card diagnosis is completed. Diagnostic result is OK.
NG	SD card diagnosis is completed. Diagnostic result is NG.
During diagnosis	SD card diagnosis is in progress.

Function Check/Setting

On Service Menu, click Function Check/Setting to display the following screen.

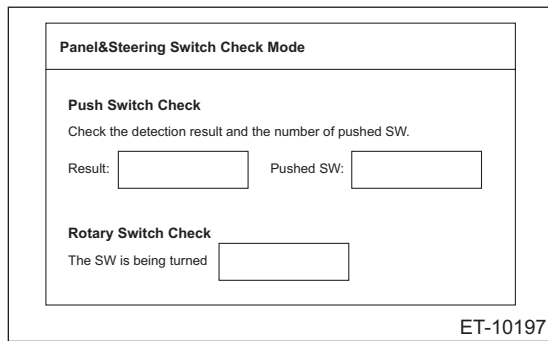

NOTE:

System Sensors Check is displayed only for the navigation system.

1) Panel & Steering Switch Check Mode

On the Function Check/Setting screen, click Panel & Steering Switch to display the following screen.

Once the screen is displayed, press the push switches to check that the number of pushed switches matches the number shown in Pushed SW.

If the number of SW does not match, SW conditions are not properly recognized. Therefore, perform inspection for unrecognized switches.

In addition, turn the rotary switch clockwise or counterclockwise to check that the screen indicates correct status according to the operation. If the screen display does not match the actual operation, the rotary SW may be faulty. Perform inspection for the rotary SW.

NOTE:

The following shows information to be displayed and its description.

Item	Display	Content
Result	Pressed	Pressing of switch is detected.
Number of switch pushed	1	One pressed switch is detected.
	2	Two pressed switches are detected.
	3	Three pressed switches are detected.
	4	Four pressed switches are detected.
Direction of switch rotation	Clockwise	The rotary switch is turned clockwise.
	Counterclockwise	The rotary switch is turned counterclockwise.

2) Touch Switch Check

On the Function Check/Setting screen, click Touch Switch to display the following screen.

Once the screen appears, touch the screen. + (cursor) appears where you touched.

NOTE:

The following shows information to be displayed and its description.

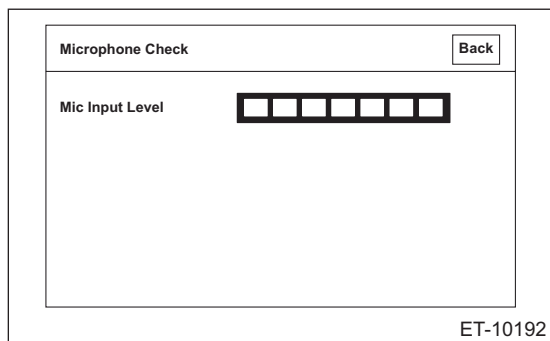

Item	Content
+ (Cursor)	Appears when the screen is touched. The displayed white-outlined + (cursor) stays on, even when a touching finger is removed, until the screen is switched.

Service Diagnostics Mode

ENTERTAINMENT

3) Microphone Check

On the Function Check/Setting screen, click Microphone Check to perform inspection for microphone.

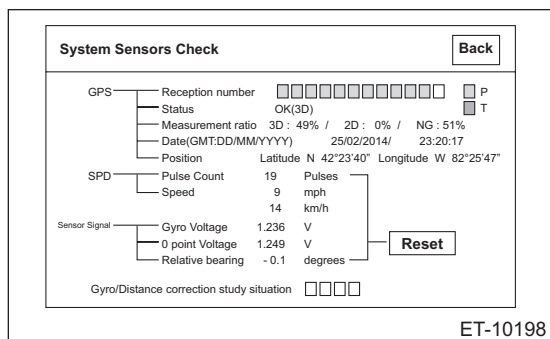

With the microphone input level screen displayed, make sound toward the microphone.

Fluctuate the sound volume to check that the microphone input level changes accordingly.

If the input level does not become green or the input level does not change even when the sound volume is fluctuated, the microphone may be faulty.

4) System Sensors Check

On the Function Check/Setting screen, click Touch Switch to display the following screen.

GPS related check: Status of the GPS signal reception can be checked. When there is faulty in reception status, position detection or date indication, re-check the reception status at a location with a fine view and no obstacles around that will interrupt the signal reception. When normal condition is still not obtained, the GPS antenna may be faulty.

- GPS/Reception number: Normal when it is indicated in blue.
- GPS/Status: Normal when OK is indicated.
- GPS/Measurement ratio 3D:
- GPS/Measurement ratio 2D:
- GPS/Date: Normal when current time is indicated. When current date/time is not indicated, click the Date Setting button to set the current date on the displayed date setting screen.
- GPS/Position: Normal when longitude and latitude of the current position are indicated.

SPD check: Status of the vehicle speed sensor signal can be checked.

1. Before starting inspections, check the safety around the vehicle. (Lift up the vehicle as necessary.)
2. When VDC CM detected DTC, clear the DTC.
3. Drive the vehicle at 9 km/h (6 MPH) or more.
4. Check that SPD indicates vehicle speed that is almost equivalent to the figure displayed on the combination meter.
5. Vehicle speed is not displayed. Or, when the vehicle speed is not correct, check if the DTC related to the vehicle sensor is stored for the VDC system, and perform inspection according to the procedure. If no fault is found with the vehicle speed sensor, and the vehicle speed is displayed on the combination meter, the unit itself may be faulty.

Gyro sensor related check: Status of the Gyro sensor signal can be checked. If fault is found with the Gyro sensor related indications, the main unit could be faulty.

- Gyro sensor/Gyro Voltage: Shake the vehicle to the left and right to check that the voltage changes.
- Gyro sensor/Relative bearing: Normal when the value changes when direction of the vehicle is changed.

Service Diagnostics Mode

ENTERTAINMENT

- Inclined angle sensor/relative angle: Park the vehicle on uphill or downhill surface. Normal when the value changes.
- Gyro/Distance correction study situation: Study situation can be checked.
- Reset: Press and hold the Reset button for three seconds to reset the pulse count of SPD, relative bearing of Gyro sensor, relative angle of inclined angle sensor.

NOTE:

The following shows information to be displayed and its description.

Item	Display	Content
GPS/Reception number	Blue	When notification of "Positioning with collected data is used" is received from the GPS reception device. (Status: In-use)
	Yellow	When notification of "Tracking in progress" is received from the GPS reception device. (Status: Reception in progress)
	Transparent	When notification of "Positioning with collected data is not used" or "Searching in progress" is received from the GPS reception device. (Status: Not used)
GPS/Status	OK (H3D)	When three-dimensional positioning (Hyper 3D positioning) using satellites with less accuracy degradation is used.
	OK (H2D)	When two-dimensional positioning (Hyper 2D positioning) using satellites with less accuracy degradation is used.
	OK (3D)	When three-dimensional positioning is used.
	OK (2D)	When two-dimensional positioning is used.
	NG	When the positioning data is not available.
	error	When a reception error occurred.
	—	For cases other than above.
GPS/Measurement ratio 3D	Ratio	Displays ratio of three-dimensional positioning satellites.
GPS/Measurement ratio 2D	Ratio	Displays ratio of two-dimensional positioning satellites.
GPS/Measurement ratio NG	Ratio	Displays ratio of non-positioning satellites.
GPS/Date	Current date and time	Displays date information obtained from GPS in four digits for year and 24-hour clock for time. Date information is displayed as [Y/M/D].
GPS/Position (latitude)	Current position, latitude information	Displays latitude information of the current position in "degree", "minute" and "second". When positioning information is not obtained, it appears as 00° 00' 00".
GPS/Position (longitude)	Current position, longitude information	Displays longitude information of the current position in "degree", "minute" and "second". When positioning information is not obtained, it appears as 00° 00' 00".
SPD/Pulse Count	Pulse count	Displays SPD signal status in the following format. <ul style="list-style-type: none"> • The number of input pulses accumulated since this screen is displayed. (Indicated in four-digit DEC code.) • The number returns to 0 after 9999. • Reset with ACC OFF/ON.
SPD/Speed	Speed	Displays SPD signal status in the following format. <ul style="list-style-type: none"> • LSB: Displays in km-per-hour as 1 [km/h]. • Displays 255 [km/h] for MAX value or more, and 0 [km/h] for MIN value or less.
Gyro sensor/Gyro Voltage	Voltage value	Voltage value (unit: V, LSB: 1mV)
Gyro sensor/0 point Voltage	Unit: 0 point voltage	Displays 0 point voltage of the Gyro sensor used by each company.
Gyro sensor/Relative bearing	Relative bearing	-360.0° — +360.0°
Inclined angle sensor/relative angle	Relative angle	Displays longitudinal inclination angle of the vehicle in the relative angle (unit: °, LSB: 1°, no sign for elevation angle, negative sign for depression angle: -), while the position when this screen appears is set as [0°].

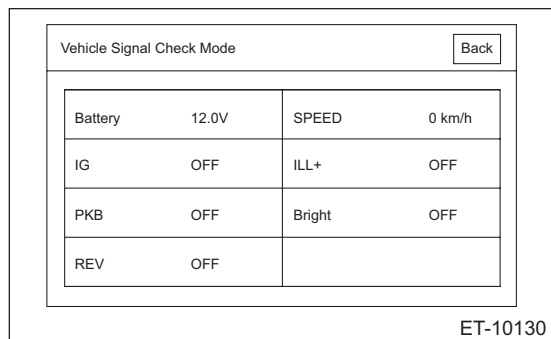

Service Diagnostics Mode

ENTERTAINMENT

Item	Display	Content
Gyro/Distance correction study situation	Gyro/Distance correction study situation	Gyro/Distance correction study situation is displayed.
Reset	Reset the following display items to [0]. <ul style="list-style-type: none"> • SPD pulse count • Relative bearing of Gyro sensor • Relative angle of inclined angle sensor 	Press and hold the reset button for three seconds or more.

5) Vehicle Signal Check

On the Function Check/Setting screen, click Vehicle Signal to display the following screen.

- **Battery:** Status of the battery voltage signal input can be checked. Measure the battery voltage using a tester. System is normal when the indicated voltage is almost equivalent to the tester value. When the indicated voltage is different from the tester value, perform inspection for the power supply circuit of main unit.
- **SPEED:** Status of the vehicle speed signal input can be checked.
 1. Before starting inspections, check the safety around the vehicle. (Lift up the vehicle as necessary.)
 2. When VDC CM detected DTC, clear the DTC.
 3. Drive the vehicle at 9 km/h (6 MPH) or more.
 4. Check that SPD indicates vehicle speed that is almost equivalent to the figure displayed on the combination meter.
 5. Vehicle speed is not displayed. Or, when the vehicle speed is not correct, check if the DTC related to the vehicle sensor is stored for the VDC system, and perform inspection according to the procedure. If no fault is found with the vehicle speed sensor, and the vehicle speed is displayed on the combination meter, the unit itself may be faulty.
- **IG:** Status of the IG signal input can be checked. Turn the ignition switch to ON, and check that the IG indication appears as ON. If the indication does not appear as ON, check the IG signal line.
- **ILL+:** Status of the illumination signal input can be checked.
 1. Before starting inspections, turn the ignition to ON.
 2. Set the lighting switch to the parking position. Make sure that the bright switch is not turned ON at this time.
 3. Check that ON lights in ILL+ and then the screen becomes dim.

ON: Normal.
OFF: Abnormal. Check the signal line and connector. If no faulty is found, the unit itself may be faulty.
- **PKB:** Status of the parking brake signal input can be checked.
- **GPS:** Normal when longitude and latitude of the current position are indicated. Pull parking brake lever. Check that ON is displayed in PKB.
ON: Normal.
OFF: Abnormal. Check the signal line and connector. If no faulty is found, the unit itself may be faulty.
- **Bright:** Status of the Bright signal input can be checked. Operate the dial-type bright switch next to the steering wheel. System is normal when the signal indicates ON.
If the signal does not indicate ON, check the bright switch.

- REV: Status of the reverse range signal input can be checked.
 1. Before starting inspections, check the safety around the rear end of the vehicle and then turn the ignition to ON.
 2. Pull the parking brake lever and depress the brake pedal, then place the select lever or gear shift lever in reverse.
 3. Check that ON is displayed in REV.

ON: Normal.
 OFF: Abnormal. Check the signal line and connector. If no faulty is found, the unit itself may be faulty.

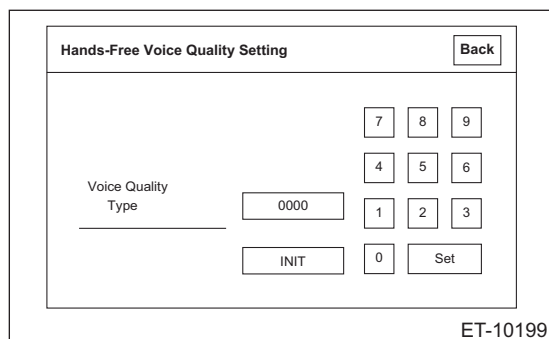

NOTE:

The following shows information to be displayed and its description.

Item	Display	Content
Battery	Status of battery voltage	0 [V] — 24.0 [V] (Minimum unit: 0.1 [V])
SPEED	Status of vehicle speed	0 [km/h] — 255 [km/h] (Minimum unit 1 [km/h])
IG	ON	IG power supply ON
	OFF	IG power supply OFF
ILL+	ON	ILL+ signal ON
	OFF	ILL+ signal OFF
PKB	ON	PKB signal ON
	OFF	PKB signal OFF
Bright	ON	Bright with dimmer
	OFF	Bright without dimmer
REV	ON	REV signal ON
	OFF	REV signal OFF

6) Hands-free voice quality setting

On the Function Check/Setting screen, click Hands-Free Voice Quality Setting to display the following screen.

Setting of the hands-free voice quality setting is possible.

Service Diagnostics Mode

ENTERTAINMENT

7) Camera setting

On the Function Check/Setting screen, click Camera Setting to display the following screen.

Setting of the rearview camera adjustment is possible.

- Guide line: Turn ON the guide line display to show the guide lines.
- Caution: Turn ON the caution display to enable caution display during the rearview camera display.
- Default: Click the Default button to return the Guide line display and Caution display settings to the initial settings.

NOTE:

The following shows information to be displayed and its description.

Item	Content
Guide line	Guide line display setting switch <ul style="list-style-type: none">• Turns on/off the guide line display for the rearview camera display screen.• When On is selected, guide lines will appear on the rearview camera display screen.
Caution	Caution display setting switch <ul style="list-style-type: none">• Turns on/off the caution display for the rearview camera display screen.• When On is selected, the caution will appear on the rearview camera display screen.
Default	Default setting switch <ul style="list-style-type: none">• Returns the Guide line display setting and Caution display setting to the default settings.

Service Information

On Service Menu, click Service Information to display the following screen.

- Program Update: This function is used when the main unit program is updated, and not used as troubleshooting.
- Version Information: This function is used to view version of the main unit, and not used as troubleshooting.
- Memory Initialization: This function is used to initialize information stored in the main unit memory.

CAUTION:

When this function is used, music information and navigation setting information saved in the main unit will be deleted. Therefore, obtain permission from the user before using this function.

When initializing the memory, perform procedures by following the indicated messages. Also, when clicking the OK button, press and hold it.

Product information

On Service Menu, click Product Information to display the following screen.

- Product Information: Displays the product number of the main unit.
- Connectivity ID: ID that is required upon using the SUBARU STARLINK functions. When this ID is not indicated, the SUBARU STARLINK functions are not accessible.
- Pandora ID: ID that is required upon using Pandora. When this ID is not indicated, Pandora is not accessible.

General Description

COMMUNICATION SYSTEM

1. General Description

A: COMPONENT

COM10015

(1) Horn switch (driver's airbag module ASSY)

(3) Horn relay

(5) Horn ASSY - Hi

(2) Roll connector

(4) Horn ASSY - Lo

B: CAUTION

- Before disconnecting connectors of sensors or units, be sure to disconnect the ground cable from battery.
- When replacing the audio and MFD parts provided with memory functions, record the memory contents before disconnecting the battery ground cable.
- Be careful of the following items. Failing to do so may cause the airbag system malfunction.
 - Yellow connectors and harnesses with yellow tapes around them are the connectors and harnesses for the airbag system. When using a tester on these circuits, follow the cautions of "AIRBAG SYSTEM". <Ref. to AB-9, CAUTION, General Description.>
 - Be careful not to damage the airbag system wiring harness when servicing the electrical parts around the steering column.
- When removing, installing or replacing the VDCCM&H/U, VDCCM&H/U bracket, steering wheel or steering angle sensor (steering roll connector), perform "VSC(VDC) Centering Mode" of the VDC. <Ref. to VDC-23, ADJUSTMENT, VDC Control Module and Hydraulic Control Unit (VDCCM&H/U).>

C: PREPARATION TOOL

1. GENERAL TOOL

TOOL NAME	REMARKS
Circuit tester	Used for measuring resistance, voltage and current.

2. Relay and Fuse

A: LOCATION

Main fuse box	Fuse 15 A (horn assembly)	(A)
	Horn relay	(B)

NOTE:

For other related fuses, refer to the wiring diagram. <Ref. to WI-15, Power Supply Circuit.>

B: INSPECTION

1. CHECK FUSE

- 1) Remove the fuse and check visually.
- 2) If the fuse is blown out, replace the fuse.

2. CHECK RELAY

- 1) Check the resistance between relay terminals.

Terminal No.	Inspection conditions	Specification	Circuit
1 — 2	Always	1 MΩ or more	<p style="text-align: right; font-size: small;">SR-00180</p>
1 — 2	Apply battery voltage between 4 — 3 terminals.	Less than 1 Ω	

- 2) Replace the relay if the inspection result is not within the standard value.

Horn System

COMMUNICATION SYSTEM

3. Horn System

A: WIRING DIAGRAM

Refer to "Horn System" in the wiring diagram. <Ref. to WI-146, WIRING DIAGRAM, Horn System.>

B: INSPECTION

Symptoms	Inspection steps
Horn does not sound	1. Check the fuse.
	2. Check the horn relay.
	3. Check the role connector.
	4. Check the horn switch.
	5. Check the horn assembly.
	6. Check the harness.

C: NOTE

For operation procedures of each component of the horn system, refer to the respective section.

- Horn ASSY: <Ref. to COM-5, Horn.>
- Horn switch: <Ref. to COM-8, Horn Switch.>

4. Horn

A: REMOVAL

CAUTION:

Do not remove the bumper face - front when removing the horn, in order to prevent damaging the claws of the bracket - front bumper corner and the bracket - front bumper side.

- 1) Disconnect the ground cable from battery. <Ref. to NT-6, BATTERY, NOTE, Note.>
- 2) Remove the clip, and remove the bracket - grille.

- 3) Remove the horn assembly - Lo.

- (1) Disconnect the connector.
- (2) Remove the horn bracket mounting bolt, and remove the horn assembly - Lo.

Horn

COMMUNICATION SYSTEM

4) Remove the horn assembly - Hi.

- (1) Remove the screw and clips, and turn over the front side of the mud guard - front.

- (2) Disconnect the horn connector.

- (3) Remove the horn bracket mounting bolt, and remove the horn assembly - Hi.

CAUTION:

The resistor may become hot. Be careful not to burn yourself.

B: INSTALLATION

CAUTION:

Install so that the front end of the under cover (b) comes inside the bumper face - front (a), and the front end of the mud guard (c) comes outside the bumper face - front (a).

COM00138

Install each part in the reverse order of removal.

Tightening torque:

Horn assembly - Hi: 13 N·m (1.33 kgf-m, 9.6 ft-lb)

Horn assembly - Lo: 18 N·m (1.84 kgf-m, 13.3 ft-lb)

C: INSPECTION

1. CHECK HORN ASSEMBLY

- 1) Remove the horn assembly (Hi & Lo). <Ref. to COM-5, REMOVAL, Horn.>
- 2) Check the horn sounds when applying the battery voltage to the horn assembly.

COM00099

Terminal No.	Inspection conditions	Specification
Horn terminal (+) — Horn case (-)	Connect battery to the terminals	Sounds

- 3) If it does not operate normally, replace the horn assembly.

Horn Switch

COMMUNICATION SYSTEM

5. Horn Switch

A: NOTE

Horn switch is a unit with the driver's airbag module. For operation procedures, refer to "Driver's Airbag Module" in "AIRBAG SYSTEM". <Ref. to AB-32, Driver's Airbag Module.>

B: INSPECTION

1. CHECK HORN SWITCH

CAUTION:

Before handling the airbag system components, refer to "CAUTION" of "General Description" in "AIRBAG SYSTEM". <Ref. to AB-9, CAUTION, General Description.>

- 1) Turn the ignition switch to OFF.
- 2) Disconnect the ground cable from battery and wait for at least 60 seconds before starting work. <Ref. to NT-6, BATTERY, NOTE, Note.>
- 3) Remove the driver's airbag module. <Ref. to AB-32, REMOVAL, Driver's Airbag Module.>
- 4) Check that the connection of the horn switch harness connector is correct.
- 5) Disconnect the horn switch harness connector and check the resistance between the harness connectors.

Preparation tool:

Circuit tester

(a) Ground terminal

(b) Horn switch terminal

Terminal No.	Inspection conditions	Standard
Horn switch terminal — ground terminal	Always	Less than 1 Ω

- 6) Replace the driver's airbag module if the inspection result is not within the standard value.

2. CHECK ROLL CONNECTOR

CAUTION:

- Before handling the airbag system components, refer to “CAUTION” of “General Description” in “AIRBAG SYSTEM”. <Ref. to AB-9, CAUTION, General Description.>
- If the steering wheel and steering angle sensor (steering roll connector) are removed, be sure to perform the following operations.
 - Align the center position of the steering roll connector.
 - Perform the neutral position setting of the steering angle sensor.

- 1) Turn the ignition switch to OFF.
- 2) Disconnect the ground cable from battery and wait for at least 60 seconds before starting work. <Ref. to NT-6, BATTERY, NOTE, Note.>
- 3) Remove the roll connector. <Ref. to AB-59, REMOVAL, Roll Connector.>
- 4) Check the resistance between roll connector terminals.

Preparation tool:
Circuit tester

COM00160

Terminal No.	Inspection conditions	Standard
A1 — C9	Always	Less than 1 Ω

- 5) Replace the roll connector if the inspection result is not within the standard value.

General Description

GLASS/WINDOWS/MIRRORS

B: CAUTION

- Before disassembling or reassembling parts, always disconnect the battery ground cable from battery. When replacing the audio, control module and other parts provided with memory functions, record the memory contents before disconnecting the battery ground cable. Otherwise, the memory is cleared.
- Avoid impact and damage to the glass.
- Reassemble the parts in the reverse order of disassembly procedure unless otherwise indicated.
- Connect the connectors securely during reassembly.
- After reassembly, make sure that the each component operates normally.

C: PREPARATION TOOL

1. SPECIAL TOOL

ILLUSTRATION	TOOL NUMBER	DESCRIPTION	REMARKS
 STSSM4	—	SUBARU SELECT MONITOR 4	Used for setting of each function and troubleshooting for electrical system. NOTE: For detailed operation procedures of Subaru Select Monitor 4, refer to “Application help”.

2. GENERAL TOOL

TOOL NAME	REMARKS
Circuit tester	Used for measuring resistance, voltage and current.
DST-i	Used together with Subaru Select Monitor 4.
Piano wire	Used for removing the window glass.
Cutter knife	Used for removing the window glass.
Windshield glass knife	Used for removing the window glass.

2. Relay and Fuse

A: LOCATION

Main fuse box	Rear defogger relay	(A)
	Fuse 25 A (rear defogger)	(B)
Relay & fuse box	Fuse 7.5 A (remote control mirror)	(C)
	Fuse 15 A (wiper deicer)	(D)
	Fuse 7.5 A (power window)	(E)
Relay holder	Power window relay	(F)
	Wiper deicer relay	(G)

NOTE:

For other related fuses, refer to the wiring diagram. <Ref. to WI-15, Power Supply Circuit.>

Relay and Fuse

GLASS/WINDOWS/MIRRORS

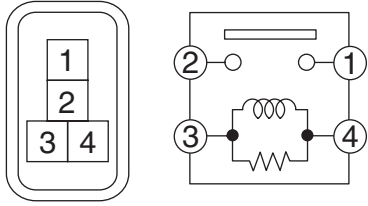

B: INSPECTION

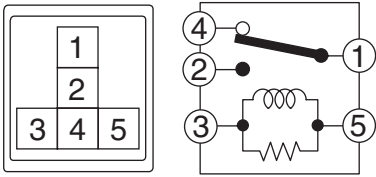

1. CHECK FUSE

- 1) Remove the fuse and check visually.
- 2) If the fuse is blown out, replace the fuse.

2. CHECK RELAY

- 1) Check the resistance between relay terminals.

Terminal No.	Inspection conditions	Specification	Circuit
1 — 2	Always	1 M Ω or more	 <p style="text-align: right;">SR-00180</p>
1 — 2	Apply battery voltage between 4 — 3 terminals.	Less than 1 Ω	

Terminal No.	Inspection conditions	Specification	Circuit
1 — 2	Always	1 M Ω or more	 <p style="text-align: right;">SL-01085</p>
1 — 4	Always	Less than 1 Ω	
1 — 2	Apply battery voltage between 3 — 5 terminals.	Less than 1 Ω	

- 2) Replace the relay if the inspection result is not within the standard value.

3. Power Window System

A: WIRING DIAGRAM

Refer to “Power Window System” in the wiring diagram. <Ref. to WI-182, WIRING DIAGRAM, Power Window System.>

B: INSPECTION

Symptoms	Inspection order
All power windows do not operate.	<ol style="list-style-type: none"> 1. Check the fuse. 2. Check the power window relay. 3. Check the wiring harness.
Particular window does not operate.	<ol style="list-style-type: none"> 1. Check the fuse. 2. Check the switch - power window main. 3. Check the switch - power window sub. 4. Check the power window motor. 5. Check the wiring harness.
“Window Lock” does not operate.	Check the switch - power window main.
Driver’s side window moves slightly (approx. 20 mm (0.79 in)).	<ol style="list-style-type: none"> 1. Check the motor - front. 2. Check the switch - power window main. 3. Check the wiring harness.
Driver’s side window moves slightly (approx. 50 mm (1.97 in)). (This status is not a failure.)	Perform reset operation A. <Ref. to GW-9, RESET OPERATION A, OPERATION, Power Window System.>
Driver’s side window does not close completely. (Using AUTO UP allows the window to fully close first and then move in reverse resulting in slightly opening.)	Perform reset operation B. <Ref. to GW-9, RESET OPERATION B, OPERATION, Power Window System.>

C: OPERATION

1. RESET OPERATION A

- 1) Sit in the driver’s seat and close the door.
- 2) Turn the ignition switch to ON.
- 3) Operate the switch - power window main to open the glass assembly - front door halfway.
- 4) Operate the switch - power window main in “UP” direction to fully close the glass assembly - front door on the driver’s side.
- 5) While the glass assembly - front door is fully closed, hold down the switch - power window main in “UP” direction for one second.
- 6) Operate the switch - power window main in “AUTO DOWN” direction to check whether the window fully opens properly.

NOTE:

If the window does not fully open properly, repeat steps 1) to 6).

2. RESET OPERATION B

- 1) Sit in the driver’s seat and close the door.
- 2) Turn the ignition switch to ON.
- 3) On the glass assembly - front door of the driver’s side, operate the “AUTO UP” function (fully pull up the switch) using the switch - power window main, and perform auto-reverse operations 10 times in a row (after the window fully closes, it slightly opens).
- 4) Check that the “AUTO UP” function no longer operates.
- 5) Perform reset operation A.
- 6) Check that the window operates properly by operating the “AUTO UP” and “AUTO DOWN” switch.

NOTE:

If the window does not fully open/close properly, repeat steps 1) to 6).

Power Window System

GLASS/WINDOWS/MIRRORS

D: NOTE

For operation procedures of each component of the power window system, refer to the respective sections.

- Power window control switch: <Ref. to GW-11, Power Window Control Switch.>
- Front door glass: <Ref. to GW-17, Front Door Glass.>
- Front regulator and motor assembly: <Ref. to GW-20, Front Regulator and Motor Assembly.>
- Rear door glass: <Ref. to GW-31, Rear Door Glass.>
- Rear regulator and motor assembly: <Ref. to GW-33, Rear Regulator and Motor Assembly.>

4. Power Window Control Switch

A: REMOVAL

1. MAIN SWITCH

- 1) Disconnect the ground cable from battery and wait for at least 60 seconds before starting work. <Ref. to NT-6, BATTERY, NOTE, Note.>
- 2) Remove the trim panel - front door. <Ref. to EI-50, FRONT DOOR, REMOVAL, Door Trim.>
- 3) Remove the panel - power window main switch.

CAUTION:

Be careful not to damage the trim panel - front door with the panel - power window main switch.

- (1) Insert a sheet of protective paper (a) between panel - power window main switch and trim panel - front door.
- (2) Remove the screws and disconnect the connector.

GW-01413

- (3) Release the claws, and then remove the panel - power window main switch.

GW-01020

Power Window Control Switch

GLASS/WINDOWS/MIRRORS

- (4) Release the claws, and then remove the switch - power window main.

2. SUB-SWITCH

Switch - power window sub front

For removal of the switch - power window sub front on the passenger's seat, refer to the removal procedure of the switch - power window main. <Ref. to GW-11, MAIN SWITCH, REMOVAL, Power Window Control Switch.>

Switch - power window sub rear

- 1) Disconnect the ground cable from battery and wait for at least 60 seconds before starting work. <Ref. to NT-6, BATTERY, NOTE, Note.>
- 2) Remove the trim panel - rear door. <Ref. to EI-51, REAR DOOR, REMOVAL, Door Trim.>
- 3) Remove the panel - power window sub switch rear.

CAUTION:

Be careful not to damage the trim panel - rear door with the panel - power window sub switch rear.

- (1) Insert a sheet of protective paper (a) between panel - power window sub switch rear and trim panel - rear door.
- (2) Remove the screws and disconnect the connector.

(3) Release the claws, and then remove the panel - power window sub switch rear.

4) Release the claws, and then remove the switch - power window sub rear.

B: INSTALLATION

CAUTION:

- After installing the switch - power window main, always perform the initial setting. Failure to do so may cause the improper activation of auto-reverse operation for pinching hazard prevention.

- Use protective paper to avoid damage to the trim panel.

1) Install each part in the reverse order of removal.

2) Perform initial setting operation (reset operation A). <Ref. to GW-9, RESET OPERATION A, OPERATION, Power Window System.>

Power Window Control Switch

GLASS/WINDOWS/MIRRORS

C: INSPECTION

1. MAIN SWITCH

- Driver's seat

CAUTION:

Since the switch - power window main is controlled by CPU, do not check continuity for switch alone with the circuit tester. Performing continuity check with circuit tester can damage the switch - power window main circuit.

Check output from the switch - power window main to the driver's side motor using the oscilloscope function in the Subaru Select Monitor.

- 1) Remove the switch - power window main.
- 2) Connect the battery and the Subaru Select Monitor to the switch - power window main terminal.

CAUTION:

Never mix up the terminals when connecting the harness connector of the switch - power window main and the battery. If the connection is wrong, the switch - power window main may be damaged.

NOTE:

- When the battery is connected to the switch - power window main terminal, the letters "AUTO" on the driver's side knob illuminates.
- For detailed procedures, refer to "Subaru Select Monitor Operation Manual".

- 3) Operate the switch - power window main and check the output.

NOTE:

Since output time during window UP operation is extremely short, it cannot be checked without using a measuring instrument such as oscilloscope. Output is constantly produced while the switch is operated for window DOWN operation.

Inspection conditions	Output time	Standard
AUTO UP	Approx. 130 ms	Battery voltage
UP		
OFF	—	0 V
DOWN	During switch operation	Battery voltage
AUTO DOWN	Approx. 300 ms	

- 4) If the inspection result is not within the standard, replace the switch - power window main.

Power Window Control Switch

GLASS/WINDOWS/MIRRORS

• **Except for driver's seat**

1) Check the resistance between terminals of the switch - power window main.

	Terminal No.	Inspection conditions	Standard
Passenger's seat	14 — 8 1 — 2	UP	Less than 1 Ω
	14 — 2 14 — 8	OFF	1 MΩ or more
	1 — 8 1 — 2 8 — 2		Less than 1 Ω
	14 — 2 1 — 8	DOWN	Less than 1 Ω
Rear LH	14 — 15 1 — 16	UP	Less than 1 Ω
	14 — 15 14 — 16	OFF	1 MΩ or more
	1 — 15 1 — 16 15 — 16		Less than 1 Ω
	14 — 16 1 — 15	DOWN	Less than 1 Ω
Rear RH	14 — 7 1 — 6	UP	Less than 1 Ω
	14 — 7 14 — 6	OFF	1 MΩ or more
	1 — 6 1 — 7 6 — 7		Less than 1 Ω
	14 — 6 1 — 7	DOWN	Less than 1 Ω

2) If the inspection result is not within the standard, replace the switch - power window main.

Power Window Control Switch

GLASS/WINDOWS/MIRRORS

2. SUB-SWITCH

- 1) Remove the switch - power window sub.
- 2) Check the resistance between terminals of the switch - power window sub.

	Terminal No.	Inspection conditions	Standard
Passenger seat, rear	6 — 5 8 — 7	UP	Less than 1 Ω
	7 — 6 4 — 6	OFF	1 MΩ or more
	5 — 4 8 — 7		Less than 1 Ω
	6 — 8 5 — 4	DOWN	Less than 1 Ω

- 3) If the inspection result is not within the standard, replace the switch - power window sub.

5. Front Door Glass

A: REMOVAL

- 1) Disconnect the ground cable from battery and wait for at least 60 seconds before starting work. <Ref. to NT-6, BATTERY, NOTE, Note.>
- 2) Remove the trim panel - front door. <Ref. to EI-50, FRONT DOOR, REMOVAL, Door Trim.>
- 3) Remove the sealing cover - front door. <Ref. to EB-25, REMOVAL, Front Sealing Cover.>
- 4) Remove the front door inner pad (a).

CAUTION:

If the clip is damaged, replace it with a new part because the panel assembly - front door may be deformed.

- 5) Attach the battery ground cable and the switch - power window, and turn the ignition switch to ON. <Ref. to NT-6, BATTERY, NOTE, Note.>
- 6) Remove the glass assembly - front door.
 - (1) Operate the switch - power window to move the glass assembly - front door to the position where the mounting bolts can be seen.
 - (2) Remove the running channel - front door.
 - (3) Remove the mounting bolts from the glass assembly - front door.

Front Door Glass

GLASS/WINDOWS/MIRRORS

(4) While tilting the glass, remove the glass assembly - front door.

CAUTION:

Avoid impact and damage to the glass assembly - front door.

7) Remove the glass - front door partition.

(1) Remove the bolts and screws, and then remove the sash COMPL - partition.

(2) Remove the glass - front door partition.

B: INSTALLATION

CAUTION:

- Check that the running channel - front door is securely fixed to the panel assembly - front door and to the sash COMPL - partition.
- Before installing the glass assembly - front door, check the lip of the running channel - front door for being everted or tuck-in.

Install each part in the reverse order of removal.

Tightening torque:

Refer to "COMPONENT" of "General Description". <Ref. to GW-2, FRONT DOOR GLASS, COMPONENT, General Description.>

Front Regulator and Motor Assembly

GLASS/WINDOWS/MIRRORS

6. Front Regulator and Motor Assembly

A: REMOVAL

- 1) Disconnect the ground cable from battery and wait for at least 60 seconds before starting work. <Ref. to NT-6, BATTERY, NOTE, Note.>
- 2) Remove the trim panel - front door. <Ref. to EI-50, FRONT DOOR, REMOVAL, Door Trim.>
- 3) Remove the sealing cover - front door. <Ref. to EB-25, REMOVAL, Front Sealing Cover.>
- 4) Remove the glass assembly - front door. <Ref. to GW-17, REMOVAL, Front Door Glass.>
- 5) Remove the regulator and motor assembly - front.
 - (1) Disconnect the motor - front connector.
 - (2) Remove the bolts, and then remove the regulator and motor assembly - front.

B: INSTALLATION

Install each part in the reverse order of removal.

Tightening torque:

Refer to "COMPONENT" of "General Description". <Ref. to GW-2, FRONT DOOR GLASS, COMPONENT, General Description.>

C: INSPECTION

- 1) Disconnect the connector of the motor - front.
- 2) Check the motor operation when battery voltage is applied between terminals of the motor - front connector.

• LH side

Terminal No.	Inspection conditions	Standard
4 (+) — 1 (-)	Apply battery voltage between terminals.	Increase
1 (+) — 4 (-)	Apply battery voltage between terminals.	Decrease

• RH side

Terminal No.	Inspection conditions	Standard
3 (+) — 6 (-)	Apply battery voltage between terminals.	Increase
6 (+) — 3 (-)	Apply battery voltage between terminals.	Decrease

- 3) If it does not operate properly as a result of inspection, replace the regulator and motor assembly - front.

Remote Control Mirror System

GLASS/WINDOWS/MIRRORS

7. Remote Control Mirror System

A: WIRING DIAGRAM

Refer to “Remote Control Mirror System” in the wiring diagram. <Ref. to WI-198, WIRING DIAGRAM, Remote Control Mirror System.>

B: INSPECTION

1. SYMPTOM CHART

Symptoms	Inspection order
All function does not operate.	<ol style="list-style-type: none">1. Check the fuse.2. Check the remote control mirror switch.3. Check the wiring harness.
One side of the mirror motor does not operate.	<ol style="list-style-type: none">1. Check the remote control mirror switch.2. Check the mirror motor.3. Check the wiring harness.
Mirror heater does not operate.	<ol style="list-style-type: none">1. Check the rear defogger switch.2. Check the rear defogger relay.3. Check the mirror heater.4. Check the wiring harness.5. Check body integrated unit.

NOTE:

The mirror heater operates with the rear window defogger at the same time. Refer to “INSPECTION” of “Rear Window Defogger System” for details. <Ref. to GW-47, INSPECTION, Rear Window Defogger System.>

C: NOTE

For procedure of each component in the remote control mirror system, refer to the respective section.

- Outer mirror assembly: <Ref. to GW-23, Outer Mirror Assembly.>
- Remote control mirror switch: <Ref. to GW-28, Remote Control Mirror Switch.>

8. Outer Mirror Assembly

A: REMOVAL

Refer to "DISASSEMBLY" for removal procedures of scalp cap and mirror face. <Ref. to GW-24, DISASSEMBLY, Outer Mirror Assembly.>

- 1) Disconnect the ground cable from battery and wait for at least 60 seconds before starting work. <Ref. to NT-6, BATTERY, NOTE, Note.>
- 2) Remove the trim panel - front door. <Ref. to EI-50, FRONT DOOR, REMOVAL, Door Trim.>
- 3) Turn over the sealing cover - front door.

CAUTION:

- Carefully remove the butyl tape. Excessive force will easily break the sealing cover - front door.
- If the sealing cover - front door gets broken, replace it with a new part.
- Be careful not to allow the butyl tape to contact any trims and seats because the butyl tape, which has a strong adhesive force, is difficult to remove once it adhered.

- (1) Remove the connector clip that is installed on the panel assembly - front door, and disconnect the connector.
 - (2) Carefully remove and turn over the sealing cover - front door within the area where the operation can be performed.
- 4) Remove the outer mirror assembly.
 - (1) Remove the connector clip that is installed on the panel assembly - front door, and disconnect the connector.
 - (2) Turn over the sealing cover - front door.
 - (3) Remove the bolts to remove outer mirror assembly.

GW-01364

B: INSTALLATION

CAUTION:

Be careful not to catch the harness in between the parts.

Install each part in the reverse order of removal.

Tightening torque:

Outer mirror assembly: 7.5 N·m (0.76 kgf-m, 5.5 ft-lb)

Outer Mirror Assembly

GLASS/WINDOWS/MIRRORS

C: DISASSEMBLY

CAUTION:

When removing the mirror - repair, be careful not to damage the back surface of mirror - repair with a flat tip screwdriver.

- 1) Operate the remote control mirror switch to face the mirror - repair upward.
- 2) Disconnect the ground cable from battery and wait for at least 60 seconds before starting work. <Ref. to NT-6, BATTERY, NOTE, Note.>
- 3) Remove the mirror - repair.
 - (1) Using a flat tip screwdriver, release the clip, and slide the mirror - repair downward to remove.

- (2) Disconnect connectors. (Model with mirror heater and Subaru Rear Vehicle Detection system)

4) Release the claws, and then remove the cover - cap outer mirror lower.

5) Release the claws, and then remove the cover - cap outer mirror.

CAUTION:

Be careful not to apply excessive force when removing the cover - cap outer mirror, as the lower hooks may become damaged.

Outer Mirror Assembly

GLASS/WINDOWS/MIRRORS

- 6) Remove the light assembly - side turn mirror. (Model with side turn signal light)
- (1) Remove the screws and pull out the light assembly - side turn mirror to the front of the vehicle.
 - (2) Disconnect the connector and remove the light assembly - side turn mirror.

GW-01525

D: ASSEMBLY

CAUTION:

- **Be careful not to catch the harness in between the parts.**
 - **When installing the mirror - repair, insert the connector and clip securely.**
- 1) Install the light assembly - side turn mirror.
 - 2) Install the cover - cap outer mirror.
 - 3) Install the cover - cap outer mirror lower.
 - 4) Check that all the claws are securely engaged.
 - 5) Install the mirror - repair.

E: INSPECTION**1. CHECK OPERATION**

- 1) Disconnect the outer mirror connector.
- 2) Apply battery voltage between the outer mirror connector terminals and check the mirror operation.

Terminal No.	Inspection conditions	Switch position
—	—	OFF
3 (+) — 8 (-)	Apply battery voltage between terminals.	UP
8 (+) — 3 (-)	Apply battery voltage between terminals.	DOWN
7 (+) — 3 (-)	Apply battery voltage between terminals.	LEFT
3 (+) — 7 (-)	Apply battery voltage between terminals.	RIGHT

- 3) If it does not operate normally, replace the outer mirror assembly.

2. CHECK OPERATION OF Subaru Rear Vehicle Detection INDICATOR

- 1) Check the Subaru Rear Vehicle Detection system. <Ref. to RVD(diag)-2, Basic Diagnostic Procedure.>
- 2) Check the outer mirror assembly.
 - (1) Check that it illuminates normally when the BSD/RCTA OFF switch is turned ON while it is installed to the vehicle.
 - (2) If it does not illuminate normally, replace the mirror - repair.
 - (3) Check that it illuminates normally again. If it does not illuminate normally, replace the outer mirror assembly.

Remote Control Mirror Switch

GLASS/WINDOWS/MIRRORS

9. Remote Control Mirror Switch

A: REMOVAL

- 1) Disconnect the ground cable from battery and wait for at least 60 seconds before starting work. <Ref. to NT-6, BATTERY, NOTE, Note.>
- 2) Remove the trim panel - front door. <Ref. to EI-50, FRONT DOOR, REMOVAL, Door Trim.>
- 3) Remove the panel - power window main switch. <Ref. to GW-11, MAIN SWITCH, REMOVAL, Power Window Control Switch.>
- 4) Release the claws, and then remove the switch - door mirror.

GW-01416

B: INSTALLATION

Install each part in the reverse order of removal.

C: INSPECTION

- 1) Disconnect the connector of the switch - door mirror.
- 2) Check the resistance between switch - door mirror terminals.

Preparation tool:
Circuit tester

GW-01174

• Changeover switch RH

Terminal No.	Inspection conditions	Standard
—	OFF	1 M Ω or more
1 — 12 9 — 7	UP	Less than 1 Ω
1 — 9 12 — 7	DOWN	Less than 1 Ω
1 — 11 12 — 7	LEFT	Less than 1 Ω
1 — 12 11 — 7	RIGHT	Less than 1 Ω

• Changeover switch LH

Terminal No.	Inspection conditions	Standard
—	OFF	1 M Ω or more
1 — 14 8 — 7	UP	Less than 1 Ω
1 — 8 14 — 7	DOWN	Less than 1 Ω
1 — 10 14 — 7	LEFT	Less than 1 Ω
1 — 14 10 — 7	RIGHT	Less than 1 Ω

- 3) If the inspection result is not within the standard, replace the switch - door mirror.

Rearview Mirror

GLASS/WINDOWS/MIRRORS

10.Rearview Mirror

A: REMOVAL

CAUTION:

- Be careful not to damage the mirror surface and the glass - front window.
- Do not remove the base - inner mirror from the glass - front window.

1) Release the claws, and then remove the cover.

2) Release the lock lever, and slide the mirror assembly - inner rearview to remove.

3) If the base - inner mirror is damaged, replace it together with the glass - front window.

B: INSTALLATION

Install each part in the reverse order of removal.

C: INSPECTION

Check that the mirror assembly - inner rearview and base - inner mirror for damage.

11.Rear Door Glass

A: REMOVAL

- 1) Disconnect the ground cable from battery. <Ref. to NT-6, BATTERY, NOTE, Note.>
- 2) Remove the trim panel - rear door. <Ref. to EI-51, REAR DOOR, REMOVAL, Door Trim.>
- 3) Remove the sealing cover - rear door. <Ref. to EB-31, REMOVAL, Rear Sealing Cover.>
- 4) Attach the battery ground cable and the switch - power window, and turn the ignition switch to ON.
- 5) Remove the glass assembly - rear door.
 - (1) Operate the switch - power window sub rear to move the glass assembly - rear door to the lowest position.
 - (2) Remove the running channel - rear door.
 - (3) Remove the screws and bolts, and then remove the sash COMPL - rear partition.

- (4) Remove the glass - rear door partition.

Rear Door Glass

GLASS/WINDOWS/MIRRORS

(5) While tilting the glass assembly - rear door, remove the guide from the roller of the regulator and motor assembly - rear, then remove the glass assembly - rear door.

CAUTION:

Avoid impact and damage to the glass assembly - rear door.

B: INSTALLATION

CAUTION:

- Check that the running channel - rear door is securely fixed to the panel assembly - rear door and to the sash COMPL - rear partition.
- Before installing the glass assembly - rear door, check the lip of the running channel - rear door for being everted or tuck-in.

Install each part in the reverse order of removal.

Tightening torque:

Refer to "COMPONENT" of "General Description". <Ref. to GW-3, REAR DOOR GLASS, COMPONENT, General Description.>

12.Rear Regulator and Motor Assembly

A: REMOVAL

- 1) Disconnect the ground cable from battery. <Ref. to NT-6, BATTERY, NOTE, Note.>
- 2) Remove the trim panel - rear door. <Ref. to EI-51, REAR DOOR, REMOVAL, Door Trim.>
- 3) Remove the sealing cover - rear door. <Ref. to EB-31, REMOVAL, Rear Sealing Cover.>
- 4) Remove the glass assembly - rear door. <Ref. to GW-31, REMOVAL, Rear Door Glass.>
- 5) Remove the rear regulator and motor assembly.
 - (1) Disconnect the motor - rear connector.

- (2) Remove the bolts, and then remove the rear regulator and motor assembly.

Rear Regulator and Motor Assembly

GLASS/WINDOWS/MIRRORS

B: INSTALLATION

Install each part in the reverse order of removal.

Tightening torque:

Refer to "COMPONENT" of "General Description". <Ref. to GW-3, REAR DOOR GLASS, COMPONENT, General Description.>

C: INSPECTION

- 1) Disconnect the connector of the motor - rear.
- 2) Check the motor operation when battery voltage is applied between terminals of the motor - rear connector.

- LH side

Terminal No.	Inspection conditions	Standard
4 (+) — 1 (-)	Apply battery voltage between terminals.	Increase
1 (+) — 4 (-)	Apply battery voltage between terminals.	Decrease

- RH side

Terminal No.	Inspection conditions	Standard
3 (+) — 6 (-)	Apply battery voltage between terminals.	Increase
6 (+) — 3 (-)	Apply battery voltage between terminals.	Decrease

- 3) If it does not operate properly as a result of inspection, replace the regulator and motor assembly - rear.

13. Windshield Glass

A: REMOVAL

1. USING WINDSHIELD GLASS KNIFE

CAUTION:

- For model with EyeSight, always remove the glass - front window after the stereo camera is removed.
- For model with EyeSight, always use Subaru genuine windshield glass specially designed for EyeSight. (If the windshield glass other than the glass specially designed for EyeSight is used, the visibility of the camera is blocked or the distortion of the glass prevents the correct measurement of the object, resulting in the EyeSight abnormal operation.)
- For model with EyeSight, if the windshield glass is installed after removal or replaced, always perform the "Inspection" and "Adjustment and check" of the stereo camera.

Inspection: <Ref. to ES(diag)-7, INSPECTION, General Description.>

Adjustment and check: <Ref. to ES-12, Camera Adjustment, Inspection.>

- For model with EyeSight, if the damage is found in the glass repair prohibited area, always replace the glass. Damage in the prohibited area can affect the recognition of the stereo camera even if it is repaired, and thereby EyeSight function may not operate properly.

- 1) Disconnect the ground cable from battery. (Models with wiper deicer) <Ref. to NT-6, BATTERY, NOTE, Note.>
- 2) Remove the trim panel - front pillar UPR. <Ref. to EI-77, REMOVAL, Upper Inner Trim.>
- 3) Remove the cowl panel assembly. <Ref. to EI-42, REMOVAL, Cowl Panel.>
- 4) Disconnect the wiper deicer connector. (Models with wiper deicer)
- 5) Remove the stereo camera cover and stereo camera. (Models with EyeSight) <Ref. to ES-7, REMOVAL, Stereo Camera.>
- 6) Remove the molding - front window from the glass - front window, and attach protective tape on the body side of the circumference of the glass - front window.

(a) Molding - front window
(b) Glass - front window

(c) Body panel
(d) Protective tape

(e) Adhesive

Windshield Glass

GLASS/WINDOWS/MIRRORS

7) Remove the glass - front window.

- (1) Apply sufficient amount of soapy water to the adhesive part and insert the windshield glass knife.
- (2) While holding the edges of the knife and the glass - front window at a right angle, move the windshield glass knife parallel to the edge of the glass - front window, and cut the adhesive along the surface and the edge of the glass - front window.

CAUTION:

- Cutting of adhesive part should be started from an area with wider gap between the glass - front window and the body.
- Never twist the windshield glass knife.

GW-01615

- | | | |
|----------------------------|--------------------------|----------------|
| (a) Windshield glass knife | (c) Adhesive | (e) Body panel |
| (b) Protective tape | (d) Glass - front window | |

(3) Disconnect the locating pin - front window, and remove the glass - front window.

NOTE:

The locating pin - front window are bonded to the corners of the glass - front window. Use piano wire to disconnect the pins.

GW-10028

- | | | |
|---------------------------------|----------------|--------------------------|
| (a) Locating pin - front window | (b) Body panel | (c) Glass - front window |
|---------------------------------|----------------|--------------------------|

2. USING PIANO WIRE

CAUTION:

- Do not tightly pull the piano wire against the glass - front window edge.
- Apply protective tape, etc, and be careful that the inner and outer components of the vehicle are not damaged.
- Do not cross piano wires. Otherwise they may be cut.

- 1) Disconnect the ground cable from battery. (Models with wiper deicer) <Ref. to NT-6, BATTERY, NOTE, Note.>
- 2) Remove the trim panel - front pillar UPR. <Ref. to EI-77, REMOVAL, Upper Inner Trim.>
- 3) Remove the cowl panel assembly. <Ref. to EI-42, REMOVAL, Cowl Panel.>
- 4) Disconnect the wiper deicer connector. (Models with wiper deicer)
- 5) Remove the stereo camera cover and stereo camera. (Models with EyeSight) <Ref. to ES-7, REMOVAL, Stereo Camera.>
- 6) Remove the molding - front window from the glass - front window, and attach protective tape on the body side of the circumference of the glass - front window.

GW-10188

(a) Molding - front window

(c) Body panel

(e) Adhesive

(b) Glass - front window

(d) Protective tape

Windshield Glass

GLASS/WINDOWS/MIRRORS

7) Remove the glass - front window.

(1) Using a drill, make a hole in the adhesive part.

(2) Pass the piano wire through the hole, and pull the wire ends alternately to cut off the adhesive part and the locating pin - front window.

CAUTION:

Attach a piece of wood to both piano wire ends.

(a) Piano wire
(b) Glass - front window

(c) Adhesive
(d) Body panel

(e) Protective tape

B: INSTALLATION

CAUTION:

- For model with EyeSight, always use Subaru genuine windshield glass specially designed for EyeSight. (If the windshield glass other than the glass specially designed for EyeSight is used, the visibility of the camera is blocked or the distortion of the glass prevents the correct measurement of the object, resulting in the EyeSight abnormal operation.)

- For model with EyeSight, if the windshield glass is installed after removal or replaced, always perform the "Inspection" and "Adjustment and check" of the stereo camera.

Inspection: <Ref. to ES(diag)-7, INSPECTION, General Description.>

Adjustment and check: <Ref. to ES-12, Camera Adjustment, Inspection.>

- For model with EyeSight, if the damage is found in the glass repair prohibited area, always replace the glass. Damage in the prohibited area can affect the recognition of the stereo camera even if it is repaired, and thereby EyeSight function may not operate properly.

1) Fabricate the cartridge nozzle tip as shown and set the sealant gun with the adhesive.

(a) 10 mm (0.39 in)

(b) 8 mm (0.31 in)

(c) Sealant gun

2) Remove the adhesive layer on the body using cutter knife to obtain smooth face of 2 mm (0.08 in) thick.

CAUTION:

- Be careful not to damage the body and paint surface.
- Be sure to keep some amount of old adhesive.

(a) Adhesive

(b) Body panel

(c) 2 mm (0.08 in)

3) Clean the glass - front window and the body with alcohol or appropriate cleaning solvent to completely eliminate cutting powder, dust and dirt.

Windshield Glass

GLASS/WINDOWS/MIRRORS

4) Attach the dam rubber - front to the glass - front window.

CAUTION:

- Attach the driver's side dam rubber - front lower to the constant distance of 19.1 mm (0.75 in) from the glass end.
- Attach the passenger's side dam rubber - front lower straight between the dam rubber set marks while aligning with the dam rubber set mark.

GW-10214

- (a) Locating pin - front window
(b) Dam rubber - front upper
(c) 16 mm (0.63 in)

- (d) 19.1 mm (0.75 in)
(e) Dam rubber - front lower
(f) Dam rubber set mark

- (g) Seal - lower
(h) VIN plate confirmation window
(i) 0+ 5 mm (0 + 0.2 in)

5) Attach the molding - front window to the glass - front window.

CAUTION:

Be careful to attach the molding - front window so that the molding has no loose or undulating part.

GW-01048

- (1) Align the molding - front window (A) to the upper ends (a) of the glass - front window (C).
- (2) Install the molding - front window from both corners of the upper edge toward the center (b).
- (3) Install the molding - front window from both corners of the upper edge toward the lower side (c).
- (4) Firmly apply the double sided tape (B) of the molding - front window evenly to the surface of the glass - front window.

6) Attach the seal - upper to the molding - front window.

GW-10190

- | | | |
|---------------------------------|----------------------------|--------------|
| (a) Locating pin - front window | (d) Molding - front window | (g) Adhesive |
| (b) Dam rubber - front upper | (e) 3 mm (0.12 in) | |

Windshield Glass

GLASS/WINDOWS/MIRRORS

7) Install the glass - front window.

(1) Apply the primer to the adhesive surface of glass - front window side and body side using sponge.

Preparation items:

Glass primer: Dow Automotive ESSEX U-401, U-402 or equivalent

Painted surface primer: Dow Automotive ESSEX U-413 or equivalent

NOTE:

- Primer once attached to the painted surface of the body and internal trim is hard to wipe off. Mask the circumference of such area.
- Let primer dry for about ten minutes before installing the glass - front window.
- Do not touch the surface coated with primer.

(2) Apply adhesive to the end back surface of the glass - front window.

Preparation items:

Adhesive: Dow Automotive ESSEX U-400HV or equivalent

GW-01051

- | | | |
|--|----------------------------|------------------------|
| (a) Application of primer (glass side) | (c) Adhesive | (e) Dam rubber - front |
| (b) Application of primer (body side) | (d) Molding - front window | |

(3) Fit the locating pins - front window to the vehicle body using suction rubber cups to install the windshield glass.

GW-00862

(4) Lightly press the entire perimeter of the glass - front window for tight fit.

(5) Make flush the adhesive surface jugged out using spatula.

8) After completion of all work, allow the vehicle to stand for about 24 hours.

NOTE:

- When opening/closing the door after the glass - front window was bonded, always lower the glass assembly - door first, and then open/close it carefully.
- Move the vehicle slowly.
- For minimum drying time and vehicle standing time before driving after bonding, follow instructions or instruction manual from the adhesive manufacturer.

9) Connect the wiper deicer connector. (Models with wiper deicer)

10) Install the cowl panel assembly. <Ref. to EI-44, INSTALLATION, Cowl Panel.>

11) Install the stereo camera cover and stereo camera. (Models with EyeSight) <Ref. to ES-10, INSTALLATION, Stereo Camera.>

12) Install the trim panel - front pillar UPR. <Ref. to EI-79, INSTALLATION, Upper Inner Trim.>

13) Connect the battery ground terminal. (Models with wiper deicer) <Ref. to NT-6, BATTERY, NOTE, Note.>

14) After curing of adhesive, pour the water on external surface of vehicle to check that there are no water leaks.

NOTE:

When a vehicle is returned to the user, tell him or her that the vehicle should not be subjected to heavy impact for at least three days.

Rear Gate Glass

GLASS/WINDOWS/MIRRORS

14.Rear Gate Glass

A: REMOVAL

- 1) Disconnect the ground cable from battery. <Ref. to NT-6, BATTERY, NOTE, Note.>
- 2) Remove the roof spoiler. (Crosstrek model) <Ref. to EI-49, REMOVAL, Roof Spoiler.>
- 3) Remove the trim panel - rear gate and the motor assembly - rear wiper. <Ref. to WW-44, REMOVAL, Rear Wiper Motor.>
- 4) Disconnect the rear defogger connector.
- 5) Remove the glass - rear gate in the same procedure as for the glass - front window. <Ref. to GW-35, REMOVAL, Windshield Glass.>

B: INSTALLATION

NOTE:

Use the markings on the glass to apply adhesive and primer, and to install the dam rubber - rear gate and the spacer - rear gate.

- (a) Marking for dam rubber - rear gate application (Ag print) (c) Marking for spacer - rear gate application (Ag print) (d) Marking for primer application
- (b) Center line for adhesive

1) Fabricate the cartridge nozzle tip as shown and set the sealant gun with the adhesive.

GW-10029

(a) 10 mm (0.39 in)

(b) 8 mm (0.31 in)

(c) Sealant gun

2) Smoothen and clean the adhesive surfaces of the glass - rear gate and body using the same procedures as for the glass - front window. <Ref. to GW-38, INSTALLATION, Windshield Glass.>

3) Attach the dam rubber - rear gate to the glass - rear gate.

GW-01127

(a) Dam rubber - rear gate

(c) Spacer - rear gate

(d) Locating pin - rear gate

(b) Holder - rear gate

Rear Gate Glass

GLASS/WINDOWS/MIRRORS

4) Install the glass - rear gate.

- (1) Apply the primer to the adhesive surface of glass - rear gate side and body side using sponge.
- (2) Apply adhesive to the glass - rear gate end back surface.

GW-01053

- (a) Application of primer (glass side) (c) Adhesive (e) Spacer - rear gate
(b) Application of primer (body side) (d) Dam rubber - rear gate

- (3) Attach the clip to the holder - rear gate of the glass - rear gate.
- (4) Insert the locating pins - rear gate into the rear gate panel holes, and install the glass - rear gate.
- (5) Lightly press the entire perimeter of the glass - rear gate for tight fit.
- (6) Make flush the adhesive surface juttred out using spatula.

5) After completion of all work, allow the vehicle to stand for about 24 hours.

NOTE:

- When opening/closing the door after the glass - rear gate was bonded, always lower the glass assembly - door first, and then open/close it carefully.
- Move the vehicle slowly.
- For minimum drying time and vehicle standing time before driving after bonding, follow instructions or instruction manual from the adhesive manufacturer.

6) Connect the rear defogger connector.

7) Install the motor assembly - rear wiper and the arm assembly - rear wiper.

Tightening torque:

Motor assembly - rear wiper and arm assembly - rear wiper: <Ref. to WW-4, REAR WIPER, COMPONENT, General Description.>

8) Install the roof spoiler. <Ref. to EI-98, INSTALLATION, Rear Gate Garnish.>

Tightening torque:

7.5 N·m (0.8 kgf·m, 5.5 ft·lb)

9) Install the trim panel - rear gate. <Ref. to EI-94, INSTALLATION, Rear Gate Trim.>

10) After curing of adhesive, pour the water on external surface of vehicle to check that there are no water leaks.

NOTE:

When a vehicle is returned to the user, tell him or her that the vehicle should not be subjected to heavy impact for at least three days.

15. Rear Window Defogger System

A: WIRING DIAGRAM

Refer to “Rear Defogger System” in the wiring diagram. <Ref. to WI-192, WIRING DIAGRAM, Rear Defogger System.>

B: INSPECTION

1. CHECK SYSTEM

Symptoms	Inspection order
Rear window defogger does not operate.	1. Check the fuse. 2. Check the rear defogger relay. 3. Check the rear window defogger switch. 4. Check the heat wire. 5. Check the wiring harness. 6. Check body integrated unit.

NOTE:

Rear window defogger system can be customized using the Subaru Select Monitor, when the customize setting {Auto A/C Setting} of the body integrated unit is set to {support}.

System name	Initial setting	Customize setting
Rear defogger operation mode	Normal	Continuous

2. CHECK WITH SUBARU SELECT MONITOR

CAUTION:

Before performing inspection, check whether the rear defogger operation mode setting is either in initial setting or customize setting.

- 1) Check the input signal when the rear window defogger switch is operated using Subaru Select Monitor.
 - (1) Connect the Subaru Select Monitor to data link connector.

NOTE:

For detailed operation procedures, refer to “Application help”.

- (2) Turn the ignition switch to ON.
 - (3) On «Start» display, select «Diagnosis».
 - (4) On «Vehicle selection» display, input the target vehicle information and select «Confirmed».
 - (5) On «Main Menu» display, select «Each System».
 - (6) On «Select System» display, select «Body Control» and then select «Enter».
 - (7) On «Select Function» display, select «Data Monitor».
 - (8) From the data monitor item list, select «Auto A/C Setting».
 - (9) Check the vehicle equipment and the settings of body integrated unit.
If correct, go to (10).
If not correct, go to (13).
 - (10) From the data monitor item list, select «Rr Defogger output».
 - (11) Check the displayed data (ON/OFF) by operating the rear window defogger switch.
 - (12) On «Select Function» display, select «Customize».
 - (13) From the Customize item list, select «Auto A/C Setting» and match the auto A/C ECM setting to the actual vehicle equipment.
- 2) Check the operation with rear window defogger switch ON.
 - When customize setting is set as “Continuous”, it is normal if the 15-minute operation and 2-minute stop repeats.
 - When customize setting is “Normal”, it is normal if the operation lasts for 15 minutes and then turns OFF.
 - 3) When the operation in 2) above fails, replace the body integrated unit.

Rear Window Defogger System

GLASS/WINDOWS/MIRRORS

3. HEAT WIRE INSPECTION

CAUTION:

Use a dry soft cloth to wipe off dirt on the glass along the heat wires with care not to damage the heat wires.

1) Prepare the following checking items.

- Liquid crystal thermograph sheet (approximate Size: 300 × 300 mm (11.8 × 11.8 in) and thermal temperature: 35 — 40°C (95 — 104°F))
 - Aluminum foil
- 2) Turn the ignition switch to ON.
3) Turn the defogger switch to ON.
4) Push the liquid crystal thermograph sheet from the outside of the glass - rear window.

NOTE:

Use the liquid crystal thermograph sheet every range it is separated with the separate line.

- (A) Liquid crystal thermograph sheet
(B) Separate line

5) Determine the faulty heat wire by checking the color of the liquid crystal thermograph sheet.

Liquid crystal thermograph sheet	Criteria
Change occurred (red → blue)	Normal
No change (black)	Open

NOTE:

- Check from the inside of the glass - rear window if the liquid crystal thermograph sheet does not change.
 - The time for the color change may differ depends on the surface temperature of the glass.
- 6) Wrap a piece of aluminum foil around the tip of tester probe and press it against the heat wire with your finger.

- (A) Tester probe
(B) Aluminum foil
(C) Heat wire

7) To both ends of the section that has been found to include an open in the step 5), apply the tester positive (+) probe and the negative (-) probe.

Rear Window Defogger System

GLASS/WINDOWS/MIRRORS

8) Move the tester probe on the negative (–) side slowly along the heat wire. If voltage changes from zero while moving the tester probe, heat wire is open at the voltage change point.

9) Repair the heat wire that determines the place of the open circuit. <Ref. to GW-49, REPAIR, Rear Window Defogger System.>

C: REPAIR

- 1) Clean the broken portion with alcohol or appropriate cleaning solvent.
- 2) Mask both side of wire with masking tape.
- 3) Apply the conductive silver composition to the broken portion.

Preparation items:

Conductive silver composition: Permatex QUICK GRID

- (1) Broken portion
- (2) Masking tape
- (3) Broken wire
- (4) Conductive silver composition

- 4) Dry using a dryer after applying the composition.
- 5) After repair, check the wire.

Rear Quarter Glass

GLASS/WINDOWS/MIRRORS

16.Rear Quarter Glass

A: REMOVAL

- 1) Disconnect the ground cable from battery. <Ref. to NT-6, BATTERY, NOTE, Note.>
- 2) Remove the trim panel - rear pillar UPR. <Ref. to EI-80, CROSSTREK MODEL, REMOVAL, Rear Quarter Trim.>
- 3) Remove the glass - rear quarter in the same procedure as for the glass - front window. <Ref. to GW-35, REMOVAL, Windshield Glass.>

B: INSTALLATION

- 1) Fabricate the cartridge nozzle tip as shown and set the sealant gun with the adhesive.

(1) 10 mm (0.39 in)

(2) 8 mm (0.31 in)

(3) Sealant gun

- 2) Smoothen and clean the adhesive surfaces of the glass - rear quarter and body using the same procedures as for the glass - front window. <Ref. to GW-38, INSTALLATION, Windshield Glass.>

Rear Quarter Glass

3) Install the dam rubber - rear and the seal - rear quarter to the glass - rear quarter.

GW-01367

- | | | |
|---------------------------------|-------------------------|-----------------------|
| (a) Dam rubber - rear quarter | (d) 9 mm (0.35 in) | (g) 15.2 mm (0.60 in) |
| (b) Fastener - rear quarter | (e) Seal - rear quarter | (h) 22.4 mm (0.88 in) |
| (c) Locating pin - rear quarter | (f) 23.1 mm (0.91 in) | |

4) Install the glass - rear quarter in the same procedure as for the glass - front window. <Ref. to GW-38, INSTALLATION, Windshield Glass.>

- (1) Apply the primer to the adhesive surface of glass - rear quarter side and body side using sponge.
- (2) Apply adhesive to the glass - rear quarter end back surface.

GW-01125

- | | | |
|--|-------------------------------|-------------------------|
| (a) Application of primer (glass side) | (c) Adhesive | (e) Seal - rear quarter |
| (b) Application of primer (body side) | (d) Dam rubber - rear quarter | (f) Protective plate |

- (3) Mount the fastener - rear quarter on the vehicle body.
- (4) Insert the locating pins - rear quarter into the side panel holes, and install the glass - rear quarter.
- (5) Lightly press the entire perimeter of the glass - rear quarter for tight fit.
- (6) Make flush the adhesive surface jugged out using spatula.

Rear Quarter Glass

GLASS/WINDOWS/MIRRORS

5) After completion of all work, allow the vehicle to stand for about 24 hours.

NOTE:

- When opening/closing the door after the glass - rear quarter was bonded, always lower the glass assembly - door first, and then open/close it carefully.
- Move the vehicle slowly.
- For minimum drying time and vehicle standing time before driving after bonding, follow instructions or instruction manual from the adhesive manufacturer.

6) Install the trim panel - rear pillar UPR. <Ref. to EI-82, INSTALLATION, Rear Quarter Trim.>

7) After curing of adhesive, pour the water on external surface of vehicle to check that there are no water leaks.

NOTE:

When a vehicle is returned to the user, tell him or her that the vehicle should not be subjected to heavy impact for at least three days.

17. Wiper Deicer System

A: WIRING DIAGRAM

Refer to “Wiper Deicer System” in the wiring diagram. <Ref. to WI-238, WIRING DIAGRAM, Wiper Deicer System.>

B: INSPECTION

1. CHECK SYSTEM

NOTE:

- The wiper deicer does not operate when the ambient temperature becomes 5°C (41°F) or more.
- The wiper deicer operates with the rear window defogger at the same time.
- It is possible to perform a forced operation if you keep holding the rear window defogger switch for 3 seconds or more.

Symptoms	Inspection order
Wiper deicer does not operate.	<ol style="list-style-type: none"> 1. Check the fuse. 2. Check the wiper deicer relay. 3. Check the wiper deicer switch. 4. Check the heat wire. 5. Check the wiring harness. 6. Check body integrated unit.

NOTE:

- Wiper deicer system can be customized using the Subaru Select Monitor, when the customize setting «Auto A/C Setting» of the body integrated unit is set to {support}.
- Set the system using the Rr Defogger op. mode, and setting will be the same as rear defogger system setting.

System name	Initial setting	Customize setting
Rr defogger op. mode	Normal	Continuous*

*: When one of the following conditions occurs, the continuous operation is suspended and turned to the normal operation.

- Ambient temperature at 5°C (41°F) or more continues for 10 seconds.
- Malfunction occurs on ambient sensor.
- Vehicle speed of 15 km/h (9 MPH) or less continues 15 minutes (OFF when conditions are met)
- Malfunction occurs in CAN communication.
- Battery voltage remains at 10 V or less for 30 seconds.

Wiper Deicer System

GLASS/WINDOWS/MIRRORS

2. CHECK WITH SUBARU SELECT MONITOR

CAUTION:

Before performing the inspection, check the following settings.

- Wiper deicer setting → “support”. If “no support”, set to “support” using customize setting.
- Rear defogger operation mode setting → initial setting or customize setting.

- 1) Check the input signal when the rear window defogger switch is operated using Subaru Select Monitor.
 - (1) Connect the Subaru Select Monitor to data link connector.

NOTE:

For detailed operation procedures, refer to “Application help”.

- (2) Turn the ignition switch to ON.
 - (3) On «Start» display, select «Diagnosis».
 - (4) On «Vehicle selection» display, input the target vehicle information and select «Confirmed».
 - (5) On «Main Menu» display, select «Each System».
 - (6) On «Select System» display, select «Body Control» and then select «Enter».
 - (7) On «Select Function» display, select «Data Monitor».
 - (8) From the data monitor item list, select «Auto A/C Setting».
 - (9) Check the vehicle equipment and the settings of body integrated unit.
If correct, go to (10).
If not correct, go to (13).
 - (10) From the data monitor item list, select «Rr Defogger output».
 - (11) Check the displayed data (ON/OFF) by operating the rear window defogger switch.
 - (12) On «Select Function» display, select «Customize».
 - (13) From the Customize item list, select «Auto A/C Setting» and match the auto A/C ECM setting to the actual vehicle equipment.
- 2) Check the operation with rear window defogger switch ON.
 - When customize setting is set as “Continuous”, it is normal if the 15-minute operation and 2-minute stop repeats.
 - When customize setting is “Normal”, it is normal if the operation lasts for 15 minutes and then turns OFF.
 - 3) When the operation in 2) above fails, replace the body integrated unit.

3. HEAT WIRE INSPECTION

Refer to “HEAT WIRE INSPECTION” of “Rear Window Defogger System”. <Ref. to GW-48, HEAT WIRE INSPECTION, INSPECTION, Rear Window Defogger System.>

NOTE:

Heat wire inspection needs removing/installing procedure of instrument panel assembly.

C: REPAIR

Refer to “REPAIR” of “Rear Window Defogger System”. <Ref. to GW-49, REPAIR, Rear Window Defogger System.>

NOTE:

Heat wire repair needs removing/installing procedure of instrument panel assembly.

Passenger's airbag ON indicator light	
Passenger's airbag OFF indicator light	
Passenger's seat belt warning light	

B: LOCATION

Refer to "LOCATION" of "INSTRUMENTATION/DRIVER INFO (DIAGNOSTICS)" section. <Ref. to IDI(diag)-6, LOCATION, Electrical Component Location.>

C: CAUTION

- Before disassembling or reassembling parts, always disconnect the battery ground cable from battery. When replacing the audio, control module and other parts provided with memory functions, record the memory contents before disconnecting the battery ground cable. Otherwise, the memory is cleared.
- Reassemble the parts in the reverse order of disassembly procedure unless otherwise indicated.
- Use gloves to avoid damage and getting fingerprints on the glass surface and meter surfaces.
- Do not apply an excessive force on the printed circuit.
- Do not drop or otherwise apply impact.
- Connect the connectors securely during reassembly.
- After reassembly, make sure that each component operates normally.
- When the combination meter assembly has been replaced, be sure to perform the following operations.
 - For models without the keyless access with push button start except for C5, be sure to perform the registration of immobilizer system. For detailed operation procedure, refer to “Type B” described in “REGISTRATION MANUAL FOR IMMOBILIZER”.
 - Be sure to reset the ODO fuel economy value of the multi-function display (MFD). (High grade type) <Ref. to IDI-14, ODO FUEL ECONOMY VALUE RESET (HIGH GRADE TYPE ONLY), OPERATION, Multi-function Display (MFD) System.>
- Yellow connectors and harnesses with yellow tapes around them are the connectors and harnesses for the airbag system. Using a tester above such circuits may cause malfunction of airbag system. Follow the cautions of “AIRBAG SYSTEM” in this case. <Ref. to AB-9, CAUTION, General Description.>
- Be careful not to damage the airbag system wiring harness when servicing electrical parts and switches.
- When removing, installing or replacing the VDCCM&H/U, VDCCM&H/U bracket, steering wheel or steering angle sensor (steering roll connector), perform the VDC setting mode. <Ref. to VDC-23, ADJUSTMENT, VDC Control Module and Hydraulic Control Unit (VDCCM&H/U).>

D: PREPARATION TOOL

1. SPECIAL TOOL

ILLUSTRATION	TOOL NUMBER	DESCRIPTION	REMARKS
 STSSM4	—	SUBARU SELECT MONITOR 4	Used for setting of each function and troubleshooting for electrical system. NOTE: For detailed operation procedures of Subaru Select Monitor 4, refer to “Application help”.

2. GENERAL TOOL

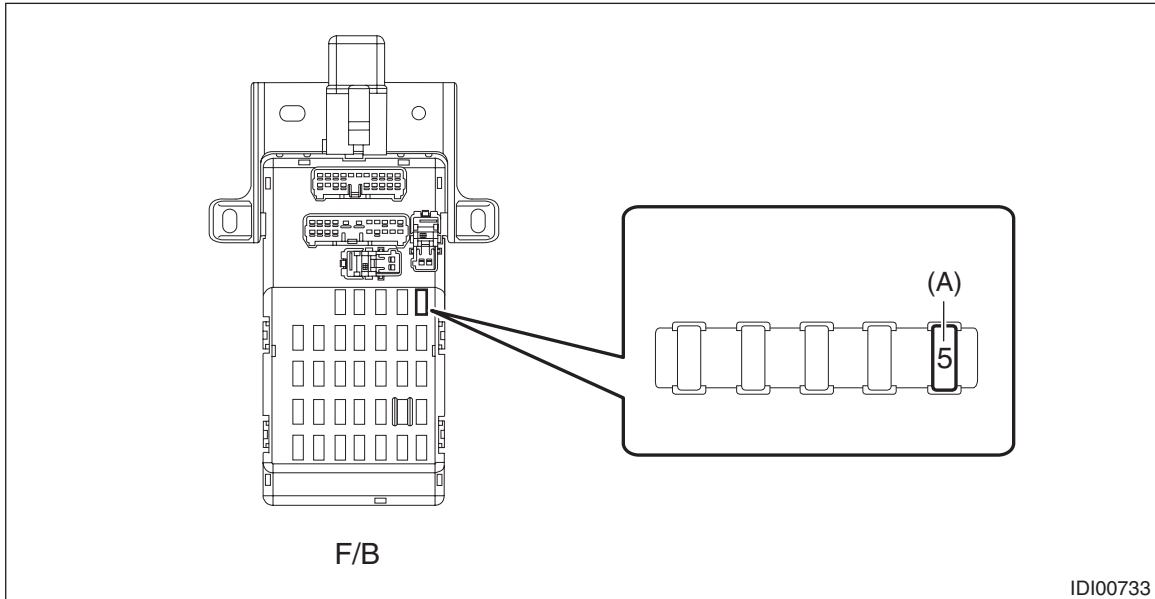

TOOL NAME	REMARKS
Circuit tester	Used for measuring resistance, voltage and current.
DST-i	Used together with Subaru Select Monitor 4.

Relay and Fuse

INSTRUMENTATION/DRIVER INFO

2. Relay and Fuse

A: LOCATION

Relay & fuse box	Fuse 10 A (combination meter, MFD)	(A)
------------------	------------------------------------	-----

NOTE:

For other related fuses, refer to the wiring diagram. <Ref. to WI-15, Power Supply Circuit.>

B: INSPECTION

1. CHECK FUSE

- 1) Remove the fuse and inspect visually.
- 2) If the fuse is blown out, replace the fuse.

NOTE:

If the fuse is blown again, check the system wiring harness.

3. Combination Meter System

A: WIRING DIAGRAM

Refer to “Combination Meter System” in the wiring diagram.

– Models with normal meters: <Ref. to WI-76, MODEL WITH NORMAL METER, WIRING DIAGRAM, Combination Meter System.>

– Model with color TFT meter: <Ref. to WI-81, MODEL WITH COLOR TFT METER, WIRING DIAGRAM, Combination Meter System.>

B: ELECTRICAL SPECIFICATION

1. COMBINATION METER ASSEMBLY

Refer to “Control Module I/O Signal” of “INSTRUMENTATION/DRIVER INFO (DIAGNOSTICS)” section. <Ref. to IDI(diag)-7, ELECTRICAL SPECIFICATION, Control Module I/O Signal.>

C: OPERATION

1. SELF-DIAGNOSIS DISPLAY MODE

The self-diagnosis (checking of each meter, warning light, indicator light, illumination, LCD/TFT) of combination meter can be performed in the following procedure.

1) Procedure

CAUTION:

Perform the steps described in (1) through (4) within 10 seconds.

- (1) Unfasten → fasten the driver’s seat belt within 3 seconds after the ignition switch is turned to ON.
- (2) With the driver’s seat belt fastened, press the trip meter knob three times.
- (3) Unfasten the driver’s seat belt, and then press the trip meter knob three times.
- (4) Fasten the driver’s seat belt again, and then press the trip meter knob three times.

NOTE:

- When the self-diagnosis function operates, the warning light, indicator light, and LCD/TFT display checks are performed. After that, the buzzer will sound for 0.5 seconds every time the trip meter knob is pressed, and operation checks are performed in the order of meter indicator needle operation, meter indicator needle indication, and LCD/TFT. Turn the ignition switch to OFF to cancel the self-diagnosis function.
- When the engine starts during diagnosis, the self-diagnosis function is not cancelled, however, once the vehicle starts driving, the self-diagnosis function is deactivated automatically.

2) Go to “Check meter indicator operation”.

Check meter operation, warning light, indicator light, illumination and LCD/TFT.

NOTE:

- After “_S_1” is displayed on the LCD/TFT, the meter indicator operation check mode is initiated.
- Each of the meter indicator operation display and LCD/TFT display switches every 6 seconds.

Meter indicator	LCD/TFT display, illumination	Warning light/ indicator light
MIN indication ↓	ILL1 (Min. brightness) ↓*4	*1, *2, *3
MAX indication	ILL6 (Max. brightness)	
MAX indication ↓	ILL6 (Max. brightness) ↓*4	
MIN indication	ILL1 (Min. brightness)	

*1: Warning lights and indicator lights controlled by the meter drive circuit are illuminated. <Ref. to IDI-2, SPECIFICATION, General Description.>

*2: Warning lights and indicator lights controlled by other module are turned on/off according to the module control. <Ref. to IDI-2, SPECIFICATION, General Description.>

*3: Engine coolant temperature warning light illuminates in red.

*4: Display for one second for each level.

3) Press the trip meter knob once.

Combination Meter System

INSTRUMENTATION/DRIVER INFO

4) Go to “Meter Indicator Needle Indication Check”.

Check meter operation, warning light, indicator light, and LCD/TFT.

NOTE:

- Meter indicator switches every 1.5 seconds for each indication.
- ILL indication illuminates at the same brightness as when entering “Meter Indicator Needle Indication Check”.
- During operation, “_S_2” is displayed on the LCD/TFT trip display.

Speedometer (km/h)	Tachometer (r/min)	ECO gauge	Warning light/ indicator light
0	0	Lowest point	*1, *2, *3
0	0	–Max	
40	1,000	0	
100	4,000	+Max	
40	1,000	0	
0	0	–Max	

*1: Warning lights and indicator lights controlled by the meter drive circuit go off. <Ref. to IDI-2, SPECIFICATION, General Description.>

*2: Warning lights and indicator lights controlled by other module are turned on/off according to the module control. <Ref. to IDI-2, SPECIFICATION, General Description.>

*3: Engine coolant temperature indicator light illuminates in blue.

5) Press the trip meter knob once.

6) Go to “Check LCD/TFT display”.

Check the LCD/TFT display.

NOTE:

- After “_S_3” is displayed on the LCD/TFT, the LCD/TFT display check mode is initiated.
- LCD/TFT display switches every 1 second.
- Warning lights and indicator lights controlled by the meter drive circuit go off. <Ref. to IDI-2, SPECIFICATION, General Description.>
- Warning lights and indicator lights controlled by other module are turned on/off according to the module control. <Ref. to IDI-2, SPECIFICATION, General Description.>
- The meter indication remains at the same level as “Meter Indicator Needle Indication Check”.
- ILL indication illuminates at ILL6 level (max. brightness).
- After No. 14 is displayed in the illumination order, display is repeated from No. 1 again. (models with normal meters)
- After No. 8 is displayed in the illumination order, display is repeated from No. 1 again. (Model with color TFT meter)
- The version display contents of the illumination order No. 1 varies depending on the vehicle. (Model with color TFT meter)

2. DEMONSTRATION MODE (MODEL WITH COLOR TFT METER)

The demonstration mode screen of the combination meter can be displayed according to the following procedure.

CAUTION:

- Perform the steps while the ignition switch is OFF (ACC OFF) and the odo/trip meter is not displayed.
- To avoid battery discharge, perform the operation under the following condition.
 - Perform the operation while the battery is being charged.
 - While performing the operation and displaying the demonstration mode, close all doors and do not operate any electrical parts.
- If the battery voltage is low, the demonstration mode is not initiated.
- To display the demonstration mode, set the “Demonstration mode permission / fault permission” of the user customize mode to “permission”. For operation procedures, refer to “Application help”.
- When the demonstration mode display is completed, make sure to set “Demonstration mode permission / fault permission” of the user customize mode to “fault permission”. Do not deliver the vehicle to the customer with “Demonstration mode permission / fault permission” set to “permission”.
- Even if the backup fuse is removed, the demonstration mode can be initiated.

1) Procedure

CAUTION:

Perform the steps described in (1) through (4) within 10 seconds.

- (1) Press the trip meter knob twice.

NOTE:

When the trip meter knob is pressed once, the odo/trip meter is displayed.

- (2) Press the MID (i/SET) switch three times within three seconds after the operation (1) above is performed.
- (3) Press the trip meter knob once, and press the MID (i/SET) switch three times.
- (4) Press the trip meter knob once, and press the MID (i/SET) switch three times.

2) The “demonstration mode” is initiated.

CAUTION:

If the procedure is not performed properly, stop the operation and wait until the odo/trip meter display disappears (for approx. 10 seconds), and then perform the procedure from (1) to (4) again after confirming that the display disappeared.

NOTE:

The demonstration mode will be cancelled in the following condition.

When resuming the operation after cancellation, the demonstration mode is displayed, however, for the model with keyless access with push button start, the resuming can only be accepted after approx. 1 minute.

- At the completion of the “goodbye screen” display that is shown 60 minutes after the demonstration mode is initiated
- When the ignition switch is turned to ON
- When the MID (i/SET) switch is turned to ON for two seconds
- When the battery voltage is low
- When the push button ignition switch is pressed with the access key out of the passenger room (model with keyless access with push button start)
- When any request switch is pressed with the access key in the passenger room (model with keyless access with push button start)

D: INSPECTION

Refer to “Basic Diagnostic Procedure” of “INSTRUMENTATION/DRIVER INFO (DIAGNOSTICS)” section.
<Ref. to IDI(diag)-2, Basic Diagnostic Procedure.>

E: NOTE

For procedure of each component in the combination meter system, refer to the respective section.

- Combination meter assembly: <Ref. to IDI-18, Combination Meter.>
- Speedometer: <Ref. to IDI-21, Speedometer.>
- Tachometer: <Ref. to IDI-22, Tachometer.>
- FUEL meter: <Ref. to IDI-23, Fuel Gauge.>
- ECO gauge: <Ref. to IDI-24, ECO Gauge.>

Multi-function Display (MFD) System

INSTRUMENTATION/DRIVER INFO

4. Multi-function Display (MFD) System

A: WIRING DIAGRAM

Refer to “Multi-function Display (MFD) System” in WI section. <Ref. to WI-168, WIRING DIAGRAM, Multi-function Display (MFD) System.>

B: ELECTRICAL SPECIFICATION

1. MULTI FUNCTION DISPLAY

- Standard type

IDI00472

Terminal No.	Item	Measuring condition	Standard
1 (+B) ↔ Chassis ground	Voltage	Always	10 — 14 V
2 (GND) ↔ Chassis ground	Resistance	Always	Less than 1 Ω
3 (IG) ↔ Chassis ground	Voltage	IG OFF → ON	0 V → 10 — 14 V
9 (U-ART com.)	—	Cannot be measured	—
10 ↔ Chassis ground	Voltage	Passenger's airbag ON indicator light OFF → ON	0 V → 1.5 V
11 ↔ Chassis ground	Voltage	Passenger's airbag OFF indicator light OFF → ON	0 V → 1.5 V

- High grade type

Refer to “Control Module I/O Signal” of “INSTRUMENTATION/DRIVER INFO (DIAGNOSTICS)” section. <Ref. to IDI(diag)-7, ELECTRICAL SPECIFICATION, Control Module I/O Signal.>

C: OPERATION

1. DIAGNOSTIC MODE (HIGH GRADE TYPE ONLY)

The settings of the multi-function display can be changed by performing the following procedures to display the diagnostic mode. To show the demonstration display only, refer to “DEMONSTRATION DISPLAY”.

CAUTION:

- To avoid battery discharge, perform the procedure while charging the battery.
- While performing the work, close the front hood and all doors, and do not operate any electrical parts.
- Display can not be switched to diagnostic mode if the illumination control dial is set to the position for the dimming cancel function (maximum brightness).

1) Procedure

CAUTION:

Perform the steps described in (2) through (4) within 10 seconds.

- (1) Turn the ignition switch to ON, and within 3 seconds, turn the lighting switch to Switch 1 (TAIL/PARKING) or Switch 2 (HEAD).
- (2) While keeping the lighting switch to Switch 1 (TAIL/PARKING) or Switch 2 (HEAD) position, press the MFD (ENTER) switch three times.
- (3) Turn the lighting switch to OFF, and press the MFD (ENTER) switch three times.
- (4) Turn the lighting switch to Switch 1 (TAIL/PARKING) or Switch 2 (HEAD) position again, and press the MFD (ENTER) switch three times.

NOTE:

- Except for the demonstration display setting of the diagnostic mode, the display will terminate by turning the ignition switch to OFF (ACC OFF) or by selecting “Back” from the menu screen.
- The demonstration display setting of the diagnostic mode will terminate by starting the engine or removing the battery. Even if the ignition switch is turned to OFF (ACC OFF), then to ON again, the diagnostic mode will not terminate.
- To select other menus from the demonstration display setting, terminate the diagnostic mode by starting the engine or removing the battery, then access to the diagnostic mode again.

2) Display menu

Change the display and settings from each menu.

Menu	Item	Content
Demonstration display setting	—	Shows demonstration display.
Vehicle status confirmation	• CAN communication	Displays the connection status of input signals.
	• U-ART communication	
	• Camera connection	
Customize	• Key operation sound	Select “ON” or “OFF”, then select “Set” to determine.
	• Correction of lifetime fuel economy value*	Adjust the fuel economy value within the range of -10 — +10 km/l, then determine the value with MFD (ENTER) switch.
Back	—	Finish the diagnostic mode.

*: Correction of lifetime fuel economy value is used only when the multi-function display has been replaced. This function is provided as a compensation feature to bring the current lifetime fuel economy value to the one before the replacement of multi-function display.

Multi-function Display (MFD) System

INSTRUMENTATION/DRIVER INFO

2. DEMONSTRATION SCREEN DISPLAY (HIGH GRADE TYPE ONLY)

The demonstration screen can be displayed according to the following procedure.

CAUTION:

- Perform the steps while the ignition switch is OFF (ACC OFF).
- To avoid battery discharge, perform the operation under the following condition.
 - Perform the operation while the battery is being charged.
 - While performing the operation and displaying the demonstration mode, do not operate any electrical parts.

1) Procedure

CAUTION:

Perform the steps described in (2) through (5) within 10 seconds.

- (1) Sit in the driver's seat and close the door.
 - (2) Open the driver's door, and within 5 seconds, press the MFD (ENTER) switch three times.
 - (3) Close the driver's door, and press the MFD (ENTER) switch three times.
 - (4) Open the driver's door, and press the MFD (ENTER) switch three times.
 - (5) Close the driver's door, and press the MFD (ENTER) switch three times.
- 2) Go to "Demonstration screen display".

NOTE:

The demonstration display will be cancelled in any of the following conditions.

- When 60 minutes elapsed since the demonstration mode started
- When the ignition switch is turned to ON
- When the MFD (ENTER) switch is turned to ON for two seconds
- When the battery voltage is low

3. ODO FUEL ECONOMY VALUE RESET (HIGH GRADE TYPE ONLY)

Follow the procedure below to initialize the ODO setting value.

- 1) Turn the ignition switch to ON, and press the MFD (ENTER) switch for two seconds.
- 2) Select "Factory delivery setting" from "Setting screen".
- 3) Select "ODO setting reset" and determine with "Yes".
- 4) The screen that indicates the completion of the setting is displayed for three seconds. This is the end of operation.

NOTE:

- The resetting operation is confirmed twice. Select confirmation according to the screen.
- The display will terminate by turning the ignition switch to OFF (ACC OFF) or by selecting "Back" from the menu screen.

Multi-function Display (MFD) System

INSTRUMENTATION/DRIVER INFO

D: INSPECTION

- Standard type

Refer to the following inspection steps. <Ref. to IDI-15, SYMPTOM CHART, INSPECTION, Multi-function Display (MFD) System.>

- High grade type

Refer to “Basic Diagnostic Procedure” of “INSTRUMENTATION/DRIVER INFO (DIAGNOSTICS)” section. <Ref. to IDI(diag)-2, Basic Diagnostic Procedure.>

1. SYMPTOM CHART

Symptoms	Repair order	Note
No display is shown.	1. Power supply 2. Ground circuit 3. Communication circuit harness 4. MFD	<Ref. to IDI-15, CHECK POWER SUPPLY AND GROUND CIRCUIT AND COMMUNICATION CIRCUIT, INSPECTION, Multi-function Display (MFD) System.>
Ambient air temperature/fuel economy displays do not appear.	1. Power supply 2. Ground circuit 3. MFD	<Ref. to IDI-16, CHECK CLOCK SYSTEM COMMUNICATION CIRCUIT, INSPECTION, Multi-function Display (MFD) System.>
Only ambient air temperature display is not displayed.	1. Power supply 2. Harness 3. Ambient sensor 4. Communication circuit 5. MFD	<Ref. to IDI-16, CHECK AMBIENT TEMPERATURE METER SYSTEM COMMUNICATION CIRCUIT, INSPECTION, Multi-function Display (MFD) System.>
Only fuel economy display is not displayed.	1. Setting 2. MFD	<Ref. to IDI-17, CHECK COMMUNICATION CIRCUIT OF FUEL ECONOMY SYSTEM, INSPECTION, Multi-function Display (MFD) System.>

2. CHECK POWER SUPPLY AND GROUND CIRCUIT AND COMMUNICATION CIRCUIT

Step	Check	Yes	No
1 CHECK POWER SUPPLY. 1) Disconnect the MFD connector. 2) Measure the voltage between MFD connector and chassis ground. Connector & terminal (i122) No. 1 (+) — Chassis ground (-):	Is the voltage 10 V or more?	Go to step 2.	Check the harness for open or short between the fuse and MFD.
2 CHECK GROUND CIRCUIT. Measure the resistance between MFD connector and chassis ground. Connector & terminal (i122) No. 2 — Chassis ground:	Is the resistance less than 10 Ω?	Go to step 3.	Repair or replace the harness.
3 CHECK HARNESS BETWEEN MFD AND COMBINATION METER ASSEMBLY. 1) Disconnect the connector of combination meter assembly. 2) Check the harness between MFD and combination meter assembly. Connector & terminal (i122) No. 9 — (i10) No. 28:	Is harness normal?	Go to step 4.	Repair or replace the harness.
4 CHECK MFD. 1) Remove the MFD. 2) Attach the clock to another vehicle on which the clock display operates normally, and check its operation.	Is MFD normal?	Replace the meter-main assembly. <Ref. to IDI-18, Combination Meter.>	Replace the MFD.

Multi-function Display (MFD) System

INSTRUMENTATION/DRIVER INFO

3. CHECK CLOCK SYSTEM COMMUNICATION CIRCUIT

Step	Check	Yes	No
1 CHECK POWER SUPPLY. 1) Disconnect the MFD connector. 2) Turn the ignition switch to ON. 3) Measure the voltage between MFD connector and chassis ground. Connector & terminal (i122) No. 3 (+) — Chassis ground (-):	Is the voltage 10 V or more?	Go to step 2.	Repair or replace the harness.
2 CHECK GROUND CIRCUIT. Measure the resistance between MFD connector and chassis ground. Connector & terminal (i122) No. 2 — Chassis ground:	Is the resistance less than 10 Ω ?	Go to step 3.	Repair or replace the harness.
3 CHECK MFD. 1) Remove the MFD. 2) Attach the clock to another vehicle on which the clock display operates normally, and check its operation.	Is the MFD normal?	Repair the poor contact of connector.	Replace the MFD.

4. CHECK AMBIENT TEMPERATURE METER SYSTEM COMMUNICATION CIRCUIT

Step	Check	Yes	No
1 CHECK AMBIENT SENSOR POWER SUPPLY. 1) Disconnect the ambient sensor connector. 2) Turn the ignition switch to ON. 3) Measure the voltage between the ambient sensor connector and chassis ground. Connector & terminal (F78) No. 1 (+) — Chassis ground (-):	Is the voltage 4 V or more?	Go to step 2.	Check the harness for open or short between the fuse and MFD.
2 CHECK HARNESS BETWEEN AMBIENT SENSOR AND COMBINATION METER ASSEMBLY. 1) Disconnect the connector of combination meter assembly. 2) Check harness between ambient sensor and combination meter assembly. Connector & terminal (F78) No. 1 — (i10) No. 27: (F78) No. 2 — (i10) No. 36:	Is harness normal?	Go to step 3.	Repair or replace the harness.
3 CHECK AMBIENT SENSOR. Check the ambient sensor. <Ref. to AC-68, INSPECTION, Ambient Sensor.>	Is the ambient sensor operating properly?	Go to step 4.	Replace the ambient sensor.
4 CHECK AMBIENT TEMPERATURE DISPLAY. 1) Connect the combination meter assembly connector. 2) Install the 3 k Ω resistance between connector terminals of the ambient sensor. 3) Turn the ignition switch to ON. Connector & terminal (F78) No. 1 — No. 2:	Does the ambient temperature display 25°C (77°F)?	Repair the poor contact between the ambient sensor and harness connector.	Go to step 5.
5 CHECK CURRENT DATA. Using the Subaru Select Monitor, display the data of «Ambient Air Temperature». NOTE: For detailed operation procedures, refer to “Application help”.	Is the ambient temperature of 25°C (77°F) output?	Go to step 6.	Replace the meter-main assembly. <Ref. to IDI-18, Combination Meter.>

Multi-function Display (MFD) System

INSTRUMENTATION/DRIVER INFO

Step	Check	Yes	No
6 CHECK MFD. 1) Remove the MFD. 2) Attach the ambient temperature display to another vehicle on which the ambient temperature display operates normally to check its operation.	Does the ambient temperature display 25°C (77°F)?	Replace the MFD.	Replace the meter - main assembly. <Ref. to IDI-18, Combination Meter.>

5. CHECK COMMUNICATION CIRCUIT OF FUEL ECONOMY SYSTEM

Step	Check	Yes	No
1 CHECK FUEL ECONOMY DISPLAY OFF MODE. Check that the mode display changes when the MFD changeover knob is operated. (Display changes in the following order: cruising distance → average fuel economy → instantaneous fuel economy → continuous driving time → average vehicle speed → blank display)	Is fuel economy displayed?	MFD is normal.	Go to step 2.
2 CHECK MFD. 1) Remove the MFD. 2) Attach the fuel economy display to another vehicle on which the fuel economy display operates normally to check its operation.	Is the fuel economy display correct?	Replace the meter - main assembly. <Ref. to IDI-18, Combination Meter.>	Replace the MFD.

E: NOTE

For procedure of each component in the Multi-Function Display (MFD) system, refer to the respective section.

- Multi-function display: <Ref. to IDI-25, MULTI FUNCTION DISPLAY, REMOVAL, Multi-function Display (MFD).>
- Multi-function display switch: <Ref. to IDI-26, MULTI-FUNCTION DISPLAY SWITCH, REMOVAL, Multi-function Display (MFD).>

Combination Meter

INSTRUMENTATION/DRIVER INFO

5. Combination Meter

A: REMOVAL

- 1) Disconnect the ground cable from battery. <Ref. to NT-6, BATTERY, NOTE, Note.>
- 2) Release the lock, tilt the steering column to the lowest end and fully extend the column by the telescopic system.
- 3) Release the screws, clips and claws, and remove the visor - combination meter.

- 4) Remove the combination meter assembly.

CAUTION:

- Be careful not to damage the meter or instrument panel.
- Pay particular attention to avoid damaging the meter glass.

- (1) Remove the screws.

- (2) Pull the combination meter assembly toward you and disconnect the connector.

B: INSTALLATION

CAUTION:

- Make sure the electrical connector is connected securely.
- Make sure that each meter operates normally.
- When the combination meter assembly has been replaced, be sure to perform the following operations.
 - For models without the keyless access with push button start except for C5, be sure to perform the registration of immobilizer system. For detailed operation procedure, refer to “Type B” described in “REGISTRATION MANUAL FOR IMMOBILIZER”.
 - Be sure to reset the ODO fuel economy value of the multi-function display (MFD). (High grade type) <Ref. to IDI-14, ODO FUEL ECONOMY VALUE RESET (HIGH GRADE TYPE ONLY), OPERATION, Multi-function Display (MFD) System.>

Install each part in the reverse order of removal.

Combination Meter

INSTRUMENTATION/DRIVER INFO

C: DISASSEMBLY

CAUTION:

- Use gloves to avoid damage and getting fingerprints on the glass surface and meter surfaces.
- Be careful not to apply excessive force to the trip knob.
- Be sure not to touch the meter indicator needle.
- Because LEDs are used for all of warning lights and indicator lights, they are not removable from the meter - main assembly.

1) Release the claws, and then remove the glass - combination meter.

2) Release the claws, and then remove the visor - combination meter.

D: ASSEMBLY

Assemble each part in the reverse order of disassembly.

6. Speedometer

A: SPECIFICATION

Since the meter - main assembly cannot be disassembled, do not remove or inspect the speedometer alone.
(Do not remove the cover on the back surface.)

Tachometer

INSTRUMENTATION/DRIVER INFO

7. Tachometer

A: SPECIFICATION

Since the meter - main assembly cannot be disassembled, do not remove or inspect the tachometer alone. (Do not remove the cover on the back surface.)

8. Fuel Gauge

A: SPECIFICATION

Since the meter - main assembly cannot be disassembled, do not remove or inspect the fuel gauge alone. (Do not remove the cover on the back surface.)

9. ECO Gauge

A: SPECIFICATION

Since the meter - main assembly cannot be disassembled, do not remove or inspect the ECO gauge alone. (Do not remove the cover on the back surface.)

10. Multi-function Display (MFD)

A: REMOVAL

1. MULTI FUNCTION DISPLAY

- 1) Disconnect the ground cable from battery. <Ref. to NT-6, BATTERY, NOTE, Note.>
- 2) Remove the center grille assembly. <Ref. to AC-86, CENTER GRILLE ASSEMBLY, REMOVAL, Air Vent Grille.>
- 3) Release the claw and hook, and then remove the cover center UPR.

EI-03441

NOTE:

Lightly push up the back of the cover center UPR, hook the finger to the end portion and pull it toward you to remove it.

- 4) Remove the multi-function display.

CAUTION:

Be careful not to damage the multi-function display or instrument panel.

- (1) Release the screws and claws.
- (2) Pull the multi-function display assembly toward you, and disconnect the connector.

EI-03440

Multi-function Display (MFD)

INSTRUMENTATION/DRIVER INFO

- (3) Remove the screw, and remove the multi-function display from the panel - display.

2. MULTI-FUNCTION DISPLAY SWITCH

- 1) Disconnect the ground cable from battery. <Ref. to NT-6, BATTERY, NOTE, Note.>
- 2) Remove the center grille assembly. <Ref. to AC-86, CENTER GRILLE ASSEMBLY, REMOVAL, Air Vent Grille.>
- 3) Release the claws and remove the switch - multi-function display.

B: INSTALLATION

CAUTION:

- Make sure the electrical connector is connected securely.
- Make sure that the multi-function display (MFD) operates normally.
- After installing the center grille assembly, check that the air vent grille of the center grille assembly is inserted correctly into the air vent duct.
- When the multi-function display has been replaced, perform the following operations.
 - Be sure to reset the ODO fuel economy value of the multi-function display (MFD). (High grade type) <Ref. to IDI-14, ODO FUEL ECONOMY VALUE RESET (HIGH GRADE TYPE ONLY), OPERATION, Multi-function Display (MFD) System.>
 - Be sure to correction the lifetime fuel economy value of the multi-function display (MFD). (High grade type) <Ref. to IDI-13, DIAGNOSTIC MODE (HIGH GRADE TYPE ONLY), OPERATION, Multi-function Display (MFD) System.>

Install each part in the reverse order of removal.

C: INSPECTION

1. MULTI-FUNCTION DISPLAY SWITCH

1) Measure the resistance between connector terminals.

Preparation tool:
Circuit tester

IDI00773

Terminal No.	Inspection conditions		Standard
2 — 3	△ (UP) ENTER ▽ (DOWN)	All OFF	1 MΩ or more
	△ (UP)	ON	Less than 1 Ω
	ENTER	ON	Approx. 1,000 Ω
	▽ (DOWN)	ON	Approx. 3,670 Ω

2) Apply battery voltage between the connector terminals to check lighting condition of illumination inside the switch.

Terminal No.	Inspection conditions	Specification
4 (+) — 1 (-)	Apply battery voltage.	Light ON

3) If the inspection result is not within the standard, replace the switch - multi-function display.

Steering Switch

INSTRUMENTATION/DRIVER INFO

11. Steering Switch

A: REMOVAL

CAUTION:

Before handling the airbag system components, refer to “CAUTION” of “General Description” in “AIRBAG SYSTEM”. <Ref. to AB-9, CAUTION, General Description.>

- 1) Set the tire to the straight-ahead position.
- 2) Disconnect the ground cable from battery and wait for at least 60 seconds before starting work. <Ref. to NT-6, BATTERY, NOTE, Note.>
- 3) Remove the driver’s airbag module. <Ref. to AB-32, REMOVAL, Driver’s Airbag Module.>
- 4) Remove the steering wheel. <Ref. to PS-8, REMOVAL, Steering Wheel.>
- 5) Remove the MID switch. <Ref. to PS-9, DISASSEMBLY, Steering Wheel.>

B: INSTALLATION

CAUTION:

• Before handling the airbag system components, refer to “CAUTION” of “General Description” in “AIRBAG SYSTEM”. <Ref. to AB-9, CAUTION, General Description.>

- Do not allow harness and connectors to interfere or get tangled up with other parts.
- If the steering wheel has been removed, make sure that the steering roll connector is not turned from the original position.
- If the steering wheel and steering angle sensor (steering roll connector) are removed, perform the VDC setting mode. <Ref. to VDC-23, ADJUSTMENT, VDC Control Module and Hydraulic Control Unit (VDCCM&H/U).>
- Securely install the switch. Improper insertion of the pin or claw of the switch may cause improper installation.

- 1) Align the center position of the steering roll connector. <Ref. to AB-62, ADJUSTMENT, Roll Connector.>
- 2) Install each part in the reverse order of removal.

NOTE:

Align the alignment marks on the steering wheel and the column assembly - steering.

Tightening torque:

Steering wheel: 39 N·m (3.98 kgf·m, 28.8 ft·lb)

Clearance:

Between cover assembly - column and steering wheel: 4 — 6 mm (0.16 — 0.24 in)

C: INSPECTION

1) Measure the resistance between switch terminals.

Preparation tool:
Circuit tester

IDI00805

Terminal No.	Inspection conditions		Standard
3 — 2	△ (UP) i/SET ▽ (DOWN)	All OFF	Approx. 1 MΩ or more
	△ (UP)	ON	Less than 1 Ω
	i/SET	ON	Approx. 1,000 Ω
	▽ (DOWN)	ON	Approx. 3,670 Ω

2) Apply battery voltage between the connector terminals to check lighting condition of illumination inside the switch.

Terminal No.	Inspection conditions	Specification
4 (+) — 1 (-)	Apply battery voltage.	Light ON

3) Replace the MID switch if the inspection result is not within the standard value.

General Description

INSTRUMENTATION/DRIVER INFO (DIAGNOSTICS)

3. General Description

A: CAUTION

1. AIRBAG SYSTEM

CAUTION:

- Do not use the electrical test equipment on the airbag system wiring harnesses and connector circuits.
- Be careful not to damage the airbag system wiring harness.

B: INSPECTION

Before performing the diagnosis, check the following items which may cause problems relating the wiper or light.

- 1) Check the battery. <Ref. to SC(H4DO)-51, Battery.>
- 2) Check the fuse condition.
- 3) Check the connecting condition of harness and harness connector.

C: PREPARATION TOOL

6. Subaru Select Monitor

A: OPERATION

- For detailed operation procedures, refer to “Application help”.
- If the combination meter or MFD can not communicate with Subaru Select Monitor, perform the “Communication for Initializing Impossible”. <Ref. to IDI(diag)-9, INSPECTION, Subaru Select Monitor.>

If the DTCs related to the LAN system are not displayed, perform the inspection by connecting the Subaru Select Monitor to another vehicle which is operating properly and by establishing the communication.

B: INSPECTION

1. COMMUNICATION FOR INITIALIZING IMPOSSIBLE (COMBINATION METER)

Detecting condition:

- Defective harness connector
- Power supply circuit malfunction
- Defective combination meter
- Defective CAN communication circuit
- Defective Subaru Select Monitor

Trouble symptom:

Communication is impossible between combination meter and Subaru Select Monitor.

Wiring diagram:

- Combination meter system <Ref. to WI-76, WIRING DIAGRAM, Combination Meter System.>
- CAN communication system <Ref. to WI-68, WIRING DIAGRAM, CAN Communication System.>

Step	Check	Yes	No
1	CHECK OTHER COMMUNICATION. Communicate with the system other than the combination meter using the Subaru Select Monitor.	Go to step 2.	Perform the “Communication for Initializing Impossible” of LAN system. <Ref. to LAN(diag)-11, COMMUNICATION FOR INITIALIZING IMPOSSIBLE, Subaru Select Monitor.>

Subaru Select Monitor

INSTRUMENTATION/DRIVER INFO (DIAGNOSTICS)

Step	Check	Yes	No
2 CHECK DTC. Read the DTC of the LAN system using the Subaru Select Monitor. <Ref. to LAN(diag)-31, OPERATION, Read Diagnostic Trouble Code (DTC).>	Is DTC detected?	Perform the diagnosis according to DTC.	Go to step 3.
3 CHECK COMBINATION METER. 1) Turn the ignition switch to OFF. 2) Disconnect the connector of combination meter. 3) Connect the disconnected connectors. 4) Communicate with the combination meter using the Subaru Select Monitor.	Is communication possible?	It is possible that temporary poor communication occurs.	Replace the combination meter. <Ref. to IDI-18, Combination Meter.>

2. COMMUNICATION FOR INITIALIZING IMPOSSIBLE (MFD)

Detecting condition:

- Defective harness connector
- Power supply circuit malfunction
- Defective MFD
- Defective CAN communication circuit
- Defective Subaru Select Monitor

Trouble symptom:

Communication is impossible between MFD and Subaru Select Monitor.

Wiring diagram:

- Multi-function display (MFD) system <Ref. to WI-168, WIRING DIAGRAM, Multi-function Display (MFD) System.>
- CAN communication system <Ref. to WI-68, WIRING DIAGRAM, CAN Communication System.>

IDI00428

Subaru Select Monitor

INSTRUMENTATION/DRIVER INFO (DIAGNOSTICS)

Step	Check	Yes	No
1 CHECK OTHER COMMUNICATION. Communicate with the system other than the MFD using the Subaru Select Monitor.	Is the communication to other control module possible?	Go to step 2.	Perform the “Communication for Initializing Impossible” of LAN system. <Ref. to LAN(diag)-11, COMMUNICATION FOR INITIALIZING IMPOSSIBLE, Subaru Select Monitor.>
2 CHECK DTC. Read the DTC of the LAN system using the Subaru Select Monitor. <Ref. to LAN(diag)-31, OPERATION, Read Diagnostic Trouble Code (DTC).>	Is DTC detected?	Perform the diagnosis according to DTC.	Go to step 3.
3 CHECK MFD. 1) Turn the ignition switch to OFF. 2) Disconnect the MFD connector. 3) Connect the disconnected connectors. 4) Communicate with the MFD using the Subaru Select Monitor.	Is communication possible?	It is possible that temporary poor communication occurs.	Replace the MFD. <Ref. to IDI-25, Multi-function Display (MFD).>

Read Diagnostic Trouble Code (DTC)

INSTRUMENTATION/DRIVER INFO (DIAGNOSTICS)

7. Read Diagnostic Trouble Code (DTC)

A: OPERATION

1. COMBINATION METER

- 1) On «Start» display, select «Diagnosis».
- 2) On «Vehicle selection» display, input the target vehicle information and select «Confirmed».
- 3) On «Main Menu» display, select «Each System».
- 4) On «Select System» display, select «Combination Meter» and then select «Enter».
- 5) On «Select Function» display, select «DTC».

NOTE:

- For detailed operation procedures, refer to “Application help”.
- For details concerning DTC, refer to “List of Diagnostic Trouble Code (DTC)”. <Ref. to IDI(diag)-23, List of Diagnostic Trouble Code (DTC).>

2. MFD

- 1) On «Start» display, select «Diagnosis».
- 2) On «Vehicle selection» display, input the target vehicle information and select «Confirmed».
- 3) On «Main Menu» display, select «Each System».
- 4) On «Select System» display, select «Multi-function Display», and then select «Enter».
- 5) On «Select Function» display, select «DTC».

NOTE:

- For detailed operation procedures, refer to “Application help”.
- For details concerning DTC, refer to “List of Diagnostic Trouble Code (DTC)”. <Ref. to IDI(diag)-23, List of Diagnostic Trouble Code (DTC).>

8. Clear Memory Mode

A: OPERATION

1. COMBINATION METER

- 1) On «Start» display, select «Diagnosis».
- 2) On «Vehicle selection» display, input the target vehicle information and select «Confirmed».
- 3) On «Main Menu» display, select «Each System».
- 4) On «Select System» display, select «Combination Meter» and then select «Enter».
- 5) On «Select Function» display, select «DTC».
- 6) On «DTC» display, select «Clear Memory».

NOTE:

For detailed operation procedures, refer to “Application help”.

2. MFD

- 1) On «Start» display, select «Diagnosis».
- 2) On «Vehicle selection» display, input the target vehicle information and select «Confirmed».
- 3) On «Main Menu» display, select «Each System».
- 4) On «Select System» display, select «Multi-function Display», and then select «Enter».
- 5) On «Select Function» display, select «DTC».
- 6) On «DTC» display, select «Clear Memory».

DTC	Item	Content	Reference
B1501	POWER SUPPLY SYSTEM ERROR DETECTION	Combination meter power supply circuit is open or shorted.	<Ref. to IDI(diag)-35, DTC B1501 POWER SUPPLY SYSTEM ERROR DETECTION, Diagnostic Procedure with Diagnostic Trouble Code (DTC).>
B1507	EXTERNAL AIR TEMPERATURE OPEN/SHORT-CIRCUIT DETECTION	External air temperature sensor circuit is open or shorted.	<Ref. to IDI(diag)-37, DTC B1507 EXTERNAL AIR TEMPERATURE OPEN/SHORT-CIRCUIT DETECTION, Diagnostic Procedure with Diagnostic Trouble Code (DTC).>

Diagnostic Procedure with Diagnostic Trouble Code (DTC)

INSTRUMENTATION/DRIVER INFO (DIAGNOSTICS)

13. Diagnostic Procedure with Diagnostic Trouble Code (DTC)

A: DTC U0073 CONTROL MODULE COMMUNICATION BUS OFF

Detected when CAN line abnormality is detected.

NOTE:

Perform the diagnosis for LAN system. <Ref. to LAN(diag)-2, PROCEDURE, Basic Diagnostic Procedure.>

B: DTC U0100 LOST COMMUNICATION WITH ECM/PCM “A”

Detected when CAN data from the engine control module (ECM) does not arrive.

NOTE:

Perform the diagnosis for LAN system. <Ref. to LAN(diag)-2, PROCEDURE, Basic Diagnostic Procedure.>

C: DTC U0101 LOST COMMUNICATION WITH TCM

Detected when CAN data from TCM does not arrive.

NOTE:

Perform the diagnosis for LAN system. <Ref. to LAN(diag)-2, PROCEDURE, Basic Diagnostic Procedure.>

D: DTC U0122 LOST COMMUNICATION WITH VEHICLE DYNAMICS CONTROL MODULE

Detected when CAN data from VDC does not arrive.

NOTE:

Perform the diagnosis for LAN system. <Ref. to LAN(diag)-2, PROCEDURE, Basic Diagnostic Procedure.>

E: DTC U0131 LOST COMMUNICATION WITH POWER STEERING CONTROL MODULE

Detected when CAN data is not received from electric power steering CM.

NOTE:

Perform the diagnosis for LAN system. <Ref. to LAN(diag)-2, PROCEDURE, Basic Diagnostic Procedure.>

F: DTC U0140 LOST COMMUNICATION WITH BODY CONTROL MODULE

Detected when CAN data is not received from body integrated unit.

NOTE:

Perform the diagnosis for LAN system. <Ref. to LAN(diag)-2, PROCEDURE, Basic Diagnostic Procedure.>

G: DTC U0151 LOST COMMUNICATION WITH RESTRAINTS CONTROL MODULE

Detected when CAN data is not received from airbag CM.

NOTE:

Perform the diagnosis for LAN system. <Ref. to LAN(diag)-2, PROCEDURE, Basic Diagnostic Procedure.>

H: DTC U0164 LOST COMMUNICATION WITH HVAC CONTROL MODULE

Detected when CAN data is not received from A/C CM.

NOTE:

Perform the diagnosis for LAN system. <Ref. to LAN(diag)-2, PROCEDURE, Basic Diagnostic Procedure.>

I: DTC U0327 SOFTWARE INCOMPATIBILITY WITH VEHICLE SECURITY CONTROL MODULE

Detected when CAN data is not received from keyless access CM.

NOTE:

Perform the diagnosis for LAN system. <Ref. to LAN(diag)-2, PROCEDURE, Basic Diagnostic Procedure.>

Diagnostic Procedure with Diagnostic Trouble Code (DTC)

INSTRUMENTATION/DRIVER INFO (DIAGNOSTICS)

J: DTC U1201 CAN-HS COUNTER ABNORMAL

Detected when CAN data is abnormal.

NOTE:

Perform the diagnosis for LAN system. <Ref. to LAN(diag)-2, PROCEDURE, Basic Diagnostic Procedure.>

Diagnostic Procedure with Diagnostic Trouble Code (DTC)

INSTRUMENTATION/DRIVER INFO (DIAGNOSTICS)

K: DTC U1650 INVALID DATA RECEIVED FROM METER (UART)

DTC DETECTING CONDITION:

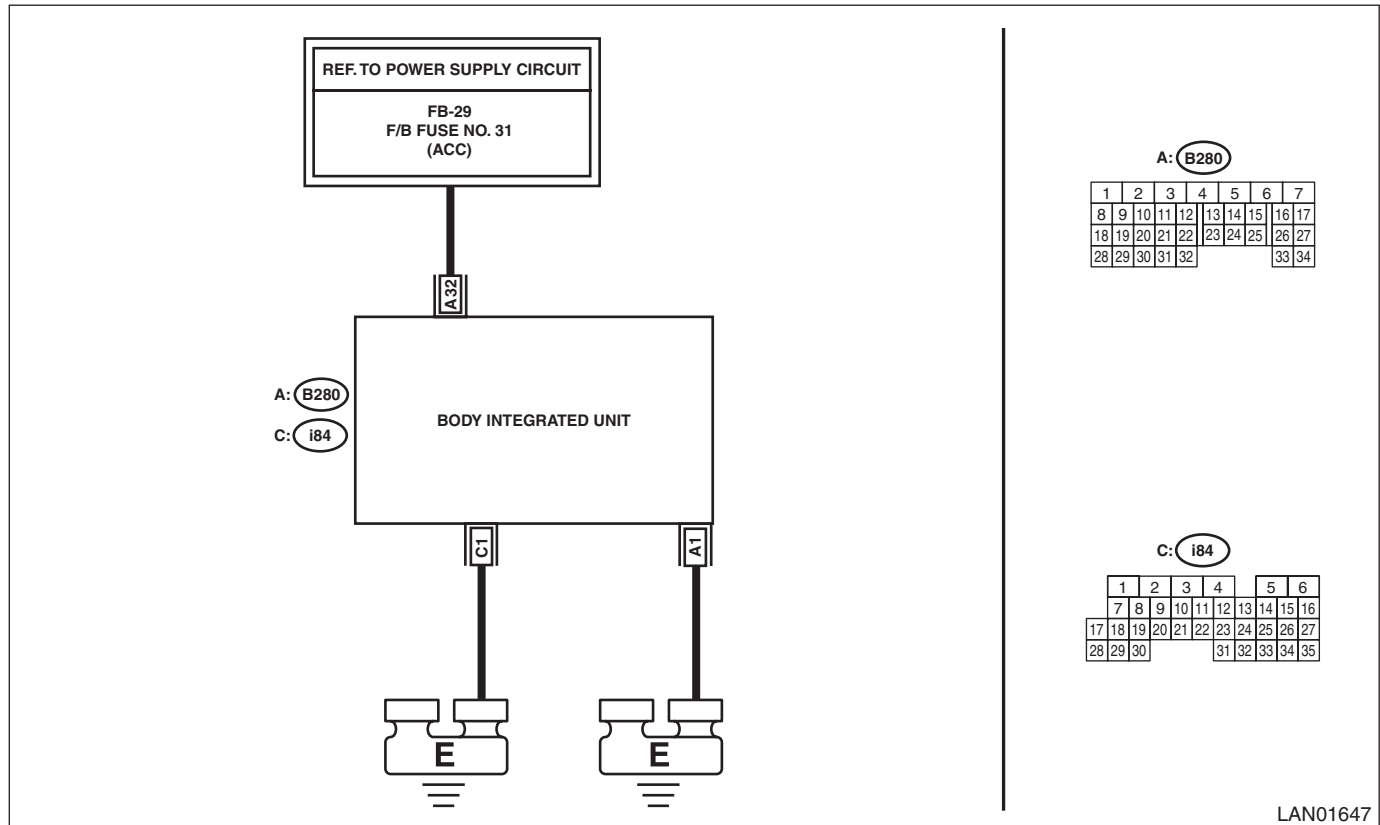

There is an abnormality in UART data from combination meter.

TROUBLE SYMPTOM:

LCD is not displayed.

WIRING DIAGRAM:

Clearance Light and Illumination Light System <Ref. to WI-71, Clearance Light and Illumination Light System.>

Step	Check	Yes	No
1 CHECK LAN SYSTEM. Read the DTC of body integrated unit and LAN system using Subaru Select Monitor. <Ref. to BC(diag)-10, Read Diagnostic Trouble Code (DTC).> <Ref. to LAN(diag)-31, Read Diagnostic Trouble Code (DTC).>	Is any DTC other than U1650 displayed?	Perform the diagnosis according to DTC.	Go to step 2.
2 CHECK FUSE. Check the fuse No. 31 in the fuse & relay box.	Is the fuse OK?	Go to step 3.	Replace the fuse. When the fuse is blown easily, check the wiring.
3 CHECK HARNESS. 1) Disconnect the body integrated unit connector. 2) Turn the ignition switch OFF → ACC. 3) Measure the voltage between body integrated unit connector and chassis ground using tester. Connector & terminal (B280) No. 32 (+) — Chassis ground (-):	Is the voltage 10 V or more?	Go to step 4.	Repair the ACC power supply circuit of the body integrated unit.

Diagnostic Procedure with Diagnostic Trouble Code (DTC)

INSTRUMENTATION/DRIVER INFO (DIAGNOSTICS)

Step	Check	Yes	No
<p>4</p> <p>CHECK CURRENT DATA OF INTEGRATED UNIT.</p> <p>1) Connect the Subaru Select Monitor. 2) Turn the ignition switch to ON. 3) Check the current data «ACC voltage» of the body integrated unit. <Ref. to BC(diag)-12, Read Current Data.></p>	<p>Is the voltage 10 V or more?</p>	<p>Go to step 5.</p>	<p>Inspect and correct the body integrated unit connector. If there is no abnormality, replace the body integrated unit. <Ref. to SL-72, Body Integrated Unit.> (There may be a poor contact in the body integrated unit connector ((B280) terminal No. 32), or an internal malfunction of the integrated unit.) (If the current data indicates ACC voltage value \approx Battery voltage, there will be no malfunction up to inside of the integrated unit. If U1650 is still detected in this condition as current malfunction, perform step 5 and subsequent procedures.)</p>
<p>5</p> <p>CHECK CONNECTOR.</p> <p>1) Disconnect the MFD connector and the combination meter connector. 2) Connect the disconnected connectors. 3) Read the DTC of the MFD using the Subaru Select Monitor. <Ref. to IDI(diag)-12, Read Diagnostic Trouble Code (DTC).></p>	<p>Is DTC U1650 a current malfunction?</p>	<p>Go to step 6.</p>	<p>There was poor contact of connector. Repair the poor contact of connector. (Poor contact in combination connector (i10) terminal No. 20 or MFD connector (i122) terminal No. 9)</p>
<p>6</p> <p>CHECK COMBINATION METER.</p> <p>1) Replace the combination meter. <Ref. to IDI-18, Combination Meter.> 2) Read the DTC of the MFD using the Subaru Select Monitor. <Ref. to IDI(diag)-12, Read Diagnostic Trouble Code (DTC).></p>	<p>Is DTC U1650 a current malfunction?</p>	<p>Replace the MFD. <Ref. to IDI-25, Multi-function Display (MFD).></p>	<p>There was something wrong with the combination meter.</p>

Diagnostic Procedure with Diagnostic Trouble Code (DTC)

INSTRUMENTATION/DRIVER INFO (DIAGNOSTICS)

L: DTC U1651 LOST COMMUNICATION WITH METER (UART)

DTC detecting condition:

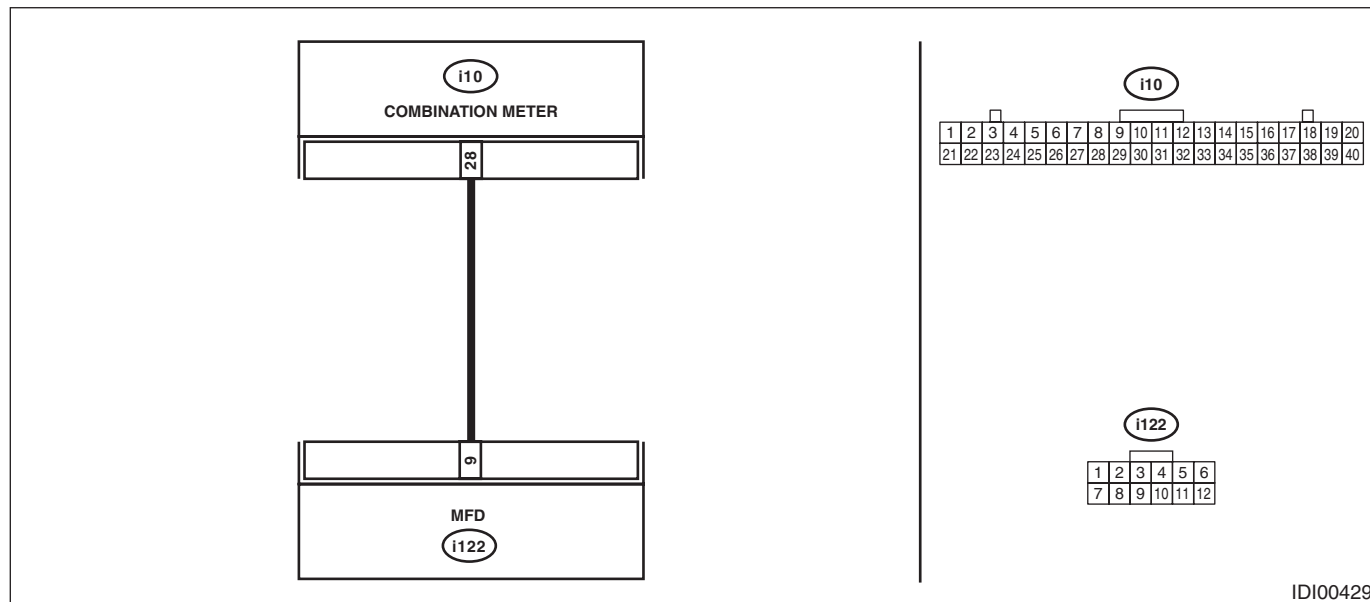

UART data from combination meter is not received.

Trouble symptom:

LCD is not displayed.

Wiring diagram:

Multi-function display (MFD) system <Ref. to WI-168, WIRING DIAGRAM, Multi-function Display (MFD) System.>

IDI00429

Step	Check	Yes	No
1 CHECK LAN SYSTEM. Read the DTC of the LAN system using the Subaru Select Monitor. <Ref. to LAN(diag)-31, OPERATION, Read Diagnostic Trouble Code (DTC).>	Are any DTCs displayed?	Perform the diagnosis according to DTC.	Go to step 2.
2 CHECK CONNECTOR. 1) Disconnect the MFD connector and combination meter connector. 2) Connect the disconnected connectors. 3) Read the DTC of the MFD using the Subaru Select Monitor. <Ref. to IDI(diag)-12, Read Diagnostic Trouble Code (DTC).>	Is DTC U1651 a current malfunction?	Go to step 3.	There was poor contact of connector.
3 CHECK HARNESS (OPEN CIRCUIT). 1) Disconnect the MFD connector and combination meter connector. 2) Using the tester, measure the resistance between terminals. Connector & terminal (i10) No. 28 — (i122) No. 9:	Is the resistance 10 Ω or less?	Go to step 4.	Repair the open circuit of harness or replace harness.
4 CHECK HARNESS (GROUND SHORT CIRCUIT). Using the tester, measure the resistance between terminals. Connector & terminal (i122) No. 9 — Chassis ground:	Is the resistance 10 Ω or less?	Repair the short circuit of harness or replace harness.	Go to step 5.

Diagnostic Procedure with Diagnostic Trouble Code (DTC)

INSTRUMENTATION/DRIVER INFO (DIAGNOSTICS)

Step	Check	Yes	No
5 CHECK COMBINATION METER. 1) Replace the combination meter. <Ref. to IDI-18, Combination Meter.> 2) Read the DTC of the MFD using the Subaru Select Monitor. <Ref. to IDI(diag)-12, Read Diagnostic Trouble Code (DTC).>	Is DTC U1651 a current malfunction?	Go to step 6.	There was something wrong with the combination meter.
6 CHECK COMBINATION METER. 1) Replace the current combination meter with the original combination meter. 2) Replace the MFD. <Ref. to IDI-25, Multi-function Display (MFD).> 3) Read the DTC of the MFD using the Subaru Select Monitor. <Ref. to IDI(diag)-12, Read Diagnostic Trouble Code (DTC).>	Is DTC U1651 a current malfunction?	Replace the combination meter. <Ref. to IDI-18, Combination Meter.>	There was an abnormality in MFD.

Diagnostic Procedure with Diagnostic Trouble Code (DTC)

INSTRUMENTATION/DRIVER INFO (DIAGNOSTICS)

M: DTC B2220 BREAK THE WIRE OF IGN

DTC detecting condition:

There was voltage malfunction caused by poor contact of IGN power supply circuits.

Trouble symptom:

Airbag indicator does not illuminate.

Wiring diagram:

Multi-function display (MFD) system <Ref. to WI-168, WIRING DIAGRAM, Multi-function Display (MFD) System.>

IDI00430

Step	Check	Yes	No
1 CHECK DTC. Read the DTC of the MFD using the Subaru Select Monitor. <Ref. to IDI(diag)-12, Read Diagnostic Trouble Code (DTC).>	Is DTC B2220 a current malfunction?	Go to step 2.	Go to step 5.
2 CHECK DTC. 1) Turn the ignition switch to OFF. 2) Disconnect the MFD connector and reconnect it. 3) Turn the ignition switch to ON. 4) Read the DTC relating the MFD using the Subaru Select Monitor. <Ref. to IDI(diag)-12, Read Diagnostic Trouble Code (DTC).>	Is DTC B2220 a current malfunction?	Go to step 3.	Go to step 5.
3 CHECK FUSE. 1) Turn the ignition switch to OFF. 2) Check the fuse.	Is the fuse OK?	Go to step 4.	Replace the defective fuse.
4 CHECK HARNESS. 1) Disconnect the MFD connector. 2) Turn the ignition switch to ON. 3) Using the tester, measure the voltage between terminals. Connector & terminal (i122) No. 3 (+) — Chassis ground (-):	Is the voltage 8.5 — 16.5 V?	Replace the MFD. <Ref. to IDI-25, Multi-function Display (MFD).>	Repair the harness between MFD and fuse.

Diagnostic Procedure with Diagnostic Trouble Code (DTC)

INSTRUMENTATION/DRIVER INFO (DIAGNOSTICS)

Step	Check	Yes	No
5 CHECK CONNECTOR. 1) Turn the ignition switch to OFF. 2) Disconnect the MFD connector.	Is there poor contact of connector?	Repair or replace the poor contact of connector.	Even if DTC is displayed, the circuit has returned to a normal condition at this time. Reproduce the failure, and then perform the diagnosis again. NOTE: In this case, temporary poor contact of connector, temporary open or short circuit of harness may be the cause.

N: DTC B2222 SYSTEM MICROCOMPUTER FAIL

DTC DETECTING CONDITION:

When the microcomputer froze.

TROUBLE SYMPTOM:

MFD does not operate.

NOTE:

Reset the MFD. If it does not return to the normal operation, replace the MFD. <Ref. to IDI-25, Multi-function Display (MFD).>

O: DTC B2223 GERDA MALFUNCTION

DTC DETECTING CONDITION:

When the system microcomputer can not send/receive the data with the image microcomputer normally.

TROUBLE SYMPTOM:

There is no display on the TFT. Operation is normal.

NOTE:

Replace the MFD. <Ref. to IDI-25, Multi-function Display (MFD).>

Diagnostic Procedure with Diagnostic Trouble Code (DTC)

INSTRUMENTATION/DRIVER INFO (DIAGNOSTICS)

P: DTC B1500 FUEL SENDER OPEN/SHORT-CIRCUIT DETECTION

DTC detecting condition:

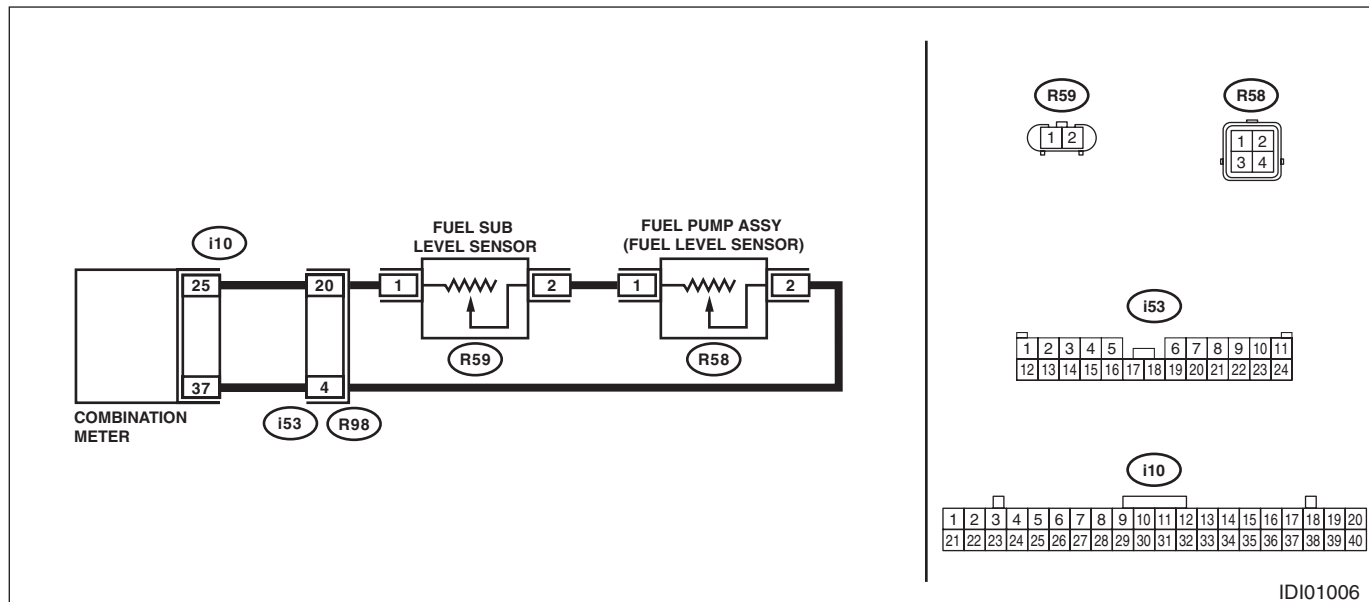

The fuel gauge circuit is open or shorted.

Trouble symptom:

- Defective fuel gauge.
- Fuel level warning light blinks.

Wiring diagram:

Fuel gauge system <Ref. to WI-139, WIRING DIAGRAM, Fuel Gauge System.>

ID101006

Step	Check	Yes	No
1	CHECK DTC. Read the DTC of the combination meter using the Subaru Select Monitor. <Ref. to IDI(diag)-12, Read Diagnostic Trouble Code (DTC).>	Is DTC B1500 a current malfunction?	Go to step 2. Go to step 7.
2	CHECK COMBINATION METER. 1) Check the operation of combination meter using Subaru Select Monitor. 2) From «Active Test», select «Fuel Meter Operation» and «Remaining fuel warning». <Ref. to IDI(diag)-18, System Operation Check Mode.>	Is the operation of combination meter OK?	Go to step 3. Replace the combination meter. <Ref. to IDI-18, Combination Meter.>
3	CHECK HARNESS (OPEN CIRCUIT). 1) Turn the ignition switch to OFF. 2) Disconnect the combination meter connector and the fuel sub level sensor connector and the fuel level sensor connector. 3) Using the tester, measure the resistance between terminals. Connector & terminal (i10) No. 25 — (R59) No. 1: (i10) No. 37 — (R58) No. 2: (R58) No. 1 — (R59) No. 2:	Is the resistance 10 Ω or less?	Go to step 4. Repair the open circuit of harness or replace harness.
4	CHECK HARNESS (GROUND SHORT CIRCUIT). Using the tester, measure the resistance between terminals. Connector & terminal (i10) No. 25 — Chassis ground: (i10) No. 37 — Chassis ground:	Is the resistance 10 Ω or less?	Repair the short circuit of harness or replace harness. Go to step 5.

Diagnostic Procedure with Diagnostic Trouble Code (DTC)

INSTRUMENTATION/DRIVER INFO (DIAGNOSTICS)

Step	Check	Yes	No
5 CHECK FUEL SUB LEVEL SENSOR. Check the fuel sub level sensor as a single part. <Ref. to FU(H4DO)-153, INSPECTION, Fuel Sub Level Sensor.>	Is the sensor normal?	Go to step 6.	Replace the sensor. <Ref. to FU(H4DO)-153, INSPECTION, Fuel Sub Level Sensor.>
6 CHECK FUEL LEVEL SENSOR. Check the fuel level sensor as a single part. <Ref. to FU(H4DO)-144, INSPECTION, Fuel Level Sensor.>	Is the sensor normal?	Go to step 7.	Replace the sensor. <Ref. to FU(H4DO)-144, INSPECTION, Fuel Level Sensor.>
7 CHECK CONNECTOR. 1) Turn the ignition switch to OFF. 2) Disconnect connectors.	Is there poor contact of connector?	Repair or replace the poor contact of connector.	Go to step 8.
8 CHECK CURRENT DATA. Using the Subaru Select Monitor, display «Fuel level resistance» from «Data monitor». <Ref. to IDI(diag)-14, Read Current Data.>	Does the data display 10—570 Ω?	Even if DTC is displayed, the circuit has returned to a normal condition at this time. Reproduce the failure, and then perform the diagnosis again. NOTE: In this case, temporary poor contact of connector, temporary open or short circuit of harness may be the cause.	Replace the combination meter. <Ref. to IDI-18, Combination Meter.>

Diagnostic Procedure with Diagnostic Trouble Code (DTC)

INSTRUMENTATION/DRIVER INFO (DIAGNOSTICS)

Q: DTC B1501 POWER SUPPLY SYSTEM ERROR DETECTION

DTC detecting condition:

Open or short in combination meter power supply circuit

Trouble symptom:

Defective operation of combination meter

Wiring diagram:

Combination meter system <Ref. to WI-76, WIRING DIAGRAM, Combination Meter System.>

Step	Check	Yes	No
1 CHECK POWER SUPPLY CIRCUIT. Turn the ignition switch to ON, and confirm that the illumination of combination meter lights.	Does the illumination light?	Go to step 2.	Go to step 3.
2 CHECK DTC. Read the DTC of the combination meter using the Subaru Select Monitor. <Ref. to IDI(diag)-12, Read Diagnostic Trouble Code (DTC).>	Is DTC B1501 a current malfunction?	Go to step 3.	Go to step 5.
3 CHECK FUSE. 1) Turn the ignition switch to OFF. 2) Check the fuse. <Ref. to IDI-6, Relay and Fuse.>	Is the fuse OK?	Go to step 4.	Replace the defective fuse.
4 CHECK HARNESS. 1) Turn the ignition switch to OFF. 2) Disconnect the combination meter connector. 3) Using the tester, measure the voltage between terminals. Connector & terminal (i10) No. 20 (+) — Chassis ground (-): (i10) No. 40 (+) — Chassis ground (-):	Is the voltage 8.5 — 16.5 V?	Go to step 5.	Repair the open circuit of harness or replace harness.

Diagnostic Procedure with Diagnostic Trouble Code (DTC)

INSTRUMENTATION/DRIVER INFO (DIAGNOSTICS)

	Step	Check	Yes	No
5	CHECK CONNECTOR. 1) Turn the ignition switch to OFF. 2) Disconnect connectors.	Is there poor contact of connector?	Repair or replace the poor contact of connector.	Even if DTC is displayed, the circuit has returned to a normal condition at this time. Reproduce the failure, and then perform the diagnosis again. NOTE: In this case, temporary poor contact of connector, temporary open or short circuit of harness may be the cause.

Diagnostic Procedure with Diagnostic Trouble Code (DTC)

INSTRUMENTATION/DRIVER INFO (DIAGNOSTICS)

R: DTC B1507 EXTERNAL AIR TEMPERATURE OPEN/SHORT-CIRCUIT DETECTION

DTC detecting condition:

Open or short circuit in ambient sensor

Trouble symptom:

- Defective ambient temperature display
- Defective air conditioner operation

Wiring diagram:

Air conditioning system <Ref. to WI-44, WIRING DIAGRAM, Air Conditioning System.>

IDI00434

Step	Check	Yes	No	
1	CHECK DTC. Read the DTC of the combination meter using the Subaru Select Monitor. <Ref. to IDI(diag)-12, Read Diagnostic Trouble Code (DTC).>	Is DTC B1507 a current malfunction?	Go to step 2.	Go to step 6.
2	CHECK CURRENT DATA. Using the Subaru Select Monitor, display «Ambient air temperature» from «Data monitor». <Ref. to IDI(diag)-14, Read Current Data.>	Is data displayed?	System is normal.	Go to step 3.
3	CHECK HARNESS (OPEN CIRCUIT). 1) Turn the ignition switch to OFF. 2) Disconnect the combination meter connector and ambient sensor connector. 3) Using the tester, measure the resistance between terminals. Connector & terminal (i10) No. 36 — (F78) No. 2: (i10) No. 27 — (F78) No. 1:	Is the resistance 10 Ω or less?	Go to step 4.	Repair the open circuit of harness or replace harness.
4	CHECK HARNESS (GROUND SHORT CIRCUIT). Using the tester, measure the resistance between terminals. Connector & terminal (i10) No. 36 — Chassis ground: (i10) No. 27 — Chassis ground:	Is the resistance 10 Ω or less?	Repair the short circuit of harness or replace harness.	Go to step 5.
5	CHECK AMBIENT SENSOR. Perform the inspection of ambient sensor unit. <Ref. to AC-67, Ambient Sensor.>	Is the sensor normal?	Go to step 6.	Replace the sensor. <Ref. to AC-67, Ambient Sensor.>

Diagnostic Procedure with Diagnostic Trouble Code (DTC)

INSTRUMENTATION/DRIVER INFO (DIAGNOSTICS)

	Step	Check	Yes	No
6	CHECK CONNECTOR. 1) Turn the ignition switch to OFF. 2) Disconnect connectors.	Is there poor contact of connector?	Repair or replace the poor contact of connector.	Even if DTC is displayed, the circuit has returned to a normal condition at this time. Reproduce the failure, and then perform the diagnosis again. NOTE: In this case, temporary poor contact of connector, temporary open or short circuit of harness may be the cause.

B: CAUTION

When removing the front seat from the vehicle, refer to “CAUTION” of “General Description” in “AIRBAG SYSTEM” section. <Ref. to AB-9, CAUTION, General Description.>

C: PREPARATION TOOL

1. GENERAL TOOL

TOOL NAME	REMARKS
Long nose pliers	Used for removing the hog ring.
Hog ring pliers	Used for installing the hog ring.
Circuit tester	Used for measuring resistance, voltage and current.

Front Seat

SEATS

2. Front Seat

A: REMOVAL

CAUTION:

Before handling the airbag system components, refer to “CAUTION” of “General Description” in “AIRBAG SYSTEM”. <Ref. to AB-9, CAUTION, General Description.>

- 1) Remove the headrest assembly - front.
- 2) Turn the ignition switch to OFF.
- 3) Disconnect the ground cable from battery and wait for at least 60 seconds before starting work. <Ref. to NT-6, BATTERY, NOTE, Note.>
- 4) Remove the slide rail assembly installing bolt.
 - (1) Tilt the backrest assembly forward and move the front seat to the front most position.
 - (2) Remove the cover - bolt rear (A) and remove the bolts.

SE-01296

- (3) Move the front seat to the rearmost position, and remove the bolts.
- 5) Disconnect the connector under the front seat.
 - Seat belt warning light connector (driver's seat)
 - Occupant detection system harness connector (passenger's seat) <Ref. to OD(diag)-13, OCCUPANT DETECTION SYSTEM (BETWEEN AIRBAG REAR HARNESS AND SEAT HARNESS), PROCEDURE, Airbag Connector.>
 - Side airbag connector <Ref. to AB-22, SIDE AIRBAG MODULE, PROCEDURE, Airbag Connector.>
 - Seat heater connector (model with seat heater)
 - Buckle switch RH connector (passenger's seat) <Ref. to AB-23, BUCKLE SWITCH RH, PROCEDURE, Airbag Connector.>
- 6) Take out the front seat from the vehicle.

CAUTION:

Be careful not to damage the body.

B: INSTALLATION

Install each part in the reverse order of removal.

CAUTION:

- The front seat mounting bolts differ between the front mounting points and the rear mounting points. When installing the front seat, make sure that you are using correct bolts at correct positions.
- Tighten the slide rail assembly installing bolts in the order as shown in the figure, in several steps by gradually increasing the torque until they reach the specified torque.

- Front (bolt A): Washer diameter 22 mm (0.87 in)
- Rear (bolt B): Washer diameter 26 mm (1.02 in)

Tightening torque:

Front seat assembly: 53 N·m (5.4 kgf-m, 39.1 ft-lb)

C: DISASSEMBLY

1. DRIVER'S SEAT

CAUTION:

Before assembling, make sure how the harnesses such as the side airbag harness and the seat belt inner - front harness are routed in order to avoid misarranging. Assembling with harnesses improperly routed may cause the harness to get caught and short out.

- 1) Remove the front seat from vehicle. <Ref. to SE-8, REMOVAL, Front Seat.>
- 2) Remove the knob - lifter.
 - (1) Remove the cap - lifter lever (a).

NOTE:

Insert a flat tip screwdriver or similar tool wrapped with protective tape into the gap (shown with arrow) between the cap - lifter lever and the knob - lifter.

- (2) Remove the screws and remove the knob - lifter.

SE-01671

- 3) Remove the lever - reclining.
 - (1) Pull up the lever - reclining and release the claws on the back.
 - (2) Pull out the lever - reclining.

SE-01101

4) Remove the cover - hinge front seat OUT.

- (1) Remove the screws.
- (2) Release the claw in the upper section of the cover - hinge front seat OUT.
- (3) Release the claw in the rear section of the cover - hinge front seat OUT.
- (4) Release the claw in the front section of the cover - hinge front seat OUT, then remove the cover - hinge front seat OUT.

SE-01297

5) Remove the seat belt inner - front.

- (1) Remove the nut, and remove the seat belt inner - front.
- (2) Remove the clip for the seat belt inner - front located under the seat cushion assembly.

SE-01298

Front Seat

SEATS

6) Remove the cover - hinge front seat INN.

- (1) Remove the screws.
- (2) Release the claw in the upper section of the cover - hinge front seat INN.
- (3) Release the claw in the rear section of the cover - hinge front seat INN, then remove the cover - hinge front seat INN.

7) Separate the backrest assembly and the seat cushion assembly.

- (1) Remove the clip for the side airbag harness located under the seat cushion assembly. (seat with side airbag)
- (2) Remove the bolts from reclining hinge of both sides.
- (3) While taking care not to damage the airbag harness, separate the backrest assembly and the seat cushion assembly.

8) Remove the cover - slide rail OUT.

(1) Remove the clip.

(2) Remove the hook, and detach the cover - slide rail OUT.

SE-01444

9) Remove the screws and detach the cover - slide rail INN.

SE-01331

Front Seat

SEATS

- 10) Remove the pad assembly - front seat cushion and the cover - front cushion.
 - (1) Remove the hooks and hog rings.
 - (2) Remove the pad assembly - front seat cushion and the cover - front cushion from the seat cushion assembly.

- 11) Remove the cover - front cushion.
 - (1) Remove the hog ring (A).

- (2) Pull out the pad assembly - front seat cushion from the cover - front cushion.
- (3) Remove the seat heater module from the pad assembly as necessary.

CAUTION:

- If the seat heater module is removed, replace the pad assembly with a new part.
- If the seat heater module is reused, remove the polyurethane section from the reverse side completely.

12) Remove the pad assembly - front seat backrest and the cover COMPL - front backrest.

- (1) Remove the plastic fastener at the back side (bottom) of backrest assembly.
- (2) Open the fastener at the rear side of backrest assembly.

NOTE:

If it is hard to open, use a metal clip, etc.

- (3) Remove the hog ring.

- (4) Remove the pad assembly - front seat backrest and the cover COMPL - front backrest from the backrest assembly.

Front Seat

SEATS

13) Remove the side airbag module.

CAUTION:

Do not open the protective cover of the side airbag. If any damage is present in the protective cover or the cloth of side airbag module comes out from the protective cover slit, replace the side airbag module with a new part.

- (1) Remove the hexagon cap nut and nuts.
- (2) While taking care not to damage the airbag protective cover, remove the side airbag module.

14) Remove the bushing - headrest.

NOTE:

Catch the tip of the bushing - headrest with pliers and push it outward from the inside of seat to remove it.

15) Pull out the frame assembly - front backrest.

16) Remove the cover COMPL - front backrest.

(1) Remove the hog ring (A).

(2) Pull out the pad assembly - front seat backrest from the cover COMPL - front backrest.

(3) Remove the seat heater module from the pad assembly as necessary.

CAUTION:

- If the seat heater module is removed, replace the pad assembly with a new part.
- If the seat heater module is reused, remove the polyurethane section from the reverse side completely.

2. PASSENGER'S SEAT

CAUTION:

- The occupant detection system (passenger's seat only) control module, the occupant detection sensor, the pad assembly - front seat cushion and the frame assembly - front cushion are considered as a single seat cushion pad & frame assembly. Never remove the occupant detection control module or the occupant detection sensor from the frame assembly - front cushion.
- If the cover - front cushion is removed, make sure to replace the hang wire on the cover - front cushion side with a new wire.
- Never remove the occupant detection sensor connector from the occupant detection control module.
- When replacing the seat cover, be careful not to damage the occupant detection sensor while installing the hog ring.
- When removing or replacing the seat cover, perform "Occupant Detection System Inspection" after installing the seat to check if the occupant detection system operates normally. <Ref. to PI-13, SEAT, PRE-DELIVERY INSPECTION (PDI) PROCEDURE, Pre-delivery Inspection.>
- If the seat heater module is removed, replace the seat cushion pad & frame assembly with a new part.
- If the seat heater module is reused, remove the polyurethane section from the reverse side completely.

1) Remove the front seat (passenger's side) from vehicle. <Ref. to SE-8, REMOVAL, Front Seat.>

2) Refer to the disassembly procedures for the driver's seat. <Ref. to SE-10, DRIVER'S SEAT, DISASSEMBLY, Front Seat.>

Front Seat

SEATS

D: ASSEMBLY

CAUTION:

- Do not confuse the harness routing of the side airbag harness and the seat belt inner - front harness, etc. Assembling with harnesses improperly routed may cause the harness to get caught and short out.
- If the flat mat hook of the frame assembly - front backrest is deformed or comes off due to the deformation, replace the hook with a new part.

- Make sure that the side airbag module is installed as shown in the figure.

- | | | |
|---|----------------------------------|-----------------------------|
| (1) Pad ASSY - front seat backrest | (4) Side airbag module inflator | (7) Side airbag guide cloth |
| (2) Frame ASSY - front backrest | (5) Nut | |
| (3) Side airbag module protective cover | (6) Cover COMPL - front backrest | |

Besides, if the cover COMPL - front backrest is not installed securely, the side airbag may not be activated properly, therefore keep strictly to the following procedures.

- Be careful not to stain or damage the cover COMPL - front backrest during assembly.
- Do not reuse hog rings.
- Secure the hog ring using hog ring pliers.
- Install the hog rings to the specified points securely and make sure that there is no wrinkle or twisting on the cover COMPL - front backrest.

1) Install the seat heater module.

CAUTION:

- If the seat heater module is removed, replace the pad assembly with a new part. (Driver's seat)
- If the seat heater module is removed, replace the seat cushion pad & frame assembly with a new part. (Passenger's seat)
- If the seat heater module is reused, remove the polyurethane section from the reverse side completely and attach a new pad assembly with a double-sided tape.

Double-sided tape:

NITTO DENKO 501L or equivalent

2) Make sure that there is no foreign matter on side airbag module.

3) Assemble the seat cover.

(1) Adjust so that the left and right clearances between wire and seat pad become equal, and mark the seat pad.

(1) Marking

(2) Mark the center of the wire on the pad side to which the hog ring is attached.

(1) Marking

(3) Insert the wire into the seat cover, and align the wire with the position marked in step 1).

Front Seat

SEATS

(4) Mark the wire on the seat cover side according to the markings on the seat pad.

(1) Marking

(5) Perform steps 1) — 4) to all sections to which the hog rings are attached.

(6) Make sure that all hog rings (A) are attached securely.

4) Assemble remaining parts in the reverse order of disassemble.

NOTE:

- When installing the seat belt inner - front, follow the procedures described in the seat belt section. <Ref. to SB-18, INSTALLATION, Front Seat Belt.>
- Install the backrest assembly and seat cushion assembly in the following procedure.
 1. Temporarily tighten the four reclining hinge bolts.
 2. Place the backrest in the most upright position.

3. Tighten the reclining hinge bolts in order from (1) to (4) two or three times, until they reach the specified torque.

- (A) Vehicle inside
- (B) Vehicle outside

Tightening torque:

Refer to “COMPONENT” of “General Description”. <Ref. to SE-2, FRONT SEAT, COMPONENT, General Description.>

5) If any wrinkles are found after the assembly of the seat cover, finish the seat cover with iron.

(1) Place the wet towel on wrinkles.

(2) Touch up with warm iron.

CAUTION:

Keep moving the iron, otherwise the seat cover surface can be damaged.

NOTE:

This method is available for genuine leather, synthetic leather, cloth, etc.

Front Seat

SEATS

6) Install connectors located under the front seat.

- Manual seat

SE-01799

(A) Driver's seat (six-way)

(B) Passenger's seat (four-way)

(1) Seat cushion heater connector

(4) Seat cushion - heater harness

(7) Band A

(2) Side airbag connector

(5) Backrest heater harness

(8) Occupant detection control module

(3) Seat belt switch connector

(6) Velcro

7) Install the seat assembly.

CAUTION:

- The seat mounting bolts differ between the front mounting points and the rear mounting points. Make sure that you are using correct bolts at correct positions.
- Tighten the slide rail installing bolts in the order as shown in the figure, in several steps by gradually increasing the torque until they reach the specified torque.

SE-01116

- Front (bolt A): Washer diameter 22 mm (0.87 in)

- Rear (bolt B): Washer diameter 26 mm (1.02 in)

Tightening torque: 53 N·m (5.4 kgf·m, 39.1 ft·lb)

E: INSPECTION

1. SEAT COVER

Check that there is no tear or fray on the cover COMPL - front backrest and the cover - front cushion.

NOTE:

For model with side airbag, if the door side of the cover COMPL - front backrest is torn or frayed, the side airbag may not be deployed properly. In this case, replace the cover COMPL - front backrest with a new part.

2. CHECK ILLUMINATION OF PASSENGER'S SEAT BELT WARNING LIGHT

Check that the passenger's seat belt warning light illuminates when the passenger's seat is occupied.

If it does not illuminate, check the seat belt warning system and the occupant detection system.

- Seat belt warning system: <Ref. to SB-12, Seat Belt Warning System.>
- Occupant detection system: <Ref. to OD(diag)-2, Basic Diagnostic Procedure.>

3. FLAT MAT HOOK

Check the flat mat hook by applying weight to the backrest assembly.

NOTE:

If the appropriate stiffness is not obtained by applying weight to the backrest assembly, the hook may be disengaged.

If it is due to the deformation of the hook, replace the hook with a new part.

3. Rear Seat

A: REMOVAL

CAUTION:

- Before handling the airbag system components, refer to “CAUTION” of “General Description” in “AIRBAG SYSTEM”. <Ref. to AB-9, CAUTION, General Description.>

- Airbag system satellite safing sensor is located in the lower of the rear seat cushion center. Be careful not to apply strong impact to the sensor when working with the rear seat cushion removed.

1) Disconnect the ground cable from battery and wait for at least 60 seconds before starting work. <Ref. to NT-6, BATTERY, NOTE, Note.>

2) Remove the rear seat cushion assembly.

(1) Push the corners of the rear seat cushion from above.

(2) While pushing the corners of the rear seat cushion from above, pull the knob of the hook - seat cushion rear towards yourself.

(3) While pulling the knob towards yourself, disconnect the hooks by lifting up the rear seat cushion.

NOTE:

Pull the left side of the knob to disconnect the LH side hook, and pull the right side of the knob to disconnect the RH side hook.

SE-01306

(4) Remove the hook (A) by pushing it back while lifting the front side of the rear seat cushion, and remove the rear seat cushion.

SE-01307

3) Remove the backrest assembly LH.

(1) Tilt the backrest assembly LH forward.

(2) Remove the clips located at the bottom of the cover COMPL - rear backrest LH and RH of the rear seat back.

SE-10095

(3) Turn over the cover COMPL - rear backrest LH to remove the bolts.

SE-10096

Rear Seat

SEATS

(4) Remove the backrest assembly LH from the hinge assembly.

NOTE:

The backrest assembly cannot be removed unless pin positions on the hinge assembly side and backrest assembly side are aligned.

4) Remove the backrest assembly RH.

(1) Remove the bolts and nuts.

(2) Remove the backrest assembly RH from the hinge assembly.

NOTE:

The backrest assembly cannot be removed unless pin positions on the hinge assembly side and backrest assembly side are aligned.

B: INSTALLATION

Install each part in the reverse order of removal.

NOTE:

- After installing the backrest assembly, make sure that each seat belt operates normally.
- Make sure that they are properly secured on each hook on the vehicle side.

Tightening torque:

Refer to “COMPONENT” of “General Description”. <Ref. to SE-6, REAR SEAT, COMPONENT, General Description.>

Rear Seat

SEATS

C: DISASSEMBLY

- 1) Remove the rear seat. <Ref. to SE-24, REMOVAL, Rear Seat.>
- 2) Remove the headrest assembly - rear backrest.
- 3) Remove the armrest assembly - rear center. (model with armrest assembly - rear center)
 - (1) Remove the cover - armrest by pulling it in the direction of the arrow (black).
 - (2) Remove the screws and remove the armrest assembly - rear center.

NOTE:

The armrest assembly - rear center cannot be detached unless pin positions on the RH side of the backrest assembly and on the center side of the armrest assembly - rear are aligned.

- 4) Remove the knob - backrest. (Screw-in type)

5) Remove the clips on the backside of the cover COMPL - rear backrest LH.

6) Detach the plastic fastener at the bottom of backrest assembly LH and turn over the cover COMPL - rear backrest LH.

Rear Seat

SEATS

7) Remove the plastic hooks on the back side of the backrest assembly LH, and turn over the backrest assembly.

8) Pull up the pad and cover, and remove the tether anchor cover from the inside of back board.

9) Remove the lock assembly - rear backrest rear LH.

SE-01318

10) Detach the bushing - headrest and the bushing - lock assembly, and remove the frame assembly - rear backrest LH from the pad assembly - main LH.

SE-01319

Rear Seat

SEATS

- 11) Remove the hog rings (A) and wire clip (B), then remove the cover COMPL - rear backrest LH.
- LH side

- RH side

(a) Model with armrest assembly - rear center

(b) Model without armrest ASSY - rear center

- 12) Referring to the above steps, disassemble the backrest assembly RH.
- 13) Detach the plastic fastener and hog ring, and then remove the headrest cover.

- 14) Remove the hog rings (A) on the back side of the rear seat cushion assembly.

Rear Seat

SEATS

15) Remove the hog rings (A), then remove the cover - rear cushion.

D: ASSEMBLY

CAUTION:

- Do not reuse hog rings.
- Secure the hog ring using hog ring pliers.
- Install the hog rings to the specified points securely and make sure that there is no wrinkle or twisting on the cover COMPL - rear backrest.

1) Assemble the cover COMPL - rear backrest and the cover - rear cushion in the same manner as for the front seat. <Ref. to SE-18, ASSEMBLY, Front Seat.>

2) Make sure that all hog rings (A) and wire clips (B) are attached securely.

(a) Model with armrest assembly - rear center

(b) Model without armrest assembly - rear center

3) Assemble each part in the reverse order of disassembly.

NOTE:

- Do not contaminate or damage the cover COMPL - rear backrest and the cover - rear cushion.
- While installing the hog rings, prevent the cover COMPL - rear backrest and the cover - rear cushion from getting wrinkled.

Tightening torque:

Refer to "COMPONENT" of "General Description". <Ref. to SE-6, REAR SEAT, COMPONENT, General Description.>

4) Before installation, check the following items.

- No tear and fray on the cover COMPL - rear backrest and the cover - rear cushion.
- No fray or deformation on each wire cable.

5) Install each part in the reverse order of removal.

Rear Seat

SEATS

E: INSPECTION

1. SEAT COVER

Check that there is no tear or fray on the cover COMPL - rear backrest and the cover - rear cushion.

4. Seat Heater System

A: REMOVAL

1. SEAT HEATER UNIT

- 1) Remove the front seats. <Ref. to SE-8, REMOVAL, Front Seat.>
- 2) Remove the backrest cover of front seat and seat cushion cover. <Ref. to SE-10, DISASSEMBLY, Front Seat.>
- 3) Remove the seat heater module.

CAUTION:

If the seat heater module is removed, replace the pad assembly with a new part.

2. SEAT HEATER SWITCH

- 1) Disconnect the ground cable from battery. <Ref. to NT-6, BATTERY, NOTE, Note.>

NOTE:

On CVT models, shift the select lever into “N” before disconnecting the battery ground cable.

- 2) Remove the console box assembly. <Ref. to EI-59, REMOVAL, Console Box.>
- 3) Remove the screws and remove the seat heater switch from the backside of the console box assembly.

3. SEAT HEATER RELAY AND FUSE

- 1) Disconnect the ground cable from battery. <Ref. to NT-6, BATTERY, NOTE, Note.>
- 2) Remove the cover assembly - instrument panel LWR driver. <Ref. to EI-54, REMOVAL, Instrument Panel Lower Cover.>
- 3) Remove the glove box assembly. <Ref. to EI-56, REMOVAL, Glove Box.>
- 4) Remove the seat heater relay and fuse.
 - (1) Remove the relay & fuse box bolts.
 - (2) Remove the seat heater relay from the relay holder.

Relay & fuse box	Fuse 7.5 A (remote control mirror)	(A)
	Fuse 15 A (seat heater)	(B)
Relay holder	Seat heater relay	(C)

Seat Heater System

SEATS

B: INSTALLATION

CAUTION:

- If the cover - front cushion is removed, make sure to replace the hang wire on the cover - front cushion side with a new wire.
- When replacing the seat cover, be careful not to damage the occupant detection sensor while installing the hog ring.
- When removing or replacing the seat cover, perform “Occupant Detection System Inspection” after installing the seat to check if the occupant detection system operates normally. <Ref. to PI-13, SEAT, PRE-DELIVERY INSPECTION (PDI) PROCEDURE, Pre-delivery Inspection.>
- If the seat heater module is removed, replace the seat cushion pad & frame assembly with a new part.
- If the seat heater module is reused, remove the polyurethane section from the reverse side completely.

Install each part in the reverse order of removal.

*Double-sided tape for seat heater module adhesion:
NITTO DENKO's 501L or equivalent*

C: INSPECTION

1. WIRING DIAGRAM

Refer to “Seat Heater System” in the wiring diagram. <Ref. to WI-204, WIRING DIAGRAM, Seat Heater System.>

2. DIAGNOSTIC CHART

Symptoms	Repair order
Seat heater does not operate.	1. Check the fuse. <Ref. to SE-38, CHECK SEAT HEATER FUSE, INSPECTION, Seat Heater System.>
	2. Check the seat heater relay. <Ref. to SE-39, CHECK SEAT HEATER RELAY, INSPECTION, Seat Heater System.>
	3. Check the seat heater system power supply and ground circuit. <Ref. to SE-39, CHECK POWER SUPPLY AND GROUND CIRCUIT, INSPECTION, Seat Heater System.>
	4. Check the seat heater module. <Ref. to SE-40, SEAT HEATER UNIT, INSPECTION, Seat Heater System.>
	5. Check the seat heater switch circuit. <Ref. to SE-40, SEAT HEATER SWITCH, INSPECTION, Seat Heater System.>

3. CHECK SEAT HEATER FUSE

Remove the seat heater fuse and inspect visually.

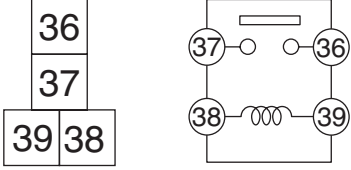

Is the fuse blown out?

- **Yes** → Replace the fuse.
- **No** → Check the power supply and ground circuits.

4. CHECK SEAT HEATER RELAY

- 1) Remove the seat heater relay from the relay holder.
- 2) Measure the resistance between seat heater relay terminals.

Preparation tool: Circuit tester

Terminal No.	Inspection conditions	Standard	Circuit
36 — 37	Always	1 M Ω or more	 <p style="text-align: right; font-size: small;">SE-01325</p>
36 — 37	Apply battery voltage between terminals 38 — 39.	Less than 1 Ω	

- 3) Replace the seat heater relay if the inspection result is not within the standard.

5. CHECK POWER SUPPLY AND GROUND CIRCUIT

- 1) Check power supply circuit
 - (1) Disconnect the harness connector of seat heater switch.
 - (2) Turn the ignition switch to ON.
 - (3) Measure the voltage between harness connector terminal and chassis ground.

Connector & terminal

(R43) No. 7 (+) — Chassis ground (-):

Is the voltage 12 V or more?

- **Yes** → Go to step 2.
- **No** → Check the harness between the seat heater switch and fuse.

- 2) Check ground circuit

Measure the resistance between harness connector terminal and chassis ground.

Connector & terminal

(R43) No. 2 — Chassis ground:

Is the resistance less than 10 Ω ?

- **Yes** → Go to step 3.
- **No** → Repair the harness.

- 3) Check ground circuit

Measure the resistance between seat heater switch terminals.

Connector & terminal

(R43) No. 7 — (R43) No. 2:

Is the resistance less than 10 Ω ?

- **Yes** → The power supply and ground circuits are normal.
- **No** → Replace the seat heater switch.

Seat Heater System

SEATS

6. SEAT HEATER UNIT

1) Disconnect the seat heater unit connector, and check the continuity between terminals of connector.

Connector & terminal

HI

No. 1 — No. 3:

2) If no continuity exists, replace the seat heater switch with a new part.

BODY 2 SECTION

This service manual has been prepared to provide SUBARU service personnel with the necessary information and data for the correct maintenance and repair of SUBARU vehicles.

This manual includes the procedures for maintenance, disassembling, reassembling, inspection and adjustment of components and diagnostics for guidance of experienced mechanics.

Please peruse and utilize this manual fully to ensure complete repair work for satisfying our customers by keeping their vehicle in optimum condition. When replacement of parts during repair work is needed, be sure to use SUBARU genuine parts.

All information, illustration and specifications contained in this manual are based on the latest product information available at the time of publication approval.

General Description

SECURITY AND LOCKS

1. General Description

A: COMPONENT

1. DOOR LOCK ASSEMBLY

General Description

- | | | |
|---|--|--|
| (A) Front | (B) Rear | |
| (1) Grommet - screw | (9) Key lock - door (driver's seat only) | (17) Frame ASSY - rear door outer |
| (2) Remote ASSY - door | (10) Spacer - door handle outer B | |
| (3) Cap remote | (11) Spacer - door handle outer A | Tightening torque: N·m (kgf·m, ft·lb) |
| (4) Latch & actuator ASSY - front | (12) Frame ASSY - front door outer | T1: 6.5 (0.66, 4.8) |
| (5) Handle - door outer (model with keyless access with push button start) | (13) Striker - door | T2: 7.5 (0.76, 5.5) |
| (6) Cover - handle front outer (passenger's seat) | (14) Screw | T3: 18 (1.84, 13.3) |
| (7) Handle - door outer (model without keyless access with push button start) | (15) Latch & actuator ASSY - rear | |
| (8) Cover - handle front outer (driver's seat) | (16) Cover - handle rear outer | |

2. REAR GATE LOCK

SL-10360

- (1) Latch & actuator - rear gate
- (2) Striker - rear gate

Tightening torque: N·m (kgf·m, ft·lb)
T: 25 (2.55, 18.4)

General Description

SECURITY AND LOCKS

3. FRONT HOOD LOCK

SL-01441

- | | |
|----------------------------|-----------------------------|
| (1) Lock ASSY - front hood | (3) Bracket - opener handle |
| (2) Cable - front hood | (4) Striker - front hood |

Tightening torque: N·m (kgf·m, ft·lb)

T1: 7.5 (0.76, 5.5)

T2: 33 (3.36, 24.3)

4. REMOTE OPENER

SL-10417

- | | |
|--------------------------|-----------------------|
| (1) Cover - handle | (3) Cable ASSY - fuel |
| (2) Pull handle - opener | (4) Holder |

Tightening torque: N·m (kgf·m, ft·lb)

T: 7.5 (0.76, 5.5)

5. KEYLESS ENTRY SYSTEM

SL-10362

- | | | |
|------------------------------|----------------------------------|-----------------|
| (1) Body integrated unit | (3) Keyless entry control module | (5) Door switch |
| (2) Power window main switch | (4) Rear gate latch switch | |

General Description

SECURITY AND LOCKS

6. SECURITY SYSTEM

- | | | |
|---|---|----------------------------|
| (1) Horn assembly | (4) Body integrated unit | (7) Door switch |
| (2) Horn relay (in main fuse box) | (5) Turn signal and hazard module | (8) Rear gate latch switch |
| (3) Security indicator light (in combination meter) | (6) Impact sensor (driver's seat instrument panel side) (dealer option) | |

7. KEYLESS ACCESS WITH PUSH BUTTON START SYSTEM

NOTE:

Refer to "Electrical Component Location" of "KEYLESS ACCESS WITH PUSH BUTTON START SYSTEM (DIAGNOSTICS)" section. <Ref. to KPS(diag)-11, Electrical Component Location.>

B: CAUTION

- Before disassembling or reassembling parts, always disconnect the battery ground cable from battery. When replacing the audio, control module and other parts provided with memory functions, record the memory contents before disconnecting the battery ground cable. Otherwise, the memory is cleared.
- Reassemble the parts in the reverse order of disassembly procedure unless otherwise indicated.
- Connect the connectors securely during reassembly.
- After reassembly, make sure that the each component operates normally.
- If any immobilizer related part has been replaced, make sure to register the immobilizer.
- Be careful of the following items. Failing to do so may cause the airbag system malfunction.
 - Yellow connectors and harnesses with yellow tapes around them are the connectors and harnesses for the airbag system. When using a tester on these circuits, follow the cautions of “AIRBAG SYSTEM”. <Ref. to AB-9, CAUTION, General Description.>
 - Be careful not to damage the airbag system wiring harness when servicing the electrical parts around the steering column.
- Be careful not to damage the airbag system wiring harness when servicing the ignition key cylinder.
- If the steering wheel and steering angle sensor (steering roll connector) are removed, perform the VDC midpoint setting mode. <Ref. to VDC-23, ADJUSTMENT, VDC Control Module and Hydraulic Control Unit (VDCCM&H/U).>

C: PREPARATION TOOL

1. SPECIAL TOOL

ILLUSTRATION	TOOL NUMBER	DESCRIPTION	REMARKS
 STSSM4	—	SUBARU SELECT MONITOR 4	Used for setting of each function and troubleshooting for electrical system. NOTE: For detailed operation procedures of Subaru Select Monitor 4, refer to “Application help”.

2. GENERAL TOOL

TOOL NAME	REMARKS
Circuit tester	Used for measuring resistance, voltage and current.
DST-i	Used together with Subaru Select Monitor 4.
Drill	Used for replacing ignition key lock.
Reverse tap	Used for replacing ignition key lock.
TORX® T30	Used for removing and installing door outer handle cover and frame assembly.
Clip remover	Used for removing trim clip.

Relay and Fuse

SECURITY AND LOCKS

2. Relay and Fuse

A: LOCATION

Main fuse box	Fuse 15 A (key warning switch, turn signal & hazard unit, body integrated unit)	(A)
	Fuse 20 A (body integrated unit, immobilizer antenna)	(B)
Relay & fuse box	Fuse 15 A (body integrated unit)	(C)
	Fuse 10 A (keyless access CM, TPMS & keyless entry CM)	(D)
	Fuse 10 A (TPMS & keyless entry CM)	(E)

NOTE:

For other related fuses, refer to the wiring diagram. <Ref. to WI-15, Power Supply Circuit.>

B: INSPECTION

1. CHECK FUSE

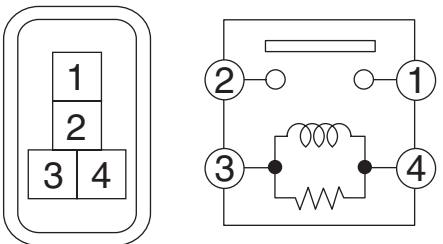

- 1) Remove the fuse and inspect visually.
- 2) If the fuse is blown out, replace the fuse.

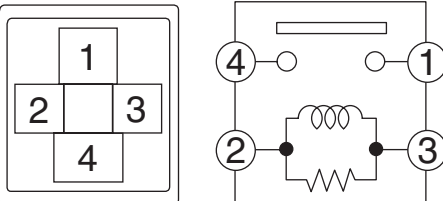

NOTE:

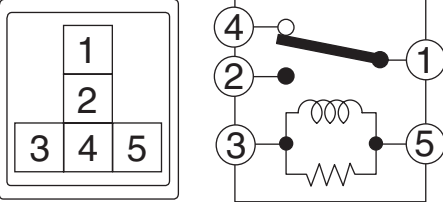

If the fuse is blown again, check the system wiring harness.

2. CHECK RELAY

- 1) Check the resistance between relay terminals.

Terminal No.	Inspection conditions	Standard	Circuit
1 — 2	Always	1 M Ω or more	 <p style="text-align: right; font-size: small;">LI-01273</p>
1 — 2	Apply battery voltage between terminals 4 and 3.	Less than 1 Ω	

Terminal No.	Inspection conditions	Standard	Circuit
1 — 4	Always	1 M Ω or more	 <p style="text-align: right; font-size: small;">AC-02796</p>
1 — 4	Apply battery voltage between terminals 2 and 3.	Less than 1 Ω	

Terminal No.	Inspection conditions	Standard	Circuit
1 — 2	Always	1 M Ω or more	 <p style="text-align: right; font-size: small;">SL-01566</p>
1 — 4	Always	Less than 1 Ω	
1 — 2	Apply battery voltage between terminals 3 and 5.	Less than 1 Ω	

- 2) Replace the relay if the inspection result is not within the standard value.

Door Lock Control System

SECURITY AND LOCKS

3. Door Lock Control System

A: WIRING DIAGRAM

For wiring diagrams related to the door lock control system, refer to the following items.

- Keyless entry system: <Ref. to WI-164, WIRING DIAGRAM, Keyless Entry System.>
- Keyless access system: <Ref. to WI-157, WIRING DIAGRAM, Keyless Access System.>

B: ELECTRICAL SPECIFICATION

1. BODY INTEGRATED UNIT

Refer to “Control Module I/O Signal” of “BODY CONTROL SYSTEM (DIAGNOSTICS)” section. <Ref. to BC(diag)-6, ELECTRICAL SPECIFICATION, Control Module I/O Signal.>

C: INSPECTION

1. SYMPTOM CHART

Symptoms	Repair order	Reference
The door lock control system does not operate.	1. Remove and visually inspect the following fuses. <ul style="list-style-type: none">• No. 3 (in fuse & relay box)• No. 7 (in fuse & relay box)• No. 8 (in main fuse box)	If the fuse is blown out, replace the fuse with a new part. When there is no defective with the fuse, check the power supply and ground circuit. <Ref. to SL-11, CHECK POWER SUPPLY AND GROUND CIRCUIT, INSPECTION, Door Lock Control System.>
	2. Check the power supply and ground circuit for body integrated unit.	<Ref. to SL-11, CHECK POWER SUPPLY AND GROUND CIRCUIT, INSPECTION, Door Lock Control System.>
	3. Check the door lock switch and the circuit.	<Ref. to SL-11, CHECK DOOR LOCK SWITCH, INSPECTION, Door Lock Control System.>
	4. Check the rear gate opener button and the circuit.	<Ref. to SL-12, CHECK REAR GATE OPENER BUTTON CIRCUIT, INSPECTION, Door Lock Control System.>
	5. Check the door lock actuator and the circuit.	<Ref. to SL-13, CHECK DOOR LOCK ACTUATOR AND CIRCUIT, INSPECTION, Door Lock Control System.>
A specific door lock actuator does not operate.	Check the door lock actuator and circuit.	<Ref. to SL-13, CHECK DOOR LOCK ACTUATOR AND CIRCUIT, INSPECTION, Door Lock Control System.>

2. CHECK POWER SUPPLY AND GROUND CIRCUIT

Step	Check	Yes	No
1 CHECK POWER SUPPLY. 1) Disconnect the connector of body integrated unit. 2) Measure the voltage between the body integrated unit connector and chassis ground. <i>Connector & terminal</i> <i>(i84) No. 6 (+) — Chassis ground (-):</i> <i>(i171) No. 1 (+) — Chassis ground (-):</i> <i>(B281) No. 7 (+) — Chassis ground (-):</i>	Is the voltage 9 V or more?	Go to step 2.	Check the harness for open or short circuit between body integrated unit and fuse.
2 CHECK GROUND CIRCUIT. Measure the resistance between the body integrated unit connector and chassis ground. <i>Connector & terminal</i> <i>(i84) No. 1 — Chassis ground:</i> <i>(B280) No. 1 — Chassis ground:</i>	Is the resistance less than 10 Ω?	The power supply and ground circuit are OK.	Repair or replace the harness.

3. CHECK DOOR LOCK SWITCH

Step	Check	Yes	No
1 CHECK DATA MONITOR. Using the Subaru Select Monitor, display the data of «Manual lock SW input». NOTE: For detailed operation procedures, refer to “Application help”.	Does the display switch between OFF ←→ ON when each door lock switch is moved to LOCK?	Go to step 2.	Go to step 3.
2 CHECK DOOR LOCK SWITCH. From the condition in step 1), operate each door lock switch (driver’s and passenger’s) in the UNLOCK direction.	Does the display switch between OFF ←→ ON?	The door lock switch is OK.	Go to step 4.
3 CHECK POWER WINDOW MAIN SWITCH (DOOR LOCK SWITCH). 1) Disconnect the power window main switch (door lock switch) connector. 2) Measure the continuity between terminals when moving the power window main switch (door lock switch) in LOCK direction. <i>Terminals</i> <i>Driver’s side</i> <i>No. 3 — No. 1:</i> <i>Passenger’s side</i> <i>No. 4 — No. 5:</i>	Did the indicator change from “No continuity” (1 MΩ or more) to “Continuity exists” (less than 10 Ω)?	Go to step 4.	Replace the power window main switch or door lock switch.
4 CHECK POWER WINDOW MAIN SWITCH (DOOR LOCK SWITCH). Measure the continuity between terminals when moving the power window main switch (door lock switch) in UNLOCK direction. <i>Terminals</i> <i>Driver’s side</i> <i>No. 9 — No. 1:</i> <i>Passenger’s side</i> <i>No. 2 — No. 5:</i>	Did the indicator change from “No continuity” (1 MΩ or more) to “Continuity exists” (less than 10 Ω)?	Go to step 5.	Replace the power window main switch or door lock switch.

Door Lock Control System

SECURITY AND LOCKS

Step	Check	Yes	No
5 CHECK HARNESS. Measure the resistance between the power window main switch (door lock switch) connector and chassis ground. Connector & terminal Driver's side (D7) No. 3 — Chassis ground: Passenger's side (D125) No. 5 — Chassis ground:	Is the resistance less than 10 Ω?	Go to step 6.	Repair or replace the harness.
6 CHECK HARNESS. Check the harness between body integrated unit and power window main switch (door lock switch). Connector & terminal Driver's side (D7) No. 3 — (i84) No. 9: (D7) No. 9 — (i84) No. 20: Passenger's side (D125) No. 4 — (i84) No. 9: (D125) No. 2 — (i84) No. 20:	Is harness normal?	Replace the body integrated unit. <Ref. to SL-72, Body Integrated Unit.>	Repair or replace the harness.

4. CHECK REAR GATE OPENER BUTTON CIRCUIT

Step	Check	Yes	No
1 CHECK DATA MONITOR. Using the Subaru Select Monitor, display the data of «R Gate Release SW input». NOTE: For detailed operation procedures, refer to “Application help”.	Does the display change to OFF ←→ ON, when the rear gate opener button is operated?	Rear gate opener button is normal.	Go to step 2.
2 CHECK HARNESS. 1) Disconnect the connectors of body integrated unit and rear gate opener button. 2) Check the harness between the body integrated unit and rear gate opener button. Connector & terminal (i84) No. 10 — (D47) No. 1:	Is harness normal?	Go to step 3.	Repair or replace the harness.
3 CHECK HARNESS. Measure the resistance between the rear gate opener button connector and chassis ground. Connector & terminal (D47) No. 2 — Chassis ground:	Is the resistance less than 10 Ω?	Go to step 4.	Repair or replace the harness.
4 CHECK REAR GATE OPENER BUTTON. Measure the resistance between terminals both when the rear gate opener button is pressed and when not pressed. Terminals No. 1 — No. 2:	Is the resistance less than 10 Ω when the switch is pressed and 1 MΩ or more when not pressed?	Replace the body integrated unit. <Ref. to SL-72, Body Integrated Unit.>	Replace the rear gate opener button.

5. CHECK DOOR LOCK ACTUATOR AND CIRCUIT

Step	Check	Yes	No
<p>1 CHECK HARNESS (DOOR LOCK). 1) Disconnect the body integrated unit and each door lock actuator connector. 2) Check the harness between body integrated unit and each door lock actuator. Connector & terminal Front door LH <i>(i171) No. 2 — (D72) No. 4:</i> Front door RH <i>(i171) No. 2 — (D18) No. 4:</i> Rear door LH <i>(i171) No. 2 — (D26) No. 4:</i> Rear door RH <i>(i171) No. 2 — (D32) No. 4:</i></p>	Is harness normal?	Go to step 2.	Repair or replace the harness.
<p>2 CHECK HARNESS (DOOR UNLOCK). Check the harness between body integrated unit and each door lock actuator. Connector & terminal Front door LH <i>(i171) No. 4 — (D72) No. 1:</i> Front door RH <i>(i171) No. 3 — (D18) No. 1:</i> Rear door LH <i>(i171) No. 3 — (D26) No. 1:</i> Rear door RH <i>(i171) No. 3 — (D32) No. 1:</i></p>	Is harness normal?	Go to step 3.	Repair or replace the harness.
<p>3 CHECK HARNESS (REAR GATE UNLOCK). Check the harness between the body integrated unit and rear gate lock actuator. Connector & terminal <i>(i171) No. 7 — (D46) No. 1:</i></p>	Is harness normal?	Go to step 4.	Repair or replace the harness.
<p>4 CHECK HARNESS (REAR GATE UNLOCK). Measure the resistance between the rear gate lock actuator connector and chassis ground. Connector & terminal <i>(D46) No. 2 — Chassis ground:</i></p>	Is the resistance less than 10 Ω?	Go to step 5.	Repair or replace the harness.
<p>5 CHECK BODY INTEGRATED UNIT OUTPUT SIGNAL. 1) Connect the body integrated unit connector. 2) Measure the voltage between terminals of the body integrated unit when operating the door lock switch to LOCK direction. Connector & terminal Except for front door LH <i>(i171) No. 2 (+) — (i171) No. 3 (-):</i> Front door LH <i>(i171) No. 2 (+) — (i171) No. 4 (-):</i></p>	Does the voltage change from less than 1 V → 9 V or more? (During lock output)	Go to step 6.	Replace the body integrated unit. <Ref. to SL-72, Body Integrated Unit.>
<p>6 CHECK BODY INTEGRATED UNIT OUTPUT SIGNAL. Measure the voltage between terminals of the body integrated unit when operating the door lock switch to UNLOCK direction. Connector & terminal Except for front door LH <i>(i171) No. 3 (+) — (i171) No. 2 (-):</i> Front door LH <i>(i171) No. 4 (+) — (i171) No. 2 (-):</i></p>	Does the voltage change from less than 1 V → 9 V or more? (During unlock output)	Go to step 7.	Replace the body integrated unit. <Ref. to SL-72, Body Integrated Unit.>

Door Lock Control System

SECURITY AND LOCKS

Step	Check	Yes	No
7 CHECK BODY INTEGRATED UNIT OUTPUT SIGNAL. Measure the voltage between body integrated unit and chassis ground when operating the rear gate opener button. <i>Connector & terminal (i171) No. 7 (+) — Chassis ground (-):</i>	Does the voltage change from less than 1 V → 9 V or more? (During unlock output)	Go to step 8 .	Replace the body integrated unit. <Ref. to SL-72, Body Integrated Unit.>
8 CHECK DOOR LOCK ACTUATOR. Check the door lock actuator. <ul style="list-style-type: none"> • Front door lock actuator: <Ref. to SL-40, INSPECTION, Front Door Latch and Door Lock Actuator Assembly.> • Rear door lock actuator: <Ref. to SL-47, INSPECTION, Rear Door Latch and Door Lock Actuator Assembly.> 	Is the door lock actuator OK?	Go to step 9 .	Replace the door latch and door lock actuator assembly.
9 CHECK REAR GATE LOCK ACTUATOR. Check the rear gate lock actuator. <Ref. to SL-50, Rear Gate Latch and Actuator Assembly.>	Is the rear gate lock actuator normal?	Check the connection status of the harness and connector that may have a temporary poor contact.	Replace the rear gate latch and actuator assembly.

4. Keyless Entry System

A: WIRING DIAGRAM

Refer to “Keyless Entry System” in the wiring diagram. <Ref. to WI-164, WIRING DIAGRAM, Keyless Entry System.>

B: ELECTRICAL SPECIFICATION

1. KEYLESS ENTRY CONTROL MODULE

- Model without tire pressure monitoring system

Terminal No.	Item	Measuring condition	Standard
3 (U-ART com.)	—	Cannot be measured	—
4 (+B) ←→ Chassis ground	Voltage	Always	10 — 14 V
7 (GND) ←→ Chassis ground	Resistance	Always	Less than 1 Ω

Keyless Entry System

SECURITY AND LOCKS

- Model with tire pressure monitoring system

Terminal No.	Item	Measuring condition	Standard
4 (IG) ↔ Chassis ground	Voltage	IG OFF → ON	0 V → 10 — 14 V
5 (GND) ↔ Chassis ground	Resistance	Always	Less than 1 Ω
6 (+B) ↔ Chassis ground	Voltage	Always	10 — 14 V
11 (U-ART com.)	—	Cannot be measured	—

2. BODY INTEGRATED UNIT

Refer to “Control Module I/O Signal” of “BODY CONTROL SYSTEM (DIAGNOSTICS)” section. <Ref. to BC(diag)-6, ELECTRICAL SPECIFICATION, Control Module I/O Signal.>

C: INSPECTION

1. SYMPTOM CHART

Symptoms	Repair order	Reference
None of the functions of the keyless entry system operate.	1. Check the keyless transmitter battery.	<Ref. to SL-18, CHECK KEYLESS TRANSMITTER BATTERY AND FUNCTION, INSPECTION, Keyless Entry System.>
	2. Remove and visually inspect the following fuses. <ul style="list-style-type: none"> • No. 3 (in fuse & relay box) • No. 7 (in fuse & relay box) • No. 8 (in main fuse box) 	If the fuse is blown out, replace the fuse with a new part. When there is no defective with the fuse, check the power supply and ground circuit. <Ref. to SL-11, CHECK POWER SUPPLY AND GROUND CIRCUIT, INSPECTION, Door Lock Control System.>
	3. Check the keyless entry control module.	<Ref. to SL-19, CHECK KEYLESS ENTRY CONTROL MODULE, INSPECTION, Keyless Entry System.>
	4. Check the power supply and ground circuit for body integrated unit.	<Ref. to SL-19, CHECK BODY INTEGRATED UNIT POWER SUPPLY AND GROUND CIRCUIT, INSPECTION, Keyless Entry System.>
	5. Check the key warning switch.	<Ref. to SL-21, CHECK KEY WARNING SWITCH, INSPECTION, Keyless Entry System.>
	6. Check the body integrated unit.	<Ref. to BC(diag)-2, Basic Diagnostic Procedure.>
The keyless transmitter cannot be registered.	1. Check the keyless transmitter battery.	<Ref. to SL-18, CHECK KEYLESS TRANSMITTER BATTERY AND FUNCTION, INSPECTION, Keyless Entry System.>
	2. Check the key warning switch.	<Ref. to SL-21, CHECK KEY WARNING SWITCH, INSPECTION, Keyless Entry System.>
	3. Check the keyless entry control module.	<Ref. to SL-19, CHECK KEYLESS ENTRY CONTROL MODULE, INSPECTION, Keyless Entry System.>
	4. Check the body integrated unit.	<Ref. to BC(diag)-2, Basic Diagnostic Procedure.>
Door lock or unlock does not operate. NOTE: If the door lock control system does not operate when using the door lock switch, check the door lock control system. <Ref. to SL-10, INSPECTION, Door Lock Control System.>	1. Check the keyless transmitter battery.	<Ref. to SL-18, CHECK KEYLESS TRANSMITTER BATTERY AND FUNCTION, INSPECTION, Keyless Entry System.>
	2. Check the key warning switch.	<Ref. to SL-21, CHECK KEY WARNING SWITCH, INSPECTION, Keyless Entry System.>
	3. Check the door switch signal.	<Ref. to SL-20, CHECK DOOR SWITCH, INSPECTION, Keyless Entry System.>
	4. Check the keyless entry control module.	<Ref. to SL-19, CHECK KEYLESS ENTRY CONTROL MODULE, INSPECTION, Keyless Entry System.>
	5. Check the body integrated unit.	<Ref. to BC(diag)-2, Basic Diagnostic Procedure.>

Keyless Entry System

SECURITY AND LOCKS

Symptoms	Repair order	Reference
The keyless buzzer and hazard light do not operate.	1. Check the keyless buzzer operation.	<Ref. to SL-23, CHECK KEYLESS BUZZER, INSPECTION, Keyless Entry System.>
	2. Check the hazard light operation.	<Ref. to SL-22, CHECK HAZARD LIGHT OPERATION, INSPECTION, Keyless Entry System.>
	3. Check the body integrated unit.	<Ref. to BC(diag)-2, Basic Diagnostic Procedure.>
Room light does not operate.	1. Check the room light operation.	<Ref. to SL-22, CHECK ROOM LIGHT OPERATION, INSPECTION, Keyless Entry System.>
	2. Check the body integrated unit.	<Ref. to BC(diag)-2, Basic Diagnostic Procedure.>
Ignition switch illumination does not operate.	1. Check the ignition switch illumination.	<Ref. to SL-24, CHECK IGNITION SWITCH ILLUMINATION, INSPECTION, Keyless Entry System.>
	2. Check the body integrated unit.	<Ref. to BC(diag)-2, Basic Diagnostic Procedure.>

2. CHECK KEYLESS TRANSMITTER BATTERY AND FUNCTION

CAUTION:

Be sure to reset keyless transmitter of other vehicles registered to the inspection target vehicle, and vehicles to which keyless transmitters were registered for inspection, to the condition before performing the inspection. (Re-register the keyless transmitters.)

Step	Check	Yes	No
1 CHECK KEYLESS TRANSMITTER BATTERY. 1) Remove the battery from the keyless transmitter. <Ref. to SL-75, REMOVAL, Keyless Transmitter.> 2) Check the battery voltage. <Ref. to SL-76, INSPECTION, Keyless Transmitter.>	Is the voltage 2.5 V or more?	Go to step 2.	Replace the keyless transmitter battery.
2 CHECK KEYLESS TRANSMITTER. Register the keyless transmitter which operates normally on other vehicles to the inspection target vehicle. <Ref. to SL-76, REGISTRATION OF KEYLESS TRANSMITTER WITH SUBARU SELECT MONITOR, REPLACEMENT, Keyless Transmitter.> 1) Close all the doors and rear gate of inspection target vehicle. 2) Using the keyless transmitter, lock and unlock the doors and rear gate of vehicle.	Can the check vehicle be locked and unlocked properly?	Go to step 3.	Due to vehicle malfunction, continue the keyless entry system diagnosis.
3 CHECK KEYLESS TRANSMITTER. Register the keyless transmitter of the inspected vehicle to another vehicle whose keyless system operates normally. <Ref. to SL-76, REGISTRATION OF KEYLESS TRANSMITTER WITH SUBARU SELECT MONITOR, REPLACEMENT, Keyless Transmitter.>	Is the keyless transmitter registered correctly?	Go to step 4.	Replace the keyless transmitter and perform registration.
4 CHECK KEYLESS TRANSMITTER. Check the registered keyless transmitter. 1) Close all the doors and rear gate of the vehicle which keyless system operates normally. 2) Using the keyless transmitter, lock and unlock the doors and rear gate of vehicle.	Does the vehicle operate lock and unlock normally?	Keyless transmitter is OK.	Replace the keyless transmitter and perform registration.

3. CHECK KEYLESS ENTRY CONTROL MODULE

Step	Check	Yes	No
1 CHECK BODY INTEGRATED UNIT. Read the DTC using Subaru Select Monitor. NOTE: For detailed operation procedures, refer to “Application help”.	Is DTC B1500 “KEYLESS UART COM. MALFUNCTION” displayed?	Go to step 2.	Keyless entry control module is normal.
2 CHECK POWER SUPPLY. 1) Disconnect the keyless entry control module connector. 2) Measure the voltage between keyless entry control module connector and chassis ground. Connector & terminal Model without tire pressure monitoring system (R80) No. 4 (+) — Chassis ground (-): Model with tire pressure monitoring system (R221) No. 6 (+) — Chassis ground (-): (R221) No. 4 (+) — Chassis ground (-):	Is the voltage 10 V or more?	Go to step 3.	Check the harness for open or short circuits between the keyless entry control module and the fuse.
3 CHECK GROUND CIRCUIT. Measure the resistance between keyless entry control module connector and chassis ground. Connector & terminal Model without tire pressure monitoring system (R80) No. 7 — Chassis ground: Model with tire pressure monitoring system (R221) No. 5 — Chassis ground:	Is the resistance less than 10 Ω?	Go to step 4.	Repair or replace the harness.
4 CHECK KEYLESS ENTRY CONTROL MODULE CIRCUIT. 1) Disconnect the body integrated unit connector. 2) Check the harness between keyless entry control module and body integrated unit. Connector & terminal Model without tire pressure monitoring system (i171) No. 11 — (R80) No. 3: Model with tire pressure monitoring system (i171) No. 11 — (R221) No. 11:	Is harness normal?	Replace the keyless entry control module.	Repair or replace the harness.

4. CHECK BODY INTEGRATED UNIT POWER SUPPLY AND GROUND CIRCUIT

Refer to the “INSPECTION of POWER SUPPLY AND GROUND CIRCUIT” of “Door Lock Control System” for detailed procedures. <Ref. to SL-11, CHECK POWER SUPPLY AND GROUND CIRCUIT, INSPECTION, Door Lock Control System.>

Keyless Entry System

SECURITY AND LOCKS

5. CHECK DOOR SWITCH

	Step	Check	Yes	No
1	<p>CHECK DATA MONITOR. Display the following items using Subaru Select Monitor.</p> <ul style="list-style-type: none"> • «Driver's door SW input» • «P-door SW input» • «Rear right door SW input» • «Rear left door SW input» • «R Gate SW input» <p>NOTE: For detailed operation procedures, refer to "Application help".</p>	Does the display switch between OFF ←→ ON when each door or rear gate is opened/closed?	The door switch or the rear gate latch switch is normal.	Go to step 2.
2	<p>CHECK HARNESS.</p> <ol style="list-style-type: none"> 1) Disconnect the connector of body integrated unit. 2) Disconnect the connector of the door switch or the rear gate latch switch that the display does not change. 3) Check the harness between body integrated unit and defective switch. <p>Connector & terminal</p> <p>Front door LH (i84) No. 14 — (R9) No. 1:</p> <p>Front door RH (i84) No. 13 — (R12) No. 1:</p> <p>Rear door LH (i84) No. 24 — (R22) No. 1:</p> <p>Rear door RH (i84) No. 25 — (R16) No. 1:</p> <p>Rear gate (i84) No. 33 — (D46) No. 3:</p>	Is harness normal?	Go to step 3.	Repair or replace the harness.
3	<p>CHECK HARNESS.</p> <p>Measure the resistance between the faulty switch connector and chassis ground.</p> <p>Connector & terminal</p> <p>Front door LH (R9) No. 3 — Chassis ground:</p> <p>Front door RH (R12) No. 3 — Chassis ground:</p> <p>Rear door LH (R22) No. 3 — Chassis ground:</p> <p>Rear door RH (R16) No. 3 — Chassis ground:</p> <p>Rear gate (D46) No. 4 — Chassis ground:</p>	Is the resistance less than 10 Ω?	Go to step 4.	Repair or replace the harness.
4	<p>CHECK DOOR SWITCH.</p> <p>Measure the resistance between faulty switch terminals.</p> <p>Terminals</p> <p>Front LH door switch No. 1 — No. 3:</p> <p>Front RH door switch No. 1 — No. 3:</p> <p>Rear LH door switch No. 1 — No. 3:</p> <p>Rear RH door switch No. 1 — No. 3:</p> <p>Rear gate latch switch No. 3 — No. 4:</p>	Is the resistance 1 MΩ or more when the door switch is pushed, or the rear gate is closed?	Replace the body integrated unit. <Ref. to SL-72, Body Integrated Unit.>	Replace the faulty parts. • Door switches • Rear gate latch and actuator assembly

6. CHECK KEY WARNING SWITCH

Step	Check	Yes	No
1 CHECK DATA MONITOR. Using the Subaru Select Monitor, display the data of «key-lock warning SW». NOTE: For detailed operation procedures, refer to “Application help”.	Is the normal input signal displayed when the key is inserted in/removed from the ignition switch?	The key warning switch is OK.	Go to step 2.
2 CHECK FUSE. Remove and visually check fuse No. 14 (in the main fuse box).	Is the fuse blown out?	Replace the fuse with a new part.	Go to step 3.
3 CHECK KEY WARNING SWITCH CIRCUIT. 1) Disconnect the connector of body integrated unit. 2) Insert the key into ignition switch. (LOCK position) 3) Measure the voltage between the body integrated unit connector and chassis ground. Connector & terminal (B280) No. 4 (+) — Chassis ground (-):	Is the voltage 9 V or more?	Go to step 4.	Go to step 5.
4 CHECK KEY WARNING SWITCH CIRCUIT. 1) Remove the key from ignition switch. 2) Measure the voltage between the body integrated unit connector and chassis ground. Connector & terminal (B280) No. 4 (+) — Chassis ground (-):	Is the voltage less than 1.5 V?	The key warning switch is OK.	Go to step 5.
5 CHECK KEY WARNING SWITCH. 1) Disconnect the connector of key warning switch. 2) Insert the key into ignition switch. (LOCK position) 3) Measure the resistance between key warning switch terminals. Terminals No. 1 — No. 2:	Is the resistance less than 1 Ω ?	Go to step 6.	Replace the key warning switch.
6 CHECK KEY WARNING SWITCH. 1) Remove the key from ignition switch. 2) Measure the resistance between key warning switch terminals. Terminals No. 1 — No. 2:	Is the resistance 1 M Ω or more?	Check the following: • Harness for open circuits and shorts between the key warning switch and fuse. • Harness for open or short between the body integrated unit and key warning switch.	Replace the key warning switch.

Keyless Entry System

SECURITY AND LOCKS

7. CHECK ROOM LIGHT OPERATION

	Step	Check	Yes	No
1	CHECK ROOM LIGHT OPERATION. Make sure the room light illuminates when the room light switch is ON, and goes off when the switch is OFF.	Does the room light illuminate or go off?	Go to step 2.	Check the room light circuit. <Ref. to LI-67, INSPECTION, Room Light.>
2	CHECK ROOM LIGHT OPERATION. 1) Turn the room light switch to the "DOOR" position. 2) Open and close any door.	Does the room light illuminate ←→ go off (including off delay) when the door is opened and closed?	Go to step 3.	Go to step 4.
3	CHECK KEYLESS ENTRY OPERATION. Press the LOCK/UNLOCK button of the keyless transmitter.	Does it operate properly?	Room light is normal.	Check keyless entry system. <Ref. to SL-17, SYMPTOM CHART, INSPECTION, Keyless Entry System.>
4	CHECK ROOM LIGHT. Check the room light. <Ref. to LI-67, INSPECTION, Room Light.>	Is room light normal?	Go to step 5.	Replace the bulb or room light assembly.
5	CHECK HARNESS. 1) Disconnect the connectors of body integrated unit and room light. 2) Check the harness between body integrated unit and room light. Connector & terminal (i84) No. 4 — (R52) No. 2:	Is harness normal?	Go to step 6.	Repair or replace the harness.
6	CHECK HARNESS. Measure the voltage between the room light connector and chassis ground. Connector & terminal (R52) No. 3 (+) — Chassis ground (-):	Is the voltage 10 V or more?	Replace the body integrated unit. <Ref. to SL-72, Body Integrated Unit.>	Repair or replace the harness.

8. CHECK HAZARD LIGHT OPERATION

	Step	Check	Yes	No
1	CHECK HAZARD LIGHT OPERATION. Make sure the hazard light blinks when hazard switch is turned to ON.	Does the hazard light blink?	Go to step 2.	Check the hazard light circuit.
2	CHECK BODY INTEGRATED UNIT SETTING. Display the data of «Abnormal warning lamp flashing setting» using Subaru Select Monitor. NOTE: For detailed operation procedures, refer to "Application help".	Is the setting ON?	Go to step 3.	Turn the setting to ON.
3	CHECK DATA MONITOR. Display the data of «Hazard Output» using Subaru Select Monitor.	Is output signal present when operating the transmitter LOCK/UNLOCK button?	Go to step 4.	Go to step 5.
4	CHECK KEYLESS ENTRY OPERATION. Press the LOCK/UNLOCK button of the keyless transmitter.	Does it operate properly?	Replace the body integrated unit. <Ref. to SL-72, Body Integrated Unit.>	Check keyless entry system. <Ref. to SL-17, SYMPTOM CHART, INSPECTION, Keyless Entry System.>

Keyless Entry System

SECURITY AND LOCKS

Step	Check	Yes	No
5 CHECK HAZARD LIGHT CIRCUIT. 1) Disconnect the connectors of the body integrated unit and turn signal & hazard unit. 2) Check the harness between body integrated unit and turn signal & hazard unit. Connector & terminal (i171) No. 18 — (B32) No. 8:	Is harness normal?	Check body integrated unit. <Ref. to BC(diag)-2, Basic Diagnostic Procedure.>	Repair or replace the harness.

9. CHECK KEYLESS BUZZER

Step	Check	Yes	No
1 CHECK BODY INTEGRATED UNIT SETTING. Display the data of «Ans.-back Buzzer» using Subaru Select Monitor. NOTE: For detailed operation procedures, refer to “Application help”.	Is the setting “ON”?	Go to step 2.	Turn the setting to ON.
2 CHECK BODY INTEGRATED UNIT. Select and perform the «Keyless Buzzer Output» using Subaru Select Monitor.	Does the keyless buzzer sound?	Check the keyless control module.	Go to step 3.
3 CHECK KEYLESS BUZZER CIRCUIT. 1) Turn the ignition switch to OFF. 2) Disconnect the connectors of the body integrated unit and keyless buzzer. 3) Check the harness between body integrated unit and keyless buzzer. Connector & terminal (B280) No. 20 — (B164) No. 1:	Is harness normal?	Go to step 4.	Repair or replace the harness.
4 CHECK HARNESS. Measure the resistance between keyless buzzer connector and chassis ground. Connector & terminal (B164) No. 1 — Chassis ground:	Is the resistance value 10 kΩ or more?	Go to step 5.	Repair or replace the short circuit of the harness.
5 CHECK KEYLESS BUZZER CIRCUIT. Measure the resistance between the keyless buzzer connector and chassis ground. Connector & terminal (B164) No. 2 — Chassis ground:	Is the resistance less than 10 Ω?	Go to step 6.	Repair or replace the harness.
6 CHECK BODY INTEGRATED UNIT. 1) Connect the connector of body integrated unit. 2) Select and perform the «Keyless Buzzer Output» using Subaru Select Monitor. 3) Measure the voltage between body integrated unit connector and chassis ground using an oscilloscope. Connector & terminal (B280) No. 20 (+) — Chassis ground (-):	Is the frequency 2 kHz or the voltage 9 V or more?	Replace the keyless buzzer.	Replace the body integrated unit. <Ref. to SL-72, Body Integrated Unit.>

10.CHECK DOOR LOCK SWITCH

For operation procedures, refer to the “INSPECTION OF DOOR LOCK SWITCH” of the “Door Lock Control System”. <Ref. to SL-11, CHECK DOOR LOCK SWITCH, INSPECTION, Door Lock Control System.>

Keyless Entry System

SECURITY AND LOCKS

11.CHECK IGNITION SWITCH ILLUMINATION

	Step	Check	Yes	No
1	CHECK IGNITION CIRCUIT. Check the ignition circuit. <Ref. to SL-32, CHECK IGNITION SWITCH CIRCUIT, INSPECTION, Security System.>	Is the switch circuit normal?	Go to step 2.	Repair or replace.
2	CHECK DOOR SWITCH CIRCUIT. Inspect door switch circuit. <Ref. to SL-20, CHECK DOOR SWITCH, INSPECTION, Keyless Entry System.>	Is the switch circuit normal?	Go to step 3.	Repair or replace.
3	CHECK FUSE. Remove and visually check fuse No. 14 (in the main fuse box).	Is the fuse blown out?	Replace the fuse with a new part.	Go to step 4.
4	CHECK HARNESS. 1) Disconnect the ignition switch illumination connector. NOTE: The ignition switch illumination is integrated into the immobilizer antenna. 2) Measure the voltage between ignition switch illumination connector and chassis ground. Connector & terminal (B415) No. 2 (+) — Chassis ground (-):	Is the voltage 10 V or more?	Go to step 5.	Check the harness for open or short circuits between the ignition switch illumination and fuse.
5	CHECK IGNITION SWITCH ILLUMINATION CIRCUIT. 1) Disconnect the connector of body integrated unit. 2) Check the harness between body integrated unit and ignition switch illumination. Connector & terminal (B280) No. 25 — (B415) No. 6:	Is harness normal?	Go to step 6.	Check the harness for open circuits and shorts between the body integrated unit and ignition switch illumination.
6	CHECK IGNITION SWITCH ILLUMINATION BULB. Apply battery voltage between terminals of the bulb. Terminals No. 2 (+) — No. 6 (-):	Does the bulb illuminate?	Replace the body integrated unit. <Ref. to SL-72, Body Integrated Unit.>	Replace the immobilizer antenna. <Ref. to SL-80, REMOVAL, Immobilizer Antenna.>

5. Keyless Access System

A: WIRING DIAGRAM

For wiring diagrams related to the keyless access system, refer to the following items.

- Keyless access system: <Ref. to WI-157, WIRING DIAGRAM, Keyless Access System.>
- Push button start system: <Ref. to WI-186, WIRING DIAGRAM, Push Button Start System.>

B: ELECTRICAL SPECIFICATION

Refer to “Control Module I/O Signal” of “KEYLESS ACCESS WITH PUSH BUTTON START SYSTEM (DIAGNOSTICS)” section. <Ref. to KPS(diag)-13, ELECTRICAL SPECIFICATION, Control Module I/O Signal.>

C: INSPECTION

1. KEYLESS ACCESS WITH PUSH BUTTON START SYSTEM

Refer to “Basic Diagnostic Procedure” of “KEYLESS ACCESS WITH PUSH BUTTON START SYSTEM (DIAGNOSTICS)” section. <Ref. to KPS(diag)-2, Basic Diagnostic Procedure.>

Push Button Start System

SECURITY AND LOCKS

6. Push Button Start System

A: WIRING DIAGRAM

For wiring diagrams related to the push button start system (ignition change), refer to the following items.

- Keyless access system: <Ref. to WI-157, WIRING DIAGRAM, Keyless Access System.>
- Push button start system: <Ref. to WI-186, WIRING DIAGRAM, Push Button Start System.>

B: ELECTRICAL SPECIFICATION

Refer to “Control Module I/O Signal” of “KEYLESS ACCESS WITH PUSH BUTTON START SYSTEM (DIAGNOSTICS)” section. <Ref. to KPS(diag)-13, ELECTRICAL SPECIFICATION, Control Module I/O Signal.>

C: INSPECTION

1. POWER SUPPLY SWITCH FUNCTION INSPECTION

1) Check push button ignition switch function

(1) Check the change control through push button ignition switch, brake pedal operation, and shift position.

Shift lever position	Brake pedal operation	Push button ignition switch operation
P	Released	Repeat Ignition switch OFF → ACC ON → Ignition switch ON → Ignition switch OFF
P	Released	Engine running → Ignition switch OFF
P	Depressed	Ignition switch OFF → Engine started
P	Depressed	ACC ON → Engine started
P	Depressed	Ignition switch ON → Engine started
P	Depressed	Engine running → Ignition switch OFF
N	Released	Repeat Ignition switch OFF → ACC ON → Ignition switch ON → ACC ON
N	Released	Engine running → ACC ON
N	Depressed	Ignition switch OFF → Engine started
N	Depressed	ACC ON → Engine started
N	Depressed	Ignition switch ON → Engine started
N	Depressed	Engine running → ACC ON
Other than P or N	Released	Repeat Ignition switch OFF → ACC ON → Ignition switch ON → ACC ON
Other than P or N	Released	Engine running → ACC ON
Other than P or N	Depressed	Ignition switch OFF → Ignition switch ON
Other than P or N	Depressed	ACC ON → Ignition switch ON
Other than P or N	Depressed	Engine running → ACC ON

(2) Check the changeover functions other than push button ignition switch operation.

With ACC ON or the ignition switch ON, and the shift lever in “P” position, check that ACC is ON or Ignition switch is ON → Ignition switch is OFF when the vehicle is left for 1 hour or more.

(3) If the inspection result indicates an improper operation, check the push button start system. <Ref. to KPS(diag)-99, POWER SUPPLY SWITCHING SYSTEM, INSPECTION, General Diagnostic Table.>

Push Button Start System

2) Check power status display

(1) Check the power indicator display of the push button ignition switch.

NOTE:

*1: Key collation is normal, and the stop light switch is ON.

Indicator display

Push button ignition switch status	Indicator lighting status
Ignition OFF (except for condition *1)	Light OFF
ACC ON (except for condition *1)	Orange light
Ignition ON (except for condition *1)	Orange light
Engine start standby (*1)	Green light
After engine is started	Light OFF

(2) If the inspection result indicates an improper operation, check the push button start system. <Ref. to KPS(diag)-99, POWER SUPPLY SWITCHING SYSTEM, INSPECTION, General Diagnostic Table.>

NOTE:

The indicator blinks if any of the following malfunctions are detected.

Detected malfunction	Indicator lighting status
Steering lock stuck	Green blinking
Steering lock CM internal malfunction	Orange blinking
Keyless access CM internal malfunction	Orange blinking
Vehicle speed signal malfunction	Orange blinking

Security System

SECURITY AND LOCKS

7. Security System

A: WIRING DIAGRAM

Refer to “Security System” in the wiring diagram.

- Model without push button start: <Ref. to WI-205, WITHOUT PUSH BUTTON START, WIRING DIAGRAM, Security System.>
- Model with push button start: <Ref. to WI-209, WITH PUSH BUTTON START, WIRING DIAGRAM, Security System.>

B: ELECTRICAL SPECIFICATION

Refer to “Control Module I/O Signal” of “BODY CONTROL SYSTEM (DIAGNOSTICS)” section. <Ref. to BC(diag)-6, ELECTRICAL SPECIFICATION, Control Module I/O Signal.>

C: INSPECTION

1. BASIC DIAGNOSTIC PROCEDURE

	Step	Check	Yes	No
1	INITIAL CHECK. Check the keyless entry system or keyless access system operation.	Does the keyless entry system or keyless access system operate normally?	Go to step 2.	Check the keyless entry system or keyless access system. <ul style="list-style-type: none">• Keyless entry system: <Ref. to SL-17, INSPECTION, Keyless Entry System.>• Keyless access system: <Ref. to KPS(diag)-5, KEYLESS ACCESS WITH PUSH BUTTON START SYSTEM, CAUTION, General Description.>
2	CHECK SECURITY ON/OFF SETTING. 1) Remove the key from ignition switch or turn off the power, and close all doors. 2) Check the status of security indicator light. 3) Press the LOCK button of the keyless transmitter or access key. 4) Check the security indicator light blinking patterns.	Is the security indicator light blinking patterns as follows? <ul style="list-style-type: none">• Before pressing the LOCK button: Blinks once within 3 seconds• After pressing the LOCK button: When monitoring lag is set to 0 second, flashes twice within 0.5 seconds in 2 second intervals / When monitoring lag is set to 30 seconds, flashes once within 0.4 seconds in 30 seconds.	Go to step 4.	Go to step 3.
3	CHANGE SETTING OF SECURITY SYSTEM. Change the setting of security system to ON using Subaru Select Monitor. <Ref. to SL-31, SECURITY SYSTEM ON/OFF SETTING, INSPECTION, Security System.>	Is setting change completed correctly?	Go to step 4.	Replace the body integrated unit. <Ref. to SL-72, Body Integrated Unit.>

Security System

SECURITY AND LOCKS

Step	Check	Yes	No
4 CHECK SECURITY SYSTEM OPERATION. 1) Remove the key from ignition switch or turn off the power, and close all doors. 2) Press the LOCK button on the keyless transmitter or access key, then wait for 30 seconds. 3) Check the security indicator light blinking patterns.	Does the security indicator light blink twice within 0.5 seconds in 2 second intervals?	Go to step 5.	Check the security indicator light. <Ref. to SL-31, CHECK SECURITY INDICATOR LIGHT CIRCUIT, INSPECTION, Security System.>
5 CHECK SECURITY ALARM OPERATION. 1) Operate the driver's door lock switch to the UNLOCK side. 2) Open any door or rear gate.	Does the security alarm operate when opening any door or rear gate?	Go to step 6.	Check the following parts. <Ref. to SL-20, CHECK DOOR SWITCH, INSPECTION, Keyless Entry System.> <ul style="list-style-type: none"> • Door switches • Rear gate latch switch
6 CHECK SECURITY ALARM OPERATION. Check the security alarm operation status.	During the operation, does the horn keep sounding and the hazard light blink?	Go to step 7.	Check the following parts. <Ref. to SL-20, CHECK DOOR SWITCH, INSPECTION, Keyless Entry System.> <ul style="list-style-type: none"> • Horn: <Ref. to SL-31, CHECK HORN, INSPECTION, Security System.> • Hazard light: <Ref. to SL-32, CHECK HAZARD LIGHT OPERATION, INSPECTION, Security System.>
7 CHECK SECURITY ALARM CANCEL OPERATION. Press any button of the transmitter or access key while the security alarm is operating.	Do the horn sound and the blinking of the hazard light stop?	Go to step 8.	Replace the body integrated unit. <Ref. to SL-72, Body Integrated Unit.>
8 CHECK IMPACT SENSOR (DEALER OPTION). Check the sensibility of impact sensor. <Ref. to SL-68, CHECK IMPACT SENSOR, ADJUSTMENT, Impact Sensor.>	Is the sensibility set properly?	Go to step 9.	Adjust the sensitivity. <Ref. to SL-68, IMPACT SENSITIVITY ADJUSTMENT, ADJUSTMENT, Impact Sensor.>

Security System

SECURITY AND LOCKS

Step	Check	Yes	No
9 CHECK SECURITY SYSTEM CONDITION MEMORY. 1) Remove the key from ignition switch or turn off the power, and close all doors. 2) Open the front hood. 3) Press the LOCK button on the keyless transmitter or access key, then wait for 30 seconds. 4) Disconnect the ground cable from battery. <Ref. to NT-6, BATTERY, NOTE, Note.> 5) Connect the ground cable to battery. <Ref. to NT-6, BATTERY, NOTE, Note.> 6) Check the status of security indicator light.	Does the security indicator light blinks twice within 0.5 seconds at 2 second intervals?	Go to step 10.	Replace the body integrated unit. <Ref. to SL-72, Body Integrated Unit.>
10 CHECK SECURITY SYSTEM MANUAL ON/OFF SETTING. 1) Press the UNLOCK button of the keyless transmitter or access key. 2) Change the setting of security system. <Ref. to SL-31, SECURITY SYSTEM ON/OFF SETTING, INSPECTION, Security System.>	Is setting change completed correctly?	Restore the security system settings to those before the diagnosis and finish the diagnosis.	Check the following parts. • Ignition switch circuit: <Ref. to SL-61, INSPECTION, Ignition Key Lock.> • Door lock switch circuit: <Ref. to SL-11, CHECK DOOR LOCK SWITCH, INSPECTION, Door Lock Control System.>

NOTE:

If the horn sounds when the security is turned on (monitor condition) using the keyless transmitter or access key, check the function setting of the body integrated unit. As a cause, it is possible that the impact sensor present (ON) / not present (OFF) setting is set to ON in the customization function though there is no impact sensor. <Ref. to BC(diag)-17, User Customizing.>

2. CHECK SECURITY SYSTEM CONDITION MEMORY

- 1) Pull out the key from the ignition switch, or turn the ignition switch to OFF.
- 2) Close all the doors and rear gate.
- 3) Open the front hood.
- 4) Press the LOCK button of the keyless transmitter or access key.

NOTE:

Wait until the security indicator light blinks twice within 0.5 seconds at 2 second intervals.

If the 30 second monitoring lag has been set, wait for 30 seconds.

5) Disconnect the ground cable from battery. <Ref. to NT-6, BATTERY, NOTE, Note.>

6) Connect the ground cable to battery. <Ref. to NT-6, BATTERY, NOTE, Note.>

7) Check that the security indicator light blinks twice within 0.5 seconds at 2 second intervals. When it does not blink, replace the body integrated unit.

3. SECURITY SYSTEM ON/OFF SETTING

NOTE:

It can be set by «Security Alarm Setup» in unit customizing using Subaru Select Monitor.

For detailed operation procedures, refer to “Application help”.

- 1) Close all doors or rear gate, and sit down on the driver’s seat. Press the UNLOCK button of the keyless transmitter or access key.
- 2) Turn the ignition switch to ON.
- 3) Press the central door unlock switch and open the driver’s door simultaneously. (Keep the central door unlock switch pressed down.)
- 4) When the condition in step 3) continues for 10 seconds, the system switches to a mode reverse to the current mode.

Setting	Horn activation	Meter display
ON → OFF	Twice	[AL_OF]
OFF → ON	Once	[AL_ON]

4. CHECK DOOR SWITCH

For operation procedure, refer to “CHECK DOOR SWITCH” of “Keyless Entry System”. <Ref. to SL-20, CHECK DOOR SWITCH, INSPECTION, Keyless Entry System.>

5. CHECK SECURITY INDICATOR LIGHT CIRCUIT

For operation procedures, refer to “CHECK SECURITY INDICATOR LIGHT CIRCUIT” of “IMMOBILIZER (DIAGNOSTICS)” section. <Ref. to IM(diag)-11, CHECK SECURITY INDICATOR LIGHT CIRCUIT, INSPECTION, Diagnostics Chart for Security Indicator Light.>

6. CHECK HORN

Step	Check	Yes	No
1 CHECK HORN OPERATION. Check the horn sounds when the horn switch is pushed.	Does the horn sound?	Go to step 2.	Check the horn circuit.
2 CHECK BODY INTEGRATED UNIT. Select and perform the «Horn Output» using Subaru Select Monitor. NOTE: For detailed operation procedures, refer to “Application help”.	Does the horn sound?	Horn circuit is OK.	Go to step 3.
3 CHECK HORN RELAY CIRCUIT. 1) Turn the ignition switch to OFF or turn the power to OFF. 2) Disconnect the connector of body integrated unit. 3) Remove the horn relay. 4) Check the harness between body integrated unit and horn relay. Connector & terminal (B280) No. 24 — Horn relay No. 4:	Is harness normal?	Check body integrated unit. <Ref. to BC(diag)-2, Basic Diagnostic Procedure.>	Repair or replace the harness.

Security System

SECURITY AND LOCKS

7. CHECK HAZARD LIGHT OPERATION

For operation procedure, refer to “CHECK HAZARD LIGHT OPERATION” of “Keyless Entry System”. <Ref. to SL-22, CHECK HAZARD LIGHT OPERATION, INSPECTION, Keyless Entry System.>

8. CHECK IGNITION SWITCH CIRCUIT

Step	Check	Yes	No
1 CHECK DATA MONITOR. Display the data of «BATT voltage» and «IGN voltage» using the Subaru Select Monitor. NOTE: For detailed operation procedures, refer to “Application help”.	Does the «IGN voltage» indicate 0 V when the ignition is OFF, and fall within a range of ± 1 V from the «BATT voltage» when the ignition is ON?	The ignition switch input circuit is OK.	Go to step 2.
2 CHECK IGNITION SWITCH CIRCUIT. 1) Turn the ignition switch to OFF or turn off the power. 2) Disconnect the connector of body integrated unit. 3) Turn the ignition switch to ON. 4) Measure the voltage between the body integrated unit connector and chassis ground. Connector & terminal (B281) No. 3 (+) — Chassis ground (-):	Is the voltage 10 V or more?	Check body integrated unit. <Ref. to BC(diag)-2, Basic Diagnostic Procedure.>	Check the harness for open or short circuit between body integrated unit and fuse.

8. Front Inner Remote

A: REMOVAL

- 1) Disconnect the ground cable from battery and wait for at least 60 seconds before starting work. <Ref. to NT-6, BATTERY, NOTE, Note.>
- 2) Remove the trim panel - front door. <Ref. to EI-50, FRONT DOOR, REMOVAL, Door Trim.>
- 3) Remove the screw, and remove the remote assembly - door.

CAUTION:

The remote assembly - door is tightened with the plate. Be careful not to drop or damage the part.

SL-01445

B: INSTALLATION

- 1) Before installation, check the following items.
 - Cable is free from deformation such as fray.
 - Grease is applied sufficiently to cable joints.
 If grease is insufficient, add it as necessary before assembling the cable.
 - If the lever is faulty, replace the front inner remote handle.
- 2) Install each part in the reverse order of removal.

CAUTION:

Securely install the plate.

C: INSPECTION

- Check if the remote handle operates normally.
- If the lever is faulty, replace the remote handle.
 - If the cable is deformed, replace the latch & actuator assembly - front.

Front Outer Handle

SECURITY AND LOCKS

9. Front Outer Handle

A: REMOVAL

- 1) Raise the glass assembly - front door to the top position.
- 2) Disconnect the ground cable from battery and wait for at least 60 seconds before starting work. <Ref. to NT-6, BATTERY, NOTE, Note.>
- 3) Remove the trim panel - front door. <Ref. to EI-50, FRONT DOOR, REMOVAL, Door Trim.>
- 4) Remove the sealing cover - front door. <Ref. to EB-25, REMOVAL, Front Sealing Cover.>
- 5) Remove the holder of the frame assembly - front door outer.

NOTE:

For model with keyless access with push button start, disconnect the harness clip and exterior antenna (touch sensor) connector.

6) Remove the cover - handle front outer.

Preparation tool:

TORX® T30

- (1) Remove the plug at the rear end of the panel assembly - front door.
- (2) Loosen the TORX® bolt and remove the cover - handle front outer.

7) Remove the handle - door outer by moving it rearward.

CAUTION:

Do not apply excessive force to remove the handle - door outer from the panel assembly - front door. The panel assembly - front door may be deformed.

Front Outer Handle

SECURITY AND LOCKS

8) Remove the frame assembly - front door outer.

Preparation tool:

TORX® T30

(1) Remove the spacer - door handle outer.

SL-01177

(2) Remove the rod from the rod clamp of the frame assembly - front door outer.

(3) Loosen the TORX® bolt and remove the frame assembly - front door outer from inside the panel assembly - front door.

SL-01448

B: INSTALLATION

1) Before installation, check the following items.

- Rod is free from deformation.
- Grease is applied sufficiently to rod joints.

If grease is insufficient, add it as necessary before assembling the rod.

- If the lever is faulty, replace the front outer handle.
- If the rod is deformed, replace the latch & actuator assembly - front.

2) Install each part in the reverse order of removal.

CAUTION:

When installing the cover - handle front outer on driver's side, make sure that the key cylinder shaft is correctly inserted into the latch & actuator assembly - front.

Tightening torque:

Refer to "COMPONENT" of "General Description". <Ref. to SL-2, DOOR LOCK ASSEMBLY, COMPONENT, General Description.>

C: INSPECTION

Check if the outer handle operates normally.

- If the lever is faulty, replace the handle - door outer.
- If the rod is deformed, replace the latch & actuator assembly - front.

For models with keyless access system with push button start, check that the keyless access function operates normally.

If the system does not operate normally, refer to "General Diagnostic Table" of the "KEYLESS ACCESS WITH PUSH BUTTON START SYSTEM (DIAGNOSTICS)" section. <Ref. to KPS(diag)-98, KEYLESS ACCESS SYSTEM, INSPECTION, General Diagnostic Table.>

Front Door Latch and Door Lock Actuator Assembly

SECURITY AND LOCKS

10. Front Door Latch and Door Lock Actuator Assembly

A: REMOVAL

- 1) Raise the glass assembly - front door to the top position.
- 2) Disconnect the ground cable from battery and wait for at least 60 seconds before starting work. <Ref. to NT-6, BATTERY, NOTE, Note.>
- 3) Remove the trim panel - front door. <Ref. to EI-50, FRONT DOOR, REMOVAL, Door Trim.>
- 4) Remove the sealing cover - front door. <Ref. to EB-25, REMOVAL, Front Sealing Cover.>
- 5) Remove the rod from the rod clamp of the frame assembly - front door outer.

SL-01449

- 6) Remove the cover - handle front outer. <Ref. to SL-64, FRONT DOOR, REPLACEMENT, Key Lock Cylinders.>
- 7) Remove the sash COMPL - lower.
 - (1) Remove the lower side of the running channel - front door.
 - (2) Remove the bolts, and remove the sash COMPL - lower.

SL-01450

8) Remove the screws to remove the latch & actuator assembly - front.

CAUTION:

Do not re-use the screws. Always replace with a new part.

B: INSTALLATION

1) Before installation, check the following items.

- Rod is free from deformation.
- Grease is applied sufficiently to rod joints.

If grease is insufficient, add it as necessary before assembling the rod.

- If the lever is faulty, replace the front outer handle.
- If the rod is deformed, replace the latch & actuator assembly - front.

2) Install each part in the reverse order of removal.

CAUTION:

Do not reuse the screws of the latch and actuator assembly - front. Always replace with a new part.

Tightening torque:

Door lock assembly: <Ref. to SL-2, DOOR LOCK ASSEMBLY, COMPONENT, General Description.>

Sash COMPL - lower: 7.5 N·m (0.76 kgf·m, 5.5 ft·lb)

Front Door Latch and Door Lock Actuator Assembly

SECURITY AND LOCKS

C: INSPECTION

1. LATCH

Check if the latch operates normally.

If the cable or rod is faulty, replace the latch & actuator assembly - front.

2. LOCK ACTUATOR

Preparation tool:

Circuit tester

1) Check door lock operation

Check the door lock operation when battery voltage is applied between the terminals of actuator.

Terminal No.	Inspection conditions	Specification
4 (+) — 1 (-)	Apply battery voltage.	LOCK
1 (+) — 4 (-)		UNLOCK

2) Check position switch

Check the resistance between actuator terminals.

Preparation tool:

Circuit tester

Terminal No.	Inspection conditions	Standard
8 — 7	LOCK	1 M Ω or more
	UNLOCK	Less than 1 Ω

3) Replace the latch & actuator assembly - front if it is found defective.

11.Rear Inner Remote

A: REMOVAL

- 1) Disconnect the ground cable from battery. <Ref. to NT-6, BATTERY, NOTE, Note.>
- 2) Remove the trim panel - rear door. <Ref. to EI-51, REAR DOOR, REMOVAL, Door Trim.>
- 3) Remove the screw, and remove the remote assembly - door.

B: INSTALLATION

- 1) Before installation, check the following items.
 - Cable is free from deformation such as fray.
 - Grease is applied sufficiently to cable joints.If grease is insufficient, add it as necessary before assembling the cable.
 - If the lever is faulty, replace the rear inner remote handle.
- 2) Install each part in the reverse order of removal.

C: INSPECTION

- Check if the remote handle operates normally.
- If the lever is faulty, replace the remote handle.
 - If the cable is deformed, replace the latch & actuator assembly - rear.

Rear Outer Handle

SECURITY AND LOCKS

12.Rear Outer Handle

A: REMOVAL

- 1) Raise the glass assembly - rear door to the top position.
- 2) Disconnect the ground cable from battery. <Ref. to NT-6, BATTERY, NOTE, Note.>
- 3) Remove the trim panel - rear door. <Ref. to EI-51, REAR DOOR, REMOVAL, Door Trim.>
- 4) Remove the sealing cover - rear door. <Ref. to EB-31, REMOVAL, Rear Sealing Cover.>
- 5) Remove the screws and move downward the latch & actuator assembly - rear.

CAUTION:

Do not re-use the screws. Always replace with a new part.

- 6) Remove the holder of the frame assembly - rear door outer.

7) Remove the cover - handle rear outer.

Preparation tool:

TORX® T30

- (1) Loosen the TORX® bolt.
- (2) Release the claws, and then remove the cover - handle rear outer.

8) Remove the handle - door outer by moving it rearward.

CAUTION:

Do not apply excessive force to remove the handle - door outer from the panel assembly - rear door. The panel assembly - rear door may be deformed.

Rear Outer Handle

SECURITY AND LOCKS

9) Remove the frame assembly - rear door outer.

Preparation tool:
TORX® T30

(1) Remove the spacer - door handle outer.

SL-01177

(2) Loosen the TORX® bolt and remove the frame assembly - rear door outer from inside the panel assembly - rear door.

SL-01455

B: INSTALLATION

1) Before installation, check the following items.

- Lever is free from deformation.
- Grease is applied sufficiently to lever joints.

If grease is insufficient, add it as necessary before assembling.

- If the lever is faulty, replace the rear outer handle.
- If the lever is deformed, replace the latch & actuator assembly - rear.

2) Install each part in the reverse order of removal.

CAUTION:

Do not reuse the screws of the latch and actuator assembly - rear. Always replace with a new part.

Tightening torque:

Refer to "COMPONENT" of "General Description". <Ref. to SL-2, DOOR LOCK ASSEMBLY, COMPONENT, General Description.>

C: INSPECTION

Check if the outer handle operates normally.

If the lever is faulty, replace the handle - door outer.

Rear Door Latch and Door Lock Actuator Assembly

SECURITY AND LOCKS

13.Rear Door Latch and Door Lock Actuator Assembly

A: REMOVAL

- 1) Disconnect the ground cable from battery. <Ref. to NT-6, BATTERY, NOTE, Note.>
- 2) Remove the trim panel - rear door. <Ref. to EI-51, REAR DOOR, REMOVAL, Door Trim.>
- 3) Remove the sealing cover - rear door. <Ref. to EB-31, REMOVAL, Rear Sealing Cover.>
- 4) Remove the glass assembly - rear door. <Ref. to GW-31, REMOVAL, Rear Door Glass.>
- 5) Remove the screws to remove the latch & actuator assembly - rear.

CAUTION:

Do not re-use the screws. Always replace with a new part.

B: INSTALLATION

- 1) Before installation, check the following items.
 - Lever is free from deformation.
 - Grease is applied sufficiently to lever joints.If grease is insufficient, add it as necessary before assembling.
 - If the lever is faulty, replace the rear outer handle.
 - If the lever is deformed, replace the latch & actuator assembly - rear.
- 2) Install each part in the reverse order of removal.

CAUTION:

Do not reuse the screws of the latch and actuator assembly - rear. Always replace with a new part.

Tightening torque:

Refer to "COMPONENT" of "General Description". <Ref. to SL-2, DOOR LOCK ASSEMBLY, COMPONENT, General Description.>

NOTE:

Make sure the child safety lock works correctly after installation.

Rear Door Latch and Door Lock Actuator Assembly

SECURITY AND LOCKS

C: INSPECTION

1. LATCH

Check if the latch operates normally.

If the cable is faulty, replace the latch & actuator assembly - rear.

2. ACTUATOR

1) Check door lock operation

Check the door lock operation when battery voltage is applied between the terminals of actuator.

Terminal No.	Inspection conditions	Specification
4 (+) — 1 (-)	Apply battery voltage.	LOCK
1 (+) — 4 (-)		UNLOCK

2) If it does not operate properly as a result of inspection, replace the latch & actuator assembly - rear.

Rear Gate Opener Button

SECURITY AND LOCKS

14.Rear Gate Opener Button

A: REMOVAL

NOTE:

- The button - opener rear gate is integrated with the rear lock button. (Model with keyless access with push button start)
 - Open the panel - rear gate before disconnecting the ground terminal from the battery.
- 1) Disconnect the ground cable from battery. <Ref. to NT-6, BATTERY, NOTE, Note.>
 - 2) Remove the garnish assembly - rear gate. <Ref. to EI-97, REMOVAL, Rear Gate Garnish.>
 - 3) Release the locks at both ends of the button - opener rear gate by pushing them with a flat tip screwdriver, and remove the button - opener rear gate.

- 4) Remove the screws, and remove the rear lock button, and remove the integrated harness. (Model with keyless access with push button start)

B: INSTALLATION

CAUTION:

Make sure that the harness grommet is securely installed.

If not properly installed, this may cause leaks.

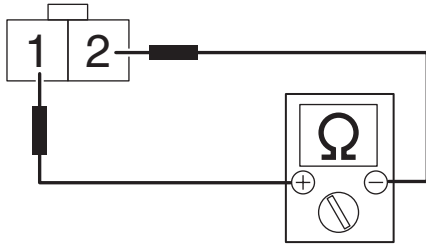

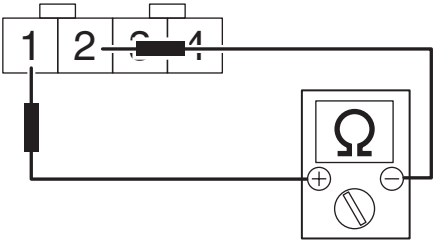

Install each part in the reverse order of removal.

C: INSPECTION

Preparation tool:

Circuit tester

1) Check the resistance between switch terminals.

Terminal No.	Inspection conditions	Standard	Connection diagram
1 — 2	OPEN	Less than 5 Ω	<ul style="list-style-type: none"> •Model without keyless access with push button start  <p style="text-align: right;">SL-01476</p>
	CLOSE	1 MΩ or more	<ul style="list-style-type: none"> •Model with keyless access with push button start  <p style="text-align: right;">SL-01578</p>

2) If the inspection result is not within the standard, replace the button - opener rear gate.

Rear Gate Latch and Actuator Assembly

SECURITY AND LOCKS

15.Rear Gate Latch and Actuator Assembly

A: REMOVAL

- 1) Disconnect the ground cable from battery. <Ref. to NT-6, BATTERY, NOTE, Note.>
- 2) Remove the trim panel - rear gate. <Ref. to EI-93, REMOVAL, Rear Gate Trim.>
- 3) Remove the latch and actuator - rear gate.
 - (1) Disconnect the connector.
 - (2) Remove the bolts, and remove the latch and actuator - rear gate.

B: INSTALLATION

Install each part in the reverse order of removal.

Tightening torque:

Refer to "COMPONENT" of "General Description". <Ref. to SL-3, REAR GATE LOCK, COMPONENT, General Description.>

C: INSPECTION

1. LATCH

Check if the latch operates normally.

If latch deformation, abnormal wear, or unsmooth lock operation is observed, replace the latch and actuator - rear gate.

2. ACTUATOR

Preparation tool:

Circuit tester

1) Check door lock operation

Check the door lock operation when battery voltage is applied between the terminals of actuator.

Terminal No.	Inspection conditions	Specification
1 (+) — 2 (-)	Connect battery to the terminals	OPEN

2) Check switch

Check the resistance between actuator terminals.

Terminal No.	Inspection conditions	Standard
3 — 4	OPEN	Less than 1.5 Ω
	CLOSE	1 MΩ or more

3) If it does not operate properly as a result of inspection, replace the latch and actuator - rear gate.

Front Hood Lock Assembly

SECURITY AND LOCKS

16. Front Hood Lock Assembly

A: REMOVAL

- 1) Open the front hood.
- 2) Remove the clip, and remove the bracket - grille.

NOTE:

To prevent damage to the bracket - grille, make sure to remove all clips.

- 3) Remove the lock assembly - front hood.
 - (1) Remove the bolt and clip.

- (2) Disconnect the release cable, and detach the lock assembly - front hood.

NOTE:

When disconnecting the release cable, refer to “FRONT HOOD OPENER” of “Remote Openers”. <Ref. to SL-55, FRONT HOOD OPENER, REMOVAL, Remote Openers.>

B: INSTALLATION

1) Before installation, check the following items.

- Is the cable deformed?
- Grease is applied sufficiently to cable joints.

If grease is insufficient, add it as necessary before assembling the cable.

2) Install each part in the reverse order of removal.

Tightening torque:

Refer to “COMPONENT” of “General Description”. <Ref. to SL-4, FRONT HOOD LOCK, COMPONENT, General Description.>

Front Hood Lock Assembly

SECURITY AND LOCKS

C: ADJUSTMENT

- 1) Loosen the bolt, and adjust the lock assembly - front hood while moving it up and down.

- 2) After adjustment, tighten the bolts securely.

Tightening torque:

Refer to "COMPONENT" of "General Description". <Ref. to SL-4, FRONT HOOD LOCK, COMPONENT, General Description.>

D: INSPECTION

Check if the lock assembly operates normally.

If lever deformation, abnormal wear, or unsmooth lock operation is observed, replace the lock assembly - front hood.

17. Remote Openers

A: REMOVAL

1. FRONT HOOD OPENER

- 1) Remove the opener handle.
 - (1) Remove the cable.
 - (2) Remove the bolt, and remove the opener handle.

2) After removing the following parts, attach a string to the end of the cable - front hood and remove the cable clip and the cable.

- Lock assembly - front hood: <Ref. to SL-52, REMOVAL, Front Hood Lock Assembly.>
- Cover assembly - instrument panel LWR driver: <Ref. to EI-54, REMOVAL, Instrument Panel Lower Cover.>

Remote Openers

SECURITY AND LOCKS

2. FUEL FLAP OPENER

- 1) Remove the cover - handle.
 - (1) Open the cover by using a flat tip screwdriver.
 - (2) Remove the screws and detach the cover - handle.

- 2) Remove the pull handle - opener.
 - (1) Remove the nut.
 - (2) Remove the cable from pull handle - opener.

- 3) Remove the trim panel - rear apron RH. <Ref. to EI-80, CROSSTREK MODEL, REMOVAL, Rear Quarter Trim.>
- 4) Remove the fuel lock inside the quarter panel.
 - (1) Press the claws of the fuel lock.
 - (2) While keeping the condition in step (1), pull the fuel lock to the rearward of the vehicle.

- 5) Remove the lower inner trim. <Ref. to EI-73, REMOVAL, Lower Inner Trim.>
- 6) Remove the cable clip, and remove the cable.

B: INSTALLATION

- 1) Before installation, check the following items.
 - Cable is free from deformation such as fray.
- 2) Install each part in the reverse order of removal.

Tightening torque:

Front hood lock: <Ref. to SL-4, FRONT HOOD LOCK, COMPONENT, General Description.>

Remote opener: <Ref. to SL-4, REMOTE OPENER, COMPONENT, General Description.>

C: INSPECTION

Check if the front hood and fuel flap operate normally.

Ignition Key Lock

SECURITY AND LOCKS

18. Ignition Key Lock

A: REPLACEMENT

CAUTION:

- Before handling the airbag system components, refer to “CAUTION” of “General Description” in “AIRBAG SYSTEM”. <Ref. to AB-9, CAUTION, General Description.>
- If the steering wheel and steering angle sensor (steering roll connector) are removed, perform “VSC(VDC) Centering Mode” of the VDC. <Ref. to VDC-23, ADJUSTMENT, VDC Control Module and Hydraulic Control Unit (VDCCM&H/U).>

- 1) Disconnect the ground cable from battery and wait for at least 60 seconds before starting work. <Ref. to NT-6, BATTERY, NOTE, Note.>
- 2) Remove the cover assembly - instrument panel LWR driver. <Ref. to AB-34, REMOVAL, Knee Airbag Module.>
- 3) Remove the knee airbag module. <Ref. to AB-34, REMOVAL, Knee Airbag Module.>
- 4) Remove the column assembly - steering. <Ref. to PS-18, REMOVAL, Steering Column.>
- 5) Remove the ignition key lock.
 - (1) Secure the column assembly - steering in a vise.
 - (2) Use the reverse tap and drill to remove the set bolt and remove the ignition key lock.

CAUTION:

Do not apply any impact to the set bolt by a chisel or punch.

- 6) Install the ignition key lock.
 - (1) Secure the ignition key lock to the column assembly - steering.
 - (2) Use new set bolts. Tighten the bolt until the bolt head is broken (bolt head wrenched off).

B: DISASSEMBLY

- 1) Remove the immobilizer antenna assembly or the ignition switch illumination. <Ref. to SL-80, REMOVAL, Immobilizer Antenna.>
- 2) Release the claws, and pull the key warning switch downwards to remove.

- 3) Remove the screws and remove the key lock solenoid.

Ignition Key Lock

SECURITY AND LOCKS

4) Replace the key cylinder.

(1) Insert the key into the key cylinder, and turn the key to the ACC position.

(2) Insert a flat tip screwdriver from the steering lock frame hole (A), and pull the key cylinder until the key cylinder claws touch the steering lock frame stopper (B).

(3) Insert a flat tip screwdriver from the steering lock frame hole (A), and release the claws to pull out the key cylinder.

5) Release the claws and remove the ignition switch assembly.

SL-01537

C: INSPECTION

Preparation tool:

Circuit tester

1) Check the resistance between switch terminals.

SL-01522

Terminal No.	Inspection conditions		Standard
Between all terminals	(A)	LOCK	1 MΩ or more
2 — 4	(B)	ACC	Less than 1 Ω
1 — 2 — 4 5 — 6	(C)	ON	Less than 1 Ω
1 — 3 — 4 5 — 6 — 7	(D)	ST	Less than 1 Ω

2) Replace the ignition switch assembly if the inspection result is not within the standard.

19. Key Lock Cylinders

A: REPLACEMENT

1. STEERING LOCK

- 1) Disconnect the ground cable from battery. <Ref. to NT-6, BATTERY, NOTE, Note.>
- 2) Remove the cover assembly - column.
 - (1) Remove the screws by turning the steering wheel to right and left.
 - (2) Release the claw, and remove the cover assembly - column UPR and the cover assembly - column LWR.

- 3) Remove the immobilizer antenna assembly or the ignition switch illumination. <Ref. to SL-80, REMOVAL, Immobilizer Antenna.>
- 4) Remove the key lock solenoid.
 - (1) Disconnect the connector.
 - (2) Remove the screws and remove the key lock solenoid.

5) Replace the key cylinder.

(1) Insert the key into the key cylinder, and turn the key to the ACC position.

(2) Insert a flat tip screwdriver from the steering lock frame hole (A), and pull the key cylinder until the key cylinder claws touch the steering lock frame stopper (B).

(3) Insert a flat tip screwdriver from the steering lock frame hole (A), and release the claws to pull out the key cylinder.

6) Install each part in the reverse order of removal.

Key Lock Cylinders

SECURITY AND LOCKS

2. FRONT DOOR

- 1) Raise the glass assembly - front door to the top position.
- 2) Remove the cover - handle front outer.

Preparation tool:

TORX® T30

- (1) Remove the plug at the rear end of the panel assembly - front door.
- (2) Loosen the TORX® bolt and remove the cover - handle front outer.

- 3) Remove the key cylinder (B) from the cover - handle front outer (A), and replace the key cylinder.

- 4) Install each part in the reverse order of removal.

CAUTION:

When installing the cover - handle front outer on driver's side, make sure that the key cylinder shaft is correctly inserted into the latch & actuator assembly - front.

Tightening torque:

Refer to "COMPONENT" of "General Description". <Ref. to SL-2, DOOR LOCK ASSEMBLY, COMPONENT, General Description.>

3. GLOVE BOX LID

1) Remove the pocket assembly.

- (1) Attach the protective tape (a) to the panel center LWR.
- (2) Remove the damper COMPL - pocket.
- (3) Release the stoppers and remove the pocket assembly by pulling it toward you.

EI-03419

2) Replace the key cylinder.

- (1) Pull up the lock knob.
- (2) Push out the key cylinder from the pocket assembly while pressing in the metal plate.

SL-01528

3) Install each part in the reverse order of removal.

20.Security Control Module

A: REMOVAL

CAUTION:

- Before handling the airbag system components, refer to “CAUTION” of “General Description” in “AIRBAG SYSTEM”. <Ref. to AB-9, CAUTION, General Description.>
 - Do not allow harness and connectors to interfere or get tangled up with other parts.
 - If the steering wheel and steering angle sensor (steering roll connector) are removed, perform “VSC(VDC) Centering Mode” of the VDC. <Ref. to VDC-23, ADJUSTMENT, VDC Control Module and Hydraulic Control Unit (VDCCM&H/U).>
- 1) Remove the steering wheel. <Ref. to PS-8, REMOVAL, Steering Wheel.>
 - 2) Remove the instrument panel assembly. <Ref. to EI-61, REMOVAL, Instrument Panel Assembly.>
 - 3) Remove the heater and cooling unit assembly. <Ref. to AC-54, REMOVAL, Heater and Cooling Unit.>
 - 4) Remove the security control module.
 - (1) Disconnect the connector.
 - (2) Remove the nuts, and remove the security control module.

B: INSTALLATION

CAUTION:

- When the control module related to immobilizer has been replaced, be sure to perform the registration of immobilizer system. For detailed operation procedure, refer to “Type B” described in “REGISTRATION MANUAL FOR IMMOBILIZER”.
 - Before handling the airbag system components, refer to “CAUTION” of “General Description” in “AIRBAG SYSTEM”. <Ref. to AB-9, CAUTION, General Description.>
 - Do not allow harness and connectors to interfere or get tangled up with other parts.
 - If the steering wheel and steering angle sensor (steering roll connector) are removed, perform “VSC(VDC) Centering Mode” of the VDC. <Ref. to VDC-23, ADJUSTMENT, VDC Control Module and Hydraulic Control Unit (VDCCM&H/U).>
- Install each part in the reverse order of removal.

Tightening torque:

Security control module: 7.5 N·m (0.76 kgf-m, 5.5 ft-lb)

21. Impact Sensor

A: REMOVAL

- 1) Pull out the key from the ignition switch, or turn off the power.
- 2) Close all the doors and rear gate.
- 3) Press the UNLOCK button of the keyless transmitter or access key.
- 4) Disconnect the ground cable from battery. <Ref. to NT-6, BATTERY, NOTE, Note.>
- 5) Remove the impact sensor.
- 6) Change the setting of impact sensor using Subaru Select Monitor.

B: INSTALLATION

- 1) Pull out the key from the ignition switch, or turn the ignition switch to OFF.
- 2) Close all the doors and rear gate.
- 3) Press the UNLOCK button of the keyless transmitter or access key.
- 4) Disconnect the ground cable from battery. <Ref. to NT-6, BATTERY, NOTE, Note.>
- 5) Install the impact sensor.
- 6) Change the setting of impact sensor using Subaru Select Monitor.

C: OPERATION

1. IMPACT SENSOR SETTING USING SUBARU SELECT MONITOR

- 1) Make an impact sensor setting.
 - (1) Connect the Subaru Select Monitor.

NOTE:

For detailed operation procedures, refer to "Application help".

- (2) Turn the ignition switch to ON.
- (3) On «Start» display, select «Diagnosis».
- (4) On «Vehicle selection» display, input the target vehicle information and select «Confirmed».
- (5) On «Main Menu» display, select «Each System».
- (6) On «Select System» display, select «Body Control» and then select «Enter».
- (7) On «Select Function» display, select «Customize».
- (8) From the Customize item list, select «Impact sensor» or «Impact Sensor Setup».
- (9) Make an impact sensor setting.
 - When installing: ON
 - When removing: OFF
- (10) Make an impact sensor ON/OFF setting.
 - When installing: ON
 - When removing: OFF
- (11) Turn the ignition switch to OFF, and then remove the Subaru Select Monitor.

D: ADJUSTMENT

1. CHECK IMPACT SENSOR

- 1) Pull out the key from the ignition switch, or turn the ignition switch to OFF.
- 2) Close all the windows.
- 3) Close all the doors and rear gate. Leave open the front hood.
- 4) Press the LOCK button of the keyless transmitter or access key from outside of vehicle.
- 5) Check that the security indicator light blinks twice within 0.5 seconds in 2 second cycles after 30 seconds.
- 6) Hit all windows with the palm with force repeatedly, to check for whether the security alarm operates. Lift up the front hood approx. 12 cm (4.7 in) or more, and then drop it off to check the operation of security alarm.
- 7) If NG, adjust the impact sensitivity.

2. IMPACT SENSITIVITY ADJUSTMENT

- 1) Adjust the impact sensitivity.
 - (1) Connect the Subaru Select Monitor.

NOTE:

For detailed operation procedures, refer to "Application help".

- (2) Turn the ignition switch to ON.
- (3) On «Start» display, select «Diagnosis».
- (4) On «Vehicle selection» display, input the target vehicle information and select «Confirmed».
- (5) On «Main Menu» display, select «Each System».
- (6) On «Select System» display, select «Impact Sensor» and then «Enter».
- (7) On «Select Function» display, select «Work Support».
- (8) From the work support item list, select «Sensitivity Adjustment Mode».
- (9) Perform the sensitivity adjustment.
 - Sensitivity can be adjusted in 11 levels (0 to 10).
 - Initial setting is 5.
 - Smaller number means more sensitive.
 - Larger number means less sensitive.
- (10) Turn the ignition switch to OFF, and then remove the Subaru Select Monitor.

NOTE:

- Set the sensor so that it is not triggered by normal vibrations (someone reclining on the door, hit by a ball, etc.).
- Set the sensor to operate the alarm when the windshield glass or door is hit hard repeatedly, etc, where it can be assumed that there is an attempt to damage the car by a burglar, etc.
- Even if there is no burglary attempt, if there is vibration (road construction, elevated parking lots, passage of trains or boarding of ferries), the alarm can be triggered. Because of this, ask the customer about their parking conditions, and set an appropriate sensitivity level after discussion.
- If the sensitivity setting was not performed properly, a buzzer will sound four times. In this case, check that there is no error in CAN communication.

22. Keyless Entry Control Module

A: REMOVAL

- 1) Disconnect the ground cable from battery. <Ref. to NT-6, BATTERY, NOTE, Note.>
- 2) Remove the trim panel - rear apron LH. <Ref. to EI-80, REMOVAL, Rear Quarter Trim.>
- 3) Remove the keyless entry control module.
 - (1) Disconnect the connector.
 - (2) Remove the bolt and then remove the keyless entry control module.

WT-00172

B: INSTALLATION

Install each part in the reverse order of removal.

Tightening torque:

Keyless entry control module: 13 N·m (1.33 kgf-m, 9.6 ft-lb)

Keyless Buzzer

SECURITY AND LOCKS

23. Keyless Buzzer

A: REMOVAL

- 1) Disconnect the ground cable from battery. <Ref. to NT-6, BATTERY, NOTE, Note.>
- 2) Lift up the vehicle.
- 3) Remove the clips and screws, and turn over the front side of the mud guard - front RH.

- 4) Remove the keyless buzzer.
 - (1) Disconnect the connector.
 - (2) Remove the clip and detach the keyless buzzer.

B: INSTALLATION

Install each part in the reverse order of removal.

CAUTION:

Install so that the front end of the under cover (b) comes inside the bumper face - front (a), and the front end of the mud guard (c) comes outside the bumper face - front (a).

C: INSPECTION

Using the Subaru Select Monitor, perform forced operation of the keyless buzzer. <Ref. to BC(diag)-17, OPERATION, User Customizing.>

If the buzzer does not sound, replace the keyless buzzer.

24. Body Integrated Unit

A: NOTE

1. REPLACE BODY INTEGRATED UNIT

- 1) Check and record the current setting. <Ref. to BC(diag)-20, CONFIRM CURRENT SETTING, OPERATION, Registration Body Integrated Unit.>
- 2) Prepare all immobilizer keys already registered. (Models without the keyless access with push button start)
- 3) Replace the body integrated unit with a new part.
- 4) Set the current settings as recorded. <Ref. to BC(diag)-21, REGISTRATION BODY INTEGRATED UNIT (FUNCTION SETTING), OPERATION, Registration Body Integrated Unit.>
- 5) Register the immobilizer. (Models without the keyless access with push button start) For detailed operation procedure, refer to "Type B" described in "REGISTRATION MANUAL FOR IMMOBILIZER".

B: REMOVAL

CAUTION:

Before handling the airbag system components, refer to "CAUTION" of "General Description" in "AIRBAG SYSTEM". <Ref. to AB-9, CAUTION, General Description.>

- 1) Disconnect the ground cable from battery and wait for at least 60 seconds before starting work. <Ref. to NT-6, BATTERY, NOTE, Note.>
- 2) Remove the cover assembly - instrument panel LWR driver. <Ref. to EI-54, REMOVAL, Instrument Panel Lower Cover.>
- 3) Remove the knee airbag module. <Ref. to AB-34, REMOVAL, Knee Airbag Module.>
- 4) Release the lock and remove the fuse holder.

SL-01530

5) Remove the relay & fuse box.

(1) Disconnect the connector.

(2) Remove the bolts and nuts, and remove the relay & fuse box.

SL-01531

6) Remove the body integrated unit.

CAUTION:

Be careful to keep water and other foreign materials away from body integrated unit terminals.

(1) Disconnect the connector.

SL-01532

Body Integrated Unit

SECURITY AND LOCKS

- (2) Release the lock, and remove the data link connector bracket from the bracket.

- (3) Release the claws, and pull out the body integrated unit from the bracket.

C: INSTALLATION

CAUTION:

- When the control module related to immobilizer has been replaced, be sure to perform the registration of immobilizer system. For detailed operation procedure, refer to “Type B” described in “REGISTRATION MANUAL FOR IMMOBILIZER”.
- Before handling the airbag system components, refer to “CAUTION” of “General Description” in “AIRBAG SYSTEM”. <Ref. to AB-9, CAUTION, General Description.>
- Do not allow harness and connectors to interfere or get tangled up with other parts.

Install each part in the reverse order of removal.

Tightening torque:

Relay & fuse box: 7.5 N·m (0.76 kgf-m, 5.5 ft-lb)

NOTE:

Make sure that there are no differences from the contents of the current settings after installation. <Ref. to BC(diag)-12, LIST, Read Current Data.>

25. Keyless Transmitter

A: REMOVAL

1. KEYLESS TRANSMITTER BATTERY

CAUTION:

To prevent static electricity damage to the keyless transmitter printed circuit board, touch the steel area of building with hand to discharge static electricity carried on body or clothes before disassembling the keyless transmitter.

1) Remove the keyless transmitter cover, and take out the transmitter case (A).

NOTE:

Use a flat tip screwdriver with protective tape or cloth in order not to damage the components.

2) Release the claws to open the transmitter case, then remove the battery (A).

B: INSTALLATION

1. KEYLESS TRANSMITTER BATTERY

Install each part in the reverse order of removal.

Keyless Transmitter

SECURITY AND LOCKS

C: INSPECTION

1. KEYLESS TRANSMITTER BATTERY

1) Check the keyless transmitter battery voltage.

PREPARATION TOOL:

Circuit tester

NOTE:

Complete the measurement within 5 seconds because the battery discharges during measurement.

Battery terminal	Inspection Conditions	Standard
(+) — (-)	Connect resistor (A) 47 Ω	2.5 — 3.0 V

2) Replace the battery if the inspection result is not within the standard. (Use CR1620 or equivalent.)

D: REPLACEMENT

1. REGISTRATION OF KEYLESS TRANSMITTER WITH SUBARU SELECT MONITOR

NOTE:

- A maximum of four keyless transmitters can be registered for each individual vehicle.
- When replacing or adding the keyless transmitter, new registration of transmitter is necessary.

1) Register the transmitter.

(1) Connect the Subaru Select Monitor to data link connector.

NOTE:

For detailed operation procedures, refer to “Application help”.

(2) Turn the ignition switch to ON.

(3) On «Start» display, select «Diagnosis».

(4) On «Vehicle selection» display, input the target vehicle information and select «Confirmed».

(5) On «Main Menu» display, select «Each System».

(6) On «Select System» display, select «Body Control» and then select «Enter».

(7) On «Select Function» display, select «Work Support».

(8) From the work support item list, select «Keyless ID registration».

(9) According to the directions on the screen, press the button of the transmitter to be registered in order of Lock → Unlock. When registration completed, external buzzer sound once. Repeat the registration as many times as desired.

(10) Press the [Exit] button to finish the operations.

NOTE:

When attempting to register a key that has already been registered, the external buzzer sounds twice.

26. Access Key

A: REMOVAL

NOTE:

Refer to keyless transmitter for model without keyless access with push button start. <Ref. to SL-75, KEY-LESS TRANSMITTER BATTERY, REMOVAL, Keyless Transmitter.>

1. ACCESS KEY BATTERY

CAUTION:

To prevent static electricity damage to the access key printed circuit board, touch the steel area of building with hand to discharge static electricity carried on body or clothes before disassembling the access key.

- 1) Push the lock button and remove the mechanical key from the access key.
- 2) Insert a flat tip screwdriver end wrapped with insulating tape etc. into the slit (a) of the access key to open the case.

- 3) Insert a flat tip screwdriver wrapped with insulating tape, and while holding the upper side of the battery (a), remove the battery (a) from the case.

B: INSTALLATION

1. ACCESS KEY BATTERY

Install each part in the reverse order of removal.

C: INSPECTION

1. ACCESS KEY BATTERY

Check the access key battery voltage.

Preparation tool:

Circuit tester

NOTE:

Complete the measurement within 5 seconds because the battery discharges during measurement.

Battery terminal	Inspection conditions	Standard
(+) — (-)	Connect resistor (A) 47 Ω	2.5 — 3.0 V

Replace the battery if the inspection result is not within the standard value. (Use CR2032V or equivalent.)

D: REPLACEMENT

1. ACCESS KEY REGISTRATION

NOTE:

- A maximum of seven access keys can be registered for each individual vehicle.
- When replacing or adding an access key, new registration of the access key is necessary.
- When the access key has been newly added, it is registered to the immobilizer system at the same time.

2. CLEARING ACCESS KEY REGISTRATION

Refer to the “REGISTRATION MANUAL FOR IMMOBILIZER” for clearing access key registration.

27. Immobilizer Control Module

A: NOTE

The control of immobilizer system is carried out in body integrated unit. Refer to the section on the body integrated unit for the work procedures. <Ref. to SL-72, Body Integrated Unit.>

28. Immobilizer Antenna

A: REMOVAL

1. MODEL WITHOUT KEYLESS ACCESS WITH PUSH BUTTON START

- 1) Disconnect the ground cable from battery. <Ref. to NT-6, BATTERY, NOTE, Note.>
- 2) Remove the cover assembly - column.
 - (1) Remove the screws by turning the steering wheel to right and left.
 - (2) Release the claw, and remove the cover assembly - column UPR and the cover assembly - column LWR.

- 3) Remove the immobilizer antenna assembly.
 - (1) Disconnect the connector.
 - (2) Release two claws using a flat tip screwdriver or similar tool wrapped with a protection tape, and remove the immobilizer antenna assembly.

CAUTION:

Do not apply excessive force to disengage the lock of immobilizer antenna assembly. Otherwise they may be broken because those parts are the products made of a plastic.

2. MODEL WITH KEYLESS ACCESS WITH PUSH BUTTON START

NOTE:

Immobilizer antenna is integrated with the push button ignition switch.

1) Remove the cover assembly - instrument panel LWR driver. <Ref. to EI-54, REMOVAL, Instrument Panel Lower Cover.>

2) Remove the push button ignition switch.

(1) Disconnect the connector, and remove the aspirator hose.

AC-02714

(2) Release the claws, and then remove the panel - switch.

(3) Release the claws, and then remove the push button ignition switch from the panel - switch.

SL-01599

B: INSTALLATION

Install each part in the reverse order of removal.

29. Keyless Access Indoor Antenna

A: REMOVAL

1. FRONT ANTENNA

- 1) Disconnect the ground cable from battery. <Ref. to NT-6, BATTERY, NOTE, Note.>
- 2) Remove the cover - shift lever. <Ref. to EI-59, REMOVAL, Console Box.>
- 3) Disconnect the connector and remove the front antenna assembly - interior.

2. REAR ANTENNA

- 1) Disconnect the ground cable from battery. <Ref. to NT-6, BATTERY, NOTE, Note.>
- 2) Remove the rear seat cushion assembly. <Ref. to SE-24, REMOVAL, Rear Seat.>
- 3) Remove the rear antenna assembly - interior.

NOTE:

Do not remove the antenna assembly from the cover. If removed, the antenna assembly and cover mounting becomes loose, causing abnormal noises.

- (1) Disconnect the connector.
- (2) Remove the screw, and remove the rear antenna assembly - interior.

B: INSTALLATION

Install each part in the reverse order of removal.

C: INSPECTION

- 1) Check the setting by performing Keyless access system check using the Subaru Select Monitor. <Ref. to KPS(diag)-33, OPERATION, Keyless Access System Check.>
- 2) Disconnect the Subaru Select Monitor. Operate the touch sensor of the door outer handle to check if door lock operates.
- 3) If the system does not operate normally as the result of inspection, refer to “General Diagnostic Table” of the “KEYLESS ACCESS WITH PUSH BUTTON START SYSTEM (DIAGNOSTICS)” section. <Ref. to KPS(diag)-98, KEYLESS ACCESS SYSTEM, INSPECTION, General Diagnostic Table.>

Keyless Access Outdoor Antenna

SECURITY AND LOCKS

30. Keyless Access Outdoor Antenna

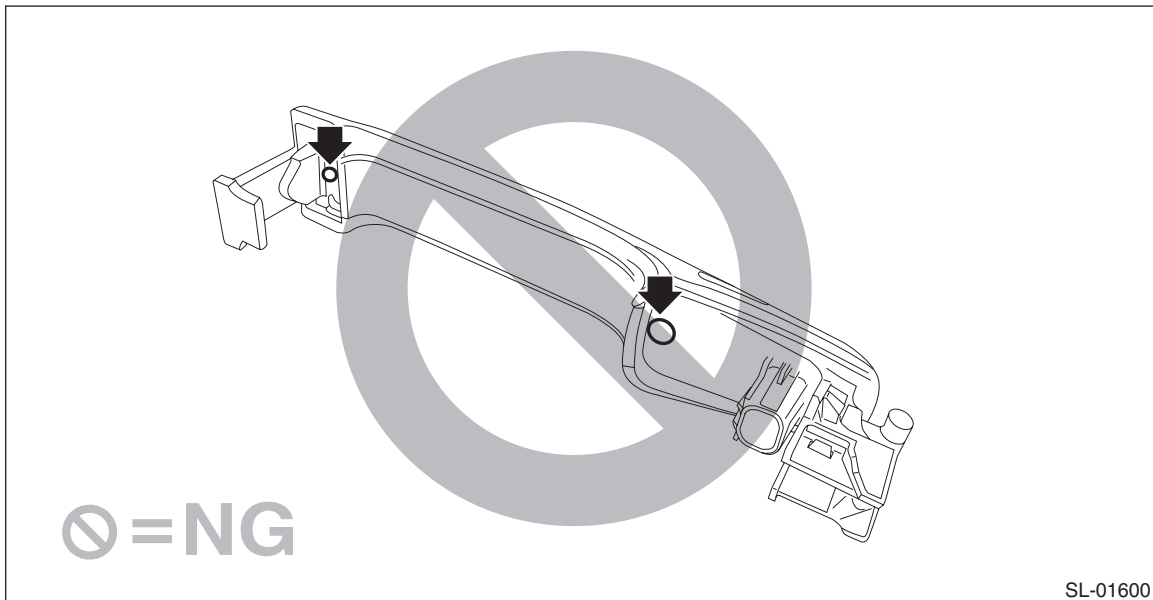

A: REMOVAL

1. FRONT ANTENNA

CAUTION:

Do not remove the antenna from the front door outer handle.

If replacement is needed, replace the front outer handle assembly as a set.

Remove the handle - door outer. <Ref. to SL-34, REMOVAL, Front Outer Handle.>

2. REAR ANTENNA

CAUTION:

- Do not detach the antenna except when replacing it. Detaching unnecessarily will lead to insecure attachment of the antenna.
- When replacing the antenna, do not reuse the tapping screw. Always replace with new tapping screws.

- 1) Disconnect the ground cable from battery. <Ref. to NT-6, BATTERY, NOTE, Note.>
- 2) Remove the bumper face - rear. <Ref. to EI-38, CROSSTREK MODEL, REMOVAL, Rear Bumper.>
- 3) Remove the rear antenna assembly - exterior.
 - (1) Disconnect the connector.
 - (2) Remove the screws, and remove the rear antenna assembly - exterior.

B: INSTALLATION

Install each part in the reverse order of removal.

Tightening torque:

Rear antenna assembly - exterior: 1.5 N·m (0.2 kgf·m, 1.1 ft·lb)

C: INSPECTION

- 1) Check the setting by performing Keyless access system check using the Subaru Select Monitor. <Ref. to KPS(diag)-33, OPERATION, Keyless Access System Check.>
- 2) Disconnect the Subaru Select Monitor. While bringing the access key, operate the touch sensor on door handle to check if door lock or unlock operates.
- 3) Disconnect the Subaru Select Monitor. While bringing the access key, operate the opener switch on the rear gate and the lock request switch to check if the door lock or lock operates.
- 4) If the system does not operate normally as the result of inspection, refer to “General Diagnostic Table” of the “KEYLESS ACCESS WITH PUSH BUTTON START SYSTEM (DIAGNOSTICS)” section. <Ref. to KPS(diag)-98, KEYLESS ACCESS SYSTEM, INSPECTION, General Diagnostic Table.>

Rear Lock Button

SECURITY AND LOCKS

31.Rear Lock Button

A: REMOVAL

NOTE:

The rear lock button is integrated into the rear gate opener button.

- 1) Disconnect the ground cable from battery. <Ref. to NT-6, BATTERY, NOTE, Note.>
- 2) Remove the garnish assembly - rear gate. <Ref. to EI-97, REMOVAL, Rear Gate Garnish.>
- 3) Remove the screws and remove the rear lock button.

SL-01619

- 4) Release the locks at both ends of the button - opener rear gate by pushing them with a flat tip screwdriver, remove the button - opener rear gate and remove the integrated harness.

SL-01620

B: INSTALLATION

CAUTION:

Make sure that the harness grommet is securely installed.

If not properly installed, this may cause leaks.

Install each part in the reverse order of removal.

C: INSPECTION

- 1) Using the Subaru Select Monitor, display «Rear gate/Trunk UNLOCK output» from «Data monitor».
- 2) Check if the display changes when the rear lock button is operated.
- 3) If the display is not correct as the result of inspection, refer to “General Diagnostic Table” of the “KEYLESS ACCESS WITH PUSH BUTTON START SYSTEM (DIAGNOSTICS)” section. <Ref. to KPS(diag)-98, KEYLESS ACCESS SYSTEM, INSPECTION, General Diagnostic Table.>

32.Receiver

A: REMOVAL

NOTE:

Except for model with keyless entry

- 1) Disconnect the ground cable from battery. <Ref. to NT-6, BATTERY, NOTE, Note.>
- 2) Remove the trim panel - rear apron LH. <Ref. to EI-80, REMOVAL, Rear Quarter Trim.>
- 3) Remove the receiver assembly.
 - (1) Disconnect the connector.
 - (2) Remove the bolt and remove the receiver assembly.

B: INSTALLATION

Install each part in the reverse order of removal.

Tightening torque:

Receiver assembly: 13 N·m (1.33 kgf-m, 9.6 ft-lb)

C: INSPECTION

- 1) Check if the door lock operates when the touch sensor of the door outer handle and rear lock button is operated.
- 2) If the system does not operate normally as the result of inspection, refer to “General Diagnostic Table” of the “KEYLESS ACCESS WITH PUSH BUTTON START SYSTEM (DIAGNOSTICS)” section. <Ref. to KPS(diag)-98, KEYLESS ACCESS SYSTEM, INSPECTION, General Diagnostic Table.>

33.Keyless Access CM

A: REMOVAL

CAUTION:

Before handling the airbag system components, refer to “CAUTION” of “General Description” in “AIRBAG SYSTEM”. <Ref. to AB-9, CAUTION, General Description.>

- 1) Disconnect the ground cable from battery and wait for at least 60 seconds before starting work. <Ref. to NT-6, BATTERY, NOTE, Note.>
- 2) Remove the cover assembly - instrument panel LWR driver. <Ref. to EI-54, REMOVAL, Instrument Panel Lower Cover.>
- 3) Remove the knee airbag module. <Ref. to AB-34, REMOVAL, Knee Airbag Module.>
- 4) Release the lock and remove the fuse holder.

SL-01530

- 5) Remove the relay & fuse box.
 - (1) Disconnect the connector.
 - (2) Remove the bolts and nuts, and remove the relay & fuse box.

SL-01531

Keyless Access CM

SECURITY AND LOCKS

6) Remove the keyless access CM.

CAUTION:

Be careful to keep water and other foreign materials away from body integrated unit terminals.

(1) Disconnect the connector.

(2) Release the claws, and pull out the keyless access CM from the bracket.

B: INSTALLATION

CAUTION:

- When the control module related to immobilizer has been replaced, be sure to perform the registration of immobilizer system. For detailed operation procedure, refer to “Type D” described in “REGISTRATION MANUAL FOR IMMOBILIZER”.

- Before handling the airbag system components, refer to “CAUTION” of “General Description” in “AIRBAG SYSTEM”. <Ref. to AB-9, CAUTION, General Description.>

Install each part in the reverse order of removal.

Tightening torque:

Relay & fuse box: 7.5 N·m (0.76 kgf-m, 5.5 ft-lb)

34.ID Code Box

A: NOTE

NOTE:

- Equipped on C5 model with keyless access with push button start.
- The ID code box is located at the place of security control module.

Refer to “Security Control Module” for operation procedures on ID code box. <Ref. to SL-66, Security Control Module.>

Steering Lock CM

SECURITY AND LOCKS

35. Steering Lock CM

A: REMOVAL

CAUTION:

- Before handling the airbag system components, refer to “CAUTION” of “General Description” in “AIRBAG SYSTEM”. <Ref. to AB-9, CAUTION, General Description.>
- Do not allow harness and connectors to interfere or get tangled up with other parts.
- If the steering wheel and steering angle sensor (steering roll connector) are removed, perform “VSC(VDC) Centering Mode” of the VDC. <Ref. to VDC-23, ADJUSTMENT, VDC Control Module and Hydraulic Control Unit (VDCCM&H/U).>

1) Disconnect the ground cable from battery and wait for at least 60 seconds before starting work. <Ref. to NT-6, BATTERY, NOTE, Note.>

2) Remove the cover assembly - instrument panel LWR driver. <Ref. to EI-54, REMOVAL, Instrument Panel Lower Cover.>

3) Remove the knee airbag module. <Ref. to AB-34, REMOVAL, Knee Airbag Module.>

4) Remove the universal joint assembly - steering. <Ref. to PS-13, REMOVAL, Universal Joint.>

5) Remove the column assembly - steering. <Ref. to PS-18, REMOVAL, Steering Column.>

6) Remove the steering lock CM.

(1) Secure the column assembly - steering in a vise.

(2) Use the reverse tap or drill to remove the set bolt and remove the steering lock CM.

CAUTION:

Do not apply any impact to the set bolt by a chisel or punch.

SL-01607

B: INSTALLATION

CAUTION:

- When the control module related to immobilizer has been replaced, be sure to perform the registration of immobilizer system. For detailed operation procedure, refer to “Type D” described in “REGISTRATION MANUAL FOR IMMOBILIZER”.
 - Before handling the airbag system components, refer to “CAUTION” of “General Description” in “AIRBAG SYSTEM”. <Ref. to AB-9, CAUTION, General Description.>
 - Do not allow harness and connectors to interfere or get tangled up with other parts.
 - If the steering wheel and steering angle sensor (steering roll connector) are removed, perform “VSC(VDC) Centering Mode” of the VDC. <Ref. to VDC-23, ADJUSTMENT, VDC Control Module and Hydraulic Control Unit (VDCCM&H/U).>
- 1) Secure the steering lock CM to the steering column.
 - 2) Use new set bolts. Tighten the bolt until the bolt head is broken (bolt head wrenched off).

C: INSPECTION

- 1) Check if the steering lock is released when you start the engine using the push button ignition switch.
- 2) If the system does not operate normally as the result of inspection, refer to “General Diagnostic Table” of the “KEYLESS ACCESS WITH PUSH BUTTON START SYSTEM (DIAGNOSTICS)” section. <Ref. to KPS(diag)-99, STEERING LOCK SYSTEM, INSPECTION, General Diagnostic Table.>

Push Button Ignition Switch

SECURITY AND LOCKS

36.Push Button Ignition Switch

A: REMOVAL

CAUTION:

Before handling the airbag system components, refer to “CAUTION” of “General Description” in “AIRBAG SYSTEM”. <Ref. to AB-9, CAUTION, General Description.>

- 1) Disconnect the ground cable from battery and wait for at least 60 seconds before starting work. <Ref. to NT-6, BATTERY, NOTE, Note.>
- 2) Remove the cover assembly - instrument panel LWR driver. <Ref. to EI-54, REMOVAL, Instrument Panel Lower Cover.>
- 3) Remove the knee airbag module. <Ref. to AB-34, REMOVAL, Knee Airbag Module.>
- 4) Remove the push button ignition switch.
 - (1) Disconnect the connector, and remove the aspirator hose.

AC-02714

- (2) Release the claws, and then remove the panel - switch.
- (3) Release the claws, and then remove the push button ignition switch from the panel - switch.

SL-01599

B: INSTALLATION

CAUTION:

Before handling the airbag system components, refer to “CAUTION” of “General Description” in “AIRBAG SYSTEM”. <Ref. to AB-9, CAUTION, General Description.>

Install each part in the reverse order of removal.

C: INSPECTION

1) Check the continuity between push button ignition switch terminals.

Preparation tool:

Circuit tester

Terminal No.	Inspection conditions	Specification
4 (COM) — 5 (GND)	Always	Continuity exists
7 (SSW1) — 5 (GND)	Push button ignition switch released → pressed	Continuity exists
2 (SSW2) — 5 (GND)	Push button ignition switch released → pressed	Continuity exists

2) Check the push button ignition switch operation when battery voltage is applied between the terminals of the push button ignition switch.

Terminal No.	Inspection conditions	Specification
11 (SWIL) — 5 (GND)	Connect battery to the terminals	Goes off → Red switch illumination light
12 (INDS) — 5 (GND)		Turns off → Switch indicator lights in green
13 (INDW) — 5 (GND)		Turns off → Switch indicator lights in orange

3) Replace the push button ignition switch if the inspection result is not within the standard value.

Starter Relay (Push Button Start)

SECURITY AND LOCKS

37. Starter Relay (Push Button Start)

A: REMOVAL

CAUTION:

Before handling the airbag system components, refer to “CAUTION” of “General Description” in “AIRBAG SYSTEM”. <Ref. to AB-9, CAUTION, General Description.>

- 1) Disconnect the ground cable from battery and wait for at least 60 seconds before starting work. <Ref. to NT-6, BATTERY, NOTE, Note.>
- 2) Remove the cover assembly - instrument panel LWR driver. <Ref. to EI-54, REMOVAL, Instrument Panel Lower Cover.>
- 3) Remove the knee airbag module. <Ref. to AB-34, REMOVAL, Knee Airbag Module.>
- 4) Release the lock and remove the fuse holder.

- 5) Remove the relay & fuse box.
 - (1) Disconnect the connector.
 - (2) Remove the bolts and nuts, and remove the relay & fuse box.

6) Remove the starter relay (push button start) (A) from the relay holder.

B: INSTALLATION

CAUTION:

Before handling the airbag system components, refer to “CAUTION” of “General Description” in “AIRBAG SYSTEM”. <Ref. to AB-9, CAUTION, General Description.>

Install each part in the reverse order of removal.

Tightening torque:

Relay & fuse box: 7.5 N·m (0.76 kgf-m, 5.5 ft-lb)

C: INSPECTION

Refer to “CHECK RELAY” in “Relay and Fuse”. <Ref. to SL-9, CHECK RELAY, INSPECTION, Relay and Fuse.>

IG Relay1 (Push Button Start)

SECURITY AND LOCKS

38.IG Relay1 (Push Button Start)

A: REMOVAL

CAUTION:

Before handling the airbag system components, refer to “CAUTION” of “General Description” in “AIRBAG SYSTEM”. <Ref. to AB-9, CAUTION, General Description.>

- 1) Disconnect the ground cable from battery and wait for at least 60 seconds before starting work. <Ref. to NT-6, BATTERY, NOTE, Note.>
- 2) Remove the cover assembly - instrument panel LWR driver. <Ref. to EI-54, REMOVAL, Instrument Panel Lower Cover.>
- 3) Remove the knee airbag module. <Ref. to AB-34, REMOVAL, Knee Airbag Module.>
- 4) Release the lock and remove the fuse holder.

- 5) Remove the relay & fuse box.
 - (1) Disconnect the connector.
 - (2) Remove the bolts and nuts, and remove the relay & fuse box.

6) Remove IG relay 1 (push button start) (A) from the relay holder.

SL-01625

B: INSTALLATION

CAUTION:

Before handling the airbag system components, refer to “CAUTION” of “General Description” in “AIRBAG SYSTEM”. <Ref. to AB-9, CAUTION, General Description.>

Install each part in the reverse order of removal.

Tightening torque:

Relay & fuse box: 7.5 N·m (0.76 kgf-m, 5.5 ft-lb)

C: INSPECTION

Refer to “CHECK RELAY” in “Relay and Fuse”. <Ref. to SL-9, CHECK RELAY, INSPECTION, Relay and Fuse.>

IG Relay2 (Push Button Start)

SECURITY AND LOCKS

39.IG Relay2 (Push Button Start)

A: REMOVAL

CAUTION:

Before handling the airbag system components, refer to “CAUTION” of “General Description” in “AIRBAG SYSTEM”. <Ref. to AB-9, CAUTION, General Description.>

- 1) Disconnect the ground cable from battery and wait for at least 60 seconds before starting work. <Ref. to NT-6, BATTERY, NOTE, Note.>
- 2) Remove the cover assembly - instrument panel LWR driver. <Ref. to EI-54, REMOVAL, Instrument Panel Lower Cover.>
- 3) Remove the knee airbag module. <Ref. to AB-34, REMOVAL, Knee Airbag Module.>
- 4) Release the lock and remove the fuse holder.

- 5) Remove the relay & fuse box.
 - (1) Disconnect the connector.
 - (2) Remove the bolts and nuts, and remove the relay & fuse box.

6) Remove IG relay 2 (push button start) (A) from the relay holder.

B: INSTALLATION

CAUTION:

Before handling the airbag system components, refer to “CAUTION” of “General Description” in “AIRBAG SYSTEM”. <Ref. to AB-9, CAUTION, General Description.>

Install each part in the reverse order of removal.

Tightening torque:

Relay & fuse box: 7.5 N·m (0.76 kgf-m, 5.5 ft-lb)

C: INSPECTION

Refer to “CHECK RELAY” in “Relay and Fuse”. <Ref. to SL-9, CHECK RELAY, INSPECTION, Relay and Fuse.>

Accessory Relay (Push Button Start)

SECURITY AND LOCKS

40. Accessory Relay (Push Button Start)

A: REMOVAL

CAUTION:

Before handling the airbag system components, refer to “CAUTION” of “General Description” in “AIRBAG SYSTEM”. <Ref. to AB-9, CAUTION, General Description.>

- 1) Disconnect the ground cable from battery and wait for at least 60 seconds before starting work. <Ref. to NT-6, BATTERY, NOTE, Note.>
- 2) Remove the cover assembly - instrument panel LWR driver. <Ref. to EI-54, REMOVAL, Instrument Panel Lower Cover.>
- 3) Remove the knee airbag module. <Ref. to AB-34, REMOVAL, Knee Airbag Module.>
- 4) Release the lock and remove the fuse holder.

- 5) Remove the accessory relay (push button start) (A) from the relay and fuse box.

B: INSTALLATION

CAUTION:

Before handling the airbag system components, refer to “CAUTION” of “General Description” in “AIRBAG SYSTEM”. <Ref. to AB-9, CAUTION, General Description.>

Install each part in the reverse order of removal.

C: INSPECTION

Refer to “CHECK RELAY” in “Relay and Fuse”. <Ref. to SL-9, CHECK RELAY, INSPECTION, Relay and Fuse.>

Starter Cut Relay

SECURITY AND LOCKS

41. Starter Cut Relay

A: REMOVAL

CAUTION:

Before handling the airbag system components, refer to “CAUTION” of “General Description” in “AIRBAG SYSTEM”. <Ref. to AB-9, CAUTION, General Description.>

- 1) Disconnect the ground cable from battery and wait for at least 60 seconds before starting work. <Ref. to NT-6, BATTERY, NOTE, Note.>
- 2) Remove the cover assembly - instrument panel LWR driver. <Ref. to EI-54, REMOVAL, Instrument Panel Lower Cover.>
- 3) Remove the knee airbag module. <Ref. to AB-34, REMOVAL, Knee Airbag Module.>
- 4) Release the lock and remove the fuse holder.

- 5) Remove the relay & fuse box.
 - (1) Disconnect the connector.
 - (2) Remove the bolts and nuts, and remove the relay & fuse box.

6) Remove the starter cut relay (A) from the relay holder.

B: INSTALLATION

CAUTION:

Before handling the airbag system components, refer to “CAUTION” of “General Description” in “AIRBAG SYSTEM”. <Ref. to AB-9, CAUTION, General Description.>

Install each part in the reverse order of removal.

Tightening torque:

Relay & fuse box: 7.5 N·m (0.76 kgf-m, 5.5 ft-lb)

C: INSPECTION

Refer to “CHECK RELAY” in “Relay and Fuse”. <Ref. to SL-9, CHECK RELAY, INSPECTION, Relay and Fuse.>

Access Buzzer

SECURITY AND LOCKS

42. Access Buzzer

A: REMOVAL

- 1) Disconnect the ground cable from battery. <Ref. to NT-6, BATTERY, NOTE, Note.>
- 2) Lift up the vehicle.
- 3) Remove the clips and screws, and turn over the front side of the mud guard - front RH.

- 4) Remove the access buzzer.
 - (1) Disconnect the connector.
 - (2) Remove the clip and detach the access buzzer.

B: INSTALLATION

Install each part in the reverse order of removal.

CAUTION:

Install so that the front end of the under cover (b) comes inside the bumper face - front (a), and the front end of the mud guard (c) comes outside the bumper face - front (a).

C: INSPECTION

Using the Subaru Select Monitor, perform forced operation of the access buzzer. <Ref. to BC(diag)-17, OPERATION, User Customizing.>

If the buzzer does not sound, replace the access buzzer.

43. Function Setting (Customize)

A: OPERATION

Disabling/Activating the keyless access system

The following functions are disabled when the keyless access system functions are disabled:

- LOCK function performed by the operation of touch sensor on the door outer handle
- Rear gate LOCK function by rear lock button operation
- UNLOCK function by holding the door handle
- Rear gate open function by rear gate opener button operation in the rear gate lock condition
- Lockout prevention feature
- Warning function
- Engine starting control using keyless access collation

B: PROCEDURE

1. METHOD FOR STOPPING KEYLESS ACCESS SYSTEM FUNCTION BY OPENING/CLOSING DOORS

1) Check that the vehicle status is as follows:

- Ignition switch OFF
- One window is completely open
- Keyless access system is activated (or disabled if re-activating)

2) Sit in the driver's seat with the door closed and press the door lock switch to UNLOCK once.

3) Open the driver's door within five seconds.

4) Within 5 seconds, with the driver's door opened, slowly press the door lock switch to UNLOCK twice.

5) Within 10 seconds after finishing step 4), perform the closing → opening operation of the driver's door twice.

6) Within 10 seconds after finishing step 5), with the driver's door opened, slowly press the door lock switch to UNLOCK twice.

7) Within 10 seconds after finishing step 6), perform the closing → opening operation of the driver's door once.

8) Within five seconds after finishing step 7), close the drivers door.

NOTE:

- Perform the same procedures to re-activate the keyless access system from the disabled condition.
- In step 4) and step 6), press the door lock switch completely. The function may not work properly if the switch is pressed shortly.

2. METHOD FOR STOPPING KEYLESS ACCESS SYSTEM FUNCTION BY OPERATING ACCESS KEY

1) Open the driver's door and press the door lock knob forward (in the LOCK direction).

2) Press the lock button and the trunk/rear gate button of the access key simultaneously for at least five seconds.

3) A buzzer sounds for two seconds and the function stops.

NOTE:

Perform the same procedures to re-activate the keyless access system from the disabled condition.

44. Keyless Access With Push Button Start System

A: DIAGNOSTIC PROCEDURE WITH PHENOMENON

Refer to "Diagnostics with Phenomenon" of "KEYLESS ACCESS WITH PUSH BUTTON START SYSTEM (DIAGNOSTICS)" section. <Ref. to KPS(diag)-100, Diagnostics with Phenomenon.>

Keyless Access With Push Button Start System

Tightening torque: N-m (kgf-m, ft-lb)

T1: 4.5 (0.46, 3.3)

T2: 6 (0.61, 4.4)

General Description

SUNROOF/T-TOP/CONVERTIBLE TOP (SUNROOF)

B: CAUTION

Before disconnecting connectors of sensors or units, be sure to disconnect the ground cable from battery. When replacing the audio and MFD parts provided with memory functions, record the memory contents before disconnecting the battery ground cable.

C: PREPARATION TOOL

1. GENERAL TOOL

TOOL NAME	REMARKS
Circuit tester	Used for measuring resistance, voltage and current.
Hexagon wrench	Used for forcibly driving the motor assembly - sunroof. Width across flat 4 mm (0.16 in)
TORX® T25	Used for removing and installing the lid assembly - sunroof.

Relay and Fuse

SUNROOF/T-TOP/CONVERTIBLE TOP (SUNROOF)

2. Relay and Fuse

A: LOCATION

Relay & fuse box	Fuse 10A (IG 2)	(A)
------------------	-----------------	-----

NOTE:

For other related fuses, refer to the wiring diagram. <Ref. to WI-15, Power Supply Circuit.>

B: INSPECTION

1. CHECK FUSE

- 1) Remove the fuse and check visually.
- 2) If the fuse is blown out, replace the fuse.

Sunroof Control System

SUNROOF/T-TOP/CONVERTIBLE TOP (SUNROOF)

3. Sunroof Control System

A: WIRING DIAGRAM

Refer to “Sunroof Control System” in the wiring diagram. <Ref. to WI-220, WIRING DIAGRAM, Sunroof Control System.>

B: INSPECTION

Symptoms	Inspection steps
Water leakage	<ol style="list-style-type: none">1. Check the roof panel and the lid assembly - sunroof for improper or poor sealing.2. Check the drain tube - sunroof for clogging.3. Check the joints of the rail assembly - sunroof for improper sealing and for proper installation to the body.
Booming noise, wind noise and other noise	<ol style="list-style-type: none">1. Check the lid assembly - sunroof and the roof panel for improper clearance.2. Check the sunshade assembly and the trim panel - roof assembly for improper clearance.
Abnormal motor noise	<ol style="list-style-type: none">1. Check installing part of motor for looseness.2. Check gears and bearings for wear.3. Check cable assembly for wear.4. Check cable pipe for deformities.
Failure of sunroof (Motor operates properly.)	<ol style="list-style-type: none">1. Check guide rail for foreign particles.2. Check guide rail for improper installation.3. Check parts for mutual interference.4. Check cable slider for improper clinching.5. Check cable assembly for improper installation.
Motor does not rotate or rotate improperly.	<ol style="list-style-type: none">1. Check fuse for blown out.2. Check switch for improper function.3. Check motor assembly for incorrect terminal voltage.4. Check the relay for improper operation.5. Check harness for open or short and terminals for poor connections.
Incorrect reverse operation of the lid assembly - sunroof	Check guide rail for foreign particles.

- Incorrect reverse operation of the lid assembly - sunroof while driving on rough road

The lid assembly - sunroof has auto-reverse function. When the lid assembly - sunroof is pushed in the opening direction with a force of 100 N (10.2 kgf, 22.5 lbf) or less, the glass lid moves in reverse and then stops. Therefore, if you operate (open or close) the lid assembly - sunroof while driving on rough road, the vibration may be judged as a force and the lid may incorrectly move in the reverse direction.

When the incorrect reverse operation is occurred repeatedly, perform inspection around the sunroof frame. If there are no problems, perform the initialization operation with following procedure.

Sunroof Control System

SUNROOF/T-TOP/CONVERTIBLE TOP (SUNROOF)

C: OPERATION

1. INITIALIZE OPERATION

CAUTION:

During initialization, perform the position learning and the sliding learning. Sliding learning mode can not be initiated unless the position learning is performed.

NOTE:

When initialize operation is performed, it is necessary to press the switch repeatedly as it operates for only at the moment when the switch is pressed, even when the switch is held down.

- Position learning

1) Position the lid assembly - sunroof at the full open position, and press and hold the tilt up switch for ten seconds.

2) The motion of the glass lid shifts to inching operation until it reaches the full close position. After that, it returns to the full open position and then stops.

3) Release the tilt up switch to finish the position learning.

- Sliding learning

4) Within six seconds after the position learning is finished, press and hold the tilt up switch again.

5) The lid assembly - sunroof moves to the full close position, full open position, and the full close position successively, and stops at the full close position.

6) Release the tilt up switch and turn the ignition switch to OFF to finish the initializing.

D: NOTE

For operation procedures of each component of the sunroof control system, refer to the respective section.

- Glass lid: <Ref. to SR-7, Glass Lid.>
- Sunroof assembly: <Ref. to SR-11, Sunroof Assembly.>
- Sunroof motor: <Ref. to SR-18, Sunroof Motor.>
- Sunroof switch: <Ref. to SR-20, Sunroof Switch.>
- Sunshade: <Ref. to SR-22, Sunshade.>

Glass Lid

SUNROOF/T-TOP/CONVERTIBLE TOP (SUNROOF)

4. Glass Lid

A: REMOVAL

1. GLASS LID

- 1) Completely close the lid assembly - sunroof, and open the sunshade assembly.
- 2) Remove the TORX® bolt, and then remove the lid assembly - sunroof.

CAUTION:

Be careful not to damage the lid assembly - sunroof.

PREPARATION TOOL:

TORX® T25

SR-00187

2. DEFLECTOR ASSEMBLY

- 1) Open the lid assembly - sunroof and the sunshade assembly.
- 2) Remove the deflector assembly - sunroof.
 - (1) Remove the spring from the rail assembly - sunroof.

SR-00210

Glass Lid

SUNROOF/T-TOP/CONVERTIBLE TOP (SUNROOF)

C: ADJUSTMENT

- 1) Adjust the height of the lid assembly - sunroof and the roof panel.
- 2) Loosen the lid assembly - sunroof mounting bolts (A), and then adjust the height by moving the lid assembly - sunroof side.

Lid assembly - sunroof height difference L:

Lid assembly - sunroof to Roof panel: 0.7 ± 1.0 mm (0.03 ± 0.04 in)

(1) Roof panel

(2) Lid ASSY - sunroof

Tightening torque:

4.5 N·m (0.46 kgf·m, 3.3 ft·lb)

Glass Lid

SUNROOF/T-TOP/CONVERTIBLE TOP (SUNROOF)

D: FORCED DRIVE

If the lid assembly - sunroof does not operate or the motor assembly is not supplied with power, move the lid assembly - sunroof using the hexagon wrench.

Preparation tool:

Hexagon wrench: width across flat 4 mm (0.16 in)

CAUTION:

After a forced operation, make sure to perform an initialize operation. <Ref. to SR-6, INITIALIZE OPERATION, OPERATION, Sunroof Control System.>

- 1) Disconnect the ground cable from battery. <Ref. to NT-6, BATTERY, NOTE, Note.>
- 2) Remove the light assembly - map. <Ref. to LI-63, REMOVAL, Spot Map Light.>
- 3) Remove the stereo camera cover assembly. (Models with EyeSight) <Ref. to ES-7, REMOVAL, Stereo Camera.>
- 4) Insert the hexagon wrench securely until it touches the motor shaft end.
- 5) Turn the hexagon wrench, and move the lid assembly - sunroof.
 - Turning right, the lid assembly - sunroof opens.
 - Turning left, the lid assembly - sunroof closes.

CAUTION:

Be careful not to damage the adjacent parts with the rod end when moving the lid assembly - sunroof with the hexagon wrench.

5. Sunroof Assembly

A: REMOVAL

CAUTION:

- Before handling the airbag system components, refer to “CAUTION” of “General Description” in “AIRBAG SYSTEM”. <Ref. to AB-9, CAUTION, General Description.>

- When removing the clip, use great care not to damage the trim panel - roof assembly.

1) Disconnect the ground cable from battery and wait for at least 60 seconds before starting work. <Ref. to NT-6, BATTERY, NOTE, Note.>

2) Remove the lid assembly - sunroof.

(1) Completely close the lid assembly - sunroof, and open the sunshade assembly.

(2) Remove the TORX[®] bolt, and then remove the lid assembly - sunroof.

CAUTION:

Be careful not to damage the lid assembly - sunroof.

Preparation tool:

TORX[®] T25

SR-00187

Sunroof Assembly

SUNROOF/T-TOP/CONVERTIBLE TOP (SUNROOF)

- 3) Remove the trim panel - roof assembly. <Ref. to EI-85, REMOVAL, Roof Trim.>
- 4) Disconnect the harness connector of the motor assembly.
- 5) Remove the drain tube - sunroof.

NOTE:

When removing the drain tube - sunroof completely, perform the step 8).

Sunroof Assembly

SUNROOF/T-TOP/CONVERTIBLE TOP (SUNROOF)

6) Remove the rail assembly.

(1) Remove the curtain airbag module. <Ref. to AB-44, REMOVAL, Curtain Airbag Module.>

(2) Remove the bolts, and then remove the bracket - assist rail.

(3) Remove the bolts and then remove the sunroof bracket.

Sunroof Assembly

SUNROOF/T-TOP/CONVERTIBLE TOP (SUNROOF)

(4) Remove the bolts, then remove the rail assembly.

SR-00197

7) Remove the drain tube - sunroof.

NOTE:

For easy replacement work, attach a string when pulling the drain tube - sunroof.

- (1) Remove the cover side sill - front INN and cover side sill - front. <Ref. to EI-73, REMOVAL, Lower Inner Trim.>
- (2) Disconnect each connector, bolt and clip, then remove the connector holder.
- (3) Remove the front side of drain tube - sunroof.
- (4) Remove the mat - rear floor and the spacer - rear floor.
- (5) Remove the rear side of drain tube - sunroof.

SR-10017

Sunroof Assembly

SUNROOF/T-TOP/CONVERTIBLE TOP (SUNROOF)

B: INSTALLATION

CAUTION:

- Before handling the airbag system components, refer to “CAUTION” of “General Description” in “AIRBAG SYSTEM”. <Ref. to AB-9, CAUTION, General Description.>
 - For installation of the stereo camera cover assembly, refer to “INSTALLATION”, “Stereo Camera” in the “EyeSight” section and observe the precautions for installation. <Ref. to ES-10, INSTALLATION, Stereo Camera.>
 - Be careful not to snag the harness.
- 1) Install each connector and the drain tube - sunroof.

Tightening torque:

Connector holder: 7.5 N·m (0.76 kgf-m, 5.5 ft-lb)

Ground bolt: 13 N·m (1.33 kgf-m, 9.6 ft-lb)

- 2) Install the sunroof bracket and the rail assembly - sunroof.

Tightening torque:

6 N·m (0.61 kgf-m, 4.4 ft-lb)

- 3) Connect the harness connector of the drain tube - sunroof and the motor assembly.

CAUTION:

Insert the four drain tubes 15 mm (0.59 in) or more into the drain pipes (A).

- 4) Install the curtain airbag module. <Ref. to AB-45, INSTALLATION, Curtain Airbag Module.>
- 5) Install the bracket - assist rail.

Tightening torque:

7.5 N·m (0.76 kgf-m, 5.5 ft-lb)

- 6) Install the trim panel - roof assembly. <Ref. to EI-90, INSTALLATION, Roof Trim.>
- 7) Using a new TORX® bolt, install the lid assembly - sunroof.

Tightening torque:

4.5 N·m (0.46 kgf-m, 3.3 ft-lb)

Sunroof Assembly

SUNROOF/T-TOP/CONVERTIBLE TOP (SUNROOF)

C: DISASSEMBLY

1) Remove the screw and remove the sunroof motor.

SR-00198

2) Remove the stopper rubber and pull out the sunshade assembly from the rail assembly - sunroof.

SR-00199

Sunroof Assembly

SUNROOF/T-TOP/CONVERTIBLE TOP (SUNROOF)

3) Disconnect the claws and then remove the drain holder.

4) Remove the screw and pull out the cable assembly from the rail assembly - sunroof.

D: ASSEMBLY

Install each part in the reverse order of removal.

Sunroof Motor

SUNROOF/T-TOP/CONVERTIBLE TOP (SUNROOF)

6. Sunroof Motor

A: REMOVAL

- 1) Completely close the lid assembly - sunroof.
- 2) Disconnect the ground cable from battery. <Ref. to NT-6, BATTERY, NOTE, Note.>
- 3) Remove the light assembly - map. (Models without EyeSight) <Ref. to LI-63, REMOVAL, Spot Map Light.>
- 4) Remove the stereo camera cover assembly. (Models with EyeSight) <Ref. to ES-7, REMOVAL, Stereo Camera.>
- 5) Remove the motor assembly - sunroof.
 - (1) Disconnect the harness connector.
 - (2) Remove the screws and remove the motor assembly - sunroof.

CAUTION:

When removing the motor assembly - sunroof, secure the cable assembly so that it does not move.

Sunroof Motor

SUNROOF/T-TOP/CONVERTIBLE TOP (SUNROOF)

B: INSTALLATION

CAUTION:

• For installation of the stereo camera cover assembly, refer to “INSTALLATION”, “Stereo Camera” in the “EyeSight” section and observe the precautions for installation. <Ref. to ES-10, INSTALLATION, Stereo Camera.>

• When installing the motor assembly - sunroof, be careful not to move the cable assembly.

- 1) Install the motor assembly - sunroof.
- 2) Install the stereo camera cover assembly. (Models with EyeSight) <Ref. to ES-10, INSTALLATION, Stereo Camera.>
- 3) Install the light assembly - map. (Models without EyeSight)
- 4) Connect the battery ground terminal. <Ref. to NT-6, BATTERY, NOTE, Note.>
- 5) Perform the initialize operation. <Ref. to SR-6, INITIALIZE OPERATION, OPERATION, Sunroof Control System.>
- 6) Check the operation of sunroof by following the table below.

Operation	Switch position
(1) Lid assembly - sunroof closes completely.	Close
(2) Lid assembly - sunroof is tilted up to the top position.	Tilt up
(3) Lid assembly - sunroof closes completely.	Tilt down
(4) Lid assembly - sunroof opens 295 mm (11.61 in) away from completely closed position.	Open
(5) Lid assembly - sunroof opens completely.	Open
(6) Lid assembly - sunroof closes completely.	Close

C: INSPECTION

Check the auto-reverse mechanism.

CAUTION:

Do not place objects in the way to check the auto-reverse mechanism.

- 1) Open the lid assembly - sunroof.
- 2) Push the lid assembly - sunroof in the opening direction with a force of 110 ± 10 N (11.2 kgf, 24.7 lbf ± 1.0 kgf, 2.2 lbf) during the auto-closing operation, and check whether the window auto-reverse mechanism functions.

NOTE:

If the auto function is cancelled, perform the initialize operation. <Ref. to SR-6, INITIALIZE OPERATION, OPERATION, Sunroof Control System.>

Sunroof Switch

SUNROOF/T-TOP/CONVERTIBLE TOP (SUNROOF)

7. Sunroof Switch

A: REMOVAL

- 1) Disconnect the ground cable from battery. <Ref. to NT-6, BATTERY, NOTE, Note.>
- 2) Remove the light assembly - map. (Models without EyeSight) <Ref. to LI-63, REMOVAL, Spot Map Light.>
- 3) Remove the stereo camera cover assembly. (Models with EyeSight) <Ref. to ES-7, REMOVAL, Stereo Camera.>
- 4) Release the claws and remove the sunroof switch from the light assembly - map.

- (a) Sunroof switch (tilt)
(b) Sunroof switch (slide)

B: INSTALLATION

CAUTION:

For installation of the stereo camera cover assembly, refer to “INSTALLATION”, “Stereo Camera” in the “EyeSight” section and observe the precautions for installation. <Ref. to ES-10, INSTALLATION, Stereo Camera.>

- 1) Install the sunroof switch.
- 2) Install the stereo camera cover assembly. (Models with EyeSight) <Ref. to ES-10, INSTALLATION, Stereo Camera.>
- 3) Install the light assembly - map. (Models without EyeSight)
- 4) Connect the battery ground terminal. <Ref. to NT-6, BATTERY, NOTE, Note.>

Sunroof Switch

SUNROOF/T-TOP/CONVERTIBLE TOP (SUNROOF)

C: INSPECTION

1) Check the resistance between connector terminals.

Preparation tool:

Circuit tester

SR-10009

Terminal No.	Inspection conditions	Standard	Connector
1 — 3	Open	Less than 1 Ω	(b): Slide switch
4 — 3	Close	Less than 1 Ω	
1 — 3	Tilt up	Less than 1 Ω	(a): Tilt switch
4 — 3	Tilt down	Less than 1 Ω	

2) Replace the sunroof switch if the inspection result is not within the standard value.

Sunshade

SUNROOF/T-TOP/CONVERTIBLE TOP (SUNROOF)

8. Sunshade

A: REMOVAL

- 1) Disconnect the ground cable from battery and wait for at least 60 seconds before starting work. <Ref. to NT-6, BATTERY, NOTE, Note.>
- 2) Remove the lid assembly - sunroof. <Ref. to SR-7, REMOVAL, Glass Lid.>
- 3) Remove the trim panel - roof assembly. <Ref. to EI-85, REMOVAL, Roof Trim.>
- 4) Remove the sunshade assembly.
 - (1) Attach protective tape (a) on the handle of sunshade assembly.
 - (2) Remove the left and right stoppers (b).
 - (3) Remove the sunshade assembly while pulling the center of the brace downward.

CAUTION:

Be careful not to damage the sunshade assembly.

B: INSTALLATION

CAUTION:

For installation of the stereo camera cover assembly, refer to “INSTALLATION”, “Stereo Camera” in the “EyeSight” section and observe the precautions for installation. <Ref. to ES-10, INSTALLATION, Stereo Camera.>

1) Install the sunshade assembly.

Tightening torque:

Refer to “COMPONENT” of “General Description”. <Ref. to SR-2, COMPONENT, General Description.>

2) Install the trim panel - roof assembly. <Ref. to EI-90, INSTALLATION, Roof Trim.>

3) Install the lid assembly - sunroof. <Ref. to SR-7, REMOVAL, Glass Lid.>

4) Connect the battery ground terminal. <Ref. to NT-6, BATTERY, NOTE, Note.>

C: INSPECTION

1. MOVING LOAD OF SUNSHADE ASSEMBLY

1) Attach a spring scale together with a cloth to the edge of sunshade assembly.

2) Pull the spring scale to check the moving load of the sunshade assembly.

Moving load of sunshade assembly:

14 ± 6 N (1.43 kgf, 3.1 lbf \pm 0.61 kgf, 1.3 lbf)

NOTE:

Moving load is larger at the beginning of pulling a spring scale, so take a spring scale reading while the sunshade assembly is sliding smoothly.

3) If the inspection result exceeds the standard, check the sunshade assembly or the rail assembly - sunroof for improper installation, and replace if necessary.

B: PREPARATION TOOL

TOOL NAME	REMARKS
Clip remover	Used for removing trim. • KTC AP201-10A • KTC AP201-N • KTC AP203-10A • KTC AP20L-10B Or equivalent.
Clip clamp pliers	Used for removal of various clips and clamps. • KTC CCP-190 Or equivalent.

Front Under Cover

EXTERIOR/INTERIOR TRIM

2. Front Under Cover

A: REMOVAL

- 1) Lift up the vehicle.
- 2) Remove the bolts and clips, and remove the under cover - front.

EI-04833

(1) Under cover - front

(2) Mud guard - front

(3) Spacer - under cover

B: INSTALLATION

CAUTION:

Install so that the front end of the under cover (b) comes inside the bumper face - front (a), and the front end of the mud guard (c) comes outside the bumper face - front (a).

COM00138

Install each part in the reverse order of removal.

Tightening torque:

18 N·m (1.84 kgf·m, 13.3 ft·lb)

3. Mud Guard

A: REMOVAL

- 1) Lift up the vehicle.
- 2) Remove the wheels.
- 3) Remove the screws and clips to remove the mud guard.

EI-10434

(1) Under cover - front

(2) Mud guard - front

(3) Mud guard - rear

B: INSTALLATION

Install each part in the reverse order of removal.

Tightening torque:

Wheel nut:

Except for C4 model: 120 N·m (12.24 kgf-m, 88.5 ft-lb)

C4 model: 100 N·m (10.2 kgf-m, 73.8 ft-lb)

Floor Under Protector

EXTERIOR/INTERIOR TRIM

4. Floor Under Protector

A: REMOVAL

1) Lift up the vehicle.

NOTE:

A plate type lift cannot be used.

2) Remove the bolts and clips, and remove the floor under protector.

EI-04185

B: INSTALLATION

Install each part in the reverse order of removal.

Tightening torque:

Refer to "COMPONENT" of "General Description". <Ref. to EI-3, FLOOR UNDER PROTECTOR, COMPONENT, General Description.>

5. Fuel Tank Protector

A: NOTE

Refer to "FUEL INJECTION" section for removal and installation procedure of the fuel tank protector. (Gasoline engine model) <Ref. to FU(H4DO)-112, Fuel Tank Protector.>

Front Grille

EXTERIOR/INTERIOR TRIM

6. Front Grille

A: REMOVAL

- 1) Disconnect the ground cable from battery. <Ref. to NT-6, BATTERY, NOTE, Note.>
- 2) Remove the bumper face - front. <Ref. to EI-27, REMOVAL, Front Bumper.>
- 3) Remove the front grille assembly.
 - (1) Remove the screws from the back side of the bumper face - front.
 - (2) Release the claws, and remove the front grille assembly.

B: INSTALLATION

CAUTION:

- Install so that the front end of the under cover (b) comes inside the bumper face - front (a), and the front end of the mud guard (c) comes outside the bumper face - front (a).

- Before installing the bumper face, match the claws on the bracket - front bumper with the engaging position of flange section on the bumper face side. If the engaging position is not correct, the flange section may be broken or the clearance between fender panel and bumper face may not be uniform.
 - 1) Install each part in the reverse order of removal.
 - 2) Adjust the fog light beam. (Model with fog light) <Ref. to LI-46, FOG LIGHT AIMING, ADJUSTMENT, Front Fog Light Assembly.>

7. Front Bumper

A: REMOVAL

- 1) Disconnect the ground cable from battery. <Ref. to NT-6, BATTERY, NOTE, Note.>
- 2) Remove the bumper face - front.
 - (1) Remove the screw and clips, and turn over the mud guard - front.

- (2) Disconnect the connectors of the left and right fog light assembly - front. (Model with fog light)
- (3) Remove the clips at the upper side of the bumper face - front.
- (4) Remove the clips from the fender.
- (5) Remove the clips at the lower side of the bumper face - front.

Front Bumper

EXTERIOR/INTERIOR TRIM

(6) Apply protective tape (A) to the light assembly - head.

(7) Detach the flange section on the bumper face side from the bracket - front bumper side.

CAUTION:

Do not pull forcibly. It may damage the flange section on the bumper face - front side when it comes off from the claws of the bracket - front bumper.

NOTE:

Remove the bumper face - front according to the following procedures.

1. Remove the clips, turn over the mud guard, and insert a flat tip screwdriver with protection for damage prevention into the clearance between bumper and bracket. (a)
 2. Push out the bumper with the flat tip screwdriver while pushing up the bumper from below. (b), (c)
 3. Release the engagement of clips in the order of (d) to (g) while pushing up the bumper from below.
 4. Perform the same procedures to remove the opposite side.
- 3) Remove the bolts, and remove the bumper beam COMPL - front.

Front Bumper

EXTERIOR/INTERIOR TRIM

4) Remove the clip, and remove the bracket - grille.

CAUTION:

To prevent damage to the bracket - grille, make sure to remove all clips.

NOTE:

The bracket - grille can be removed without removing the bumper face - front.

5) Remove the bracket - front center LWR.

(1) Remove the bolts and clips, and turn over the under cover - front.

(1) Under cover - front

(2) Mud guard - front

(3) Spacer - under cover

Front Bumper

EXTERIOR/INTERIOR TRIM

(2) Remove the bolts, and remove the bracket - front center LWR.

6) Remove the bolts and clips, and remove the bracket - front bumper corner.

NOTE:

When removing the bracket - front bumper corner only, do not remove the light assembly - head.

Front Bumper

7) Remove the bracket - front bumper side.

(1) Remove the bolts and clips, and remove the light assembly - head and the bracket - front bumper corner.

(2) Remove the screws.

(3) Remove the claws from behind the fender COMPL - front, and remove the bracket - front bumper side.

8) Remove the bolts and clips, and remove the fog light assembly - front.

Front Bumper

EXTERIOR/INTERIOR TRIM

B: INSTALLATION

- 1) Install each part in the reverse order of removal.
- 2) Secure the flange section of the bumper face - front to the bracket - front bumper side.

CAUTION:

- Install so that the front end of the under cover (b) comes inside the bumper face - front (a), and the front end of the mud guard (c) comes outside the bumper face - front (a).

- Before installing the bumper face, match the claws on the bracket - front bumper with the engaging position of flange section on the bumper face side. If the engaging position is not correct, the flange section may be broken or the clearance between fender panel and bumper face may not be uniform.

Tightening torque:

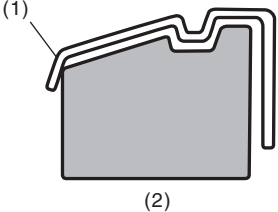

Front bumper-related parts: <Ref. to EI-4, FRONT BUMPER, COMPONENT, General Description.>

Under cover - front: 18 N·m (1.84 kgf-m, 13.3 ft-lb)

- 3) Install each part in the reverse order of removal.
- 4) Adjust the headlight beam and fog light beam.
 - Adjust the headlight beam. <Ref. to LI-28, HEADLIGHT BEAM ADJUSTMENT, ADJUSTMENT, Headlight Assembly.>
 - Adjust the fog light beam. (Model with fog light) <Ref. to LI-46, FOG LIGHT AIMING, ADJUSTMENT, Front Fog Light Assembly.>

C: REPAIR

1. COATING METHOD FOR PP BUMPER

Process No.	Process name	Job contents	
1	Bumper installation	Place the bumper on a paint worktable as required. Use the paint worktable conforming to inner shape of bumper if possible.	<p>Cross section of bumper</p>  <p>(1) Bumper (2) Paint worktable</p> <p style="text-align: right;">EI-00234</p>
2	Masking	Mask specified part (black base) with masking tape. Use masking tape for PP.	
3	Degreasing/cleaning	Clean all parts to be painted with appropriate cleaning solvent, normal alcohol, etc. to remove dirt, oil, grease, etc.	
4	Primer paint	Apply primer to all parts to be painted, using spray gun. Use primer (clear).	
5	Drying	Dry at normal temperature. [10 — 15 min. at 20°C (68°F)] In half-dried condition, PP primer paint is dissolved by solvent, e.g. thinner, etc. Therefore, if dust or dirt must be removed, use ordinary alcohol etc.	
6	Top coat paint (I)	Non-colored	Metallic paint
		Use section (block) paint for top coat. For paint/hardener mixture, observe the specifications recommended by the manufacturers. <ul style="list-style-type: none"> • Viscosity: 10 — 13 sec./20°C (68°F) • Film thickness: 35 — 45 μ • Spraying pressure: 245 — 343 kPa (2.5 — 3.5 kgf/cm², 36 — 50 psi) 	Use section (block) paint for top coat. For paint/hardener mixture, observe the specifications recommended by the manufacturers. <ul style="list-style-type: none"> • Viscosity: 10 — 13 sec./20°C (68°F) • Film thickness: 15 — 20 μ • Spraying pressure: 245 — 343 kPa (2.5 — 3.5 kgf/cm², 36 — 50 psi)
7	Drying	Not required.	Dry at normal temperature [at least 10 min. at 20°C (68°F)]. In half-dried condition, avoid dust, dirt.
8	Top coat paint (II)	Not required.	Apply a clear coat to parts with top coat paint (I), three times at 5 — 7 minute intervals. For paint/hardener mixture, observe the specifications recommended by the manufacturers. <ul style="list-style-type: none"> • Viscosity: 14 — 16 sec./20°C (68°F) • Film thickness: 25 — 30 μ • Spraying pressure: 245 — 343 kPa (2.5 — 3.5 kgf/cm², 36 — 50 psi)
9	Drying	60°C (140°F), 60 min. or 80°C (176°F), 30 min. If the temperature is higher than 80°C (176°F), PP may be deformed. Keep maximum temperature at 80°C (176°F) or less.	
10	Inspection	Check paint.	
11	Removal of masking	Remove the masking tape applied in procedure 2.	

Front Bumper

EXTERIOR/INTERIOR TRIM

2. REPAIR INSTRUCTIONS FOR COLORED PP BUMPER

NOTE:

All PP bumpers are provided with a grained surface, and if the surface is damaged, it cannot normally be restored to its former condition. Damages limited to the shallow scratches that cause only a change in the luster of the base material or coating, can be almost fully restored. Before repairing a damaged area, explain this point to the customer and obtain an understanding about the matter.

Repair methods are outlined below, based on a classification of the extent of damage.

1) Minor damage causing only a change in the luster of the bumper due to a light touch
Almost restorable.

Process No.	Process name	Job contents	
1	Cleaning	Clean the area to be repaired using water.	
2	Sanding	Grind the repairing area with #500 sand paper in a "feathering" motion.	
3	Finish	Resin section	Coated section
		Repeatedly apply wax to the affected area using soft cloth (such as flannel). Recommended wax: Tire wax or equivalent	Perform either the same procedures as for the resin section or process No. 18 and subsequent in section 3), depending on the degree and nature of damage.
		Polish the waxed area with clean cloth after 5 — 10 minutes.	

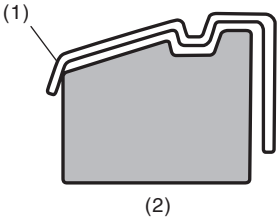

2) Deep damage caused by scratching with fences etc.

A dent cannot be repaired but a whitened or swelled part can be removed.

Process No.	Process name	Job contents	
1	Cleaning	Clean the damaged area with water.	
2	Removal of damaged area	Cut off protruding area, if any, due to collision, using a putty knife.	
3	Sanding	Grind the affected area with #100 — #500 sand paper.	
4	Finish	Resin section	Coated section
		Same as process No. 3 in section "1)".	Perform process No. 12 and subsequent operations in section "3)".

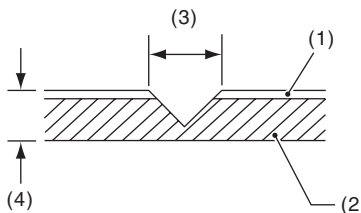

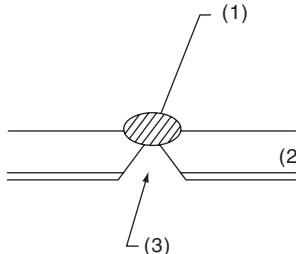

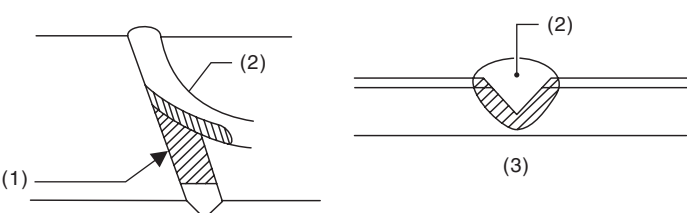

3) Deep damage such as a break or hole that requires filling

Much of the peripheral grained surface must be sacrificed for repair. The degree of restoration is not really worth the expense. (The surface, however, will become almost flush with adjacent areas.)

Process No.	Process name	Job contents	
1	Bumper removal	Remove the bumper as required.	
2	Removal of parts	Remove the parts built into bumper as required.	
3	Bumper placement	Place the bumper on a paint worktable as required. It is recommended to use the paint worktable conforming to internal shape of bumper.	<p>Cross section of bumper</p>  <p>(1) Bumper (2) Paint worktable</p> <p>EI-00234</p>
4	Surface preparation	Remove dust, oil, etc. from areas to be repaired and surrounding areas, using an appropriate solvent (appropriate cleaning solvent or alcohol, etc.).	

Front Bumper

EXTERIOR/INTERIOR TRIM

Process No.	Process name	Job contents	
5	Cutting	<p>If the damage is a crack or a hole, cut a guide slit of 20 to 30 mm (0.79 to 1.18 in) in length along the crack or hole up to the bumper base surface. Next, use a knife or grinder to carve a V-shaped groove in the area for repair.</p>	 <p>EI-00235</p> <p>(1) Paint surface (2) PP base surface (3) 20 — 30 mm (0.79 — 1.18 in) (4) 3 mm (0.12 in)</p>
6	Sanding (I)	Grind beveled surface with sand paper (#40 — #60) to smooth finish.	
7	Cleaning	Clean the sanded surface with the same solvent as used in process No. 4.	
8	Temporary welding	<p>Grind the side just opposite the beveled area with sand paper (#40 — #60) and clean using a solvent.</p> <p>Temporarily spot-weld the side, using PP welding rod and heater gun.</p>	 <p>EI-00236</p> <p>(1) Welded point (Use heater gun and PP welding rod) (2) PP base surface (3) Beveled section</p> <p>NOTE:</p> <ul style="list-style-type: none"> Do not melt welding rod until it flows out. This results in reduced strength. Leave the welded spot unattended until it cools completely.
9	Welding	<p>Using a heater gun and PP welding rod, weld the beveled spot while melting both the rod and damaged area.</p>	 <p>EI-00237</p> <p>(1) Welding rod (2) Melt hatched area (3) Section</p> <p>NOTE:</p> <ul style="list-style-type: none"> Melt the sections indicated by hatched area. Do not melt the welding rod until it flows out, in order to provide strength. Always keep the heater gun 1 to 2 cm (0.4 to 0.8 in) away from the welding spot. Leave the welded spot unattended until it cools completely.

Front Bumper

EXTERIOR/INTERIOR TRIM

Process No.	Process name	Job contents	
10	Sanding (II)	Remove excess part of weld with a putty knife. If a drill or disc wheel is used instead of the knife, operate it at less than 1,500 r/min and grind the excess part little by little. A higher rpm will cause the PP substrate to melt from the heat.	
			
		EI-00042	
		Sand the welded spot smooth with #240 sand paper.	
11	Masking	Mask the black substrate section using masking tape.	
12	Cleaning/degreasing	Completely clean the entire coated area, using solvent similar to that used in process No. 4.	
13	Primer coating	Apply a coat of primer for bumpers to the repaired surface and its surrounding areas. Mask these areas, if necessary. NOTE: Be sure to apply a coat of primer using a spray gun at a pressure of 245 — 343 kPa (2.5 — 3.5 kgf/cm ² , 36 — 50 psi).	
14	Leave unattended	Leave the repaired area unattended at 20°C (68°F) for 10 to 15 minutes until primer is half-dry. NOTE: If dirt or dust comes in contact with the coated area, wipe it off with a cloth dampened with alcohol. (Do not use thinner since it could melt the coated area.)	
15	Surfacer coating	Apply a coat of surfacer for PP bumpers to the repaired area two or three times at an interval of 3 — 5 minutes. For surfacer/hardener mixture, viscosity and paint thickness, observe the specifications of the surfacers to be used.	
16	Drying	Allow the coated surface to dry for 20 minutes at 20°C (68°F) [or 30 minutes at 60°C (140°F)].	
17	Sanding (III)	Sand the coated surface and its surrounding areas using #400 sand paper and water.	
18	Cleaning/degreasing	Same as process No. 12.	
19	Top coat (I)	Non-colored	Metallic paint
		Use a “block” coating method. For paint/hardener mixture, observe the specifications recommended by the manufacturers. • Viscosity: 11 — 13 sec./20°C (68°F) • Coating film thickness: 40 — 50 μ • Spraying pressure: 245 — 343 kPa (2.5 — 3.5 kgf/cm ² , 36 — 50 psi)	Use a “block” coating method. For paint/hardener mixture, observe the specifications recommended by the manufacturers. • Viscosity: 11 — 13 sec./20°C (68°F) • Coating film thickness: 20 — 30 μ • Spraying pressure: 245 — 343 kPa (2.5 — 3.5 kgf/cm ² , 36 — 50 psi)
20	Leave unattended	Not required.	Leave unattended at 20°C (68°F) for at least 10 minutes until the topcoated area is half-dry. NOTE: Be careful to keep dust or dirt from coming in contact with the affected area.
21	Top coat (II)	Not required.	Apply a clear coat three times at an interval of 3 to 5 minutes. For paint/hardener mixture, observe the specifications recommended by the manufacturers. • Viscosity: 10 — 13 sec./20°C (68°F) • Coating film thickness: 20 — 30 μ • Spraying pressure: 245 — 343 kPa (2.5 — 3.5 kgf/cm ² , 36 — 50 psi)

Front Bumper

EXTERIOR/INTERIOR TRIM

Process No.	Process name	Job contents
22	Drying	Allow the coated surface to dry for two hours at 20°C (68°F) or 30 minutes at 60°C (140°F). NOTE: Do not allow the temperature to exceed 80°C (176°F) since this will deform the PP substrate.
23	Inspection	Carefully check the condition of the repaired area.
24	Removal of masking	Remove the masking tape applied in process No. 11 and 13.
25	Parts installation	Install parts on the bumper in reverse order of removal.
26	Bumper installation	Install the bumper.

Rear Bumper

EXTERIOR/INTERIOR TRIM

8. Rear Bumper

A: REMOVAL

1. CROSSTREK MODEL

- 1) Disconnect the ground cable from battery. <Ref. to NT-6, BATTERY, NOTE, Note.>
- 2) Remove the light assembly - rear combination.

CAUTION:

Be careful not to damage the clips.

- (1) Release the bolts and clips, then pull out the light assembly - rear combination to the vehicle rear.
- (2) Disconnect the connector and remove the light assembly - rear combination.

EI-10443

- 3) Remove the bumper face - rear.

- (1) Remove the clips inside the wheel housing.
- (2) Remove the clips at the lower side of the bumper face - rear.

EI-10444

Rear Bumper

EXTERIOR/INTERIOR TRIM

- (3) Detach (b) and (c) while pulling up (a) of the bumper face - rear.
- (4) Detach (e) while pulling up (d) of the bumper face - rear.
- (5) Detach the opposite side in the same manner.
- (6) Detach in order from (f) to (h) while pulling up the center part of the bumper face - rear.

CAUTION:

Do not pull forcibly. It may damage the flange section on the bumper face - rear side when it comes off from the claws of the bracket - rear bumper.

- 4) Remove the bolts and nuts, and remove the bumper beam COMPL - rear.

NOTE:

After all nuts are removed, raise the bumper beam COMPL - rear a little to remove it from vehicle body.

Rear Bumper

EXTERIOR/INTERIOR TRIM

5) Remove bumper brackets.

(1) Remove the screws.

(2) Turn over the trim panel - rear apron, and detach the claw of the clip from the back side.

(3) Remove the clip, and remove the bracket - rear bumper lower.

6) From behind the bumper, release the claws, and remove the reflex reflector assembly.

B: INSTALLATION

Install each part in the reverse order of removal.

CAUTION:

Before installing the bumper face, match the claws on the bracket - rear bumper with the engaging position of flange section on the bumper face side. If the engaging position is not correct, the flange section may be broken or the clearance between fender panel and bumper face may not be uniform.

NOTE:

If the bumper face - rear comes off too easily, adjust the hook of the bracket side.

Tightening torque:

Rear bumper component: <Ref. to EI-5, REAR BUMPER, COMPONENT, General Description.>

Light assembly - rear combination: 7.5 N·m (0.76 kgf-m, 5.5 ft-lb)

C: REPAIR

Refer to the description concerning repair in "Front Bumper" section. <Ref. to EI-33, REPAIR, Front Bumper.>

Cowl Panel

EXTERIOR/INTERIOR TRIM

9. Cowl Panel

A: REMOVAL

- 1) Open the front hood.
- 2) Remove the arm assembly - windshield wiper. <Ref. to WW-26, REMOVAL, Front Wiper Arm.>
- 3) Remove the cowl panel - side.
 - (1) Remove the clips.
 - (2) Release the claws, and then remove the cowl panel - side.

CAUTION:

Pulling with excessive force may damage the cowl panel - side. If it is difficult to remove, use a plastic remover or equivalent tool.

4) Remove the cowl panel assembly.

CAUTION:

Before removing the cowl panel, use an air blower and nylon brush to sweep gravel from the lower area of the front side of the glass.

- (1) Disconnect the washer hose.
- (2) Remove clips (A).
- (3) Check the direction of the clip (B), and push the claws from both sides to remove it.

CAUTION:

When removing the clip (B), push the claws of the clip first.

Be careful not to apply excessive force when pulling the clip (B), as the clip may become damaged.

- (4) Remove the cowl panel assembly by pulling it out towards the front of the vehicle.

EI-03698

5) Remove the washer nozzle and the washer hose as required. <Ref. to WW-35, REMOVAL, Front Washer Nozzle and Hose.>

Cowl Panel

EXTERIOR/INTERIOR TRIM

B: INSTALLATION

CAUTION:

Before installing the windshield glass and cowl panel, make sure there are no gravel in the installing area.

1) Install the cowl panel assembly.

CAUTION:

If the cowl panel assembly cannot be installed properly, do not hit or set it forcibly. The claws of the cowl panel or the windshield glass may be damaged.

(1) Hook the claw of the cowl panel on the lower end (1) of the windshield glass.

(2) Align the center protrusion of the cowl panel assembly to the cutout portion of the vehicle side, then install the cowl panel assembly.

(3) Attach the clip and connect the washer hose.

2) Install the arm assembly - windshield wiper. <Ref. to WW-27, INSTALLATION, Front Wiper Arm.>

3) Install the remaining parts in the reverse order of removal.

4) If the washer nozzles have been removed from the cowl panel assembly, adjust the washer spray positions. <Ref. to WW-39, ADJUSTMENT, Front Washer Nozzle and Hose.>

10.Side Garnish

A: REMOVAL

1) Remove the clips and detach the side garnish assembly.

EI-10119

(1) Garnish ASSY - fender

(2) Garnish ASSY - rear quarter

(3) Garnish ASSY - side sill

2) Remove the garnish assembly or protector on the fender panel.

CAUTION:

Do not reuse the garnish assembly and protector that have been deformed during removal.

(1) Attach the protective tape to the periphery of the garnish and protector.

(2) Heat the garnish and protector sections for 3 — 5 minutes at 40 — 60°C using a heat light or a drier.

CAUTION:

Be careful not to burn yourself.

(3) Separate the bonded part of double sided tape with a nylon cord or equivalent.

(4) Release the clips, and remove the garnish assembly and protector.

B: INSTALLATION

CAUTION:

Do not reuse the garnish assembly. Deformation occurs on the garnish assembly when once removed, and this may cause improper adhesion.

1) Install each part in the reverse order of removal.

2) Install the garnish assembly - fender and the garnish assembly - rear quarter.

(1) Remove the double-sided tape remaining on the vehicle body, then clean the adhesive surface.

CAUTION:

If even a slight amount of double-sided tape remains on the adhesive surface, it may lead to improper adhesion.

(2) Heat the vehicle body and the garnish for 1 — 3 minutes using a heat light or a drier.

CAUTION:

Be careful not to burn yourself.

(3) Apply primer to the installation surfaces of garnish, and wait till the primer dries.

(4) Attach new double-sided tape on garnish.

(5) Peel off the backing papers, engage the clips, and adhere the garnish assembly to the vehicle body.

CAUTION:

Press-fit the garnish assembly to adhere securely.

Roof Molding

EXTERIOR/INTERIOR TRIM

11. Roof Molding

A: REMOVAL

CAUTION:

Be careful not to damage the body.

- 1) Remove the roof rail assembly. (model with roof rail) <Ref. to EI-48, REMOVAL, Roof Rail.>
- 2) Turn over the front end of the molding - roof.
- 3) Slide the inner fastener in the direction of the arrow using a flat tip screwdriver, then remove the fastener from the stud on the vehicle side.

EI-04391

Right side: Slide towards the front of the vehicle.

Left side: Slide towards the rear of the vehicle.

- Model without roof rail: 8 locations per side
- Model with roof rail: 5 locations per side

EI-10446

- 4) Pull up the molding - roof, and remove from the vehicle.

B: INSTALLATION

1) Remove the clips from the molding - roof, and attach to the studs on the vehicle.

CAUTION:

- Always replace the clips that were damaged during removal of the molding - roof with new parts.
- While installing the molding - roof, be careful not to catch the glass molding with the tip of the front side and rear side.

2) Push the front end of the molding - roof against the front window, and attach the forward positioning clip onto the rivet on the body.

- (1) Windshield
- (2) Positioning clip
- (3) Molding - roof
- (4) Rivet
- (5) Clip

3) While pushing down the molding - roof from above, connect the molding - roof and the clip.

12. Roof Rail

A: REMOVAL

- 1) Remove the trim panel - roof. <Ref. to EI-85, CROSSTREK MODEL, REMOVAL, Roof Trim.>
- 2) Remove the curtain airbag module. <Ref. to AB-44, CROSSTREK MODEL, REMOVAL, Curtain Airbag Module.>

CAUTION:

- Before handling the airbag system components, refer to “CAUTION” of “General Description” in “AIRBAG SYSTEM”. <Ref. to AB-9, CAUTION, General Description.>
 - Be careful not to damage the curtain airbag module during removal.
- 3) Remove the six installing nuts.

B: INSTALLATION

CAUTION:

When removing or installing the roof rail, be careful not to scratch the body panel with the stud bolt of roof rail.

Install each part in the reverse order of removal.

Tightening torque:

7.5 N·m (0.76 kgf-m, 5.5 ft-lb)

13. Roof Spoiler

A: REMOVAL

- 1) Disconnect the ground cable from battery. <Ref. to NT-6, BATTERY, NOTE, Note.>
- 2) Remove the trim panel - rear gate UPR. <Ref. to EI-93, REMOVAL, Rear Gate Trim.>
- 3) Remove the roof spoiler assembly.
 - (1) Disconnect the connector of high-mounted stop light.
 - (2) Remove the caps, and remove the bolts.
 - (3) Remove the nuts.
 - (4) Remove the nuts, and remove the roof spoiler assembly.

EI-04597

B: INSTALLATION

CAUTION:

- Make sure that packings are attached on the clips of the roof spoiler assembly. If a gasket is not attached, water leakage may occur.
- Make sure the bolt is tightened securely because improper installation may cause the water leakage.

- 1) Install the roof spoiler assembly.

Tightening torque:

7.5 N·m (0.76 kgf-m, 5.5 ft-lb)

- 2) Connect the connector of high-mounted stop light.
- 3) Install the trim panel - rear gate UPR. <Ref. to EI-94, INSTALLATION, Rear Gate Trim.>
- 4) Connect the ground terminal to battery sensor. <Ref. to NT-6, BATTERY, NOTE, Note.>

Door Trim

EXTERIOR/INTERIOR TRIM

14. Door Trim

A: REMOVAL

1. FRONT DOOR

- 1) Disconnect the ground cable from battery. <Ref. to NT-6, BATTERY, NOTE, Note.>
- 2) Remove the trim panel - front door.
 - (1) Attach the protective tape (a).
 - (2) Open the cover and remove the screw.
 - (3) Remove the clips, and remove the trim panel - front door from the panel assembly - front door.

EI-04178

NOTE:

It is easier to remove the door trim if the removal is performed from the gray arrow section.

- (4) Detach the door lock cable (a) and door open cable (b) from the remote assembly - door.

EI-03634

- (5) Disconnect the harness connector and remove the trim panel - front door.

3) Remove each part as required.

- Remote assembly - door: <Ref. to SL-33, REMOVAL, Front Inner Remote.>
- Switch - power window main: <Ref. to GW-11, MAIN SWITCH, REMOVAL, Power Window Control Switch.>
- Weather strip - door INN: <Ref. to EI-52, DISASSEMBLY, Door Trim.>

2. REAR DOOR

1) Disconnect the ground cable from battery. <Ref. to NT-6, BATTERY, NOTE, Note.>

2) Remove the trim panel - rear door.

(1) Attach the protective tape (a).

(2) Open the cover and remove the screw.

(3) Remove the clips, and remove the trim panel - rear door from the panel assembly - rear door.

EI-04221

NOTE:

It is easier to remove the door trim if the removal is performed from the gray arrow section.

(4) Detach the door lock cable (a) and door open cable (b) from the remote assembly - door.

EI-03634

(5) Disconnect the harness connector and remove the trim panel - rear door.

Door Trim

EXTERIOR/INTERIOR TRIM

3) Remove each part as required.

- Remote assembly - door: <Ref. to SL-41, REMOVAL, Rear Inner Remote.>
- Switch - power window sub: <Ref. to GW-12, SUB-SWITCH, REMOVAL, Power Window Control Switch.>
- Weather strip - door INN: <Ref. to EI-52, DISASSEMBLY, Door Trim.>

B: INSTALLATION

Install each part in the reverse order of removal.

NOTE:

Attach the door lock cable (a - end ball: small) to the upper side, and attach the door open cable (b - end ball: large) to the lower side.

EI-03634

C: DISASSEMBLY

- 1) Remove the door trim.
- 2) Remove the rivets and claws, and remove the weather strip - door INN from the door trim.

EI-03433

(a) Rivet

(b) Claw

(c) Claw

NOTE:

Remove the rivets by using the rivet cutter or nippers.

D: ASSEMBLY

1) Bend the claws while pushing the weather strip - door INN against the door trim so that there is no gap.

CAUTION:

Beware of the direction of folding the claws.

EI-03433

(a) Rivet

(b) Direction of folding claws

(c) Claw bending direction: bend forward for LH side, backward for RH side.

2) Install the rivet.

CAUTION:

- Set the height of rivet crimped section as 3 mm (0.12 in). If the crimp is not sufficient, press it with pliers, etc. in order not to interfere the trim panel - door.
- Apply unwoven cloth tape so that the rivet crimped section is covered. If unwoven cloth tape is not applied, a knocking noise may occur when the door panel contacts the rivet crimped section.

Preparation tool and item:

Hand riveter (corresponding to $\phi 3.2$ mm (0.13 in))

Rivet

Tape: 94029FG000/TAPE or unwoven cloth

3) After installing the weather strip - door INN, perform the following checks.

- Make sure there are no gaps between the weather strip - door INN and the door trim.
- Make sure there are no looseness when pulling the weather strip - door INN lightly.

Instrument Panel Lower Cover

EXTERIOR/INTERIOR TRIM

15. Instrument Panel Lower Cover

A: REMOVAL

CAUTION:

Before handling the airbag system components, refer to “CAUTION” of “General Description” in “AIRBAG SYSTEM”. <Ref. to AB-9, CAUTION, General Description.>

- 1) Disconnect the ground cable from battery and wait for at least 60 seconds before starting work. <Ref. to NT-6, BATTERY, NOTE, Note.>
- 2) Remove the clips, and remove the cover - instrument panel side LH.

NOTE:

Using a plastic remover, open the cover - instrument panel side LH.

Instrument Panel Lower Cover

EXTERIOR/INTERIOR TRIM

3) Remove the cover assembly - instrument panel LWR driver INN and OUT.

CAUTION:

When removing the cover assembly - instrument panel LWR driver, be sure to pull it toward you. If attempting to remove by turning it upward, the claws may be damaged.

EI-03690

(1) Remove the screws and release the clips and claws.

(2) Disconnect the harness connectors, and remove the cover assembly - instrument panel LWR driver INN and OUT.

EI-03533

B: INSTALLATION

Install each part in the reverse order of removal.

Glove Box

EXTERIOR/INTERIOR TRIM

16. Glove Box

A: REMOVAL

NOTE:

Refer to "Security and Locks" section for key cylinder replacement. <Ref. to SL-65, GLOVE BOX LID, REPLACEMENT, Key Lock Cylinders.>

1) Remove the pocket assembly.

(1) Attach the protective tape (a) to the panel center LWR.

(2) Remove the damper COMPL - pocket.

(3) Release the stoppers and remove the pocket assembly by pulling it toward you.

EI-03419

2) Remove the back panel - pocket.

(1) Release the clips, and remove the under cover assembly - passenger.

EI-04598

(2) Remove the clips, and remove the cover - instrument panel side RH.

NOTE:

Remove the cover - instrument panel side RH by using a plastic remover.

(3) Release the clips, and remove the ornament - panel assembly passenger.

NOTE:

To facilitate the removal, push the clip of the ornament - panel assembly passenger from the backside.

(4) Remove the glove box light LED, and disconnect the connector.

(5) Remove the screws, claws and harness clamp, then remove the back panel - pocket.

B: INSTALLATION

Install each part in the reverse order of removal.

17.Center Console

A: REMOVAL

- 1) Remove the center grille assembly. <Ref. to AC-86, REMOVAL, Air Vent Grille.>
- 2) Remove the audio assembly or navigation assembly. <Ref. to ET-28, REMOVAL, Audio.>

B: INSTALLATION

CAUTION:

After installing the panel center assembly, check that the air vent grille of the panel center assembly is inserted correctly into the air vent duct.

Install each part in the reverse order of removal.

18. Console Box

A: REMOVAL

1) Disconnect the ground cable from battery. <Ref. to NT-6, BATTERY, NOTE, Note.>

NOTE:

On CVT models, shift the select lever into "N" before disconnecting the battery ground cable.

2) Remove the console box assembly.

(1) Release the claws, and then remove the boot - hand brake.

(2) Move the seat forward, and remove the bolts after detaching the left and right caps.

(3) Remove the screws and clips, disconnect the harness connector and remove the console box assembly.

Console Box

EXTERIOR/INTERIOR TRIM

3) Remove the cover - shift lever.

- (1) Remove the shift knob. (MT model)
- (2) Release the clips and claws, then pull up the cover - shift lever.

4) Remove the left and right panel center LWR.

- (1) Remove the screws and clips.
- (2) Release the claws, and then pull the panel center LWR to remove.

B: INSTALLATION

Install each part in the reverse order of removal.

Tightening torque:

6.5 N·m (0.66 kgf-m, 4.8 ft-lb)

19. Instrument Panel Assembly

A: REMOVAL

CAUTION:

- Before handling the airbag system components, refer to “CAUTION” of “General Description” in “AIRBAG SYSTEM”. <Ref. to AB-9, CAUTION, General Description.>
- Be careful not to damage the airbag system harness when servicing the instrument panel. Damage may cause the system to malfunction.

NOTE:

Remove the instrument panel assembly and the beam COMPL - steering as a unit.

- 1) Disconnect the ground cable from battery and wait for at least 60 seconds before starting work. <Ref. to NT-6, BATTERY, NOTE, Note.>

NOTE:

On CVT models, shift the select lever into “N” before disconnecting the battery ground cable.

- 2) Remove the console box assembly, the cover - shift lever and the panel center LWR on the RH and LH sides. <Ref. to EI-59, REMOVAL, Console Box.>
- 3) Remove the cover - instrument panel side and the cover assembly - instrument panel LWR driver. <Ref. to EI-54, REMOVAL, Instrument Panel Lower Cover.>
- 4) Remove the cover switch - starter. (Models without the keyless access with push button start)
 - (1) Release the claws and remove the cover switch - starter.
 - (2) Disconnect the connector and aspirator hose.

Instrument Panel Assembly

EXTERIOR/INTERIOR TRIM

- 5) Remove the panel - switch. (Model with keyless access with push button start)
 - (1) Release the claw of the switch - push button start, and disconnect the connector.
 - (2) Release the claws, and then remove the panel - switch.
 - (3) Disconnect the connector and aspirator hose.

- 6) Remove the knee airbag module. <Ref. to AB-34, REMOVAL, Knee Airbag Module.>
- 7) Release the clips and claws, then detach the left and right grille speaker side.

NOTE:

Remove the grille speaker side by using a plastic remover.

8) Remove the trim panel - front pillar UPR on the left and right sides. <Ref. to EI-77, REMOVAL, Upper Inner Trim.>

9) Remove the glove box assembly. <Ref. to EI-56, REMOVAL, Glove Box.>

- 10) On manual A/C models, disconnect the control cables from both sides of the heater & cooling unit.

EI-04586

- 11) Remove the center grille assembly. <Ref. to AC-86, REMOVAL, Air Vent Grille.>
12) Remove the audio assembly or navigation assembly. <Ref. to ET-28, REMOVAL, Audio.>
13) Remove the multi-function display assembly. <Ref. to IDI-25, REMOVAL, Multi-function Display (MFD).>
14) Remove the combination meter assembly. <Ref. to IDI-18, REMOVAL, Combination Meter.>
15) Disconnect the passenger's airbag module connector. <Ref. to AB-18, PASSENGER'S AIRBAG MODULE, PROCEDURE, Airbag Connector.>

EI-03445

- 16) Remove the column assembly - steering. <Ref. to PS-18, REMOVAL, Steering Column.>
17) Remove the cover side sill - front INN and cover side sill - front on the RH and LH side. <Ref. to EI-73, REMOVAL, Lower Inner Trim.>
18) Remove the body side weather strip - flange front.

Instrument Panel Assembly

EXTERIOR/INTERIOR TRIM

19) Remove the instrument panel assembly and the beam COMPL - steering as a unit.

CAUTION:

The instrument panel assembly and the beam COMPL - steering are heavy. Always work in a team of two persons when removing them from the vehicle, so as not to damage the vehicle interior.

- (1) Remove the fuse box and relay box.
- (2) Disconnect all harness clamps and connectors of the instrument panel harness.
- (3) Remove the TORX® bolt. (a), (b)

Preparation tool:

TORX® T40

- (4) Remove the bolts at the floor center. (c), (d)
- (5) Remove the bolt. (e), (f)

EI-03450

(6) Loosen the adjuster portion (h) of the adjuster - clip space. (Only LH side of the beam COMPL - steering)

Preparation tool:

Hexagon wrench: 8 mm (0.31 in)

(7) Slightly lift the instrument panel assembly together with the beam COMPL - steering to detach the left and right pins. Then pull it toward you to remove the assembly.

CAUTION:

- Check that all harness clamps and connectors are detached.
- The instrument panel assembly and the beam COMPL - steering are heavy. Always work in a team of two persons when removing them from the vehicle, so as not to damage the vehicle interior.

Instrument Panel Assembly

EXTERIOR/INTERIOR TRIM

- 20) Remove the grille front defroster.
(1) Disconnect the sunload sensor.
(2) Release the claws and remove the grille front defroster.

- 21) Remove the screws and remove the front (A) and side vent duct (B) LH, RH.

- 22) Separate the panel COMPL - instrument and the beam COMPL - steering.
 - (1) Remove the clamps and bolts of the passenger's airbag module harness.

EI-03449

Instrument Panel Assembly

EXTERIOR/INTERIOR TRIM

(2) Remove the left and right speakers.

NOTE:

Detach the harness clamp together.

(3) Disconnect the front accessory socket connector.

(4) Remove the nut (a) and screws (b), (c), (d), (e), (f), (g) and (h).

(5) While being careful with the harness, separate the panel COMPL - instrument and the beam COMPL - steering.

EI-03468

23) Remove the claws, and remove the passenger's airbag module.

B: INSTALLATION

CAUTION:

- Before handling the airbag system components, refer to “CAUTION” of “General Description” in “AIRBAG SYSTEM”. <Ref. to AB-9, CAUTION, General Description.>
- After installing the panel center assembly, check that the air vent grille of the panel center assembly is inserted correctly into the air vent duct.
- When installing the cover - instrument panel side (a), make sure that the body side weather strip - flange front does not come inside the panel COMPL - instrument (b).

- When reusing the tether clip on the upper part of the trim panel - front pillar UPR, check that there is no damage to the tether clip. If the tether clip is damaged, always replace it with a new tether clip. If the tether clip is damaged, its holding force is reduced and the trim panel - front pillar UPR may come off.
- Do not reuse the tether clip removed from the upper part of the trim panel - front pillar UPR. Always replace with a new part.

Instrument Panel Assembly

EXTERIOR/INTERIOR TRIM

- Check the installation status of the tether clips and install the trim panel - front pillar UPR.

- 1) Attach components until the instrument panel assembly is formed, in the reverse order of removal.

NOTE:

Method of installing insulator

- Adhesive

Use polyurethane adhesive. When assembling the instrument panel assembly, wait until the adhesive has evaporated to prevent filling of the smell in the compartment.

- Double-sided tape

Use commercial double-sided tape. (Use strong double-sided adhesive tape.)

- 2) Insert the matching pins on the body side (three locations - one in the center and the remaining two on both sides) into the instrument panel assembly and the beam COMPL - steering.
- 3) Check that the matching pins are inserted securely, and then route the harness.
- 4) Install the sunload sensor and the grille - front defroster.

- 5) Secure the instrument panel assembly and the beam COMPL - steering to the vehicle body.
 (1) Position the instrument panel assembly and the beam COMPL - steering to the vehicle body and tighten the adjuster - clip space.

Preparation tool:

Hexagon wrench: 8 mm (0.31 in)

NOTE:

Tighten so that there is no gap between the adjuster portion (h) and the body.

Tightening torque:

Adjuster - clip space: 0.8 — 4 N·m (0.08 — 0.41 kgf·m, 0.6 — 2.95 ft·lb)

EI-03669

- (2) Temporarily tighten the bolts (a), (b), (c) and (d) of the beam COMPL - steering.

EI-03565

- (3) Tighten the beam COMPL - steering in the order from (a) to (d) to the specified torque.

Tightening torque:

Beam COMPL - steering: 25 N·m (2.55 kgf·m, 18.4 ft·lb)

Passenger's airbag module: 7.5 N·m (0.76 kgf·m, 5.5 ft·lb)

Instrument Panel Assembly

EXTERIOR/INTERIOR TRIM

6) Install each part in the reverse order of removal.

Tightening torque:

Column assembly - steering: <Ref. to PS-3, STEERING WHEEL AND COLUMN, COMPONENT, General Description.>

Knee airbag module: 7.5 N·m (0.76 kgf-m, 5.5 ft-lb)

Console box assembly: 6.5 N·m (0.66 kgf-m, 4.8 ft-lb)

20.Lower Inner Trim

A: REMOVAL

CAUTION:

- Before handling the airbag system components, refer to “CAUTION” of “General Description” in “AIRBAG SYSTEM”. <Ref. to AB-9, CAUTION, General Description.>
- Airbag system satellite safing sensor is located in the lower of the rear seat cushion center. Be careful not to apply strong impact to the sensor when performing operations, while the rear seat cushion is removed.

1) Release the claws, and then remove the cover side sill - front INN.

CAUTION:

Do not pull with excessive force. Doing so may damage the claws of the cover side sill - front INN.

EI-04177

Lower Inner Trim

EXTERIOR/INTERIOR TRIM

2) Remove the clips, and remove the cover side sill - front.

3) Remove the rear seat cushion assembly. <Ref. to SE-24, REMOVAL, Rear Seat.>

4) Release the clips and claws, and then remove the cover side sill - rear INN.

CAUTION:

Do not pull with excessive force. Doing so may damage the claws of the cover side sill - rear INN.

5) Remove the trim panel - center pillar LWR.

(1) Release the clip by pulling the trim panel - center pillar LWR toward you.

(2) Expand the claws of the trim panel - center pillar LWR outward, and remove it from the trim panel - center pillar UPR.

CAUTION:

Do not expand the trim panel - center pillar LWR excessively. Doing so may damage the trim.

NOTE:

First release the claw located to the front of the vehicle.

6) Disconnect the claws and remove the cover - catcher.

NOTE:

Remove the cover - catcher by using a plastic remover.

Lower Inner Trim

EXTERIOR/INTERIOR TRIM

B: INSTALLATION

Install each part in the reverse order of removal.

NOTE:

Assemble the trim panel - center pillar LWR to the trim panel - center pillar UPR securely.

21.Upper Inner Trim

A: REMOVAL

CAUTION:

- Before handling the airbag system components, refer to “CAUTION” of “General Description” in “AIRBAG SYSTEM”. <Ref. to AB-9, CAUTION, General Description.>
- Airbag system satellite safing sensor is located in the lower of the rear seat cushion center. Be careful not to apply strong impact to the sensor when performing operations, while the rear seat cushion is removed.

- 1) Disconnect the ground cable from battery and wait for at least 60 seconds before starting work. <Ref. to NT-6, BATTERY, NOTE, Note.>
- 2) Release the clips and claws, then detach the grille speaker side.

NOTE:

Remove the grille speaker side by using a plastic remover.

- 3) Remove the trim panel - front pillar UPR.

- (1) Pull the upper part of the trim panel - front pillar UPR towards the center of the vehicle.
- (2) Insert long-nose pliers into the top part of the trim, grip the tether clip with the pliers and twist 90° in that position.

CAUTION:

Be careful not to damage the pillar trim surface and curtain airbag module when inserting the pliers.

- (3) Holding the tether clip twisted as in the previous step, remove the trim panel - front pillar UPR from the tether clip.

Upper Inner Trim

EXTERIOR/INTERIOR TRIM

(4) Remove the clips, and remove the trim panel - front pillar UPR.

4) Remove the rear seat cushion assembly. <Ref. to SE-24, REMOVAL, Rear Seat.>

5) Remove the cover side sill - front INN, cover side sill - rear INN, and trim panel - center pillar LWR. <Ref. to EI-73, REMOVAL, Lower Inner Trim.>

6) Remove the trim panel - center pillar UPR.

(1) Remove the cover through (a), and remove the seat belt anchor bolt.

(2) Remove the bolt on the lower side of the trim panel - center pillar UPR.

(3) Remove the clip by pulling the upper part of the trim toward you, and while lowering the entire trim, remove the trim panel - center pillar UPR.

CAUTION:

Do not reuse the upper clips of the trim panel - center pillar UPR. Once the clip is removed, its holding force is reduced. Be sure to replace it with a new clip.

B: INSTALLATION**CAUTION:**

- When reusing the tether clip on the upper part of the trim panel - front pillar UPR, check that there is no damage to the tether clip. If the tether clip is damaged, always replace it with a new tether clip. If the tether clip is damaged, its holding force is reduced and the trim panel - front pillar UPR may come off.
- Do not reuse the tether clip removed from the upper part of the trim panel - front pillar UPR. Always replace with a new part.
- Do not reuse the upper clips of the trim panel - center pillar UPR. Once the clip is removed, its holding force is reduced. Be sure to replace it with a new clip.
- Before installing the trim panel - front pillar UPR, check the condition of protective non-woven fabric (white) of the curtain airbag. If it is damaged (airbag module cloth is exposed), replace the curtain airbag module assembly with a new part.

1) Remove the remaining tether clips from the vehicle body.

2) Install the trim panel - front pillar UPR.

(1) Check the installation status of the tether clips and install the trim panel - front pillar UPR.

3) Install each part in the reverse order of removal.

Tightening torque

Front seat belt: <Ref. to SB-2, FRONT SEAT BELT, COMPONENT, General Description.>

Trim panel - center pillar UPR: 7.5 N·m (0.76 kgf·m, 5.5 ft-lb)

Rear Quarter Trim

EXTERIOR/INTERIOR TRIM

4) Release the clips and claws, and then remove the cover side sill - rear INN.

CAUTION:

Do not pull with excessive force. Doing so may damage the claws of the cover side sill - rear INN.

EI-03497

5) Remove the mat - rear floor CTR and the spacer - rear floor side.

EI-03517

Rear Quarter Trim

EXTERIOR/INTERIOR TRIM

6) Remove the clips, and remove the trim panel - rear skirt.

7) Remove the trim panel - rear apron.

(1) Remove the caps, and remove the bolts.

(2) Remove the screws.

(3) Disengage the clips, and remove the trim panel - rear apron.

NOTE:

For LH side, disconnect the connector of the luggage room light.

B: INSTALLATION

Install each part in the reverse order of removal.

23.Sun Visor

A: REMOVAL

- 1) Remove the sun visor assembly.
 - (1) Remove the cap - sun visor, and then remove the screws.
 - (2) Disconnect the connector and remove the sun visor assembly.
- 2) Remove the hook - sun visor.
 - (1) Press both sides using a flat tip screwdriver.
 - (2) Remove the hook - sun visor by pulling it toward you.

B: INSTALLATION

Install each part in the reverse order of removal.

Assist Grip

EXTERIOR/INTERIOR TRIM

24. Assist Grip

A: REMOVAL

- 1) Pull both sides of the cap (a) using a flat tip screwdriver or similar tool wrapped with a protection tape.
- 2) Pull the assist grip toward yourself (toward the vehicle center) to remove.

EI-03361

B: INSTALLATION

Install each part in the reverse order of removal.

25. Roof Trim

A: REMOVAL

1. CROSTREK MODEL

CAUTION:

- Before handling the airbag system components, refer to “CAUTION” of “General Description” in “AIRBAG SYSTEM”. <Ref. to AB-9, CAUTION, General Description.>
 - Airbag system satellite safing sensor is located in the lower of the rear seat cushion center. Be careful not to apply strong impact to the sensor when working with the rear seat cushion removed.
- 1) Disconnect the ground cable from battery and wait for at least 60 seconds before starting work. <Ref. to NT-6, BATTERY, NOTE, Note.>
 - 2) Adjust the front seat position.
 - (1) Remove the headrest.
 - (2) Move the seat to the front-most position and tilt the backrest rearward.
 - 3) Remove the rear seat cushion assembly and backrest assembly. <Ref. to SE-24, REMOVAL, Rear Seat.>
 - 4) Release the clips and claws, then detach the left and right grille speaker side.

NOTE:

Remove the grille speaker side by using a plastic remover.

Roof Trim

EXTERIOR/INTERIOR TRIM

- 5) Remove the lower inner trim on the RH and LH sides. <Ref. to EI-73, REMOVAL, Lower Inner Trim.>
- 6) Remove the upper inner trim on the RH and LH sides. <Ref. to EI-77, REMOVAL, Upper Inner Trim.>
- 7) Remove the screws and clips, and remove the trim panel - rear quarter pillar UPR on the left and right sides.

- 8) Remove the mat - rear floor CTR and the spacer - rear floor side.

9) Remove the clips, and remove the trim panel - rear skirt.

10) Remove the trim panel - rear apron.

(1) Remove the caps, and remove the bolts.

(2) Remove the screws.

(3) Disengage the clips, and remove the trim panel - rear apron.

NOTE:

For LH side, disconnect the connector of the luggage room light.

Roof Trim

EXTERIOR/INTERIOR TRIM

11) Remove the bolts, and remove the striker - backrest rear on the passenger's side.

12) Remove the light assembly - map. (Models without EyeSight) <Ref. to LI-63, REMOVAL, Spot Map Light.>

13) Remove the stereo camera cover assembly. (Models with EyeSight) <Ref. to ES-7, REMOVAL, Stereo Camera.>

14) Remove the left and right sun visor assembly. <Ref. to EI-83, REMOVAL, Sun Visor.>

15) Remove the light assembly - room. <Ref. to LI-66, REMOVAL, Room Light.>

16) Remove all assist rails. <Ref. to EI-84, REMOVAL, Assist Grip.>

17) Remove the garnish - roof. (Model with sunroof)

18) Remove the trim panel - roof assembly.

- (1) Remove the harness clamp of the cord assembly - antenna feeder and the cord - roof, and disconnect the connectors.
- (2) Remove the clips and remove the touch fastener behind the room light.

EI-03485

(3) Remove the weather strip - body side flange from the front/rear and left/right doors, and remove the trim panel - roof assembly.

(4) Slightly bend the rear end of the trim panel - roof assembly along the character line, and take it out from the rear gate opening.

CAUTION:

Be careful of the bending direction. If the direction is wrong, the trim panel - roof assembly may be wrinkled.

EI-03486

Roof Trim

EXTERIOR/INTERIOR TRIM

B: INSTALLATION

CAUTION:

- For installation of the stereo camera cover assembly, refer to “INSTALLATION”, “Stereo Camera” in the “EyeSight” section and observe the precautions for installation. <Ref. to ES-10, INSTALLATION, Stereo Camera.>
- When reusing the tether clip on the upper part of the trim panel - front pillar UPR, check that there is no damage to the tether clip. If the tether clip is damaged, always replace it with a new tether clip. If the tether clip is damaged, its holding force is reduced and the trim panel - front pillar UPR may come off.
- Do not reuse the tether clip removed from the upper part of the trim panel - front pillar UPR. Always replace with a new part.
- Do not reuse the upper clips of the trim panel - center pillar UPR. Once the clip is removed, its holding force is reduced. Be sure to replace it with a new clip.
- Before installing the trim panel - front pillar UPR, check the condition of protective non-woven fabric (white) of the curtain airbag. If it is damaged (airbag module cloth is exposed), replace the curtain airbag module assembly with a new part.
- Check the installation status of the tether clips and install the trim panel - front pillar UPR.

1) Attach the feeder cord and roof cord to the roof trim.

CAUTION:

Route each cord carefully. The cord may interfere, thus preventing normal deployment of the curtain airbag when necessary.

Tape:

Item number: 86359SC000/TAPE

Roof Trim

NOTE:

Use the tape (service parts) by cutting into 80 mm × 50 mm (3.2 in × 2.0 in).

EI-10116

EI-10117

- (1) Roof cord
- (2) Feeder cord
- (3) Trim panel - roof
- (4) Cushion
- (5) Tape

- (a) Align the center of the marking (white tape) on the cord with the trim end, then secure using the tape.
- (b) Align the marking (white tape) of the cord with the clamp to secure.
- (c) Secure the cord to the roof pad clamp.
- (d) Adjust the excess cord at (d) position and secure using the tape.
- (e) Secure the marking (white tape) of the cord using the tape so that the marking cannot be viewed from the passenger room.
- (f) Align the center of the marking (red tape) on the cord with the roof trim end, then secure using the tape.
- (g) Route the cord along inside of the cushion (to the vehicle center) and secure using the tape.

Roof Trim

EXTERIOR/INTERIOR TRIM

2) Attach the insulator along the mark-off line on the back of the roof trim.

(a) Mark-off line

(b) Insulator

3) Install each part in the reverse order of removal.

Tightening torque:

Console box assembly: 6.5 N·m (0.66 kgf·m, 4.8 ft·lb)

Rear seat backrest assembly: <Ref. to SE-6, REAR SEAT, COMPONENT, General Description.>

26.Rear Gate Trim

A: REMOVAL

- 1) Remove the trim panel - rear gate UPR.
 - (1) Remove the claws on the trim edge.
 - (2) Release the claws in the center of trim, and remove the trim panel - rear gate UPR.

- 2) Remove the trim panel - rear gate pillar side.
 - (1) Release the claws.
 - (2) Remove the claws on the bottom of trim, and remove the trim panel - rear gate pillar side.

Rear Gate Trim

EXTERIOR/INTERIOR TRIM

- 3) Remove the trim panel - rear gate LWR.
 - (1) Remove the clips on both ends.
 - (2) Release the clips, and remove the trim panel - rear gate LWR.

B: INSTALLATION

Install each part in the reverse order of removal.

27.Floor Mat

A: REMOVAL

CAUTION:

• Before handling the airbag system components, refer to “CAUTION” of “General Description” in “AIRBAG SYSTEM”. <Ref. to AB-9, CAUTION, General Description.>

• Airbag system satellite safing sensor is located in the lower of the rear seat cushion center. Be careful not to apply strong impact to the sensor when working with the rear seat cushion removed.

- 1) Remove the front seat assembly. <Ref. to SE-8, REMOVAL, Front Seat.>
- 2) Remove the rear seat cushion assembly. <Ref. to SE-24, REMOVAL, Rear Seat.>
- 3) Remove the console box assembly and panel center LWR. <Ref. to EI-59, REMOVAL, Console Box.>
- 4) Remove the lower inner trim. <Ref. to EI-73, REMOVAL, Lower Inner Trim.>
- 5) Remove the pull handle cover.
 - (1) Open the cover by using a flat tip screwdriver.
 - (2) Remove the screw and remove the pull handle cover.

EI-04246

- 6) Remove the knobs of the hook - seat cushion rear.

EI-03524

Floor Mat

EXTERIOR/INTERIOR TRIM

- 7) Take out the floor mat from the vehicle.
- (1) Remove the clips from the floor mat.
 - (2) Remove the mat hook on both sides.
 - (3) Take out the floor mat after folding down.

B: INSTALLATION

Install each part in the reverse order of removal.

CAUTION:

Make sure that the knobs of the hook - seat cushion rear are securely installed.

NOTE:

Secure the mat firmly with clips.

28.Rear Gate Garnish

A: REMOVAL

- 1) Disconnect the ground cable from battery. <Ref. to NT-6, BATTERY, NOTE, Note.>
- 2) Remove the trim panel - rear gate. <Ref. to EI-93, REMOVAL, Rear Gate Trim.>
- 3) Remove the arm assembly - rear wiper.
 - (1) Remove the cover - rear wiper arm.
 - (2) Remove the nut, and remove the arm assembly - rear wiper.

WW-00818

- 4) Remove the motor assembly - rear wiper.
 - (1) Disconnect the harness connector of the motor assembly - rear wiper.
 - (2) Remove the bolts, and remove the motor assembly - rear wiper.

WW-00819

Rear Gate Garnish

EXTERIOR/INTERIOR TRIM

- 5) Remove the garnish assembly - rear gate.
- (1) Disconnect the harness connector of license plate light assembly.
 - (2) Remove the nuts.
 - (3) Remove the clips and remove the garnish assembly - rear gate.

EI-03473

B: INSTALLATION

CAUTION:

Make sure that the harness grommet is securely installed.

If not properly installed, this may cause leaks.

Install each part in the reverse order of removal.

Tightening torque

Garnish assembly - rear gate: 4.5 N·m (0.46 kgf-m, 3.3 ft-lb)

Motor assembly - rear wiper: 6 N·m (0.61 kgf-m, 4.4 ft-lb)

Arm assembly - rear wiper: 8 N·m (0.82 kgf-m, 5.9 ft-lb)

29.Heat Shield Cover

A: NOTE

Refer to "EXHAUST" section for removal and installation procedure of the heat shield cover.

30.Ornament

A: INSTALLATION

1. LETTER MARK

Align the end of application tape with the end of panel, then adhere the letter mark.

(a) Panel - rear gate end

(b) Application tape end

NOTE:

- Align the cutout of application tape with the end reference of the front door. (a)
- Align the upper end of application tape with the end of rounded corner of character line. (b)

2. Front Hood

A: REMOVAL

1. FRONT HOOD PANEL

CAUTION:

The hood COMPL - front is heavy. When removing or installing the hinge COMPL - front hood, be sure to work in a group of two or more.

- 1) Open the hood COMPL - front.
- 2) Remove the clips, and remove the insulator - front hood.

- 3) Remove the clip, and remove the seal - front duct.

CAUTION:

If the weather strip clip is removed with excessive force, the seal - front duct may be damaged. Be sure to use clip remover, etc. to remove.

Front Hood

- 4) Using a marker pen, make alignment marks (A) on the hood COMPL - front and the striker - front hood.

- 5) Remove the striker - front hood from the hood COMPL - front.

Front Hood

EXTERIOR BODY PANELS

6) Remove the nut on the hood COMPL - front side, and remove the hood COMPL - front.

2. FRONT HOOD HINGE

CAUTION:

The hood COMPL - front is heavy. When removing or installing the hinge COMPL - front hood, be sure to work in a group of two or more.

1) Remove the cover - front fender.

(1) Remove the clip.

(2) Release the claws by pulling them forward, and remove the cover - front fender.

Front Hood

- 2) Remove the fender COMPL - front. <Ref. to EB-15, REMOVAL, Front Fender.>
- 3) Remove the hood COMPL - front.
 - (1) Remove the nuts on the hood panel side, and remove the hood COMPL - front.

EB-00689

- 4) Remove the bolts, and remove the hinge COMPL - front hood.

EB-00700

Front Hood

EXTERIOR BODY PANELS

B: INSTALLATION

CAUTION:

The hood COMPL - front is heavy. When removing or installing the hinge COMPL - front hood, be sure to work in a group of two or more.

1) To install the insulator - front hood and the seal - front duct, follow the removal procedure in the reverse order.

2) Align the alignment marks (A), and install the striker - front hood to the hood COMPL - front.

CAUTION:

When installing the striker - front hood, make sure that the front and rear sides are positioned in a correct direction.

Tightening torque:

33 N·m (3.36 kgf·m, 24.3 ft·lb)

(A) Alignment mark

F Front side of vehicle

NOTE:

It is not necessary to adjust the striker - front hood because there is no span of adjustable range.

3) Install the hinge COMPL - front hood to the vehicle body. (When the hinge COMPL - front hood is removed)

4) Temporarily install the hood COMPL - front to the hinge COMPL - front hood.

NOTE:

When installing the hood COMPL - front, make sure that a uniform clearance is created around it.

5) Adjust the clearance around the hood COMPL - front. <Ref. to EB-13, ADJUSTMENT, Front Hood.>

6) Tighten the bolts and nuts of the hinge COMPL - front hood.

Tightening torque:

25 N·m (2.55 kgf·m, 18.4 ft·lb)

7) Install each part of the hood COMPL - front in the reverse order of removal.

- Insulator - front hood
- Seal - front duct

C: ADJUSTMENT

Adjust the clearance around the hood COMPL - front as follows.

EB-10065

Part		Standard
A	Hood COMPL - front to Front grille	7.5±1.0 mm (0.30±0.04 in)
B	Hood COMPL - front to Bumper face - front	6.0+2.0, -1.0 mm (0.24+0.08, -0.04 in)
C	Offset value: Hood COMPL - front to Front end of fender COMPL - front	0+0.5, -1.0 mm (0+0.02, -0.04 in)
D	Hood COMPL - front to Fender COMPL - front (from front end to just before curved portion)	3.5±1.0 mm (0.14±0.04 in)
E	Hood COMPL - front to Fender COMPL - front (from rear end to just before curved portion)	4.5±1.0 mm (0.18±0.04 in)
F	Surface level gap: Hood COMPL - front to Fender COMPL - front	0.5+0.5, -1.0 mm (0.02+0.02, -0.04 in)

1) Adjust the horizontal position of the hood COMPL - front.

(1) Loosen the attaching nuts of the hinge COMPL - front hood on the left and right sides.

EB-00689

Front Hood

EXTERIOR BODY PANELS

- (2) Adjust the horizontal clearance of the hood COMPL - front, and tighten the attaching nuts of the hinge COMPL - front hood.

Tightening torque:

25 N·m (2.55 kgf·m, 18.4 ft·lb)

- 2) Adjust the front end height of the hood COMPL - front.
 - (1) Loosen the bolts on the lock assembly - front hood.
 - (2) Adjust the lock assembly - front hood by moving it up and down.

Tightening torque:

33 N·m (3.36 kgf·m, 24.3 ft·lb)

- 3) Rotate the buffer - front hood of the hood COMPL - front to adjust the height.

3. Front Fender

A: REMOVAL

- 1) Disconnect the ground cable from battery. <Ref. to NT-6, BATTERY, NOTE, Note.>
- 2) Remove the bumper face - front. <Ref. to EI-27, REMOVAL, Front Bumper.>
- 3) Remove the light assembly - head. <Ref. to LI-24, REMOVAL, Headlight Assembly.>
- 4) Remove the cover - front fender.
 - (1) Remove the clip.
 - (2) Release the claws by pulling them forward, and remove the cover - front fender.

EB-00699

- 5) Remove the clips and detach the side garnish assembly. <Ref. to EI-45, REMOVAL, Side Garnish.>
- 6) Remove the mud guard - front. <Ref. to EI-23, REMOVAL, Mud Guard.>
- 7) Remove the cover - A pillar assembly.

EB-00771

Front Fender

EXTERIOR BODY PANELS

8) Remove the fender COMPL - front.

(1) Remove the garnish assembly - front fender.

CAUTION:

Do not reuse the garnish assembly - front fender. Always replace with a new part.

EB-00987

(2) Remove the bolts, and remove the fender COMPL - front.

EB-00702

B: INSTALLATION

1) Install each part in the reverse order of removal.

CAUTION:

- Install the bumper face - front so that the front end of the under cover (b) comes inside the bumper face - front (a), and the front end of the mud guard (c) comes outside the bumper face - front (a).

- Before installing the bumper face, match the claws on the bracket - front bumper with the engaging position of flange section on the bumper face side. If the engaging position is not correct, the flange section may be broken or the clearance between fender panel and bumper face may not be uniform.

Tightening torque:

Fender COMPL - front: 7.5 N·m (0.76 kgf-m, 5.5 ft-lb)

Light assembly - head: 7.5 N·m (0.76 kgf-m, 5.5 ft-lb)

NOTE:

When installing the fender COMPL - front, make sure that a uniform clearance is created around it.

- Fender COMPL - front to Hood COMPL - front: <Ref. to EB-13, ADJUSTMENT, Front Hood.>

- Fender COMPL - front to Panel assembly - front door: <Ref. to EB-23, ADJUSTMENT, Front Door.>

2) Adjust the headlight beam and fog light beam.

- Adjust the headlight beam. <Ref. to LI-28, HEADLIGHT BEAM ADJUSTMENT, ADJUSTMENT, Headlight Assembly.>

- Adjust the fog light beam. (Model with fog light) <Ref. to LI-46, FOG LIGHT AIMING, ADJUSTMENT, Front Fog Light Assembly.>

Front Door

EXTERIOR BODY PANELS

4. Front Door

A: REMOVAL

1. FRONT DOOR PANEL

- 1) Disconnect the ground cable from battery and wait for at least 60 seconds before starting work. <Ref. to NT-6, BATTERY, NOTE, Note.>
- 2) Remove the trim panel - front door. <Ref. to EI-50, FRONT DOOR, REMOVAL, Door Trim.>
- 3) Remove the sealing cover - front door. <Ref. to EB-25, REMOVAL, Front Sealing Cover.>
- 4) Remove the outer mirror assembly. <Ref. to GW-23, REMOVAL, Outer Mirror Assembly.>
- 5) Remove the front door speaker assembly. <Ref. to ET-32, DOOR SPEAKER, REMOVAL, Front Speaker.>
- 6) Remove the cover B pillar - front door INN.

CAUTION:

- Always replace with a new part, because engagement of the claw weakens.
- Do not damage the sash while removing.

- 7) Remove the front door impact sensor assembly. <Ref. to AB-50, REMOVAL, Front Door Impact Sensor.>
- 8) Remove the glass assembly - front door and the glass - front door partition. <Ref. to GW-17, REMOVAL, Front Door Glass.>
- 9) Remove the regulator & motor assembly - front of the front door. <Ref. to GW-20, REMOVAL, Front Regulator and Motor Assembly.>
- 10) Remove the latch and actuator assembly - front. <Ref. to SL-38, REMOVAL, Front Door Latch and Door Lock Actuator Assembly.>
- 11) Remove the handle - door outer and the cover - handle front outer. <Ref. to SL-34, REMOVAL, Front Outer Handle.>

12) Remove the weather strip - front door.

CAUTION:

If the weather strip clip is removed with excessive force, the weather strip may be damaged. Be sure to use clip remover to remove.

13) Remove the bolts and nuts, and then detach the checker assembly - front door.

14) Remove the cover side sill - front INN and cover side sill - front. <Ref. to EI-73, REMOVAL, Lower Inner Trim.>

15) Disconnect the front door impact sensor harness connector. <Ref. to AB-21, FRONT DOOR IMPACT SENSOR (BETWEEN AIRBAG REAR HARNESS AND DOOR HARNESS), PROCEDURE, Airbag Connector.>

CAUTION:

Before handling the airbag system components, refer to “CAUTION” of “General Description” in “AIRBAG SYSTEM”. <Ref. to AB-9, CAUTION, General Description.>

16) Disconnect the front door harness connectors.

(1) Disconnect the connector of door harness from body harness.

Front Door

EXTERIOR BODY PANELS

(2) Push in the claws to remove the grommet, and pull out the door harness connector.

A	Driver's side
B	Passenger's side

17) Before removing the panel assembly - front door, make the following preparations.

- (1) Put a wooden block on a floor jack and place the jack under the panel assembly - front door.
- (2) Support the panel assembly - front door with the jack to protect it from damage.

CAUTION:

Do not excessively lift the panel assembly - front door with the floor jack. The door hinges may be damaged.

18) Remove the door-side bolts for the upper hinge - front door and the lower hinge - front door to remove the panel assembly - front door.

CAUTION:

The panel assembly - front door is heavy. When removing and installing it, always work in a team of two or more persons.

19) Remove the door hinge from vehicle.

2. FRONT DOOR HINGE

1) Remove the bolts from the vehicle side to disconnect the checker assembly - front door.

2) Before removing the door hinge, make the following preparations.

- (1) Put a wooden block on a floor jack and place the jack under the panel assembly - front door.
- (2) Support the panel assembly - front door with the jack to protect it from damage.

CAUTION:

Do not excessively lift the panel assembly - front door with the floor jack. The door hinges may be damaged.

3) Remove the bolts of the upper hinge - front door or the lower hinge - front door.

CAUTION:

Do not remove the upper hinge - front door and the lower hinge - front door at the same time.

4) Remove the hinge - front door from the vehicle.

Front Door

EXTERIOR BODY PANELS

B: INSTALLATION

1. FRONT DOOR PANEL

1) Put a wooden block on a jack and place the panel assembly - front door on it.

2) Apply grease to the sliding area of door hinges, and install the door hinge to vehicle.

3) Adjust the height by the jack, and temporarily install the panel assembly - front door to the upper hinge - front door and the lower hinge - front door.

NOTE:

- When installing the panel assembly - front door, make sure that a uniform clearance is created around the panel.
 - Perform installation while paying attention to the assembly direction of the grommet.
- 4) Adjust the clearance around the panel assembly - front door. <Ref. to EB-23, ADJUSTMENT, Front Door.>
- 5) Tighten the bolts and nuts of the door hinge and the checker assembly - front door.

Tightening torque:

Refer to “COMPONENT” of “General Description”. <Ref. to EB-4, FRONT DOOR, COMPONENT, General Description.>

6) Install door internal parts in the reverse order of removal.

NOTE:

Before installation, check the following items.

- Rod of the latch and actuator assembly - front is free from deformation.
 - Grease is applied sufficiently to the rod joints of the latch and actuator assembly - front.
 - Cable of the latch and actuator assembly - front is free from deformation such as fray.
 - Grease is applied sufficiently to the cable joints of the latch and actuator assembly - front.
- 7) Connect door harness connector, and install the cover side sill - front.

2. FRONT DOOR HINGE

1) Apply grease to the sliding area of door hinges, and install the door hinge to vehicle.

2) Adjust the height by the jack, and temporarily install the panel assembly - front door to the upper hinge - front door and the lower hinge - front door.

NOTE:

When installing the panel assembly - front door, make sure that a uniform clearance is created around the panel.

3) Adjust the clearance around the panel assembly - front door. <Ref. to EB-23, ADJUSTMENT, Front Door.>

4) Tighten the bolts and nuts of the door hinge and the checker assembly - front door.

Tightening torque:

Refer to “COMPONENT” of “General Description”. <Ref. to EB-4, FRONT DOOR, COMPONENT, General Description.>

C: ADJUSTMENT

Adjust the clearance around the panel assembly - front door as follows.

EB-10067

Part		Standard
A	Fender COMPL - front to Panel assembly - front door	4.5±1.0 mm (0.18±0.04 in)
B	Panel assembly - front door to Side sill	6.0+1.5, -1.0 mm (0.24+0.06, -0.04 in)
C	Roof panel to Front door sash	5.1+1.5, -1.0 mm (0.20+0.06, -0.04 in)
D	Surface level gap between roof panel and front door sash	7±1.5 mm (0.28±0.06 in)
E	Front door sash to Rear door sash	5.5+1.5, -1.0 mm (0.22+0.06, -0.04 in)
F	Panel assembly - front door to Panel assembly - rear door	4.5±1.0 mm (0.18±0.04 in)

1) Adjust the vertical and horizontal positions of the panel assembly - front door.

Preparation tool:

ST: WRENCH (925610000)

EB-00016

- (1) Using ST, loosen the body side bolts of the upper hinge - front door and the lower hinge - front door.
- (2) Adjust the vertical and horizontal clearance of the panel assembly - front door.

Front Door

EXTERIOR BODY PANELS

2) Adjust the surface level gap between the panel assembly - front door and the panel assembly - rear door.

CAUTION:

Do not use an impact wrench. Welding area on the striker nut plate is easily broken.

(1) Loosen the screws (A).

(2) Tap the striker - front door (B) using a plastic hammer to adjust the surface level gap between the rear end of the panel assembly - front door and the front end of the panel assembly - rear door.

5. Front Sealing Cover

A: REMOVAL

- 1) Disconnect the ground cable from battery and wait for at least 60 seconds before starting work. <Ref. to NT-6, BATTERY, NOTE, Note.>
- 2) Remove the trim panel - front door. <Ref. to EI-50, FRONT DOOR, REMOVAL, Door Trim.>
- 3) Remove the sealing cover - front door.

CAUTION:

- Carefully remove the butyl tape. Excessive force will easily break the cover.
- If the sealing cover - front door gets broken, replace it with a new part.
- Be careful not to allow the butyl tape to contact any trims and seats because the butyl tape, which has a strong adhesive force, is difficult to remove once it adhered.

- (1) Remove the screw to remove the bracket - door trim front.
- (2) Carefully remove the butyl tape to remove the sealing cover - front door.

AB-02910

B: INSTALLATION

CAUTION:

- If the sealing cover - front door gets broken, replace it with a new part.
- Apply a uniform bead of butyl tape.
- Attach the sealing cover - front door, keeping it from becoming wrinkled.
- Breaks in the bead will allow water leakage and contamination.

- 1) Install the sealing cover - front door.
 - (1) Forcefully push the butyl tape portion to prevent any floating on surface.
 - (2) When replacing the sealing cover, use the butyl tape.

Preparation items:

Butyl tape: 3M Butyl Rubber 8626 or equivalent

- 2) Install each part in the reverse order of removal.

NOTE:

Before installation, check the following items.

- Rod of the latch and actuator assembly - front is free from deformation.
- Grease is applied sufficiently to the rod joints of the latch and actuator assembly - front.
- Cable of the latch and actuator assembly - front is free from deformation such as fray.
- Grease is applied sufficiently to the cable joints of the latch and actuator assembly - front.

C: INSPECTION

If the sealing cover - front door is broken, replace it with a new part.

Rear Door

EXTERIOR BODY PANELS

6. Rear Door

A: REMOVAL

1. REAR DOOR PANEL

- 1) Disconnect the ground cable from battery. <Ref. to NT-6, BATTERY, NOTE, Note.>
- 2) Remove the trim panel - rear door. <Ref. to EI-51, REAR DOOR, REMOVAL, Door Trim.>
- 3) Remove the sealing cover - rear door. <Ref. to EB-31, REMOVAL, Rear Sealing Cover.>
- 4) Remove the cover B pillar - rear door INN and the cover C pillar - rear door INN.

- 5) Remove the rear door speaker assembly. <Ref. to ET-33, REMOVAL, Rear Speaker.>
- 6) Remove the sash COMPL - rear partition and the glass assembly - rear door. <Ref. to GW-31, REMOVAL, Rear Door Glass.>
- 7) Remove the regulator - rear. <Ref. to GW-33, REMOVAL, Rear Regulator and Motor Assembly.>
- 8) Remove the latch and actuator assembly - rear. <Ref. to SL-46, REMOVAL, Rear Door Latch and Door Lock Actuator Assembly.>
- 9) Remove the handle - door outer and the cover - handle rear outer. <Ref. to SL-42, REMOVAL, Rear Outer Handle.>
- 10) Remove the weather strip - rear door.

CAUTION:

If the weather strip clip is removed with excessive force, the weather strip may be damaged. Be sure to use clip remover to remove.

- 11) Remove the bolts and nuts, and then detach the checker assembly - rear door.

- 12) Disconnect the rear door harness connectors.

- (1) Remove the grommet and pull out the rear door harness connector from inside the center pillar.

- (2) Disconnect the rear door harness connectors.

- 13) Before removing the panel assembly - rear door, make the following preparations.

Rear Door

EXTERIOR BODY PANELS

- (1) Put a wooden block on a floor jack and place the jack under the panel assembly - rear door.
- (2) Support the panel assembly - rear door with the jack to protect it from damage.

CAUTION:

Do not excessively lift the panel assembly - rear door with the floor jack. The door hinges may be damaged.

- 14) Remove the door-side bolts for the upper hinge - rear door and the lower hinge - rear door to remove the panel assembly - rear door.

CAUTION:

The panel assembly - rear door is heavy. When removing and installing it, always work in a team of two or more persons.

- 15) Remove the door hinge from vehicle. <Ref. to EB-28, REAR DOOR HINGE, REMOVAL, Rear Door.>

2. REAR DOOR HINGE

- 1) Open the panel assembly - rear door, and remove the bolts of the upper hinge - rear door or the lower hinge - rear door.

CAUTION:

- Do not remove the upper hinge - rear door and the lower hinge - rear door at the same time.
- Removal and installation of the panel assembly - rear door must be performed with the door closed.

- 2) Remove the rear door hinge from vehicle.

B: INSTALLATION

1. REAR DOOR PANEL

- 1) Put a wooden block on a jack and place the panel assembly - rear door on it.

- 2) Apply grease to the moving part of door hinges.
- 3) Adjust the height by the jack, and temporarily install the panel assembly - rear door to the upper hinge - rear door and the lower hinge - rear door.

NOTE:

- When installing the panel assembly - rear door, make sure that a uniform clearance is created around the panel.
 - Perform installation while paying attention to the assembly direction of the grommet.
- 4) Adjust the clearance around the panel assembly - rear door. <Ref. to EB-29, ADJUSTMENT, Rear Door.>

5) Tighten the bolts and nuts of the door hinge and the checker assembly - rear door.

Tightening torque:

Refer to “COMPONENT” of “General Description”. <Ref. to EB-5, REAR DOOR, COMPONENT, General Description.>

6) Install door internal parts in the reverse order of removal.

NOTE:

Before installation, check the following items.

- Is the lever of the frame assembly - rear door outer is free from deformation?
- Is grease applied sufficiently to the lever joints of the latch and actuator assembly - rear?
- Is the cable of the latch and actuator assembly - rear free from deformation such as fray?
- Is grease applied sufficiently to the cable joints of the latch and actuator assembly - rear?

7) Connect the door harness connector, and install the harness grommet.

2. REAR DOOR HINGE

1) Apply grease to the moving part of door hinges.

2) Adjust the clearance around the panel assembly - rear door. <Ref. to EB-29, ADJUSTMENT, Rear Door.>

3) Tighten the door hinge bolts.

Tightening torque:

Refer to “COMPONENT” of “General Description”. <Ref. to EB-5, REAR DOOR, COMPONENT, General Description.>

C: ADJUSTMENT

Adjust the clearance around the panel assembly - rear door as follows.

EB-10068

Part		Standard
A	Front door sash to Rear door sash	5.5+1.5, -1.0 mm (0.22+0.06, -0.04 in)
B	Panel assembly - front door to Panel assembly - rear door	4.5±1.0 mm (0.18±0.04 in)
C	Roof panel to Rear door sash	5.1+1.5, -1.0 mm (0.20+0.06, -0.04 in)
D	Surface level gap between roof panel and rear door sash	6.6±1.5 mm (0.26±0.06 in)
E	Panel assembly - rear door to Rear quarter panel	4.1±1.0 mm (0.16±0.04 in)
F	Panel assembly - rear door to Side sill	6.0±1.5 mm (0.24±0.06 in)

Rear Door

EXTERIOR BODY PANELS

- 1) Adjust the vertical and horizontal positions of the panel assembly - rear door.

- (1) Loosen the body side bolts of the upper hinge - rear door and the lower hinge - rear door.
(2) Adjust the vertical and horizontal clearance of the panel assembly - rear door.
- 2) Adjust the surface level gap between the panel assembly - rear door and the body.

CAUTION:

Do not use an impact wrench. Welding area on the striker nut plate is easily broken.

- (1) Loosen the screws (A).
- (2) Tap the striker - rear door (B) using a plastic hammer to adjust the surface level gap between the rear end of the panel assembly - rear door and the rear quarter.

7. Rear Sealing Cover

A: REMOVAL

- 1) Disconnect the ground cable from battery. <Ref. to NT-6, BATTERY, NOTE, Note.>
- 2) Remove the trim panel - rear door. <Ref. to EI-51, REAR DOOR, REMOVAL, Door Trim.>
- 3) Remove the sealing cover - rear door.

CAUTION:

- Carefully remove the butyl tape. Excessive force will easily break the cover.
- If the sealing cover - rear door gets broken, replace it with a new part.
- Be careful not to allow the butyl tape to contact any trims and seats because the butyl tape, which has a strong adhesive force, is difficult to remove once it adhered.

- (1) Remove the screw to remove the bracket - door trim rear.
- (2) Carefully remove the butyl tape to remove the sealing cover - rear door.

EB-00717

B: INSTALLATION

CAUTION:

- If the sealing cover - rear door gets broken, replace it with a new part.
- Apply a butyl tape evenly.
- Attach the sealing cover - rear door, keeping it from becoming wrinkled.
- If the butyl tape is applied unevenly, it will cause water leakage and soiling.

- 1) Install the sealing cover.
 - (1) Forcefully push the butyl tape portion to prevent any floating on surface.
 - (2) When replacing the sealing cover, use the butyl tape.

Preparation items:

Butyl tape: 3M Butyl Rubber 8626 or equivalent

- 2) Install each part in the reverse order of removal.

NOTE:

Before installation, check the following items.

- Is the lever of the frame assembly - rear door outer is free from deformation?
- Is grease applied sufficiently to the lever joints of the latch and actuator assembly - rear?
- Is the cable of the latch and actuator assembly - rear free from deformation such as fray?
- Is grease applied sufficiently to the cable joints of the latch and actuator assembly - rear?

C: INSPECTION

If the sealing cover - rear door is broken, replace it with a new part.

Door Sash Tape

EXTERIOR BODY PANELS

8. Door Sash Tape

A: REMOVAL

1. FRONT DOOR

- 1) Disconnect the ground cable from battery and wait for at least 60 seconds before starting work. <Ref. to NT-6, BATTERY, NOTE, Note.>
- 2) Remove the trim panel - front door. <Ref. to EI-50, FRONT DOOR, REMOVAL, Door Trim.>
- 3) Remove the outer mirror assembly. <Ref. to GW-23, REMOVAL, Outer Mirror Assembly.>
- 4) Remove the sealing cover - front door. <Ref. to EB-25, REMOVAL, Front Sealing Cover.>
- 5) Remove the glass assembly - front door. <Ref. to GW-17, REMOVAL, Front Door Glass.>
- 6) Remove the running channel - front door.
- 7) Remove the weather strip outer - front door.

CAUTION:

- When removing the weather strip outer, be careful not to damage the vehicle.
- Do not reuse the weather strip outer. Always replace with a new part.

- 8) Peel the door sash tape from the door sash.

NOTE:

- If the tape is difficult to remove, warm the tape with a hairdryer, etc. to make the removal easier. Use a household hairdryer. Do not use industrial dryers.
- If tape residue is remaining on the door sash, wipe clean.

2. REAR DOOR

- 1) Disconnect the ground cable from battery. <Ref. to NT-6, BATTERY, NOTE, Note.>
- 2) Remove the trim panel - rear door. <Ref. to EI-51, REAR DOOR, REMOVAL, Door Trim.>
- 3) Remove the sealing cover - rear door. <Ref. to EB-31, REMOVAL, Rear Sealing Cover.>
- 4) Remove the glass assembly - rear door. <Ref. to GW-31, REMOVAL, Rear Door Glass.>
- 5) Remove the running channel - rear door.
- 6) Remove the weather strip outer - rear door.

CAUTION:

- When removing the weather strip outer, be careful not to damage the vehicle.
- Do not reuse the weather strip outer. Always replace with a new part.

- 7) Peel the door sash tape from the door sash.

NOTE:

- If the tape is difficult to remove, warm the tape with a hairdryer, etc. to make the removal easier. Use a household hairdryer. Do not use industrial dryers.
- If tape residue is remaining on the door sash, wipe clean.

Door Sash Tape

EXTERIOR BODY PANELS

B: INSTALLATION

CAUTION:

- Do not reuse the removed door sash tape. Replace it with a new tape.
- Press evenly along the sash when applying the tape using a spatula or similar object to make sure no bubbles are formed.

If air bubbles are formed, reapply the tape.

- If the tape is wrinkled, etc. during application, replace the tape.
- Be sure to press the ends of the tape firmly to adhere securely. If the tape comes off at the ends or where folded, the adhesive strength is weakened and the tape may peel off.
- There are locations where the tape ends will overlap each other. When applying the tape, be careful of the following order of their application.

- Front

- Rear

1. FRONT DOOR

1) Apply the front door sash tape - medium from the rear of the vehicle towards the front.

EB-00777

2) Apply the front door sash tape - rear from the top of the vehicle towards the bottom.

EB-00778

(1) Front door sash tape - medium

(2) Front door sash tape - rear

(3) End of panel outer

Door Sash Tape

EXTERIOR BODY PANELS

3) Fold the corners at the door upper end area in the order of (1) — (3).

4) Apply the front door sash tape - front from the top of the vehicle towards the bottom.

(1) Upper end of weather strip

(2) Front door sash tape - front

(3) Front door sash tape - medium

5) Fold the corners at the door upper end area in the order of (1) — (3).

6) Thereafter, install door parts in the reverse order of removal.

NOTE:

Before installation, check the following items.

- Rod of the latch and actuator assembly - front is free from deformation.
- Grease is applied sufficiently to the rod joints of the latch and actuator assembly - front.
- Cable of the latch and actuator assembly - front is free from deformation such as fray.
- Grease is applied sufficiently to the cable joints of the latch and actuator assembly - front.

2. REAR DOOR

1) Apply the rear door sash tape - medium from the front of the vehicle towards the rear.

Door Sash Tape

EXTERIOR BODY PANELS

2) Apply the rear door sash tape - front from the top of the vehicle towards the bottom.

(1) Rear door sash tape - medium

(2) Rear door sash tape - front

(3) End of panel outer

3) Fold the corners at the door upper end area in the order of (1) — (2).

4) Apply the rear door sash tape - rear from the top of the vehicle towards the bottom.

EB-10096

(1) End of panel outer

(2) Rear door sash tape - rear

(3) Rear door sash tape - medium

5) Fold the corners at the door upper end area in the order of (1) — (3).

EB-00831

6) Thereafter, install door parts in the reverse order of removal.

NOTE:

Before installation, check the following items.

- Is the lever of the frame assembly - rear door outer is free from deformation?
- Is grease applied sufficiently to the lever joints of the latch and actuator assembly - rear?
- Is the cable of the latch and actuator assembly - rear free from deformation such as fray?
- Is grease applied sufficiently to the cable joints of the latch and actuator assembly - rear?

Rear Gate

EXTERIOR BODY PANELS

9. Rear Gate

A: REMOVAL

CAUTION:

The panel - rear gate is heavy. When removing and installing it, always work in a team of two or more persons.

1. REAR GATE PANEL

- 1) Disconnect the ground cable from battery. <Ref. to NT-6, BATTERY, NOTE, Note.>
- 2) Remove the trim panel - rear gate. <Ref. to EI-93, REMOVAL, Rear Gate Trim.>
- 3) Remove the garnish assembly - rear gate. <Ref. to EI-97, REMOVAL, Rear Gate Garnish.>
- 4) Remove the license plate light. <Ref. to LI-60, REMOVAL, License Plate Light.>
- 5) Remove the arm assembly - rear wiper and the motor assembly - rear wiper. <Ref. to WW-44, REMOVAL, Rear Wiper Motor.>
- 6) Remove the roof spoiler. <Ref. to EI-49, REMOVAL, Roof Spoiler.>
- 7) Remove the light assembly - high-mounted. <Ref. to LI-61, CROSSTREK MODEL, REMOVAL, High-mounted Stop Light.>
- 8) Remove the rear gate latch and actuator - rear gate. <Ref. to SL-50, REMOVAL, Rear Gate Latch and Actuator Assembly.>
- 9) Remove the clips, and remove the drip - rear gate.

- 10) Remove the nozzle - rear washer. <Ref. to WW-47, REMOVAL, Rear Washer.>

11) Remove the rubber duct (A).

(1) Pull out the claw while pushing it using a flat tip screwdriver (B) or similar tools.

(2) Remove the rubber duct (A) connection.

EB-00755

12) Pull out the harness and the hose assembly - rear washer from the panel - rear gate.

13) Remove harness clip of each harness from the panel - rear gate.

14) Before removing the stay assembly - rear gate, prevent the panel - rear gate from closing by using a prop or the like.

CAUTION:

If the prop comes off, operators may get injured and vehicle may get damaged. Make sure to support the panel - rear gate with secure material to prevent injury or damage.

EB-00389

Rear Gate

EXTERIOR BODY PANELS

15) Remove the mounting bolts from the stay assembly - rear gate.

16) Remove the bolts of the hinge - rear gate, and remove the panel - rear gate.

CAUTION:

The panel - rear gate is heavy. When removing and installing it, always work in a team of two or more persons.

17) Remove the hinge - rear gate from the vehicle.

2. REAR GATE DAMPER STAY

CAUTION:

- Do not damage piston rods and oil seals.
- Never disassemble cylinders: They contain gas.
- The panel - rear gate is heavy. When removing and installing it, always work in a team of two or more persons.

1) Before removing the stay assembly - rear gate, prevent the panel - rear gate from closing by using a prop or the like.

CAUTION:

If the prop comes off, operators may get injured and vehicle may get damaged. Make sure to support the panel - rear gate with secure material to prevent injury or damage.

2) Remove the mounting bolts and remove the stay assembly - rear gate.

B: INSTALLATION

1. REAR GATE PANEL

CAUTION:

The panel - rear gate is heavy. When removing and installing it, always work in a team of two or more persons.

- 1) Install the hinge - rear gate to the vehicle body.
- 2) Temporarily install the panel - rear gate to the hinge - rear gate.

NOTE:

When installing, make sure that a uniform clearance is created around the panel - rear gate.

- 3) Adjust the clearance around the panel - rear gate. <Ref. to EB-45, ADJUSTMENT, Rear Gate.>
- 4) Tighten the bolts of the hinge - rear gate.

Tightening torque:

25 N·m (2.55 kgf-m, 18.4 ft-lb)

- 5) Install each part in the reverse order of removal.

Tightening torque:

Rear gate parts: <Ref. to EB-6, REAR GATE, COMPONENT, General Description.>

Garnish assembly - rear gate: 4.5 N·m (0.46 kgf-m, 3.3 ft-lb)

Arm assembly - rear wiper and motor assembly - rear wiper: <Ref. to WW-4, REAR WIPER, COMPONENT, General Description.>

Roof spoiler: 7.5 N·m (0.8 kgf-m, 5.5 ft-lb)

2. REAR GATE DAMPER STAY

CAUTION:

The panel - rear gate is heavy. When removing and installing it, always work in a team of two or more persons.

- 1) Prevent the panel - rear gate from closing using prop or the like.

CAUTION:

If the prop comes off, operators may get injured and vehicle may get damaged. Make sure to support the panel - rear gate with secure material to prevent injury or damage.

- 2) Install each part in the reverse order of removal.

Tightening torque:

Refer to "COMPONENT" of "General Description". <Ref. to EB-6, REAR GATE, COMPONENT, General Description.>

C: ADJUSTMENT

Adjust the clearance around the panel - rear gate as follows.

EB-10070

Part		Standard
A	Panel - rear gate to Roof panel	6.0+1.0, -0.5 mm (0.24+0.04, -0.02 in)
B	Surface level gap: Panel - rear gate to Roof panel	1.0±1.0 mm (0.04±0.04 in)
C	Panel - rear gate to Light assembly - rear combination	6.0±1.0 mm (0.24±0.04 in)
D	Surface level gap: Panel - rear gate to Light assembly - rear combination	1.0±1.0 mm (0.04±0.04 in)
E	Panel - rear gate to Bumper face - rear	8.0±1.5 mm (0.31±0.06 in)

1) Adjust the vertical and horizontal positions of the panel - rear gate.

EB-00708

- (1) Loosen the mounting bolts of the hinge - rear gate.
- (2) Adjust the vertical and horizontal clearance of the panel - rear gate.

Tightening torque:
25 N·m (2.55 kgf·m, 18.4 ft·lb)

Rear Gate

EXTERIOR BODY PANELS

2) Adjust the surface level gap between the panel - rear gate and the body.

- (1) Remove the trim panel - rear skirt.
- (2) Loosen the bolt.
- (3) Tap the striker - rear gate using a plastic hammer to adjust the surface level gap between the panel - rear gate and the body.

Tightening torque:

25 N·m (2.55 kgf·m, 18.4 ft·lb)

D: DISPOSAL

1. REAR GATE DAMPER STAY

CAUTION:

Gas is colorless, odorless, and harmless. However, gas pressure may spray cutting powder or oil. Be sure to wear dust-resistant goggles.

1) Cover with a vinyl sack as shown in the figure.

- (1) Stay ASSY - rear gate
- (2) Vinyl sack

NOTE:

Prevent the vinyl sack from being caught by drill cutting edge.

Rear Gate

2) Lift the body side slightly with piston rods fully extended, and secure the body side with vise. Drill a hole of 2 to 3 mm (0.08 to 0.12 in) diameter at a point 6 to 196 mm (0.24 to 7.72 in) from the body side, and bleed the gas in the stay assembly - rear gate completely.

- (1) Door side
- (2) Body side
- (3) 196 mm (7.72 in)
- (4) 6 mm (0.24 in)
- (5) Piston rod
- (6) Cylinder
- (7) Portion to be drilled

Protector Tape

EXTERIOR BODY PANELS

10.Protector Tape

A: INSTALLATION

Apply the protector tape by the following steps.

1. REAR QUARTER PROTECTOR (MODELS WITHOUT SIDE GARNISH)

- (1) Apply the protector tape by aligning it to the rounded edge.

- 1) Clean the area around applying position to remove any foreign objects on body.
- 2) Detach the backing paper from the temporary retention area (a) and apply the protector tape after positioning it correctly.
- 3) Detach the backing papers, and moisten the applying area and the backside of protector tape by spraying liquid (mild detergent solution at 3% concentration).
- 4) Apply the protector tape to the vehicle body.

CAUTION:

Remove the water or air bubbles out of the protector tape by using the plastic or rubber spatula.

- 5) Detach the application tape and temporary retention tape.
- 6) Bend the tack-in end and apply it as shown by (1) in the figure.

General Description

CRUISE CONTROL SYSTEM

1. General Description

A: LOCATION

Refer to "LOCATION" of "CRUISE CONTROL SYSTEM (DIAGNOSTICS)" section. <Ref. to CC(diag)-6, LOCATION, Electrical Component Location.>

B: CAUTION

- Before disassembling or reassembling parts, always disconnect the battery ground cable from battery. When replacing the audio, control module and other parts provided with memory functions, record the memory contents before disconnecting the battery ground cable. Otherwise, the memory is cleared.
- Reassemble the parts in the reverse order of disassembly procedure unless otherwise indicated.
- Adjust parts to the given specifications.
- Connect the connectors securely during reassembly.
- After reassembly, make sure that the each component operates normally.
- Yellow connectors and harnesses with yellow tapes around them are the connectors and harnesses for the airbag system. Using a tester above such circuits may cause malfunction of airbag system. Follow the cautions of "AIRBAG SYSTEM" in this case. <Ref. to AB-9, CAUTION, General Description.>
- Be careful not to damage the airbag system wiring harness when servicing electrical parts and switches.
- When removing, installing or replacing the VDCCM&H/U, VDCCM&H/U bracket, steering wheel or steering angle sensor (steering roll connector), perform the VDC setting mode. <Ref. to VDC-23, ADJUSTMENT, VDC Control Module and Hydraulic Control Unit (VDCCM&H/U).>

C: PREPARATION TOOL

TOOL NAME	REMARKS
Circuit tester	Used for measuring resistance, voltage and current.

2. Relay and Fuse

A: LOCATION

CC-01047

Relay & fuse box	Fuse 10 A (stop light & brake switch)	(A)
------------------	---------------------------------------	-----

NOTE:

For other related fuses, refer to the wiring diagram. <Ref. to WI-15, Power Supply Circuit.>

B: INSPECTION

1. CHECK FUSE

- 1) Remove the fuse and inspect visually.
- 2) If the fuse is blown out, replace the fuse.

NOTE:

If the fuse is blown again, check the system wiring harness.

Cruise Control System

CRUISE CONTROL SYSTEM

3. Cruise Control System

A: WIRING DIAGRAM

Refer to “Cruise Control System” in the wiring diagram. <Ref. to WI-89, WIRING DIAGRAM, Cruise Control System.>

B: INSPECTION

Refer to “Basic Diagnostic Procedure” of “CRUISE CONTROL SYSTEM (DIAGNOSTICS)”. <Ref. to CC(diag)-2, Basic Diagnostic Procedure.>

C: NOTE

For operation procedures of each component of the cruise control system, refer to the respective section.

- Control module: <Ref. to CC-5, Control Unit.>

NOTE:

System control of the cruise control is performed by each module. For procedure, refer to the following sections.

- Engine control module (ECM): <Ref. to FU(H4DO)-98, Engine Control Module (ECM).>
- Transmission control module (TCM): <Ref. to CVT(TR580)-148, Transmission Control Module (TCM).>
- Cruise control command switch: <Ref. to CC-6, Cruise Control Command Switch.>
- Combination meter: <Ref. to IDI-18, Combination Meter.>
- Stop light and brake switch: <Ref. to BR-72, Stop Light Switch.>
- Clutch switch: <Ref. to CL-30, Clutch Switch.>
- Inhibitor switch: <Ref. to CVT(TR580)-97, Inhibitor Switch.>
- Neutral position switch: <Ref. to 5MT-35, Switches and Harness.>

4. Control Unit

A: NOTE

System control of the cruise control is performed by each module. For procedure, refer to the following sections.

- Engine control module (ECM): <Ref. to FU(H4DO)-98, Engine Control Module (ECM).>
- Transmission control module (TCM): <Ref. to CVT(TR580)-148, Transmission Control Module (TCM).>

Cruise Control Command Switch

CRUISE CONTROL SYSTEM

5. Cruise Control Command Switch

A: REMOVAL

CAUTION:

Before handling the airbag system components, refer to “CAUTION” of “General Description” in “AIRBAG SYSTEM”. <Ref. to AB-9, CAUTION, General Description.>

- 1) Set the tire to the straight-ahead position.
- 2) Disconnect the ground cable from battery and wait for at least 60 seconds before starting work. <Ref. to NT-6, BATTERY, NOTE, Note.>
- 3) Remove the driver’s airbag module. <Ref. to AB-32, REMOVAL, Driver’s Airbag Module.>
- 4) Remove the steering wheel. <Ref. to PS-8, REMOVAL, Steering Wheel.>
- 5) Remove the cruise control command switch assembly. <Ref. to PS-9, DISASSEMBLY, Steering Wheel.>

B: INSTALLATION

CAUTION:

- Before handling the airbag system components, refer to “CAUTION” of “General Description” in “AIRBAG SYSTEM”. <Ref. to AB-9, CAUTION, General Description.>
- Do not allow harness and connectors to interfere or get tangled up with other parts.
- If the steering wheel has been removed, make sure that the steering roll connector is not turned from the original position.
- If the steering wheel and steering angle sensor (steering roll connector) are removed, perform the VDC setting mode. <Ref. to VDC-23, ADJUSTMENT, VDC Control Module and Hydraulic Control Unit (VDCCM&H/U).>
- Securely install the switch. Improper insertion of the pin or claw of the switch may cause improper installation.

- 1) Align the center position of the steering roll connector. <Ref. to AB-62, ADJUSTMENT, Roll Connector.>
- 2) Install each part in the reverse order of removal.

NOTE:

Align the alignment marks on the steering wheel and the column assembly - steering.

Tightening torque:

Steering wheel: 39 N·m (3.98 kgf·m, 28.8 ft·lb)

Clearance:

Between cover assembly - column and steering wheel: 4 — 6 mm (0.16 — 0.24 in)

C: INSPECTION

1) Measure the resistance between connector terminals.

Preparation tool:
Circuit tester

Terminal No.	Inspection conditions		Standard
3 — 9	CANCEL SET/- RES/+	All OFF	Approx. 4,020 Ω
	CANCEL	ON	Less than 1 Ω
	SET/-	ON	Approx. 250 Ω
	RES/+	ON	Approx. 1,470 Ω
4 — 9	CRUISE (MAIN)	OFF	1 MΩ or more
		ON	Less than 1 Ω

2) Apply battery voltage between the connector terminals to check lighting condition of illumination inside the switch.

Terminal No.	Inspection conditions	Specification
10 (+) — 11 (-)	Apply battery voltage.	Light ON

3) Replace the cruise control command switch assembly if it is found defective.

6. Combination Meter

A: NOTE

For the operation procedures for combination meter, refer to “INSTRUMENTATION/DRIVER INFO” section.
<Ref. to IDI-18, Combination Meter.>

7. Stop Light & Brake Switch

A: NOTE

For the operation procedures for stop light and brake switch, refer to “BRAKE” section. <Ref. to BR-72, Stop Light Switch.>

8. Clutch Switch

A: NOTE

For the operation procedures for clutch switch, refer to “CLUTCH SYSTEM” section. <Ref. to CL-30, Clutch Switch.>

9. Inhibitor Switch

A: NOTE

For the operation procedures for inhibitor switch, refer to “CONTINUOUSLY VARIABLE TRANSMISSION” section. <Ref. to CVT(TR580)-97, Inhibitor Switch.>

Transmission Control Module (TCM)

CRUISE CONTROL SYSTEM

10. Transmission Control Module (TCM)

A: NOTE

For the operation procedures for transmission control module (TCM), refer to “CONTINUOUSLY VARIABLE TRANSMISSION” section. <Ref. to CVT(TR580)-148, Transmission Control Module (TCM).>

11. Neutral Position Switch

A: NOTE

For the operation procedures for neutral position switch, refer to “MANUAL TRANSMISSION AND DIFFERENTIAL” section. <Ref. to 5MT-35, Switches and Harness.>

12. Diagnostics with Phenomenon

A: INSPECTION

Refer to “Diagnostics with Phenomenon” of “CRUISE CONTROL SYSTEM (DIAGNOSTICS)” section. <Ref. to CC(diag)-11, Diagnostics with Phenomenon.>

CRUISE CONTROL SYSTEM (DIAGNOSTICS)

8. Diagnostics with Phenomenon	11
9. List of Cancel Code	13
10. Diagnostic Procedure with Cancel Code	15

Basic Diagnostic Procedure

CRUISE CONTROL SYSTEM (DIAGNOSTICS)

1. Basic Diagnostic Procedure

A: PROCEDURE

CAUTION:

- Before performing all diagnostics or cruise control diagnostics, always start the engine and make sure that the initial illumination of the ABS/VDC warning light has been ended. (If you start the diagnostics before performing the above procedures, the cancel code “43” is recorded and CRUISE indicator does not illuminate even though the CRUISE switch is pressed.)
- When performing diagnosis, observe the legal speed limit on the road.
- The cancel code will be also appear when cruise control is cancelled by the driver’s operation. Do not confuse them.
- Be sure to get an assistant to support the diagnosis while driving, and have him/her operate the select monitor.

Step	Check	Yes	No	
1	CHECK MALFUNCTION INDICATOR LIGHT. Make sure the malfunction indicator light illuminates.	Does the malfunction indicator light illuminate?	Go to step 5.	Go to step 2.
2	CHECK CRUISE INDICATOR LIGHT. Make sure the cruise indicator light blinks.	Does the cruise indicator light blink?	Go to step 7.	Go to step 3.
3	CHECK CRUISE SWITCH OPERATION. Check the CRUISE switch operation. (Check the illumination of the CRUISE indicator.)	Is the CRUISE switch turned on? (Does the CRUISE indicator illuminate?)	Go to step 4.	Go to phenomenon 1. <Ref. to CC(diag)-11, DIAGNOSTIC PROCEDURE WITH PHENOMENON, Diagnostics with Phenomenon.>
4	CHECK CRUISE CONTROL SET OPERATION. Check the cruise control setting operation.	Can the cruise control be set while driving at 40 km/h (25 MPH) or more?	Go to step 8.	Go to step 7.
5	CHECK DTC. Read all DTCs using the Subaru Select Monitor.	Is an engine or ABS/VDC related DTC displayed?	Record the DTC. Go to step 6.	Go to phenomenon 2. <Ref. to CC(diag)-11, DIAGNOSTIC PROCEDURE WITH PHENOMENON, Diagnostics with Phenomenon.>
6	CHECK FREEZE FRAME DATA. Using the Subaru Select Monitor, check the Freeze Frame Data or Information in Trouble State.	Was the Freeze Frame Data or Information in Trouble State recorded?	Record the data. Perform the diagnosis according to the engine or ABS/VDC related DTC.	Perform the diagnosis according to the engine or ABS/VDC related DTC.
7	CHECK CANCEL CODE. Using the Subaru Select Monitor, read the cancel codes. NOTE: • Do not turn the ignition switch to OFF after the cruise control is deactivated. • Do not operate the cruise control command switch after the cruise control is deactivated. If the above is performed, the cancel code will be cleared.	Is it possible to read the cancel codes?	Perform the diagnosis according to the cancel code. <Ref. to CC(diag)-13, LIST, List of Cancel Code.>	Go to step 8.

Basic Diagnostic Procedure

CRUISE CONTROL SYSTEM (DIAGNOSTICS)

Step	Check	Yes	No
8	CHECK SET INDICATOR. Check the illumination of the SET indicator.	Go to step 9.	Go to phenomenon 3. <Ref. to CC(diag)-11, DIAGNOSTIC PROCEDURE WITH PHENOMENON, Diagnostics with Phenomenon.>
9	CHECK VEHICLE SPEED IS HELD WITHIN SET SPEED. Make sure the vehicle speed is held within set speed.	Go to step 10.	Go to phenomenon 4. <Ref. to CC(diag)-11, DIAGNOSTIC PROCEDURE WITH PHENOMENON, Diagnostics with Phenomenon.>
10	CHECK RES/+ OPERATION. Check the RES/+ switch operation.	Go to step 11.	Go to phenomenon 5. <Ref. to CC(diag)-11, DIAGNOSTIC PROCEDURE WITH PHENOMENON, Diagnostics with Phenomenon.>
11	CHECK SET/- OPERATION. Check the SET/- switch operation.	Go to step 12.	Go to phenomenon 6. <Ref. to CC(diag)-11, DIAGNOSTIC PROCEDURE WITH PHENOMENON, Diagnostics with Phenomenon.>
12	CANCEL OPERATION CHECK. Check the CANCEL switch operation.	Go to step 13.	Go to phenomenon 7. <Ref. to CC(diag)-11, DIAGNOSTIC PROCEDURE WITH PHENOMENON, Diagnostics with Phenomenon.>
13	CHECK CRUISE CONTROL RELEASE OPERATION. Check the cruise control release operation.	Go to step 14.	Go to phenomenon 8. <Ref. to CC(diag)-11, DIAGNOSTIC PROCEDURE WITH PHENOMENON, Diagnostics with Phenomenon.>

Basic Diagnostic Procedure

CRUISE CONTROL SYSTEM (DIAGNOSTICS)

Step	Check	Yes	No
14 CHECK CRUISE CONTROL RELEASE OPERATION. Check the cruise control release operation.	Is the cruise control released after shifting to the neutral position?	Go to step 15.	Go to phenomenon 9. <Ref. to CC(diag)-11, DIAGNOSTIC PROCEDURE WITH PHENOMENON, Diagnostics with Phenomenon.>
15 CHECK CRUISE CONTROL RELEASE OPERATION. Check the cruise control release operation.	Is the cruise control released after depressing the clutch pedal?	Finish the diagnosis.	Go to phenomenon 10. <Ref. to CC(diag)-11, DIAGNOSTIC PROCEDURE WITH PHENOMENON, Diagnostics with Phenomenon.>

General Description

CRUISE CONTROL SYSTEM (DIAGNOSTICS)

2. General Description

A: CAUTION

Airbag system wiring harness is routed near the cruise control command switch.

CAUTION:

- Do not use the electrical test equipment on the airbag system wiring harnesses and connector circuits.
- Be careful not to damage the airbag system wiring harness when servicing the cruise control command switch. Airbag system wiring harness is routed near the cruise control command switch.

B: PREPARATION TOOL

1. SPECIAL TOOL

ILLUSTRATION	TOOL NUMBER	DESCRIPTION	REMARKS
 STSSM4	—	SUBARU SELECT MONITOR 4	Used for setting of each function and troubleshooting for electrical system. NOTE: For detailed operation procedures of Subaru Select Monitor 4, refer to "Application help".

2. GENERAL TOOL

TOOL NAME	REMARKS
Circuit tester	Used for measuring resistance, voltage and current.
DST-i	Used together with Subaru Select Monitor 4.

C: INSPECTION

Check the battery. <Ref. to SC(H4DO)-52, INSPECTION, Battery.>

Electrical Component Location

CRUISE CONTROL SYSTEM (DIAGNOSTICS)

3. Electrical Component Location

Engine Control Module (ECM) I/O Signal

CRUISE CONTROL SYSTEM (DIAGNOSTICS)

4. Engine Control Module (ECM) I/O Signal

A: ELECTRICAL SPECIFICATION

For details on the input/output signals for the engine control module, refer to ENGINE (DIAGNOSTICS). <Ref. to EN(H4DO)(diag)-20, ELECTRICAL SPECIFICATION, Engine Control Module (ECM) I/O Signal.>

B: WIRING DIAGRAM

Refer to "Cruise Control System" in the wiring diagram. <Ref. to WI-89, WIRING DIAGRAM, Cruise Control System.>

Subaru Select Monitor

CRUISE CONTROL SYSTEM (DIAGNOSTICS)

5. Subaru Select Monitor

A: OPERATION

1. GENERAL DESCRIPTION

The on-board diagnosis function of the cruise control system uses Subaru Select Monitor.

The on-board diagnosis function operates in two categories, which are used depending on the type of problems;

1) Cruise Control Cancel Conditions Diagnosis:

(1) This category of diagnosis requires actual vehicle driving in order to determine the cause, as when cruise speed is cancelled during driving although cruise cancel condition is not entered.

(2) Cruise control memory in ECM stores the cancel code which occurred during driving. When there are multiple cancel code, they are shown on the Subaru Select Monitor.

CAUTION:

• **The cruise control memory stores not only the cruise “cancel” which occurred (although “cancel” operation is not entered by the driver), but also the “cancel” condition input by the driver.**

• **The content of the latest memory (the latest code) is cleared when the ignition switch is turned to OFF. However, memory contents set by the diagnosis of faulty switches related to the system and cruise control will remain as trouble history (memory code) after the ignition switch is turned to OFF.**

2) Real-time Diagnosis:

Real-time diagnosis function is used to determine whether or not the input signal system is in good order, according to signal emitted from switches, sensors, etc.

(1) Vehicle cannot be driven at cruise speed when the problem occurs in the cruise control system or relevant circuits.

(2) Monitor the signal conditions from switches and sensors.

2. BASIC OPERATION

For detailed operation procedures, refer to “Application help”.

6. Read Cancel Code

A: OPERATION

- 1) On «Start» display, select «Diagnosis».
- 2) On «Vehicle selection» display, input the target vehicle information and select «Confirmed».
- 3) On «Main Menu» display, select «Each System».
- 4) On «Select System» display, select «Engine Control System».
- 5) Drive vehicle at 40 km/h (25 MPH) or more and set the cruise control.

CAUTION:

- **When performing diagnosis, observe the legal speed limit on the road.**
- **The cancel code will also appear when the cruise control is cancelled by the driver's operation. Do not confuse them.**
- **Be sure to get an assistant to support the diagnosis while driving, and have him/her operate the select monitor.**

6) When the set speed is cancelled by itself (when cancelled without a cancel operation such as applying the brake) or if the cruise control could not be set by performing the setting operation, selecting the «Cancel Code» on the engine malfunction diagnosis screen will display the cancel code on the select monitor display.

NOTE:

The «Current» and «The past» are contained in the cancel code. The latest code recognized during current test drive is displayed in «Current». Cancel codes resulting from fault diagnosis of switches relating to the system and cruise control are also displayed in «The past».

7) Perform Engine DTC Clear Memory operation. <Ref. to EN(H4DO)(diag)-66, OPERATION, Clear Memory Mode.>

Cancel codes for switches relating to the system and cruise control are deleted by clearing memory on the engine side.

NOTE:

- The latest code will be cleared by turning ignition switch to OFF.
- For detailed operation procedures, refer to “Application help”.
- For details on cancel codes, refer to List of Cancel Code. <Ref. to CC(diag)-13, List of Cancel Code.>

Real-time Diagnosis

CRUISE CONTROL SYSTEM (DIAGNOSTICS)

7. Real-time Diagnosis

A: OPERATION

- 1) On «Start» display, select «Diagnosis».
- 2) On «Vehicle selection» display, input the target vehicle information and select «Confirmed».
- 3) On «Main Menu» display, select «Each System».
- 4) On «Select System» display, select «Engine Control System» and then «Enter».
- 5) On «Select Function» display, select «Data Monitor».
- 6) Make sure that normal display is shown when operated as follows:
 - Depress and release the brake pedal. (Stop light switch and brake switch are turned ON.)
 - Turn the “CRUISE” switch to ON.
 - Turn the “CANCEL” switch to ON.
 - Turn the “SET/–” switch to ON.
 - Turn the “RES/+” switch to ON.
 - Depress or release the clutch switch.
 - Place the shift lever in any position other than neutral.

NOTE:

For detailed operation procedures, refer to “Application help”.

Diagnostics with Phenomenon

CRUISE CONTROL SYSTEM (DIAGNOSTICS)

8. Diagnostics with Phenomenon

A: DIAGNOSTIC PROCEDURE WITH PHENOMENON

Phenomenon		Check item	Reference
1	CRUISE switch is not turned ON. (CRUISE indicator does not illuminate.) Or the cruise control is cancelled without CRUISE switch operation.	(1) Perform cruise cancel conditions diagnosis.	Perform the diagnosis according to displayed cancel code.
		(2) Perform the real-time diagnosis.	Check the input signal of cruise control system.
		(3) Check the cruise control command switch.	<Ref. to CC(diag)-15, 11, Diagnostic Procedure with Cancel Code.>
		(4) Check the CRUISE indicator.	<Ref. to CC(diag)-12, CHECK CRUISE INDICATOR LIGHT AND CRUISE SET INDICATOR LIGHT, Diagnostics with Phenomenon.>
2	Cruise control cannot be set. Or the cruise control is cancelled without canceling operation.	(1) Perform cruise cancel conditions diagnosis.	Perform the diagnosis according to displayed cancel code.
		(2) Perform the real-time diagnosis.	Check the input signal of cruise control system.
		(3) Check the cruise control command switch.	<Ref. to CC(diag)-15, 11, Diagnostic Procedure with Cancel Code.>
		(4) Check stop light switch and brake switch.	<Ref. to BR-72, Stop Light Switch.> <Ref. to CC(diag)-17, 12, Diagnostic Procedure with Cancel Code.>
		(5) Check clutch switch.	<Ref. to CL-30, Clutch Switch.> <Ref. to CC(diag)-19, 13, Diagnostic Procedure with Cancel Code.>
		(6) Check the neutral position switch.	<Ref. to CC(diag)-20, 14, Diagnostic Procedure with Cancel Code.> <Ref. to CC(diag)-24, 62, Diagnostic Procedure with Cancel Code.>
		(7) Check vehicle speed sensor.	<Ref. to CC(diag)-23, 22, Diagnostic Procedure with Cancel Code.>
3	SET indicator does not illuminate.	Check the SET indicator.	<Ref. to CC(diag)-12, CHECK CRUISE INDICATOR LIGHT AND CRUISE SET INDICATOR LIGHT, Diagnostics with Phenomenon.>
4	Vehicle speed is not held within set speed ± 3 km/h (± 2 MPH).	Check the vehicle speed sensor.	<Ref. to CC(diag)-23, 22, Diagnostic Procedure with Cancel Code.>
5	Vehicle speed does not increase or does not return to set speed after RES/+ switch has been pressed.	(1) Perform the real-time diagnosis.	Check the input signal of cruise control system.
		(2) Check the RES/+ switch.	<Ref. to CC(diag)-15, 11, Diagnostic Procedure with Cancel Code.>
6	Vehicle speed does not decrease after SET/- switch has been pressed.	(1) Perform the real-time diagnosis.	Check the input signal of cruise control system.
		(2) Check the SET/- switch.	<Ref. to CC(diag)-15, 11, Diagnostic Procedure with Cancel Code.>
7	Cruise control is not released after CANCEL switch has been pressed.	(1) Perform the real-time diagnosis.	Check the input signal of cruise control system.
		(2) Check the CANCEL switch.	<Ref. to CC(diag)-15, 11, Diagnostic Procedure with Cancel Code.>
8	Cruise control is not released after brake pedal has been depressed.	(1) Perform the real-time diagnosis.	Check the input signal of cruise control system.
		(2) Check stop light switch and brake switch.	<Ref. to CC(diag)-17, 12, Diagnostic Procedure with Cancel Code.> <Ref. to BR-73, INSTALLATION, Stop Light Switch.>

Diagnostics with Phenomenon

CRUISE CONTROL SYSTEM (DIAGNOSTICS)

Phenomenon		Check item	Reference
9	Cruise control is not released after shifting to the neutral position.	(1) Perform the real-time diagnosis.	Check the input signal of cruise control system.
		(2) Check the neutral position switch.	<Ref. to CC(diag)-20, 14, Diagnostic Procedure with Cancel Code.> <Ref. to CC-13, Neutral Position Switch.>
10	Cruise control is not released after clutch pedal has been depressed.	(1) Perform the real-time diagnosis.	Check the input signal of cruise control system.
		(2) Check clutch switch.	<Ref. to CC(diag)-19, 13, Diagnostic Procedure with Cancel Code.> <Ref. to CL-30, CLUTCH SWITCH, INSTALLATION, Clutch Switch.>

B: CHECK CRUISE INDICATOR LIGHT AND CRUISE SET INDICATOR LIGHT

TROUBLE SYMPTOM:

Cruise control can be set, but the CRUISE indicator and SET indicator do not illuminate.

	Step	Check	Yes	No
1	CHECK CRUISE INDICATOR LIGHT AND CRUISE SET INDICATOR LIGHT. Check the combination meter. <Ref. to IDI-7, OPERATION, Combination Meter System.>	Do the CRUISE & SET indicators illuminate?	Go to step 2.	Replace the meter case assembly. <Ref. to IDI-18, Combination Meter.>
2	CHECK LAN SYSTEM. Perform the diagnosis for LAN system. <Ref. to LAN(diag)-2, Basic Diagnostic Procedure.>	Is a DTC of the LAN system detected?	Perform the diagnosis according to DTC for LAN system.	Replace the ECM. <Ref. to FU(H4DO)-98, Engine Control Module (ECM).>

List of Cancel Code

CRUISE CONTROL SYSTEM (DIAGNOSTICS)

9. List of Cancel Code

A: LIST

NOTE:

- The cancel code is registered even when cancel is performed intentionally by the driver.
- Cancel codes are cleared if the ignition switch is turned to OFF.
- If a different cancel code is input after a cancel code (latest code) has been input, the latest code is overwritten.
- If the cruise indicator light is flashing, a malfunction is occurring in the system or cruise control related switch. The cancel code at this time is saved even after ignition switch is OFF as a memory code of a past malfunction.
- To display a cancel code, use the Subaru Select Monitor to read the code after the cruise control is deactivated during a driving test.

Cancel code	Item	Contents of diagnosis	Note
11	Main switch	CRUISE switch of cruise control command switch is turned to OFF, and then the cruise control is released.	This code is displayed without operating the CRUISE switch. <Ref. to CC(diag)-15, 11, Diagnostic Procedure with Cancel Code.>
12	Stop & brake switch	Stop light switch or brake switch is turned to ON, and then the cruise control is released.	This code is displayed without depressing the brake pedal. <Ref. to CC(diag)-17, 12, Diagnostic Procedure with Cancel Code.>
13	Clutch switch	Clutch switch is turned to ON, and then the cruise control is released.	This code is displayed without depressing the clutch pedal. <Ref. to CC(diag)-19, 13, Diagnostic Procedure with Cancel Code.>
14	Neutral switch	Neutral position switch is turned to ON, and then the cruise control is released.	This code is displayed without shifting to neutral position. <Ref. to CC(diag)-20, 14, Diagnostic Procedure with Cancel Code.>
15	Cancel switch	Cancel switch is turned to ON, and then the cruise control is released.	This code is displayed without operating the cancel switch. <Ref. to CC(diag)-21, 15, Diagnostic Procedure with Cancel Code.>
16	Ignition switch	Ignition switch is turned to OFF, and then the cruise control is released.	This code is displayed without operating the ignition switch. <Ref. to CC(diag)-22, 16, Diagnostic Procedure with Cancel Code.>
21	Cruise control switch malfunction when the ignition switch is ON	When the ignition switch is turned to ON, each switch of cruise control command switch is already turned to ON.	This code is displayed when the ignition switch is turned to ON without operating the cruise control command switch. <Ref. to CC(diag)-22, 21, Diagnostic Procedure with Cancel Code.>
22	Abnormality of change in vehicle speed	Malfunction of vehicle speed signal variation is detected.	<Ref. to CC(diag)-23, 22, Diagnostic Procedure with Cancel Code.>
24	Abnormality of switches related to cruise control	Open circuit of the cruise control switch is detected during cruise driving. (The system is judged as model without cruise control.)	This code is displayed with normal operation. <Ref. to CC(diag)-23, 24, Diagnostic Procedure with Cancel Code.>
31	Abnormal engine speed Signal	<ul style="list-style-type: none"> • Abnormal increase of engine speed is detected. • Gear is placed in Neutral, 1st (MT model only) or Reverse position. 	Cruise in 2nd shift position or more. <Ref. to CC(diag)-23, 31, Diagnostic Procedure with Cancel Code.>
32	Cruse Control out of Range	<ul style="list-style-type: none"> • Controlled vehicle speed decreased under the limit during cruising. • Set operation was performed at vehicle speed unavailable for setting. • RESUME operation was performed without memorized vehicle speed. 	This code is displayed, though the vehicle speed is increased to the speed available for cruise set and set operation was performed again. <Ref. to CC(diag)-23, 32, Diagnostic Procedure with Cancel Code.>

List of Cancel Code

CRUISE CONTROL SYSTEM (DIAGNOSTICS)

Cancel code	Item	Contents of diagnosis	Note
34	Prohibition of cruise control at continuing big Accel. angle	The vehicle has been driven at higher speed than set vehicle speed for an abnormally long time (approximately 10 minutes) during cruise driving.	This code is displayed when driving for a long period of time at higher speed than appropriate cruise set vehicle speed by operating accelerator pedal. In this case, the cruise setting is deactivated. <Ref. to CC(diag)-23, 34, Diagnostic Procedure with Cancel Code.>
35	Prohibition of cruise control at vehicle speed F/B malfunction	Set vehicle speed cannot be kept because of some reasons (steep uphill, parking brake, abnormal decrease of engine output, etc.) during cruise driving.	This code is displayed when driving condition is not suitable for cruise control. Perform cruise set operation again after clearing the possible cause. <Ref. to CC(diag)-23, 35, Diagnostic Procedure with Cancel Code.>
41	VDC/TCS/EPB Operating	Vehicle dynamics control (VDC), TCS or EPB is operated during cruise driving or cruise setting.	This code is displayed when driving condition is not suitable for cruise control. Perform cruise set operation again after clearing the possible cause. <Ref. to CC(diag)-24, 41, Diagnostic Procedure with Cancel Code.>
43	ABS/VDC Failure	<ul style="list-style-type: none"> • During cruise driving or cruise setting, the situation that some or all functions for ABS or VDC can not work is detected. • CRUISE indicator does not illuminate even though you pressed the CRUISE switch before starting the engine. 	<Ref. to CC(diag)-24, 43, Diagnostic Procedure with Cancel Code.>
44	Body Integrated unit Failure	Body integrated unit system malfunction is detected during cruise driving or cruise setting.	<Ref. to CC(diag)-24, 44, Diagnostic Procedure with Cancel Code.>
45	Meter Failure	Combination meter malfunction is detected during cruise driving or cruise setting.	<Ref. to CC(diag)-24, 45, Diagnostic Procedure with Cancel Code.>
49	TCM Failure	Transmission control module (TCM) malfunction is detected during cruise driving or cruise setting.	<Ref. to CC(diag)-24, 49, Diagnostic Procedure with Cancel Code.>
61	Brake switch abnormal	Malfunction in the stop light & brake switch is detected.	<Ref. to CC(diag)-24, 61, Diagnostic Procedure with Cancel Code.>
62	Neutral switch abnormal	Neutral position switch malfunction is detected.	<Ref. to CC(diag)-24, 62, Diagnostic Procedure with Cancel Code.>
63	Abnormality 1 of change in vehicle speed	Malfunction of vehicle speed signal variation is detected.	<Ref. to CC(diag)-24, 63, Diagnostic Procedure with Cancel Code.>
64	Engine Sensor Failure 1	Malfunction related to engine is detected.	<Ref. to CC(diag)-25, 64, Diagnostic Procedure with Cancel Code.>
65	Abnormality of switches related to cruise control 1	Cruise control command switch malfunction is detected. (When the switch is pressed ON for a long time (approximately two minutes), stuck ON condition is detected.)	<Ref. to CC(diag)-25, 65, Diagnostic Procedure with Cancel Code.>
66	Cruise Control Calculation Error	Cruise control calculation (microcomputer) malfunction is detected.	<Ref. to CC(diag)-25, 66, Diagnostic Procedure with Cancel Code.>

Diagnostic Procedure with Cancel Code

CRUISE CONTROL SYSTEM (DIAGNOSTICS)

10. Diagnostic Procedure with Cancel Code

A: 11

When CRUISE switch is pressed, or a malfunction related to CRUISE switch occurs, this is detected.

Trouble symptom:

- Cruise control cannot be set. (Cancelled immediately.)
- Cruise control cannot be released.

Wiring diagram:

Cruise control system <Ref. to WI-89, WIRING DIAGRAM, Cruise Control System.>

CC-10053

Step	Check	Yes	No
1 CHECK CRUISE CONTROL COMMAND SWITCH CIRCUIT. 1) Remove the driver's airbag module. <Ref. to AB-32, REMOVAL, Driver's Airbag Module.> 2) Disconnect the harness connector of cruise control command switch. 3) Turn the ignition switch to ON. 4) Measure the voltage between harness connector terminal and chassis ground. Connector & terminal (ST3) No. 4 (+) — Chassis ground (-): (ST3) No. 3 (+) — Chassis ground (-):	Is the voltage 5 V or more?	Go to step 2.	Check the harness between cruise control command switch and ECM, and the steering roll connector for open or short circuit, or for poor contact.
2 CHECK CRUISE CONTROL COMMAND SWITCH CIRCUIT. 1) Turn the ignition switch to OFF. 2) Remove the cruise control command switch. <Ref. to CC-6, REMOVAL, Cruise Control Command Switch.> 3) Measure the resistance between harness connector terminal and chassis ground. Connector & terminal (ST3) No. 9 — Chassis ground:	Is the resistance less than 10 Ω ?	Go to step 3.	Check for open circuit between cruise control command switch, ECM, and chassis ground and check the ECM.
3 CHECK CRUISE CONTROL COMMAND SWITCH. Measure the resistance between switch terminals when the cruise control command switch is not depressed. Terminals No. 3 — No. 9:	Is the resistance approx. 4 k Ω ?	Go to step 4.	Replace the cruise control command switch. <Ref. to CC-6, Cruise Control Command Switch.>

Diagnostic Procedure with Cancel Code

CRUISE CONTROL SYSTEM (DIAGNOSTICS)

Step	Check	Yes	No
4 CHECK CANCEL SWITCH. 1) Turn the ignition switch to OFF. 2) Remove the cruise control command switch. <Ref. to CC-6, REMOVAL, Cruise Control Command Switch.> 3) Measure the resistance between switch terminals with the CANCEL switch pressed. <i>Terminals</i> <i>No. 3 — No. 9:</i>	Is the resistance approx. less than 1 Ω when the CANCEL switch is pressed?	Go to step 5.	Replace the cruise control command switch. <Ref. to CC-6, Cruise Control Command Switch.>
5 CHECK SET/- SWITCH. Measure the resistance between the switch terminals with the SET/- switch pressed. <i>Terminals</i> <i>No. 3 — No. 9:</i>	Is the resistance approx. 250 Ω when the SET/- switch is pressed?	Go to step 6.	Replace the cruise control command switch. <Ref. to CC-6, Cruise Control Command Switch.>
6 CHECK RES/+ SWITCH CIRCUIT. Measure the resistance between the switch terminals with the RES/+ switch pressed. <i>Terminals</i> <i>No. 3 — No. 9:</i>	Is the resistance approx. 1,500 Ω when the RES/+ switch is pressed?	Replace the ECM. <Ref. to FU(H4DO)-98, Engine Control Module (ECM).>	Replace the cruise control command switch. <Ref. to CC-6, Cruise Control Command Switch.>

Diagnostic Procedure with Cancel Code

CRUISE CONTROL SYSTEM (DIAGNOSTICS)

B: 12

Detected when brake pedal is depressed or malfunction related to stop light & brake switch occurs.

TROUBLE SYMPTOM:

- Cruise control cannot be set.
- Cruise control cannot be released.

WIRING DIAGRAM:

Cruise control system <Ref. to WI-89, WIRING DIAGRAM, Cruise Control System.>

Step	Check	Yes	No
1 CHECK STOP LIGHT & BRAKE SWITCH. Check the stop light & brake switch. <Ref. to CC-9, Stop Light & Brake Switch.>	Is the stop light & brake switch and installation position OK?	Go to step 2.	Replace the stop light & brake switch. Or adjust the installation position.
2 CHECK STOP LIGHT & BRAKE SWITCH CIRCUIT. 1) Turn the ignition switch to OFF. 2) Disconnect the stop light & brake switch harness connector. 3) Turn the ignition switch to ON. 4) Measure the voltage between harness connector terminal and chassis ground. Connector & terminal (B65) No. 3 (+) — Chassis ground (-):	Is the voltage 10 V or more?	Go to step 3.	<ul style="list-style-type: none"> • Check fuse No. 8 (in fuse & relay box). • Check for open or short in the harness between stop light & brake switch and fuse & relay box.
3 CHECK STOP LIGHT & BRAKE SWITCH CIRCUIT. Measure the voltage between harness connector terminal and chassis ground. Connector & terminal (B65) No. 1 (+) — Chassis ground (-):	Is the voltage 10 V or more?	Go to step 4.	<ul style="list-style-type: none"> • Check fuse No. 4 (in fuse & relay box). • Check for open or short in the harness between stop light & brake switch and fuse & relay box.

Diagnostic Procedure with Cancel Code

CRUISE CONTROL SYSTEM (DIAGNOSTICS)

	Step	Check	Yes	No
4	CHECK STOP LIGHT & BRAKE SWITCH CIRCUIT. 1) Turn the ignition switch to OFF. 2) Disconnect the harness connector of ECM. 3) Measure the resistance between ECM harness connector terminal and stop light & brake switch harness connector terminal. Connector & terminal (B137) No. 3 — (B65) No. 4: (B137) No. 7 — (B65) No. 2:	Is the resistance less than 10 Ω ?	Replace the ECM. <Ref. to FU(H4DO)-98, Engine Control Module (ECM).>	Repair the harness.

Diagnostic Procedure with Cancel Code

C: 13

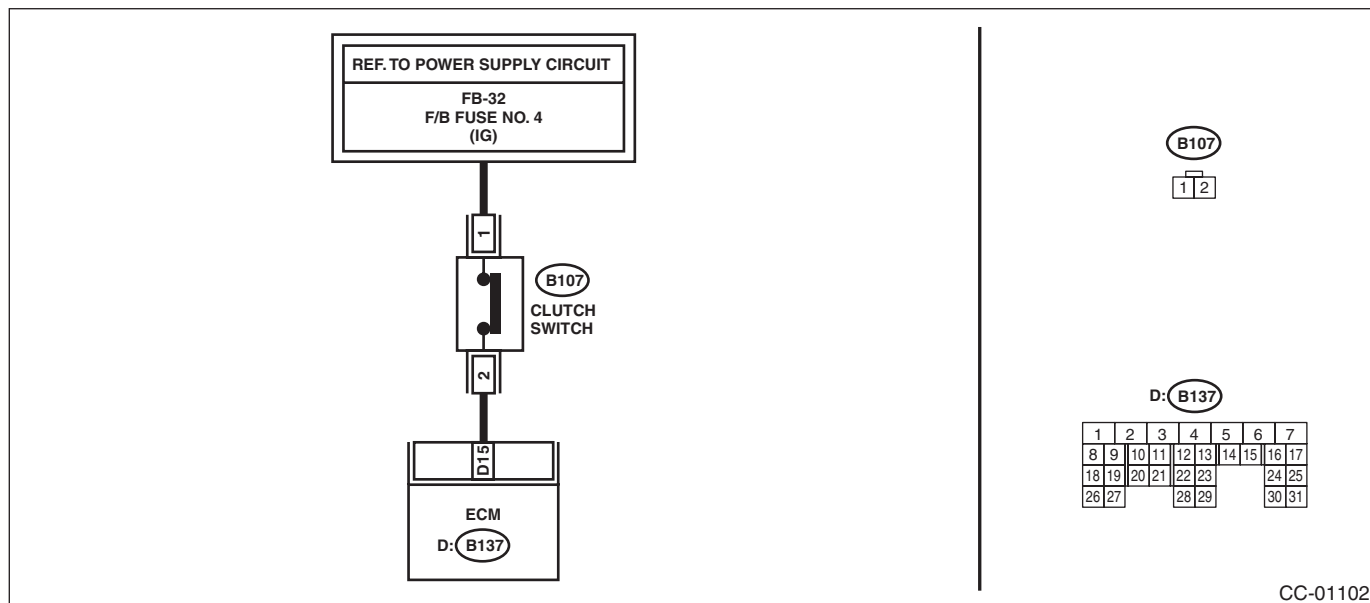

Detected when clutch pedal is depressed or malfunction related to clutch switch occurs.

TROUBLE SYMPTOM:

- Cruise control cannot be set.
- Cruise control cannot be released.

WIRING DIAGRAM:

Cruise control system <Ref. to WI-89, WIRING DIAGRAM, Cruise Control System.>

CC-01102

Step	Check	Yes	No
1	CHECK CLUTCH SWITCH. Check the clutch switch. <Ref. to CC-10, Clutch Switch.>	Go to step 2.	Replace the clutch switch. Or adjust the installation position.
2	CHECK CLUTCH SWITCH CIRCUIT. 1) Turn the ignition switch to OFF. 2) Disconnect the clutch switch harness connector. 3) Turn the ignition switch to ON. 4) Measure the voltage between harness connector terminal and chassis ground. Connector & terminal (B107) No. 1 (+) — Chassis ground (-):	Go to step 3.	<ul style="list-style-type: none"> • Check fuse No. 4 (in fuse & relay box). • Check open or shorted circuit of harness between clutch switch and fuse & relay box.
3	CHECK CLUTCH SWITCH CIRCUIT. 1) Turn the ignition switch to OFF. 2) Disconnect the harness connector of ECM. 3) Measure the resistance between clutch switch harness connector terminal and ECM harness connector terminal. Connector & terminal (B107) No. 2 — (B137) No. 15:	Replace the ECM. <Ref. to FU(H4DO)-98, Engine Control Module (ECM).>	Repair the harness.

Diagnostic Procedure with Cancel Code

CRUISE CONTROL SYSTEM (DIAGNOSTICS)

D: 14

Detected when select lever is set in the neutral position, or when malfunction related to neutral position switch occurs.

TROUBLE SYMPTOM:

Cruise control cannot be set.

WIRING DIAGRAM:

Cruise control system <Ref. to WI-89, WIRING DIAGRAM, Cruise Control System.>

CC-01103

Step	Check	Yes	No
1	CHECK TRANSMISSION TYPE. Is the transmission type CVT?	Go to step 2.	Go to step 5. (MT model)
2	CHECK INHIBITOR SWITCH CIRCUIT. 1) Turn the ignition switch to OFF. 2) Disconnect the inhibitor switch harness connector. 3) Turn the ignition switch to ON. 4) Measure the voltage between harness connector terminal and chassis ground. Connector & terminal (T7) No. 6 (+) — Chassis ground (-):	Go to step 3.	Check for open or short in the harness between inhibitor switch and ECM.
3	CHECK INHIBITOR SWITCH CIRCUIT. 1) Turn the ignition switch to OFF. 2) Disconnect the starter motor harness connector. 3) Measure the resistance between inhibitor switch harness connector terminal and starter motor. Connector & terminal (T7) No. 9 — Starter motor:	Go to step 4.	Repair the harness.
4	CHECK INHIBITOR SWITCH. Remove and check the inhibitor switch. <Ref. to CC-11, Inhibitor Switch.>	Replace the ECM. <Ref. to FU(H4DO)-98, Engine Control Module (ECM).>	Replace the inhibitor switch.

Diagnostic Procedure with Cancel Code

CRUISE CONTROL SYSTEM (DIAGNOSTICS)

Step	Check	Yes	No
5 CHECK NEUTRAL POSITION SWITCH CIRCUIT. 1) Turn the ignition switch to OFF. 2) Disconnect the neutral position switch harness connector. 3) Turn the ignition switch to ON. 4) Measure the voltage between harness connector terminal and chassis ground. Connector & terminal (B25) No. 2 (+) — Chassis ground (-):	Is the voltage 10 V or more?	Go to step 6.	Check for open or short in the harness between neutral position switch and ECM.
6 CHECK NEUTRAL POSITION SWITCH CIRCUIT. 1) Turn the ignition switch to OFF. 2) Measure resistance between harness connector terminal of neutral position switch and chassis ground. Connector & terminal (B25) No. 1 — Chassis ground:	Is the resistance less than 10 Ω ?	Go to step 7.	Repair the harness.
7 CHECK NEUTRAL POSITION SWITCH. Remove and check the neutral position switch. <Ref. to CC-13, Neutral Position Switch.>	Is the neutral position switch OK?	Replace the ECM. <Ref. to FU(H4DO)-98, Engine Control Module (ECM).>	Replace the neutral position switch.

E: 15

Detected when CANCEL switch is pressed or malfunction related to CRUISE switch occurs.

TROUBLE SYMPTOM:

- Cruise control cannot be set. (Cancelled immediately.)
- Cruise control cannot be released.

Refer to DTC 11 for diagnostic procedure.

<Ref. to CC(diag)-15, 11, Diagnostic Procedure with Cancel Code.>

Diagnostic Procedure with Cancel Code

CRUISE CONTROL SYSTEM (DIAGNOSTICS)

F: 16

Detected when ignition switch is turned to OFF or malfunction related to the ignition switch occurs.

TROUBLE SYMPTOM:

Cruise control cannot be set.

WIRING DIAGRAM:

Cruise control system <Ref. to WI-89, WIRING DIAGRAM, Cruise Control System.>

Step	Check	Yes	No
1 CHECK IGNITION SWITCH CIRCUIT. 1) Turn the ignition switch to OFF. 2) Disconnect the ECM harness connector. 3) Turn the ignition switch to ON. 4) Measure the voltage between harness connector terminal and chassis ground. Connector & terminal (B137) No. 27 (+) — Chassis ground (-):	Is the voltage 10 V or more?	Check for poor contact of ECM connector.	<ul style="list-style-type: none"> • Check fuse No. 12 (in fuse & relay box). • Check the harness for open or short circuit between ignition switch and ECM.

G: 21

Cruise control command switch malfunction is detected.

TROUBLE SYMPTOM:

- Cruise control cannot be set. (Cancelled immediately.)
- Cruise control cannot be released.

Refer to DTC 11 for diagnostic procedure.

<Ref. to CC(diag)-15, 11, Diagnostic Procedure with Cancel Code.>

Diagnostic Procedure with Cancel Code

CRUISE CONTROL SYSTEM (DIAGNOSTICS)

H: 22

Malfunction related to vehicle speed sensor is detected.

DIAGNOSIS:

Open or shorted circuit in vehicle speed sensor system.

TROUBLE SYMPTOM:

Cruise control cannot be set. (Cancelled immediately.)

	Step	Check	Yes	No
1	CHECK ABS OR VDC WARNING LIGHT. 1) Turn the ignition switch to ON. 2) After the initial operation of combination meter is completed, check if ABS or VDC warning light continues to illuminate.	Does the warning light continue to illuminate?	Check the VDCCM. <Ref. to VDC(diag)-2, Basic Diagnostic Procedure.>	Go to step 2.
2	CHECK DTC OF LAN COMMUNICATION CIRCUIT. Read the DTC of body integrated unit using Subaru Select Monitor. <Ref. to BC(diag)-10, Read Diagnostic Trouble Code (DTC).>	Is DTC displayed?	Perform inspection according to DTC.	Replace the ECM. <Ref. to FU(H4DO)-98, Engine Control Module (ECM).>

I: 24

Malfunction in cruise control-related switch is detected.

TROUBLE SYMPTOM:

- Cruise control cannot be set. (Cancelled immediately.)
- Cruise control cannot be released.

Refer to DTC 11 for diagnostic procedure.

<Ref. to CC(diag)-15, 11, Diagnostic Procedure with Cancel Code.>

J: 31

Engine speed signal malfunction is detected.

Abnormal increase of engine speed is detected.

Gear is placed in 1st or Reverse position.

After driving at the 2nd gear position or higher, perform the cruise setting again. If a cancel code is not detected, it is normal.

K: 32

This DTC is detected out of vehicle speed range.

Increase vehicle speed high enough to allow the cruise control to function, and then perform setting operation again.

If cancel code is still detected after setting cruise again, perform the diagnosis for DTC 22.

Refer to DTC 22 for diagnostic procedure.

<Ref. to CC(diag)-23, 22, Diagnostic Procedure with Cancel Code.>

L: 34

The vehicle has been driven at a speed higher than set speed for a long time (approximately 10 minutes) during cruise driving.

This cancel code is detected when driving for a long period of time at a speed higher than appropriate for cruise control setting by operating the accelerator pedal.

Perform the cruise control setting operation again. If the cancel code is not detected, it is normal.

M: 35

Detected when it is impossible to perform the vehicle speed feedback.

Set vehicle speed cannot be kept for some reasons (steep uphill, unreleased parking brake, etc.) during cruise driving.

Cancel code is detected when driving conditions are not suitable for cruise control.

Perform cruise set operation again after clearing the possible cause.

Diagnostic Procedure with Cancel Code

CRUISE CONTROL SYSTEM (DIAGNOSTICS)

N: 41

VDC/TCS/EPB is operated.

Vehicle dynamics control (VDC) or TCS/EPB is operated during cruise driving or cruise setting.

<Ref. to VDC(diag)-2, PROCEDURE, Basic Diagnostic Procedure.>

O: 43

- The situation that some or all functions for ABS/VDC can not work is detected.

During cruise driving or cruise setting, the situation that some or all functions for ABS/VDC can not work is detected.

<Ref. to VDC(diag)-2, PROCEDURE, Basic Diagnostic Procedure.>

- CRUISE indicator does not illuminate even though you pressed the CRUISE switch before starting the engine.

Detected when the CRUISE switch is pressed during the initial diagnosis of ABS/VDC. It is normal if the CRUISE indicator illuminates when you press the CRUISE switch again after starting the engine and confirming that the initial illumination of the ABS/VDC warning light has been ended.

P: 44

Body integrated unit malfunction is detected.

Body integrated unit system malfunction is detected during cruise driving or cruise setting.

<Ref. to LAN(diag)-2, PROCEDURE, Basic Diagnostic Procedure.>

Q: 45

Malfunction of the combination meter is detected.

Combination meter malfunction is detected during cruise driving or cruise setting.

<Ref. to LAN(diag)-2, PROCEDURE, Basic Diagnostic Procedure.>

R: 49

Automatic transmission malfunction is detected.

Automatic transmission malfunction is detected during cruise driving or cruise control setting.

<Ref. to CVT(diag)-2, PROCEDURE, Basic Diagnostic Procedure.>

S: 61

Malfunction in the stop light & brake switch is detected.

TROUBLE SYMPTOM:

- Cruise control cannot be set.
- Cruise control cannot be released.

Refer to DTC 12 for diagnostic procedure.

<Ref. to CC(diag)-17, 12, Diagnostic Procedure with Cancel Code.>

T: 62

Neutral position switch malfunction is detected.

TROUBLE SYMPTOM:

Cruise control cannot be set.

Refer to DTC 14 for diagnostic procedure.

<Ref. to CC(diag)-20, 14, Diagnostic Procedure with Cancel Code.>

U: 63

Malfunction of vehicle speed signal variation is detected.

Trouble symptom:

Cruise control cannot be set. (Cancelled immediately.)

Refer to 22 for diagnostic procedure.

<Ref. to CC(diag)-23, 22, Diagnostic Procedure with Cancel Code.>

NOTE:

This cancel code may be detected when the vehicle suddenly started with VDC OFF on low μ road surface. In this case, restart the engine and perform the cruise control setting operation again. If the cancel code is not detected, it is normal.

Diagnostic Procedure with Cancel Code

CRUISE CONTROL SYSTEM (DIAGNOSTICS)

V: 64

Malfunction related to engine is detected.

Refer to the Engine Diagnostic Procedure for diagnostic procedure.

<Ref. to EN(H4DO)(diag)-2, PROCEDURE, Basic Diagnostic Procedure.>

W: 65

Cruise control command switch malfunction is detected.

While the command switch is pressed ON for a long time (approximately two minutes), stuck ON condition is detected.

TROUBLE SYMPTOM:

- Cruise control cannot be set. (Cancelled immediately.)
- Cruise control cannot be released.

Refer to DTC 11 for diagnostic procedure.

<Ref. to CC(diag)-15, 11, Diagnostic Procedure with Cancel Code.>

X: 66

Cruise control calculation malfunction is detected.

Refer to the Engine Diagnostic Procedure for diagnostic procedure.

<Ref. to EN(H4DO)(diag)-2, PROCEDURE, Basic Diagnostic Procedure.>

CRUISE CONTROL SYSTEM (DIAGNOSTICS)

IMMOBILIZER (DIAGNOSTICS)

IM(diag)

	Page
1. Basic Diagnostic Procedure	2
2. General Description	4
3. Electrical Component Location	6
4. Immobilizer Control Module I/O Signal	7
5. Subaru Select Monitor	8
6. Read Diagnostic Trouble Code (DTC)	9
7. Clear Memory Mode	10
8. Diagnostics Chart for Security Indicator Light	11
9. List of Diagnostic Trouble Code (DTC)	14
10. Diagnostic Procedure with Diagnostic Trouble Code (DTC)	16

Basic Diagnostic Procedure

IMMOBILIZER (DIAGNOSTICS)

1. Basic Diagnostic Procedure

A: PROCEDURE

1. MODEL WITHOUT KEYLESS ACCESS WITH PUSH BUTTON START SYSTEM

CAUTION:

When the body integrated unit is replaced, registration of the immobilizer system is required. For details, refer to the “REGISTRATION MANUAL FOR IMMOBILIZER” provided as a separate volume.

Step	Check	Yes	No
1 CONFIRM NUMBER OF REGISTERED IMMOBILIZER KEY. Confirm the number of registered immobilizer key. For details, refer to the “REGISTRATION MANUAL FOR IMMOBILIZER” provided as a separate volume.	Is the number of registration 0?	Register the immobilizer system.	Go to step 2.
2 CHECK SECURITY INDICATOR LIGHT. 1) Remove the ignition key from ignition switch. 2) Wait at least 60 seconds.	Does the security indicator light blink?	Go to step 3.	Check the security indicator light circuit. <Ref. to IM(diag)-11, CHECK SECURITY INDICATOR LIGHT CIRCUIT, INSPECTION, Diagnostics Chart for Security Indicator Light.>
3 CHECK KEY SWITCH. Insert the ignition key in the ignition switch. (OFF or ACC)	Does the security indicator light remain blinking?	Check the key switch circuit. <Ref. to IM(diag)-13, CHECK KEY SWITCH CIRCUIT, INSPECTION, Diagnostics Chart for Security Indicator Light.>	Go to step 4.
4 CHECK SECURITY INDICATOR LIGHT. Check the security indicator light status in the condition of step 3.	Does the security indicator light go off?	Go to step 7.	Go to step 5.
5 CHECK SECURITY INDICATOR LIGHT. Turn the ignition switch to ON.	Does the security indicator light go off?	Go to step 7.	Go to step 6.
6 CHECK ENGINE START. Turn the ignition switch to START.	Does the starter operate?	Check the LAN communication system. <Ref. to LAN(diag)-2, Basic Diagnostic Procedure.>	Go to step 8.
7 CHECK ENGINE START. Turn the ignition switch to START.	Does the engine start?	Immobilizer system is normal.	Go to step 9.
8 CHECK DTC. Read the DTC of body integrated unit and ECM and time stamp using Subaru Select Monitor. <Ref. to IM(diag)-9, Read Diagnostic Trouble Code (DTC).> NOTE: For time stamp, refer to “LAN SYSTEM”. <Ref. to LAN(diag)-6, TIME STAMP, CAUTION, General Description.>	Is the DTC displayed on screen?	Go to step 10.	Replace the body integrated unit. <Ref. to SL-72, Body Integrated Unit.>

Basic Diagnostic Procedure

IMMOBILIZER (DIAGNOSTICS)

Step	Check	Yes	No
9 CHECK DTC. Read the DTC of body integrated unit and ECM and time stamp using Subaru Select Monitor. <Ref. to IM(diag)-9, Read Diagnostic Trouble Code (DTC).> NOTE: For time stamp, refer to "LAN SYSTEM". <Ref. to LAN(diag)-6, TIME STAMP, CAUTION, General Description.>	Is the DTC displayed on screen?	Go to step 10.	Perform the diagnosis for engine system. <Ref. to EN(H4DO)(diag)-74, PROCEDURE, Diagnostics for Engine Starting Failure.>
10 CHECK FREEZE FRAME DATA. Using the Subaru Select Monitor, check the Freeze Frame Data.	Are the data recorded?	Record the data. Go to step 11.	Go to step 11.
11 CHECK DTC. Check the displayed DTC.	Are DTCs irrelevant to the immobilizer displayed?	Perform the diagnosis according to DTCs irrelevant to the immobilizer first.	Go to step 12.
12 PERFORM DIAGNOSIS. 1) Inspect using the "Diagnostic Procedure with Diagnostic Trouble Code (DTC)". <Ref. to IM(diag)-16, Diagnostic Procedure with Diagnostic Trouble Code (DTC).> 2) Repair the trouble cause. 3) Perform the Clear Memory Mode. <Ref. to IM(diag)-10, Clear Memory Mode.> 4) Read DTCs again. <Ref. to IM(diag)-9, Read Diagnostic Trouble Code (DTC).>	Is the DTC displayed on screen?	Inspect using the "Diagnostic Procedure with Diagnostic Trouble Code (DTC)". <Ref. to IM(diag)-16, Diagnostic Procedure with Diagnostic Trouble Code (DTC).>	Finish the diagnosis.

2. MODEL WITH KEYLESS ACCESS WITH PUSH BUTTON START SYSTEM

NOTE:

For immobilizer diagnosis of model with the keyless access with push button start system, refer to "Keyless Access with Push Button Start System". <Ref. to KPS(diag)-2, Basic Diagnostic Procedure.>

General Description

IMMOBILIZER (DIAGNOSTICS)

2. General Description

A: CAUTION

CAUTION:

- Do not use the electrical test equipment on the airbag system wiring harnesses and connector circuits.
- Be careful not to damage the airbag system wiring harness.
- While diagnostic items are being checked, do not operate radios, portable telephones, etc. which emit electromagnetic waves near or inside the vehicle.

- When turning the ignition switch to ON or OFF while diagnostic items are being checked, do not allow keys with different ID codes close to the ignition switch. If the ignition key is on a key holder, remove it from the key holder before performing diagnoses.

- When repeatedly turning the ignition switch to ON or OFF while diagnostic items are being checked, it should be switched in cycles of "ON" for at least 5 seconds → "OFF" for at least 8 seconds.

- (1) Ignition switch position
- (2) Sec.

- If the engine fails to start with a registered ignition key, detach the ignition key from ignition switch and wait for approx. 1 second until security indicator light begins to flash. And then start the engine again.
- Before performing the diagnostics, obtain all keys for the vehicle from the owner.
- Do not register a body integrated unit already registered to another vehicle to diagnose failures or inspect functions.

B: PREPARATION TOOL

A: WIRING DIAGRAM

1. IMMOBILIZER

Refer to "Immobilizer System" in the wiring diagram. <Ref. to WI-147, WIRING DIAGRAM, Immobilizer System.>

5. Subaru Select Monitor

A: OPERATION

1. HOW TO USE THE SUBARU SELECT MONITOR

For detailed operation procedures, refer to “Application help”.

2. READ DIAGNOSTIC TROUBLE CODE (DTC) FOR ENGINE AND BODY INTEGRATED UNIT

Refer to “Read Diagnostic Trouble Code (DTC)” for information about how to indicate DTC. <Ref. to IM(diag)-9, Read Diagnostic Trouble Code (DTC).>

NOTE:

If a problem is detected, repair the trouble cause. <Ref. to IM(diag)-19, DTC B1572 IMM CIRCUIT EXCEPT ANTENNA CIRCUIT, Diagnostic Procedure with Diagnostic Trouble Code (DTC).>

6. Read Diagnostic Trouble Code (DTC)

A: OPERATION

NOTE:

- For detailed operation procedures, refer to “Application help”.
- For details concerning DTC, refer to List of Diagnostic Trouble Code (DTC). <Ref. to IM(diag)-14, List of Diagnostic Trouble Code (DTC).>

1. ECM

- 1) On «Start» display, select «Diagnosis».
- 2) On «Vehicle selection» display, input the target vehicle information and select «Confirmed».
- 3) On «Main Menu» display, select «Each System».
- 4) On «Select System» display, select «Engine Control System» and then select «Enter».
- 5) On «Engine Control System» display, select «DTC».

2. BODY INTEGRATED UNIT

- 1) On «Start» display, select «Diagnosis».
- 2) On «Vehicle selection» display, input the target vehicle information and select «Confirmed».
- 3) On «Main Menu» display, select «Each System».
- 4) On «Select System» display, select «Body Control» and then select «Enter».
- 5) On «Body Control» display, select «DTC».

Clear Memory Mode

IMMOBILIZER (DIAGNOSTICS)

7. Clear Memory Mode

A: OPERATION

NOTE:

For detailed operation procedures, refer to "Application help".

1. ECM

- 1) On «Start» display, select «Diagnosis».
- 2) On «Vehicle selection» display, input the target vehicle information and select «Confirmed».
- 3) On «Main Menu» display, select «Each System».
- 4) On «Select System» display, select «Engine Control System» and then select «Enter».
- 5) On «Engine Control System» display, select «DTC».
- 6) On «DTC» display, select «Clear Memory».

NOTE:

Initial diagnosis of electronic throttle control is performed after memory clearance. Wait for 10 seconds or more after turning the ignition switch to ON, and then start the engine.

2. BODY INTEGRATED UNIT

- 1) On «Start» display, select «Diagnosis».
- 2) On «Vehicle selection» display, input the target vehicle information and select «Confirmed».
- 3) On «Main Menu» display, select «Each System».
- 4) On «Select System» display, select «Body Control» and then select «Enter».
- 5) On «Body Control» display, select «DTC».
- 6) On «DTC» display, select «Clear Memory».

Diagnostics Chart for Security Indicator Light

IMMOBILIZER (DIAGNOSTICS)

8. Diagnostics Chart for Security Indicator Light

A: INSPECTION

1. CHECK SECURITY INDICATOR LIGHT CIRCUIT

CAUTION:

When the body integrated unit is replaced, registration of the immobilizer system is required. For details, refer to the "REGISTRATION MANUAL FOR IMMOBILIZER" provided as a separate volume.

Wiring diagram:

Immobilizer system <Ref. to WI-147, WIRING DIAGRAM, Immobilizer System.>

IM-10035

Step	Check	Yes	No
1 CHECK FUSE. 1) Remove the ignition key from ignition switch. Or, turn off the power. 2) Check the fuse (M/B No. 8).	Is the fuse OK?	Go to step 2.	Replace the fuse. If the replaced fuse blows out easily, repair the short circuit in the harness between the fuse and body integrated unit.
2 CHECK SECURITY INDICATOR LIGHT. 1) Disconnect the connector from body integrated unit. 2) Connect the resistor (100 Ω) between the body integrated unit connector terminal (i171) No. 26 and chassis ground.	Does the security indicator light illuminate?	Go to step 3.	Go to step 5.

Diagnostics Chart for Security Indicator Light

IMMOBILIZER (DIAGNOSTICS)

Step	Check	Yes	No
3 CHECK BODY INTEGRATED UNIT GROUND CIRCUIT (OPEN CIRCUIT). Measure the resistance between the body integrated unit connector terminal and chassis ground. <i>Connector & terminal</i> <i>(B280) No. 1 — Chassis ground:</i> <i>(i84) No. 1 — Chassis ground:</i>	Is the resistance less than 10 Ω ?	Go to step 4.	Repair the open circuit of the body integrated unit ground circuit.
4 CHECK BODY INTEGRATED UNIT POWER SUPPLY CIRCUIT. Measure the voltage between the body integrated unit connector terminal and chassis ground. <i>Connector & terminal</i> <i>(B281) No. 7 (+) — Chassis ground (-):</i> <i>(i84) No. 6 (+) — Chassis ground (-):</i>	Is the voltage 10 V or more?	Replace the body integrated unit. <Ref. to SL-72, Body Integrated Unit.>	Check the harness for open or short circuit between body integrated unit and fuse.
5 CHECK COMBINATION METER CIRCUIT. 1) Remove the combination meter. <Ref. to IDI-18, Combination Meter.> 2) Measure the voltage between combination meter connector terminal and chassis ground. <i>Connector & terminal</i> <i>(i10) No. 40 (+) — Chassis ground (-):</i>	Is the voltage 10 V or more?	Go to step 6.	Check for an open or short circuit in the harness between the combination meter and fuse.
6 CHECK COMBINATION METER CIRCUIT (OPEN). Measure the resistance between the body integrated unit connector terminal and combination meter connector terminal. <i>Connector & terminal</i> <i>(i171) No. 26 — (i10) No. 1:</i>	Is the resistance less than 10 Ω ?	LED bulb is defective. Replace the combination meter case assembly. <Ref. to IDI-20, DISASSEMBLY, Combination Meter.>	Repair the harness or connector.

Diagnostics Chart for Security Indicator Light

IMMOBILIZER (DIAGNOSTICS)

2. CHECK KEY SWITCH CIRCUIT

CAUTION:

When the body integrated unit is replaced, registration of the immobilizer system is required. For details, refer to the "REGISTRATION MANUAL FOR IMMOBILIZER" provided as a separate volume.

Wiring diagram:

Immobilizer system <Ref. to WI-147, WIRING DIAGRAM, Immobilizer System.>

Step	Check	Yes	No
1 CHECK POWER SUPPLY CIRCUIT. 1) Disconnect the connector from key warning switch. 2) Measure the voltage between key warning switch connector terminal and chassis ground. Connector & terminal (B555) No. 1 (+) — Chassis ground (-):	Is the voltage 10 V or more?	Go to step 2.	Check the harness for an open or short between the key warning switch and fuse.
2 CHECK KEY WARNING SWITCH. 1) Insert the ignition key in the ignition switch. (OFF or ACC) 2) Measure the resistance between key warning switch connector terminals. Terminals No. 1 — No. 2:	Is the resistance less than 1 Ω ?	Go to step 3.	Replace the key warning switch. <Ref. to SL-62, Key Lock Cylinders.>
3 CHECK KEY WARNING SWITCH. 1) Remove the ignition key from ignition switch. 2) Measure the resistance between key warning switch connector terminals. Terminals No. 1 — No. 2:	Is the resistance 1 M Ω or more?	Go to step 4.	Replace the key warning switch. <Ref. to SL-62, Key Lock Cylinders.>
4 CHECK HARNESS BETWEEN KEY WARNING SWITCH AND BODY INTEGRATED UNIT (OPEN). 1) Disconnect the connector from body integrated unit. 2) Measure the resistance between key warning switch connector terminal and body integrated unit connector terminal. Connector & terminal (B555) No. 2 — (B280) No. 4:	Is the resistance less than 10 Ω ?	Replace the body integrated unit. <Ref. to SL-72, Body Integrated Unit.>	Repair the harness between key warning switch and body integrated unit.

List of Diagnostic Trouble Code (DTC)

IMMOBILIZER (DIAGNOSTICS)

9. List of Diagnostic Trouble Code (DTC)

A: LIST

NOTE:

If DTCs irrelevant to the immobilizer are detected, perform diagnosis according to the DTCs irrelevant to the immobilizer first.

1. ECM

DTC	Item	Contents of diagnosis	Index No.
B1570	ANTENNA	Faulty antenna	<Ref. to IM(diag)-16, DTC B1570 ANTENNA, Diagnostic Procedure with Diagnostic Trouble Code (DTC).>
B1571	REFERENCE CODE INCOMPATIBILITY (IMMOBILIZER CM TO ECM)	Reference code incompatibility between body integrated unit and ECM	<Ref. to IM(diag)-18, DTC B1571 REFERENCE CODE INCOMPATIBILITY (IMMOBILIZER CM TO ECM), Diagnostic Procedure with Diagnostic Trouble Code (DTC).>
B1572	IMM CIRCUIT EXCEPT ANTENNA CIRCUIT	Communication failure between body integrated unit and ECM	<Ref. to IM(diag)-19, DTC B1572 IMM CIRCUIT EXCEPT ANTENNA CIRCUIT, Diagnostic Procedure with Diagnostic Trouble Code (DTC).>
B1574	KEY COMMUNICATION	Communication failure between key and body integrated unit	<Ref. to IM(diag)-22, DTC B1574 KEY COMMUNICATION, Diagnostic Procedure with Diagnostic Trouble Code (DTC).>
B1575	INCORRECT IMMOBILIZER KEY	Incorrect immobilizer key (use of unregistered key in body integrated unit)	<Ref. to IM(diag)-23, DTC B1575 INCORRECT IMMOBILIZER KEY, Diagnostic Procedure with Diagnostic Trouble Code (DTC).>
B1576	EGI CONTROL MODULE EEPROM	ECM malfunctioning	<Ref. to IM(diag)-23, DTC B1576 EGI CONTROL MODULE EEPROM, Diagnostic Procedure with Diagnostic Trouble Code (DTC).>
B1577	IMM CONTROL MODULE EEPROM	Body integrated unit malfunctioning	<Ref. to IM(diag)-24, DTC B1577 IMM CONTROL MODULE EEPROM, Diagnostic Procedure with Diagnostic Trouble Code (DTC).>
B1578	METER	<p>Except for C5 model</p> <ul style="list-style-type: none"> • Reference code incompatibility between combination meter and body integrated unit • Communication failure between body integrated unit and ECM <p>C5 model</p> <ul style="list-style-type: none"> • Reference code incompatibility between body integrated unit and security control module • Communication failure between body integrated unit and ECM 	<Ref. to IM(diag)-24, DTC B1578 METER, Diagnostic Procedure with Diagnostic Trouble Code (DTC).>

List of Diagnostic Trouble Code (DTC)

IMMOBILIZER (DIAGNOSTICS)

2. BODY INTEGRATED UNIT

DTC	Item	Contents of diagnosis	Index No.	Relation between ECM and DTC
B1401	METER COLLATION	Reference code incompatibility between combination meter and body integrated unit	<Ref. to IM(diag)-25, DTC B1401 METER COLLATION, Diagnostic Procedure with Diagnostic Trouble Code (DTC).>	B1578
B1402	IMMOBILIZER KEY COLLATION	<ul style="list-style-type: none"> • Incorrect immobilizer key (use of unregistered key in body integrated unit) • Faulty antenna • Communication failure between key and body integrated unit 	<Ref. to IM(diag)-25, DTC B1402 IMMOBILIZER KEY COLLATION, Diagnostic Procedure with Diagnostic Trouble Code (DTC).>	<ul style="list-style-type: none"> • B1575 • B1570 • B1574
B1405	SCU COLLATION	Reference code incompatibility between body integrated unit and security control module	<Ref. to IM(diag)-26, DTC B1405 SCU COLLATION, Diagnostic Procedure with Diagnostic Trouble Code (DTC).>	B1578
B1406	SCU_EEPROM	Malfunction of security control module	<Ref. to IM(diag)-26, DTC B1406 SCU_EEPROM, Diagnostic Procedure with Diagnostic Trouble Code (DTC).>	B1578
B1407	MET COMMUNICATION	Communication failure between body integrated unit and combination meter	<Ref. to IM(diag)-27, DTC B1407 MET COMMUNICATION, Diagnostic Procedure with Diagnostic Trouble Code (DTC).>	B1578
B1408	METER NON-VOLATILE MEMORY	Combination meter malfunction	<Ref. to IM(diag)-27, DTC B1408 METER NON-VOLATILE MEMORY, Diagnostic Procedure with Diagnostic Trouble Code (DTC).>	B1578
B1409	SCU COMMUNICATION	Communication failure between body integrated unit and security control module	<Ref. to IM(diag)-28, DTC B1409 SCU COMMUNICATION, Diagnostic Procedure with Diagnostic Trouble Code (DTC).>	B1578
B1410	TRANSPONDER COMMUNICATION	Communication failure between key and body integrated unit	<Ref. to IM(diag)-30, DTC B1410 TRANSPONDER COMMUNICATION, Diagnostic Procedure with Diagnostic Trouble Code (DTC).>	B1574
B1411	IMMOBILIZER ANTENNA	Faulty antenna	<Ref. to IM(diag)-30, DTC B1411 IMMOBILIZER ANTENNA, Diagnostic Procedure with Diagnostic Trouble Code (DTC).>	B1570

NOTE:

The starter relay control is performed in immobilizer system. When the body integrated unit detects a non-conformity of reference code, it immediately outputs a starter relay cut signal to ECM, and then ECM stops the starter relay operation. In this case, engine does not start, and DTC is not recorded in ECM. Check that the engine does not start on the DTC of body integrated unit.

Diagnostic Procedure with Diagnostic Trouble Code (DTC)

IMMOBILIZER (DIAGNOSTICS)

10. Diagnostic Procedure with Diagnostic Trouble Code (DTC)

A: DTC B1570 ANTENNA

DTC detecting condition:

Faulty antenna

CAUTION:

When the body integrated unit is replaced, registration of the immobilizer system is required. For details, refer to the "REGISTRATION MANUAL FOR IMMOBILIZER" provided as a separate volume.

Wiring diagram:

Immobilizer system <Ref. to WI-147, WIRING DIAGRAM, Immobilizer System.>

IM-00652

Step	Check	Yes	No
<p>1</p> <p>CHECK BODY INTEGRATED UNIT POWER SUPPLY CIRCUIT.</p> <p>1) Turn the ignition switch to OFF.</p> <p>2) Disconnect the connector from body integrated unit.</p> <p>3) Measure the voltage between the body integrated unit connector terminal and chassis ground.</p> <p>Connector & terminal (i84) No. 6 (+) — Chassis ground (-):</p>	Is the voltage 10 V or more?	Go to step 2.	Check the harness for open or short circuit between body integrated unit and fuse.
<p>2</p> <p>CHECK BODY INTEGRATED UNIT GROUND CIRCUIT (OPEN CIRCUIT).</p> <p>Measure the resistance between the body integrated unit connector terminal and chassis ground.</p> <p>Connector & terminal (B280) No. 1 — Chassis ground: (i84) No. 1 — Chassis ground:</p>	Is the resistance less than 10 Ω?	Go to step 3.	Repair the open circuit of the body integrated unit ground circuit.

Diagnostic Procedure with Diagnostic Trouble Code (DTC)

IMMOBILIZER (DIAGNOSTICS)

Step	Check	Yes	No
3 CHECK ANTENNA POWER SUPPLY CIRCUIT. 1) Connect the connector to body integrated unit. 2) Disconnect the connector from the antenna. 3) Insert the ignition key into the key cylinder, then measure the voltage between the antenna connector terminal and the chassis ground. <i>Connector & terminal</i> <i>(B415) No. 1 (+) — Chassis ground (-):</i>	Is the voltage 5 ± 0.5 V approx. 200 ms after inserting the ignition key into the key cylinder? And then, does the voltage return to 0 V within 2 s?	Go to step 5.	Go to step 4.
4 CHECK ANTENNA POWER SUPPLY CIRCUIT (OPEN). 1) Disconnect the connector from body integrated unit. 2) Measure the resistance of body integrated unit connector terminal and antenna connector terminal. <i>Connector & terminal</i> <i>(B281) No. 2 — (B415) No. 1:</i>	Is the resistance less than 10 Ω ?	Replace the body integrated unit. <Ref. to SL-72, Body Integrated Unit.>	Repair the harness or connector between body integrated unit and antenna.
5 CHECK ANTENNA GROUND CIRCUIT (SHORT CIRCUIT TO GROUND). Measure the resistance between antenna connector terminal and chassis ground. <i>Connector & terminal</i> <i>(B415) No. 7 — Chassis ground:</i>	Is the resistance less than 10 Ω ?	Go to step 7.	Go to step 6.
6 CHECK ANTENNA GROUND CIRCUIT (OPEN). 1) Disconnect the connector from body integrated unit. 2) Measure the resistance between the body integrated unit connector terminal and antenna connector terminal. <i>Connector & terminal</i> <i>(B281) No. 30 — (B415) No. 7:</i>	Is the resistance less than 10 Ω ?	Replace the body integrated unit. <Ref. to SL-72, Body Integrated Unit.>	Repair the harness or connector between body integrated unit and antenna.
7 CHECK ANTENNA COMMUNICATION CIRCUIT (OPEN). Measure the resistance of body integrated unit connector terminal and antenna connector terminal. <i>Connector & terminal</i> <i>(B281) No. 10 — (B415) No. 5:</i> <i>(B281) No. 22 — (B415) No. 4:</i>	Is the resistance less than 10 Ω ?	Go to step 8.	Repair the harness or connector between body integrated unit and antenna.
8 CHECK ANTENNA. 1) Replace the immobilizer antenna. <Ref. to SL-80, Immobilizer Antenna.> 2) Insert the ignition key in the ignition switch. (OFF or ACC) 3) Perform the Clear Memory Mode. <Ref. to IM(diag)-10, Clear Memory Mode.> 4) Read the DTC of the body integrated unit. <Ref. to IM(diag)-9, Read Diagnostic Trouble Code (DTC).>	Is DTC B1411 detected?	Replace the body integrated unit. <Ref. to SL-72, Body Integrated Unit.>	Antenna has a failure.

Diagnostic Procedure with Diagnostic Trouble Code (DTC)

IMMOBILIZER (DIAGNOSTICS)

B: DTC B1571 REFERENCE CODE INCOMPATIBILITY (IMMOBILIZER CM TO ECM)

DTC DETECTING CONDITION:

Reference code incompatibility between body integrated unit and ECM

CAUTION:

When the body integrated unit is replaced, registration of the immobilizer system is required. For details, refer to the "REGISTRATION MANUAL FOR IMMOBILIZER" provided as a separate volume.

	Step	Check	Yes	No
1	CONFIRM NUMBER OF REGISTERED IMMOBILIZER KEY. Confirm the number of registered immobilizer key. Refer to the "REGISTRATION MANUAL FOR IMMOBILIZER" provided as a separate volume.	Is the number of registration 0?	Go to step 2.	Go to step 3.
2	PERFORM IMMOBILIZER SYSTEM REGISTRATION. Register the immobilizer system. Refer to the "REGISTRATION MANUAL FOR IMMOBILIZER" provided as a separate volume.	Is registration complete?	Finish the diagnosis.	Go to step 4.
3	PERFORM ECM REGISTRATION. Perform ECM registration. Refer to the "REGISTRATION MANUAL FOR IMMOBILIZER" provided as a separate volume.	Is registration complete?	Finish the diagnosis.	Go to step 4.
4	CHECK FOR ANY OTHER DTC ON DISPLAY. 1) Perform the Clear Memory Mode. <Ref. to IM(diag)-10, Clear Memory Mode.> 2) Read the DTC of the ECM. <Ref. to IM(diag)-9, Read Diagnostic Trouble Code (DTC).>	Is any other DTC displayed?	Perform the diagnosis according to DTC.	Go to step 5.
5	PERFORM ECM REGISTRATION. 1) Replace the ECM. <Ref. to FU(H4DO)-98, Engine Control Module (ECM).> 2) Perform ECM registration. Refer to the "REGISTRATION MANUAL FOR IMMOBILIZER" provided as a separate volume.	Is registration complete?	Finish the diagnosis.	Replace the body integrated unit. <Ref. to SL-72, Body Integrated Unit.>

Diagnostic Procedure with Diagnostic Trouble Code (DTC)

IMMOBILIZER (DIAGNOSTICS)

C: DTC B1572 IMM CIRCUIT EXCEPT ANTENNA CIRCUIT

DTC detecting condition:

Communication failure between body integrated unit and ECM

CAUTION:

When the body integrated unit is replaced, registration of the immobilizer system is required. For details, refer to the "REGISTRATION MANUAL FOR IMMOBILIZER" provided as a separate volume.

Wiring diagram:

Immobilizer system <Ref. to WI-147, WIRING DIAGRAM, Immobilizer System.>

IM-00653

Step	Check	Yes	No
1	<p>CHECK GROUNDING POINT. Check the grounding point of the engine ground and chassis ground.</p>	<p>Are there any loose connections, any foreign objects caught in the ground lines or contact surface, or any fluid stains?</p>	<p>Remove the foreign matters, and tighten to the specified torque. Then start the engine, and check that the fault was removed. Check DTC <Ref. to IM(diag)-9, Read Diagnostic Trouble Code (DTC).>, and when DTC B1572 is still displayed, Go to step 2.</p>
			<p>Go to step 2.</p>

Diagnostic Procedure with Diagnostic Trouble Code (DTC)

IMMOBILIZER (DIAGNOSTICS)

Step	Check	Yes	No
2 CHECK FUSE. 1) Turn the ignition switch to OFF. 2) Check the fuse.	Is there any fault?	Replace the fuse. If the fuse blows out easily, repair the short circuit to power supply in harness between the battery and body integrated unit.	Go to step 3.
3 CHECK CURRENT DATA. Confirm the current data «BATT voltage (control)» display of body integrated unit. <Ref. to BC(diag)-12, Read Current Data.>	Is the display 10 V or more?	Go to step 4.	Go to step 5.
4 CHECK CURRENT DATA. Check the current data «Voltage of IGN» display of body integrated unit. <Ref. to BC(diag)-12, Read Current Data.>	Is the display 10 V or more?	Go to step 7.	Go to step 6.
5 CHECK BODY INTEGRATED UNIT BATTERY POWER SUPPLY CIRCUIT. 1) Turn the ignition switch to OFF. 2) Disconnect the body integrated unit connector. 3) Measure the voltage between body integrated unit connector and chassis ground. Connector & terminal <i>(i84) No. 6 (+) — Chassis ground (-):</i>	Is the voltage 10 V or more?	Go to step 6.	Repair the open or short circuit of harness between the body integrated unit connector and fuse.
6 CHECK BODY INTEGRATED UNIT IGN POWER SUPPLY CIRCUIT. 1) Turn the ignition switch to ON. 2) Measure the voltage between the body integrated unit connector terminal and chassis ground. Connector & terminal <i>(B281) No. 3 (+) — Chassis ground (-):</i>	Is the voltage 10 V or more?	Go to step 7.	Repair the open or short circuit of harness between the body integrated unit connector and ignition switch.
7 CHECK BODY INTEGRATED UNIT GROUND CIRCUIT (OPEN CIRCUIT). 1) Turn the ignition switch to OFF. 2) Measure the resistance between body integrated unit connector and chassis ground. Connector & terminal <i>(B280) No. 1 — Chassis ground:</i> <i>(i84) No. 1 — Chassis ground:</i>	Is the resistance less than 10 Ω ?	Go to step 8.	Repair the open circuit of harness between the body integrated unit connector and chassis ground.
8 CHECK GROUND CIRCUIT FOR ECM (OPEN CIRCUIT). 1) Disconnect the ECM connector. 2) Measure the resistance between the ECM connector and engine ground. Connector & terminal <i>(B134) No. 3 — Engine ground:</i> <i>(B134) No. 4 — Engine ground:</i> <i>(B136) No. 1 — Engine ground:</i> <i>(B136) No. 2 — Engine ground:</i> <i>(B136) No. 3 — Engine ground:</i>	Is the resistance less than 10 Ω ?	Go to step 9.	Repair the open circuit in harness between ECM connector and chassis ground.

Diagnostic Procedure with Diagnostic Trouble Code (DTC)

IMMOBILIZER (DIAGNOSTICS)

Step	Check	Yes	No
9 CHECK HARNESS (OPEN CIRCUIT) BETWEEN BODY INTEGRATED UNIT AND ECM. 1) Disconnect the ECM connector. 2) Measure the resistance between the body integrated unit connector and ECM connector. <i>Connector & terminal</i> <i>(B280) No. 31 — (B135) No. 25:</i>	Is the resistance less than 10 Ω ?	Go to step 10.	Repair the open circuit of harness between the body integrated unit connector and ECM.
10 CHECK COMMUNICATION LINE HARNESS (SHORT CIRCUIT TO POWER SUPPLY). 1) Disconnect the body integrated unit connector. 2) Turn the ignition switch to ON. 3) Measure the voltage between ECM connector and engine ground. <i>Connector & terminal</i> <i>(B135) No. 25 (+) — Engine ground (-):</i>	Is the voltage 6 V or more?	Repair the short circuit to power supply in harness between body integrated unit connector and ECM connector.	Go to step 11.
11 CHECK COMMUNICATION CIRCUIT HARNESS (SHORT CIRCUIT TO GROUND). 1) Turn the ignition switch to OFF. 2) Measure the resistance between the ECM connector and engine ground. <i>Connector & terminal</i> <i>(B135) No. 25 — Engine ground:</i>	Is the resistance less than 10 Ω ?	Repair the ground short circuit of harness between body integrated unit connector and ECM connector.	Go to step 12.
12 CHECK ECM. 1) Replace the ECM. (Do not perform ECM registration.) <Ref. to FU(H4DO)-98, Engine Control Module (ECM).> 2) Connect all connectors. 3) Turn the ignition switch to ON. 4) Wait for 5 seconds. 5) Read DTC of engine. <Ref. to IM(diag)-9, Read Diagnostic Trouble Code (DTC).>	Is DTC B1572 displayed?	Replace the body integrated unit. <Ref. to SL-72, Body Integrated Unit.>	Register the ECM. Refer to the “REGISTRATION MANUAL FOR IMMOBILIZER” provided as a separate volume.

Diagnostic Procedure with Diagnostic Trouble Code (DTC)

IMMOBILIZER (DIAGNOSTICS)

D: DTC B1574 KEY COMMUNICATION

DTC DETECTING CONDITION:

Communication failure between key and body integrated unit

CAUTION:

When the body integrated unit is replaced, registration of the immobilizer system is required. For details, refer to the "REGISTRATION MANUAL FOR IMMOBILIZER" provided as a separate volume.

Step	Check	Yes	No
1 CHECK IGNITION KEY. 1) Remove the ignition key from the ignition switch. 2) Insert the ignition key into the ignition switch, and then turn the ignition switch to ON. 3) Perform the Clear Memory Mode. <Ref. to IM(diag)-10, Clear Memory Mode.> 4) Read the DTC of the body integrated unit. <Ref. to IM(diag)-9, Read Diagnostic Trouble Code (DTC).>	Is DTC B1410 detected?	Go to step 2.	Even if DTC is detected, the circuit has returned to a normal condition at this time. Reproduce the failure, and then perform the diagnosis again. NOTE: In this case, temporary poor contact of connector, temporary open or short circuit of harness may be the cause.
2 CHECK IGNITION KEY. 1) Prepare a spare ignition key that is already registered. 2) Insert the ignition key into the ignition switch, and then turn the ignition switch to ON. 3) Perform the Clear Memory Mode. <Ref. to IM(diag)-10, Clear Memory Mode.> 4) Read the DTC of the body integrated unit. <Ref. to IM(diag)-9, Read Diagnostic Trouble Code (DTC).>	Is DTC B1410 detected?	Go to step 3.	Ignition key unit was defective.
3 CHECK IMMOBILIZER ANTENNA. 1) Replace the immobilizer antenna. <Ref. to SL-80, Immobilizer Antenna.> 2) Insert the ignition key into the ignition switch, and then turn the ignition switch to ON. 3) Perform the Clear Memory Mode. <Ref. to IM(diag)-10, Clear Memory Mode.> 4) Read the DTC of the body integrated unit. <Ref. to IM(diag)-9, Read Diagnostic Trouble Code (DTC).>	Is DTC B1410 detected?	Replace the body integrated unit. <Ref. to SL-72, Body Integrated Unit.>	Immobilizer antenna was defective.

Diagnostic Procedure with Diagnostic Trouble Code (DTC)

IMMOBILIZER (DIAGNOSTICS)

E: DTC B1575 INCORRECT IMMOBILIZER KEY

DTC DETECTING CONDITION:

Incorrect immobilizer key (use of unregistered key in body integrated unit)

CAUTION:

When the body integrated unit is replaced, registration of the immobilizer system is required. For details, refer to the "REGISTRATION MANUAL FOR IMMOBILIZER" provided as a separate volume.

Step	Check	Yes	No
1 CONFIRM NUMBER OF REGISTERED IGNITION KEY. Using the Subaru Select Monitor, check the number of registered ignition keys. Refer to the "REGISTRATION MANUAL FOR IMMOBILIZER" provided as a separate volume.	Is one or more ignition key(s) registered?	Go to step 2.	Register the immobilizer.
2 CHECK IGNITION KEY. 1) Prepare another ignition key that is already registered. 2) Insert the ignition key in the ignition switch. 3) Turn the ignition switch to ON. 4) Read the DTC of the body integrated unit. Perform the procedure with all registered ignition keys.	Is DTC B1402 displayed for all ignition keys?	Refer to "REGISTRATION MANUAL FOR IMMOBILIZER" provided as a separate volume, and perform the actions for the case that all keys are faulty/lost.	Ignition key unit was defective, or ignition key was not registered.

F: DTC B1576 EGI CONTROL MODULE EEPROM

DTC DETECTING CONDITION:

- ECM malfunctioning
- Failed to access ROM in ECM during key registration.

CAUTION:

When the ECM is replaced, registration of the immobilizer system is required. For details, refer to the "REGISTRATION MANUAL FOR IMMOBILIZER" provided as a separate volume.

Step	Check	Yes	No
1 PERFORM ECM REGISTRATION. Perform ECM registration. Refer to the "REGISTRATION MANUAL FOR IMMOBILIZER" provided as a separate volume.	Is registration complete?	Finish the diagnosis.	Go to step 2.
2 PERFORM ECM REGISTRATION. Perform ECM registration. Refer to the "REGISTRATION MANUAL FOR IMMOBILIZER" provided as a separate volume.	Is registration complete?	Finish the diagnosis.	Go to step 3.
3 PERFORM ECM REGISTRATION. Perform ECM registration. Refer to the "REGISTRATION MANUAL FOR IMMOBILIZER" provided as a separate volume.	Is registration complete?	Finish the diagnosis.	Replace the ECM. <Ref. to FU(H4DO)-98, Engine Control Module (ECM).>

Diagnostic Procedure with Diagnostic Trouble Code (DTC)

IMMOBILIZER (DIAGNOSTICS)

G: DTC B1577 IMM CONTROL MODULE EEPROM

DTC DETECTING CONDITION:

- Body integrated unit malfunctioning
- Failed to access ROM inside the body integrated unit.

CAUTION:

When the body integrated unit is replaced, registration of the immobilizer system is required. For details, refer to the “REGISTRATION MANUAL FOR IMMOBILIZER” provided as a separate volume.

	Step	Check	Yes	No
1	PERFORM ECM REGISTRATION. Perform ECM registration. Refer to the “REGISTRATION MANUAL FOR IMMOBILIZER” provided as a separate volume.	Is registration complete?	Finish the diagnosis.	Go to step 2.
2	PERFORM ECM REGISTRATION. 1) Perform the Clear Memory Mode. (ECM and body integrated unit) <Ref. to IM(diag)-10, Clear Memory Mode.> 2) Perform ECM registration. Refer to the “REGISTRATION MANUAL FOR IMMOBILIZER” provided as a separate volume.	Is registration complete?	Even if DTC is detected, the circuit has returned to a normal condition at this time. Reproduce the failure, and then perform the diagnosis again. NOTE: In this case, temporary poor contact of connector, temporary open or short circuit of harness may be the cause.	Replace the body integrated unit. <Ref. to SL-72, Body Integrated Unit.>

H: DTC B1578 METER

DTC DETECTING CONDITION:

- Except for C5 model

Reference code incompatibility between combination meter and body integrated unit or communication failure between body integrated unit and ECM

- C5 model

Reference code incompatibility between security control module and body integrated unit or communication failure between body integrated unit and ECM

	Step	Check	Yes	No
1	CHECK DTC. Read the DTC of the body integrated unit. <Ref. to IM(diag)-9, Read Diagnostic Trouble Code (DTC).>	Is any of DTC B1401, B1405, B1406, B1407, B1408 or B1409 detected?	Perform the diagnosis according to the DTC.	<Ref. to IM(diag)-19, DTC B1572 IMM CIRCUIT EXCEPT ANTENNA CIRCUIT, Diagnostic Procedure with Diagnostic Trouble Code (DTC).>

Diagnostic Procedure with Diagnostic Trouble Code (DTC)

IMMOBILIZER (DIAGNOSTICS)

I: DTC B1401 METER COLLATION

DTC DETECTING CONDITION:

Reference code incompatibility between combination meter and body integrated unit

CAUTION:

When the combination meter is replaced, registration of the immobilizer system is required. For details, refer to the "REGISTRATION MANUAL FOR IMMOBILIZER" provided as a separate volume.

Step	Check	Yes	No
1 CHECK DTC. Read the DTC of the body integrated unit. <Ref. to IM(diag)-9, Read Diagnostic Trouble Code (DTC).>	Is any of DTC B1407 or B1408 detected?	Perform the diagnosis according to the DTC.	Go to step 2.
2 CHECK COMBINATION METER REGISTRATION. Perform registration of combination meter. Refer to the "REGISTRATION MANUAL FOR IMMOBILIZER" provided as a separate volume.	Is registration complete?	Currently, it is normal. (Combination meter registration is not complete.)	Go to step 3.
3 CHECK DTC. 1) Perform the Clear Memory Mode. <Ref. to IM(diag)-10, Clear Memory Mode.> 2) Read the DTC of the body integrated unit. <Ref. to IM(diag)-9, Read Diagnostic Trouble Code (DTC).>	Is any of DTC B1407 or B1408 detected?	Perform the diagnosis according to the DTC.	Replace the combination meter. <Ref. to IDI-18, Combination Meter.>

J: DTC B1402 IMMOBILIZER KEY COLLATION

DTC DETECTING CONDITION:

- Incorrect immobilizer key (use of unregistered key in body integrated unit)
- Faulty antenna
- Communication failure between key and body integrated unit

Step	Check	Yes	No
1 CHECK DTC. Read the DTC of the body integrated unit. <Ref. to IM(diag)-9, Read Diagnostic Trouble Code (DTC).>	Is any of DTC B1410 or B1411 detected?	Perform the diagnosis according to the DTC.	<Ref. to IM(diag)-23, DTC B1575 INCORRECT IMMOBILIZER KEY, Diagnostic Procedure with Diagnostic Trouble Code (DTC).>

Diagnostic Procedure with Diagnostic Trouble Code (DTC)

IMMOBILIZER (DIAGNOSTICS)

K: DTC B1405 SCU COLLATION

DTC DETECTING CONDITION:

Reference code incompatibility between security control module and body integrated unit

CAUTION:

When the security control module is replaced, registration of the immobilizer system is required. For details, refer to the “REGISTRATION MANUAL FOR IMMOBILIZER” provided as a separate volume.

Step	Check	Yes	No
1 CHECK DTC. Read the DTC of the body integrated unit. <Ref. to IM(diag)-9, Read Diagnostic Trouble Code (DTC).>	Is any of DTC B1406 or B1409 detected?	Perform the diagnosis according to DTC.	Go to step 2.
2 PERFORM SECURITY CONTROL MODULE REGISTRATION. Perform security control module registration. Refer to the “REGISTRATION MANUAL FOR IMMOBILIZER” provided as a separate volume.	Is registration complete?	Currently, it is normal. (Security control module registration is not complete.)	Go to step 3.
3 CHECK DTC. 1) Perform the Clear Memory Mode. <Ref. to IM(diag)-10, Clear Memory Mode.> 2) Read the DTC of the body integrated unit. <Ref. to IM(diag)-9, Read Diagnostic Trouble Code (DTC).>	Is any of DTC B1406 or B1409 detected?	Perform the diagnosis according to DTC.	Replace the security control module. <Ref. to SL-66, Security Control Module.>

L: DTC B1406 SCU_EEPROM

DTC DETECTING CONDITION:

- Defective security control module
- ROM of security control module cannot be accessed

CAUTION:

When the security control module is replaced, registration of the immobilizer system is required. For details, refer to the “REGISTRATION MANUAL FOR IMMOBILIZER” provided as a separate volume.

Step	Check	Yes	No
1 PERFORM SECURITY CONTROL MODULE REGISTRATION. 1) Perform security control module registration. Refer to the “REGISTRATION MANUAL FOR IMMOBILIZER” provided as a separate volume. 2) Perform the Clear Memory Mode. <Ref. to IM(diag)-10, Clear Memory Mode.> 3) Read the DTC of the body integrated unit. <Ref. to IM(diag)-9, Read Diagnostic Trouble Code (DTC).>	Is DTC B1406 detected?	Replace the security control module. <Ref. to SL-66, Security Control Module.>	Finish the diagnosis.

Diagnostic Procedure with Diagnostic Trouble Code (DTC)

IMMOBILIZER (DIAGNOSTICS)

M: DTC B1407 MET COMMUNICATION

DTC DETECTING CONDITION:

Communication failure between body integrated unit and combination meter

CAUTION:

When the combination meter is replaced, registration of the immobilizer system is required. For details, refer to the "REGISTRATION MANUAL FOR IMMOBILIZER" provided as a separate volume.

	Step	Check	Yes	No
1	CHECK DTC. Read the DTC of the body integrated unit. <Ref. to IM(diag)-9, Read Diagnostic Trouble Code (DTC).>	Is DTC of the body integrated unit except for DTC B1407 displayed?	Perform the diagnosis according to the DTC.	Replace the combination meter. <Ref. to IDI-18, Combination Meter.>

N: DTC B1408 METER NON-VOLATILE MEMORY

DTC DETECTING CONDITION:

Defective combination meter

CAUTION:

When the combination meter is replaced, registration of the immobilizer system is required. For details, refer to the "REGISTRATION MANUAL FOR IMMOBILIZER" provided as a separate volume.

	Step	Check	Yes	No
1	CHECK COMBINATION METER REGISTRATION. 1) Perform the Clear Memory Mode. (Combination meter <Ref. to IDI(diag)-13, Clear Memory Mode.> and body integrated unit <Ref. to IM(diag)-10, Clear Memory Mode.>) 2) Perform registration of combination meter. Refer to the "REGISTRATION MANUAL FOR IMMOBILIZER" provided as a separate volume. 3) Perform the Clear Memory Mode. <Ref. to IM(diag)-10, Clear Memory Mode.> 4) Read the DTC of the body integrated unit. <Ref. to IM(diag)-9, Read Diagnostic Trouble Code (DTC).>	Is DTC B1408 detected?	Replace the combination meter. <Ref. to IDI-18, Combination Meter.>	Even if DTC is detected, the circuit has returned to a normal condition at this time. Reproduce the failure, and then perform the diagnosis again. NOTE: In this case, temporary poor contact of connector, temporary open or short circuit of harness may be the cause.

Diagnostic Procedure with Diagnostic Trouble Code (DTC)

IMMOBILIZER (DIAGNOSTICS)

O: DTC B1409 SCU COMMUNICATION

DTC detecting condition:

Communication failure between body integrated unit and security control module

CAUTION:

When the body integrated unit is replaced, registration of the immobilizer system is required. For details, refer to the "REGISTRATION MANUAL FOR IMMOBILIZER" provided as a separate volume.

Wiring diagram:

Immobilizer system <Ref. to WI-147, WIRING DIAGRAM, Immobilizer System.>

IM-00654

Step	Check	Yes	No	
1	CHECK GROUNDING POINT. Check the ground point of chassis ground.	Are there any loose connections, any foreign objects caught in the ground lines or contact surface, or any fluid stains?	Remove the foreign matters, and tighten to the specified torque. Then start the engine, and check that the fault was removed. Check DTC <Ref. to IM(diag)-9, Read Diagnostic Trouble Code (DTC).>, and when DTC B1572 is still displayed, Go to step 2.	Go to step 2.

Diagnostic Procedure with Diagnostic Trouble Code (DTC)

IMMOBILIZER (DIAGNOSTICS)

Step	Check	Yes	No
<p>2 CHECK BODY INTEGRATED UNIT POWER SUPPLY CIRCUIT.</p> <p>1) Turn the ignition switch to OFF. 2) Disconnect the connector from body integrated unit. 3) Measure the voltage between the body integrated unit connector terminal and chassis ground.</p> <p>Connector & terminal (i84) No. 6 (+) — Chassis ground (-):</p>	Is the voltage 10 V or more?	Go to step 3.	Check the harness for open or short circuit between body integrated unit and fuse.
<p>3 CHECK BODY INTEGRATED UNIT POWER SUPPLY CIRCUIT.</p> <p>1) Turn the ignition switch to ON. 2) Measure the voltage between the body integrated unit connector terminal and chassis ground.</p> <p>Connector & terminal (B281) No. 3 (+) — Chassis ground (-):</p>	Is the voltage 10 V or more?	Go to step 4.	Check the harness for open or short circuit between the body integrated unit and ignition switch.
<p>4 CHECK BODY INTEGRATED UNIT GROUND CIRCUIT (OPEN CIRCUIT).</p> <p>1) Turn the ignition switch to OFF. 2) Measure the resistance between the body integrated unit connector terminal and chassis ground.</p> <p>Connector & terminal (B280) No. 1 — Chassis ground: (i84) No. 1 — Chassis ground:</p>	Is the resistance less than 10 Ω ?	Go to step 5.	Repair the open circuit of the body integrated unit ground circuit.
<p>5 CHECK SECURITY CONTROL MODULE POWER SUPPLY CIRCUIT.</p> <p>1) Disconnect the connector from the security control module. 2) Measure the voltage between security control module connector terminal and chassis ground.</p> <p>Connector & terminal (B559) No. 1 (+) — Chassis ground (-):</p>	Is the voltage 10 V or more?	Go to step 6.	Check for an open or short circuit in the harness between security control module and fuse.
<p>6 CHECK SECURITY CONTROL MODULE GROUND CIRCUIT (OPEN).</p> <p>Measure the resistance between security control module connector terminal and chassis ground.</p> <p>Connector & terminal (B559) No. 5 — Chassis ground:</p>	Is the resistance less than 10 Ω ?	Go to step 7.	Repair the open circuit of the security control module ground circuit.
<p>7 CHECK HARNESS (OPEN CIRCUIT) BETWEEN BODY INTEGRATED UNIT AND SECURITY CONTROL MODULE.</p> <p>Measure the resistance between the body integrated unit connector terminal and security control module connector terminal.</p> <p>Connector & terminal (B280) No. 21 — (B559) No. 3:</p>	Is the resistance less than 10 Ω ?	Go to step 8.	Repair the harness between body integrated unit and security control module.
<p>8 CHECK COMMUNICATION LINE HARNESS (SHORT CIRCUIT TO POWER SUPPLY).</p> <p>1) Turn the ignition switch to ON. 2) Measure the voltage between security control module connector terminal and chassis ground.</p> <p>Connector & terminal (B559) No. 3 (+) — Chassis ground (-):</p>	Is the voltage 6 V or more?	Repair the harness between body integrated unit and security control module.	Go to step 9.

Diagnostic Procedure with Diagnostic Trouble Code (DTC)

IMMOBILIZER (DIAGNOSTICS)

Step	Check	Yes	No
9 CHECK COMMUNICATION CIRCUIT HARNESS (SHORT CIRCUIT TO GROUND). 1) Turn the ignition switch to OFF. 2) Measure the resistance between security control module connector terminal and chassis ground. Connector & terminal (B559) No. 3 — Chassis ground:	Is the resistance less than 10 Ω ?	Repair the harness between body integrated unit and ECM.	Go to step 10.
10 CHECK SECURITY CONTROL MODULE. 1) Replace the security control module. (Do not perform security control module registration.) 2) Turn the ignition switch to ON. 3) Perform the Clear Memory Mode. <Ref. to IM(diag)-10, Clear Memory Mode.> 4) Read the DTC of the body integrated unit. <Ref. to IM(diag)-9, Read Diagnostic Trouble Code (DTC).>	Is DTC B1409 detected?	Replace the body integrated unit. <Ref. to SL-72, Body Integrated Unit.>	Security control module was defective. Perform security control module registration. Refer to the "REGISTRATION MANUAL FOR IMMOBILIZER" provided as a separate volume.

P: DTC B1410 TRANSPONDER COMMUNICATION

NOTE:

Refer to DTC B1574 for diagnostic procedure. <Ref. to IM(diag)-22, DTC B1574 KEY COMMUNICATION, Diagnostic Procedure with Diagnostic Trouble Code (DTC).>

Q: DTC B1411 IMMOBILIZER ANTENNA

NOTE:

Refer to DTC B1570 for diagnostic procedure. <Ref. to IM(diag)-16, DTC B1570 ANTENNA, Diagnostic Procedure with Diagnostic Trouble Code (DTC).>

	Page

General Description

EyeSight

1. General Description

A: LOCATION

Refer to "LOCATION" of "EyeSight (DIAGNOSTICS)" section. <Ref. to ES(diag)-14, LOCATION, Electrical Component Location.>

B: COMPONENT

1. STEREO CAMERA

- (1) Shim (washer)
- (2) Camera plate
- (3) Stereo camera

- (4) Stereo camera cover ASSY
- (5) Cap

Tightening torque: N·m (kgf·m, ft·lb)

T: 5.5±1.0 (0.56±0.10, 4.1±0.7)

C: CAUTION

- Before disconnecting connectors of sensors or units, be sure to disconnect the ground cable from battery. When replacing the electrical parts provided with memory functions that store contents specified by a customer, record the memory contents before disconnecting the battery ground cable.
- Be careful of the following items. Failing to do so may cause the airbag system malfunction.
 - Yellow connectors and harnesses with yellow tapes around them are the connectors and harnesses for the airbag system. When using a tester on these circuits, follow the cautions of “AIRBAG SYSTEM”. <Ref. to AB-9, CAUTION, General Description.>
 - Be careful not to damage the airbag system wiring harness when servicing the electrical parts around the steering column.
- When removing, installing or replacing the VDCCM&H/U, VDCCM&H/U bracket, steering wheel or steering angle sensor (steering roll connector), perform the VDC setting mode. <Ref. to VDC-23, ADJUSTMENT, VDC Control Module and Hydraulic Control Unit (VDCCM&H/U).>
- If the damage is found in the glass repair prohibited area, always replace the glass. <Ref. to ES(diag)-7, WINDSHIELD GLASS AND DASHBOARD, INSPECTION, General Description.>
 Damage in the prohibited area can affect the recognition of the stereo camera even if it is repaired, and thereby EyeSight function may not operate properly.

D: PREPARATION TOOL

1. SPECIAL TOOL

ILLUSTRATION	TOOL NUMBER	DESCRIPTION	REMARKS
 ST87599VA000	87599VA000	RANDOM CHART	Used for adjusting stereo camera.
 STSSM4	—	SUBARU SELECT MONITOR 4	Used for setting of each function and troubleshooting for electrical system. NOTE: For detailed operation procedures of Subaru Select Monitor 4, refer to “Application help”.

2. GENERAL TOOL

TOOL NAME	REMARKS
Circuit tester	Used for measuring resistance, voltage and current.
DST-i	Used together with Subaru Select Monitor 4.
Measure (5 m (16 ft) or more)	Used for adjusting stereo camera.
Leveling line	
Plumb bob	
Packing tape	

2. Relay and Fuse

A: LOCATION

Relay & fuse box	Fuse 10 A (stop light and brake switch, brake light relay)	(A)
Relay holder	Brake light relay	(B)

NOTE:

For other related fuses, refer to the wiring diagram. <Ref. to WI-15, Power Supply Circuit.>

B: INSPECTION

1. CHECK FUSE

- 1) Remove the fuse and inspect visually.
- 2) If the fuse is blown out, replace the fuse.

NOTE:

If the fuse is blown again, check the system wiring harness.

2. CHECK RELAY

- 1) Measure the resistance between relay terminals.

Terminal No.	Inspection conditions	Standard	Circuit
1 — 2	Always	1 MΩ or more	
1 — 4	Always	Less than 1 Ω	
1 — 2	Apply battery voltage between terminals 3 and 5.	Less than 1 Ω	

ADA00304

- 2) Replace the relay if the inspection result is not within the standard value.

3. EyeSight System

A: WIRING DIAGRAM

Refer to “EyeSight System” in the wiring diagram. <Ref. to WI-130, WIRING DIAGRAM, EyeSight System.>

B: INSPECTION

Refer to “Basic Diagnostic Procedure” of “EyeSight (DIAGNOSTICS)” section. <Ref. to ES(diag)-2, Basic Diagnostic Procedure.>

C: NOTE

For procedure of each component in the EyeSight system, refer to the respective section.

- Control module: <Ref. to ES-6, Control Unit.>

NOTE:

System control of the EyeSight is performed by each module. For procedure, refer to the following sections.

- Engine control module (ECM): <Ref. to FU(H4DO)-98, Engine Control Module (ECM).>
- Transmission control module (TCM): <Ref. to CVT(TR580)-148, Transmission Control Module (TCM).>
- VDC control module & hydraulic control unit (VDCCM&H/U): <Ref. to VDC-9, VDC Control Module and Hydraulic Control Unit (VDCCM&H/U).>
- Stereo camera: <Ref. to ES-7, Stereo Camera.>
- Body integrated unit: <Ref. to SL-72, Body Integrated Unit.>
- Combination meter: <Ref. to IDI-18, Combination Meter.>
- Stop light and brake switch: <Ref. to BR-72, Stop Light Switch.>
- Multi-function display (MFD): <Ref. to IDI-25, Multi-function Display (MFD).>
- Switches and harness: <Ref. to ES-33, Switches and Harness.>
- Roll connector (steering angle sensor): <Ref. to AB-59, Roll Connector.>

4. Control Unit

A: NOTE

System control of the EyeSight is performed by each module. For procedure, refer to the following sections.

- Engine control module (ECM): <Ref. to FU(H4DO)-98, Engine Control Module (ECM).>
- Transmission control module (TCM): <Ref. to CVT(TR580)-148, Transmission Control Module (TCM).>
- VDC control module (VDC CM): <Ref. to VDC-9, VDC Control Module and Hydraulic Control Unit (VDC-CM&H/U).>
- Stereo camera: <Ref. to ES-7, Stereo Camera.>
- Body integrated unit: <Ref. to SL-72, Body Integrated Unit.>

5. Stereo Camera

A: REMOVAL

CAUTION:

- When the stereo camera or windshield glass has been replaced, removed or installed, always perform the adjustment and inspection of the camera. (When the stereo camera has been replaced with a new part, the camera remains in a failed state until adjustment and inspection are performed.)
- Since the stereo camera is a precision equipment, install the protective cover before handling it. (New stereo camera is equipped with a protective cover as a service part.)
- During removal, do not hold at the left and right cameras.
- Do not apply any impact to the stereo camera. (Even the slightest shock will deviate the optical axis of the camera, resulting in the loss of normal operation of the camera.)
- Do not disassemble the stereo camera.
- Attach the protective cover to the replacement part, put it into the box in the same way as the other parts and return it. Cover the replaced stereo camera with a protective cover.
- Do not touch the lens filter on the stereo camera. If touched, replace the stereo camera.
- When removing the stereo camera cover assembly, cover with dust-free paper such as copy paper to avoid interference with the lens filter section, and attach the paper using tape while being careful not to let the adhesive surface contact the glass surface. Be sure to remove the paper after the procedure.

Also, do not put your hand on the polyurethane section of the windshield contact surface. Doing so may cause the polyurethane section to be removed, which may interfere with the normal operation if it hangs down in front of the lens filter section.

- 1) Disconnect the ground cable from battery. <Ref. to NT-6, BATTERY, NOTE, Note.>
- 2) Attach dust-free paper (a) such as copy paper to the stereo camera cover assembly.

ADA00636

Stereo Camera

EyeSight

- 3) Remove the stereo camera cover assembly.
 - (1) Disconnect the claws and hooks and remove the cap.
 - (2) Remove the bolt.

- (3) Pull down the rear of the stereo camera cover assembly, and then release the clips.
 - (4) Release the hook on the front side of stereo camera cover assembly.

- (5) Disconnect the connectors, and remove the stereo camera cover assembly.

- 4) Remove the stereo camera.
(1) Disconnect the connector.
(2) Remove the nuts, and then remove the stereo camera.

Stereo Camera

EyeSight

NOTE:

Remove the camera plate (a) as required.

B: INSTALLATION

CAUTION:

- Do not remove the protective cover until just before installing the stereo camera cover assembly. Using the bolt and nut, install the stereo camera with the protective cover attached, connect the connectors, and then remove the protective cover.
- Do not apply any impact to the stereo camera. (Even the slightest shock will deviate the optical axis of the camera, resulting in the loss of normal operation of the camera.)
- During installation, do not hold at the left and right cameras.
- Do not change the installation position of the stereo camera or do not modify the surrounding structure.
- Remove the protective cover, install the stereo camera cover assembly, and then perform adjustment and inspection of the stereo camera. <Ref. to ES-12, Camera Adjustment, Inspection.>
- Do not touch the lens filter on the stereo camera. If touched, replace the stereo camera.
- When installing the stereo camera cover assembly, cover with dust-free paper such as copy paper to avoid interference with the lens filter section, and attach the paper using tape while being careful not to let the adhesive surface contact the glass surface. Be sure to remove the paper after the procedure.

Also, do not put your hand on the polyurethane section of the windshield contact surface. Doing so may cause the polyurethane section to be removed, which may interfere with the normal operation if it hangs down in front of the lens filter section.

- When installing the stereo camera cover assembly, take care so that the harness does not interfere with the stereo camera or does not get caught.
- Do not allow the stereo camera cover assembly to come in contact with the stereo camera. Install the stereo camera cover assembly precisely so that it will not block the visibility of the camera.
- Because the stereo camera is incompatible, be sure to check the part number before installation.

1) Attach the camera plate.

Tightening torque:

$5.5 \pm 1.0 \text{ N}\cdot\text{m}$ ($0.56 \pm 0.10 \text{ kgf}\cdot\text{m}$, $4.1 \pm 0.7 \text{ ft}\cdot\text{lb}$)

NOTE:

Align the positioning pins of camera plate to the positioning holes of front rail.

2) Install the stereo camera.

Tightening torque:

5.5±1.0 N·m (0.56±0.10 kgf-m, 4.1±0.7 ft-lb)

NOTE:

Align the positioning holes of stereo camera to the positioning pins of camera plate.

3) Install the stereo camera cover assembly.

4) Connect the battery ground terminal. <Ref. to NT-6, BATTERY, NOTE, Note.>

5) Perform the adjustment or inspection of the stereo camera. <Ref. to ES-12, Camera Adjustment, Inspection.>

1. PREPARATIONS

Perform the preparation of the adjustment and inspection for the stereo camera.

- When performing adjustment or inspection by affixing **RANDOM CHART** onto partition

1) Before preparation, check the following items.

- (1) The headlight is off.
- (2) The vehicle is parked on a level surface.
- (3) The inflation pressure of tires is correct.
- (4) The vehicle does not have load.
- (5) The front wheels are directed to the straight ahead position, when the steering wheel is set to the center position.

NOTE:

When the front wheels are not directed to the straight ahead position, adjust the alignment. <Ref. to FS-11, ADJUSTMENT, Wheel Alignment.>

2) Prepare the Subaru Select Monitor, measure, plumb bob, leveling line and **RANDOM CHART** (ST).

Preparation tool:

ST: RANDOM CHART (87599VA000)

3) Stop the vehicle on a level surface where approximately 5 m (16.41 ft) space can be secured in front of the vehicle.

4) Suspend the plumb bob with leveling line from front center position of vehicle (center of the license plate base), and mark the position where the plumb bob touches the ground. (Point A)

ADA10317

- (a) Leveling line
- (b) Plumb bob

- (c) Point A
- (d) License plate base

- (e) Same distance

NOTE:

Stick the packing tape etc. on the floor, then make a marking on the tape.

Camera Adjustment, Inspection

EyeSight

5) Suspend the plumb bob with leveling line from rear center position of vehicle (center of the cover - rear bumper B), and mark the position where the plumb bob touches the ground. (Point B)

ADA10318

- (a) Leveling line
- (b) Plumb bob

- (c) Point B
- (d) Cover - rear bumper B

- (e) Same distance
- (f) Same distance

NOTE:

Stick the packing tape etc. on the floor, then make a marking on the tape.

6) Strain approximately 5 m (16.41 ft) leveling line from the marking point B through the marking point A toward front of the vehicle, and fix it with packing tape. (A-B line)

ADA10319

- (a) Point A

- (b) Point B

NOTE:

Confirm that there is no wet condition or unevenness on the floor, to strain the leveling line correctly.

7) Mark the installation position of the partition.

- (1) Suspend the plumb bob from the center of each front wheel, and mark the point C and point D.
- (2) Strain the leveling lines from the point C and point D toward the front of vehicle parallel to the vehicle body center line (A-B line), and fix the leveling lines with packing tape.
- (3) Make markings at the points 4,000 mm (13 ft, 1 1/2 in) ahead of the vehicle from the point C and point D. (Point E and point F)
- (4) Strain the leveling line so that it passes through the point E and point F. (E-F line)

ADA00593

(a) Vehicle body center line (A-B line)

(c) Point D

(e) Point F

(b) Point C

(d) Point E

(f) 4,000 mm (13 ft, 1 1/2 in)

Camera Adjustment, Inspection

EyeSight

8) Place the partition and RANDOM CHART.

CAUTION:

- Affix the **RANDOM CHART** onto the vertical partition with flat surface.
- When affixing the **RANDOM CHART** using tape, place the tape within 10 mm (0.39 in) from the edge of the **CHART**. In this case, do not affix with lustrous tapes which may reflect the light.
- Perform the adjustment work at lighted places. If the lighting is not enough, adjustment cannot be done, and accuracy rate may not be acquired.
- The adjustment in the outdoors cannot be recommended. Note the sun position, when adjusting it in outdoor by necessity. (It is not acceptable when the sunlight comes from front or rear of the vehicle)

(1) Using the plumb bob, attach the **RANDOM CHART** on the partition, so that the setting reference (vertical line) center is aligned with the vehicle body center line (leveling line) and the height of the setting reference (horizontal line) center from the floor is 1,000 mm (3 ft, 3 3/8 in).

(2) Adjust the partition so that it is parallel to E-F line.

(a) ① = Setting reference (vertical line) and vehicle body center line (A-B line)

(c) Plumb bob

(e) 1,000 mm (3 ft, 3 3/8 in)

(b) ② = Setting reference (horizontal line)

(d) E-F line

CAUTION:

- Centering accuracy of the plumb bob shall be ± 4.0 mm (± 0.16 in) or less.

ADA00594

(a) ± 4.0 mm (± 0.16 in)

(b) Marking

(c) Plumb bob

- Positioning accuracy of the measure shall be ± 2.0 mm (± 0.08 in) or less.
- Centering accuracy of the tire shall be ± 4.0 mm (± 0.16 in) or less.

ADA00595

(a) ± 4.0 mm (± 0.16 in)

(c) Plumb bob

(d) Marking

(b) Tire center line

Camera Adjustment, Inspection

EyeSight

- Apply the lighting from the upper direction of RANDOM CHART, and make adjustment so that brightness is even in the CHART. (If the lighting is applied from the position where light reflects at RANDOM CHART, the adjustment cannot be done, because the reflected light enters the camera.)

(a) RANDOM CHART

(b) Lighting

- When using a white board as a partition, affix the RANDOM CHART on the flat surface without protrusion such as penholder. When suspending the plumb bob, suspend it vertically from the RANDOM CHART by avoiding protrusion.

- | | | |
|------------------|----------------------------------|------------------------------|
| (a) RANDOM CHART | (c) Protrusion (penholder, etc.) | (e) Vehicle travel direction |
| (b) White board | (d) Plumb bob | |

9) Turn the ignition switch to OFF.

10) Check the windshield glass and the dashboard. <Ref. to ES(diag)-7, WINDSHIELD GLASS AND DASHBOARD, INSPECTION, General Description.>

CAUTION:

If there are any dirt, object or reflection from dashboard within the visibility of stereo camera, the correct adjustment and inspection can not be performed. Especially, do not put paper etc. on the dashboard.

11) Connect the Subaru Select Monitor.

NOTE:

- Use the Subaru Select Monitor equipped with the latest version of the software.
- For detailed operation procedures, refer to "Application help".

12) Turn the ignition switch to ON.

13) Wait for 10 seconds.

14) On «Start» display, select «Diagnosis».

15) On «Vehicle selection» display, enter vehicle information and select «Confirmed».

16) On «Main Menu» display, select «Each System».

17) Select «EyeSight» on «Select System» display while pressing the pre-collision brake OFF switch and the lane departure warning OFF switch mounted on stereo camera cover assembly at the same time, and then select «Enter».

NOTE:

If «EyeSight» is selected without pressing two switches at the same time, the camera adjustment items are not displayed in «Work Support». (for preventing misoperation)

Also, the message is not displayed, when the camera does not finish the start-up (approx. 10 seconds after ignition switch ON). In this case, repeat from the selection of «EyeSight».

18) On «Select Function» display, select «Work Support».

Camera Adjustment, Inspection

EyeSight

19) From the work support item list, select and perform camera adjustment or other inspections.

NOTE:

- When performing {Camera adjustment, inspection}, pre-collision brake OFF indicator light, lane departure warning OFF indicator light in the meter will illuminate, and the normal function will be disabled.
- After camera adjustment, the function will be enabled, when the ignition switch is turned to OFF and system is restarted.

• **When performing adjustment or inspection by affixing RANDOM CHART onto wall**

1) Before preparation, check the following items.

- (1) The headlight is off.
- (2) The vehicle is parked on a level surface.
- (3) The inflation pressure of tires is correct.
- (4) The vehicle does not have load.
- (5) The front wheels are directed to the straight ahead position, when the steering wheel is set to the center position.

NOTE:

When the front wheels are not directed to the straight ahead position, adjust the alignment. <Ref. to FS-11, ADJUSTMENT, Wheel Alignment.>

2) Prepare the Subaru Select Monitor, measure, plumb bob, leveling line and RANDOM CHART (ST).

Preparation tool:

ST: RANDOM CHART (87599VA000)

3) Mark the park position of the vehicle.

- (1) Strain the leveling line so that it is at right angles to wall on which the RANDOM CHART is affixed, and fix the leveling line with packing tape.
- (2) Make a marking 4,000 mm (13 ft, 1 1/2 in) away from the wall where the leveling line is fixed. (Point A and point B)

NOTE:

Stick the packing tape etc. on the floor, then make a marking on the tape.

- (3) Strain the leveling line so that it passes through the point A and point B. (A-B line)

ADA00605

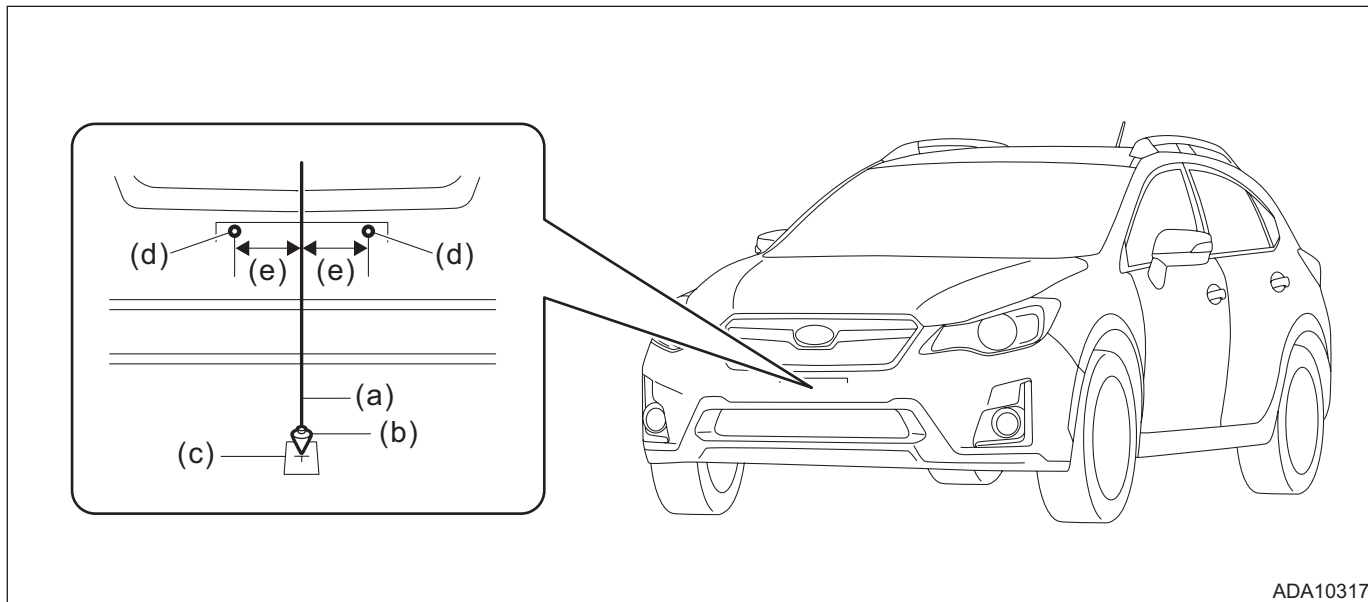

- (a) Point A
(b) Point B

(c) 4,000 mm (13 ft, 1 1/2 in)

(d) Wall

4) Suspend the plumb bob from the center of each front wheel of the vehicle, and place the vehicle so that it is aligned with the leveling line (A-B line).

5) Suspend the plumb bob with leveling line from front center position of vehicle (center of the license plate base), and mark the position where the plumb bob touches the ground. (Point C)

ADA10317

- (a) Leveling line
- (b) Plumb bob

- (c) Point C
- (d) License plate base

- (e) Same distance

NOTE:

Stick the packing tape etc. on the floor, then make a marking on the tape.

6) Suspend the plumb bob with leveling line from rear center position of vehicle (center of the cover - rear bumper B), and mark the position where the plumb bob touches the ground. (Point D)

ADA10318

- (a) Leveling line
- (b) Plumb bob

- (c) Point D
- (d) Cover - rear bumper B

- (e) Same distance
- (f) Same distance

NOTE:

Stick the packing tape etc. on the floor, then make a marking on the tape.

Camera Adjustment, Inspection

EyeSight

7) Strain the leveling line from the making point D through the marking point C to the wall, and fix it with packing tape. (C-D line)

(a) Point C

(b) Point D

8) Place the RANDOM CHART.

CAUTION:

- Affix the RANDOM CHART onto the vertical wall, etc. with flat surface.
- When affixing the RANDOM CHART using tape, place the tape within 10 mm (0.39 in) from the edge of the CHART. In this case, do not affix with lustrous tapes which may reflect the light.
- Perform the adjustment work at lighted places. If the lighting is not enough, adjustment cannot be done, and accuracy rate may not be acquired.
- The adjustment in the outdoors cannot be recommended. Note the sun position, when adjusting it in outdoor by necessity. (It is not acceptable when the sunlight comes from front or rear of the vehicle)

Camera Adjustment, Inspection

(1) Using the plumb bob, attach the RANDOM CHART on a wall, so that the setting reference (vertical line) center is aligned with the vehicle body center line (leveling line) and the height of the setting reference (horizontal line) center from the floor is 1,000 mm (3 ft, 3 3/8 in).

ADA10388

(a) Vehicle body center line (C-D line) (b) Wall (c) Setting reference (vertical line)

ADA00604

(a) ① = Setting reference (vertical line) and vehicle body center line (C-D line) (c) Plumb bob (e) 1,000 mm (3 ft, 3 3/8 in)
 (b) ② = Setting reference (horizontal line) (d) Floor

Camera Adjustment, Inspection

EyeSight

CAUTION:

- Centering accuracy of the plumb bob shall be ± 4.0 mm (± 0.16 in) or less.

ADA00594

(a) ± 4.0 mm (± 0.16 in)

(b) Marking

(c) Plumb bob

- Positioning accuracy of the measure shall be ± 2.0 mm (± 0.08 in) or less.
- Centering accuracy of the tire shall be ± 4.0 mm (± 0.16 in) or less.

ADA00595

(a) ± 4.0 mm (± 0.16 in)

(c) Plumb bob

(d) Marking

(b) Tire center line

- Apply the lighting from the upper direction of RANDOM CHART, and make adjustment so that brightness is even in the CHART. (If the lighting is applied from the position where light reflects at RANDOM CHART, the adjustment cannot be done, because the reflected light enters the camera.)

(a) RANDOM CHART

(b) Lighting

Camera Adjustment, Inspection

EyeSight

9) Turn the ignition switch to OFF.

10) Check the windshield glass and the dashboard. <Ref. to ES(diag)-7, WINDSHIELD GLASS AND DASHBOARD, INSPECTION, General Description.>

CAUTION:

If there are any dirt, object or reflection from dashboard within the visibility of stereo camera, the correct adjustment and inspection can not be performed. Especially, do not put paper etc. on the dashboard.

11) Connect the Subaru Select Monitor.

NOTE:

- Use the Subaru Select Monitor equipped with the latest version of the software.
- For detailed operation procedures, refer to “Application help”.

12) Turn the ignition switch to ON.

13) Wait for 10 seconds.

14) On «Start» display, select «Diagnosis».

15) On «Vehicle selection» display, enter vehicle information and select «Confirmed».

16) On «Main Menu» display, select «Each System».

17) Select «EyeSight» on «Select System» display while pressing the pre-collision brake OFF switch and the lane departure warning OFF switch mounted on stereo camera cover assembly at the same time, and then select «Enter».

NOTE:

If «EyeSight» is selected without pressing two switches at the same time, the camera adjustment items are not displayed in «Work Support». (for preventing misoperation)

Also, the message is not displayed, when the camera does not finish the start-up (approx. 10 seconds after ignition switch ON). In this case, repeat from the selection of «EyeSight».

18) On «Select Function» display, select «Work Support».

19) From the work support item list, select and perform camera adjustment or other inspections.

NOTE:

- When performing {Camera adjustment, inspection}, pre-collision brake OFF indicator light, lane departure warning OFF indicator light in the meter will illuminate, and the normal function will be disabled.
- After camera adjustment, the function will be enabled, when the ignition switch is turned to OFF and system is restarted.

2. ADJUSTMENT VALUE CLEAR

Perform when replacing stereo camera. (Do not perform when performing stereo camera re-adjustment and inspection)

1) From the work support item list, select «Clear adjustment value».

2) When «Make the following adjustment/inspection. Please push OK if ready.» is displayed, if preparation is ready, select «OK».

3) When «Clear the adjustment value.» is displayed, select «OK».

4) When «Clearing adjustment value...» is displayed, wait until process finishes.

5) When the adjustment value clear is finished correctly, and «Adjustment value cleared OK!» is displayed, select «OK» to finish.

6) Turn the ignition switch to OFF and wait for approx. 5 seconds or more.

CAUTION:

If the ignition switch OFF period is short, the adjustment value clear can not be performed correctly.

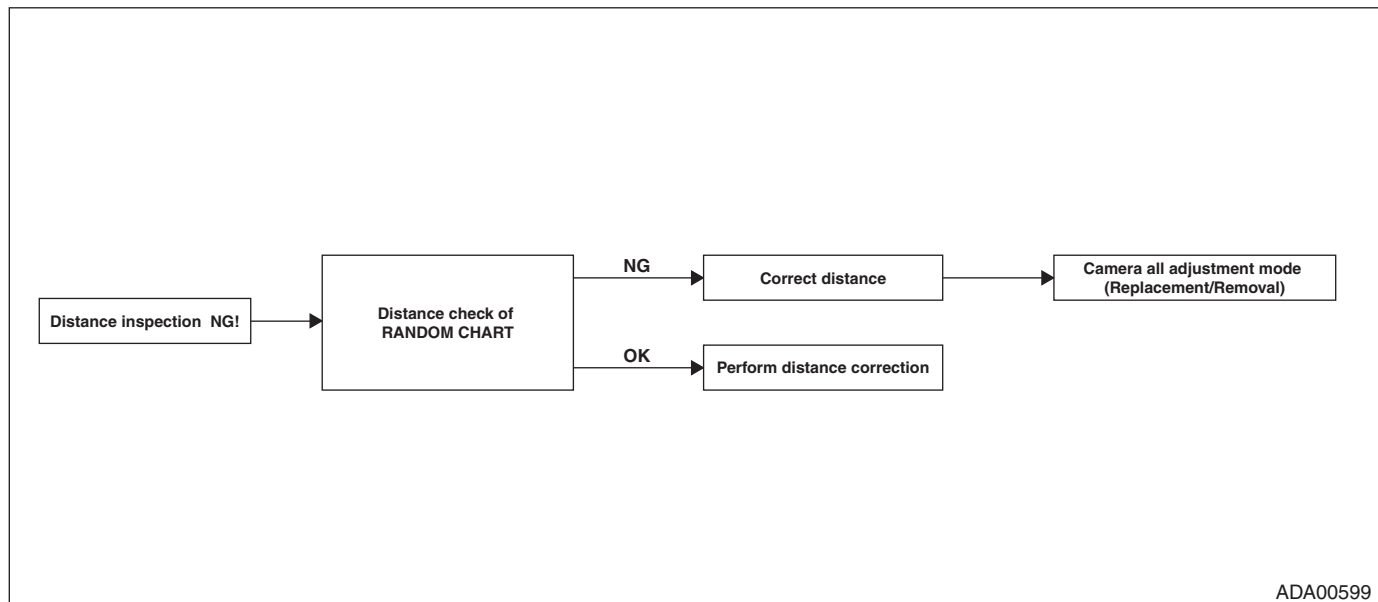

7) Next, perform the camera all adjustment mode (replacement/removal). <Ref. to ES-27, CAMERA ALL ADJUSTMENT MODE (REPLACEMENT/REMOVAL), PROCEDURE, Camera Adjustment, Inspection.>

3. CAMERA ALL ADJUSTMENT MODE (REPLACEMENT/REMOVAL)

Perform this procedure when the stereo camera is replaced or re-adjustment is necessary (when stereo camera malfunctioning, when stereo camera reinstalled, when windshield glass replaced).

CAUTION:

- When the stereo camera is replaced, be sure to perform the «Clear adjustment value» first. When {Clear adjustment value} was skipped, restart the procedure from {Clear adjustment value} again. <Ref. to ES-26, ADJUSTMENT VALUE CLEAR, PROCEDURE, Camera Adjustment, Inspection.>
 - Perform the camera adjustment and inspection at curb weight without passengers.
 - When the camera all adjustment mode is performed, the procedures must be completed correctly to the end. Otherwise, the warning is displayed on the meter LCD when the vehicle moves.
- 1) From the work support item list, select «Camera all adjustment mode (replacement/removal)».
 - 2) When «Make the following adjustment/inspection. Please push OK if ready.» is displayed, if preparation is ready, select «OK».
 - 3) When «In process...» is displayed, wait until inspection finishes.
 - 4) When the accuracy rate inspection is finished correctly, and «Accuracy rate ○○% OK!» is displayed, select «OK» to go to step 9).
 - 5) When «Distance inspection NG!» is displayed, refer to the NOTE below.

NOTE:

Distance check and adjustment of RANDOM CHART <Ref. to ES-13, PREPARATIONS, PROCEDURE, Camera Adjustment, Inspection.>

- 6) When «Perform distance correction.» is displayed, select «OK». When the distance correction is finished correctly, and «Distance correction OK!» is displayed, select «OK» and proceed to the accuracy rate inspection.
- 7) When «Perform accuracy rate inspection.» is displayed, select «OK». When the accuracy rate inspection is finished correctly, and «Accuracy rate ○○% OK!» is displayed, select «OK» to go to next.
- 8) When «○○ NG!» is displayed during adjustment, refer to the NOTE below.

Camera Adjustment, Inspection

EyeSight

CAUTION:

For details on the displayed items, refer to the following list. Check the list items, and if the same NG item is displayed even when aiming is performed again, replace the stereo camera.

ADA10165

LIST

Error code	Display	Check items on error	Remarks
1401	«Vehicle State, Environment NG!»	Check body integrated unit.	—
1402	«Vehicle Model Information Registration NG!»	Confirm the part numbers of EyeSight system components, and reconfirm that the unit should be installed to that vehicle. To confirm the components, check each item.	—
1403	«Optical Axis Contrast NG!»	1. Make sure that the stereo camera cover assembly is installed correctly.	Highly relevant with the check items 1 to 12.
1404	«Optical Axis Target Detection NG!»	2. There should be no obstacles that blocks the stereo camera.	Highly relevant with the check items 4, 6, 7, 8, 9, 10, 11 and 12.
1405	«Optical Axis Target Detection NG!»	3. Stereo camera and camera plate are assembled with no gap.	Highly relevant with the check items 4, 6, 7, 8, 9, 10, 11 and 12.
1406	«Optical Axis Right and Left Target Detection NG!»	4. Random chart for ver. 3 must be used.	Highly relevant with the check items 1 to 12.
1407	«Out of the Optical Axis Adjustment Range NG!»	5. There should be no obstacles that blocks the random chart.	Highly relevant with the check items 3 and 6.
		6. Random chart must be set correctly for the vehicle.	
		7. Grid pattern of random chart should not be dirty or damaged.	
		8. Lighting circumstance for random chart should be normal.	
		9. Make sure that the headlight is off.	
		10. There should be no objects (reflection) on the instrument panel.	
		11. Dirt should not adhere to the windshield or the lens filter of the stereo camera.	
		12. There should be no crack on the windshield.	
		NOTE: Detecting measures for the error codes 1403, 1404, 1405, 1406 and 1407 are different. Check items on error with high relevance are shown in the remarks.	

Camera Adjustment, Inspection

EyeSight

Error code	Display	Check items on error	Remarks
1408	«Optical axis adjustment Upward inclination NG!»	1. Random chart must be set correctly for the vehicle. 2. Aiming is performed with the vehicle at curb weight. 3. There should be no malfunction in the suspension. If there are no problems above, perform shim adjustment so that optical axis turns downward.	—
1409	«Optical axis adjustment Downward inclination NG!»	1. Random chart must be set correctly for the vehicle. 2. Aiming is performed with the vehicle at curb weight. 3. There should be no malfunction in the suspension. If there are no problems above, perform shim adjustment so that optical axis turns upward.	—
140A	«Rough Adjustment Matching NG!»	1. Make sure that the stereo camera cover assembly is installed correctly. 2. There should be no obstacles that blocks the stereo camera. 3. Stereo camera and camera plate are assembled with no gap.	Highly relevant with the check items 1 to 9.
140B	«Coarse adjustment NG!»	4. There should be no obstacles that blocks the random chart. 5. Random pattern of random chart should not be dirty or damaged. 6. Lighting circumstance for random chart should be normal.	Highly relevant with the check items 3, 5, 7 and 9.
140C	«Coarse adjustment NG!»	7. There should be no objects (reflection) on the instrument panel. 8. Dirt should not adhere to the windshield or the lens filter of the stereo camera. 9. There should be no crack on the windshield. NOTE: Detecting measures for the error codes 140A, 140B and 140C are different. Check items on error with high relevance are shown in the remarks.	Highly relevant with the check items 3, 5, 7 and 9.
140E	«Inspection range field of view NG!»	1. Make sure that the stereo camera cover assembly is installed correctly. 2. There should be no obstacles that blocks the random chart. 3. Random pattern of random chart should not be dirty or damaged. 4. Lighting circumstance for random chart should be normal. 5. There should be no objects (reflection) on the instrument panel. 6. Dirt should not adhere to the windshield or the lens filter of the stereo camera. 7. There should be no crack on the windshield. 8. Windshield for EyeSight should be assembled.	—
140F	«Distance inspection NG!»	1. Distance from random chart to wheel center of the vehicle should be 4,000 mm (13.12 ft). 2. Lighting circumstance for random chart should be normal.	—
1410	«Accuracy rate 00% NG !»	1. Lighting circumstance for random chart should be normal. 2. Random pattern of random chart should not be dirty or damaged. 3. There should be no objects (reflection) on the instrument panel. 4. Dirt should not adhere to the windshield or the lens filter of the stereo camera. 5. There should be no crack on the windshield.	—
1501	«Distance correction NG!»	When «Distance inspection NG!» is displayed and distance correction is performed without inspection, check the following. 1. Distance from random chart to wheel center of the vehicle should be 4,000 mm (13.12 ft). 2. Lighting circumstance for random chart should be normal.	—

NOTE:

- Shim adjustment: <Ref. to ES-31, SHIM ADJUSTMENT, PROCEDURE, Camera Adjustment, Inspection.>
- Basic inspection items: <Ref. to ES(diag)-7, INSPECTION, General Description.>
- Aiming preparation items: <Ref. to ES-13, PREPARATIONS, PROCEDURE, Camera Adjustment, Inspection.>

Camera Adjustment, Inspection

EyeSight

9) Turn the ignition switch to OFF and wait for approx. 10 seconds. (time necessary to save adjustment and inspection result)

CAUTION:

- If the ignition switch OFF period after adjustment and inspection finished is short, the adjustment and inspection result cannot be saved correctly. The warning is displayed on the meter LCD, when the vehicle moves.
- When aiming begins, normal recognition process stops and the warning is displayed on the meter LCD. The warning display will be cleared by turning the ignition switch OFF → ON.
- If the steering wheel is operated many times during adjustment and inspection preparation, the power steering control module is overheated. Therefore, you may have to wait for at least 10 seconds after turning the ignition switch to OFF.

10) Turn the ignition switch to ON. Make sure the «Aiming Completion Status» of «Data monitor» is «Exit» using Subaru Select Monitor. (This is different from «Initial Aiming Completion Status»)

11) Perform the {Clear Memory}, and turn the ignition switch to OFF.

12) Subsequently perform the automatic adjustment and function check by a test driving. <Ref. to ES-30, AUTOMATIC ADJUSTMENT AND FUNCTION CHECK BY DRIVING, PROCEDURE, Camera Adjustment, Inspection.>

4. AUTOMATIC ADJUSTMENT AND FUNCTION CHECK BY DRIVING

NOTE:

- Perform the automatic adjustment and function check by driving to improve the recognition accuracy of stereo camera, when the stereo camera is replaced or re-adjusted, or the EyeSight function does not operate correctly.
 - The automatic adjustment and function check by driving adjust the stereo camera more in detail, based on the stereo camera adjustment using RANDOM CHART.
- 1) Perform this procedure after finishing stereo camera adjustment and inspection.
 - 2) Connect the Subaru Select Monitor.

NOTE:

- Use the Subaru Select Monitor equipped with the latest version of the software.
 - For detailed operation procedures, refer to “Application help”.
- 3) On «Start» display, select «Diagnosis».
 - 4) On «Vehicle selection» display, enter vehicle information and select «Confirmed».
 - 5) On «Main Menu» display, select «Each System».
 - 6) On «Select System» display, select «EyeSight» and then select «Enter».
 - 7) On «Select Function» display, select «Data Monitor».
 - 8) From the data monitor item list, display «Automatic Adjustment Status». <Ref. to ES(diag)-23, OPERATION, Read Current Data.>

9) Drive the vehicle until «Automatic Adjustment Status» displays «0F», «1F», «2F» or «3F».

CAUTION:

- For the automatic adjustment, drive the vehicle on straight road with white lines on both sides at a speed of 40 km/h (25 MPH) or more for at least five minutes, while maintaining distance from the preceding vehicle 40 m (132 ft) or more.
- Maintain the following conditions until «Automatic Adjustment Status» displays «0F», «1F», «2F» or «3F».
 - Turn the active lane keep and cruise main to OFF.
 - Hold down the pre-collision brake OFF switch for two seconds to turn OFF the pre-collision brake function.

Display	Contents	Unit of measure	Note (at idling)
Automatic adjustment status	Index for automatic adjustment operation performed by the driving test after the completion of the optical axis adjustment	—	«0F», «1F», «2F» or «3F» is displayed when completed.

NOTE:

- It may takes long until «0F», «1F», «2F» or «3F» is displayed depends on the road condition etc.
- For new vehicles, «00» may be displayed. A test-drive is not necessary before delivery because high-accuracy aiming setting has been performed at the factory.

10) From the data monitor item list, display «Lane recognition status» to check if any of the following appears.

NOTE:

When driving does not continue until «0F», «1F», «2F» or «3F» is displayed, it may take long before recognition completes.

- Recognizing white lines on both sides during driving at 40 km/h (25 MPH) or more: «03»
- Recognizing white lines on both sides with lane width 3 m (10 ft) or more during driving at 65 km/h (40 MPH) or more: «05»

Display	Contents	Unit of measure	Note (at idling)
Lane recognition status	Display of lane recognition status	—	Recognized when vehicle lane can be seen by 20 m (66 ft) or more.

11) From the data monitor item list, display «Preceding vehicle distance» to check if the distance from the preceding vehicle is approximately the same.

5. SHIM ADJUSTMENT

- 1) Turn the ignition switch to OFF.
- 2) Detach the stereo camera cover assembly, and remove the stereo camera. <Ref. to ES-7, REMOVAL, Stereo Camera.>
- 3) Remove the stereo camera plate, and insert the shim into the vehicle body and camera plate.

Preparation items:

Genuine part: Shim (washer) (031105000)

NOTE:

- Inserting the shim into the vehicle front side makes camera downward.
 - Inserting the shim into the vehicle rear side makes camera upward.
 - There is a case that the shim may be inserted at the production line, but it is not abnormal.
- 4) Install the stereo camera plate.

Tightening torque:

5.5 ± 1.0 N·m (0.56 ± 0.10 kgf·m, 4.1 ± 0.7 ft·lb)

- 5) Install the stereo camera and stereo camera cover assembly. <Ref. to ES-7, REMOVAL, Stereo Camera.>
- 6) Perform the camera all adjustment mode (replacement/removal). <Ref. to ES-27, CAMERA ALL ADJUSTMENT MODE (REPLACEMENT/REMOVAL), PROCEDURE, Camera Adjustment, Inspection.>

6. CAMERA INITIALIZATION

This is a recovery measure prepared for the data failure caused by the low battery voltage during data storage to inside the stereo camera.

CAUTION:

Do not usually perform camera initialization because it will clear the aiming data and/or DTCs.

Perform the camera initialization only when the aiming result is NG even if the vehicle is placed correctly as shown in the flowchart described in "A: Procedure". After camera initialization, perform the aiming in the same procedure as for camera replacement.

1) Connect the Subaru Select Monitor.

NOTE:

- Use the Subaru Select Monitor equipped with the latest version of the software.
 - For detailed operation procedures, refer to "Application help".
- 2) Turn the ignition switch to ON.
 - 3) Wait for 10 seconds.
 - 4) On «Start» display, select «Diagnosis».
 - 5) On «Vehicle selection» display, enter vehicle information and select «Confirmed».
 - 6) On «Main Menu» display, select «Each System».
 - 7) On «Select System» display, select «EyeSight» and then select «Enter».
 - 8) On «Select Function» display, select «DTC».
 - 9) Select «Clear Memory» while pressing the pre-collision brake OFF switch and the lane departure warning OFF switch mounted on stereo camera cover assembly at the same time.
 - 10) Turn the ignition switch to OFF and wait for 5 seconds.
 - 11) Next, perform the clear adjustment value. <Ref. to ES-26, ADJUSTMENT VALUE CLEAR, PROCEDURE, Camera Adjustment, Inspection.>

7. Switches and Harness

A: NOTE

1. PRE-COLLISION BRAKE OFF SWITCH & LANE DEPARTURE WARNING OFF SWITCH

The pre-collision brake OFF & lane departure warning OFF switch is integrated in the stereo camera cover assembly.

If the pre-collision brake OFF & lane departure warning OFF switch is faulty, replace the stereo camera cover assembly. <Ref. to ES-7, Stereo Camera.>

2. EyeSight STEERING SWITCH

For the operation procedures for the EyeSight steering switch, refer to “CRUISE CONTROL SYSTEM” section. <Ref. to CC-6, Cruise Control Command Switch.>

B: INSPECTION

1. PRE-COLLISION BRAKE OFF SWITCH AND LANE DEPARTURE WARNING OFF SWITCH

1) Measure the resistance between connector terminals.

Preparation tool:

Circuit tester

- Pre-collision brake OFF switch

Terminal No.	Inspection conditions	Standard
10 — 8	OFF	Approx. 1 k Ω
	ON	Less than 1 Ω

- Lane departure warning OFF switch

Terminal No.	Inspection conditions	Standard
9 — 8	OFF	Approx. 1 k Ω
	ON	Less than 1 Ω

2) Apply battery voltage between the connector terminals to check lighting condition of illumination inside the switch.

Terminal No.	Inspection conditions	Specification
1 (+) — 2 (-)	Apply battery voltage.	Light ON

3) Replace the stereo camera cover assembly if faulty is found in the inspection.

Switches and Harness

EyeSight

2. EyeSight STEERING SWITCH

1) Measure the resistance between connector terminals.

Preparation tool:
Circuit tester

Terminal No.	Inspection conditions		Standard
3 — 9	CRUISE (MAIN) SET/- RES/+	All OFF	Approx. 4,020 Ω
	CRUISE (MAIN)	ON	Less than 1 Ω
	SET/-	ON	Approx. 250 Ω
	RES/+	ON	Approx. 1,470 Ω
4 — 9	DISTANCE	OFF	1 MΩ or more
		ON	Less than 1 Ω

2) Apply battery voltage between the connector terminals to check lighting condition of illumination inside the switch.

Terminal No.	Inspection conditions	Specification
10 (+) — 11 (-)	Apply battery voltage.	Light ON

3) Replace the EyeSight steering switch if it is found defective.

8. Combination Meter

A: NOTE

For the operation procedures for combination meter, refer to “INSTRUMENTATION/DRIVER INFO” section.
<Ref. to IDI-18, Combination Meter.>

9. Transmission Control Module (TCM)

A: NOTE

For the operation procedures for transmission control module (TCM), refer to “CONTINUOUSLY VARIABLE TRANSMISSION” section. <Ref. to CVT(TR580)-148, Transmission Control Module (TCM).>

10. Stop Light & Brake Switch

A: NOTE

For the operation procedures for stop light and brake switch, refer to “BRAKE” section. <Ref. to BR-72, Stop Light Switch.>

11.VDC Control Module and Hydraulic Control Unit (VDCCM&H/U)

A: NOTE

For the operation procedures for VDC control module & hydraulic control module (VDCCM&H/U), refer to “VEHICLE DYNAMICS CONTROL (VDC)” section. <Ref. to VDC-9, VDC Control Module and Hydraulic Control Unit (VDCCM&H/U).>

12. Multi-function Display (MFD)

A: NOTE

For the operation procedures for Multi-Function Display (MFD), refer to “INSTRUMENTATION/DRIVER INFO” section. <Ref. to IDI-25, Multi-function Display (MFD).>

13.Roll Connector

A: NOTE

For the operation procedures for roll connector (steering angle sensor), refer to “AIRBAG SYSTEM” section.
<Ref. to AB-59, Roll Connector.>

14. Body Integrated Unit

A: NOTE

For the operation procedures for body integrated unit, refer to "STARTING/CHARGING SYSTEMS" section.
<Ref. to SL-72, Body Integrated Unit.>

15. Diagnostics with Phenomenon

A: INSPECTION

Refer to “Diagnostics with Phenomenon” of “EyeSight (DIAGNOSTICS)” section. <Ref. to ES(diag)-45, Diagnostics with Phenomenon.>

16. Diagnostic Procedure with Diagnostic Trouble Code (DTC)	71

Basic Diagnostic Procedure

EyeSight (DIAGNOSTICS)

1. Basic Diagnostic Procedure

A: PROCEDURE

CAUTION:

- Start the diagnosis after the engine has started. (Cruise control main switch does not turn on even if it is pressed before the engine starts.)
- When performing diagnosis, observe the legal speed limit on the road.
- ECM cancel code and ACC cancel code are not the diagnostic trouble code (DTC). These codes will also appear when the cruise control is cancelled by the driver's operation. Do not confuse them.
- Be sure to get an assistant to support the diagnosis while driving, and have him/her operate the select monitor.
- Be sure to record the following data before performing the Clear Memory. (Data must be obtained before inspection because the Clear Memory operation deletes previous faults and temporary stop history.)
 - All diagnostic trouble codes (DTCs)
 - DTC of stereo camera (current malfunction, past malfunction)
 - Freeze frame data of stereo camera
 - ACC cancel code of stereo camera
 - EyeSight temporary stop code of stereo camera
 - Current data of stereo camera

(To obtain the data concerning camera adjustment information, previous trouble or temporary stop history, all data must be measured for a few seconds after the engine has started.)

- When a temporary stop occurs, stereo camera may be affected by a small amount of dirt that would not be perceived by the driver. In this case, cleaning the windshield glass is effective. <Ref. to ES(diag)-7, WINDSHIELD GLASS AND DASHBOARD, INSPECTION, General Description.>

	Step	Check	Yes	No
1	PREPARATION BEFORE INSPECTION. Using the Check List for Interview, confirm the condition of the malfunction occurrence from the user. <Ref. to ES(diag)-3, CHECK, Check List for Interview.>	Is there any component that obviously seems to affect the malfunction?	Repair or replace the component that seems to affect the malfunction.	Go to step 2.
2	CHECK DTC. Read the DTC using Subaru Select Monitor. <Ref. to ES(diag)-39, Diagnostic Code(s) Display.> NOTE: When communication with the stereo camera could not be established, check the circuit. <Ref. to ES(diag)-21, COMMUNICATION FOR INITIALIZING IMPOSSIBLE, INSPECTION, Subaru Select Monitor.>	Is DTC displayed on Subaru Select Monitor?	Perform the diagnosis according to DTC and freeze frame data. <Ref. to ES(diag)-39, Diagnostic Code(s) Display.> <Ref. to ES(diag)-43, Freeze Frame Data Display.> If the diagnostic codes other than the stereo camera are displayed, refer to the diagnosis for the relevant codes.	Go to step 3.
3	PERFORM DIAGNOSTICS WITH PHENOMENON. Using the diagnostics with phenomenon, perform inspection. <Ref. to ES(diag)-45, Diagnostics with Phenomenon.>	Is the vehicle free from any problem described in the diagnostics with phenomenon? / Are indicators normal?	Finish the diagnosis.	Perform the diagnosis according to the diagnostics with phenomenon.

Check List for Interview

EyeSight (DIAGNOSTICS)

2. Check List for Interview

A: CHECK

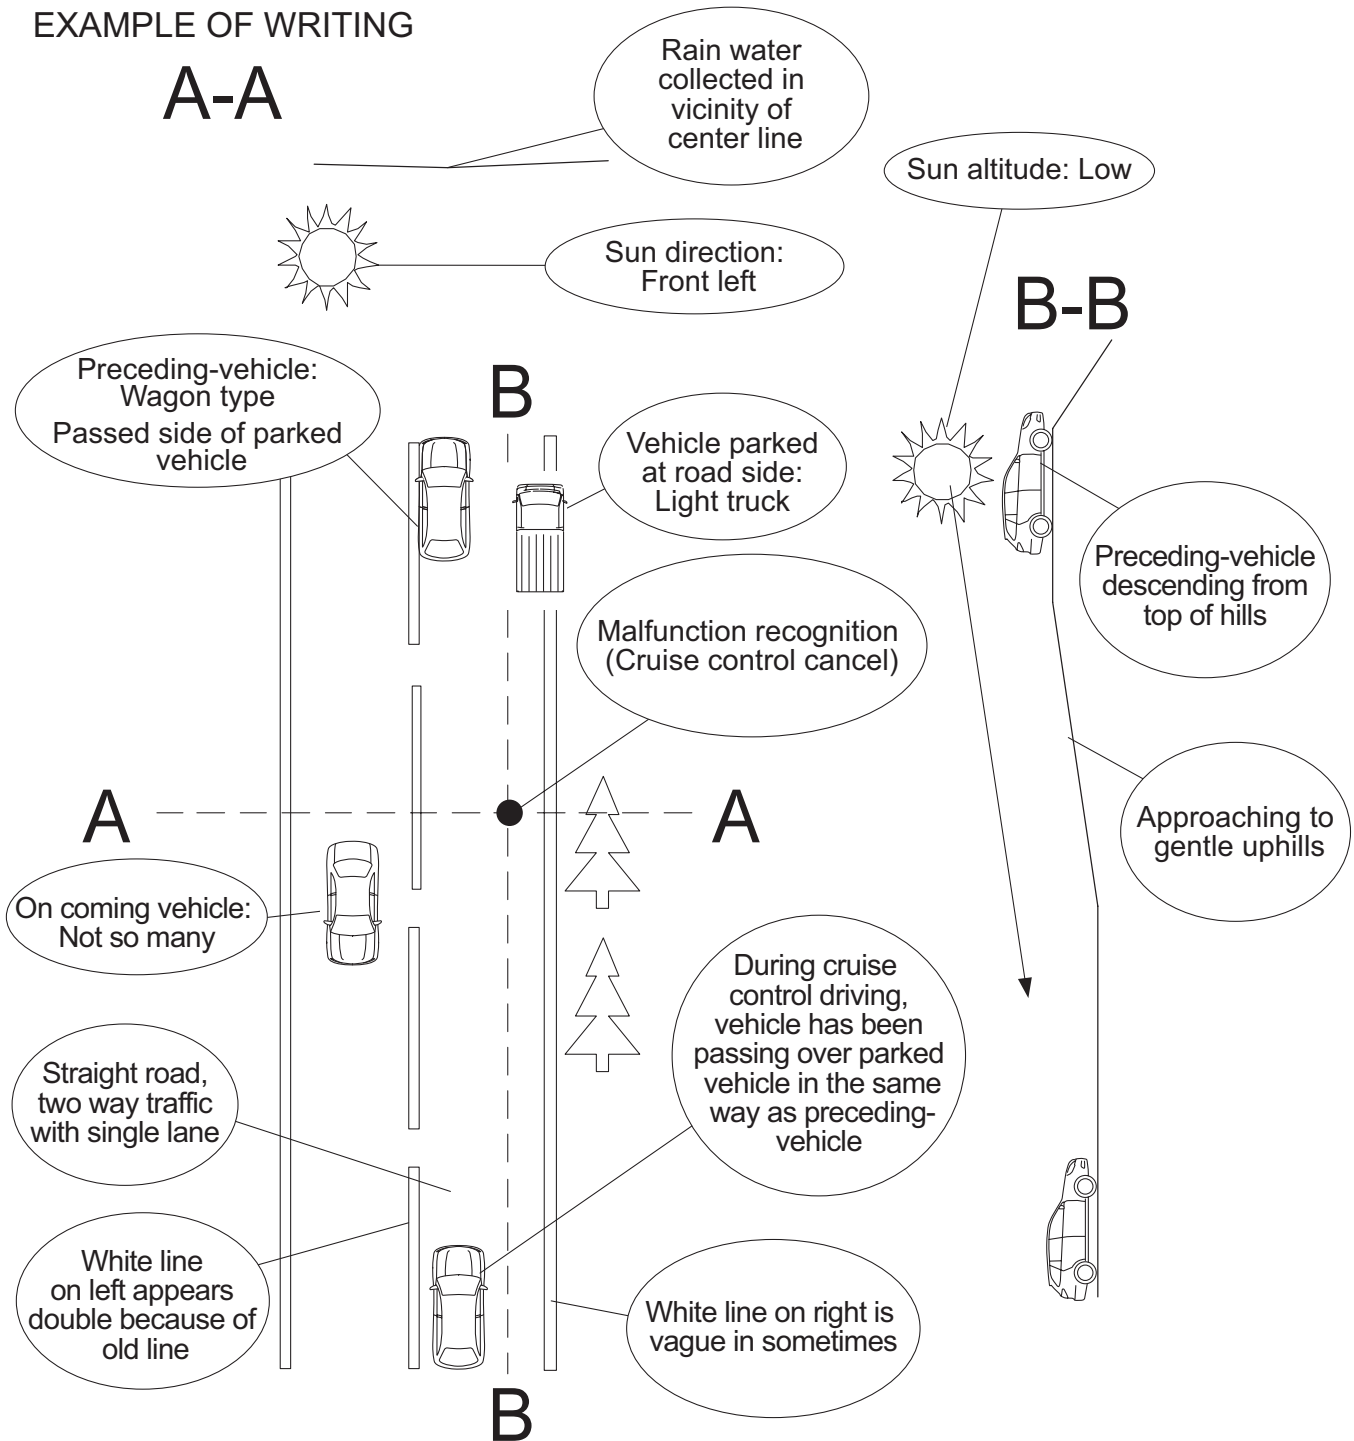

Inspect the following items regarding the vehicle's state.

Writer/ Inspector	Writer's name			
	Inspector's Name			
Vehicle information	Car accessory equipment condition	Car accessory is installed to the windshield glass.	No/Yes (Position:)	
		Other	No/Yes (Accessory's name:)	
	Is there any modification for the following items?	Suspension?	Not changed / Changed (Specifically:)	
		Headlight?	Not changed / Changed (Specifically:)	
		Tire size?	Not changed / Changed (Specifically:)	
		Front wiper?	Not changed / Changed (Specifically:)	
	How is the condition around camera?	Is there any scratch or damage on the windshield glass?	No/Yes (Specifically:)	
		Are antennas, etc. attached on the prohibited area?	No/Yes (Specifically:)	
		Is wide mirror or accessory attached?	No/Yes (Specifically:)	
	How is the surface condition of the windshield glass?	Presence of oil film, fogging, dirt and/or glass coating	No/Yes (Specifically:)	
	How is the condition of the dashboard?	Is there anything that can be easily reflected against the windshield glass on the dashboard?	No/Yes (Specifically:)	
	How is the deterioration of the wiper?	Does any streak or uneven wiping area remain in front of the camera?	No/Yes (Specifically:)	
	How is the condition of the tire?	Is there any wear? Is there any excessive wear difference?	No/Yes (Specifically:)	
		Is the air pressure proper?	Proper/Improper (Specifically:)	
How is the condition of the camera lens filter?	Is there finger print adhesion or cracks on the lens filter?	No/Yes (Specifically:)		
Description of malfunction	What kind of malfunction has been detected?	Failure / temporary stop / faulty operation of adaptive cruise control / faulty operation of pre-collision brake / other faulty operations		
	What kind of DTC and/or cancel code is displayed?			
	How is the meter display?	EyeSight warning light	Off/On/Blink	
		Pre-collision brake OFF indicator light	Off/On	
		Lane departure warning OFF indicator light	Off/On	
Multi information display		<ul style="list-style-type: none"> • EyeSight Disabled No Camera View • EyeSight Disabled Temp Range • EyeSight Disabled Check Manual 		

Check List for Interview

EXAMPLE OF WRITING

A-A

ADA10019

General Description

EyeSight (DIAGNOSTICS)

3. General Description

A: CAUTION

1. AIRBAG SYSTEM

Airbag system wiring harness is routed near the cruise control command switch.

CAUTION:

- Do not use the electrical test equipment on the airbag system wiring harnesses and connector circuits.
- Be careful not to damage the airbag system wiring harness when servicing the cruise control command switch.

2. EyeSight

CAUTION:

- Do not hold the camera unit of the stereo camera.
- Do not touch the lens on the stereo camera.
- Do not clean the lens of the stereo camera.
- When cleaning the windshield glass, use care so that the glass cleaner, etc. does not come in contact with the lens of the stereo camera.
- Do not make an impact or apply excessive force to the stereo camera.
- Do not disassemble the stereo camera.
- Do not change the installation position of the stereo camera or do not modify the surrounding structure.
- If the stereo camera or windshield glass is removed or replaced, always adjust or check the stereo camera.
- When lifting up the vehicle to rotate the tires, turn off the pre-crash function.
- Stereo camera axis may be displaced even in a minor collision. So be sure to adjust the stereo camera even when the EyeSight warning light is not illuminated or when the “Stereo Camera Temporary Stop” is not displayed on the multi-information display.
- When removing the stereo camera cover assembly, cover it with a copy paper or similar dust-free paper to avoid any interference to the camera lens, and tape the paper while being careful not to let the adhesive surface contact the glass surface. Be sure to remove the paper after the procedure. <Ref. to ES-7, REMOVAL, Stereo Camera.>

B: PREPARATION TOOL

1. SPECIAL TOOL

ILLUSTRATION	TOOL NUMBER	DESCRIPTION	REMARKS
 STSSM4	—	SUBARU SELECT MONITOR 4	Used for setting of each function and troubleshooting for electrical system. NOTE: For detailed operation procedures of Subaru Select Monitor 4, refer to “Application help”.

2. GENERAL TOOL

TOOL NAME	REMARKS
Circuit tester	Used for measuring resistance, voltage and current.
Masking tape	Used for removing and installing stereo camera cover assembly.
DST-i	Used with Subaru Select Monitor 4.

C: INSPECTION

1. BATTERY

Check the battery. <Ref. to SC(H4DO)-51, Battery.>

2. WINDSHIELD GLASS AND DASHBOARD

Remove the windshield glass and dashboard in front of the stereo camera.

Standard:

There must be no oil film, dirt, scratch or fogging that obstructs the forward visibility of the stereo camera.

Do not stick or attach the aftermarket parts on the prohibited area (D) shown in the figure below. Even outside the prohibited area, if the abnormal operation occurs due to the reflection of the light or the reflection on the glass, change the adhering position or installation position.

- **Application of stickers or antennas, installation of wide-type mirror**
 - This will affect the visibility of the stereo camera, causing the function not to operate correctly.
- **Placement of navigation unit, ETC or other things on the dashboard**
 - These things will be reflected on the windshield glass, affecting the recognition of the stereo camera, thus causing the function not to operate correctly.
- Front view

(A) 300 mm (11.8 in)
 (B) 120 mm (4.7 in)

(C) Ceramic area
 (D) Prohibited area

(E) 200 mm (7.9 in)

General Description

EyeSight (DIAGNOSTICS)

- Side view

(A) 120 mm (4.7 in)
(B) Windshield glass

(C) Stereo camera cover
(D) Dashboard

(E) Prohibited area
(F) External monitor etc.

NOTE:

- Clean the windshield glass if dirt or fogging is found on the glass. Repair or replace the glass if damage is found.

- When cleaning the inner side of the windshield glass, be careful not to touch the lens of the stereo camera. Take care so that the glass cleaner is not applied to the lens. (As with the removal procedure of the stereo camera, cover the opening of camera cover with a copy paper or similar dust-free paper before the procedure, in order to avoid any interference to the camera lens, and tape the paper while being careful not to let the adhesive surface contact the glass surface. Be sure to remove the paper after the procedure. <Ref. to ES-7, REMOVAL, Stereo Camera.>

- When replacing the windshield glass, be sure to replace the part for the EyeSight.

- If the glass is removed or replaced, always perform the stereo camera adjustment and inspection.

General Description

- If the damage is found in the glass repair prohibited area shown in the figure below, replace the glass.
 - Damage in the prohibited area can affect the recognition of the stereo camera even if it is repaired, and thereby EyeSight function may not operate properly.

ADA00669

(A) Glass repair prohibited area	(E) 130 mm (5.1 in)	(I) 65 mm (2.6 in)
(B) Glass repairable area	(F) 135 mm (5.3 in)	(J) 280 mm (11.0 in)
(C) Glass repairable area (LHD side)	(G) 120 mm (4.7 in)	(K) 280 mm (11.0 in)
(D) Glass repairable area (RHD side)	(H) 40 mm (1.6 in)	

General Description

EyeSight (DIAGNOSTICS)

- Install the ETC transponder inside the area (A) shown in the figure below. Before installing, attach a full-scale copy of the following figure onto the windshield glass surface to install the parts to correct positions.
 - Align the position with respect to the end of the ceramic area.
 - Prepare a full-scale copy in which the reference dimension on the upper part of the figure actually has 4 inches long.
 - Only the transponder with a thickness of 1.5 inches or less can be used.

ADA00670

- Relocate any aftermarket parts out of the prohibited area.
- Do not touch the lens on the stereo camera. Do not clean the lens of the stereo camera. (If the lens surface is touched, the stereo camera must be replaced as it is impossible to clean the lens surface for ensuring quality.)

3. REAR VIEW MIRROR

Check the rear view mirror condition.

Standard:

The rear view mirror other than genuine parts shall not be used. (Wide mirrors shall not be used)

The visibility of the stereo camera shall not be blocked.

— This will affect the visibility of the stereo camera, causing the system not to operate correctly.

4. FRONT WIPER

Check the wiping condition of windshield glass.

Standard:

Use Subaru genuine part only for wiper blade body and blade rubber.

— Using the part other than genuine part will affect the recognition of the stereo camera, which may cause the function not to operate correctly.

Do not continue using the damaged blade rubber.

— The glass may be damaged. If the wiping performance decreases, or if the distinct streak is found, replace it as soon as possible.

NOTE:

Clean the windshield glass if there is an oil film or any dirt on the surface.

5. TIRE INFLATION PRESSURE

Check the tire air pressure.

Standard:

Adjust to the specified air pressure. <Ref. to WT-2, SPECIFICATION, General Description.>

Do not install worn tire or tires with excessive wear difference.

Install tires with specified size.

General Description

EyeSight (DIAGNOSTICS)

6. STEREO CAMERA

Through the windshield glass, check if there are any fingerprints or faults such as crack found on lens filters at the left and right camera lenses of the stereo camera.

NOTE:

- Do not remove the camera or camera cover to check the lens.
- When spider's web or insects are found within the camera view or inside the lens hood, remove it by blowing air etc. while taking care not to touch the lens surface. Do not use a hand or a cloth.
- Thin and uniform adhesion of dust, dirt or tobacco stains to the lens filter surface resulting from normal use will not be an obstacle. Do not attempt to clean in such cases.
- If an oil film such as a fingerprint or any excessive dirt adheres, or if the lens filter cracks, replace the stereo camera. <Ref. to ES-7, Stereo Camera.>
- If the fingerprint adhesions or cracks occur on the lens filter, the following failures may arise.
 - The vehicle may not be able to detect the preceding vehicle or obstacle due to the effects of the headlight of the oncoming vehicle.
 - The vehicle may not be able to detect the preceding vehicle or obstacle due to the effects of the brake light operation of the preceding vehicle.
 - All the functions of the EyeSight may be suspended by the self-diagnosis function equipped with the camera.
 - When the lens filter is broken, the vehicle may not be able to detect the preceding vehicle or obstacle all day and all night.
- Do not clean the lens filter with any cleaner. It is quite difficult to uniformly clean both of the right and left lenses, and such an attempt just ends up spreading dirt and will cause problems as same as those from oil film.

7. LOAD ON THE ROOF

Check that load on the roof is not sticking out to the front of the stereo camera.

Standard:

The load on the roof is placed outside the prohibited area (A) shown in the figure below.

ADA00627

(A) Prohibited area
(B) 880 mm (34.6 in)

(C) 520 mm (20.5 in)
(D) Windshield glass upper end

(E) 100 mm (3.9 in)
(F) Highest surface of the roof

6. Subaru Select Monitor

A: OPERATION

1. GENERAL DESCRIPTION

For on-board diagnosis function of the EyeSight, use the Subaru Select Monitor.

The on-board diagnosis function operates in three categories, which are used depending on the type of problems.

1) Diagnosis with diagnostic trouble code (DTC):

When the electrical failure occurs in the EyeSight, DTC is detected from the stereo camera. If the DTC is detected, the relevant DTC is displayed by illuminating or blinking the EyeSight warning light. To check the details concerning the DTC, use the Subaru Select Monitor.

2) Diagnosis with cancel code:

(1) This category of diagnosis requires actual driving of the vehicle in order to determine the cause in such a case when the set speed is cancelled during cruise control driving although cruise cancel condition is not entered.

(2) With ECM cancel code and stereo camera ACC cancel code, cancel condition (Code No.) is stored when detected during cruise control driving.

CAUTION:

- **With ECM cancel code, not only the cruise control “cancel” occurred (although the driver does not input the “cancel” operation), but also the “cancel” condition input by the driver is stored.**
- **The latest memory contents of the ECM cancel code (latest code) is cleared when the ignition switch is turned to OFF. However, memory contents set by the diagnosis of faulty switches related to the system and cruise control will remain as trouble history (memory code) after the ignition switch is turned to OFF.**

3) Real-time diagnosis:

Real-time diagnosis function is used to determine whether or not the input signal system is in good order, according to signal emitted from switches, sensors, etc.

(1) Vehicle cannot be driven at cruise speed when the problem occurs in the cruise control system or relevant circuits.

(2) Monitor the signal conditions from switches and sensors.

2. BASIC OPERATION

For detailed operation procedures, refer to “Application help”.

B: INSPECTION

1. COMMUNICATION FOR INITIALIZING IMPOSSIBLE

- Communication error with stereo camera

DETECTING CONDITION:

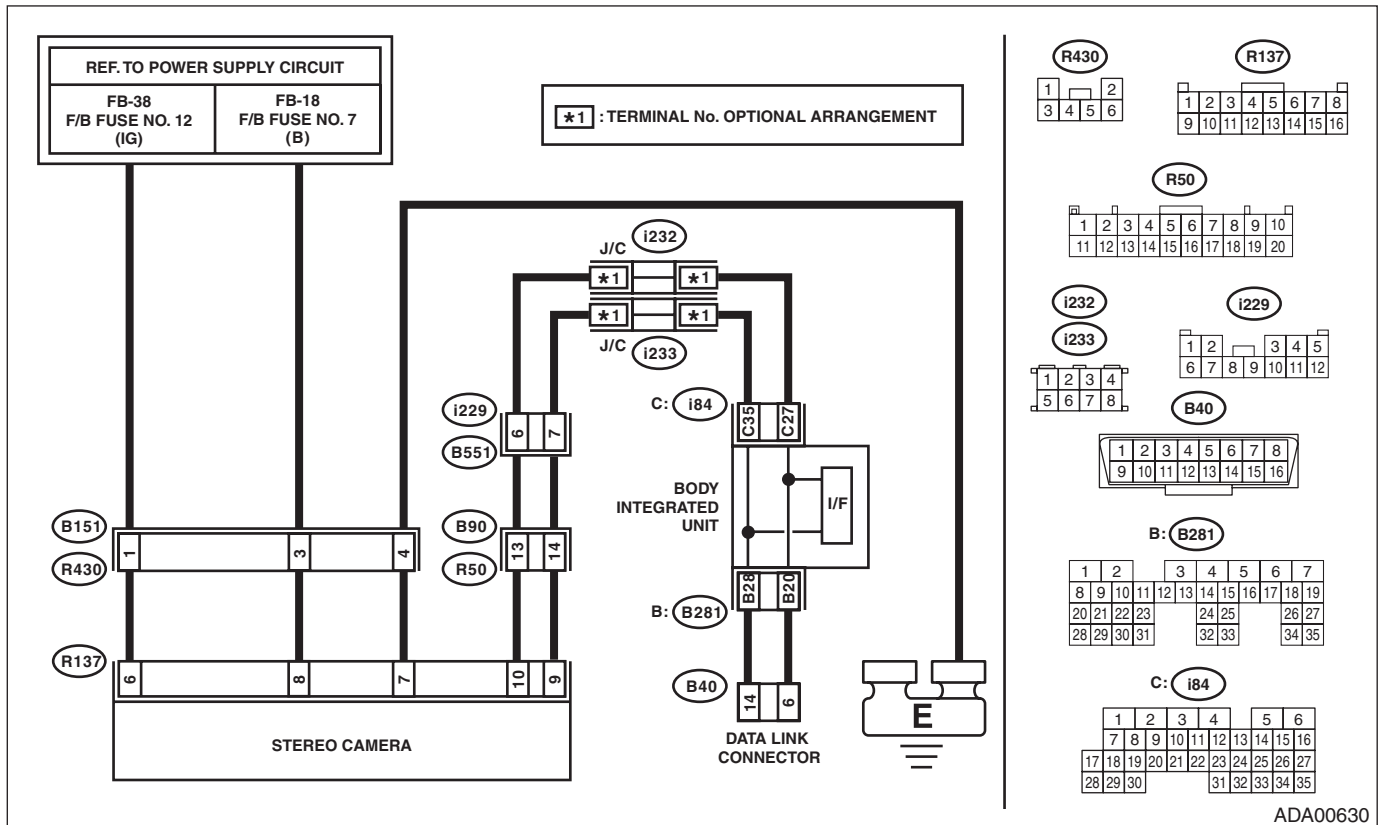

- Defective harness connector
- Power supply circuit malfunction
- Defective stereo camera
- Defective CAN system
- Defective Subaru Select Monitor

TROUBLE SYMPTOM:

- EyeSight warning light blinks.

WIRING DIAGRAM:

EyeSight System <Ref. to WI-130, WIRING DIAGRAM, EyeSight System.>

Step	Check	Yes	No	
1	CHECK IGNITION SWITCH.	Is the ignition switch ON?	Go to step 2.	Turn the ignition switch to ON, and select «EyeSight» using the Subaru Select Monitor.
2	CHECK BATTERY. 1) Turn the ignition switch to OFF. 2) Measure the battery voltage.	Is the voltage 10 V or more?	Go to step 3.	Charge or replace the battery.
3	CHECK BATTERY TERMINAL.	Is the battery terminal contact proper?	Go to step 4.	Connect the battery terminal securely or replace it.

Subaru Select Monitor

EyeSight (DIAGNOSTICS)

Step	Check	Yes	No
4 CHECK SUBARU SELECT MONITOR COMMUNICATION. 1) Turn the ignition switch to ON. 2) Using the Subaru Select Monitor, check whether the communication can be executed normally.	Is the communication between Subaru Select Monitor and body integrated unit normal?	Go to step 5.	Check the connection of the Subaru Select Monitor, and perform communication with the body integrated unit again.
5 READ DTC OF BODY INTEGRATED UNIT. Select «Body Control», and check DTC.	Is any DTC other than “Lost Communication With EyeSight” detected?	Perform the diagnosis according to DTC.	Go to step 6.
6 CHECK HARNESS CONNECTOR BETWEEN STEREO CAMERA AND DATA LINK CONNECTOR. 1) Turn the ignition switch to OFF. 2) Disconnect the stereo camera connector. 3) Measure the resistance between the stereo camera and the data link connector. Connector & terminal (R137) No. 10 — (B40) No. 6: (R137) No. 9 — (B40) No. 14:	Is the resistance less than 10 Ω?	Go to step 7.	Repair or replace the harness and connectors between the stereo camera and data link connector.
7 CHECK POWER SUPPLY CIRCUIT. 1) Turn the ignition switch to ON. 2) Measure the voltage between stereo camera and chassis ground. Connector & terminal (R137) No. 6 (+) — Chassis ground (-): (R137) No. 8 (+) — Chassis ground (-):	Is the voltage 10 V or more?	Go to step 8.	Repair or replace the harness and connectors between the stereo camera and fuse.
8 CHECK GROUND CIRCUIT. 1) Turn the ignition switch to OFF, then disconnect the ground cable from battery. 2) Measure the resistance between harness connector of stereo camera and chassis ground. Connector & terminal (R137) No. 7 — Chassis ground:	Is the resistance less than 10 Ω?	Go to step 9.	Check the harness from stereo camera to chassis ground.
9 CHECK CONNECTOR.	Is there poor contact of stereo camera connector?	Repair the connector, or replace harness.	Replace the stereo camera. <Ref. to ES-7, REMOVAL, Stereo Camera.>

7. Read Current Data

A: OPERATION

1. STEREO CAMERA

- 1) On «Start» display, select «Diagnosis».
- 2) On «Vehicle selection» display, input the target vehicle information and select «Confirmed».
- 3) On «Main Menu» display, select «Each System».
- 4) On «Select System» display, select «EyeSight» and select «Enter».
- 5) On «Select Function» display, select «Data Monitor».

NOTE:

For detailed operation procedures, refer to “Application help”.

For current data of the combination meter, refer to COMBINATION METER (DIAGNOSTICS). <Ref. to IDI(diag)-14, LIST, Read Current Data.>

8. Real-time Diagnosis

A: OPERATION

- 1) On «Start» display, select «Diagnosis».
- 2) On «Vehicle selection» display, input the target vehicle information and select «Confirmed».
- 3) On «Main Menu» display, select «Each System».
- 4) On «Select System» display, select «EyeSight» and select «Enter».
- 5) On «Select Function» display, select «Data Monitor».
- 6) Check that the display changes and the contents are correct when performing the operations as follows.
 - Depress and release the brake pedal. (Stop light switch and brake switch are turned ON.)
 - Item «Brake Lamp SW (BIU)» «Brake SW Input» «Brake Lamp SW (VDC)»
 - Turn the main switch to ON.
 - Item «Cruise Control SW Voltage (Port14)» and «Cruise Control SW Voltage (Port16)»
 - Turn the “SET/–” switch to ON.
 - Item «Cruise Control SW Voltage (Port14)» and «Cruise Control SW Voltage (Port16)»
 - Turn the “RES/+” switch to ON.
 - Item «Cruise Control SW Voltage (Port14)» and «Cruise Control SW Voltage (Port16)»
 - Turn the “Vehicle distance” switch to ON.
 - Item «Cruise Control SW Voltage (Port14)» and «Cruise Control SW Voltage (Port16)»
 - Operate the shift lever.
 - Item «Current gear position»
 - Press and hold the pre-collision brake OFF switch.
 - Item «Pre-Collision Brake OFF Indicator»
 - Press and hold the lane departure warning OFF switch.
 - Item «Lane Departure Warning OFF Indicator»

NOTE:

For detailed operation procedures, refer to “Application help”.

9. Diagnostic Code(s) Display

A: OPERATION

- 1) On «Start» display, select «Diagnosis».
- 2) On «Vehicle selection» display, input the target vehicle information and select «Confirmed».
- 3) On «Main Menu» display, select «Each System».
- 4) On «Select System» display, select «EyeSight» and select «Enter».
- 5) On «Select Function» display, select «DTC».

NOTE:

- For detailed operation procedures, refer to “Application help”.
- For details concerning DTC, refer to “List of Diagnostic Trouble Code (DTC)”. <Ref. to ES(diag)-39, LIST, Diagnostic Code(s) Display.>
- Up to ten codes can be stored. When more than ten codes are output, they will not be stored.
- The same code is stored only once, and even when the same code occurs several times, information will not be updated.

B: LIST

- List of Diagnostic Trouble Code (DTC)

DTC	Item	Contents of diagnosis	Reference
U0073	CONTROL MODULE COMMUNICATION BUS OFF	Detected when bus off status (the stereo camera detects the failure and is disconnected from CAN line) occurs.	<Ref. to ES(diag)-71, DTC U0073 CONTROL MODULE COMMUNICATION BUS OFF, Diagnostic Procedure with Diagnostic Trouble Code (DTC).>
U0100	LOST COMMUNICATION WITH ECM/PCM “A”	Detected when CAN data from ECM is not transmitted to stereo camera.	<Ref. to ES(diag)-71, DTC U0100 LOST COMMUNICATION WITH ECM/PCM “A”, Diagnostic Procedure with Diagnostic Trouble Code (DTC).>
U0101	LOST COMMUNICATION WITH TCM	Detected when CAN data from TCM is not transmitted to stereo camera.	<Ref. to ES(diag)-71, DTC U0101 LOST COMMUNICATION WITH TCM, Diagnostic Procedure with Diagnostic Trouble Code (DTC).>
U0122	LOST COMMUNICATION WITH VEHICLE DYNAMICS CONTROL MODULE	Detected when CAN data from VDC is not transmitted to stereo camera.	<Ref. to ES(diag)-71, DTC U0122 LOST COMMUNICATION WITH VEHICLE DYNAMICS CONTROL MODULE, Diagnostic Procedure with Diagnostic Trouble Code (DTC).>
U0140	LOST COMMUNICATION WITH BODY CONTROL MODULE	Detected when CAN data from body integrated unit is not transmitted to stereo camera.	<Ref. to ES(diag)-71, DTC U0140 LOST COMMUNICATION WITH BODY CONTROL MODULE, Diagnostic Procedure with Diagnostic Trouble Code (DTC).>
U0155	LOST COMMUNICATION WITH INSTRUMENT PANEL CLUSTER (IPC) CONTROL MODULE	Detected when CAN data from combination meter is not transmitted to stereo camera.	<Ref. to ES(diag)-71, DTC U0155 LOST COMMUNICATION WITH INSTRUMENT PANEL CLUSTER (IPC) CONTROL MODULE, Diagnostic Procedure with Diagnostic Trouble Code (DTC).>
U0401	INVALID DATA RECEIVED FROM ECM/PCM “A”	Failure counter diagnosis of engine control module (ECM)	<Ref. to ES(diag)-71, DTC U0401 INVALID DATA RECEIVED FROM ECM/PCM “A”, Diagnostic Procedure with Diagnostic Trouble Code (DTC).>
U0402	INVALID DATA RECEIVED FROM TCM	Failure counter diagnosis of automatic transmission control module (TCM)	<Ref. to ES(diag)-71, DTC U0402 INVALID DATA RECEIVED FROM TCM, Diagnostic Procedure with Diagnostic Trouble Code (DTC).>
U0416	INVALID DATA RECEIVED FROM VEHICLE DYNAMICS CONTROL MODULE	Failure counter diagnosis of VDC control module (VDC CM)	<Ref. to ES(diag)-72, DTC U0416 INVALID DATA RECEIVED FROM VEHICLE DYNAMICS CONTROL MODULE, Diagnostic Procedure with Diagnostic Trouble Code (DTC).>

Diagnostic Code(s) Display

EyeSight (DIAGNOSTICS)

DTC	Item	Contents of diagnosis	Reference
U0422	INVALID DATA RECEIVED FROM BODY CONTROL MODULE	Failure counter diagnosis of body integrated unit	<Ref. to ES(diag)-72, DTC U0422 INVALID DATA RECEIVED FROM BODY CONTROL MODULE, Diagnostic Procedure with Diagnostic Trouble Code (DTC).>
U0423	INVALID DATA RECEIVED FROM INSTRUMENT PANEL CLUSTER CONTROL MODULE	Failure counter diagnosis of combination meter	<Ref. to ES(diag)-72, DTC U0423 INVALID DATA RECEIVED FROM INSTRUMENT PANEL CLUSTER CONTROL MODULE, Diagnostic Procedure with Diagnostic Trouble Code (DTC).>
B2801	TCM ABNORMAL	Detected when error occurs in the automatic transmission.	<Ref. to ES(diag)-72, DTC B2801 TCM ABNORMAL, Diagnostic Procedure with Diagnostic Trouble Code (DTC).>
B2802	ETC ABNORMAL	Detected when error occurs in the electronic throttle control.	<Ref. to ES(diag)-72, DTC B2802 ETC ABNORMAL, Diagnostic Procedure with Diagnostic Trouble Code (DTC).>
B2806	ECM ABNORMAL	Detected when error occurs in the engine control module (ECM).	<Ref. to ES(diag)-72, DTC B2806 ECM ABNORMAL, Diagnostic Procedure with Diagnostic Trouble Code (DTC).>
B2807		Detected when cruise indicator illumination request from ECM and ON/OFF information of cruise function do not match.	<Ref. to ES(diag)-72, DTC B2807 ECM ABNORMAL, Diagnostic Procedure with Diagnostic Trouble Code (DTC).>
B2809	VDC MALFUNCTION	Detected when error occurs in the VDC. (VDC failure)	<Ref. to ES(diag)-72, DTC B2809 VDC MALFUNCTION, Diagnostic Procedure with Diagnostic Trouble Code (DTC).>
B280A	VDC ECHO BACK DISAGREEMENT	Detected when error occurs in the VDC. (VDC brake control malfunction 1)	<Ref. to ES(diag)-73, DTC B280A VDC ECHO BACK DISAGREEMENT, Diagnostic Procedure with Diagnostic Trouble Code (DTC).>
B280B	VDC BRAKE FLUID PRESSURE	Detected when error occurs in the VDC. (VDC brake control malfunction 2)	<Ref. to ES(diag)-73, DTC B280B VDC BRAKE FLUID PRESSURE, Diagnostic Procedure with Diagnostic Trouble Code (DTC).>
B280F	COMBINATION METER MALFUNCTION	Detected when error occurs in the CAN communication with combination meter.	<Ref. to ES(diag)-73, DTC B280F COMBINATION METER MALFUNCTION, Diagnostic Procedure with Diagnostic Trouble Code (DTC).>
B2810	INCOMPATIBLE WITH EyeSight (COMBINATION METER)	Detected when different (undesigned) type of combination meter is installed.	<Ref. to ES(diag)-73, DTC B2810 INCOMPATIBLE WITH EyeSight (COMBINATION METER), Diagnostic Procedure with Diagnostic Trouble Code (DTC).>
B2814	POWER SUPPLY LOW VOLTAGE	Detected when battery voltage is below specified value or when the +B harness of the stereo camera is broken.	<Ref. to ES(diag)-74, DTC B2814 POWER SUPPLY LOW VOLTAGE, Diagnostic Procedure with Diagnostic Trouble Code (DTC).>
B2815	POWER SUPPLY HIGH VOLTAGE	Detected when battery voltage exceeds the specified value.	<Ref. to ES(diag)-75, DTC B2815 POWER SUPPLY HIGH VOLTAGE, Diagnostic Procedure with Diagnostic Trouble Code (DTC).>
B2817	BRAKE LAMP	Detected when error occurs in the brake light illumination circuit.	<Ref. to ES(diag)-75, DTC B2817 BRAKE LAMP, Diagnostic Procedure with Diagnostic Trouble Code (DTC).>
B28A0	VEHICLE MODEL JUDGMENT	Detected when the model code stored in EEPROM and the model code used for CAN data are different, or when +B harness of the stereo camera is broken at aiming completion.	<Ref. to ES(diag)-76, DTC B28A0 VEHICLE MODEL JUDGMENT, Diagnostic Procedure with Diagnostic Trouble Code (DTC).>
B28A1	EyeSight COMMUNICATION(ECM)	Abnormal judgment for stereo camera by ECM Or detected when the stereo camera or ECM is assembled incorrectly.	<Ref. to ES(diag)-78, DTC B28A1 EyeSight COMMUNICATION(ECM), Diagnostic Procedure with Diagnostic Trouble Code (DTC).>

Diagnostic Code(s) Display

EyeSight (DIAGNOSTICS)

DTC	Item	Contents of diagnosis	Reference
B28A2	EyeSight COMMUNICATION(VDC)	Abnormal judgment for stereo camera data by VDC	<Ref. to ES(diag)-79, DTC B28A2 EyeSight COMMUNICATION(VDC), Diagnostic Procedure with Diagnostic Trouble Code (DTC).>
B28A3	EyeSight COMMUNICATION(METER)	Abnormal judgment for stereo camera data by combination meter	<Ref. to ES(diag)-80, DTC B28A3 EyeSight COMMUNICATION(METER), Diagnostic Procedure with Diagnostic Trouble Code (DTC).>
B28A5	ENGINE TORQUE LIMITER CONTROL PROHIBIT	Detected when error occurs in the transmission data from stereo camera to ECM.	<Ref. to ES(diag)-81, DTC B28A5 ENGINE TORQUE LIMITER CONTROL PROHIBIT, Diagnostic Procedure with Diagnostic Trouble Code (DTC).>
B28A6	INTERNAL STEREO CAMERA COMMUNICATION 1	Detected when communication error occurs inside the stereo camera.	<Ref. to ES(diag)-82, DTC B28A6 INTERNAL STEREO CAMERA COMMUNICATION 1, Diagnostic Procedure with Diagnostic Trouble Code (DTC).>
B28A7	STEREO CAMERA RECOGNITION(TARGET)	Detected when error occurs in the communication data inside the control module due to external factors such as noises.	<Ref. to ES(diag)-82, DTC B28A7 STEREO CAMERA RECOGNITION(TARGET), Diagnostic Procedure with Diagnostic Trouble Code (DTC).>
B28A8	INTERNAL STEREO CAMERA COMMUNICATION 2		<Ref. to ES(diag)-82, DTC B28A8 INTERNAL STEREO CAMERA COMMUNICATION 2, Diagnostic Procedure with Diagnostic Trouble Code (DTC).>
B28A9	STEREO CAMERA SYNCHRONIZED RECOGNITION DATA		<Ref. to ES(diag)-82, DTC B28A9 STEREO CAMERA SYNCHRONIZED RECOGNITION DATA, Diagnostic Procedure with Diagnostic Trouble Code (DTC).>
B28AA	STEREO CAMERA MICROCOMPUTER 1	Detected when error occurs in the communication with microcomputer 1 system inside the stereo camera.	<Ref. to ES(diag)-82, DTC B28AA STEREO CAMERA MICROCOMPUTER 1, Diagnostic Procedure with Diagnostic Trouble Code (DTC).>
B28AB	STEREO CAMERA MICROCOMPUTER 2	Detected when error occurs in the communication with microcomputer 2 system inside the stereo camera.	<Ref. to ES(diag)-83, DTC B28AB STEREO CAMERA MICROCOMPUTER 2, Diagnostic Procedure with Diagnostic Trouble Code (DTC).>
B28AC	STEREO CAMERA ASIC	Detected when error occurs in the ASIC system inside the stereo camera.	<Ref. to ES(diag)-83, DTC B28AC STEREO CAMERA ASIC, Diagnostic Procedure with Diagnostic Trouble Code (DTC).>
B28AD	STEREO CAMERA IMAGE RECOGNITION	Detected when error occurs in the stereo camera image system.	<Ref. to ES(diag)-83, DTC B28AD STEREO CAMERA IMAGE RECOGNITION, Diagnostic Procedure with Diagnostic Trouble Code (DTC).>
B28AE	INTERNAL STEREO CAMERA POWER SUPPLY	Detected when error occurs in the internal power supply system of stereo camera.	<Ref. to ES(diag)-83, DTC B28AE INTERNAL STEREO CAMERA POWER SUPPLY, Diagnostic Procedure with Diagnostic Trouble Code (DTC).>
B28AF	STEREO CAMERA ADJUSTMENT INCOMPLETE	Detected when adjustment/inspection of camera has not been completed normally.	<Ref. to ES(diag)-83, DTC B28AF STEREO CAMERA ADJUSTMENT INCOMPLETE, Diagnostic Procedure with Diagnostic Trouble Code (DTC).>
B28B1	STEREO CAMERA AUTOMATIC ADJUSTMENT	Detected when the optical axis of stereo camera is deviated in lateral direction or when the fluctuation range of automatic adjustment value has been enlarged.	<Ref. to ES(diag)-83, DTC B28B1 STEREO CAMERA AUTOMATIC ADJUSTMENT, Diagnostic Procedure with Diagnostic Trouble Code (DTC).>

Diagnostic Code(s) Display

EyeSight (DIAGNOSTICS)

DTC	Item	Contents of diagnosis	Reference
B28B2	STEREO CAMERA HIGH TEMPERATURE	Detected when the temperature of the stereo camera excessively increases. (When this DTC is detected, the camera will not return to the normal state after performing adjustment or inspection. In this case, always replace the stereo camera.)	<Ref. to ES(diag)-84, DTC B28B2 STEREO CAMERA HIGH TEMPERATURE, Diagnostic Procedure with Diagnostic Trouble Code (DTC).>
B28B3	STEREO CAMERA LOW TEMPERATURE	Detected when the temperature of the stereo camera excessively decreases. (When this DTC is detected, the camera will not return to the normal state after performing adjustment or inspection. In this case, always replace the stereo camera.)	<Ref. to ES(diag)-84, DTC B28B3 STEREO CAMERA LOW TEMPERATURE, Diagnostic Procedure with Diagnostic Trouble Code (DTC).>
B28B5	+B CIRCUIT ABNORMAL	Detected when there is an open circuit in power supply line of the stereo camera.	<Ref. to ES(diag)-84, DTC B28B5 +B CIRCUIT OPEN, Diagnostic Procedure with Diagnostic Trouble Code (DTC).>
B28B6	PRE-COLLISION OFF SWITCH	Pre-collision brake switch or harness is faulty. Detected also when the switch is held down for over 45 seconds.	<Ref. to ES(diag)-85, DTC B28B6 PRE-COLLISION OFF SWITCH, Diagnostic Procedure with Diagnostic Trouble Code (DTC).>
B28B7	LDP OFF SWITCH	Lane departure warning OFF switch or harness is faulty. Detected also when the switch is held down for over 45 seconds.	<Ref. to ES(diag)-87, DTC B28B7 LDP OFF SWITCH, Diagnostic Procedure with Diagnostic Trouble Code (DTC).>
B28B8	EyeSight STEERING SWITCH 1	Detected when the EyeSight steering switch is not installed, when the switch is faulty, or when the harness is abnormal, open or stuck to ON.	<Ref. to ES(diag)-89, DTC B28B8 EyeSight STEERING SWITCH 1, Diagnostic Procedure with Diagnostic Trouble Code (DTC).>
B28B9	EyeSight STEERING SWITCH 2		<Ref. to ES(diag)-90, DTC B28B9 EyeSight STEERING SWITCH 2, Diagnostic Procedure with Diagnostic Trouble Code (DTC).>

10. Freeze Frame Data Display

A: OPERATION

- 1) On «Start» display, select «Diagnosis».
- 2) On «Vehicle selection» display, input the target vehicle information and select «Confirmed».
- 3) On «Main Menu» display, select «Each System».
- 4) On «Select System» display, select «EyeSight» and select «Enter».
- 5) On «Select Function» display, select «DTC».
- 6) On «DTC» display, select «FFD».

NOTE:

- For detailed operation procedures, refer to “Application help”.
- Freeze frame data is stored for three DTCs. Allocation of the three DTCs are as follows:
 - DTC that occurred first.
 - DTC that occurred first during the latest driving cycle (from IGN ON to IGN OFF).
 - DTC that occurred first during the second latest driving cycle.
 - However, DTCs will be stored in order of occurrence until these three DTCs are stored.
- For details on freeze frame data, refer to List of freeze frame data. <Ref. to ES(diag)-43, LIST, Freeze Frame Data Display.>
- Freeze frame data is cleared in Clear Memory Mode. <Ref. to ES(diag)-44, Clear Memory Mode.>

B: LIST

- List of freeze frame data

Display	Content	Unit
ECU Power Supply Voltage (IG)	Display of input voltage of stereo camera	V
Engine Speed	Engine speed	rpm
Accel opening angle	Acceleration opening angle signal	%
Brake Fluid Target Pressure	Target value of brake fluid pressure	MPa
Master Cylinder Actual Fluid Pressure	Brake pressure	MPa
Right Front Wheel W/C Actual Fluid Pressure	Right front wheel cylinder fluid pressure	MPa
Left Front Wheel W/C Actual Fluid Pressure	Left front wheel cylinder fluid pressure	MPa
Brake SW Input	Brake switch signal status	—
Brake Lamp SW (BIU)	Brake light switch signal status	—
Brake Lamp SW (VDC)	Brake light switch status	—
Trip Count	Timestamp information_Trip counter	times
Count	Timestamp information_original count identification information	—
Time Count	Timestamp information_time counter	ms
Drive Wheel Average Speed	Average wheel speed signal	km/h
Brake Lamp Command	Brake lamp light up command signal	—
Driver Brake Detection	Driver brake detection signal	—
Brake Control Actuation	Brake operation permission signal	—
Pre-Collision Brake Assist Command	Pre-collision brake assist command signal	—
Pre-Collision Brake Action	Pre-collision brake command signal	—
Adaptive Cruise Control Torque Down	Torque down prohibition signal of stereo camera	—
Engine Failure	Engine failure signal	—
Brake Lamp SW Fail Status	Brake light switch failure signal	—

11. Clear Memory Mode

A: OPERATION

- 1) On «Start» display, select «Diagnosis».
- 2) On «Vehicle selection» display, input the target vehicle information and select «Confirmed».
- 3) On «Main Menu» display, select «Each System».
- 4) On «Select System» display, select «EyeSight» and select «Enter».
- 5) On «Select Function» display, select «DTC».
- 6) On «DTC» display, select «Clear Memory».

NOTE:

For detailed operation procedures, refer to “Application help”.

12. Diagnostics with Phenomenon

A: DIAGNOSTIC PROCEDURE WITH PHENOMENON

1. TEMPORARY STOP OF EyeSight

Phenomenon	Check Item	Reference
1 Temporary stop occurs frequently. EyeSight temporary stop indicator illuminates frequently.	(1) Check EyeSight temporary stop code. <Ref. to ES(diag)-60, EyeSight Temporary Code(s) Display.>	For details on temporary stop codes, refer to CHECK LIST (CAMERA TEMPORARY STOP). Check list (camera temporary stop) <Ref. to ES(diag)-62, CHECK LIST (CAMERA TEMPORARY STOP), LIST, EyeSight Temporary Code(s) Display.> When there is a relevant item in the check list, it can be the cause of malfunction. Eliminate the cause, and check that the malfunction has been improved. If not solved, the stereo camera may be malfunctioning.

2. ADAPTIVE CRUISE CONTROL, CONVENTIONAL CRUISE CONTROL

Phenomenon	Check Item	Reference
1 Cruise control switch is not turned to ON. (CRUISE indicator light does not illuminate) Or cruise control was cancelled without operating the cruise switch.	(1) Check the ECM cruise control cancel code.	Perform the diagnosis according to displayed cancel code. <Ref. to ES(diag)-66, ECM Cancel Code(s) Display.> If not displayed, go to (2).
	(2) Perform the real-time diagnosis. Check the input signal of cruise control system.	Real-time Diagnosis <Ref. to ES(diag)-38, Real-time Diagnosis.> When normal, go to (4). When abnormal, go to (3).
	(3) Check the EyeSight steering switch.	Check EyeSight steering switch <Ref. to ES(diag)-59, CHECK EyeSight STEERING SWITCH, Diagnostics with Phenomenon.>
	(4) Check the CRUISE indicator.	Inspection of cruise indicator <Ref. to ES(diag)-58, CHECK ADAPTIVE CRUISE CONTROL INDICATOR LIGHT/CONSTANT SPEED CRUISE CONTROL INDICATOR LIGHT AND CRUISE SET INDICATOR LIGHT, Diagnostics with Phenomenon.>
2 Cruise control cannot be set. Or cruise control is cancelled without releasing operation. NOTE: • Do not turn the ignition switch to OFF after the cruise control is deactivated. • Do not operate the EyeSight steering switch after the cruise control is deactivated. If the above is performed, the cancel code the ECM will be cleared.	(1) Check the ECM cruise control cancel code.	Perform the diagnosis according to displayed cancel code. <Ref. to ES(diag)-66, ECM Cancel Code(s) Display.> If not displayed, go to (2).
	(2) Perform the real-time diagnosis. Check the input signal of cruise control system.	Real-time Diagnosis <Ref. to ES(diag)-38, Real-time Diagnosis.> When normal, go to (6). When abnormal, go to the relevant items for (3), (4), (5).
	(3) Check the EyeSight steering switch.	Check EyeSight steering switch <Ref. to ES(diag)-59, CHECK EyeSight STEERING SWITCH, Diagnostics with Phenomenon.>
	(4) Check stop light switch and brake switch.	Inspection of stop light switch and brake switch <Ref. to BR-68, Brake Pedal.> <Ref. to CC(diag)-17, 12, Diagnostic Procedure with Cancel Code.>
	(5) Check the neutral position switch.	Inspection of neutral position switch <Ref. to CC(diag)-20, 14, Diagnostic Procedure with Cancel Code.> <Ref. to CC(diag)-24, 62, Diagnostic Procedure with Cancel Code.>
	(6) Check vehicle speed sensor.	Inspection of vehicle speed sensor <Ref. to CC(diag)-23, 22, Diagnostic Procedure with Cancel Code.>

Diagnostics with Phenomenon

EyeSight (DIAGNOSTICS)

Phenomenon		Check Item	Reference
3	SET indicator does not illuminate.	Check the SET indicator.	Inspection of SET indicator <Ref. to ES(diag)-58, CHECK ADAPTIVE CRUISE CONTROL INDICATOR LIGHT/ CONSTANT SPEED CRUISE CONTROL INDICATOR LIGHT AND CRUISE SET INDICATOR LIGHT, Diagnostics with Phenomenon.>
4	Vehicle speed is not held within set speed ± 3 km/h (± 2 MPH) on a level road.	Check the vehicle speed sensor.	Inspection of vehicle speed sensor <Ref. to CC(diag)-23, 22, Diagnostic Procedure with Cancel Code.>
5	Vehicle speed does not increase or does not return to set speed after RES/+ switch has been pressed.	(1) Perform the real-time diagnosis. Check the input signal of cruise control system.	Real-time Diagnosis <Ref. to ES(diag)-38, Real-time Diagnosis.> When abnormal, go to (2).
		(2) Check the RES/+ switch.	Inspection of RES/+ switch <Ref. to ES(diag)-59, CHECK EyeSight STEERING SWITCH, Diagnostics with Phenomenon.>
6	Vehicle speed does not decrease after SET/- switch has been pressed.	(1) Perform the real-time diagnosis. Check the input signal of cruise control system.	Real-time Diagnosis <Ref. to ES(diag)-38, Real-time Diagnosis.> When abnormal, go to (2).
		(2) Check the SET/- switch.	Inspection of SET/- switch <Ref. to ES(diag)-59, CHECK EyeSight STEERING SWITCH, Diagnostics with Phenomenon.>
7	Cruise control is not deactivated after the cruise switch is pressed.	(1) Perform the real-time diagnosis. Check the input signal of cruise control system.	Real-time Diagnosis <Ref. to ES(diag)-38, Real-time Diagnosis.> When abnormal, go to (2).
		(2) Check the cruise switch.	Inspection of cruise switch <Ref. to ES(diag)-59, CHECK EyeSight STEERING SWITCH, Diagnostics with Phenomenon.>
8	Following distance does not change, even after the following distance switch is pressed.	(1) Perform the real-time diagnosis. Check the input signal of cruise control system.	Real-time Diagnosis <Ref. to ES(diag)-38, Real-time Diagnosis.> When abnormal, go to (2).
		(2) Check the following distance switch.	Inspection of following distance switch <Ref. to ES(diag)-59, CHECK EyeSight STEERING SWITCH, Diagnostics with Phenomenon.>
9	Cruise control is not released after brake pedal has been depressed.	(1) Perform the real-time diagnosis. Check the input signal of cruise control system.	Real-time Diagnosis <Ref. to ES(diag)-38, Real-time Diagnosis.> When abnormal, go to (2).
		(2) Check stop light switch and brake switch.	Inspection of stop light switch and brake switch <Ref. to CC(diag)-17, 12, Diagnostic Procedure with Cancel Code.> <Ref. to BR-73, INSTALLATION, Stop Light Switch.>
10	Cruise control is not released after shifting to the neutral position.	(1) Perform the real-time diagnosis. Check the input signal of cruise control system.	Real-time Diagnosis <Ref. to ES(diag)-38, Real-time Diagnosis.> When abnormal, go to (2).
		(2) Check the neutral position switch.	Inspection of neutral position switch <Ref. to CC(diag)-20, 14, Diagnostic Procedure with Cancel Code.>

Diagnostics with Phenomenon

EyeSight (DIAGNOSTICS)

Phenomenon	Check Item	Reference
<p>11 Acceleration or deceleration does not occur according to the preceding vehicle. The preceding vehicle is difficult to be detected. Braking force is weaker than usual. Alarm for requiring more brake pedal force does not sound.</p>	<p>(1) Using CHECK LIST (ADAPTIVE CRUISE CONTROL), check the condition and respond to it. 1) Does it apply to the condition that the use of adaptive cruise control is not desired? 2) Does it apply to the condition or the object that is hard to be recognized by the stereo camera? 3) Does it apply to the driving condition that the preceding vehicle cannot be recognized or the vehicle on the next lane or the object on the roadside may be recognized by mistake? 4) Does it apply to the condition that brake force may become poor? 5) Does it apply to the condition that the alarm for requiring more brake pedal force does not sound even in a short vehicle distance?</p>	<p>Check list (adaptive cruise control) <Ref. to ES(diag)-51, CHECK LIST (ADAPTIVE CRUISE CONTROL), DIAGNOSTIC PROCEDURE WITH PHENOMENON, Diagnostics with Phenomenon.> When there is a relevant item in the check list, it can be the cause of malfunction. Eliminate the cause, and check that the malfunction has been improved. If not solved, go to (2).</p>
	<p>(2) Check the windshield glass and dashboard.</p>	<p>Inspection of windshield glass and dashboard <Ref. to ES(diag)-7, WINDSHIELD GLASS AND DASHBOARD, INSPECTION, General Description.> When normal, go to (3).</p>
	<p>(3) Check the front wiper.</p>	<p>Inspection of front wiper <Ref. to ES(diag)-11, FRONT WIPER, INSPECTION, General Description.> When normal, go to (4).</p>
	<p>(4) Check the stereo camera.</p>	<p>CHECK STEREO CAMERA. <Ref. to ES(diag)-12, STEREO CAMERA, INSPECTION, General Description.> When normal, go to (5).</p>
	<p>(5) Bleed air from brake system.</p>	<p>Air bleeding from brake system <Ref. to BR-61, BRAKE LINE, PROCEDURE, Air Bleeding.> Go to (6).</p>
	<p>(6) Check the optical axis of the stereo camera.</p>	<p>Adjust the optical axis of the stereo camera. <Ref. to ES-12, PROCEDURE, Camera Adjustment, Inspection.></p>

Diagnostics with Phenomenon

EyeSight (DIAGNOSTICS)

3. PRE-COLLISION BRAKE, AT RAPID START PREVENTION CONTROL

Phenomenon		Check Item	Reference
1	Pre-collision brake does not operate. Or the pre-collision brake operates, but the vehicle cannot stop safely before collision. Or the pre-collision brake is released automatically. Or the pre-collision brake assist does not operate.	(1) Check that the pre-collision brake OFF indicator light goes off.	If this indicator light illuminates, the operation is not performed.
		(2) Using CHECK LIST (PRE-COLLISION BRAKE), check the following and respond to it. 1) Does it apply to the condition that the pre-collision brake does not operate, or there is a high possibility that the vehicle cannot stop safely before collision with the pre-collision brake? 2) Does it apply to the condition that there is a high possibility that the pre-collision brake does not operate due to the recognition status of the stereo camera? 3) Does it apply to the condition that the system does not operate correctly and the turning OFF of the pre-collision brake is desired? 4) Does it apply to the condition that the pre-collision brake OFF indicator light illuminates?	Check list (pre-collision brake) <Ref. to ES(diag)-54, CHECK LIST (PRE-COLLISION BRAKE), DIAGNOSTIC PROCEDURE WITH PHENOMENON, Diagnostics with Phenomenon.> When there is a relevant item in the check list, it can be the cause of malfunction. Eliminate the cause, and check that the malfunction has been improved. If not solved, the stereo camera may be malfunctioning.
2	Pre-collision brake operates improperly. Or the pre-collision brake is not released. Or the pre-collision brake assist operates improperly.	(1) Using CHECK LIST (PRE-COLLISION BRAKE), check the following and respond to it. 1) Does it apply to the condition that turning OFF of the pre-collision brake is desired? 2) Does it apply to the condition that the pre-collision brake may operate?	Check list (pre-collision brake) <Ref. to ES(diag)-54, CHECK LIST (PRE-COLLISION BRAKE), DIAGNOSTIC PROCEDURE WITH PHENOMENON, Diagnostics with Phenomenon.> When there is a relevant item in the check list, it can be the cause of malfunction. Eliminate the cause, and check that the malfunction has been improved. If not solved, the stereo camera may be malfunctioning.
3	Pre-collision brake OFF indicator light does not go off. Or the pre-collision brake OFF indicator light illuminates automatically.	(1) Check that this failure occurs during engine start.	Light illumination for a while after the engine start is a normal.
		(2) Check EyeSight temporary stop code to see if temporary stop has occurred.	If the EyeSight temporary stop code is displayed, check the diagnosis from the List of EyeSight temporary stop code, and perform the corresponding operations. <Ref. to ES(diag)-60, EyeSight Temporary Code(s) Display.> If the cancel code is not displayed, go to (3).
		(3) Check the pre-collision brake OFF switch.	Inspection of pre-collision brake OFF switch <Ref. to ES(diag)-85, DTC B28B6 PRE-COLLISION OFF SWITCH, Diagnostic Procedure with Diagnostic Trouble Code (DTC).>
4	Pre-collision brake OFF indicator light does not illuminate. Or the pre-collision brake OFF indicator light goes off automatically.	(1) Check that this failure occurs during engine start.	Even if the pre-collision brake is turned off, it is turned on again when the engine switch is turned off and the engine has restarted.
		(2) Check the pre-collision brake OFF switch.	Inspection of pre-collision brake OFF switch <Ref. to ES(diag)-85, DTC B28B6 PRE-COLLISION OFF SWITCH, Diagnostic Procedure with Diagnostic Trouble Code (DTC).>

Phenomenon		Check Item	Reference
5	AT rapid start prevention control does not operate. Or the AT rapid start prevention control is released automatically.	(1) Check that the pre-collision brake OFF indicator light goes off.	If this indicator light illuminates, the operation is not performed.
		(2) Using CHECK LIST (AT RAPID START PREVENTION CONTROL), check the following and respond to it. 1) Does it apply to the condition that the AT rapid start prevention control may not operate? 2) Does it apply to the condition that the pre-collision brake OFF indicator light illuminates?	Check list (AT rapid start prevention control) <Ref. to ES(diag)-56, CHECK LIST (AT RAPID START PREVENTION CONTROL), DIAGNOSTIC PROCEDURE WITH PHENOMENON, Diagnostics with Phenomenon.> When there is a relevant item in the check list, it can be the cause of malfunction. Eliminate the cause, and check that the malfunction has been improved. If not solved, the stereo camera may be malfunctioning.
6	AT rapid start prevention control operates improperly. Or the AT rapid start prevention control is not released.	(1) Using CHECK LIST (AT RAPID START PREVENTION CONTROL), check the following and respond to it. 1) Does it apply to the condition that turning OFF of the AT rapid start prevention control is desired? 2) Does it apply to the condition that the AT rapid start prevention control may operate?	Check list (AT rapid start prevention control) <Ref. to ES(diag)-56, CHECK LIST (AT RAPID START PREVENTION CONTROL), DIAGNOSTIC PROCEDURE WITH PHENOMENON, Diagnostics with Phenomenon.> When there is a relevant item in the check list, it can be the cause of malfunction. Eliminate the cause, and check that the malfunction has been improved. If not solved, the stereo camera may be malfunctioning.

4. LANE DEPARTURE WARNING, SWAY WARNING, FORWARD VEHICLE'S START MONITORING FUNCTION

Phenomenon		Check Item	Reference
1	Lane departure warning does not operate. Or the lane departure warning is released automatically.	(1) Check that the lane departure warning OFF indicator light goes off.	If this indicator light illuminates, the operation is not performed.
		(2) Using CHECK LIST (LANE DEPARTURE WARNING, SWAY WARNING, FORWARD VEHICLE'S START MONITORING FUNCTION), check the following and respond to it. 1) Does it apply to the condition that the lane departure warning does not operate or is difficult to operate? 2) Does it apply to the condition that the lane departure warning OFF indicator light illuminates?	Check list (lane departure warning, sway warning, forward vehicle's start monitoring function) <Ref. to ES(diag)-57, CHECK LIST (LANE DEPARTURE WARNING, SWAY WARNING, FORWARD VEHICLE'S START MONITORING FUNCTION), DIAGNOSTIC PROCEDURE WITH PHENOMENON, Diagnostics with Phenomenon.> When there is a relevant item in the check list, it can be the cause of malfunction. Eliminate the cause, and check that the malfunction has been improved. If not solved, the stereo camera may be malfunctioning.

Diagnostics with Phenomenon

EyeSight (DIAGNOSTICS)

Phenomenon		Check Item	Reference
2	Lane departure warning operates improperly. Or the lane departure warning is not released.	(1) Using CHECK LIST (LANE DEPARTURE WARNING, SWAY WARNING, FORWARD VEHICLE'S START MONITORING FUNCTION), check the following and respond to it. 1) Does it apply to the condition that the vehicle lane is recognized erroneously and the lane departure warning may operate?	Check list (lane departure warning, sway warning, forward vehicle's start monitoring function) <Ref. to ES(diag)-57, CHECK LIST (LANE DEPARTURE WARNING, SWAY WARNING, FORWARD VEHICLE'S START MONITORING FUNCTION), DIAGNOSTIC PROCEDURE WITH PHENOMENON, Diagnostics with Phenomenon.> When there is a relevant item in the check list, it can be the cause of malfunction. Eliminate the cause, and check that the malfunction has been improved. If not solved, the stereo camera may be malfunctioning.
3	Lane departure warning OFF indicator light does not go off. Or the lane departure warning OFF indicator light illuminates automatically.	(1) Check that this failure occurs during engine start.	Light illumination for a while after the engine start is a normal. Even if the engine switch is turned off and the engine is restarted, the status before the engine switch off is maintained.
		(2) Check EyeSight temporary stop code to see if temporary stop has occurred.	If the EyeSight temporary stop code is displayed, check the diagnosis from the List of EyeSight temporary stop code, and perform the corresponding operations. <Ref. to ES(diag)-60, EyeSight Temporary Code(s) Display.> If the cancel code is not displayed, go to (3).
		(3) Check the lane departure warning OFF indicator light.	Inspection of lane departure warning OFF indicator light <Ref. to ES(diag)-87, DTC B28B7 LDP OFF SWITCH, Diagnostic Procedure with Diagnostic Trouble Code (DTC).>
4	Lane departure warning OFF indicator light does not illuminate. Or the lane departure warning OFF indicator light goes off automatically.	(1) Check the lane departure warning OFF indicator light.	Inspection of lane departure warning OFF indicator light <Ref. to ES(diag)-87, DTC B28B7 LDP OFF SWITCH, Diagnostic Procedure with Diagnostic Trouble Code (DTC).>
5	Sway warning does not operate. Or the sway warning is released automatically.	(1) Check that the lane departure warning OFF indicator light goes off.	If this indicator light illuminates, the operation is not performed.
		(2) Using CHECK LIST (LANE DEPARTURE WARNING, SWAY WARNING, FORWARD VEHICLE'S START MONITORING FUNCTION), check the following and respond to it. 1) Does it apply to the condition that the sway warning may not operate? 2) Does it apply to the condition that the lane departure warning OFF indicator light illuminates?	Check list (lane departure warning, sway warning, forward vehicle's start monitoring function) <Ref. to ES(diag)-57, CHECK LIST (LANE DEPARTURE WARNING, SWAY WARNING, FORWARD VEHICLE'S START MONITORING FUNCTION), DIAGNOSTIC PROCEDURE WITH PHENOMENON, Diagnostics with Phenomenon.> When there is a relevant item in the check list, it can be the cause of malfunction. Eliminate the cause, and check that the malfunction has been improved. If not solved, the stereo camera may be malfunctioning.
6	Sway warning operates improperly. Or the sway warning is not released.	(1) Using CHECK LIST (LANE DEPARTURE WARNING, SWAY WARNING, FORWARD VEHICLE'S START MONITORING FUNCTION), check the following and respond to it. 1) Does it apply to the condition that the sway warning may operate improperly?	Check list (lane departure warning, sway warning, forward vehicle's start monitoring function) <Ref. to ES(diag)-57, CHECK LIST (LANE DEPARTURE WARNING, SWAY WARNING, FORWARD VEHICLE'S START MONITORING FUNCTION), DIAGNOSTIC PROCEDURE WITH PHENOMENON, Diagnostics with Phenomenon.> When there is a relevant item in the check list, it can be the cause of malfunction. Eliminate the cause, and check that the malfunction has been improved. If not solved, the stereo camera may be malfunctioning.

Diagnostics with Phenomenon

EyeSight (DIAGNOSTICS)

Phenomenon		Check Item	Reference
7	Forward vehicle's start monitoring function does not operate. Or the forward vehicle's start monitoring function is released automatically.	(1) Using CHECK LIST (LANE DEPARTURE WARNING, SWAY WARNING, FORWARD VEHICLE'S START MONITORING FUNCTION), check the following and respond to it. 1) Does it apply to the condition that the forward vehicle's start monitoring function does not operate even when the preceding vehicle has already started?	Check list (lane departure warning, sway warning, forward vehicle's start monitoring function) <Ref. to ES(diag)-57, CHECK LIST (LANE DEPARTURE WARNING, SWAY WARNING, FORWARD VEHICLE'S START MONITORING FUNCTION), DIAGNOSTIC PROCEDURE WITH PHENOMENON, Diagnostics with Phenomenon.> When there is a relevant item in the check list, it can be the cause of malfunction. Eliminate the cause, and check that the malfunction has been improved. If not solved, the stereo camera may be malfunctioning.
8	Forward vehicle's start monitoring function operates improperly. Or the forward vehicle's start monitoring function is not released.	(1) Using CHECK LIST (LANE DEPARTURE WARNING, SWAY WARNING, FORWARD VEHICLE'S START MONITORING FUNCTION), check the following and respond to it. 1) Does it apply to the condition that the forward vehicle's start monitoring function operates even when the preceding vehicle has not yet started?	Check list (lane departure warning, sway warning, forward vehicle's start monitoring function) <Ref. to ES(diag)-57, CHECK LIST (LANE DEPARTURE WARNING, SWAY WARNING, FORWARD VEHICLE'S START MONITORING FUNCTION), DIAGNOSTIC PROCEDURE WITH PHENOMENON, Diagnostics with Phenomenon.> When there is a relevant item in the check list, it can be the cause of malfunction. Eliminate the cause, and check that the malfunction has been improved. If not solved, the stereo camera may be malfunctioning.

5. CHECK LIST (ADAPTIVE CRUISE CONTROL)

Item name	Yes/No
[1]: When the vehicle does not accelerate or decelerate according to the preceding vehicle, or when it is difficult to detect the preceding vehicle.	

Diagnostics with Phenomenon

EyeSight (DIAGNOSTICS)

Item name		Yes/No	
1	Check that the current status applies to the condition that the use of adaptive cruise control is not desired.		
1	Tire pressure is not correct.	Yes	No
2	The vehicle is equipped with the temporary spare tire.	Yes	No
3	The vehicle is equipped with worn tire or tires with excessive wear difference.	Yes	No
4	The vehicle is equipped with the tires out of specification.	Yes	No
5	The suspension has been modified.	Yes	No
6	The vehicle is equipped with the tire chain.	Yes	No
7	Headlight is dirty or the optical axis is deviated. (The vehicle cannot correctly emit the headlight beam against the object and recognize it.)	Yes	No
8	The driving of own vehicle is unstable due to an accident or failure.	Yes	No
9	The brake warning light illuminates.	Yes	No
10	Vehicle is tilted by the heavy load.	Yes	No
11	Passenger capacity is exceeded.	Yes	No
12	The vehicle is towing the trailer or other vehicle.	Yes	No
13	The vehicle drives on the general road (other than limited highway). (Depending on the road environment (complicated roads etc.), the vehicle may not be able to drive according to the traffic condition, which may lead to the traffic accident.)	Yes	No
14	The vehicle drives on the sharp bend.	Yes	No
15	The vehicle drives on the slippery roads such as icy road or snow-covered road. (Tires can spin, losing the vehicle control.)	Yes	No
16	The vehicle drives under the traffic condition that the certain vehicle distance is difficult to be maintained due to frequent acceleration and deceleration. (The vehicle may not be able to drive according to the traffic condition.)	Yes	No
17	There is a steep downhill. (The vehicle may drive at higher speed than the set vehicle speed.)	Yes	No
18	The vehicle performs adaptive driving while recognizing the preceding vehicle on the steep downhills. (Brake can be overheated.)	Yes	No
19	The vehicle drives on the road with repeated steep uphill and downhills or crossover. (The vehicle may not be able to recognize the preceding vehicle or may recognize the road surface, and appropriate control may not be performed.)	Yes	No
20	The vehicle is entering the interchange, service area, parking area, junction or tollgate. (The vehicle may not be able to recognize the preceding vehicle.)	Yes	No
21	When the surrounding brightness (such as inlet and outlet of a tunnel) suddenly changes.	Yes	No
22	There are water, snow or sandy dust raised by the preceding vehicle or oncoming vehicle, or sand or smoke blown in the wind, or moisture in front of own vehicle. (The vehicle may not be able to recognize the preceding vehicle or may recognize the water, and appropriate control may not be performed.)	Yes	No
23	The windshield glass is covered with fog, snow, dirt, frost or sandy dust.	Yes	No
24	The raindrops, water drops or dirt on the windshield glass are not wiped off sufficiently. (The vehicle may not be able to recognize the preceding vehicle, and appropriate control may not be performed.)	Yes	No
25	Canoes etc. loaded on the roof block the visibility of the stereo camera.	Yes	No

Diagnostics with Phenomenon

EyeSight (DIAGNOSTICS)

Item name		Yes/No	
2	Check that the current status applies to the condition or the object that is hard to be recognized by the stereo camera.		
1	That was a vehicle with large speed difference (low-speed driving vehicle, stopping vehicle, oncoming vehicle).	Yes	No
2	That was a cutting-in vehicle.	Yes	No
3	That was a motorcycle, bicycle, pedestrian or animal, etc.	Yes	No
4	It was dim in the evening or in the morning.	Yes	No
5	The headlight did not illuminate during nighttime hours or inside the tunnel.	Yes	No
6	The tail light of the preceding vehicle did not illuminate during nighttime hours or inside the tunnel.	Yes	No
7	The vehicle was exposed to the intense light (backlight such as sunlight or headlight high-beam light) from the front of the vehicle.	Yes	No
8	The rearmost surface of the preceding vehicle was small, low or uneven. That was a truck equipped with an unloaded platform without gate, a vehicle that the luggage was protruding from the rear end of the vehicle, a vehicle of special shape (carrier car, side car, etc.) or a vehicle with low vehicle height.	Yes	No
9	There was an object extremely close to the bumper of the own vehicle.	Yes	No
3	Check that the current status applies to the driving condition that the preceding vehicle cannot be recognized or the vehicle on the next lane or the object on the roadside may be recognized by mistake.		
1	The vehicle began adaptive cruise control from the condition that the vehicle distance was short immediately after the preceding vehicle was cut in.	Yes	No
2	The vehicle drives on the curve, outlet and inlet of the curve, or the road with many curves in succession. (Recognition may not be performed properly, because the preceding vehicle is out of recognition area.)	Yes	No
3	The position against the preceding vehicle deviated laterally.	Yes	No
4	There were some objects just near the road side.		
5	The speed difference against the preceding vehicle was large.	Yes	No
6	Other vehicle cut ahead of the own vehicle.	Yes	No
7	The vehicle distance was extremely short.	Yes	No
8	The own vehicle swayed in the vehicle lane.	Yes	No
9	The road surface was uneven due to roll or unpaved track.	Yes	No
10	The vehicle drove on the narrow lane because of the lane closure or construction work.	Yes	No
11	The driving of own vehicle was unstable due to an accident or failure.	Yes	No
12	The own vehicle was loaded with the extremely heavy load in the luggage compartment or on the rear seat.	Yes	No
[2]: When braking force is weaker than usual.			
1	Check that the current status applies to the condition that brake force may become poor.		
1	The vehicle status (loading amount, passenger, etc.) was inappropriate.	Yes	No
2	The road surface was very steep, slippery, sharp turn, or uneven.	Yes	No
3	The service maintenance condition of the vehicle (brake system, tire wear, tire pressure, spare tire, etc.) was inappropriate.	Yes	No
4	The brake was cold at low ambient temperature or immediately after the driving had started.	Yes	No
5	The symptom occurred between immediately after engine started and after a while the vehicle started driving. (Completion of warming up operation can be used as an indication.)	Yes	No
6	The brake force becomes poor due to the overheating of the brake on the downhills.	Yes	No
7	The brake force becomes poor because of the wet brake after driving onto the puddle or washing the vehicle.	Yes	No
[3]: When the alarm for requiring more brake pedal force does not sound.			
1	Check that the current status applies to the condition that the alarm for requiring more brake pedal force does not sound even in a short vehicle distance.		
1	The speed difference between own vehicle and preceding vehicle (when the vehicle speed of the own vehicle was approximately the same as that of the preceding vehicle) was small.	Yes	No
2	The vehicle speed of the preceding vehicle was faster than that of the own vehicle (when the vehicle distance was getting longer).	Yes	No
3	Other vehicle cut in extremely close to the own vehicle.	Yes	No
4	The preceding vehicle decelerated abruptly.	Yes	No
5	There are many continuous uphill and downhills.	Yes	No

Diagnostics with Phenomenon

EyeSight (DIAGNOSTICS)

6. CHECK LIST (PRE-COLLISION BRAKE)

Item name		Yes/No	
[1]: When pre-collision brake did not operate, or when vehicle could not stop safely before collision in spite of pre-collision brake operation.			
1	Check that the current status applies to the condition that the pre-collision brake does not operate, or there is a high possibility that the vehicle cannot stop safely before collision in spite of pre-collision brake operation.		
1	Conditions such as the followings occurred: 1) Vehicle speed difference with the preceding vehicle is small. 2) Distance from the preceding vehicle is long. 3) Lateral deviation (offset amount) is large.	Yes	No
2	The vehicle status (loading amount, number of passenger, etc.) was inappropriate.	Yes	No
3	The road surface was very steep, slippery, sharp turn, or uneven.	Yes	No
4	There was problem for the frontal visibility (rain, snow, fog, smoke, etc.).	Yes	No
5	The objects were livestock, animals, guardrail, telephone pole, tree, fence, wall, etc.	Yes	No
6	The object was motorcycle, bicycle, or pedestrian. However, the system could not recognize the object due to surrounding brightness, motion, posture, and/or angle.	Yes	No
7	Crash avoidance operation (accelerator pedal, brake pedal, steering wheel, etc.) was performed.	Yes	No
8	The service maintenance condition of the vehicle (brake system, tire wear, tire pressure, spare tire, etc.) was inappropriate.	Yes	No
9	The vehicle is towing the trailer or other vehicle.	Yes	No
10	The brake was cold at low ambient temperature or immediately after the driving had started.	Yes	No
11	The brake force becomes poor due to the overheating of the brake on the downhills.	Yes	No
12	The brake force becomes poor because of the wet brake after driving onto the puddle or washing the vehicle.	Yes	No
2	Check that the current status applies to the condition that there is a high possibility that the pre-collision brake does not operate depending on the recognition status of the stereo camera.		
1	It was bad weather (heavy rain, snowstorm, dense fog).	Yes	No
2	The field of view was insufficient due to water, snow or sandy dust raised by the preceding vehicle or oncoming vehicle, or the moisture, sand or smoke blown in the wind.	Yes	No
3	The headlight did not illuminate during nighttime hours or inside the tunnel.	Yes	No
4	The tail light of the preceding vehicle did not illuminate during nighttime hours or inside the tunnel.	Yes	No
5	The vehicle approached the motorcycle, bicycle or pedestrian in the night.	Yes	No
6	It was dark in the evening or in the morning.	Yes	No
7	The rearmost surface of the preceding vehicle was small, low or uneven. That was a truck equipped with an unloaded platform without gate, a vehicle that the luggage was protruding from the rear end of the vehicle, a vehicle of special shape (carrier car, side car, etc.) or a vehicle with low vehicle height.	Yes	No
8	There was a wall in front of the stopping vehicle.	Yes	No
9	There was an object close to the vehicle.	Yes	No
10	That was a vehicle stopped sideways.	Yes	No
11	That was a vehicle which was oncoming or driving in reverse.	Yes	No
12	The object was small seen from the stereo camera. (small animals, infants, person squatting down or lying down)	Yes	No
13	The preceding vehicle made a sharp turn, or performed abrupt acceleration or deceleration.	Yes	No
14	Other vehicle, motorcycle, bicycle or pedestrian existed extremely close to the bumper of the own vehicle.	Yes	No
15	The speed difference was 5 km/h (3.1 MPH) or less. (The control is performed in close distance. Depending on the objects shape and size, the rear end surface may be outside the camera visibility area.)	Yes	No
16	Other vehicle, motorcycle, bicycle or pedestrian cut in from the side or jumped in front of the own vehicle.	Yes	No
17	The own vehicle changed the vehicle lane, and followed the preceding vehicle right behind.	Yes	No
18	The vehicle was exposed to the intense light (backlight such as sunlight or headlight high-beam light) from the front of the vehicle.	Yes	No
19	The windshield glass was covered with fog, snow, dirt, frost or sandy dust.	Yes	No
20	The windshield glass has not yet been wiped off sufficiently during or after the use of the window washer.	Yes	No
21	The recognition of the object was imperfect due to the raindrop or droplet of the window washer or the wiper blade blocking the visibility of the stereo camera.	Yes	No
22	Canoes etc. loaded on the roof blocked the visibility of the stereo camera.	Yes	No
23	Other vehicle, motorcycle, bicycle or pedestrian existed out of the illuminating area of the headlight.	Yes	No

Diagnostics with Phenomenon

EyeSight (DIAGNOSTICS)

Item name		Yes/No		
2	24	The vehicle drove on the sharp turn, steep uphill or steep downhill.	Yes	No
	25	The road surface was uneven due to roll or unpaved track.	Yes	No
	26	The vehicle passed through the outlet or inlet of a tunnel.	Yes	No
	27	The object was fence or wall.	Yes	No
	28	The object was a plate of glass, mirror wall or door.	Yes	No
3	Check that the current status applies to the condition that the system does not operate correctly and the turning OFF of the pre-collision brake is desired.			
	1	Tire pressure is not correct.	Yes	No
	2	The vehicle is equipped with the temporary spare tire.	Yes	No
	3	The vehicle is equipped with worn tire or tires with excessive wear difference.	Yes	No
	4	The vehicle is equipped with the tires out of specification.	Yes	No
	5	The suspension has been modified.	Yes	No
	6	The vehicle is equipped with the tire chain.	Yes	No
	7	Headlight is dirty or the optical axis is deviated. (The vehicle cannot correctly emit the headlight beam against the object and recognize it.)	Yes	No
	8	The driving status of own vehicle is unstable due to an accident or failure.	Yes	No
	9	The brake warning light illuminates.	Yes	No
10	Vehicle is tilted by the heavy load. Or, passenger capacity is exceeded.	Yes	No	
4	Check that the current status applies to the condition that the pre-collision brake OFF indicator light illuminates. (When the pre-collision brake OFF indicator light illuminates, the pre-collision brake does not operate.)			
	1	The pre-collision brake is turned off, using the pre-collision brake OFF switch.	Yes	No
	2	Approximately for 7 seconds after the engine has started.	Yes	No
	3	EyeSight is malfunctioning.	Yes	No
	4	EyeSight is stopped temporarily.	Yes	No
[2]: When pre-collision brake operated improperly.				
1	Check that the current status applies to the condition that turning OFF of the pre-collision brake is desired.			
	1	The vehicle is towed.	Yes	No
	2	The vehicle is loaded on the carrier car.	Yes	No
	3	The chassis dynamometer or free roller is used.	Yes	No
	4	The vehicle is lifted up, engine is started and the tire is spun.	Yes	No
	5	The vehicle passes through the banners, flags, drooping branches or grass while making contact with them.	Yes	No
	6	The vehicle performs sporty driving on the circuit.	Yes	No
	7	When the vehicle uses the movable type car wash machine.	Yes	No
2	Check that the current status applies to the condition that the pre-collision brake may operate.			
	1	The vehicle passes through the ETC gate at a speed exceeding the specification.	Yes	No
	2	The vehicle drives close to the preceding vehicle.	Yes	No
	3	The vehicle drives on the place where the road surface gradient changed suddenly.	Yes	No
	4	The vehicle passes through the moisture or mass of smoke.	Yes	No
	5	When the exhaust gas emitted from the preceding vehicle is visible clearly at cold weather.	Yes	No
	6	There is an obstacle on the curve or crossing.	Yes	No
	7	The vehicle passes through close to other vehicle or obstacle.	Yes	No
8	The vehicle parks close to the wall in front or to other vehicle.	Yes	No	

Diagnostics with Phenomenon

EyeSight (DIAGNOSTICS)

7. CHECK LIST (AT RAPID START PREVENTION CONTROL)

Item name		Yes/No	
[1]: When AT rapid start prevention control did not operate.			
1	Check that the current status applies to the condition that the AT rapid start prevention control may not operate.		
1	Conditions such as the followings occurred: 1) Distance from the front object is long. 2) Vehicle speed difference is small. 3) Lateral deviation (offset amount) is large.	Yes	No
2	It was bad weather (heavy rain, snowstorm, dense fog).	Yes	No
3	The visibility was insufficient due to sand or smoke blown in the air.	Yes	No
4	The vehicle approached the object in the evening, in the morning or in the night.	Yes	No
5	The vehicle approached the object in the dark place (e.g. closed-in parking lot).	Yes	No
6	The height of the object was low. (low wall, low guardrail, vehicle with low height etc.)	Yes	No
7	The object was small seen from the stereo camera. (Small animals, infants, person squatting down or lying down)	Yes	No
8	The object or rearmost area of the preceding vehicle (trailer, etc.) was small. Or the vehicle approached them too close. (The system triggers the operation by recognizing the area other than the rearmost section, resulting in insufficient control.)	Yes	No
9	The object such as other vehicle, motorcycle, bicycle or pedestrian cut in from the side or jumped in front of the own vehicle.	Yes	No
10	The own vehicle changed the vehicle lane when it started, and approached right behind the object.	Yes	No
11	The vehicle was exposed to the intense light (backlight such as sunlight or headlight high-beam light) from the front of the vehicle.	Yes	No
12	The windshield glass was covered with fog, snow, dirt, frost or sandy dust.	Yes	No
13	The windshield glass has not yet been wiped off sufficiently during or after the use of the window washer.	Yes	No
14	The recognition of the object was imperfect due to the raindrop or droplet of the window washer or the wiper blade blocking the visibility of the stereo camera.	Yes	No
15	Canoes etc. loaded on the roof blocked the visibility of the stereo camera.	Yes	No
16	The object existed out of the illuminating area of the headlight.	Yes	No
17	The vehicle drove on the sharp turn, steep uphill or steep downhill.	Yes	No
18	The object was a fence or wall with even pattern (striped pattern or bricks) or unpatterned surface.	Yes	No
19	The object was a plate of glass, mirror wall or door.	Yes	No
20	Crash avoidance operation (accelerator pedal, brake pedal, steering wheel, etc.) was performed.	Yes	No
2	Check that the current status applies to the condition that the pre-collision brake OFF indicator light illuminates. (When the pre-collision brake OFF indicator light illuminates, the AT rapid start prevention control does not operate.)		
1	The pre-collision brake was turned off, using the pre-collision brake OFF switch.	Yes	No
2	Approximately for 7 seconds after the engine has started.	Yes	No
3	EyeSight is malfunctioning.	Yes	No
4	EyeSight is stopped temporarily.	Yes	No

Diagnostics with Phenomenon

EyeSight (DIAGNOSTICS)

	Item name	Yes/No	
[2]: When AT rapid start prevention control operated improperly.			
1	Check that the current status applies to the condition that the releasing of the AT rapid start prevention control is desired.		
1	The vehicle is towed.	Yes	No
2	The vehicle is loaded on the carrier car.	Yes	No
3	The chassis dynamometer or free roller is used.	Yes	No
4	The vehicle is lifted up, engine is started and the tire is spun.	Yes	No
5	The vehicle passes through the banners, flags, drooping branches or grass while making contact with them.	Yes	No
6	The vehicle performs sporty driving on the circuit.	Yes	No
2	Check that the current status applies to the condition that the AT rapid start prevention control may operate.		
1	The vehicle passes through the ETC gate at a speed exceeding the specification.	Yes	No
2	The vehicle drives close to the preceding vehicle.	Yes	No
3	The vehicle drives on the place where the road surface gradient changed suddenly.	Yes	No
4	The vehicle passes through the moisture or mass of smoke.	Yes	No
5	There is an obstacle on the curve or crossing.	Yes	No
6	The vehicle passes through close to other vehicle or obstacle.	Yes	No
7	The vehicle parks close to the wall in front or to other vehicle.	Yes	No

8. CHECK LIST (LANE DEPARTURE WARNING, SWAY WARNING, FORWARD VEHICLE'S START MONITORING FUNCTION)

	Item name	Yes/No	
[1]: When the lane departure warning did not operate.			
1	Check that the current status applies to the condition that the lane departure warning does not operate or is difficult to operate.		
1	The lane departure warning is turned off.	Yes	No
2	The vehicle speed of the own vehicle is approximately less than 50 km/h (31 MPH).	Yes	No
3	That was approximately 7 seconds period after the lane departure warning had occurred once.	Yes	No
4	The steering wheel was turned fully or rapidly.	Yes	No
5	The brake pedal is depressed.	Yes	No
6	The vehicle is accelerated by depressing the accelerator pedal.	Yes	No
7	The vehicle distance from the preceding vehicle is short.	Yes	No
8	That was approximately 7 seconds period while the turn signal indicator was operating or after the lever was returned.	Yes	No
9	The vehicle has not returned inside the vehicle lane after the operation of the lane departure warning.	Yes	No
10	The width of the vehicle lane is narrow.	Yes	No
11	The vehicle lane is difficult to be recognized seen from the stereo camera. (Lane line (white line, etc.) does not exist or is fading out. Or the color of the lane line is very similar to that of the road surface, and difficult to be seen. Or the width of the lane line is very thin.)	Yes	No
12	The preceding vehicle performed crash avoidance action to avoid the obstacle, and the own vehicle performed steering operation after the preceding vehicle.	Yes	No
2	Check that the current status applies to the condition that the lane departure warning OFF indicator light illuminates. (When the lane departure warning OFF indicator light illuminates, the lane departure warning does not operate.)		
1	The lane departure warning is turned off, using the lane departure warning OFF switch.	Yes	No
2	Approximately for 7 seconds after the engine has started.	Yes	No
3	EyeSight is malfunctioning.	Yes	No
4	EyeSight is stopped temporarily.	Yes	No
[2]: When the lane departure warning malfunctioned.			
1	Check that the current status applies to the condition that the vehicle lane is recognized erroneously and the lane departure warning may operate.		
1	There was the tire track on the wet road or snow-covered road.	Yes	No
2	There was the boundary line between snow-covered area and asphalt or on the trace of road repair.	Yes	No
3	There was the double vehicle lane.	Yes	No
4	The shadow of the guardrail was detected by mistake.	Yes	No

Diagnostics with Phenomenon

EyeSight (DIAGNOSTICS)

	Item name		Yes	No
[3]: When the sway warning did not operate.				
1	Check that the current status applies to the condition that the sway warning may not operate.			
1	The vehicle drove on the road with many curves in succession.	Yes	No	
2	The vehicle speed changed greatly.	Yes	No	
3	That was immediately after the vehicle lane had changed.	Yes	No	
4	The vehicle lane was difficult to be recognized seen from the stereo camera. (Lane line (white line, etc.) does not exist or is fading out. Or the color of the lane line is very similar to that of the road surface, and difficult to be seen. Or the width of the lane line is very thin.)	Yes	No	
5	That was immediately after the sway had begun.	Yes	No	
2	Check that the current status applies to the condition that the lane departure warning OFF indicator light illuminates. (When the lane departure warning OFF indicator light illuminates, the sway warning does not operate.)			
1	The lane departure warning is turned off, using the lane departure warning OFF switch.	Yes	No	
2	Approximately for 7 seconds after the engine has started.	Yes	No	
3	EyeSight is malfunctioning.	Yes	No	
4	EyeSight is stopped temporarily.	Yes	No	
[4]: When the sway warning malfunctioned.				
1	Check that the current status applies to the condition that the sway warning may operate.			
1	That was after the sway had stopped.	Yes	No	
2	The driver lost concentration on driving the vehicle due to fatigue or looking away.	Yes	No	
[5]: When the forward vehicle's start monitoring function did not operate or when it malfunctioned.				
1	Check that the current status applies to the condition that the forward vehicle's start monitoring function does not operate even when the preceding vehicle has already started, or that the forward vehicle's start monitoring function operates even when the preceding vehicle has not yet started.			
1	The motorcycle cut in the space between the own vehicle and the stopped preceding vehicle.	Yes	No	
2	The vehicle could not recognize the preceding vehicle properly due to the weather condition or road shape.	Yes	No	
3	The stereo camera lost sight of the preceding vehicle.	Yes	No	
4	The driver did not depress the brake pedal with select lever in D, M or N range. (At this time, forward vehicle's start monitoring function does not operate.)	Yes	No	
5	The forward vehicle's start monitoring function was turned OFF via the customization function.	Yes	No	

B: CHECK ADAPTIVE CRUISE CONTROL INDICATOR LIGHT/CONSTANT SPEED CRUISE CONTROL INDICATOR LIGHT AND CRUISE SET INDICATOR LIGHT

TROUBLE SYMPTOM:

Adaptive cruise control or conventional cruise control can be set, but adaptive cruise control indicator light/constant speed cruise control indicator light and cruise SET indicator light do not illuminate.

Step	Check	Yes	No
1	CHECK ADAPTIVE CRUISE CONTROL INDICATOR LIGHT/CONSTANT SPEED CRUISE CONTROL INDICATOR LIGHT AND CRUISE SET INDICATOR LIGHT. Check the combination meter. <Ref. to IDI(diag)-18, OPERATION, System Operation Check Mode.>	Does adaptive cruise control indicator light/constant speed cruise control indicator light and cruise SET indicator light illuminate?	Go to step 2. Replace the meter case assembly. <Ref. to IDI-18, Combination Meter.>
2	CHECK LAN SYSTEM. Perform the diagnosis for LAN system. <Ref. to LAN(diag)-2, Basic Diagnostic Procedure.>	Is there any fault?	Perform the diagnosis according to diagnosis for LAN system. Replace the stereo camera. <Ref. to ES-7, REMOVAL, Stereo Camera.>

C: CHECK EyeSight STEERING SWITCH

Trouble symptom:

- Cruise control cannot be set. (Cancelled immediately.)
- Cruise control cannot be released.

Wiring diagram:

EyeSight System <Ref. to WI-130, WIRING DIAGRAM, EyeSight System.>

Step	Check	Yes	No
1 CHECK EyeSight STEERING SWITCH CIRCUIT. 1) Remove the driver's airbag module. <Ref. to AB-32, REMOVAL, Driver's Airbag Module.> 2) Disconnect the EyeSight steering switch harness connector. 3) Turn the ignition switch to ON. 4) Measure the voltage between harness connector terminal and chassis ground. Connector & terminal (ST3) No. 3 (+) — Chassis ground (-): (ST3) No. 4 (+) — Chassis ground (-):	Is the voltage 5 V or more?	Go to step 2.	Check for open/short circuit or poor contact in the harness between EyeSight steering switch and ECM and in the steering roll connector.
2 CHECK EyeSight STEERING SWITCH CIRCUIT. 1) Turn the ignition switch to OFF. 2) Remove the EyeSight steering switch. <Ref. to ES-33, Switches and Harness.> 3) Measure the resistance between harness connector terminal and chassis ground. Connector & terminal (ST3) No. 9 — Chassis ground:	Is the resistance less than 10 Ω?	Go to step 3.	Check for open circuit between EyeSight steering switch and chassis ground.
3 CHECK EyeSight STEERING SWITCH. Check EyeSight steering switch. <Ref. to ES-33, Switches and Harness.>	Is the EyeSight steering switch normal?	Replace the ECM. <Ref. to FU(H4DO)-98, REMOVAL, Engine Control Module (ECM).>	Replace the EyeSight steering switch. <Ref. to ES-33, Switches and Harness.>

EyeSight Temporary Code(s) Display

EyeSight (DIAGNOSTICS)

13. EyeSight Temporary Code(s) Display

A: OPERATION

If the EyeSight pause code is detected from the stereo camera, all the functions of the EyeSight excluding the conventional cruise control stop temporarily and cannot be used. When the failure is resolved, the function starts operating.

- 1) On «Start» display, select «Diagnosis».
- 2) On «Vehicle selection» display, input the target vehicle information and select «Confirmed».
- 3) On «Main Menu» display, select «Each System».
- 4) On «Select System» display, select «EyeSight» and select «Enter».
- 5) On «Select Function» display, select «Cancel Code».
- 6) On «Cancel Code» display, select «EyeSight Pause Code».

NOTE:

- For detailed operation procedures, refer to “Application help”.
- Temporary stop is not released even if the lane departure warning OFF switch or pre-collision brake OFF switch is pressed.
- Depending on the situation, temporary stop may not be released even if the ignition switch is turned off.
- Up to 20 codes can be stored.
- Stored codes will be cleared by Clear Memory.
- For details on EyeSight temporary stop codes, refer to List of EyeSight temporary stop code. <Ref. to ES(diag)-60, LIST, EyeSight Temporary Code(s) Display.>

B: LIST

- List of EyeSight temporary stop code

EyeSight pause code	Item	Contents of diagnosis	Reference
E5	Stereo Camera Temporary Stop	The operation stopped temporarily due to vertical deviation of the optical axis of the stereo camera. (During CRUISE MAIN ON, “EyeSight Disabled Check Manual” is displayed in the multi-information display.)	Perform inspection concerning the item for E5 of the “CHECK LIST (CAMERA TEMPORARY STOP)”. <Ref. to ES(diag)-62, CHECK LIST (CAMERA TEMPORARY STOP), LIST, EyeSight Temporary Code(s) Display.> This code may be displayed when the rear of the vehicle is lowered by the overload. When the failure is resolved, and the operation returns from the temporary stop status after driving for a while, it is normal. If this item is displayed in an ordinary use under which the vehicle is not tilted, readjust the stereo camera. <Ref. to ES-12, PROCEDURE, Camera Adjustment, Inspection.> If the same cancel code is still detected after readjustment, replace the stereo camera. <Ref. to ES-7, REMOVAL, Stereo Camera.>

EyeSight Temporary Code(s) Display

EyeSight (DIAGNOSTICS)

EyeSight pause code	Item	Contents of diagnosis	Reference
CC CD	Stereo Camera Temporary Stop	Temporary stop was performed due to the bad weather, backlight, fogged window or dirty window interfering with the recognition function of the stereo camera. And this code may be displayed also when the front of the camera is blocked by the hand or when it is very dark around the vehicle or when the vehicle is surrounded by the blanket of snow and nothing can be seen from the stereo camera. (During CRUISE MAIN ON, "EyeSight Disabled No Camera View" is displayed in the multi-information display.)	Investigate the following items No. 1 and No. 2, and check that the possible cause of the temporary stop is applied either to No. 1 or No. 2. 1. Perform inspection concerning the item for CC and CD of the "CHECK LIST (CAMERA TEMPORARY STOP)". <Ref. to ES(diag)-62, CHECK LIST (CAMERA TEMPORARY STOP), LIST, EyeSight Temporary Code(s) Display.> When there is a relevant item in the check list, it can be the cause of malfunction. 2. Read the temporary stop count stored in the temporary stop count of current data, and check the cause of the temporary stop occurred in the past from "LIST OF CONTENTS FOR CAMERA TEMPORARY STOP: 0 — 23 COUNTS". <Ref. to ES(diag)-64, LIST OF CONTENTS FOR CAMERA TEMPORARY STOP, LIST, EyeSight Temporary Code(s) Display.> When the causes of the temporary stop for No. 1 and No. 2 correspond, drive the vehicle for a while after the cause of the temporary stop has been eliminated. If the operation returns from the temporary stop status, it is normal. (However, when the temporary stop takes place and is cancelled repeatedly, the temporary stop status is kept for a while to delay the return of the operation, which prevents the irritation.) When this is not the case, check the stereo camera and its periphery. <Ref. to ES(diag)-7, WINDSHIELD GLASS AND DASHBOARD, INSPECTION, General Description.> <Ref. to ES(diag)-11, FRONT WIPER, INSPECTION, General Description.> <Ref. to ES(diag)-12, STEREO CAMERA, INSPECTION, General Description.>
CE		The temperature of the stereo camera became excessively high or low, and the operation stopped temporarily. (During CRUISE MAIN ON, "EyeSight Disabled Temp Range" is displayed in the multi-information display.)	Perform inspection concerning the item for CE of the "CHECK LIST (CAMERA TEMPORARY STOP)". <Ref. to ES(diag)-62, CHECK LIST (CAMERA TEMPORARY STOP), LIST, EyeSight Temporary Code(s) Display.> When the failure is resolved, and the operation returns from the temporary stop status, it is normal. When the operation does not return from the temporary status even if driving the vehicle for a while after the failure has been resolved, replace the stereo camera. <Ref. to ES-7, REMOVAL, Stereo Camera.>
33		Detected when engine speed is 300 rpm or less. (Not detected at an initial ignition switch ON.) (During CRUISE MAIN ON, "EyeSight Disabled Check Manual" is displayed in the multi-information display.)	Detected when the engine speed drops below 300 rpm after the engine has started once. (except during Auto Start Stop operation) However, this code is detected when the seat belt is unfastened during Auto Start Stop operation or when the door is opened. If the same EyeSight temporary stop code is detected again when the engine is restarted, check the ECM. <Ref. to EN(H4DO)(diag)-2, PROCEDURE, Basic Diagnostic Procedure.>
C0	Pre-Collision Second Braking Activation	Because the pre-collision secondary brake operated three times between engine starting and stopping, the temporary stop is performed. (This is not a normal driving operation, or the system may be malfunctioning.) (During CRUISE MAIN ON, "EyeSight Disabled Check Manual" is displayed in the multi-information display.)	This code may be displayed when the pre-collision brake is operated intentionally. Turn the ignition switch to OFF, and restart after a while. If the operation returns from the temporary stop status, it is normal. When temporary stop status continues with a code other than C0 after restart, perform diagnosis according to the code. When temporary stop status continues with the code of C0 after restart, the stereo camera may be malfunctioning. Replace the stereo camera. <Ref. to ES-7, REMOVAL, Stereo Camera.>
A0	CAN Diagnosis	The voltage dropped below 10 V immediately after IGN ON. (During CRUISE MAIN ON, "EyeSight Disabled Check Manual" is displayed in the multi-information display.)	This code may be displayed when the engine is not started for a while with the ignition switch ON and when the engine has started after that. This is a normal operation. If this is not the case, the supply voltage may be malfunctioning. <Ref. to ES(diag)-74, DTC B2814 POWER SUPPLY LOW VOLTAGE, Diagnostic Procedure with Diagnostic Trouble Code (DTC).>

EyeSight Temporary Code(s) Display

EyeSight (DIAGNOSTICS)

EyeSight pause code	Item	Contents of diagnosis	Reference
A1	ECM Reprogramming	Because the control module (CM) is being reprogrammed, temporary stop is performed. (During CRUISE MAIN ON, "EyeSight Disabled Check Manual" is displayed in the multi-information display.)	After the completion of the reprogramming operation, turn the ignition to OFF and restart. If the operation returns from the temporary stop status, it is normal.

1. CHECK LIST (CAMERA TEMPORARY STOP)

Even when the set status of the adaptive cruise control is canceled or when a temporary stop status occurs, the EyeSight temporary stop code will not be retained for the following conditions.

- When the lane departure warning is stopped by pressing the lane departure warning OFF switch
- Immediately after the engine start

When these cases does not apply but the EyeSight temporary stop code is displayed, perform the inspection according to the following items.

Item name		Yes/No
[1]: EyeSight temporary stop code [CC, CD] (At this time, "EyeSight Disabled No Camera View" is displayed in the multi-information display.)		
1	Check that the current status applies to the condition that are difficult to be recognized by the stereo camera.	
1	It was bad weather (heavy rain, snowstorm, dense fog; especially when the oil film adheres to the windshield glass, the glass coating agent is used, or when the old wiper is used).	Yes No
2	The vehicle was exposed to the intense light (backlight such as sunlight or headlight high-beam light) from the front of the vehicle.	Yes No
3	The raindrops, water drops or dirt on the windshield glass are not wiped off sufficiently.	Yes No
4	The windshield glass is covered with fog, snow, dirt, frost or sandy dust, and either of them blocks the visibility of the stereo camera.	Yes No
5	The vehicle was tilted excessively by the heavy load.	Yes No
6	Canoes etc. loaded on the roof blocked the visibility of the stereo camera.	Yes No
7	The field of view was insufficient due to water or snow raised by the preceding vehicle or oncoming vehicle, or the moisture, sand, smoke or sandy dust blown in the wind.	Yes No
8	The vehicle passed through the outlet or inlet of a tunnel.	Yes No
9	The rearmost area of preceding vehicle was small (trailer, etc.), low or uneven.	Yes No
10	The object was a fence or wall with even pattern (striped pattern or bricks) or unpatterned surface.	Yes No
11	The object was a plate of glass, mirror wall or door.	Yes No
12	The tail light of the preceding vehicle did not illuminate during nighttime hours or inside the tunnel.	Yes No
13	The vehicle passed through the banners, flags, drooping branches or grass.	Yes No
14	The vehicle drove on the steep uphill or steep downhill.	Yes No
15	Front of the camera was blocked by the hand.	Yes No
16	It was very dark and there was no obstacle around the vehicle.	Yes No
17	The surrounding ground surface was similarly colored. (There is snow as far as the eye can see.)	Yes No
18	Dirt such as fingerprint adhered to the lens portion of the stereo camera.	Yes No
19	Stable recognition was difficult because of reflection to the windshield glass.	Yes No
20	The stereo camera was subject to impact, and the displacement or distortion occurred.	Yes No

EyeSight Temporary Code(s) Display

EyeSight (DIAGNOSTICS)

Item name		Yes/No
[2]: EyeSight temporary stop code [CE] (At this time, "EyeSight Disabled Temp Range" is displayed in the multi-information display.)		
1	Check that the current status applies to the condition that the temperature of the stereo camera becomes excessively high or low.	
1	The compartment temperature was high. (For example: The vehicle was left under the scorching sun.) Or the compartment temperature was low. (For example: The vehicle was left under the frigid environment.)	Yes No
[3]: EyeSight temporary stop code [E5] (At this time, "EyeSight Disabled Check Manual" is displayed in the multi-information display.)		
1	Check that the current status applies to the condition that the vertical deviation occurs on the stereo camera optical axis.	
1	The vehicle was tilted excessively by the heavy load.	Yes No
2	The vehicle drove on the steep uphill or steep downhill.	Yes No
3	The stereo camera was subject to impact, and the displacement or distortion occurred.	Yes No
[4]: EyeSight temporary stop code [33] (At this time, "EyeSight Disabled Check Manual" is displayed in the multi-information display.)		
1	Check that the current status applies to the condition that the engine speed drops to 300 rpm or below.	Yes No
[5]: EyeSight temporary stop code [C0] (At this time, "EyeSight Disabled Check Manual" is displayed in the multi-information display.)		
1	Check that the current status applies to the condition that the pre-collision secondary brake operated three times between starting and stopping of engine.	Yes No
[6]: EyeSight temporary stop code [A0] (At this time, "EyeSight Disabled Check Manual" is displayed in the multi-information display.)		
1	Check that the current status applies to the condition that the voltage dropped below 10 V immediately after the ignition ON.	Yes No
[7]: EyeSight temporary stop code [A1] (At this time, "EyeSight Disabled Check Manual" is displayed in the multi-information display.)		
1	Check that the control module (CM) is currently being reprogrammed.	Yes No

EyeSight Temporary Code(s) Display

EyeSight (DIAGNOSTICS)

2. LIST OF CONTENTS FOR CAMERA TEMPORARY STOP

Read the camera temporary stop count from Current Data Display & Save of Subaru Select Monitor, estimate the possible cause of the temporary stop according to the chart below. (After clearing the memory, the number of occurrences for each temporary stop is accumulated.)

Displayed item	Main causes	Possible conditions for temporary stop (including events occurring less frequently)
EyeSight Temporary 0 Count	Front of the camera is blocked by hand, dirty window glass	Backlight, dirty window glass, fogged window glass, frost on the window glass, oil film on the window glass, raindrop adhering to the window glass, fingerprint adhering to the lens, deteriorated wiper, front of the camera is blocked by hand, bad weather (heavy rain, snowstorm, dense fog), unpatterned wall, water or snow raised by preceding vehicle
EyeSight Temporary 1 Count	Front of the camera is blocked by hand, dirty window glass	Backlight, dirty window glass, fogged window glass, frost on the window glass, oil film on the window glass, raindrop adhering to the window glass, fingerprint adhering to the lens, deteriorated wiper, front of the camera is blocked by hand, bad weather (heavy rain, snowstorm, dense fog), water or snow raised by preceding vehicle, very dark and no obstacle around the vehicle, unpatterned wall, blanket of snow around the vehicle and no obstacle is found
EyeSight Temporary 2 Count	Fogged window glass, frost on the window glass	Dirty window glass, fogged window glass, frost on the window glass, oil film on the window glass, raindrop adhering to the window glass, fingerprint adhering to the lens, deteriorated wiper, front of the camera is blocked by hand, bad weather (heavy rain, snowstorm, dense fog), unpatterned wall, water or snow raised by preceding vehicle
EyeSight Temporary 3 Count	Backlight	Backlight, dirty window glass, fogged window glass, frost on the window glass, oil film on the window glass, raindrop adhering to the window glass, fingerprint adhering to the lens, deteriorated wiper, bad weather (heavy rain, snowstorm, dense fog), unpatterned wall, water or snow raised by preceding vehicle
EyeSight Temporary 4 Count	Water raised by preceding vehicle	Backlight, dirty window glass, fogged window glass, frost on the window glass, oil film on the window glass, raindrop adhering to the window glass, fingerprint adhering to the lens, deteriorated wiper, front of the camera is blocked by hand, bad weather (heavy rain, snowstorm, dense fog), unpatterned wall, water or snow raised by preceding vehicle, use of the window washer
EyeSight Temporary 5 Count	Dirty window glass, fogged window glass, oil film on the window glass	Dirty window glass, fogged window glass, frost on the window glass, oil film on the window glass, raindrop adhering to the window glass, fingerprint adhering to the lens, deteriorated wiper, bad weather (heavy rain, snowstorm, dense fog), water or snow raised by preceding vehicle
EyeSight Temporary 6 Count	Storm of rain	Dirty window glass, fogged window glass, frost on the window glass, oil film on the window glass, raindrop adhering to the window glass, fingerprint adhering to the lens, deteriorated wiper, bad weather (heavy rain, snowstorm, dense fog), water or snow raised by preceding vehicle, use of the window washer
EyeSight Temporary 7 Count	Object on the dashboard reflected against the windshield glass	Object on the dashboard reflected against the windshield glass, snowstorm
EyeSight Temporary 8 Count	Dirty window glass, bad weather	Backlight, dirty window glass, fogged window glass, frost on the window glass, oil film on the window glass, raindrop adhering to the window glass, fingerprint adhering to the lens, deteriorated wiper, front of the camera is blocked by hand, object on the dashboard reflected against the windshield glass, bad weather (heavy rain, snowstorm, dense fog), unpatterned wall, water drop raised by preceding vehicle, steep slope, continuous sharp curve, banner, grass, preceding vehicle with large uneven surface (trailer, etc.), preceding vehicle driving in the night without illuminating the tail light, preceding vehicle with snow adhered, use of the window washer
EyeSight Temporary 9 Count	Not used	—
EyeSight Temporary 10 Count	Not used	—

ECM Cancel Code(s) Display

EyeSight (DIAGNOSTICS)

14. ECM Cancel Code(s) Display

A: OPERATION

1) On «Main Menu» display, select «Each System».

On «Select System» display, select «Engine Control System».

2) Drive vehicle at 40 km/h (25 MPH) or more and set the cruise control.

CAUTION:

- When performing diagnosis, observe the legal speed limit on the road.
- The cancel code will also appear when the cruise control is cancelled by the driver's operation. Do not confuse them.
- Be sure to get an assistant to support the diagnosis while driving, and have him/her operate the select monitor.

3) When the set speed is cancelled by itself (without any cancel operations such as applying brake) or when the cruise control could not be set by performing the setting operation, select the «Cancel Code(s) Display» on the engine malfunction diagnosis screen.

NOTE:

The «Current» and «The past» are contained in the cancel code. The latest code recognized during current test drive is displayed in «Current». Cancel codes resulting from fault diagnosis of switches relating to the system and cruise control are also displayed in «The past».

4) Perform Engine DTC Clear Memory operation. <Ref. to EN(H4DO)(diag)-66, Clear Memory Mode.>

Cancel codes for switches relating to the system and cruise control are deleted by clearing memory on the engine side.

NOTE:

- For detailed operation procedures, refer to “Application help”.
- The latest code will be cleared by turning ignition switch to OFF.
- For details on cancel codes, refer to List of ECM cruise control cancel code. <Ref. to ES(diag)-66, LIST, ECM Cancel Code(s) Display.>

B: LIST

- List of ECM cruise control cancel code(s)

When the cruise control is cancelled, the ECM outputs the following cancel codes.

Cancel code	Item	Contents of diagnosis	Reference
11	Main switch	Main switch of the EyeSight steering switch is turned to OFF, and the cruise control is released.	This DTC is displayed without operating the main switch. <Ref. to ES(diag)-59, CHECK EyeSight STEERING SWITCH, Diagnostics with Phenomenon.>
12	Stop & Brake switch	Stop light switch or brake switch is turned to ON, and then the cruise control is released.	This DTC is displayed without depressing the brake pedal. <Ref. to CC(diag)-17, 12, Diagnostic Procedure with Cancel Code.>
14	Neutral switch	Neutral position switch is turned to ON, and then the cruise control is released.	This DTC is displayed without shifting to neutral position. <Ref. to CC(diag)-20, 14, Diagnostic Procedure with Cancel Code.>

ECM Cancel Code(s) Display

EyeSight (DIAGNOSTICS)

Cancel code	Item	Contents of diagnosis	Reference
15	Cancel switch	Cancel switch is turned to ON, and then the cruise control is released.	This DTC is displayed without operating the cancel switch. <Ref. to CC(diag)-21, 15, Diagnostic Procedure with Cancel Code.>
16	Ignition switch	Ignition switch is turned to OFF, and then the cruise control is released.	This DTC is displayed without operating the ignition switch. <Ref. to CC(diag)-22, 16, Diagnostic Procedure with Cancel Code.>
21	Abnormality of switches when Ignition switch on	When the ignition switch is turned to ON, each switch of the EyeSight steering switch is already turned ON.	This DTC is displayed when turning ignition switch to ON without operating the EyeSight steering switch. <Ref. to CC(diag)-22, 21, Diagnostic Procedure with Cancel Code.>
22	Abnormality of change in vehicle speed	Malfunction of vehicle speed signal variation is detected.	<Ref. to CC(diag)-23, 22, Diagnostic Procedure with Cancel Code.>
24	Abnormality of switches related to cruise control	Open circuit of the EyeSight steering switch is detected during cruise driving. (The system is judged as model without cruise control.)	This DTC is displayed with normal operation. <Ref. to CC(diag)-23, 24, Diagnostic Procedure with Cancel Code.>
31	Engine Speed	<ul style="list-style-type: none"> Abnormal increase of engine speed is detected. Gear is placed in Neutral, 1st or Reverse position. 	Cruise in 2nd shift position or more. <Ref. to CC(diag)-23, 31, Diagnostic Procedure with Cancel Code.>
32	Cruise Control out of Range	<ul style="list-style-type: none"> Vehicle speed exceeds the controllable range during cruising. Set operation was performed at vehicle speed unavailable for setting. RESUME operation was performed without memorized vehicle speed. 	This DTC is displayed, though the vehicle speed is increased to the speed available for cruise set and set operation was performed again. <Ref. to CC(diag)-23, 32, Diagnostic Procedure with Cancel Code.>
34	Prohibition of cruise control at continuing big Accel. angle	The vehicle has been driven at higher speed than set vehicle speed for an abnormally long time (approximately 10 minutes) during cruise driving.	<Ref. to CC(diag)-23, 34, Diagnostic Procedure with Cancel Code.>
35	Prohibition of cruise control at vehicle speed F/B malfunction	Set vehicle speed cannot be kept because of some reasons (steep uphill, parking brake, abnormal decrease of engine output, etc.) during cruise driving.	<Ref. to CC(diag)-23, 35, Diagnostic Procedure with Cancel Code.>
41	VDC/TCS/EPB Operating	Vehicle dynamics control (VDC), TCS or EPB is operated during cruise driving or cruise setting.	<Ref. to CC(diag)-24, 41, Diagnostic Procedure with Cancel Code.>
43	ABS/VDC Failure	When the cruise switch is ON, ABS or vehicle dynamics control (VDC) system malfunction is detected.	<Ref. to CC(diag)-24, 43, Diagnostic Procedure with Cancel Code.>
44	Body Integrated unit Failure	When the cruise switch is ON, body integrated unit system malfunction is detected.	<Ref. to CC(diag)-24, 44, Diagnostic Procedure with Cancel Code.>

ECM Cancel Code(s) Display

EyeSight (DIAGNOSTICS)

Cancel code	Item	Contents of diagnosis	Reference
45	Meter Failure	When the cruise switch is ON, combination meter malfunction is detected.	<Ref. to CC(diag)-24, 45, Diagnostic Procedure with Cancel Code.>
47	Adaptive cruise control ECM abnormal	When the cruise switch is ON, stereo camera malfunction is detected.	Check the DTCs related to stereo camera.
49	TCM Failure	Transmission control module (TCM) malfunction is detected during cruise driving or cruise setting.	<Ref. to CC(diag)-24, 49, Diagnostic Procedure with Cancel Code.>
53	Adaptive Cruise Control Forced Cancel	Stereo camera detects the release command of the cruise control during cruise driving or cruise setting operation.	Check the stereo camera. Check the ACC cancel code. <Ref. to ES(diag)-69, ACC Cancel Code(s) Display.>
54	Release SW	Brake control module detects the brake pedal operation by the driver during cruise driving or cruise setting operation.	If this code is detected when the brake pedal is not depressed intentionally, check the release switch.
55	Adaptive cruise control reception data abnormal	When the cruise switch is ON, malfunction is detected in the reception data from the stereo camera.	Check the cancel code of stereo camera.
61	Brake Switch Failure	Malfunction in the stop light & brake switch is detected.	<Ref. to CC(diag)-24, 61, Diagnostic Procedure with Cancel Code.>
62	Neutral Switch Failure	Neutral position switch malfunction is detected.	<Ref. to CC(diag)-24, 62, Diagnostic Procedure with Cancel Code.>
63	Abnormality 1 of change in vehicle speed	Malfunction of vehicle speed signal variation is detected. This code may be displayed by a sudden starting of the vehicle on a road with low μ and with the VDC OFF. In this case, restart the engine and perform the cruise setting again. If the cancel code is not displayed, the vehicle is in normal status.	<Ref. to CC(diag)-24, 63, Diagnostic Procedure with Cancel Code.>
64	Engine Sensor Failure 1	Malfunction related to engine is detected.	<Ref. to CC(diag)-25, 64, Diagnostic Procedure with Cancel Code.>
65	Abnormality 1 of switches related to cruise control	Malfunction of the EyeSight steering switch is detected. (When the switch is pressed ON for a long time (approximately two minutes), stuck ON condition is detected.)	<Ref. to CC(diag)-25, 65, Diagnostic Procedure with Cancel Code.>
66	Cruise Control Calculation Error	Malfunction of the cruise control calculation (microcomputer) is detected.	<Ref. to CC(diag)-25, 66, Diagnostic Procedure with Cancel Code.>

15.ACC Cancel Code(s) Display

A: OPERATION

When the ACC cancel code is detected from the stereo camera, the cruise control will be cancelled.

- 1) On «Start» display, select «Diagnosis».
- 2) On «Vehicle selection» display, input the target vehicle information and select «Confirmed».
- 3) On «Main Menu» display, select «Each System».
- 4) On «Select System» display, select «EyeSight» and select «Enter».
- 5) On «Select Function» display, select «Cancel Code».
- 6) On «Cancel Code» display, select «Cancel Code of ACC Cruise Control».

NOTE:

- For detailed operation procedures, refer to “Application help”.
- Up to 8 codes can be stored. When more than eight codes are output, the oldest code will be deleted to store the latest code.
- Stored codes will be cleared by Clear Memory.
- For details on ACC cancel codes, refer to List of ACC cancel code. <Ref. to ES(diag)-69, LIST, ACC Cancel Code(s) Display.>

B: LIST

- List of ACC cancel code(s)

ACC cancel code	Item	Contents of diagnosis
02	ACC Mode:Maintaining Standstill Position	Displayed when the cruise control is cancelled after the own vehicle stops following the preceding vehicle.
04	ACC Mode:Stereo Camera Temporary	Displayed when the cruise control is canceled by the EyeSight temporarily stop while driving in the adaptive cruise mode.
08	Common:Vehicle Speed Sensor Abnormal	Displayed when the cruise control is canceled due to a wheel speed sensor malfunction.
09	Common:Depress The Brake Pedal	Displayed when the cruise control is canceled by the brake operation of the driver.
0A	Common:Pre-Collision Braking	Displayed when the cruise control is canceled because the pre-collision brake function is activated.
0B	Common:AT Manual Mode	Displayed when the cruise control is canceled because the AT manual mode is selected or paddle operation is performed.
0D	Common:Any Doors is Opened	Displayed when the cruise control is canceled because either of the driver's door, passenger's door, or rear doors is opened.
0E	Common:Unfastened The Driver's Seatbelt	Displayed when the cruise control is canceled because the driver's seat belt is unfastened.
12	Common:AT Gear Range	Displayed in the following situations: The driver performed the SET or RES operation to drive the vehicle either in the adaptive cruise mode or in the constant speed mode, but that operation was not accepted because it was done immediately after shifting into D range.
13	Common:Steep Sloping Road	Displayed when the road surface was judged to be too steep and therefore the cruise control is canceled.
14	Common:ABS Activation	Displayed when the cruise control is canceled because the ABS is activated.
15	Common:Steering Angle Excessive	Displayed when the cruise control is canceled because the steering wheel is fully turned.
16	ACC Mode:Vehicle Stop Judge	Displayed when the cruise control is cancelled after the own vehicle stops following the preceding vehicle while driving in the adaptive cruise control mode.
17	Common:Parking Brake Activation	Displayed when the cruise control is cancelled because the parking brake is applied.
18	ACC Mode:Automatic Cancellation	Displayed when the cruise control is cancelled under the following situations: The own vehicle stops following the preceding vehicle while driving in the adaptive cruise control mode, and the driver repeats the SET or RES operation and the automatic brake control continues for 120 seconds.

ACC Cancel Code(s) Display

EyeSight (DIAGNOSTICS)

ACC cancel code	Item	Contents of diagnosis
1B	VDC actuation	Displayed when the cruise control is canceled because the VDC is activated.
1C	Common:Cancel SW Operation	Displayed when the cruise control is canceled because the cruise switch was operated while the cruise control is set.
1D	Common:Cruise SW OFF	Displayed when the cruise control is canceled (turned OFF) because the cruise switch was operated while the cruise control is not set.
1E	CC Mode:Max Speed Exceeded	Displayed when the cruise control is canceled because the own vehicle speed exceeds the controllable range while driving in the constant speed mode.
1F	ACC Mode:Max Speed Exceeded	Displayed when the cruise control is canceled because the own vehicle speed exceeds the controllable range while driving in the adaptive cruise mode.

NOTE:

- “Adaptive cruise mode”: Adaptive cruise control
- “Constant speed mode”: Conventional cruise control
- “Common”: Adaptive cruise control and conventional cruise control

16. Diagnostic Procedure with Diagnostic Trouble Code (DTC)

A: DTC U0073 CONTROL MODULE COMMUNICATION BUS OFF

Detected when an error occurs in the CAN line. (Bus off)

NOTE:

Perform the diagnosis for LAN system. <Ref. to LAN(diag)-2, PROCEDURE, Basic Diagnostic Procedure.>

B: DTC U0100 LOST COMMUNICATION WITH ECM/PCM “A”

Detected when CAN data from engine control module (ECM) is not transmitted to stereo camera.

NOTE:

Perform the diagnosis for LAN system. <Ref. to LAN(diag)-2, PROCEDURE, Basic Diagnostic Procedure.>

C: DTC U0101 LOST COMMUNICATION WITH TCM

Detected when CAN data from TCM is not transmitted to stereo camera.

When lost communication with TCM and TCM abnormal occur simultaneously, perform diagnosis for lost communication with TCM first.

NOTE:

Perform the diagnosis for LAN system. <Ref. to LAN(diag)-2, PROCEDURE, Basic Diagnostic Procedure.>

D: DTC U0122 LOST COMMUNICATION WITH VEHICLE DYNAMICS CONTROL MODULE

Detected when CAN data from VDC is not transmitted to stereo camera.

When lost communication with vehicle dynamics control and vehicle dynamics control module abnormal or VDC echo back disagreement occur simultaneously, perform diagnosis for lost communication with vehicle dynamics control first.

NOTE:

Perform the diagnosis for LAN system. <Ref. to LAN(diag)-2, PROCEDURE, Basic Diagnostic Procedure.>

E: DTC U0140 LOST COMMUNICATION WITH BODY CONTROL MODULE

Detected when CAN data from body integrated unit is not transmitted to stereo camera.

NOTE:

Perform the diagnosis for LAN system. <Ref. to LAN(diag)-2, PROCEDURE, Basic Diagnostic Procedure.>

F: DTC U0155 LOST COMMUNICATION WITH INSTRUMENT PANEL CLUSTER (IPC) CONTROL MODULE

Detected when CAN data from combination meter is not transmitted to stereo camera.

NOTE:

Perform the diagnosis for LAN system. <Ref. to LAN(diag)-2, PROCEDURE, Basic Diagnostic Procedure.>

G: DTC U0401 INVALID DATA RECEIVED FROM ECM/PCM “A”

Failure counter diagnosis of engine control module (ECM)

NOTE:

Perform the diagnosis for LAN system. <Ref. to LAN(diag)-2, PROCEDURE, Basic Diagnostic Procedure.>

H: DTC U0402 INVALID DATA RECEIVED FROM TCM

Failure counter diagnosis of automatic transmission control module (TCM)

NOTE:

Perform the diagnosis for LAN system. <Ref. to LAN(diag)-2, PROCEDURE, Basic Diagnostic Procedure.>

Diagnostic Procedure with Diagnostic Trouble Code (DTC)

EyeSight (DIAGNOSTICS)

I: DTC U0416 INVALID DATA RECEIVED FROM VEHICLE DYNAMICS CONTROL MODULE

Failure counter diagnosis of VDC control module (VDC CM)

NOTE:

Perform the diagnosis for LAN system. <Ref. to LAN(diag)-2, PROCEDURE, Basic Diagnostic Procedure.>

J: DTC U0422 INVALID DATA RECEIVED FROM BODY CONTROL MODULE

Failure counter diagnosis of body integrated unit

NOTE:

Perform the diagnosis for LAN system. <Ref. to LAN(diag)-2, PROCEDURE, Basic Diagnostic Procedure.>

K: DTC U0423 INVALID DATA RECEIVED FROM INSTRUMENT PANEL CLUSTER CONTROL MODULE

Failure counter diagnosis of combination meter

NOTE:

Perform the diagnosis for LAN system. <Ref. to LAN(diag)-2, PROCEDURE, Basic Diagnostic Procedure.>

L: DTC B2801 TCM ABNORMAL

Detected when error occurs in the automatic transmission.

When lost communication with TCM and TCM abnormal occur simultaneously, perform diagnosis for lost communication with TCM first.

NOTE:

Check the automatic transmission. <Ref. to CVT(diag)-2, PROCEDURE, Basic Diagnostic Procedure.>

M: DTC B2802 ETC ABNORMAL

Detected when error occurs in the electronic throttle control.

NOTE:

Check the electronic throttle control. <Ref. to EN(H4DO)(diag)-2, PROCEDURE, Basic Diagnostic Procedure.>

N: DTC B2806 ECM ABNORMAL

Detected when error occurs in the engine control module (ECM).

NOTE:

Perform check of the ECM. <Ref. to EN(H4DO)(diag)-2, PROCEDURE, Basic Diagnostic Procedure.>

O: DTC B2807 ECM ABNORMAL

Detected when cruise indicator illumination request from ECM and ON/OFF information of cruise function do not match.

NOTE:

- Perform check of the ECM. <Ref. to EN(H4DO)(diag)-2, PROCEDURE, Basic Diagnostic Procedure.>
- Check the ECM cruise control cancel code. <Ref. to ES(diag)-66, ECM Cancel Code(s) Display.>

P: DTC B2809 VDC MALFUNCTION

Detected when error occurs in the VDC. (VDC failure)

When lost communication with vehicle dynamics control and vehicle dynamics control module abnormal or VDC echo back disagreement occur simultaneously, perform diagnosis for lost communication with vehicle dynamics control first.

NOTE:

Check the VDC. <Ref. to VDC(diag)-2, PROCEDURE, Basic Diagnostic Procedure.>

Q: DTC B280A VDC ECHO BACK DISAGREEMENT

Detected when error occurs in the VDC. (VDC brake control malfunction 1)

When lost communication with vehicle dynamics control and vehicle dynamics control module abnormal or VDC echo back disagreement occur simultaneously, perform diagnosis for lost communication with vehicle dynamics control first.

NOTE:

Check the VDC. <Ref. to VDC(diag)-2, PROCEDURE, Basic Diagnostic Procedure.>

R: DTC B280B VDC BRAKE FLUID PRESSURE

Detected when error occurs in the VDC. (VDC brake control malfunction 2)

NOTE:

Check the VDC. <Ref. to VDC(diag)-2, PROCEDURE, Basic Diagnostic Procedure.>

S: DTC B280F COMBINATION METER MALFUNCTION

Malfunction is detected in the combination meter.

DTC DETECTING CONDITION:

Defective combination meter

TROUBLE SYMPTOM:

- All functions of EyeSight system do not operate.
- EyeSight warning light blinks or illuminates.
- Combination meter does not illuminate.

NOTE:

Check the combination meter. <Ref. to IDI-11, INSPECTION, Combination Meter System.>

T: DTC B2810 INCOMPATIBLE WITH EyeSight (COMBINATION METER)

Detected when the combination meter, which is not designed exclusively for EyeSight is installed.

DTC DETECTING CONDITION:

Incorrect specifications of combination meter

TROUBLE SYMPTOM:

All functions of EyeSight system do not operate.

NOTE:

Replace the combination meter with the one designed for EyeSight. <Ref. to IDI-18, Combination Meter.>

Diagnostic Procedure with Diagnostic Trouble Code (DTC)

EyeSight (DIAGNOSTICS)

U: DTC B2814 POWER SUPPLY LOW VOLTAGE

Detected when the status of 7.0 V or less continues approximately for 5 seconds and is judged to be low-voltage malfunction, or when the +B harness of the stereo camera is broken.

DTC DETECTING CONDITION:

- Input voltage to stereo camera is out of specifications.
- Defective stereo camera control harness (open circuit in +B harness)
- Defective stereo camera

TROUBLE SYMPTOM:

- All functions of EyeSight system do not operate.
- EyeSight warning light blinks or illuminates.
- Cruise indicator light blinks.
- Malfunction indicator light illuminates.
- VDC warning light illuminates.
- ATF temperature warning light illuminates.

WIRING DIAGRAM:

EyeSight System <Ref. to WI-130, WIRING DIAGRAM, EyeSight System.>

ADA00632

Step	Check	Yes	No
1 CHECK GENERATOR. 1) Start the engine and idle for a while. 2) Measure the voltage between generator terminal B and chassis ground. Connector & terminal Generator terminal B (+) — Chassis ground (-):	Is the voltage 10 V or more?	Go to step 2.	Check the generator. <Ref. to SC(H4DO)-32, Generator.>
2 CHECK BATTERY TERMINAL. Turn the ignition switch to OFF.	Is the battery terminal connected securely?	Go to step 3.	Tighten the battery terminal securely.
3 CHECK FUSE. Check fuses No. 7 and No. 12 in the fuse & relay box. <Ref. to ES-4, Relay and Fuse.>	Is the fuse OK?	Go to step 4.	Replace the faulty fuse. When the replaced fuse blows out easily, check the short circuit in harness.

Diagnostic Procedure with Diagnostic Trouble Code (DTC)

EyeSight (DIAGNOSTICS)

Step	Check	Yes	No
4 CHECK HARNESS (POWER SUPPLY CIRCUIT). 1) Disconnect the stereo camera. 2) Turn the ignition switch to ON. 3) Measure the voltage between harness connector of stereo camera and chassis ground. Connector & terminal (R137) No. 6 (+) — Chassis ground (-): (R137) No. 8 (+) — Chassis ground (-):	Is the voltage 10 V or more?	Go to step 5.	Check the power supply system circuit, and if any fault is found, repair the defective parts or replace the harness.
5 CHECK HARNESS (GROUND CIRCUIT). 1) Turn the ignition switch to OFF. 2) Disconnect the ground cable from battery. 3) Measure the resistance between stereo camera and chassis ground. Connector & terminal (R137) No. 7 — Chassis ground:	Is the resistance less than 10 Ω?	Go to step 6.	Check the ground system circuit, and if any fault is found, repair the defective parts or replace the harness.
6 CHECK POOR CONTACT OF CONNECTORS. Check stereo camera connector.	Is there poor contact of the connector?	Repair the connector.	Go to step 7.
7 CHECK STEREO CAMERA. 1) Connect all connectors and battery terminals securely. 2) Start the engine, drive the vehicle at 40 km/h (24.9 MPH) or more, stop the vehicle and then stop the engine. 3) After 3 seconds or more have elapsed, restart the engine. 4) Clear the memory. <Ref. to ES(diag)-44, Clear Memory Mode.> 5) Read the DTC. <Ref. to ES(diag)-39, Diagnostic Code(s) Display.>	Is the same DTC (DTC B2814 or B2815) displayed?	Replace the stereo camera. <Ref. to ES-7, REMOVAL, Stereo Camera.>	Even if DTC is displayed, the circuit has returned to a normal condition at this time. Reproduce the failure, and then perform the diagnosis again. NOTE: In this case, temporary poor contact of connector, or temporary open or short circuit of harness may be the cause.

V: DTC B2815 POWER SUPPLY HIGH VOLTAGE

Detected when the status for the battery voltage of 16 V or more continues approximately for 5 seconds and is judged to be abnormally high voltage.

Refer to DTC B2814 for DTC detecting condition, trouble symptom and diagnostic procedure. <Ref. to ES(diag)-74, DTC B2814 POWER SUPPLY LOW VOLTAGE, Diagnostic Procedure with Diagnostic Trouble Code (DTC).>

W: DTC B2817 BRAKE LAMP

DTC DETECTING CONDITION:

- Defective brake light relay
- Defective brake light switch
- Defective VDC

TROUBLE SYMPTOM:

- All functions of EyeSight system do not operate.
- EyeSight warning light illuminates.
- Brake light does not go off or illuminate.

NOTE:

When this DTC is detected, check VDC system. <Ref. to VDC(diag)-2, PROCEDURE, Basic Diagnostic Procedure.>

Diagnostic Procedure with Diagnostic Trouble Code (DTC)

EyeSight (DIAGNOSTICS)

X: DTC B28A0 VEHICLE MODEL JUDGMENT

Detected when the model code for stereo camera and the model code used for CAN data are different.

DTC DETECTING CONDITION:

- Defective CAN system
- Defective stereo camera
- In the aiming operation, there is an open circuit in the +B harness of the stereo camera.
- In the completion of the aiming operation, the switching from IGN OFF to IGN ON takes place too early, and the recording of the model information has not yet been finished.
- Incorrect assembly of stereo camera (when the stereo camera designed for A-type vehicle is installed to the B-type vehicle, etc.)

TROUBLE SYMPTOM:

- All functions of EyeSight system do not operate.
- EyeSight warning light illuminates.

WIRING DIAGRAM:

EyeSight System <Ref. to WI-130, WIRING DIAGRAM, EyeSight System.>

ADA00632

Step	Check	Yes	No
1	CHECK RELATED CM. Check the part number of the ECM, TCM, VDC CM and combination meter.	Go to step 2.	Replace the non-genuine CM with a genuine one.
2	CHECK STEREO CAMERA. 1) Remove the camera cover. 2) Check the part number of the stereo camera.	Go to step 3.	Replace the stereo camera. <Ref. to ES-7, REMOVAL, Stereo Camera.>
3	CHECK LAN SYSTEM. Perform the diagnosis for LAN system. <Ref. to LAN(diag)-2, Basic Diagnostic Procedure.>	Perform the diagnosis according to DTC.	Go to step 4.
4	CHECK MODEL REGISTRATION INFORMATION. Check the model registration information from the current data of stereo camera. <Ref. to ES(diag)-23, Read Current Data.>	Perform the adjustment or inspection of the camera. <Ref. to ES-12, Camera Adjustment, Inspection.>	Go to step 5.

Diagnostic Procedure with Diagnostic Trouble Code (DTC)

EyeSight (DIAGNOSTICS)

Step	Check	Yes	No
5 CHECK FUSE. Check fuses No. 7 and No. 12 in the fuse & relay box. <Ref. to ES-4, Relay and Fuse.>	Is the fuse OK?	Go to step 6.	Replace the faulty fuse. When the replaced fuse blows out easily, check the short circuit in harness.
6 CHECK HARNESS (POWER SUPPLY CIRCUIT). 1) Disconnect the stereo camera. 2) Turn the ignition switch to ON. 3) Measure the voltage between harness connector of stereo camera and chassis ground. Connector & terminal <i>(R137) No. 6 (+) — Chassis ground (-):</i> <i>(R137) No. 8 (+) — Chassis ground (-):</i>	Is the voltage 10 V or more?	Go to step 7.	Check the power supply system circuit, and if any fault is found, repair the defective parts or replace the harness.
7 CHECK HARNESS (GROUND CIRCUIT). 1) Turn the ignition switch to OFF. 2) Disconnect the ground cable from battery. 3) Measure the resistance between stereo camera and chassis ground. Connector & terminal <i>(R137) No. 7 — Chassis ground:</i>	Is the resistance less than 10 Ω ?	Go to step 8.	Check the ground system circuit, and if any fault is found, repair the defective parts or replace the harness.
8 CHECK POOR CONTACT OF CONNECTORS. Check stereo camera connector.	Is there poor contact of the connector?	Repair the connector.	Go to step 9.
9 CHECK STEREO CAMERA. 1) Connect all connectors and battery terminals securely. 2) Clear the memory. <Ref. to ES(diag)-44, Clear Memory Mode.> 3) Read the DTC. <Ref. to ES(diag)-39, Diagnostic Code(s) Display.>	Is the same DTC (DTC B28A0) displayed?	Replace the stereo camera. <Ref. to ES-7, REMOVAL, Stereo Camera.>	Even if DTC is displayed, the circuit has returned to a normal condition at this time. Reproduce the failure, and then perform the diagnosis again. NOTE: In this case, temporary poor contact of connector, or temporary open or short circuit of harness may be the cause.

Diagnostic Procedure with Diagnostic Trouble Code (DTC)

EyeSight (DIAGNOSTICS)

Y: DTC B28A1 EyeSight COMMUNICATION(ECM)

Detected when the engine control module (ECM) detects the malfunction of stereo camera, or when the stereo camera or ECM is assembled incorrectly.

DTC DETECTING CONDITION:

- Defective CAN system
- Defective engine control module (ECM)
- Defective stereo camera
- Incorrect assembly of stereo camera (when the stereo camera designed for A-type vehicle is installed to the B-type vehicle, etc.)
- Incorrect assembly of ECM (when the ECM designed for another model is installed, etc.)

TROUBLE SYMPTOM:

- All functions of EyeSight system do not operate.
- EyeSight warning light illuminates.

	Step	Check	Yes	No
1	CHECK ECM. Check the part number of the ECM.	Is the ECM genuine?	Go to step 2.	Replace the ECM. <Ref. to FU(H4DO)-98, REMOVAL, Engine Control Module (ECM).>
2	CHECK STEREO CAMERA. 1) Remove the camera cover. 2) Check the part number of the stereo camera.	Is the stereo camera genuine?	Go to step 3.	Replace the stereo camera. <Ref. to ES-7, REMOVAL, Stereo Camera.>
3	CHECK LAN SYSTEM. Perform the diagnosis for LAN system. <Ref. to LAN(diag)-2, PROCEDURE, Basic Diagnostic Procedure.>	Is DTC displayed?	Perform the diagnosis according to DTC.	Go to step 4.
4	CHECK ECM. Perform the diagnosis for the engine. <Ref. to EN(H4DO)(diag)-2, PROCEDURE, Basic Diagnostic Procedure.>	Is DTC displayed?	Perform the diagnosis according to DTC.	Go to step 5.
5	CHECK CONNECTOR. Check the ECM connector and the stereo camera connector.	Is the connector OK?	Go to step 6.	Repair or replace the connector.
6	CHECK STEREO CAMERA. Read the DTC. <Ref. to ES(diag)-39, Diagnostic Code(s) Display.>	Is another DTC displayed?	Perform the diagnosis according to DTC.	Go to step 7.
7	CHECK STEREO CAMERA. 1) Clear the memory. <Ref. to ES(diag)-44, Clear Memory Mode.> 2) Read the DTC. <Ref. to ES(diag)-39, Diagnostic Code(s) Display.>	Is the same DTC displayed?	Replace the stereo camera. <Ref. to ES-7, REMOVAL, Stereo Camera.>	Even if DTC is displayed, the circuit has returned to a normal condition at this time. Reproduce the failure, and then perform the diagnosis again. NOTE: In this case, temporary poor contact of connector, or temporary open or short circuit of harness may be the cause.

Diagnostic Procedure with Diagnostic Trouble Code (DTC)

EyeSight (DIAGNOSTICS)

Z: DTC B28A2 EyeSight COMMUNICATION(VDC)

Detected when the VDC control module (VDCCM) detects the malfunction of stereo camera.

DTC DETECTING CONDITION:

- Defective CAN system
- Defective VDC control module (VDCCM)
- Defective stereo camera

TROUBLE SYMPTOM:

- All functions of EyeSight system do not operate.
- EyeSight warning light illuminates.

	Step	Check	Yes	No
1	CHECK LAN SYSTEM. Perform the diagnosis for LAN system. <Ref. to LAN(diag)-2, PROCEDURE, Basic Diagnostic Procedure.>	Is DTC displayed?	Perform the diagnosis according to DTC.	Go to step 2.
2	CHECK VDC. Perform the diagnosis for VDC. <Ref. to VDC(diag)-2, PROCEDURE, Basic Diagnostic Procedure.>	Is DTC displayed?	Perform the diagnosis according to DTC.	Go to step 3.
3	CHECK CONNECTOR. Check the VDC connector and the stereo camera connector.	Is the connector OK?	Go to step 4.	Repair or replace the connector.
4	CHECK STEREO CAMERA. Read the DTC. <Ref. to ES(diag)-39, Diagnostic Code(s) Display.>	Is another DTC displayed?	Perform the diagnosis according to DTC.	Go to step 5.
5	CHECK STEREO CAMERA. 1) Clear the memory. <Ref. to ES(diag)-44, Clear Memory Mode.> 2) Read the DTC. <Ref. to ES(diag)-39, Diagnostic Code(s) Display.>	Is the same DTC displayed?	Replace the stereo camera. <Ref. to ES-7, REMOVAL, Stereo Camera.>	Even if DTC is displayed, the circuit has returned to a normal condition at this time. Reproduce the failure, and then perform the diagnosis again. NOTE: In this case, temporary poor contact of connector, or temporary open or short circuit of harness may be the cause.

Diagnostic Procedure with Diagnostic Trouble Code (DTC)

EyeSight (DIAGNOSTICS)

AA:DTC B28A3 EyeSight COMMUNICATION(METER)

Detected when the combination meter detects the malfunction of stereo camera.

DTC DETECTING CONDITION:

- Defective CAN system
- Defective combination meter
- Defective stereo camera

TROUBLE SYMPTOM:

- All functions of EyeSight system do not operate.
- EyeSight warning light illuminates.

	Step	Check	Yes	No
1	CHECK LAN SYSTEM. Perform the diagnosis for LAN system. <Ref. to LAN(diag)-2, PROCEDURE, Basic Diagnostic Procedure.>	Is the DTC displayed in the LAN system?	Perform the diagnosis according to DTC.	Go to step 2.
2	CHECK COMBINATION METER. Check the combination meter. <Ref. to IDI(diag)-2, COMBINATION METER, PROCEDURE, Basic Diagnostic Procedure.>	Is combination meter OK?	Go to step 3.	Perform the diagnosis for combination meter.
3	CHECK CONNECTOR. Check the combination meter connector and the stereo camera connector.	Is the connector OK?	Go to step 4.	Repair or replace the connector.
4	CHECK STEREO CAMERA. Read the DTC. <Ref. to ES(diag)-39, Diagnostic Code(s) Display.>	Is another DTC displayed?	Perform the diagnosis according to DTC.	Go to step 5.
5	CHECK STEREO CAMERA. 1) Clear the memory. <Ref. to ES(diag)-44, Clear Memory Mode.> 2) Read the DTC. <Ref. to ES(diag)-39, Diagnostic Code(s) Display.>	Is the same DTC displayed?	Replace the stereo camera. <Ref. to ES-7, REMOVAL, Stereo Camera.>	Even if DTC is displayed, the circuit has returned to a normal condition at this time. Reproduce the failure, and then perform the diagnosis again. NOTE: In this case, temporary poor contact of connector, or temporary open or short circuit of harness may be the cause.

Diagnostic Procedure with Diagnostic Trouble Code (DTC)

EyeSight (DIAGNOSTICS)

AB:DTC B28A5 ENGINE TORQUE LIMITER CONTROL PROHIBIT

Detected when abnormal data is transmitted from stereo camera to engine control module (ECM) and the engine control module (ECM) prohibits the AT rapid start prevention control, or when the engine control module (ECM) prohibits the AT rapid start prevention control.

DTC DETECTING CONDITION:

- Defective CAN system
- Defective engine control module (ECM)
- Defective stereo camera
- Defective combination meter
- Incorrect assembly of combination meter (when the combination meter that is not for EyeSight is installed.)

TROUBLE SYMPTOM:

- All functions of EyeSight system do not operate.
- EyeSight warning light illuminates.

	Step	Check	Yes	No
1	CHECK COMBINATION METER. Check the part number of the combination meter.	Is the combination meter genuine?	Go to step 2.	Replace the combination meter. <Ref. to IDI-18, Combination Meter.>
2	CHECK LAN SYSTEM. Perform the diagnosis for LAN system. <Ref. to LAN(diag)-2, Basic Diagnostic Procedure.>	Is DTC displayed?	Perform the diagnosis according to DTC.	Go to step 3.
3	CHECK ECM. Perform the diagnosis for the engine. <Ref. to EN(H4DO)(diag)-2, PROCEDURE, Basic Diagnostic Procedure.>	Is DTC displayed?	Perform the diagnosis according to DTC.	Go to step 4.
4	CHECK CONNECTOR. Check the ECM connector and the stereo camera connector.	Is the connector OK?	Go to step 5.	Repair or replace the connector.
5	CHECK STEREO CAMERA. Read the DTC. <Ref. to ES(diag)-39, Diagnostic Code(s) Display.>	Is another DTC displayed?	Perform the diagnosis according to DTC.	Go to step 6.
6	CHECK STEREO CAMERA. 1) Clear the memory. <Ref. to ES(diag)-44, Clear Memory Mode.> 2) Read the DTC. <Ref. to ES(diag)-39, Diagnostic Code(s) Display.>	Is the same DTC displayed?	Replace the stereo camera. <Ref. to ES-7, REMOVAL, Stereo Camera.>	Even if DTC is displayed, the circuit has returned to a normal condition at this time. Reproduce the failure, and then perform the diagnosis again. NOTE: In this case, temporary poor contact of connector, or temporary open or short circuit of harness may be the cause.

Diagnostic Procedure with Diagnostic Trouble Code (DTC)

EyeSight (DIAGNOSTICS)

AC:DTC B28A6 INTERNAL STEREO CAMERA COMMUNICATION 1

Detected when communication error occurs inside the stereo camera.

DTC DETECTING CONDITION:

Communication error occurs inside the stereo camera.

TROUBLE SYMPTOM:

All functions of EyeSight system do not operate.

	Step	Check	Yes	No
1	CHECK RESTARTING. 1) Turn the ignition switch to OFF. 2) Start the engine. 3) Read the DTC. <Ref. to ES(diag)-39, Diagnostic Code(s) Display.>	Is DTC displayed after restarting the engine? ^{*1}	Replace the stereo camera. <Ref. to ES-7, REMOVAL, Stereo Camera.>	Clear the memory, in which temporary communication failure occurs and complete the step. <Ref. to ES(diag)-44, Clear Memory Mode.>

^{*1}: When malfunction is detected after restarting the engine, 0 is registered in IG counter. Other values can be regarded as DTCs detected in the past.

AD:DTC B28A7 STEREO CAMERA RECOGNITION(TARGET)

Detected when error occurs in the communication data inside the control module caused by external factors such as noises.

NOTE:

If the same DTC is still detected after the engine has restarted, replace the stereo camera. <Ref. to ES-7, REMOVAL, Stereo Camera.>

AE:DTC B28A8 INTERNAL STEREO CAMERA COMMUNICATION 2

Detected when error occurs in the communication data inside the control module caused by external factors such as noises.

NOTE:

If the same DTC is still detected after the engine has restarted, replace the stereo camera. <Ref. to ES-7, REMOVAL, Stereo Camera.>

AF:DTC B28A9 STEREO CAMERA SYNCHRONIZED RECOGNITION DATA

Detected when error occurs in the communication data inside the control module caused by external factors such as noises.

NOTE:

If the same DTC is still detected after the engine has restarted, replace the stereo camera. <Ref. to ES-7, REMOVAL, Stereo Camera.>

AG:DTC B28AA STEREO CAMERA MICROCOMPUTER 1

Detected when communication error occurs due to malfunction of microcomputer inside the stereo camera.

DTC DETECTING CONDITION:

Communication error occurs due to malfunction of microcomputer inside the stereo camera.

TROUBLE SYMPTOM:

All functions of EyeSight system do not operate.

Refer to DTC B28A6 for diagnostic procedure. <Ref. to ES(diag)-82, DTC B28A6 INTERNAL STEREO CAMERA COMMUNICATION 1, Diagnostic Procedure with Diagnostic Trouble Code (DTC).>

AH:DTC B28AB STEREO CAMERA MICROCOMPUTER 2

Detected when communication error occurs due to malfunction of microcomputer inside the stereo camera.

DTC DETECTING CONDITION:

Communication error occurs due to malfunction of microcomputer inside the stereo camera.

TROUBLE SYMPTOM:

All functions of EyeSight system do not operate.

Refer to DTC B28A6 for diagnostic procedure. <Ref. to ES(diag)-82, DTC B28A6 INTERNAL STEREO CAMERA COMMUNICATION 1, Diagnostic Procedure with Diagnostic Trouble Code (DTC).>

AI: DTC B28AC STEREO CAMERA ASIC

Detected when communication error occurs due to malfunction of ASIC.

DTC DETECTING CONDITION:

Communication error occurs due to malfunction of ASIC.

TROUBLE SYMPTOM:

All functions of EyeSight system do not operate.

Refer to DTC B28A6 for diagnostic procedure. <Ref. to ES(diag)-82, DTC B28A6 INTERNAL STEREO CAMERA COMMUNICATION 1, Diagnostic Procedure with Diagnostic Trouble Code (DTC).>

AJ:DTC B28AD STEREO CAMERA IMAGE RECOGNITION

Detected when improper image recognition occurs in the microcomputer inside the stereo camera.

DTC DETECTING CONDITION:

Improper image recognition occurs in the microcomputer inside the stereo camera.

TROUBLE SYMPTOM:

All functions of EyeSight system do not operate.

Refer to DTC B28A6 for diagnostic procedure. <Ref. to ES(diag)-82, DTC B28A6 INTERNAL STEREO CAMERA COMMUNICATION 1, Diagnostic Procedure with Diagnostic Trouble Code (DTC).>

AK:DTC B28AE INTERNAL STEREO CAMERA POWER SUPPLY

Detected when improper power supply inside the stereo camera occurs.

DTC DETECTING CONDITION:

Improper power supply inside the stereo camera occurs.

TROUBLE SYMPTOM:

All functions of EyeSight system do not operate.

Refer to DTC B28A6 for diagnostic procedure. <Ref. to ES(diag)-82, DTC B28A6 INTERNAL STEREO CAMERA COMMUNICATION 1, Diagnostic Procedure with Diagnostic Trouble Code (DTC).>

AL:DTC B28AF STEREO CAMERA ADJUSTMENT INCOMPLETE

Detected when adjustment or inspection of stereo camera has not been completed normally.

DTC DETECTING CONDITION:

- Operation is aborted during adjustment or inspection of the stereo camera.
- After the replacement of the stereo camera, adjustment or inspection of camera has not yet been performed.

TROUBLE SYMPTOM:

All functions of EyeSight system do not operate.

For diagnostic procedure, perform adjustment/inspection of camera. When the adjustment or inspection of camera is performed, and if it is not completed successfully, replace the camera.

AM:DTC B28B1 STEREO CAMERA AUTOMATIC ADJUSTMENT

Detected when the optical axis of stereo camera is deviated in lateral direction or when the fluctuation range of automatic adjustment value has expanded.

NOTE:

Readjust the stereo camera. <Ref. to ES-12, PROCEDURE, Camera Adjustment, Inspection.>

If the same DTC is still detected after readjustment, replace the stereo camera. <Ref. to ES-7, REMOVAL, Stereo Camera.>

Diagnostic Procedure with Diagnostic Trouble Code (DTC)

EyeSight (DIAGNOSTICS)

AN:DTC B28B2 STEREO CAMERA HIGH TEMPERATURE

Detected when the temperature of the stereo camera excessively increases.

NOTE:

When this DTC is detected, performing adjustment or inspection of the camera will not return to the normal state. In this case, always replace the stereo camera. <Ref. to ES-7, REMOVAL, Stereo Camera.>

AO:DTC B28B3 STEREO CAMERA LOW TEMPERATURE

Detected when the temperature of the stereo camera excessively decreases.

NOTE:

When this DTC is detected, performing adjustment or inspection of the camera will not return to the normal state. In this case, always replace the stereo camera. <Ref. to ES-7, REMOVAL, Stereo Camera.>

AP:DTC B28B5 +B CIRCUIT OPEN

Detected when there is an open circuit in power supply line.

NOTE:

Refer to DTC B2814 for diagnostic procedure. <Ref. to ES(diag)-74, DTC B2814 POWER SUPPLY LOW VOLTAGE, Diagnostic Procedure with Diagnostic Trouble Code (DTC).>

Diagnostic Procedure with Diagnostic Trouble Code (DTC)

EyeSight (DIAGNOSTICS)

AQ:DTC B28B6 PRE-COLLISION OFF SWITCH

Detected when pre-collision brake OFF switch circuit is not installed, open-circuited or is stuck to ON.

DTC detecting condition:

- Wiring of pre-collision brake OFF switch is not connected.
- Pre-collision brake OFF switch circuit is open.
- Pre-collision brake OFF switch circuit stays ON for 45 seconds or more.

Trouble symptom:

All functions of EyeSight system do not operate.

Wiring diagram:

EyeSight System <Ref. to WI-130, WIRING DIAGRAM, EyeSight System.>

Step	Check	Yes	No
1 CHECK CURRENT DATA. Confirm the current data «Pre-Collision Brake OFF SW Status (BIU)» of EyeSight using Subaru Select Monitor. <Ref. to ES(diag)-23, Read Current Data.>	Does the display change according to ON/OFF operation of the pre-collision brake OFF switch?	Even if DTC is displayed, the circuit has returned to a normal condition at this time. Reproduce the failure, and then perform the diagnosis again. NOTE: In this case, temporary poor contact of connector, or temporary open or short circuit of harness may be the cause.	Go to step 2.

Diagnostic Procedure with Diagnostic Trouble Code (DTC)

EyeSight (DIAGNOSTICS)

Step	Check	Yes	No
2 CHECK HARNESS. 1) Disconnect the stereo camera connector and the pre-collision brake OFF switch connector. 2) Using the tester, measure the resistance between the stereo camera connector and pre-collision brake OFF switch connector as well as chassis ground. Connector & terminal (R406) No. 3 — (R137) No. 12: (R406) No. 5 — Chassis ground:	Is the resistance less than 1 Ω?	Go to step 3.	Repair or replace an open circuit in harness between the stereo camera connector and pre-collision brake OFF switch connector.
3 CHECK HARNESS. Using the tester, measure the resistance between the pre-collision brake OFF switch connector and chassis ground. Connector & terminal (R406) No. 3 — Chassis ground:	Is the resistance 1 MΩ or more?	Check the pre-collision brake OFF switch. <Ref. to ES-33, INSPECTION, Switches and Harness.>	Repair or replace the short circuit to ground in harness between the stereo camera connector and pre-collision brake OFF switch connector.

AR:DTC B28B7 LDP OFF SWITCH

Detected when lane departure warning OFF switch circuit is not installed, open-circuited, or is stuck to ON.

DTC detecting condition:

- Wiring of lane departure warning OFF switch is not connected.
- Lane departure warning OFF switch circuit is open.
- Lane departure warning OFF switch circuit stays ON for 45 seconds or more.

Trouble symptom:

All functions of EyeSight system do not operate.

Wiring diagram:

EyeSight System <Ref. to WI-130, WIRING DIAGRAM, EyeSight System.>

ADA00633

Step	Check	Yes	No
<p>1</p> <p>CHECK CURRENT DATA. Confirm the current data «Lane Departure OFF SW (BIU)» of EyeSight using Subaru Select Monitor. <Ref. to ES(diag)-23, Read Current Data.></p>	<p>Does the display change according to the lane departure warning OFF switch ON/OFF operation?</p>	<p>Even if DTC is displayed, the circuit has returned to a normal condition at this time. Reproduce the failure, and then perform the diagnosis again.</p> <p>NOTE: In this case, temporary poor contact of connector, or temporary open or short circuit of harness may be the cause.</p>	<p>Go to step 2.</p>

Diagnostic Procedure with Diagnostic Trouble Code (DTC)

EyeSight (DIAGNOSTICS)

Step	Check	Yes	No
2 CHECK HARNESS. 1) Disconnect the stereo camera connector and the lane departure warning OFF switch connector. 2) Using the tester, measure the resistance between the stereo camera connector and lane departure warning OFF switch connector as well as chassis ground. <i>Connector & terminal</i> <i>(R406) No. 4 — (R137) No. 13:</i> <i>(R406) No. 5 — Chassis ground:</i>	Is the resistance less than 1 Ω?	Go to step 3.	Repair or replace an open circuit in harness between the stereo camera connector and lane departure warning OFF switch connector.
3 CHECK HARNESS. Using the tester, measure the resistance between the lane departure warning OFF switch connector and chassis ground. <i>Connector & terminal</i> <i>(R406) No. 4 — Chassis ground:</i>	Is the resistance 1 MΩ or more?	Check the lane departure warning OFF switch. <Ref. to ES-33, INSPECTION, Switches and Harness.>	Repair or replace the short circuit to ground in harness between the stereo camera connector and lane departure warning OFF switch connector.

AS:DTC B28B8 EyeSight STEERING SWITCH 1

Detected when EyeSight steering switch is not installed or has malfunction, or when the harness is faulty or open-circuited or in stuck ON condition.

DTC detecting condition:

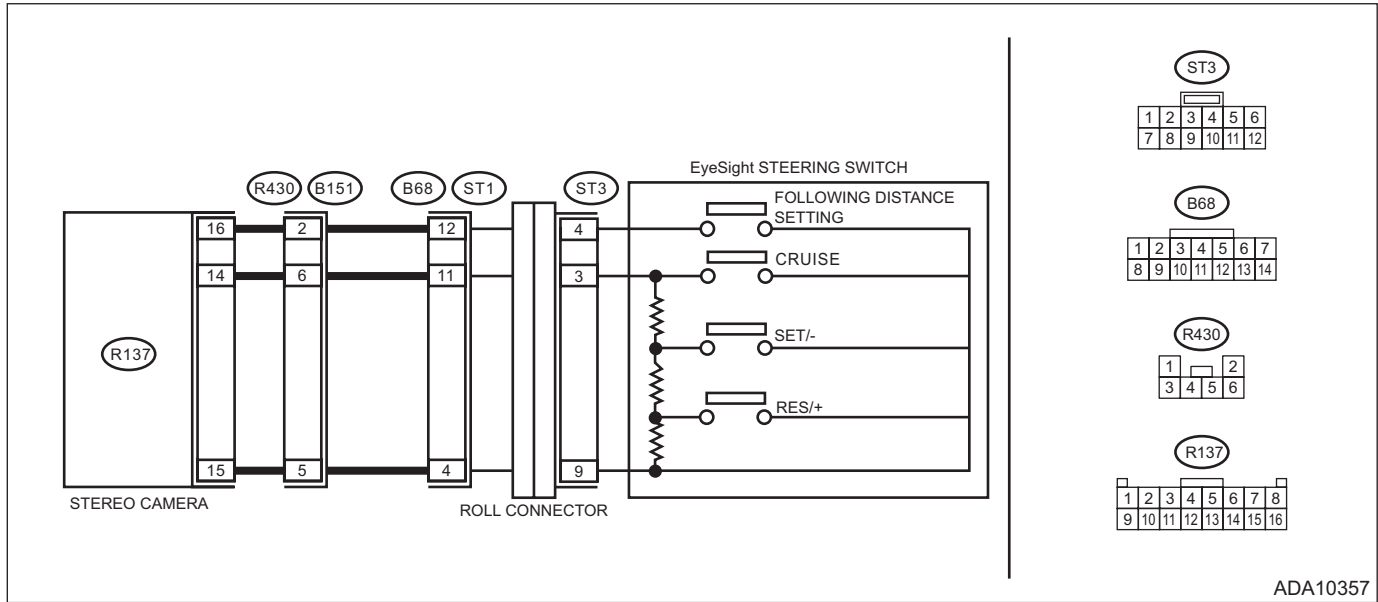

- Wiring of the EyeSight steering switch is not connected.
- EyeSight steering switch circuit is open.
- EyeSight steering switch circuit stays ON.

Trouble symptom:

All functions of EyeSight system do not operate.

Wiring diagram:

EyeSight System <Ref. to WI-130, WIRING DIAGRAM, EyeSight System.>

ADA10357

Step	Check	Yes	No
1 CHECK CURRENT DATA. Confirm the current data «Cruise Control SW Voltage (Port14)» and «Cruise Control SW Voltage (Port16)» of EyeSight using Subaru Select Monitor. <Ref. to ES(diag)-23, Read Current Data.>	Does the display change according to the EyeSight steering switch operation?	Even if DTC is displayed, the circuit has returned to a normal condition at this time. Reproduce the failure, and then perform the diagnosis again. NOTE: In this case, temporary poor contact of connector, or temporary open or short circuit of harness may be the cause.	Go to step 2.

Diagnostic Procedure with Diagnostic Trouble Code (DTC)

EyeSight (DIAGNOSTICS)

Step	Check	Yes	No
2 CHECK HARNESS. 1) Disconnect the stereo camera connector and EyeSight steering switch connector. 2) Using the tester, measure the resistance between stereo camera connector and EyeSight steering switch connector. <i>Connector & terminal</i> <i>(ST3) No. 4 — (R137) No. 16:</i> <i>(ST3) No. 3 — (R137) No. 14:</i> <i>(ST3) No. 9 — (R137) No. 15:</i>	Is the resistance less than 1 Ω?	Go to step 3.	Repair or replace an open circuit in harness between the stereo camera connector and the EyeSight steering switch connector.
3 CHECK HARNESS. Using the tester, measure the resistance between EyeSight steering switch connector and chassis ground. <i>Connector & terminal</i> <i>(ST3) No. 4 — Chassis ground:</i> <i>(ST3) No. 3 — Chassis ground:</i> <i>(ST3) No. 9 — Chassis ground:</i>	Is the resistance 1 MΩ or more?	Check the EyeSight steering switch. <Ref. to ES-33, Switches and Harness.>	Repair or replace the short circuit to ground in harness between the stereo camera connector and the EyeSight steering switch connector.

AT:DTC B28B9 EyeSight STEERING SWITCH 2

Detected when steering switch for EyeSight is not installed, is open-circuited or is stuck to ON.

Refer to DTC B28B8 for diagnostic procedure. <Ref. to ES(diag)-89, DTC B28B8 EyeSight STEERING SWITCH 1, Diagnostic Procedure with Diagnostic Trouble Code (DTC).>

Blind Spot Detection/Rear Cross Traffic Alert

General Description

Blind Spot Detection/Rear Cross Traffic Alert

1. General Description

A: LOCATION

Refer to "LOCATION" of "Blind Spot Detection/Rear Cross Traffic Alert (DIAGNOSTICS)" section. <Ref. to RVD(diag)-7, LOCATION, Electrical Component Location.>

B: COMPONENT

1. RADAR SENSOR

ADA10047

(1) Radar sensor (master & slave)

(2) Radar bracket

Tightening torque: N·m (kgf-m, ft-lb)

T: 7.5 (0.8, 5.5)

C: CAUTION

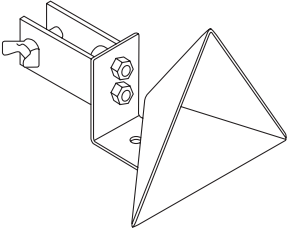

- Before disconnecting connectors of sensors or units, be sure to disconnect the ground cable from battery. When replacing the electrical parts provided with memory functions that store contents specified by a customer, record the memory contents before disconnecting the battery ground cable.
- For precautions for Rear Vehicle Detection function, refer to "CAUTION" in "Blind Spot Detection/Rear Cross Traffic Alert (DIAGNOSTICS)" section. <Ref. to RVD(diag)-4, CAUTION, General Description.>

General Description

Blind Spot Detection/Rear Cross Traffic Alert

D: PREPARATION TOOL

1. SPECIAL TOOL

ILLUSTRATION	TOOL NUMBER	DESCRIPTION	REMARKS
 <p>ST87699AL00A</p>	87699AL00A	RADAR REFLECTOR	Used for adjusting the radar axis of the radar sensor. NOTE: Attach the radar reflector to a round pole with a diameter of approx. 20 mm (0.79 in) or a 20-mm (0.79-in) square pole.
 <p>STSSM4</p>	—	SUBARU SELECT MONITOR 4	Used for setting of each function and troubleshooting for electrical system. NOTE: For detailed operation procedures of Subaru Select Monitor 4, refer to “Application help”.

2. GENERAL TOOL

TOOL NAME	REMARKS
Circuit tester	Used for measuring resistance, voltage and current.
DST-i	Used together with Subaru Select Monitor 4.
Measure (5 m (16 ft) or more)	Used for adjusting the radar axis of the radar sensor.
Leveling line	
Plumb bob	
Packing tape	
Stand, tripod, etc.	

Relay and Fuse

Blind Spot Detection/Rear Cross Traffic Alert

2. Relay and Fuse

A: LOCATION

Fuse & Relay Box	Fuse 10 A (radar sensor LH (master), radar sensor RH (slave), BSD/RCTA OFF switch)	(A)
------------------	--	-----

NOTE:

For other related fuses, refer to the wiring diagram. <Ref. to WI-15, Power Supply Circuit.>

B: INSPECTION

1. CHECK FUSE

- 1) Remove the fuse and inspect visually.
- 2) If the fuse is blown out, replace the fuse.

NOTE:

If the fuse is blown again, check the system wiring harness.

3. Blind Spot Detection/Rear Cross Traffic Alert

A: WIRING DIAGRAM

Refer to “Subaru Rear Vehicle Detection system” in the wiring diagram. <Ref. to WI-65, WIRING DIAGRAM, Blind Spot Detection/Rear Cross Traffic Alert.>

B: INSPECTION

Refer to “Basic Diagnostic Procedure” of “Blind Spot Detection/Rear Cross Traffic Alert (DIAGNOSTICS)” section. <Ref. to RVD(diag)-2, Basic Diagnostic Procedure.>

C: NOTE

For procedure of each component in the Subaru Rear Vehicle Detection system, refer to the respective sections.

- Radar sensor: <Ref. to RVD-6, Radar Sensor.>
- BSD/RCTA OFF switch: <Ref. to RVD-12, Switches and Harness.>
- Combination meter: <Ref. to RVD-14, Combination Meter.>
- Outer mirror assembly: <Ref. to GW-23, Outer Mirror Assembly.>

Radar Sensor

Blind Spot Detection/Rear Cross Traffic Alert

4. Radar Sensor

A: REMOVAL

1. RADAR SENSOR LH (MASTER)

- 1) Disconnect the ground cable from battery. <Ref. to NT-6, BATTERY, NOTE, Note.>
- 2) Remove the bumper face - rear. <Ref. to EI-38, REMOVAL, Rear Bumper.>
- 3) Remove the radar sensor LH (master).
 - (1) Disconnect the connector.
 - (2) Remove the nut and remove the radar sensor LH.

ADA10059

- 4) Remove the nut and remove the radar bracket.

ADA10058

2. RADAR SENSOR RH (SLAVE)

NOTE:

For the procedure of radar sensor RH (slave), refer to "RADAR SENSOR LH (MASTER)".

B: INSTALLATION

1) Install each part in the reverse order of removal.

Tightening torque:

Radar sensor and radar bracket: 7.5 N·m (0.8 kgf·m, 5.5 ft·lb)

2) Perform the adjustment of the radar sensor radar axis. <Ref. to RVD-7, RADAR AXIS ADJUSTMENT, ADJUSTMENT, Radar Sensor.>

C: ADJUSTMENT

1. RADAR AXIS ADJUSTMENT

CAUTION:

- After removal/installation or replacement of the radar sensor, perform the radar axis adjustment.
- The procedure for the master is only shown here. However the procedure for the slave can also be done in the same way as the master.

1) Before performing the inspection, check the following items.

- The inflation pressure of tires is correct.
- The vehicle does not have load.
- Vehicle's fuel tank is fully filled.

2) Place the vehicle on a level surface, where approximately 5 square meters (16.41 square ft) area can be secured behind the vehicle.

CAUTION:

- No metallic objects around the vehicle and on the floor in the area.
- Do not let in objects other than the radar reflector (ST), persons and metallic objects inside the area.

NOTE:

The illustration shows the secured area for adjusting the radar axis on the master side.

(a) Approx. 4 m (13.12 ft)

(b) Approx. 5 m (16.41 ft)

Radar Sensor

Blind Spot Detection/Rear Cross Traffic Alert

3) Prepare the Subaru Select Monitor, measure, leveling line, plumb bob, packing tape, RADAR REFLECTOR (ST), and stand or tripod for fixing the RADAR REFLECTOR.

Preparation tool:

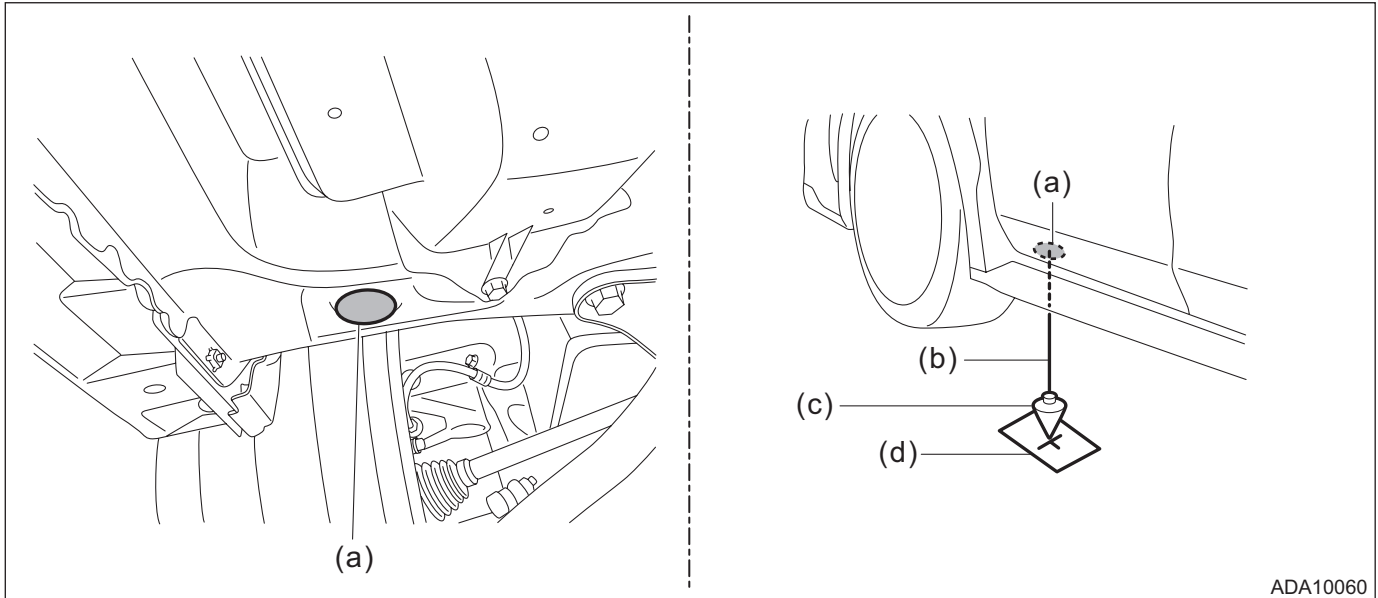

ST: RADAR REFLECTOR (87699AL00A)

4) Set up the radar reflector.

NOTE:

The following procedure explains the method of setting the radar reflector so that the distance between radar reflector and radar sensor is 1,500 mm (4.92 ft) and the radar is positioned at an angle of 50 degree.

(1) Suspend the plumb bob from the center of the front hole cap, and mark the position where the plumb bob touches the ground. (Point A)

(a) Front hole cap

(c) Plumb bob

(d) Point A

(b) Leveling line

NOTE:

Stick the packing tape etc. on the floor, then make a marking on the tape.

Radar Sensor

Blind Spot Detection/Rear Cross Traffic Alert

(2) Suspend the plumb bob from the center of the rear hole cap, and mark the position where the plumb bob touches the ground. (Point B)

(a) Rear hole cap
(b) Leveling line

(c) Plumb bob

(d) Point B

NOTE:

Stick the packing tape etc. on the floor, then make a marking on the tape.

(3) Stretch a leveling line to draw an arc with the marked point A as a pivot.

(4) Stretch a leveling line to draw an arc with the marked point B as a pivot.

Radar Sensor

Blind Spot Detection/Rear Cross Traffic Alert

(5) Set up the radar reflector at the cross point.

CAUTION:

When setting up the radar reflector, adjust the height so that the center of the pyramid points at the radar sensor as shown in the figure.

(a) 751±10 mm (29.57±0.39 in)

(b) Center of pyramid

(a) Point A

(b) Point B

(c) Radar reflector

(d) Radar sensor

(e) 4,109 mm (13.48 ft)

(f) 2,522 mm (8.27 ft)

5) Connect the Subaru Select Monitor.

NOTE:

- Use the Subaru Select Monitor equipped with the latest version of the software.
- For detailed operation procedures, refer to “Application help”.

6) Turn the ignition switch to ON and wait for 10 seconds.

7) Perform radar axis adjustment.

- (1) On «Start» display, select «Diagnosis».
- (2) On «Vehicle selection» display, enter vehicle information and select «Confirmed».
- (3) On «Main Menu» display, select «Each System».
- (4) On «Select System» display, select «Subaru Rear Vehicle Detection(LH)» or «Subaru Rear Vehicle Detection(RH)» and then select «Enter».
- (5) On «Select Function» display, select «Work Support».
- (6) From the work support item list, select «RADAR Alignment».
- (7) Follow the messages displayed on the Subaru Select Monitor screen when working.

NOTE:

Deviation of radar axis direction is indicated by + (plus) or – (minus).

- (a) Center of radar
- (b) + (plus)
- (c) – (minus)

(8) If the result is out of permissive range, it is assumed that the radar reflector position may be incorrect or the radar bracket or its installation location on the vehicle may be deformed. Check the set position of the radar reflector, radar bracket and other attachment, and perform the radar axis adjustment again.

Switches and Harness

Blind Spot Detection/Rear Cross Traffic Alert

5. Switches and Harness

A: REMOVAL

BSD/RCTA OFF switch

- 1) Disconnect the ground cable from battery and wait for at least 60 seconds before starting work. <Ref. to NT-6, BATTERY, NOTE, Note.>
- 2) Remove the cover assembly - instrument panel LWR driver OUT. <Ref. to EI-54, REMOVAL, Instrument Panel Lower Cover.>
- 3) Release the connector locks and claws, and remove the BSD/RCTA OFF switch.

B: INSTALLATION

BSD/RCTA OFF switch

Install each part in the reverse order of removal.

C: INSPECTION

BSD/RCTA OFF switch

1) Measure the resistance between connector terminals.

Preparation tool:

Circuit tester

Terminal No.	Inspection conditions	Standard
1 — 2	Switch OFF	1 MΩ or more
	Switch ON	Less than 1 Ω

2) Apply battery voltage between the connector terminals to check lighting condition of illumination inside the switch.

Terminal No.	Inspection conditions	Specification
3 (+) — 4 (-)	Apply battery voltage.	Light ON

3) Replace the BSD/RCTA OFF switch if the inspection result is not within the standard value.

Combination Meter

Blind Spot Detection/Rear Cross Traffic Alert

6. Combination Meter

A: NOTE

For the operation procedures for combination meter, refer to “INSTRUMENTATION/DRIVER INFO” section.
<Ref. to IDI-18, Combination Meter.>

7. Outer Mirror Assembly

A: NOTE

For the operation procedures for the outer mirror assembly, refer to “GLASS/WINDOWS/MIRRORS” section.
<Ref. to GW-23, Outer Mirror Assembly.>

Diagnostics with Phenomenon

Blind Spot Detection/Rear Cross Traffic Alert

8. Diagnostics with Phenomenon

A: INSPECTION

Refer to “Diagnostics with Phenomenon” of “Blind Spot Detection/Rear Cross Traffic Alert (DIAGNOSTICS)” section. <Ref. to RVD(diag)-39, Diagnostics with Phenomenon.>

Blind Spot Detection/Rear Cross Traffic Alert (DIAGNOSTICS)

RVD(diag)

	Page
1. Basic Diagnostic Procedure	2
2. Check List for Interview	3
3. General Description	4
4. Electrical Component Location	7

6. Subaru Select Monitor	10
7. Read Diagnostic Trouble Code (DTC)	12
8. Clear Memory Mode	13
9. Read Cancel Code	14
10. Inspection Mode	15
11. Read Current Data	17
12. System Operation Check Mode	19
13. List of Diagnostic Trouble Code (DTC)	20
14. List of Cancel Code	21
15. Diagnostic Procedure with Diagnostic Trouble Code (DTC)	22
16. Diagnostic Procedure with Cancel Code	38
17. Diagnostics with Phenomenon	39

Basic Diagnostic Procedure

Blind Spot Detection/Rear Cross Traffic Alert (DIAGNOSTICS)

1. Basic Diagnostic Procedure

A: PROCEDURE

	Step	Check	Yes	No
1	PERFORM CUSTOMER INTERVIEW. Using the Check List for Interview, ask the customer the condition of how trouble occurs.	Did you interview the customer?	Go to step 2.	Interview the customer. <Ref. to RVD(diag)-3, Check List for Interview.>
2	CHECK SUBARU SELECT MONITOR COMMUNICATION. Check for communication with the radar sensor. NOTE: If the communication function of the Subaru Select Monitor cannot be executed properly, check the communication circuit. <Ref. to RVD(diag)-10, INSPECTION, Subaru Select Monitor.>	Is communication possible?	Go to step 3.	Check the communication circuit.
3	CHECK RADAR SENSOR. Read the DTC and cancel code of the radar sensors LH and RH using the Subaru Select Monitor. <Ref. to RVD(diag)-12, Read Diagnostic Trouble Code (DTC).> <Ref. to RVD(diag)-14, Read Cancel Code.>	Is DTC displayed?	Perform the diagnosis according to DTC and cancel code. (Perform the diagnosis to the side that displayed the DTC.) <Ref. to RVD(diag)-20, List of Diagnostic Trouble Code (DTC).> <Ref. to RVD(diag)-14, Read Cancel Code.> After diagnosis, Go to step 6.	Go to step 4.
4	PERFORM DIAGNOSTICS WITH PHENOMENON. Check the list of Diagnostics with Phenomenon. <Ref. to RVD(diag)-39, Diagnostics with Phenomenon.>	Does the symptom apply?	Perform diagnosis according to the procedures in the diagnostics with phenomenon.	Go to step 5.
5	CHECK TROUBLE PHENOMENON. 1) Perform the basic inspection. <Ref. to RVD(diag)-6, INSPECTION, General Description.> 2) Check the radar sensor. <Ref. to RVD(diag)-8, Control Module I/O Signal.> 3) Perform check of current data. <Ref. to RVD(diag)-17, Read Current Data.>	Was the trouble cause found?	Perform the Clear Memory after repairing or replacing the cause of trouble.	System is normal.
6	PERFORM DIAGNOSIS. 1) Perform the Clear Memory Mode. <Ref. to RVD(diag)-13, Clear Memory Mode.> 2) Perform the Inspection Mode. <Ref. to RVD(diag)-15, Inspection Mode.>	Is DTC displayed?	Perform the diagnosis according to DTC. <Ref. to RVD(diag)-20, List of Diagnostic Trouble Code (DTC).>	Finish the diagnosis.

General Description

Blind Spot Detection/Rear Cross Traffic Alert (DIAGNOSTICS)

3. General Description

A: CAUTION

1. BSD/RCTA

1. In some cases, BSD/RCTA may not work correctly under the following conditions.
 - In bad weather such as heavy rain, fog, snow, sand storm, etc.
 - When ice, snow, dirt, etc. cover the rear bumper.
 - When the rear bumper has scratches or deformation in the area of the radar sensor.
 - When a difference of vehicle speeds between your own vehicle and another vehicle within the detection range is too large.
 - When there is another vehicle remaining within the detection range while your own vehicle starts from stationary state.
 - While driving on a steep slope with a series of uphill and downhill.
 - While driving on a wet road with such as puddles.
 - When more than one vehicle is approaching one after another with a short distance.
 - When vehicle speed of your own vehicle is almost the same as that of the vehicle within the detection range.
 - When a difference of the vehicle heights between your own vehicle and another vehicle in the next lane is too large.
 - Immediately after operating the BSD/RCTA OFF switch.
 - On wide lanes, when another vehicle of the next lane drives along the opposite edge so the distance is too large for the detection.
2. BSD/RCTA does not detect the following type of vehicles as well as objects other than vehicles.
 - Oncoming vehicle
 - Small motorcycle, bike, pedestrian, etc. *
 - Vehicle following behind on the same lane *
 - Stationary objects such as guardrail, wall, sign and parked vehicle*
 - Another vehicle driving on two lanes away*

NOTE:

*: Detection may be successful depending on circumstances.

3. BSD/RCTA may perform unnecessary detection in the following conditions.
 - When guardrails or walls are close enough to be within the detection range.
 - When distance from the vehicle behind is short.
 - On narrow lanes, when another vehicle driving on two lanes away enters the detection range.

General Description

Blind Spot Detection/Rear Cross Traffic Alert (DIAGNOSTICS)

4. Radar sensors of BSD/RCTA are each located on LH and RH sides. Always observe the followings for proper operation of the system.

- Always clean the vicinity of radar sensors.
- Do not give a strong impact to the radar sensor areas. Displacement of the radar sensors may result in improper operation of the system such that it may not detect the vehicle entering the detection range.
- Do not disassemble the radar sensors.
- Do not scratch or deform the bumper areas with the radar sensors.

NOTE:

Replace the rear bumper in the following cases.

- When there is any collision trace or dent inside the radar projection area.
- When there is any scuffed (chipped off) section inside the radar projection area on the resin bumper.
- When there is any crack inside the radar projection area.

NOTE:

Radar projection area

(a) 70 mm (2.8 in)

(b) Vertical line

(c) Radar projection area

For other flaws, perform the sensor readjustment. If no problem is found, replacement is unnecessary.

- Do not put a sticker, etc. on/around the radar sensors.
- Do not retrofit the radar sensors or the bumper close to the radar sensors.
- Do not repaint the radar sensors or the bumper close to the radar sensors.

NOTE:

If there is any painting defect inside the radar projection area, replace the rear bumper without trying to repair it.

- Do not give a strong impact, force or drop-off to the radar sensors because they are precision devices.
- Do not reuse the radar sensors that were affected by strong impact, force, or fell off.

General Description

Blind Spot Detection/Rear Cross Traffic Alert (DIAGNOSTICS)

B: INSPECTION

1. BASIC INSPECTION

Before performing diagnosis, check the following items that might provoke the problems related to BSD/RC-TA.

- 1) Check the battery. <Ref. to SC(H4DO)-51, Battery.>
- 2) Check the relay and fuse condition. <Ref. to RVD-4, Relay and Fuse.>
- 3) Check the connecting condition of harness and connector.

C: PREPARATION TOOL

1. SPECIAL TOOL

ILLUSTRATION	TOOL NUMBER	DESCRIPTION	REMARKS
 STSSM4	—	SUBARU SELECT MONITOR 4	Used for setting of each function and troubleshooting for electrical system. NOTE: For detailed operation procedures of Subaru Select Monitor 4, refer to “Application help”.

2. GENERAL TOOL

TOOL NAME	REMARKS

Control Module I/O Signal

Blind Spot Detection/Rear Cross Traffic Alert (DIAGNOSTICS)

B: WIRING DIAGRAM

Refer to "BSD/RCTA System" in the wiring diagram. <Ref. to WI-65, WIRING DIAGRAM, Blind Spot Detection/Rear Cross Traffic Alert.>

C: SYSTEM BLOCK DIAGRAM

- Blind Spot Detection/Rear Cross Traffic Alert system consists of the following.
- There is a control ECM in the radar sensor main body, which performs the vehicle identification and the alert judgment control.
- The LH/RH radar sensors are identified as Master/Slave for control purposes. They are connected by the private CAN to execute the controls through mutual communication. The radar on the Master side receives the input from the vehicle CAN and the SRVD OFF switch, and information necessary for control can be obtained from other modules via the vehicle CAN.
- The outer mirror LED is directly driven by the signal from the radar sensor.

Subaru Select Monitor

Blind Spot Detection/Rear Cross Traffic Alert (DIAGNOSTICS)

6. Subaru Select Monitor

A: OPERATION

- For detailed operation procedures, refer to “Application help”.
- When the radar sensor cannot communicate with Subaru Select Monitor, perform “COMMUNICATION FOR INITIALIZING IMPOSSIBLE”. <Ref. to RVD(diag)-10, COMMUNICATION FOR INITIALIZING IMPOSSIBLE, INSPECTION, Subaru Select Monitor.>

B: INSPECTION

1. COMMUNICATION FOR INITIALIZING IMPOSSIBLE

When communication with the radar sensor is impossible

Detecting condition:

- Defective harness connector
- Power supply circuit malfunction
- Defective radar sensor
- Defective CAN communication circuit
- Defective Subaru Select Monitor

Trouble symptom:

Communication is impossible between radar sensor and Subaru Select Monitor.

Wiring diagram:

BSD/RCTA system <Ref. to WI-65, WIRING DIAGRAM, Blind Spot Detection/Rear Cross Traffic Alert.>

Step	Check	Yes	No
1 CHECK FUSE. 1) Turn the ignition switch to OFF. 2) Check the fuse for radar sensor LH. <Ref. to RVD-4, Relay and Fuse.>	Is it normal?	Go to step 2.	Replace the fuse. If the replaced fuse has blown out immediately, repair the short circuit to ground in harness between fuse and radar sensor LH.

Subaru Select Monitor

Blind Spot Detection/Rear Cross Traffic Alert (DIAGNOSTICS)

Step	Check	Yes	No
2 CHECK HARNESS (OPEN CIRCUIT). 1) Disconnect the radar sensor LH connector. 2) Turn the ignition switch to ON. 3) Using a tester, measure the voltage between radar sensor LH connector (harness side) and chassis ground. Connector & terminal (R25) No. 5 (+) — Chassis ground (-):	Is the voltage 10 V or more?	Go to step 3.	Repair the open circuit of harness between fuse and radar sensor LH connector.
3 CHECK HARNESS (OPEN CIRCUIT). 1) Turn the ignition switch to OFF. 2) Using a tester, measure the resistance between radar sensor LH connector (harness side) and chassis ground. Connector & terminal (R25) No. 10 — Chassis ground:	Is the resistance less than 1 Ω ?	Go to step 4.	Repair the open circuit in harness between radar sensor and chassis ground.
4 CHECK LAN SYSTEM. 1) Connect the radar sensor LH connector. 2) Inspect LAN system. <Ref. to RVD(diag)-2, Basic Diagnostic Procedure.>	Is it normal?	Go to step 5.	Perform the inspection according to the diagnosis for LAN system.
5 CHECK RADAR SENSOR. Communicate with the radar sensor.	Is communication possible?	The circuit has returned to a normal condition at this time. Reproduce the failure, and then perform the diagnosis again. NOTE: In this case, temporary poor contact of connector, temporary open or short circuit of harness may be the cause.	Replace the radar sensor LH. <Ref. to RVD-6, Radar Sensor.>

Read Diagnostic Trouble Code (DTC)

Blind Spot Detection/Rear Cross Traffic Alert (DIAGNOSTICS)

7. Read Diagnostic Trouble Code (DTC)

A: OPERATION

- 1) On «Start» display, select «Diagnosis».
- 2) On «Vehicle selection» display, input the target vehicle information and select «Confirmed».
- 3) On «Main Menu» display, select «Each System».
- 4) On «Select System» display, select «Subaru Rear Vehicle Detection(RH)» or «Subaru Rear Vehicle Detection(LH)» and then select «Enter».
- 5) On «Select Function» display, select «DTC».

NOTE:

- For detailed operation procedures, refer to “Application help”.
- For details concerning DTC, refer to the List of Diagnostic Trouble Codes (DTC). <Ref. to RVD(diag)-20, List of Diagnostic Trouble Code (DTC).>
- Check and replace the side that displayed the DTC.

Clear Memory Mode

Blind Spot Detection/Rear Cross Traffic Alert (DIAGNOSTICS)

8. Clear Memory Mode

A: OPERATION

- 1) On «Start» display, select «Diagnosis».
- 2) On «Vehicle selection» display, input the target vehicle information and select «Confirmed».
- 3) On «Main Menu» display, select «Each System».
- 4) On «Select System» display, select «Subaru Rear Vehicle Detection(RH)» or «Subaru Rear Vehicle Detection(LH)» and then select «Enter».
- 5) On «Select Function» display, select «DTC».
- 6) On «DTC» display, select «Clear Memory».

NOTE:

For detailed operation procedures, refer to “Application help”.

Read Cancel Code

Blind Spot Detection/Rear Cross Traffic Alert (DIAGNOSTICS)

9. Read Cancel Code

A: OPERATION

- 1) On «Start» display, select «Diagnosis».
- 2) On «Vehicle selection» display, input the target vehicle information and select «Confirmed».
- 3) On «Main Menu» display, select «Each System».
- 4) On «Select System» display, select «Subaru Rear Vehicle Detection(RH)» or «Subaru Rear Vehicle Detection(LH)» and then select «Enter».
- 5) On «Select Function» display, select «Cancel Code».

NOTE:

- For detailed operation procedures, refer to “Application help”.
- For details concerning cancel codes, refer to the List of Cancel Codes. <Ref. to RVD(diag)-21, List of Cancel Code.>

Inspection Mode

Blind Spot Detection/Rear Cross Traffic Alert (DIAGNOSTICS)

10. Inspection Mode

A: OPERATION

It is possible to diagnose the DTC by performing the indicated inspection mode. After correcting the DTC, perform a necessary inspection mode and make sure that the function is resumed correctly and the DTC is recorded.

1. INSPECTION MODE 1

DTC	Item	Note
U0073	CONTROL MODULE COMMUNICATION BUS OFF	—
U0101	LOST COMMUNICATION WITH TCM	—
U0122	LOST COMMUNICATION WITH VEHICLE DYNAMICS CONTROL MODULE	—
U0140	LOST COMMUNICATION WITH BODY CONTROL MODULE	—
U0155	LOST COMMUNICATION WITH INSTRUMENT PANEL CLUSTER (IPC) CONTROL MODULE	—
U0402	INVALID DATA RECEIVED FROM TCM	—
U0416	INVALID DATA RECEIVED FROM VEHICLE DYNAMICS CONTROL MODULE	—
U0422	INVALID DATA RECEIVED FROM BODY CONTROL MODULE	—
U0423	INVALID DATA RECEIVED FROM INSTRUMENT PANEL CLUSTER CONTROL MODULE	—
B2304	REAR RADAR ON-OFF SWITCH STUCK	—
B2311	REAR RADAR DETECT TCM	—
B2313	REAR RADAR DETECT VDC	—
B2327	REAR RADAR INTERNAL FAILURE (INTERNAL ELECTRIC CIRCUIT)	—
B2350	REAR RADAR COMMUNICATION ERROR BETWEEN MASTER AND SLAVE	—

1) Perform the Clear Memory Mode. <Ref. to RVD(diag)-13, Clear Memory Mode.>

2) Read the DTC and check that the DTC is not displayed. <Ref. to RVD(diag)-12, Read Diagnostic Trouble Code (DTC).>

NOTE:

If the DTC is displayed on the screen, the trouble is still present. Perform the diagnosis according to DTC. After solving the DTC, repeat from step 1).

3) Start the engine and wait for 30 seconds or more.

4) Read the DTC and check that the DTC is not displayed. <Ref. to RVD(diag)-12, Read Diagnostic Trouble Code (DTC).>

NOTE:

If the DTC is displayed on the screen, the trouble is still present. Perform the diagnosis according to DTC. <Ref. to RVD(diag)-20, List of Diagnostic Trouble Code (DTC).>

Inspection Mode

Blind Spot Detection/Rear Cross Traffic Alert (DIAGNOSTICS)

2. INSPECTION MODE 2

DTC	Item	Note
B2300	REAR RADAR CIRCUIT LOW	—
B2301	REAR RADAR CIRCUIT HIGH	—

1) Perform the Clear Memory Mode. <Ref. to RVD(diag)-13, Clear Memory Mode.>

2) Read the DTC and check that the DTC is not displayed. <Ref. to RVD(diag)-12, Read Diagnostic Trouble Code (DTC).>

NOTE:

If the DTC is displayed on the screen, the trouble is still present. Perform the diagnosis according to DTC. After solving the DTC, repeat from step 1).

3) Start the engine.

4) Perform the System Operation Check Mode «Door mirror indicator active test». <Ref. to RVD(diag)-19, System Operation Check Mode.>

5) Read the DTC and check that the DTC is not displayed. <Ref. to RVD(diag)-12, Read Diagnostic Trouble Code (DTC).>

NOTE:

If the DTC is displayed on the screen, the trouble is still present. Perform the diagnosis according to DTC. <Ref. to RVD(diag)-20, List of Diagnostic Trouble Code (DTC).>

3. INSPECTION MODE 3

DTC	Item	Note
B2329	REAR RADAR AXIS ALIGNMENT INCOMPLETE	—

1) Perform the Clear Memory Mode. <Ref. to RVD(diag)-13, Clear Memory Mode.>

2) Read the DTC and check that the DTC is not displayed. <Ref. to RVD(diag)-12, Read Diagnostic Trouble Code (DTC).>

NOTE:

If the DTC is displayed on the screen, the trouble is still present. Perform the diagnosis according to DTC. After solving the DTC, repeat from step 1).

3) Perform the adjustment of radar axis.

4) Read the DTC and check that the DTC is not displayed. <Ref. to RVD(diag)-12, Read Diagnostic Trouble Code (DTC).>

NOTE:

If the DTC is displayed on the screen, the trouble is still present. Perform the diagnosis according to DTC. <Ref. to RVD(diag)-20, List of Diagnostic Trouble Code (DTC).>

Read Current Data

Blind Spot Detection/Rear Cross Traffic Alert (DIAGNOSTICS)

11.Read Current Data

A: OPERATION

- 1) On «Start» display, select «Diagnosis».
- 2) On «Vehicle selection» display, input the target vehicle information and select «Confirmed».
- 3) On «Main Menu» display, select «Each System».
- 4) On «Select System» display, select «Subaru Rear Vehicle Detection(RH)» or «Subaru Rear Vehicle Detection(LH)» and then select «Enter».
- 5) On «Select Function» display, select «Data Monitor».

NOTE:

For detailed operation procedures, refer to “Application help”.

B: LIST

- «Subaru Rear Vehicle Detection (LH)»

Display	Content	Reference value	Note
SRVD System fail flag	Current failure status of BSD/RCTA system is displayed.	<ul style="list-style-type: none"> • Normal • Fail 	—
SRVD System HALT flag	Current temporary stop status of BSD/RCTA system is displayed. Temporary stop: Temporarily stops when reception of radar sensor waves failed due to some obstacles or when the temperature is not within the range of -40°C (-40°F) — 85°C (185°F).	<ul style="list-style-type: none"> • Normal • Halt 	—
SRVD System ON-OFF flag	ON/OFF status of BSD/RCTA system is displayed. If this flag is set to «OFF» while the values of «SRVD System fail flag» and «SRVD System HALT flag» are «Normal», the BSD/RCTA system is set to OFF by the BSD/RCTA OFF switch.	<ul style="list-style-type: none"> • OFF • ON 	—
LH-Side Target detection flag	Detection status of the control target vehicle on the rear left side is displayed. Detection is possible if the target vehicle is moving when the own vehicle drives forward at 12 km/h (8 MPH) or more or backward at 0 km/h (0 MPH) or more.	<ul style="list-style-type: none"> • Un-detect • Detect 	—

List of Cancel Code

Blind Spot Detection/Rear Cross Traffic Alert (DIAGNOSTICS)

14. List of Cancel Code

A: LIST

Code	Item	Contents of diagnosis
B2320	Rear RADAR Low Voltage (less than 9V)	Temporarily stops because the voltage supplied to radar drops below 9 V. Returns to normal when the voltage becomes normal.
B2321	Rear RADAR High Voltage (more than 16V)	Temporarily stops because the voltage supplied to radar rises to or above 16 V. Returns to normal when the voltage becomes normal.
B2328	Rear RADAR internal failure (RADAR misalignment)	Deviation of the radar axis prevents normal detection. Returns to normal when the radar axis becomes normal. When B2328 is frequently detected, perform "Diagnostic Procedure with Cancel Code". <Ref. to RVD(diag)-38, DTC B2328 REAR RADAR INTERNAL FAILURE (RADAR MISALIGNMENT), Diagnostic Procedure with Cancel Code.>
B2340	RADAR ASSY B&S out of operation temperature range	Temporarily stops because the temperature is outside the operative range (-40°C (-40°F) — 85°C (185°F)). Returns to normal when the ambient temperature falls within the operative range.
B2341	Rear RADAR degradation of detecting performance	Temporarily stops because some obstacles blocked radar waves of the back and side radar. Returns to normal when the transmission and reception of radar signals becomes normal.

Diagnostic Procedure with Diagnostic Trouble Code (DTC)

Blind Spot Detection/Rear Cross Traffic Alert (DIAGNOSTICS)

15. Diagnostic Procedure with Diagnostic Trouble Code (DTC)

A: DTC B2300 REAR RADAR CIRCUIT LOW

DTC detecting condition:

- Short circuit to ground in the harness between radar sensor and outer mirror assembly
- Ground short circuit of the harness in outer mirror assembly module (Malfunction of the outer mirror assembly)
- Defective radar sensor

Trouble symptom:

- All functions of BSD/RCTA stop.
- Fail icon is displayed in the combination meter LCD display.
- Failure-related notification is displayed for approx. two seconds on LCD display in the combination meter.

Wiring diagram:

NOTE:

For the coupling connector, refer to "WIRING SYSTEM".

BSD/RCTA system <Ref. to WI-65, WIRING DIAGRAM, Blind Spot Detection/Rear Cross Traffic Alert.>

- Radar sensor LH

- Radar sensor RH

Diagnostic Procedure with Diagnostic Trouble Code (DTC)

Blind Spot Detection/Rear Cross Traffic Alert (DIAGNOSTICS)

NOTE:

Check and replace the side that displayed the DTC.

Step	Check	Yes	No
<p>1</p> <p>CHECK DTC. Read the DTC. <Ref. to RVD(diag)-12, OPERATION, Read Diagnostic Trouble Code (DTC).></p>	<p>Is DTC B2327 displayed? (Current malfunction)</p>	<p>Perform the diagnosis according to DTC. <Ref. to RVD(diag)-33, DTC B2327 REAR RADAR INTERNAL FAILURE (INTERNAL ELECTRIC CIRCUIT), Diagnostic Procedure with Diagnostic Trouble Code (DTC).></p>	<p>Go to step 2.</p>
<p>2</p> <p>CHECK DTC. Read the DTC. <Ref. to RVD(diag)-12, OPERATION, Read Diagnostic Trouble Code (DTC).></p>	<p>Is DTC B2300 displayed? (Current malfunction)</p>	<p>Go to step 3.</p>	<p>Even if DTC is displayed, the circuit has returned to a normal condition at this time. Reproduce the failure, and then perform the diagnosis again. NOTE: In this case, temporary poor contact of connector, temporary open or short circuit of harness may be the cause.</p>
<p>3</p> <p>CHECK OPERATION CHECK MODE. Perform the system operation check mode «Door mirror indicator active test» from «Subaru Rear Vehicle Detection(RH)» or «Subaru Rear Vehicle Detection(LH)». <Ref. to RVD(diag)-19, System Operation Check Mode.></p>	<p>Does the indicator illuminate?</p>	<p>Even if DTC is displayed, the circuit has returned to a normal condition at this time. Reproduce the failure, and then perform the diagnosis again. NOTE: In this case, temporary poor contact of connector, temporary open or short circuit of harness may be the cause.</p>	<p>Go to step 4.</p>

Diagnostic Procedure with Diagnostic Trouble Code (DTC)

Blind Spot Detection/Rear Cross Traffic Alert (DIAGNOSTICS)

Step	Check	Yes	No
4 CHECK HARNESS (GROUND SHORT CIRCUIT). 1) Disconnect the radar sensor connector. 2) Disconnect the outer mirror assembly connector. 3) Using a tester, measure the resistance between radar sensor connector (harness side) and the chassis ground. Connector & terminal Radar sensor LH (R25) No. 4 — Chassis ground: Radar sensor RH (R61) No. 4 — Chassis ground:	Is the resistance 1 MΩ or more?	Go to step 5.	Repair the short to ground in harness between radar sensor connector and outer mirror assembly connector.
5 CHECK CONNECTOR. Check the radar sensor connector and the outer mirror assembly connector.	Is there any fault? (Insecure connection, poor contact, etc.)	Repair the connector.	Go to step 6.
6 CHECK OUTER MIRROR ASSEMBLY. Perform unit-check for the outer mirror assembly. <Ref. to GW-23, Outer Mirror Assembly.>	Is there any fault?	Replace the outer mirror assembly. <Ref. to GW-23, Outer Mirror Assembly.>	Go to step 7.
7 CHECK BSD/RCTA. 1) Restore the vehicle to its original state. 2) Perform the Inspection Mode. <Ref. to RVD(diag)-15, Inspection Mode.>	Is DTC B2300 displayed? (Current malfunction)	Replace the radar sensor. <Ref. to RVD-6, Radar Sensor.>	Even if DTC is displayed, the circuit has returned to a normal condition at this time. Reproduce the failure, and then perform the diagnosis again. NOTE: In this case, temporary poor contact of connector, temporary open or short circuit of harness may be the cause.

Diagnostic Procedure with Diagnostic Trouble Code (DTC)

Blind Spot Detection/Rear Cross Traffic Alert (DIAGNOSTICS)

B: DTC B2301 REAR RADAR CIRCUIT HIGH

DTC detecting condition:

- Open circuit or short circuit to power supply in harness between radar sensor and outer mirror assembly.
- Open circuit or short circuit to power supply of harness in the outer mirror assembly module. (Malfunction of the outer mirror assembly)
- Open circuit or short circuit to power supply of harness between outer mirror assembly and ground.
- Defective radar sensor

Trouble symptom:

- All functions of BSD/RCTA stop.
- Fail icon is displayed in the combination meter LCD display.
- Failure-related notification is displayed for approx. two seconds on LCD display in the combination meter.

Wiring diagram:

NOTE:

For the coupling connector, refer to "WIRING SYSTEM".

BSD/RCTA system <Ref. to WI-65, WIRING DIAGRAM, Blind Spot Detection/Rear Cross Traffic Alert.>

- Radar sensor LH

- Radar sensor RH

Diagnostic Procedure with Diagnostic Trouble Code (DTC)

Blind Spot Detection/Rear Cross Traffic Alert (DIAGNOSTICS)

NOTE:

Check and replace the side that displayed the DTC.

Step	Check	Yes	No
1 CHECK DTC. Read the DTC. <Ref. to RVD(diag)-12, OPERATION, Read Diagnostic Trouble Code (DTC).>	Is DTC B2327 displayed? (Current malfunction)	Perform the diagnosis according to DTC. <Ref. to RVD(diag)-33, DTC B2327 REAR RADAR INTERNAL FAILURE (INTERNAL ELECTRIC CIRCUIT), Diagnostic Procedure with Diagnostic Trouble Code (DTC).>	Go to step 2.
2 CHECK DTC. Read the DTC. <Ref. to RVD(diag)-12, OPERATION, Read Diagnostic Trouble Code (DTC).>	Is DTC B2301 displayed? (Current malfunction)	Go to step 3.	Even if DTC is displayed, the circuit has returned to a normal condition at this time. Reproduce the failure, and then perform the diagnosis again. NOTE: In this case, temporary poor contact of connector, temporary open or short circuit of harness may be the cause.
3 CHECK OPERATION CHECK MODE. Perform the system operation check mode «Door mirror indicator active test» from «Subaru Rear Vehicle Detection(RH)» or «Subaru Rear Vehicle Detection(LH)». <Ref. to RVD(diag)-19, System Operation Check Mode.>	Does the indicator illuminate?	Even if DTC is displayed, the circuit has returned to a normal condition at this time. Reproduce the failure, and then perform the diagnosis again. NOTE: In this case, temporary poor contact of connector, temporary open or short circuit of harness may be the cause.	Go to step 4.

Diagnostic Procedure with Diagnostic Trouble Code (DTC)

Blind Spot Detection/Rear Cross Traffic Alert (DIAGNOSTICS)

Step	Check	Yes	No
4 CHECK HARNESS (OPEN CIRCUIT). 1) Disconnect the radar sensor connector. 2) Disconnect the outer mirror assembly connector. 3) Using a tester, measure the resistance between radar sensor connector (harness side) and outer mirror assembly connector (harness side). Connector & terminal Radar sensor LH (R25) No. 4 — (D5) No. 2: Radar sensor RH (R61) No. 4 — (D15) No. 2:	Is the resistance less than 1 Ω?	Go to step 5.	Repair the open circuit of harness between radar sensor connector and outer mirror assembly connector.
5 CHECK HARNESS (SHORT CIRCUIT TO POWER SUPPLY). 1) Turn the ignition switch to ON. 2) Using a tester, measure the voltage between radar sensor connector (harness side) and the chassis ground. Connector & terminal Radar sensor LH (R25) No. 4 (+) — Chassis ground (-): Radar sensor RH (R61) No. 4 (+) — Chassis ground (-):	Is the voltage less than 1 V?	Go to step 6.	Repair the short circuit to power supply in harness between radar sensor connector and outer mirror assembly connector.
6 CHECK CONNECTOR. Check the radar sensor connector and the outer mirror assembly connector.	Is there any fault? (Insecure connection, poor contact, etc.)	Repair the connector.	Go to step 7.
7 CHECK OUTER MIRROR ASSEMBLY. Perform unit-check for the outer mirror assembly. <Ref. to GW-23, Outer Mirror Assembly.>	Is there any fault?	Replace the outer mirror assembly. <Ref. to GW-23, Outer Mirror Assembly.>	Go to step 8.
8 CHECK BSD/RCTA. 1) Restore the vehicle to its original state. 2) Perform the Inspection Mode. <Ref. to RVD(diag)-15, Inspection Mode.>	Is DTC B2301 displayed? (Current malfunction)	Replace the radar sensor. <Ref. to RVD-6, Radar Sensor.>	Even if DTC is displayed, the circuit has returned to a normal condition at this time. Reproduce the failure, and then perform the diagnosis again. NOTE: In this case, temporary poor contact of connector, temporary open or short circuit of harness may be the cause.

Diagnostic Procedure with Diagnostic Trouble Code (DTC)

Blind Spot Detection/Rear Cross Traffic Alert (DIAGNOSTICS)

C: DTC B2304 REAR RADAR ON-OFF SWITCH STUCK

DTC detecting condition:

- BSD/RCTA OFF switch is stuck to ON. (Switch malfunction)
- Switch was left pressed for a prolonged time.
- Defective radar sensor

Trouble symptom:

- All functions of BSD/RCTA stop.
- Fail icon is displayed in the combination meter LCD display.
- Failure-related notification is displayed for approx. two seconds on LCD display in the combination meter.

Wiring diagram:

NOTE:

For the coupling connector, refer to "WIRING SYSTEM".

BSD/RCTA system <Ref. to WI-65, WIRING DIAGRAM, Blind Spot Detection/Rear Cross Traffic Alert.>

Step	Check	Yes	No
1 CHECK METER DISPLAY. 1) Turn the ignition switch to ON. 2) Check the display of OFF indicator in the combination meter LCD display.	Does the display change according to operation of BSD/RCTA OFF switch?	Even if DTC is displayed, the circuit has returned to a normal condition at this time. Reproduce the failure, and then perform the diagnosis again. NOTE: • Temporary poor contact of connector, temporary open or short circuit of harness may be the cause. • User may have kept pressing the switch for 30 seconds or more.	Go to step 2.

Diagnostic Procedure with Diagnostic Trouble Code (DTC)

Blind Spot Detection/Rear Cross Traffic Alert (DIAGNOSTICS)

Step	Check	Yes	No
2 CHECK CURRENT DATA. Check the current data «SRVD System ON-OFF flag» of «Subaru Rear Vehicle Detection(RH)» or «Subaru Rear Vehicle Detection(LH)». <Ref. to RVD(diag)-17, Read Current Data.>	Does the display change according to operation of BSD/RCTA OFF switch?	Check the combination meter. <Ref. to IDI(diag)-2, Basic Diagnostic Procedure.>	Go to step 3.
3 INSPECTION OF SWITCH UNIT. Perform unit inspection of the BSD/RCTA OFF switch. <Ref. to RVD-12, Switches and Harness.>	Is it normal?	Go to step 4.	Replace the BSD/RCTA OFF switch. <Ref. to RVD-12, Switches and Harness.>
4 CHECK BATTERY. Check the battery. <Ref. to SC(H4DO)-51, Battery.>	Is it normal?	Go to step 5.	Charge or replace the battery.
5 CHECK FUSE. Check the fuse of BSD/RCTA OFF switch. <Ref. to RVD-4, Relay and Fuse.>	Is it normal?	Go to step 6.	Replace the fuse. If the replaced fuse blows out easily, repair the ground short circuit in harness between the fuse and the BSD/RCTA OFF switch.
6 CHECK HARNESS (OPEN CIRCUIT). 1) Disconnect the BSD/RCTA OFF switch connector. 2) Turn the ignition switch to ON. 3) Using a tester, measure the voltage between BSD/RCTA OFF switch connector and chassis ground. Connector & terminal (i94) No. 2 (+) — Chassis ground (-):	Is the voltage 10 V or more?	Go to step 7.	Repair the open circuit of harness between the fuse and the BSD/RCTA OFF switch.
7 CHECK HARNESS (OPEN CIRCUIT). 1) Turn the ignition switch to OFF. 2) Disconnect the radar sensor LH connector. 3) Using a tester, measure the resistance between BSD/RCTA OFF switch connector and radar sensor LH connector (harness side). Connector & terminal (i94) No. 1 — (R25) No. 8:	Is the resistance less than 1 Ω?	Go to step 8.	Repair the open circuit of harness between BSD/RCTA OFF switch and radar sensor LH.
8 CHECK HARNESS (GROUND SHORT CIRCUIT). Using a tester, measure the resistance between the BSD/RCTA OFF switch connector (harness side) and the chassis ground. Connector & terminal (i94) No. 1 — Chassis ground:	Is the resistance 1 MΩ or more?	Go to step 9.	Repair the short circuit to ground in harness between BSD/RCTA OFF switch and radar sensor LH.
9 CHECK HARNESS (SHORT CIRCUIT TO POWER SUPPLY). 1) Turn the ignition switch to ON. 2) Using a tester, measure the voltage between the BSD/RCTA OFF switch connector (harness side) and the chassis ground. Connector & terminal (i94) No. 1 (+) — Chassis ground (-):	Is the voltage less than 1 V?	Go to step 10.	Repair the short circuit to power supply in harness between BSD/RCTA OFF switch and radar sensor LH.
10 CHECK CONNECTOR. Check the radar sensor LH connector.	Is there any fault? (Insecure connection, poor contact, etc.)	Repair the connector.	Go to step 11.

Diagnostic Procedure with Diagnostic Trouble Code (DTC)

Blind Spot Detection/Rear Cross Traffic Alert (DIAGNOSTICS)

	Step	Check	Yes	No
11	CHECK BSD/RCTA. 1) Restore the vehicle to its original state. 2) Perform the Inspection Mode. <Ref. to RVD(diag)-15, Inspection Mode.>	Is DTC B2304 displayed? (Current malfunction)	Replace the radar sensor LH. <Ref. to RVD-6, Radar Sensor.>	Even if DTC is displayed, the circuit has returned to a normal condition at this time. Reproduce the failure, and then perform the diagnosis again. NOTE: In this case, temporary poor contact of connector, temporary open or short circuit of harness may be the cause.

Diagnostic Procedure with Diagnostic Trouble Code (DTC)

Blind Spot Detection/Rear Cross Traffic Alert (DIAGNOSTICS)

D: DTC B2311 REAR RADAR DETECT TCM

DTC DETECTING CONDITION:

Automatic transmission fails.

TROUBLE SYMPTOM:

- All functions of BSD/RCTA stop.
- Fail icon is displayed in the combination meter LCD display.
- Failure-related notification is displayed for approx. two seconds on LCD display in the combination meter.
- AT OIL TEMP light blinks in the combination meter.

NOTE:

Check and replace the side that displayed the DTC.

	Step	Check	Yes	No
1	CHECK TRANSMISSION. Check the transmission. <Ref. to CVT(diag)-2, Basic Diagnostic Procedure.>	Is there any fault?	Perform the inspection according to the diagnosis of the transmission.	Go to step 2.
2	CHECK BSD/RCTA. 1) Restore the vehicle to its original state. 2) Perform the Inspection Mode. <Ref. to RVD(diag)-15, Inspection Mode.>	Is DTC B2311 displayed? (Current malfunction)	Replace the radar sensor. <Ref. to RVD-6, Radar Sensor.>	Even if DTC is displayed, the circuit has returned to a normal condition at this time. Reproduce the failure, and then perform the diagnosis again. NOTE: In this case, temporary poor contact of connector, temporary open or short circuit of harness may be the cause.

Diagnostic Procedure with Diagnostic Trouble Code (DTC)

Blind Spot Detection/Rear Cross Traffic Alert (DIAGNOSTICS)

E: DTC B2313 REAR RADAR DETECT VDC

DTC DETECTING CONDITION:

Vehicle dynamics control (VDC) fails.

TROUBLE SYMPTOM:

- All functions of BSD/RCTA stop.
- Fail icon is displayed in the combination meter LCD display.
- Failure-related notification is displayed for approx. two seconds on LCD display in the combination meter.
- VDC warning light illuminates in the combination meter.

NOTE:

Check and replace the side that displayed the DTC.

	Step	Check	Yes	No
1	CHECK VDC. Check the VDC. <Ref. to VDC(diag)-2, Basic Diagnostic Procedure.>	Is there any fault?	Perform the inspection according to the VDC diagnosis.	Go to step 2.
2	CHECK BSD/RCTA. 1) Restore the vehicle to its original state. 2) Perform the Inspection Mode. <Ref. to RVD(diag)-15, Inspection Mode.>	Is DTC B2313 displayed? (Current malfunction)	Replace the radar sensor. <Ref. to RVD-6, Radar Sensor.>	Even if DTC is displayed, the circuit has returned to a normal condition at this time. Reproduce the failure, and then perform the diagnosis again. NOTE: In this case, temporary poor contact of connector, temporary open or short circuit of harness may be the cause.

Diagnostic Procedure with Diagnostic Trouble Code (DTC)

Blind Spot Detection/Rear Cross Traffic Alert (DIAGNOSTICS)

F: DTC B2327 REAR RADAR INTERNAL FAILURE (INTERNAL ELECTRIC CIRCUIT)

DTC DETECTING CONDITION:

Defective radar sensor

TROUBLE SYMPTOM:

- All functions of BSD/RCTA stop.
- Fail icon is displayed in the combination meter LCD display.
- Failure-related notification is displayed for approx. two seconds on LCD display in the combination meter.

NOTE:

Check and replace the side that displayed the DTC.

	Step	Check	Yes	No
1	CHECK BSD/RCTA. 1) Perform the Clear Memory Mode. <Ref. to RVD(diag)-13, Clear Memory Mode.> 2) Read the DTC again. <Ref. to RVD(diag)-12, Read Diagnostic Trouble Code (DTC).>	Is DTC B2327 displayed? (Current malfunction)	Replace the radar sensor. <Ref. to RVD-6, Radar Sensor.>	Even if DTC is displayed, the circuit has returned to a normal condition at this time. Reproduce the failure, and then perform the diagnosis again. NOTE: In this case, temporary poor contact of connector, temporary open or short circuit of harness may be the cause.

Diagnostic Procedure with Diagnostic Trouble Code (DTC)

Blind Spot Detection/Rear Cross Traffic Alert (DIAGNOSTICS)

G: DTC B2329 REAR RADAR AXIS ALIGNMENT INCOMPLETE

DTC DETECTING CONDITION:

Axis adjustment of the radar sensor has failed.

(Forced termination of the Subaru Select Monitor, improper location of the target reflector, or deviation of the radar sensor due to impact.)

TROUBLE SYMPTOM:

- All functions of BSD/RCTA stop.
- Fail icon is displayed in the combination meter LCD display.
- Failure-related notification is displayed for approx. two seconds on LCD display in the combination meter.

NOTE:

Check and replace the side that displayed the DTC.

Step	Check	Yes	No
1 CHECK REAR BUMPER. Check the rear bumper.	Is there any fault? (Stickered, trace of repainting, etc.)	Replace or repair the bumper. <Ref. to EI-38, Rear Bumper.> Go to step 2.	Go to step 2.
2 CHECK RADAR SENSOR BRACKET. 1) Remove the rear bumper. <Ref. to EI-38, Rear Bumper.> 2) Check the mounting bracket of the radar sensor as well as its installation position. <Ref. to RVD-6, Radar Sensor.>	Is there any fault? (Visible damage, deformation, etc.)	Replace the mounting bracket of the radar sensor, or repair the installation position. <Ref. to RVD-6, Radar Sensor.> Go to step 3.	Go to step 3.
3 ADJUSTMENT OF RADAR SENSOR AXIS. 1) Install the rear bumper. 2) Perform the adjustment of radar axis. <Ref. to RVD-7, ADJUSTMENT, Radar Sensor.> 3) Perform the Inspection Mode. <Ref. to RVD(diag)-15, Inspection Mode.>	Is DTC B2329 displayed? (Current malfunction)	Replace the radar sensor. <Ref. to RVD-6, Radar Sensor.>	Even if DTC is displayed, the circuit has returned to a normal condition at this time. Reproduce the failure, and then perform the diagnosis again. NOTE: In this case, temporary poor contact of connector, temporary open or short circuit of harness may be the cause.

Diagnostic Procedure with Diagnostic Trouble Code (DTC)

Blind Spot Detection/Rear Cross Traffic Alert (DIAGNOSTICS)

H: DTC B2350 REAR RADAR COMMUNICATION ERROR BETWEEN MASTER AND SLAVE

DTC DETECTING CONDITION:

- Defective harness for CAN communication between radar sensor LH and radar sensor RH
- Defective radar sensor

TROUBLE SYMPTOM:

- All functions of BSD/RCTA stop.
- Fail icon is displayed in the combination meter LCD display.
- Failure-related notification is displayed for approx. two seconds on LCD display in the combination meter.

WIRING DIAGRAM:

NOTE:

For the coupling connector, refer to "WIRING SYSTEM".

BSD/RCTA system <Ref. to WI-65, WIRING DIAGRAM, Blind Spot Detection/Rear Cross Traffic Alert.>

Step	Check	Yes	No
1 CHECK DTC. Read the DTC. <Ref. to RVD(diag)-12, OPERATION, Read Diagnostic Trouble Code (DTC).>	Is DTC B2350 displayed? (Current malfunction)	Go to step 2.	Even if DTC is displayed, the circuit has returned to a normal condition at this time. Reproduce the failure, and then perform the diagnosis again. NOTE: In this case, temporary poor contact of connector, temporary open or short circuit of harness may be the cause.

Diagnostic Procedure with Diagnostic Trouble Code (DTC)

Blind Spot Detection/Rear Cross Traffic Alert (DIAGNOSTICS)

Step	Check	Yes	No
2 CHECK HARNESS (OPEN CIRCUIT). 1) Disconnect the radar sensor connectors LH and RH. 2) Using a tester, measure the resistance between radar sensor RH connector (harness side) and radar sensor LH connector (harness side). <i>Connector & terminal</i> (R25) No. 1 — (R61) No. 1: (R25) No. 6 — (R61) No. 6:	Is the resistance less than 1 Ω?	Go to step 3.	Repair the open circuit of harness between radar sensor RH connector and radar sensor LH connector.
3 CHECK HARNESS (SHORT BETWEEN LINES, GROUND SHORT CIRCUIT). Using a tester, measure the resistance between radar sensor LH connectors (harness side) and the resistance between radar sensor LH connector (harness side) and chassis ground. <i>Connector & terminal</i> (R25) No. 1 — (R25) No. 6: (R25) No. 1 — Chassis ground: (R25) No. 6 — Chassis ground:	Is the resistance 1 MΩ or more?	Go to step 4.	Repair the short circuit of harness between radar sensor RH connector and radar sensor LH connector.
4 CHECK HARNESS (SHORT CIRCUIT TO POWER SUPPLY). 1) Turn the ignition switch to ON. 2) Using a tester, measure the voltage between radar sensor LH connector (harness side) and chassis ground. <i>Connector & terminal</i> (R25) No. 1 (+) — Chassis ground (-): (R25) No. 6 (+) — Chassis ground (-):	Is the voltage less than 1 V?	Go to step 5.	Repair the short to power supply in harness between radar sensor RH connector and radar sensor LH connector.
5 CHECK RADAR SENSOR. (INTERNAL IMPEDANCE). Using a tester, measure the resistance between radar sensor LH connectors (module side) and the resistance between radar sensor RH connectors (module side). <i>Connector & terminal</i> (R25) No. 1 — (R25) No. 6: (R61) No. 1 — (R61) No. 6:	Is the resistance approximately 120 Ω?	Go to step 6.	Replace the radar sensor RH or radar sensor LH. <Ref. to RVD-6, Radar Sensor.>
6 CHECK BSD/RCTA. 1) Restore the vehicle to its original state. 2) Perform the Clear Memory Mode. <Ref. to RVD(diag)-13, Clear Memory Mode.> 3) Perform the Inspection Mode. <Ref. to RVD(diag)-15, Inspection Mode.>	Is DTC B2350 displayed? (Current malfunction)	Replace the radar sensor on the side that displayed the DTC. <Ref. to RVD-6, Radar Sensor.>	Even if DTC is displayed, the circuit has returned to a normal condition at this time. <Reproduce the failure, and then perform the diagnosis again.> NOTE: In this case, temporary poor contact of connector, temporary open or short circuit of harness may be the cause.

Diagnostic Procedure with Diagnostic Trouble Code (DTC)

Blind Spot Detection/Rear Cross Traffic Alert (DIAGNOSTICS)

I: DTC U0073 CONTROL MODULE COMMUNICATION BUS OFF

Detected when CAN line abnormality is detected.

NOTE:

Perform the diagnosis for LAN system. <Ref. to LAN(diag)-2, PROCEDURE, Basic Diagnostic Procedure.>

J: DTC U0101 LOST COMMUNICATION WITH TCM

Detected when CAN data from TCM does not arrive.

NOTE:

Perform the diagnosis for LAN system. <Ref. to LAN(diag)-2, PROCEDURE, Basic Diagnostic Procedure.>

K: DTC U0122 LOST COMMUNICATION WITH VEHICLE DYNAMICS CONTROL MODULE

Detected when CAN data from VDC CM does not arrive.

NOTE:

Perform the diagnosis for LAN system. <Ref. to LAN(diag)-2, PROCEDURE, Basic Diagnostic Procedure.>

L: DTC U0140 LOST COMMUNICATION WITH BODY CONTROL MODULE

Detected when CAN data from BIU does not arrive.

NOTE:

Perform the diagnosis for LAN system. <Ref. to LAN(diag)-2, PROCEDURE, Basic Diagnostic Procedure.>

M: DTC U0155 LOST COMMUNICATION WITH INSTRUMENT PANEL CLUSTER (IPC) CONTROL MODULE

Detected when CAN data from combination meter does not arrive.

NOTE:

Perform the diagnosis for LAN system. <Ref. to LAN(diag)-2, PROCEDURE, Basic Diagnostic Procedure.>

N: DTC U0402 INVALID DATA RECEIVED FROM TCM

Received error data from TCM.

NOTE:

Perform the diagnosis for LAN system. <Ref. to LAN(diag)-2, PROCEDURE, Basic Diagnostic Procedure.>

O: DTC U0416 INVALID DATA RECEIVED FROM VEHICLE DYNAMICS CONTROL MODULE

Received error data from VDC CM.

NOTE:

Perform the diagnosis for LAN system. <Ref. to LAN(diag)-2, PROCEDURE, Basic Diagnostic Procedure.>

P: DTC U0422 INVALID DATA RECEIVED FROM BODY CONTROL MODULE

Received error data from BIU.

NOTE:

Perform the diagnosis for LAN system. <Ref. to LAN(diag)-2, PROCEDURE, Basic Diagnostic Procedure.>

Q: DTC U0423 INVALID DATA RECEIVED FROM INSTRUMENT PANEL CLUSTER CONTROL MODULE

Received error data from combination meter.

NOTE:

Perform the diagnosis for LAN system. <Ref. to LAN(diag)-2, PROCEDURE, Basic Diagnostic Procedure.>

Diagnostic Procedure with Cancel Code

Blind Spot Detection/Rear Cross Traffic Alert (DIAGNOSTICS)

16. Diagnostic Procedure with Cancel Code

A: DTC B2328 REAR RADAR INTERNAL FAILURE (RADAR MISALIGNMENT)

DETECTING CONDITION:

- Excessive impact was given to the installation area of the radar sensor, which resulted in deviation of the radar sensor axis.
- Mounting bracket for the radar sensor is deformed.
- Defective radar sensor

TROUBLE SYMPTOMS:

- All functions of BSD/RCTA are temporarily suspended.
- The icon indicating function suspended will be displayed in the combination meter LCD display.
- Function-suspended confirmation will be displayed for approx. two seconds on LCD display in the combination meter.

NOTE:

If DTC B2328 is detected repeatedly, check or replace the part corresponding to the cancel code.

Step	Check	Yes	No
1 CHECK REAR BUMPER. Check the rear bumper.	Is there any fault? (Stickered, trace of repainting, etc.)	Replace or repair the bumper. <Ref. to EI-38, Rear Bumper.> Go to step 2.	Go to step 2.
2 CHECK RADAR SENSOR BRACKET. 1) Remove the rear bumper. <Ref. to EI-38, Rear Bumper.> 2) Check the mounting bracket of the radar sensor as well as its installation position. <Ref. to RVD-6, Radar Sensor.>	Is there any fault? (Visible damage, deformation, etc.)	Replace the mounting bracket of the radar sensor, or repair the installation position. <Ref. to RVD-6, Radar Sensor.> Go to step 3.	Go to step 3.
3 ADJUSTMENT OF RADAR SENSOR AXIS. 1) Install the rear bumper. 2) Perform the adjustment of radar axis. <Ref. to RVD-7, ADJUSTMENT, Radar Sensor.> 3) Read the cancel code. <Ref. to RVD(diag)-14, Read Cancel Code.>	Is B2328 displayed?	Replace the radar sensor. <Ref. to RVD-6, Radar Sensor.>	The circuit has returned to a normal condition at this time. Reproduce the failure, and then perform the diagnosis again. NOTE: In this case, temporary poor contact of connector, temporary open or short circuit of harness may be the cause.

Basic Diagnostic Procedure

LAN SYSTEM (DIAGNOSTICS)

1. Basic Diagnostic Procedure

A: PROCEDURE

CAUTION:

- Subaru Select Monitor is required for reading DTC, performing diagnosis, reading current data, customizing and active test (compulsory drive).
- Remove foreign matter (dust, water, oil, etc.) from each control module connector during removal and installation.
- Registration of immobilizer may be needed after the replacement of controller modules, etc. For detailed procedure, refer to the "REGISTRATION MANUAL FOR IMMOBILIZER" provided as a separate volume.

NOTE:

- To check harness for open or short circuits, shake the suspected trouble spot or connector.
- Perform the diagnosis, and when the control module is replaced as a result of judgment that malfunction is the control module, re-check that the control module was actually malfunctioning. Replace to a new control module, and confirm that the malfunction is eliminated. Then, install the previously removed control module again and check that the malfunction reproduces again.
- Check List for Interview <Ref. to LAN(diag)-4, Check List for Interview.>

	Step	Check	Yes	No
1	CHECK PRE-INSPECTION. Ask the customer when and how the trouble occurred using the interview check list. <Ref. to LAN(diag)-4, Check List for Interview.>	Did you interview the customer?	Go to step 2.	Interview the customer.
2	BASIC INSPECTION (CAN DIAGNOSTIC IS NOT USED). Check the power supply circuit of the module which might affect CAN communication problem. <Ref. to LAN(diag)-7, INSPECTION WITHOUT USING CAN DIAGNOSTIC, INSPECTION, General Description.>	Is the power supply circuit of each module that is performing CAN communication normal?	Go to step 3.	Repair or replace the faulty portion.
3	BASIC INSPECTION (CAN DIAGNOSTIC IS NOT USED). Check the registration status of the body integrated unit which might affect CAN communication problem. <Ref. to LAN(diag)-7, INSPECTION USING CAN DIAGNOSTIC, INSPECTION, General Description.>	Does the registration status of the body integrated unit match the vehicle specification? (When the Subaru Select Monitor and the body integrated unit cannot communicate, and the registration status cannot be checked, Go to step 5.)	Go to step 4.	Match the registration status of the body integrated unit with the vehicle specification.
4	CHECK COMMUNICATION FOR INITIALIZING. Communicate with the all systems by connecting the Subaru Select Monitor.	Is the communication for initializing finished for all modules?	Go to step 5.	Check the error of communication for initializing. <Ref. to LAN(diag)-11, COMMUNICATION FOR INITIALIZING IMPOSSIBLE, Subaru Select Monitor.>

Basic Diagnostic Procedure

LAN SYSTEM (DIAGNOSTICS)

Step	Check	Yes	No
<p>5 CHECK DTC. 1) Start the engine and read all DTCs. NOTE: When the engine does not start, perform the diagnosis for the engine start malfunction. <Ref. to EN(H4DO)(diag)-74, Diagnostics for Engine Starting Failure.> 2) Record all DTCs (current malfunction and past malfunction), time stamp and freeze frame data. NOTE: For time stamp, refer to "TIME STAMP" of General Description. <Ref. to LAN(diag)-6, TIME STAMP, CAUTION, General Description.></p>	<p>Is DTC U**** displayed on Subaru Select Monitor?</p>	<p>Go to step 6.</p>	<p>Inspect using the "General Diagnostic Table". <Ref. to LAN(diag)-125, General Diagnostic Table.></p>
<p>6 CHECK USING THE DTC CHECK SHEET. Perform the inspection using the DTC check sheet. <Ref. to LAN(diag)-94, CHECK USING THE DTC CHECK SHEET, LIST, List of Diagnostic Trouble Code (DTC).></p>	<p>Is CAN communication line faulty?</p>	<p>Repair or replace the faulty portion of the harness. And then, Go to step 7.</p>	<p>Perform the diagnosis for the displayed DTCs. And then, Go to step 7.</p>
<p>7 PERFORM DIAGNOSIS. 1) Perform the Clear Memory Mode. <Ref. to LAN(diag)-32, OPERATION, Clear Memory Mode.> 2) Read the DTC. <Ref. to LAN(diag)-31, OPERATION, Read Diagnostic Trouble Code (DTC).></p>	<p>Are any DTCs displayed?</p>	<p>Repeat the Basic Diagnostic Procedure from the beginning until DTC is not shown.</p>	<p>Finish the diagnosis.</p>

Check List for Interview

LAN SYSTEM (DIAGNOSTICS)

2. Check List for Interview

A: CHECK

Inspect the following item about the vehicle's state.

1. DISPLAY STATUS IN THE COMBINATION METER

Display status in the combination meter	Engine coolant temperature gauge display	<input type="checkbox"/> OK / <input type="checkbox"/> NG
	Fuel gauge display	<input type="checkbox"/> OK / <input type="checkbox"/> NG
	Tachometer display	<input type="checkbox"/> OK / <input type="checkbox"/> NG (0 rpm at idling etc.)
Display of other indicators	Malfunction indicator light	<input type="checkbox"/> ON / <input type="checkbox"/> Blink / <input type="checkbox"/> OFF
	Sport indicator light (AT warning light)	<input type="checkbox"/> ON / <input type="checkbox"/> Blink / <input type="checkbox"/> OFF
	ABS warning light	<input type="checkbox"/> ON / <input type="checkbox"/> Blink / <input type="checkbox"/> OFF
	VDC warning light	<input type="checkbox"/> ON / <input type="checkbox"/> Blink / <input type="checkbox"/> OFF
	Immobilizer indicator light	<input type="checkbox"/> ON / <input type="checkbox"/> Blink / <input type="checkbox"/> OFF
	AT OIL TEMP warning light	<input type="checkbox"/> ON / <input type="checkbox"/> Blink / <input type="checkbox"/> OFF
	Tire pressure warning light	<input type="checkbox"/> ON / <input type="checkbox"/> Blink / <input type="checkbox"/> OFF
	Engine coolant temperature warning light	<input type="checkbox"/> Blue light ON / <input type="checkbox"/> Red light ON / <input type="checkbox"/> Red light blinks / <input type="checkbox"/> Blue and red lights blink
	CRUISE indicator	<input type="checkbox"/> ON / <input type="checkbox"/> Blink / <input type="checkbox"/> OFF
	Shift indicator	<input type="checkbox"/> OK / <input type="checkbox"/> NG
	Fuel level warning light	<input type="checkbox"/> ON / <input type="checkbox"/> Blink / <input type="checkbox"/> OFF
	Airbag warning light	<input type="checkbox"/> ON / <input type="checkbox"/> OFF
	VDC OFF indicator	<input type="checkbox"/> ON / <input type="checkbox"/> OFF
	Brake warning light	<input type="checkbox"/> ON / <input type="checkbox"/> OFF
	Headlight beam leveler indicator	<input type="checkbox"/> ON / <input type="checkbox"/> OFF

2. CONDITIONS UNDER WHICH TROUBLE OCCURS

Driving condition	<input type="checkbox"/> At standstill (While idling)
	<input type="checkbox"/> When the vehicle is running Vehicle speed km/h (MPH)
	<input type="checkbox"/> While accelerating Acceleration km/h (MPH) to km/h (MPH)
	<input type="checkbox"/> Decelerating (With braking) Deceleration km/h (MPH) to km/h (MPH)
	<input type="checkbox"/> Decelerating (Without braking) Deceleration km/h (MPH) to km/h (MPH)
	<input type="checkbox"/> Flat road
	<input type="checkbox"/> Uphill
<input type="checkbox"/> Downhill	
<input type="checkbox"/> Gravel road	
<input type="checkbox"/> Bumpy road	
<input type="checkbox"/> Snowy road	
Does it occur when operating any part? Operated part: TRouble SYMPTOM:	
Are there any other troubles occurred? From where: TRouble SYMPTOM:	

3. General Description

A: CAUTION

1. SUPPLEMENTAL RESTRAINT SYSTEM “AIRBAG”

Airbag system wiring harness is routed near the body integrated unit and twisted pair line.

CAUTION:

- Do not use the electrical test equipment on all airbag system wiring harnesses and connectors.
- Be careful not to damage the airbag system wiring harness when servicing the body integrated unit and LAN system.

2. LAN SYSTEM

- Bus line of LAN system is twisted pair line. Be careful not to by-pass or partly unbind the twisted pair line.
- Do not make clearance between bus lines (CAN High, CAN Low).
- Difference of bus line length should be within 10 cm (3.94 in).
- Fray near the connector should be within 8 cm (3.14 in).

(A) Bypass wire connection

- If the characteristics of the twisted pair line are changed, it may extremely weaken against noise.
- When repairing the harness, connect the wires using soldering and protect it with insulating tape etc.

(A) Soldering and protection with insulating tape

General Description

LAN SYSTEM (DIAGNOSTICS)

3. TIME STAMP

There are three types of record data for the information of time stamp, and they are stored together with diagnostic codes.

NOTE:

Depending on DTCs, time stamp may not be stored.

a. **«Trip Count»**

This indicates the number of times that the ignition has been turned to ON since the vehicle was manufactured. The ignition ON count of when the diagnostic code is stored is displayed on the diagnostic code check screen.

NOTE:

Subaru Select Monitor 4 screen (A/C system diagnostic code and time stamp)

Code	Description & trouble position	Trouble occurrence record	«Trip Count»	«Time Count»	«Category»
B14E1	Air mix door actuator stepping motor circuit wire break (driver's seat)	Detected on the first time	983	18000	Common
B14E7	Heater core rear sensor circuit wire break	Detected on the 2nd time	984	117800	Common

The current Trip Count can be checked at "Current Data Display & Save" in "Integ. unit mode".

By comparing the current Trip Count and the Trip Count of when the diagnostic code was stored, it is possible to determine that it is how many ignition-ON operations ago that DTC was stored.

b. **«Time Count»**

The elapsed time from when the ignition is turned to ON to when the diagnostic code is stored is displayed on the diagnostic code check screen. It is possible to determine the length of time that passed between when the user started driving and when the diagnostic code was stored. Therefore, if Trip Count until the vehicle-received-date is determined by interviewing the user, it is possible to estimate where the user was driving when the diagnostic code was stored, using the information such as Trip Count and Time Count. This estimate is useful information to perform diagnosis including checking of repeatability.

NOTE:

Subaru Select Monitor 4 screen (A/C system diagnostic code and time stamp)

Code	Description & trouble position	Trouble occurrence record	«Trip Count»	«Time Count»	«Category»
B14E1	Air mix door actuator stepping motor circuit wire break (driver's seat)	Detected on the first time	983	18000	Common
B14E7	Heater core rear sensor circuit wire break	Detected on the 2nd time	984	117800	Common

When multiple diagnostic codes are recorded for one trouble, it is extremely important to determine the diagnostic code that was stored first. (It is important to perform the diagnosis for the first recorded diagnostic code.) In this case, it is also possible to immediately determine which diagnostic code was recorded first, using the information such as Trip Count and Time Count.

c. «Category»

Each unit individually counts the elapsed time since the ignition is turned to ON. However, these time counts may have some errors, and therefore, the control modules need to be adjusted to the time carried by the master-time unit (the body integrated unit). When the count is set as common, it means that each control module is already adjusted to the master time, and the display for the master integrated unit is always indicated as “Common”. When the count is indicated as “Originally”, it means that the time is not synchronized with the master time. In this case, check the communication between the corresponding control module and integrated unit. When all controls other than the body integrated unit is indicated as “Originally”, perform the basic inspection for the body integrated unit. <Ref. to BC(diag)-2, PROCEDURE, Basic Diagnostic Procedure.>

NOTE:

Subaru Select Monitor 4 screen (A/C system diagnostic code and time stamp)

Code	Description & trouble position	Trouble occurrence record	«Trip Count»	«Time Count»	«Category»
B14E1	Air mix door actuator stepping motor circuit wire break (driver's seat)	Detected on the first time	983	18000	Common
B14E7	Heater core rear sensor circuit wire break	Detected on the 2nd time	984	117800	Common

Even when multiple diagnostic codes are stored in multiple control modules, it is possible to determine the code stored first through the categorizing feature.

NOTE:

Troubleshooting for CAN system U-code occurrence

When the first stored diagnostic code is a U-code for CAN system, perform the troubleshooting as a U code combination, instead of a U code alone. In addition, when CAN open circuit occurs, communication of the diagnostic device itself becomes impossible beyond the particular areas. However, trouble positions can also be determined by the combination of initial communication success/failure. Thus, by performing the basic diagnostic procedure in LAN system, trouble positions can be determined efficiently on the principle above. <Ref. to LAN(diag)-2, PROCEDURE, Basic Diagnostic Procedure.>

B: INSPECTION

1. INSPECTION WITHOUT USING CAN DIAGNOSTIC

Before performing diagnosis, check the following items that might affect troubles of each module.

- 1) Check the battery. <Ref. to SC(H4DO)-52, INSPECTION, Battery.>
- 2) Check the fuse condition.
Make sure that ampere of the fuse is setting value, and it is not blown out.
- 3) Check the connecting condition of harness and harness connector.

2. INSPECTION USING CAN DIAGNOSTIC

Before performing diagnostics, check the following item which might affect body integrated unit malfunctions.

- 1) Confirm settings of body integrated unit are corresponded to vehicle equipment. <Ref. to BC(diag)-20, OPERATION, Registration Body Integrated Unit.>
- 2) Make sure that the User Customizing of the body integrated unit matches the vehicle equipment. <Ref. to BC(diag)-17, OPERATION, User Customizing.>
- 3) Confirm “Factory initial setting” of body integrated unit registrations is set to “Market”.

General Description

LAN SYSTEM (DIAGNOSTICS)

C: PREPARATION TOOL

1. SPECIAL TOOL

ILLUSTRATION	TOOL NUMBER	DESCRIPTION	REMARKS
 STSSM4	—	SUBARU SELECT MONITOR 4	Used for setting of each function and troubleshooting for electrical system. NOTE: For detailed operation procedures of Subaru Select Monitor 4, refer to “Application help”.

2. GENERAL TOOL

For I/O signals of stereo camera, refer to EyeSight (Diagnostics). <Ref. to ES(diag)-17, Control Module I/O Signal.>

- Radar sensor

For I/O signals of the radar sensor, refer to BSD/RCTA (DIAGNOSTICS). <Ref. to RVD(diag)-8, Control Module I/O Signal.>

- Data communication module

For I/O signals of data communication module, refer to TELEMATICS (DIAGNOSTICS). <Ref. to TEL(diag)-8, Control Module I/O Signal.>

- Data link connector

For I/O signals of data link connector, refer to ENGINE (DIAGNOSTICS). <Ref. to EN(H4DO)(diag)-30, Data Link Connector.>

* CAN sleep state:

Hold on for approx. one minute with ignition OFF and the doors, trunk, rear gate all closed.

B: WIRING DIAGRAM

Refer to “CAN Communication System” in the wiring diagram. <Ref. to WI-68, WIRING DIAGRAM, CAN Communication System.>

6. Subaru Select Monitor

A: OPERATION

For detailed operation procedures, refer to "Application help".

B: COMMUNICATION FOR INITIALIZING IMPOSSIBLE

DIAGNOSIS:

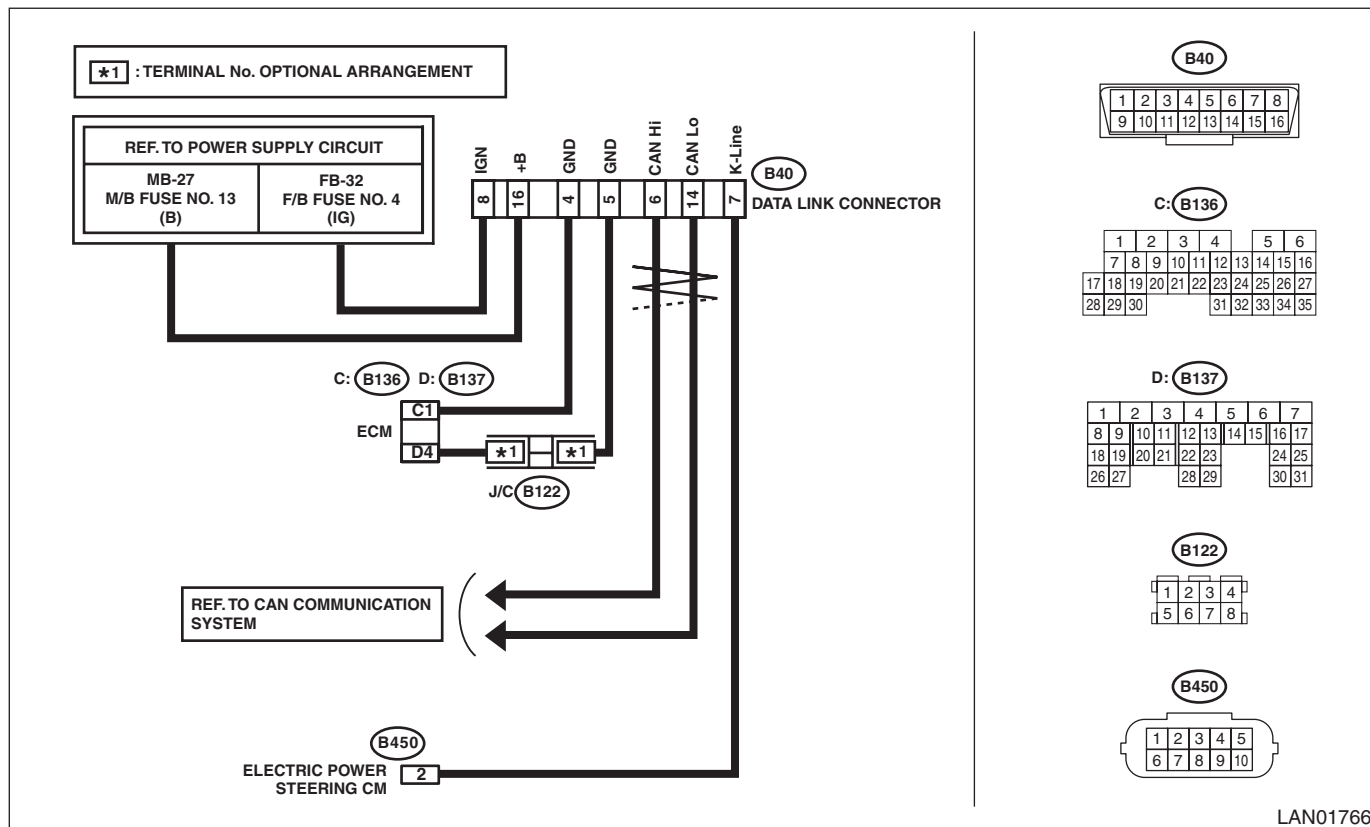

Subaru Select Monitor communication line is open or shorted.

TROUBLE SYMPTOM:

Not communicable with Subaru Select Monitor.

WIRING DIAGRAM:

CAN communication system <Ref. to WI-68, WIRING DIAGRAM, CAN Communication System.>

	Step	Check	Yes	No
1	<p>CHECK SUBARU SELECT MONITOR.</p> <p>1) Connect the Subaru Select Monitor to another vehicle.</p> <p>2) Check communication condition between Subaru Select Monitor and vehicle.</p>	<p>Is communication performed normally?</p>	<p>Go to step 2.</p>	<p>Subaru Select Monitor unit or diagnosis cable is faulty. Or check the fuse on the vehicle side.</p>

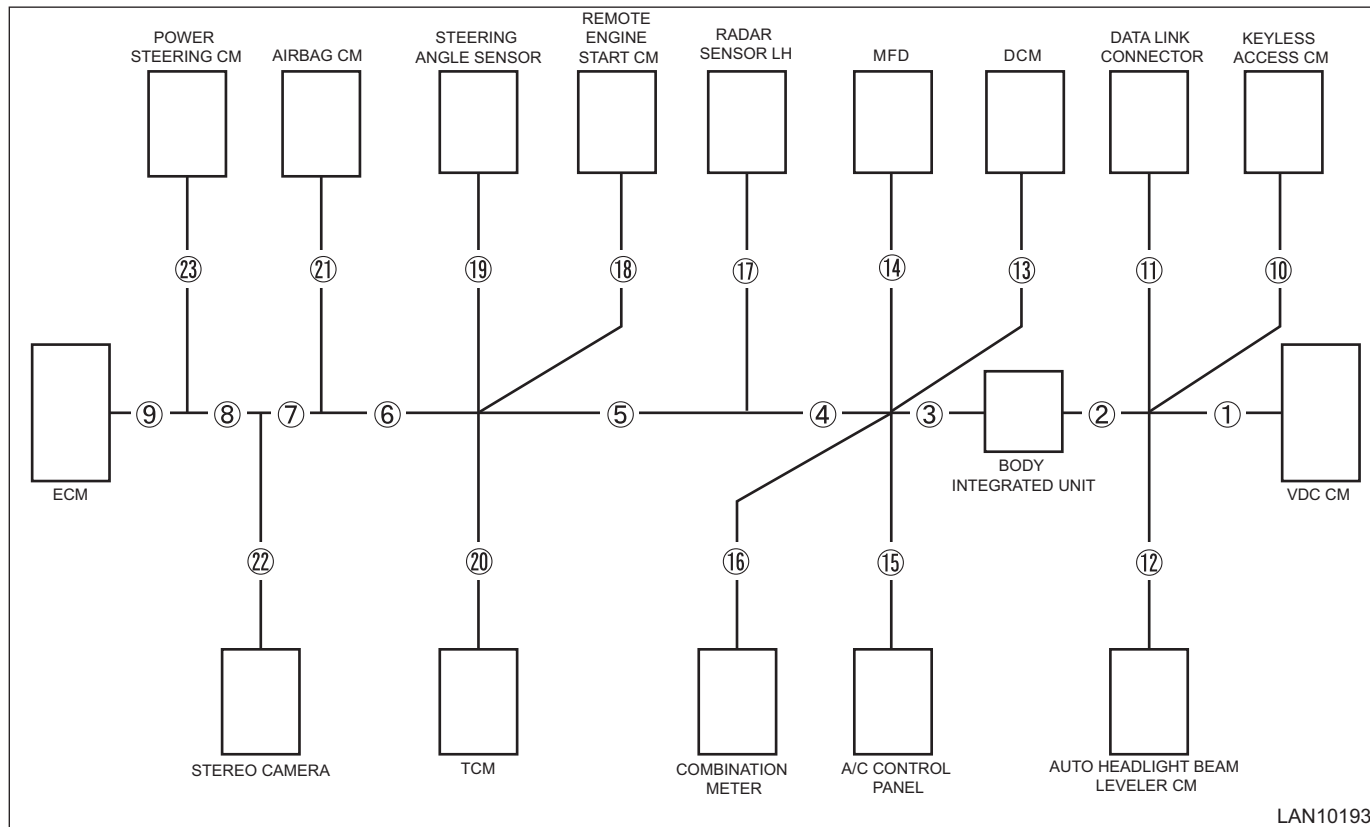

Subaru Select Monitor

LAN SYSTEM (DIAGNOSTICS)

Step	Check	Yes	No
<p>2 CHECK COMMUNICATION FOR INITIALIZING ERROR. Perform the communication for initializing with each module by connecting the Subaru Select Monitor. (For systems whose module can communicate with diagnostic devices)</p>	Is the communication possible with all modules?	Go to step 3.	Perform the inspection using the check sheet of communication for initializing. <Ref. to LAN(diag)-13, CHECK USING THE CHECK SHEET OF COMMUNICATION FOR INITIALIZING, COMMUNICATION FOR INITIALIZING IMPOSSIBLE, Subaru Select Monitor.>
<p>3 CHECK K-LINE. 1) Establish the communication between Select Monitor and K-Line communication module. 2) Using a tester, check continuity between the modules that did not communicate with Select Monitor. Connector & terminal (B40) No. 7 — (B450) No. 2 (electric power steering):</p>	Is there continuity?	Go to step 4.	Repair or replace the open circuit.
<p>4 CHECK K-LINE. Using a tester, check continuity between K-line and chassis ground. Connector & terminal (B40) No. 7 — Chassis ground:</p>	Is there continuity?	Repair or replace the short circuit portion.	Go to step 5.
<p>5 CHECK K-LINE. Using a tester, check voltage between K-line and chassis ground. Connector & terminal (B40) No. 7 (+) — Chassis ground (-):</p>	Is the voltage 5 V or more with IG ON?	Repair or replace the short circuit portion.	Go to step 6.
<p>6 CHECK K-LINE. Use a tester to check for continuity in the ground circuit. Connector & terminal (B40) No. 4 — Chassis ground: (B40) No. 5 — Chassis ground:</p>	Is there continuity?	Go to step 8.	Go to step 7.
<p>7 CHECK K-LINE. 1) Disconnect the ECM connector. 2) Use a tester to check for continuity in the ground circuit. Connector & terminal (B40) No. 4 — (B136) No. 1: (B40) No. 5 — (B137) No. 4:</p>	Is there continuity?	Check ECM ground.	Repair or replace the open circuit.
<p>8 CHECK K-LINE. 1) Turn the ignition switch to ON. 2) Using a tester, check the power supply of data link connector. Connector & terminal (B40) No. 8 (+) — Chassis ground (-): (B40) No. 16 (+) — Chassis ground (-):</p>	Is the voltage 10 V or more?	K-Line is normal. Check the power supply circuit of each module.	Check the power supply circuits to the data link connector.

1) Module installation check

- (1) Write “-” marks in the field for installation check if the vehicle to be inspected does not have relevant module.
- (2) Write “-” marks in all blank fields on the same row that the “-” mark has filled in.

NOTE:

Example of writing <Ref. to LAN(diag)-15, EXAMPLE OF WRITING FOR THE CHECK SHEET OF COMMUNICATION FOR INITIALIZING, COMMUNICATION FOR INITIALIZING IMPOSSIBLE, Subaru Select Monitor.>

2) Subaru Select Monitor communication initialization check

- (1) Write “○” marks in the field for communication initialization if the module succeeded in the communication for initializing with Select Monitor.
If the communication with all modules is not possible, go to 3).
- (2) Write “○” marks in all blank fields on the same row that the “○” mark has filled in.
- (3) When at least one field in a column of wiring location is filled with the “○” mark, then the wiring for that location is normal. Write “○” marks in all blank fields on the same column that the “○” mark has filled in under the circled number.
- (4) Check the open circuit of the modules which have no “○” mark in their columns of the wiring location in ascending order. (only for installed modules)
- (5) If the communication is not possible after checking all harnesses, check the module power supply line.

(6) Replace the module if the power supply line is normal.

NOTE:

- Example of writing <Ref. to LAN(diag)-15, EXAMPLE OF WRITING FOR THE CHECK SHEET OF COMMUNICATION FOR INITIALIZING, COMMUNICATION FOR INITIALIZING IMPOSSIBLE, Subaru Select Monitor.>
- Inspection using the communication for initializing of Subaru Select Monitor cannot be used to diagnose the wiring location marked with “-”. Example of DTC data not received <Ref. to LAN(diag)-95, EXAMPLE OF DTC DATA NOT RECEIVED, LIST, List of Diagnostic Trouble Code (DTC).> should be used to identify the faulty portion.

3) Subaru Select Monitor communication initialization check (impossible to communicate with all modules)

NOTE:

If at least one module becomes possible to communicate, return to 2).

- (1) Check for the short circuit to ground. <Ref. to LAN(diag)-38, GROUND SHORT INSPECTION, INSPECTION, CAN Communication Circuit Check.> If it is normal, go to the next.
- (2) Check for the short circuit to battery. <Ref. to LAN(diag)-41, BATTERY SHORT INSPECTION, INSPECTION, CAN Communication Circuit Check.> If it is normal, go to the next.
- (3) Perform the inspection for the resistance of 52 Ω or less (short between wires). <Ref. to LAN(diag)-47, 52 Ω OR LESS, INSPECTION, CAN Communication Circuit Check.> If it is normal, go to the next.
- (4) Check for the open circuit of network diagram No. 10 (data link connector).

LAN10212

7. Read Diagnostic Trouble Code (DTC)

A: OPERATION

- 1) On «Start» display, select «Diagnosis».
- 2) On «Vehicle selection» display, input the target vehicle information and select «Confirmed».
- 3) On «Main Menu» display, select «All diagnosis code».

NOTE:

- For detailed operation procedures, refer to “Application help”.
- For details concerning DTC, refer to “List of Diagnostic Trouble Code (DTC)”. <Ref. to LAN(diag)-92, List of Diagnostic Trouble Code (DTC).>

Clear Memory Mode

LAN SYSTEM (DIAGNOSTICS)

8. Clear Memory Mode

A: OPERATION

- 1) On «Start» display, select «Diagnosis».
 - 2) On «Vehicle selection» display, input the target vehicle information and select «Confirmed».
 - 3) On «Main Menu» display, select «All diagnosis code».
- On «All diagnosis code» display, select «Clear Memory».

NOTE:

For detailed operation procedures, refer to “Application help”.

9. CAN Communication Circuit Check

A: PROCEDURE

NOTE:

- When measuring the resistance of CAN communication circuit, measure it in sleep status.

To enter sleep status

- With ignition switch OFF and key or switch operation stopped, keep the doors, trunk, and rear gate all closed for one minute or more.
- On models with keyless access function, keep the access key 2 m or more away from the vehicle.
- When the bus line is measured, combined resistance of the end resistance (120 Ω) in ECM and the end resistance (120 Ω) in VDC CM can be measured. The combined resistance is supposed to be approximately 53 — 61 Ω with the stabilizing circuit included. If the measured resistance value becomes 52 Ω or less, main wiring harness or related lines may be shorted. Or, the combined resistance may have changed because of a resistance other than the end resistance created on the circuit. If the measured value is 62 Ω or more, there may be a malfunction such as open circuit in one of the end resistances, in the stabilizing circuit, or in the main wiring harness.

Also, even when the resistance value falls within approx. 53 — 61 Ω , related lines may be open if an error of communication for initializing or a CAN system U-code has occurred. (The resistance cannot be between approx. 53 — 61 Ω if the main wiring harness is open.)

LAN10827

CAN Communication Circuit Check

LAN SYSTEM (DIAGNOSTICS)

Step	Check	Yes	No
1 CHECK BASIC DIAGNOSTIC PROCEDURE. Check that the basic diagnosis has been performed up to STEP 3. NOTE: Possible defective parts can be narrowed easily by inspection using Subaru Select Monitor before performing "CHECK CAN COMMUNICATION CIRCUIT" using a tester.	Was the basic diagnostic procedure performed?	Go to step 2.	Perform the basic diagnostic procedure. <Ref. to LAN(diag)-2, PROCEDURE, Basic Diagnostic Procedure.>
2 CHECK FROM DATA LINK CONNECTOR. Using the tester, measure the resistance between terminals. <i>Connector & terminal</i> <i>(B40) No. 6 — Chassis ground:</i> <i>(B40) No. 14 — Chassis ground:</i>	Is the resistance less than 10 Ω?	Check for ground short. <Ref. to LAN(diag)-38, GROUND SHORT INSPECTION, INSPECTION, CAN Communication Circuit Check.>	Go to step 3.
3 CHECK FROM DATA LINK CONNECTOR. 1) Turn the ignition switch to ON. 2) Using the tester, measure the voltage between terminals. <i>Connector & terminal</i> <i>(B40) No. 6 — Chassis ground:</i> <i>(B40) No. 14 — Chassis ground:</i>	Is the voltage 5 V or less?	Go to step 4.	Check for battery short. <Ref. to LAN(diag)-41, BATTERY SHORT INSPECTION, INSPECTION, CAN Communication Circuit Check.>
4 CHECK FROM DATA LINK CONNECTOR. 1) Turn the ignition switch to OFF. 2) Using the tester, measure the resistance between terminals. <i>Connector & terminal</i> <i>(B40) No. 6 — No. 14:</i>	Is the resistance 52 Ω or less?	Perform the inspection for resistance of 52 Ω or less. <Ref. to LAN(diag)-47, 52 Ω OR LESS, INSPECTION, CAN Communication Circuit Check.>	Go to step 5.
5 CHECK FROM DATA LINK CONNECTOR. Using the tester, measure the resistance between terminals. <i>Connector & terminal</i> <i>(B40) No. 6 — No. 14:</i>	Is the resistance 62 Ω or more?	Perform the inspection for resistance of 62 Ω or more. <Ref. to LAN(diag)-51, 62 Ω OR MORE, INSPECTION, CAN Communication Circuit Check.>	If the display of CAN system U-code disappears from the current malfunction, the CAN network is currently normal. If the U-code has detected as current malfunction, related lines may be open. Perform the inspection for the related line corresponding to the detected DTC. <Ref. to LAN(diag)-37, LIST, CAN Communication Circuit Check.>

CAN Communication Circuit Check

LAN SYSTEM (DIAGNOSTICS)

B: LIST

Resistance value between CAN Hi and Lo	Contents of inspection	Remarks
Ground short inspection	<Ref. to LAN(diag)-38, GROUND SHORT INSPECTION, INSPECTION, CAN Communication Circuit Check.>	Shorted to ground in the communication circuit or control module.
Battery short inspection	<Ref. to LAN(diag)-41, BATTERY SHORT INSPECTION, INSPECTION, CAN Communication Circuit Check.>	Shorted to battery power supply in the communication circuit or control module.
53 — 61 Ω	<Ref. to LAN(diag)-44, 53 — 61 Ω, INSPECTION, CAN Communication Circuit Check.>	Combined resistance of end resistance does not have malfunction; short to ground or +B short of the CAN communication circuit is possible, however.
52 Ω or less	<Ref. to LAN(diag)-47, 52 Ω OR LESS, INSPECTION, CAN Communication Circuit Check.>	Resistance is lower than combined resistance of end resistance. Short to CAN Hi and CAN Lo on the CAN communication circuit is possible.
62 Ω or more	<Ref. to LAN(diag)-51, 62 Ω OR MORE, INSPECTION, CAN Communication Circuit Check.>	Resistance is higher than combined resistance of end resistance. Open circuit of CAN communication circuit is possible.
Related lines 53 — 61 Ω (TCM)	<Ref. to LAN(diag)-54, RELATED LINES 53 — 61 Ω (TCM), INSPECTION, CAN Communication Circuit Check.>	No TCM data is received. Perform inspection when faulty is detected.
Related lines 53 — 61 Ω (steering angle sensor)	<Ref. to LAN(diag)-57, RELATED LINES 53 — 61 Ω (STEERING ANGLE SENSOR), INSPECTION, CAN Communication Circuit Check.>	No steering angle sensor data is received. Perform inspection when faulty is detected.
Related lines 53 — 61 Ω (A/C control panel)	<Ref. to LAN(diag)-60, RELATED LINES 53 — 61 Ω (A/C CONTROL PANEL), INSPECTION, CAN Communication Circuit Check.>	No A/C data is received. Perform inspection when faulty is detected.
Related lines 53 — 61 Ω (power steering)	<Ref. to LAN(diag)-63, RELATED LINES 53 — 61 Ω (POWER STEERING), INSPECTION, CAN Communication Circuit Check.>	No power steering data is received. Perform inspection when faulty is detected.
Related lines 53 — 61 Ω (combination meter)	<Ref. to LAN(diag)-66, RELATED LINES 53 — 61 Ω (COMBINATION METER), INSPECTION, CAN Communication Circuit Check.>	No meter data is received. Perform inspection when faulty is detected.
Related lines 53 — 61 Ω (MFD)	<Ref. to LAN(diag)-69, RELATED LINES 53 — 61 Ω (MFD), INSPECTION, CAN Communication Circuit Check.>	No MFD data is received. Perform inspection when faulty is detected.
Related lines 53 — 61 Ω (airbags)	<Ref. to LAN(diag)-72, RELATED LINES 53 — 61 Ω (AIRBAG CM SYSTEM), INSPECTION, CAN Communication Circuit Check.>	No airbag data is received. Perform inspection when faulty is detected.
Related lines 53 — 61 Ω (headlight beam leveler)	<Ref. to LAN(diag)-81, RELATED LINES 53 — 61 Ω (HEADLIGHT BEAM LEVELER), INSPECTION, CAN Communication Circuit Check.>	No headlight beam leveler data is received. Perform inspection when faulty is detected.
Related lines 53 — 61 Ω (remote engine starter)	<Ref. to LAN(diag)-84, RELATED LINES 53 — 61 Ω (REMOTE ENGINE STARTER), INSPECTION, CAN Communication Circuit Check.>	Perform inspection when the remote engine starter does not operate, while the mobile key side operates normally.
Related lines 53 — 61 Ω (keyless access system)	<Ref. to LAN(diag)-75, RELATED LINES 53 — 61 Ω (KEYLESS ACCESS SYSTEM), INSPECTION, CAN Communication Circuit Check.>	No keyless access CM data is received. Perform inspection when faulty is detected.
Related lines 53 — 61 Ω (stereo camera)	<Ref. to LAN(diag)-78, RELATED LINES 53 — 61 Ω (STEREO CAMERA), INSPECTION, CAN Communication Circuit Check.>	No stereo camera data is received. Perform inspection when faulty is detected.
Related lines 53 — 61 Ω (telematics)	<Ref. to LAN(diag)-87, RELATED LINES 53 — 61 Ω (TELEMATICS), INSPECTION, CAN Communication Circuit Check.>	No telematics data is received. Perform inspection when faulty is detected.
Related lines 53 — 61 Ω (radar sensor)	<Ref. to LAN(diag)-90, RELATED LINES 53 — 61 Ω (RADAR SENSOR), INSPECTION, CAN Communication Circuit Check.>	No radar sensor data is received. Perform inspection when faulty is detected.

: TERMINAL RESISTANCE	: CAN Hi (BRANCH LINE)	: HIGH GRADE MFD	: WITH TELEMATICS
	: CAN Lo (BRANCH LINE)		

LAN10828

NOTE:

Main wiring harness or related lines may be shorted to ground, or shorted to ground in one of the control modules.

CAN Communication Circuit Check

LAN SYSTEM (DIAGNOSTICS)

Step	Check	Yes	No
1 CHECK BETWEEN RELATED LINES AND MAIN WIRING HARNESS. Using the tester, measure the resistance between terminals. <i>Connector & terminal</i> <i>(B40) No. 6 — Chassis ground:</i> <i>(B40) No. 14 — Chassis ground:</i>	Is the resistance less than 10 Ω ?	Go to step 2.	Currently, it is normal.
2 CHECK CONTROL MODULE. With the tester connected, disconnect control module. NOTE: Disconnect the body integrated unit at the end. <i>Connector & terminal</i> <i>(B40) No. 6 — Chassis ground:</i> <i>(B40) No. 14 — Chassis ground:</i>	Did the resistance change to 10 Ω or more?	Replace the control module whose resistance has changed. When the value changed at disconnecting the body integrated unit, Go to step 3.	Repair or replace the short circuit of the main wiring harness and related lines between body integrated unit and VDC CM.
3 CHECK BETWEEN MAIN WIRING HARNESSSES. Using the tester, measure the resistance between terminals. <i>Connector & terminal</i> <i>(i84) No. 27 — Chassis ground:</i> <i>(i84) No. 35 — Chassis ground:</i>	Is the resistance less than 10 Ω ?	Repair or replace the short circuit of the main wiring harness and related lines between ECM and body integrated unit.	Replace the body integrated unit. <Ref. to SL-72, Body Integrated Unit.>

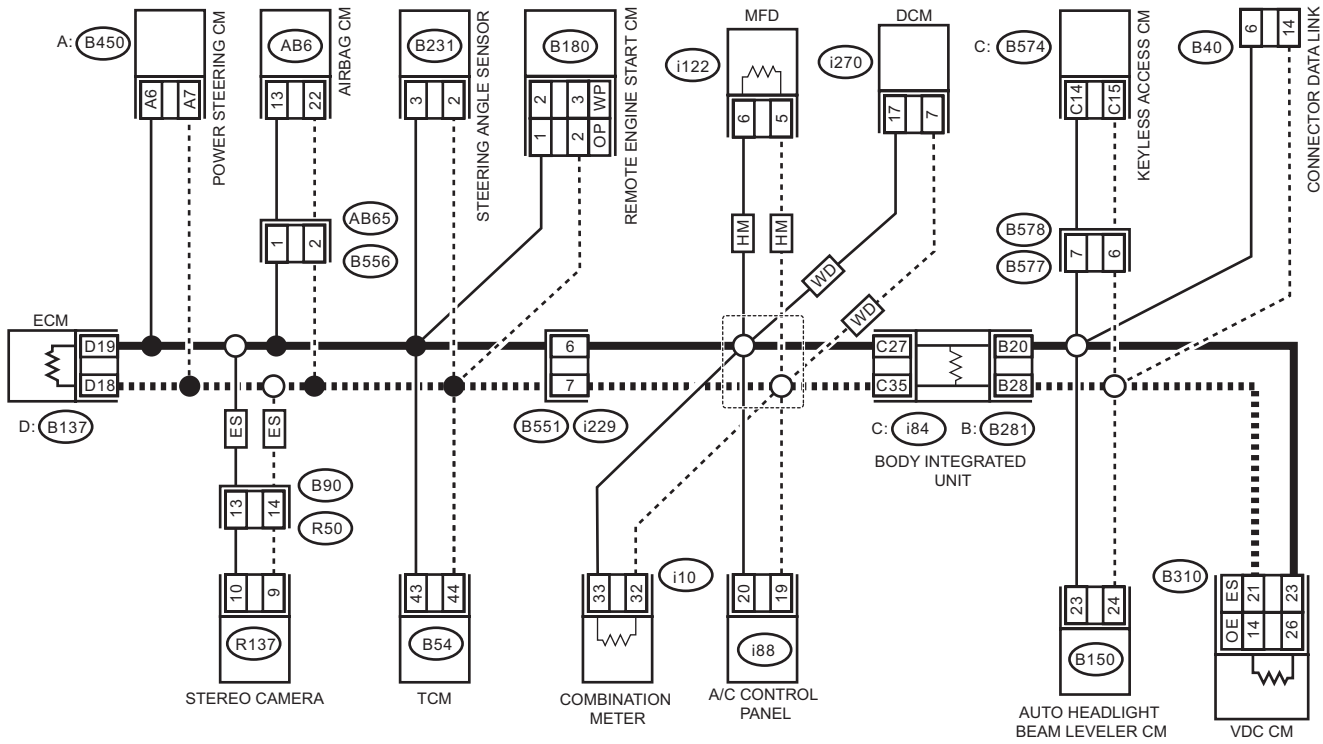

CAN Communication Circuit Check

: STABILIZING CIRCUIT	: CAN Lo (MAIN LINE)	: WITH EyeSight	: WITH PUSH BUTTON START
: TERMINAL RESISTANCE	: CAN Hi (BRANCH LINE)	: HIGH GRADE MFD	: WITH TELEMATICS
	: CAN Lo (BRANCH LINE)		

LAN10828

NOTE:
Main wiring harness or related lines may be shorted to battery circuit, or shorted to battery circuit in one of the control modules.

CAN Communication Circuit Check

LAN SYSTEM (DIAGNOSTICS)

Step	Check	Yes	No
1 CHECK BETWEEN RELATED LINES AND MAIN WIRING HARNESS. 1) Turn the ignition switch to ON. 2) Using the tester, measure the voltage between terminals. <i>Connector & terminal</i> <i>(B40) No. 6 — Chassis ground:</i> <i>(B40) No. 14 — Chassis ground:</i>	Is the voltage 5 V or less?	Currently, it is normal.	Go to step 2.
2 CHECK CONTROL MODULE. With the tester connected, disconnect control module. NOTE: Disconnect the body integrated unit at the end. <i>Connector & terminal</i> <i>(B40) No. 6 — Chassis ground:</i> <i>(B40) No. 14 — Chassis ground:</i>	Did the voltage change to 5 V or less?	Replace the control module whose voltage has changed. When the value changed at disconnecting the body integrated unit, Go to step 3.	Repair or replace the short circuit of the harness between body integrated unit and VDC CM.
3 CHECK BETWEEN MAIN WIRING HARNESSES. Using the tester, measure the voltage between terminals. <i>Connector & terminal</i> <i>(i84) No. 27 — Chassis ground:</i> <i>(i84) No. 35 — Chassis ground:</i>	Is the voltage 5 V or less?	Replace the body integrated unit. <Ref. to SL-72, Body Integrated Unit.>	Repair or replace the short circuit of the harness between ECM and body integrated unit.

CAN Communication Circuit Check

LAN SYSTEM (DIAGNOSTICS)

3. 53 — 61 Ω

Wiring diagram:

CAN communication system <Ref. to WI-68, WIRING DIAGRAM, CAN Communication System.>

- Without BSD/RCTA

LAN10827

CAN Communication Circuit Check

LAN SYSTEM (DIAGNOSTICS)

- With BSD/RCTA

: J/C	: CAN Hi (MAIN LINE)	: WITHOUT EyeSight	: WITHOUT PUSH BUTTON START
: STABILIZING CIRCUIT	: CAN Lo (MAIN LINE)	: WITH EyeSight	: WITH PUSH BUTTON START
: TERMINAL RESISTANCE	: CAN Lo (BRANCH LINE)	: HIGH GRADE MFD	: WITH TELEMATICS

LAN10828

NOTE:
 When the measured resistance value is 53 — 61 Ω, main wiring harness or related lines may be shorted to ground, or shorted to power supply line, or related line may be open.

CAN Communication Circuit Check

LAN SYSTEM (DIAGNOSTICS)

Step	Check	Yes	No
1 CHECK BETWEEN RELATED LINES AND MAIN WIRING HARNESS. Using the tester, measure the resistance between terminals. <i>Connector & terminal</i> <i>(B40) No. 6 — Chassis ground:</i> <i>(B40) No. 14 — Chassis ground:</i>	Is the resistance less than 10 Ω?	Go to step 2.	Go to step 4.
2 CHECK CONTROL MODULE. With the tester connected, disconnect control module. NOTE: Disconnect the body integrated unit at the end. <i>Connector & terminal</i> <i>(B40) No. 6 — Chassis ground:</i> <i>(B40) No. 14 — Chassis ground:</i>	Did the resistance change to 10 Ω or more?	Replace the control module whose resistance has changed. When the value changed at disconnecting the body integrated unit, Go to step 3.	Repair or replace the short circuit of the harness between body integrated unit and VDC CM.
3 CHECK MAIN WIRING HARNESS AND RELATED LINES. Using the tester, measure the resistance between terminals. <i>Connector & terminal</i> <i>(i84) No. 27 — Chassis ground:</i> <i>(i84) No. 35 — Chassis ground:</i>	Is the resistance less than 10 Ω?	Repair or replace the short circuit of the harness between ECM and body integrated unit.	Replace the body integrated unit. <Ref. to SL-72, Body Integrated Unit.>
4 CHECK BETWEEN RELATED LINES AND MAIN WIRING HARNESS. 1) Turn the ignition switch to ON. 2) Using the tester, measure the voltage between terminals. <i>Connector & terminal</i> <i>(B40) No. 6 — Chassis ground:</i> <i>(B40) No. 14 — Chassis ground:</i>	Is the voltage 5 V or less?	CAN communication circuit is normal.	Go to step 5.
5 CHECK CONTROL MODULE. With the tester connected, disconnect control module. NOTE: Disconnect the body integrated unit at the end. <i>Connector & terminal</i> <i>(B40) No. 6 — Chassis ground:</i> <i>(B40) No. 14 — Chassis ground:</i>	Did the voltage change to 5 V or less?	Replace the control module whose voltage has changed. When the value changed at disconnecting the body integrated unit, Go to step 6.	Repair or replace the short circuit of the harness between body integrated unit and VDC CM.
6 CHECK HARNESS. Using a tester, measure the voltage between terminals and chassis ground. <i>Connector & terminal</i> <i>(i84) No. 27 — Chassis ground:</i> <i>(i84) No. 35 — Chassis ground:</i>	Is the voltage 5 V or less?	Replace the body integrated unit. <Ref. to SL-72, Body Integrated Unit.>	Repair or replace the short circuit of the harness between ECM and body integrated unit.

CAN Communication Circuit Check

4. 52 Ω OR LESS

CAN Communication Circuit Check

LAN SYSTEM (DIAGNOSTICS)

- With BSD/RCTA

: J/C	: CAN Hi (MAIN LINE)	: WITHOUT EyeSight	: WITHOUT PUSH BUTTON START
: STABILIZING CIRCUIT	: CAN Lo (MAIN LINE)	: WITH EyeSight	: WITH PUSH BUTTON START
: TERMINAL RESISTANCE	: CAN Hi (BRANCH LINE)	: HIGH GRADE MFD	: WITH TELEMATICS
	: CAN Lo (BRANCH LINE)		

LAN10828

NOTE:
 When the bus line is measured, combined resistance of end resistance (120 Ω) in ECM and end resistance (120 Ω) in VDC CM can be measured. The combined resistance is approximately 53 — 61 Ω with the stabilizing circuit included. When the measured resistance value is 52 Ω or less, main wiring harness or related lines may be shorted, or combined resistance may have changed because resistance other than end resistance is created on the circuit.

CAN Communication Circuit Check

LAN SYSTEM (DIAGNOSTICS)

Step	Check	Yes	No
1 CHECK BETWEEN RELATED LINES AND MAIN WIRING HARNESS. Using the tester, measure the resistance between terminals. <i>Connector & terminal (B40) No. 6 — No. 14:</i>	Is the resistance less than 10 Ω ?	Go to step 2.	Go to step 4.
2 CHECK MAIN WIRING HARNESS AND RELATED LINES. With a tester connected, disconnect control module connectors in order. NOTE: Disconnect the body integrated unit at the end. <i>Connector & terminal (B40) No. 6 — No. 14:</i>	Is there any control module whose condition has changed from short state?	Replace the control module whose resistance has changed. When the value changed at disconnecting the body integrated unit, Go to step 3.	Repair or replace the short circuit of the harness between body integrated unit and VDC CM.
3 CHECK BETWEEN MAIN WIRING HARNESSES. Using the tester, measure the resistance between terminals. <i>Connector & terminal (i84) No. 27 — No. 35:</i>	Is the resistance less than 10 Ω ?	Repair or replace the short circuit of the harness between ECM and body integrated unit.	Replace the body integrated unit. <Ref. to SL-72, Body Integrated Unit.>
4 CHECK CONTROL MODULE. 1) Disconnect ECM and VDC CM connectors. 2) Using a tester, measure the resistance between control module terminals. <i>Connector & terminal (B137) No. 18 — No. 19: (B310) No. 14 — No. 26 (without Eye-Sight): (B310) No. 21 — No. 23 (with EyeSight):</i>	Is the resistance 114 — 126 Ω ?	Go to step 5.	Replace the control module whose end resistance value is out of the specified range.
5 CHECK CONTROL MODULE. 1) Disconnect the connector of body integrated unit. 2) Using a tester, measure the resistance between control module terminals. <i>Connector & terminal (B281) No. 28 — (i84) No. 27: (B281) No. 20 — (i84) No. 35:</i>	Is the resistance 2850 — 3150 Ω ?	Go to step 6.	Replace the body integrated unit. <Ref. to SL-72, Body Integrated Unit.>
6 CHECK CONTROL MODULE. Using a tester, measure the resistance between control module terminals. <i>Connector & terminal (B281) No. 28 — (i84) No. 35: (B281) No. 20 — (i84) No. 27:</i>	Is the resistance less than 1 Ω ?	Go to step 7.	Replace the body integrated unit. <Ref. to SL-72, Body Integrated Unit.>
7 CHECK CONTROL MODULE. 1) Disconnect the combination meter connector. 2) Using a tester, measure the resistance between control module terminals. <i>Connector & terminal (i10) No. 32 — No. 33:</i>	Is the resistance 2850 — 3150 Ω ?	Go to step 8.	Replace the combination meter. <Ref. to IDI-18, Combination Meter.>
8 CHECK CONTROL MODULE (ONLY FOR MODELS WITH HIGH GRADE MFD). 1) Disconnect the MFD connector. 2) Using a tester, measure the resistance between control module terminals. <i>Connector & terminal (i122) No. 5 — No. 6:</i>	Is the resistance 2850 — 3150 Ω ?	Go to step 9.	Replace the MFD. <Ref. to IDI-25, Multi-function Display (MFD).>

CAN Communication Circuit Check

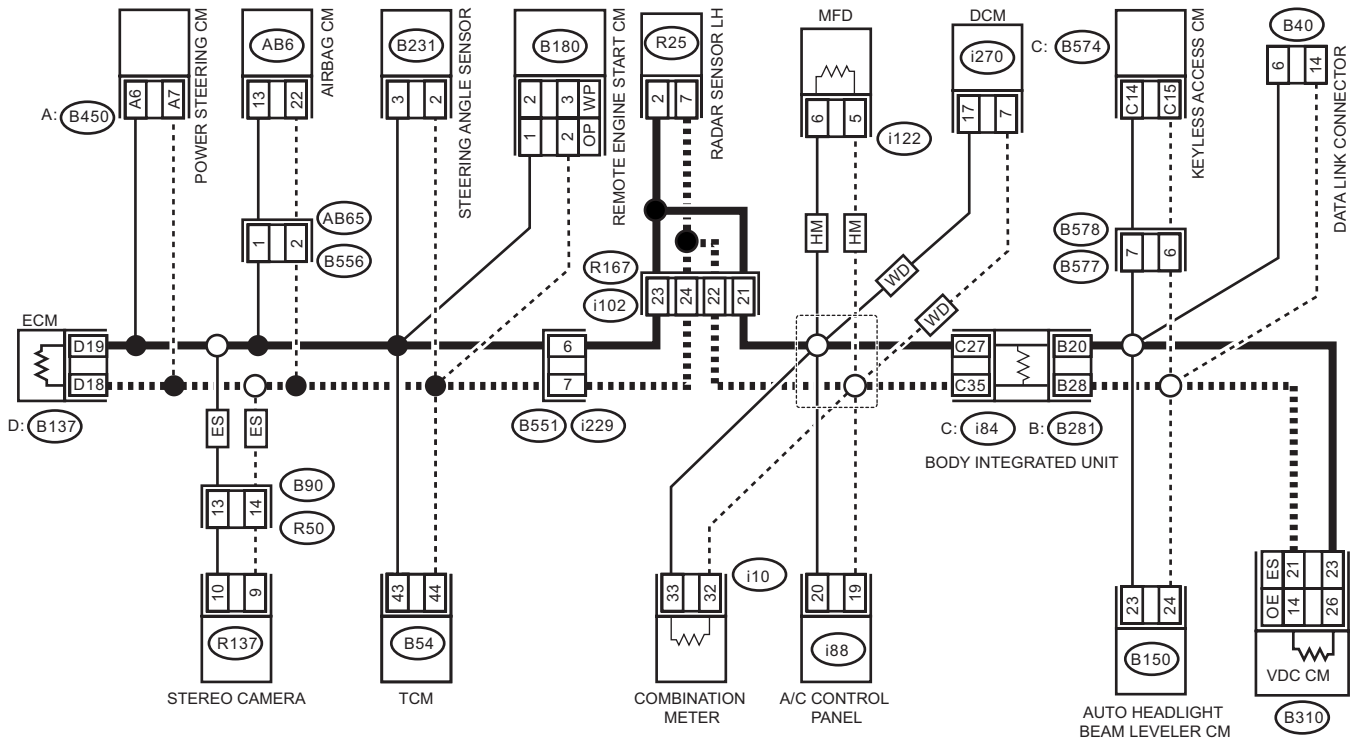

LAN SYSTEM (DIAGNOSTICS)

Step	Check	Yes	No
9 CHECK HARNESS. Using the tester, check the short circuit of each harness. <i>Connector & terminal</i> <i>(B281) No. 28 — No. 20:</i>	Is the resistance 1 M Ω or more?	Go to step 11.	Go to step 10.
10 CHECK CONTROL MODULE. With a tester connected, disconnect control modules in order. <i>Connector & terminal</i> <i>(B281) No. 28 — No. 20:</i>	Are there any control modules whose resistance changed to 1 M Ω or more?	Replace the control module that has changed.	Repair or replace the harness part which has resistance component.
11 CHECK CONTROL MODULE. With a tester connected, disconnect control modules in order. <i>Connector & terminal</i> <i>(i84) No. 27 — No. 35:</i>	Is there any control module whose resistance has changed to 1 M Ω or more?	Replace the control module that has changed.	Repair or replace the harness part which has resistance component.

CAN Communication Circuit Check

LAN SYSTEM (DIAGNOSTICS)

- With BSD/RCTA

: J/C	: CAN Hi (MAIN LINE)	: WITHOUT EyeSight	: WITHOUT PUSH BUTTON START
: STABILIZING CIRCUIT	: CAN Lo (MAIN LINE)	: WITH EyeSight	: WITH PUSH BUTTON START
: TERMINAL RESISTANCE	: CAN Hi (BRANCH LINE)	: HIGH GRADE MFD	: WITH TELEMATICS
	: CAN Lo (BRANCH LINE)		

NOTE:
 When CAN communication circuit is measured, combined resistance of end resistance (120 Ω) in ECM and end resistance (120 Ω) in VDC CM can be measured. The combined resistance is approximately 53 — 61 Ω with the stabilizing circuit included. When the measured resistance value is 62 Ω or more, either one of the end resistances, or stabilizing circuit, or main wiring harness may have malfunction such as open circuit.

CAN Communication Circuit Check

LAN SYSTEM (DIAGNOSTICS)

Step	Check	Yes	No
<p>1</p> <p>CHECK CONTROL MODULE. 1) Disconnect ECM and VDC CM connectors. 2) Using a tester, measure the resistance between control module terminals. Connector & terminal (B137) No. 18 — No. 19: (B310) No. 14 — No. 26 (without EyeSight): (B310) No. 21 — No. 23 (with EyeSight):</p>	Is the resistance 114 — 126 Ω?	Go to step 2.	Replace the control module whose value is out of the specification.
<p>2</p> <p>CHECK CONTROL MODULE. 1) Disconnect the connector of body control module. 2) Using a tester, measure the resistance between control module terminals. Connector & terminal (B281) No. 28 — (i84) No. 27: (B281) No. 20 — (i84) No. 35:</p>	Is the resistance 2850 — 3150 Ω?	Go to step 3.	Replace the body integrated unit. <Ref. to SL-72, Body Integrated Unit.>
<p>3</p> <p>CHECK CONTROL MODULE. Using the tester, measure the resistance between terminals. Connector & terminal (B281) No. 28 — (i84) No. 35: (B281) No. 20 — (i84) No. 27:</p>	Is the resistance less than 1 Ω?	Go to step 4.	Replace the body integrated unit. <Ref. to SL-72, Body Integrated Unit.>
<p>4</p> <p>CHECK CONTROL MODULE. 1) Disconnect the combination meter connector. 2) Using a tester, measure the resistance between control module terminals. Connector & terminal (i10) No. 32 — No. 33:</p>	Is the resistance 2850 — 3150 Ω?	Go to step 5.	Replace the combination meter. <Ref. to IDI-18, REMOVAL, Combination Meter.>
<p>5</p> <p>CHECK CONTROL MODULE (ONLY FOR MODELS WITH HIGH GRADE MFD). 1) Disconnect the MFD connector. 2) Using a tester, measure the resistance between control module terminals. Connector & terminal (i122) No. 5 — No. 6:</p>	Is the resistance 2850 — 3150 Ω?	Go to step 6.	Replace the MFD. <Ref. to IDI-25, REMOVAL, Multi-function Display (MFD).>
<p>6</p> <p>CHECK HARNESS. Using a tester, check continuity between terminals. Connector & terminal (B40) No. 6 — (B310) No. 26 (without EyeSight): (B40) No. 14 — (B310) No. 14 (without EyeSight): (B40) No. 6 — (B310) No. 23 (with EyeSight): (B40) No. 14 — (B310) No. 21 (with EyeSight): (B40) No. 6 — (B281) No. 20: (B40) No. 14 — (B281) No. 28:</p>	Is there continuity?	Go to step 7.	Repair or replace the open circuit of harness.
<p>7</p> <p>CHECK HARNESS. 1) Disconnect the ECM connector. 2) Using a tester, check continuity between terminals. Connector & terminal (i84) No. 27 — (B137) No. 19: (i84) No. 35 — (B137) No. 18:</p>	Is there continuity?	It is possible that temporary poor communication occurs.	Repair or replace the open circuit of harness.

1) Module installation check

- (1) Write “-” marks in the field for installation check if the vehicle to be inspected does not have relevant module.
- (2) Write “-” marks in all blank fields on the same row that the “-” mark has filled in.

2) Bus off detection / data not received

NOTE:

It becomes impossible for CAN diagnostic module to read DTC, if there is a current malfunction of open harness (data not received). If this occurs, perform the “Check using the check sheet of communication for initializing” <Ref. to LAN(diag)-13, CHECK USING THE CHECK SHEET OF COMMUNICATION FOR INITIALIZING, COMMUNICATION FOR INITIALIZING IMPOSSIBLE, Subaru Select Monitor.>, and use this sheet to confirm that the corresponding part becomes the past malfunction.

- (1) Mark “X” in the field corresponding to the DTCs that has been detected by each module in the check sheet.
- (2) Identify and repair the faulty part by referring to the example of DTC data not received. <Ref. to LAN(diag)-95, EXAMPLE OF DTC DATA NOT RECEIVED, LIST, List of Diagnostic Trouble Code (DTC).>

List of Diagnostic Trouble Code (DTC)

LAN SYSTEM (DIAGNOSTICS)

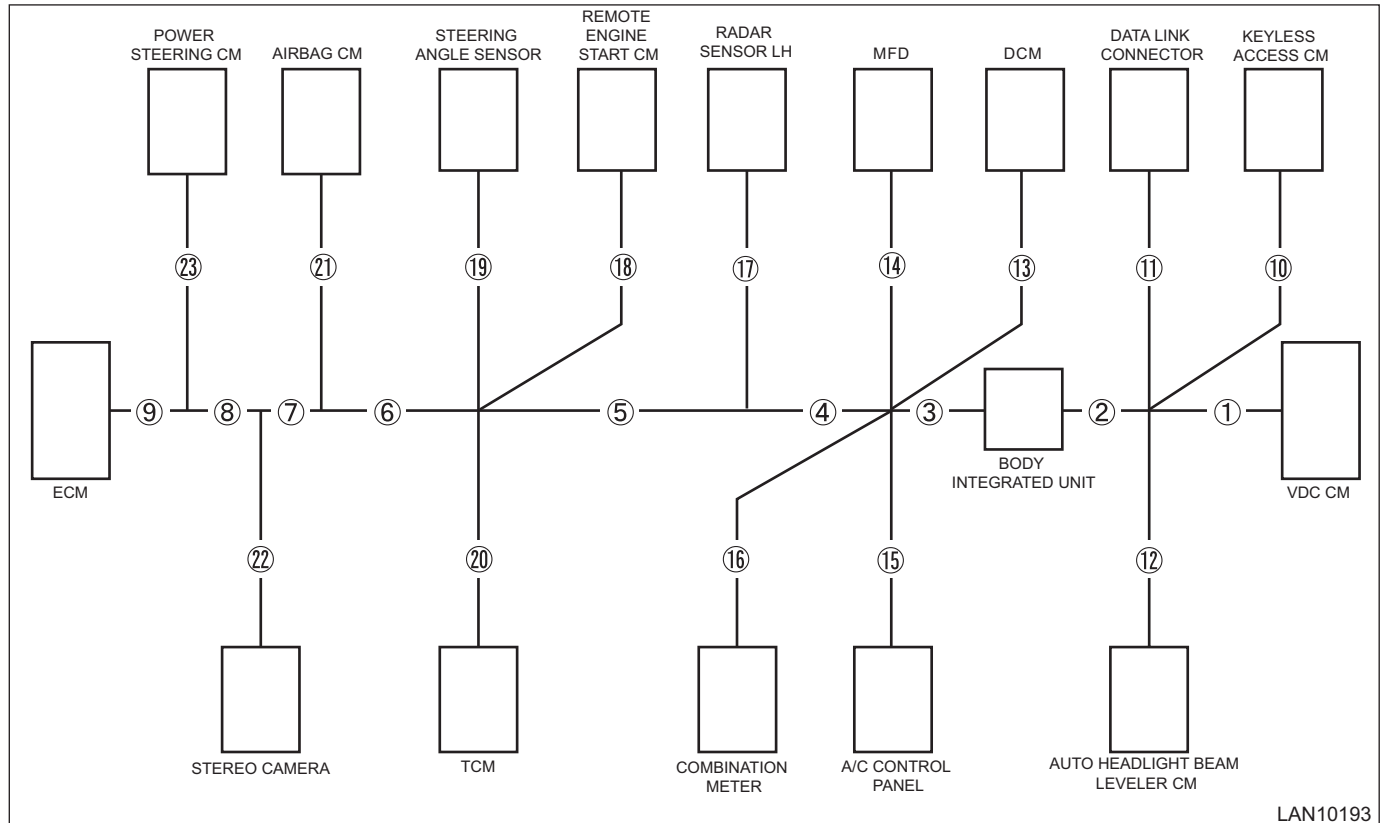

3) Data abnormal detection

NOTE:

If any "BUS OFF" or "NO-RECEIVE DATA" condition is detected, perform the diagnosis for these problems first.

- (1) If several modules detect the DTC for the same module, replace the detected module.
- (2) If one module detects the DTC, replace the module of the detected side.
- (3) If it does not return to the normal operation, re-install the module which has been replaced, and replace the module of the detected side.
- (4) If it does not return to the normal operation, replace both modules.

Diagnostic Procedure with Diagnostic Trouble Code (DTC)

LAN SYSTEM (DIAGNOSTICS)

11. Diagnostic Procedure with Diagnostic Trouble Code (DTC)

A: DTC U1201 CAN-HS COUNTER ABNORMAL

DTC DETECTING CONDITION:

Communication is unstable because of high speed CAN communication error.

TROUBLE SYMPTOM:

- Display of combination meter indicates faulty.
- Control faulty may occur due to CAN communication error.

Step	Check	Yes	No
1 CHECK PERFORMING OF BASIC DIAGNOSTIC PROCEDURE.	Was the basic diagnostic procedure performed up to STEP 3?	Go to step 2.	Perform the basic diagnostic procedure. <Ref. to LAN(diag)-2, Basic Diagnostic Procedure.>
2 CHECK DTC. 1) Start the engine. 2) Using the Subaru Select Monitor, read DTC of CAN system. <Ref. to LAN(diag)-31, Read Diagnostic Trouble Code (DTC).>	Is U0073 a current malfunction?	Perform the diagnosis of U0073. <Ref. to LAN(diag)-99, DTC U0073 CONTROL MODULE COMMUNICATION BUS OFF, Diagnostic Procedure with Diagnostic Trouble Code (DTC).>	Go to step 3.
3 CHECK DTC. Check the displayed DTC.	Is U1201 a current malfunction?	Go to step 4.	It is possible that temporary poor communication occurs. Perform the clear memory. <Ref. to LAN(diag)-32, Clear Memory Mode.>
4 CHECK DTC. 1) Turn the ignition switch to ON. 2) Using the Subaru Select Monitor, read DTC of CAN system. <Ref. to LAN(diag)-31, Read Diagnostic Trouble Code (DTC).>	Is U1201 a current malfunction?	Go to step 5.	It is possible that temporary poor communication occurs. Perform the clear memory. <Ref. to LAN(diag)-32, Clear Memory Mode.>
5 CHECK CONTROL MODULE. 1) Turn the ignition switch to OFF. 2) Disconnect the control modules other than body integrated unit in order. NOTE: When disconnecting ECM or VDC CM, connect resistance of 120 Ω between CAN Hi and CAN Lo as an alternative of end resistance. 3) Turn the ignition switch to ON. 4) Using the Subaru Select Monitor, read DTC of CAN system. <Ref. to LAN(diag)-31, Read Diagnostic Trouble Code (DTC).>	Is there any control module that U1201 is not detected as current malfunction?	Replace the control module.	Repeat 1) to 4) in step 5 until U1201 is not detected.

Diagnostic Procedure with Diagnostic Trouble Code (DTC)

LAN SYSTEM (DIAGNOSTICS)

B: DTC U0073 CONTROL MODULE COMMUNICATION BUS OFF

DTC DETECTING CONDITION:

Integrated unit communication is shut down because of high speed CAN error.

TROUBLE SYMPTOM:

CAN communication is not normal.

Step	Check	Yes	No
1	CHECK PERFORMING OF BASIC DIAGNOSTIC PROCEDURE.	Go to step 2.	Perform the basic diagnostic procedure. <Ref. to LAN(diag)-2, Basic Diagnostic Procedure.>
2	CHECK DTC. 1) Start the engine. 2) Using the Subaru Select Monitor, read DTC of CAN system. <Ref. to LAN(diag)-31, Read Diagnostic Trouble Code (DTC).>	Go to step 3.	It may be a temporary poor contact. Perform the clear memory. <Ref. to LAN(diag)-32, Clear Memory Mode.>
3	CHECK CAN COMMUNICATION CIRCUIT. Check CAN communication circuit. <Ref. to LAN(diag)-33, PROCEDURE, CAN Communication Circuit Check.>	Repair the faulty portion, following the diagnosis procedure.	Go to step 4.
4	CHECK DTC. 1) Perform the inspection using the DTC check sheet. <Ref. to LAN(diag)-94, CHECK USING THE DTC CHECK SHEET, LIST, List of Diagnostic Trouble Code (DTC).> 2) Using the Subaru Select Monitor, read DTC of CAN system. <Ref. to LAN(diag)-31, Read Diagnostic Trouble Code (DTC).>	Go to step 5.	System is normal.
5	CHECK CONTROL MODULE. 1) Turn the ignition switch to OFF. 2) Disconnect the control modules other than body integrated unit in order. NOTE: When disconnecting ECM or VDC CM, connect resistance of 120 Ω between CAN Hi and CAN Lo as an alternative of end resistance. 3) Turn the ignition switch to ON. 4) Using the Subaru Select Monitor, read DTC of CAN system. <Ref. to LAN(diag)-31, Read Diagnostic Trouble Code (DTC).>	Replace the control module.	Repeat 1) to 4) in step 3 until U0073 is not detected.

Diagnostic Procedure with Diagnostic Trouble Code (DTC)

LAN SYSTEM (DIAGNOSTICS)

C: DTC U0401 INVALID DATA RECEIVED FROM ECM/PCM "A"

DTC DETECTING CONDITION:

Defective data from ECM.

TROUBLE SYMPTOM:

Defective data on CAN communication occurs.

Step	Check	Yes	No
1	CHECK PERFORMING OF BASIC DIAGNOSTIC PROCEDURE.	Go to step 2.	Perform the basic diagnostic procedure. <Ref. to LAN(diag)-2, Basic Diagnostic Procedure.>
2	CHECK DTC. Check the displayed DTC.	Are DTCs other than U*** displayed?	Perform the diagnosis according to DTC.
3	CHECK DTC. Check the displayed DTC.	Is DTC for the bus off or the data no-receive displayed?	Go to step 3.
4	CHECK DTC. Check the displayed DTC.	Is U0401 a current malfunction?	Perform the diagnosis according to DTC.
5	CHECK DTC. 1) Turn the ignition switch to OFF. 2) Disconnect the ECM connector. 3) Connect the disconnected connectors. 4) Read the DTC using Subaru Select Monitor. <Ref. to LAN(diag)-31, Read Diagnostic Trouble Code (DTC).>	Go to step 5.	Go to step 9.
6	CHECK DTC. Using the Subaru Select Monitor, read DTC of all the systems. <Ref. to LAN(diag)-31, Read Diagnostic Trouble Code (DTC).>	Is U0401 a current malfunction?	Go to step 6.
7	CHECK DTC. Using the Subaru Select Monitor, read DTC of all the systems. <Ref. to LAN(diag)-31, Read Diagnostic Trouble Code (DTC).>	Is the engine data abnormal detected in several modules?	Go to step 9.
8	REPLACE MODULE. 1) Replace the ECM. 2) Read the DTC using Subaru Select Monitor. <Ref. to LAN(diag)-31, Read Diagnostic Trouble Code (DTC).>	Is U0401 a current malfunction?	Replace the ECM. <Ref. to FU(H4DO)-98, Engine Control Module (ECM).>
9	CHECK MODULE. 1) Reinstall the ECM. 2) Replace the module that the DTC has been detected. 3) Read the DTC using Subaru Select Monitor. <Ref. to LAN(diag)-31, Read Diagnostic Trouble Code (DTC).>	Is U0401 a current malfunction?	Go to step 8.
10	CHECK HARNESS. 1) Shake the harness, and check for poor contact. 2) Using the Subaru Select Monitor, read DTC of CAN system. <Ref. to LAN(diag)-31, Read Diagnostic Trouble Code (DTC).>	Is U0401 a current malfunction?	Replace the ECM. <Ref. to FU(H4DO)-98, Engine Control Module (ECM).>
11	CHECK CONNECTOR. Check the connector used for high speed CAN for poor contact.	Is there poor contact of connector?	Repair the poor contact of harness, or replace the harness.
		Repair the connector that has poor contact, or replace harness.	Go to step 10.
			It is possible that temporary poor communication occurs. Delete the DTC.

Diagnostic Procedure with Diagnostic Trouble Code (DTC)

LAN SYSTEM (DIAGNOSTICS)

D: DTC U0402 INVALID DATA RECEIVED FROM TCM

DTC detecting condition:

Received error data from TCM.

Trouble symptom:

Sport indicator light blinks.

Step	Check	Yes	No
1	CHECK PERFORMING OF BASIC DIAGNOSTIC PROCEDURE.	Go to step 2.	Perform the basic diagnostic procedure. <Ref. to LAN(diag)-2, Basic Diagnostic Procedure.>
2	CHECK DTC. Check the displayed DTC.	Are DTCs other than U*** displayed?	Perform the diagnosis according to DTC.
3	CHECK DTC. Check the displayed DTC.	Is DTC for the bus off or the data no-receive displayed?	Go to step 3.
4	CHECK DTC. Check the displayed DTC.	Is U0402 a current malfunction?	Perform the diagnosis according to DTC.
5	CHECK DTC. 1) Turn the ignition switch to OFF. 2) Disconnect the TCM connector. 3) Connect the disconnected connectors. 4) Read the DTC using Subaru Select Monitor. <Ref. to LAN(diag)-31, Read Diagnostic Trouble Code (DTC).>	Go to step 5.	Go to step 9.
6	CHECK DTC. Using the Subaru Select Monitor, read DTC of all the systems. <Ref. to LAN(diag)-31, Read Diagnostic Trouble Code (DTC).>	Is U0402 a current malfunction?	Go to step 6.
7	CHECK DTC. Using the Subaru Select Monitor, read DTC of all the systems. <Ref. to LAN(diag)-31, Read Diagnostic Trouble Code (DTC).>	Is the transmission data abnormal detected in several modules?	Go to step 7.
8	REPLACE MODULE. 1) Replace the TCM. 2) Read the DTC using Subaru Select Monitor. <Ref. to LAN(diag)-31, Read Diagnostic Trouble Code (DTC).>	Is U0402 a current malfunction?	Replace the TCM. <Ref. to CVT(TR580)-148, Transmission Control Module (TCM).>
9	CHECK DTC. Using the Subaru Select Monitor, read DTC of all the systems. <Ref. to LAN(diag)-31, Read Diagnostic Trouble Code (DTC).>	Is U0402 a current malfunction?	Go to step 8.
10	REPLACE MODULE. 1) Replace the TCM. 2) Read the DTC using Subaru Select Monitor. <Ref. to LAN(diag)-31, Read Diagnostic Trouble Code (DTC).>	Is U0402 a current malfunction?	System is normal.
11	CHECK MODULE. 1) Reinstall the TCM. 2) Replace the module that the DTC has been detected. 3) Read the DTC using Subaru Select Monitor. <Ref. to LAN(diag)-31, Read Diagnostic Trouble Code (DTC).>	Is U0402 a current malfunction?	Replace the TCM. <Ref. to CVT(TR580)-148, Transmission Control Module (TCM).>
12	CHECK HARNESS. 1) Shake the harness, and check for poor contact. 2) Using the Subaru Select Monitor, read DTC of CAN system. <Ref. to LAN(diag)-31, Read Diagnostic Trouble Code (DTC).>	Is U0402 a current malfunction?	Repair the poor contact of harness, or replace the harness.
13	CHECK CONNECTOR. Check the connector used for high speed CAN for poor contact.	Is there poor contact of connector?	Go to step 10.
14	CHECK CONNECTOR. Check the connector used for high speed CAN for poor contact.	Is there poor contact of connector?	Repair the connector that has poor contact, or replace harness.
15	CHECK CONNECTOR. Check the connector used for high speed CAN for poor contact.	Is there poor contact of connector?	It is possible that temporary poor communication occurs. Delete the DTC.

Diagnostic Procedure with Diagnostic Trouble Code (DTC)

LAN SYSTEM (DIAGNOSTICS)

E: DTC U0416 INVALID DATA RECEIVED FROM VEHICLE DYNAMICS CONTROL MODULE

DTC DETECTING CONDITION:

Data from VDCCM is faulty.

TROUBLE SYMPTOM:

ABS warning light and VDC warning light illuminate.

Step	Check	Yes	No
1	CHECK PERFORMING OF BASIC DIAGNOSTIC PROCEDURE.	Go to step 2.	Perform the basic diagnostic procedure. <Ref. to LAN(diag)-2, Basic Diagnostic Procedure.>
2	CHECK DTC. Check the displayed DTC.	Are DTCs other than U*** displayed?	Perform the diagnosis according to DTC.
3	CHECK DTC. Check the displayed DTC.	Is DTC for the bus off or the data no-receive displayed?	Go to step 3.
4	CHECK DTC. Check the displayed DTC.	Is U0416 a current malfunction?	Perform the diagnosis according to DTC.
5	CHECK DTC. 1) Turn the ignition switch to OFF. 2) Disconnect the VDC CM connector. 3) Connect the disconnected connectors. 4) Read the DTC using Subaru Select Monitor. <Ref. to LAN(diag)-31, Read Diagnostic Trouble Code (DTC).>	Go to step 5.	Go to step 9.
6	CHECK DTC. Using the Subaru Select Monitor, read DTC of all the systems. <Ref. to LAN(diag)-31, Read Diagnostic Trouble Code (DTC).>	Is U0416 a current malfunction?	Go to step 9.
7	CHECK DTC. Using the Subaru Select Monitor, read DTC of all the systems. <Ref. to LAN(diag)-31, Read Diagnostic Trouble Code (DTC).>	Is the VDC data abnormal detected in several modules?	Replace the VDC CM. <Ref. to VDC-9, VDC Control Module and Hydraulic Control Unit (VDCCM&H/U).>
8	REPLACE MODULE. 1) Replace the VDC CM. 2) Read the DTC using Subaru Select Monitor. <Ref. to LAN(diag)-31, Read Diagnostic Trouble Code (DTC).>	Is U0416 a current malfunction?	Go to step 7.
9	CHECK MODULE. 1) Reinstall the VDC CM. 2) Replace the module that the DTC has been detected. 3) Read the DTC using Subaru Select Monitor. <Ref. to LAN(diag)-31, Read Diagnostic Trouble Code (DTC).>	Is U0416 a current malfunction?	Go to step 8.
10	CHECK HARNESS. 1) Shake the harness, and check for poor contact. 2) Using the Subaru Select Monitor, read DTC of CAN system. <Ref. to LAN(diag)-31, Read Diagnostic Trouble Code (DTC).>	Is U0416 a current malfunction?	Replace the VDC CM. <Ref. to VDC-9, VDC Control Module and Hydraulic Control Unit (VDCCM&H/U).>
11	CHECK CONNECTOR. Check the connector used for high speed CAN for poor contact.	Is there poor contact of connector?	Repair the poor contact of harness, or replace the harness.
12			Go to step 10.
13			Repair the connector that has poor contact, or replace harness.
14			It is possible that temporary poor communication occurs. Delete the DTC.

Diagnostic Procedure with Diagnostic Trouble Code (DTC)

LAN SYSTEM (DIAGNOSTICS)

F: DTC U0420 INVALID DATA RECEIVED FROM POWER STEERING CONTROL MODULE

DTC DETECTING CONDITION:

Defective data was transmitted from EPS CM.

TROUBLE SYMPTOM:

Cooperation control with EPS CM does not operate properly.

Step	Check	Yes	No	
1	CHECK PERFORMING OF BASIC DIAGNOSTIC PROCEDURE.	Was the basic diagnostic procedure performed up to STEP 3?	Go to step 2.	Perform the basic diagnostic procedure. <Ref. to LAN(diag)-2, Basic Diagnostic Procedure.>
2	CHECK DTC. Check the displayed DTC.	Are DTCs other than U*** displayed?	Perform the diagnosis according to DTC.	Go to step 3.
3	CHECK DTC. Check the displayed DTC.	Is DTC for the bus off or the data no-receive displayed?	Perform the diagnosis according to DTC.	Go to step 4.
4	CHECK DTC. Check the displayed DTC.	Is U0420 a current malfunction?	Go to step 5.	Go to step 9.
5	CHECK DTC. 1) Turn the ignition switch to OFF. 2) Disconnect the power steering CM connector. 3) Connect the disconnected connectors. 4) Read the DTC using Subaru Select Monitor. <Ref. to LAN(diag)-31, Read Diagnostic Trouble Code (DTC).>	Is U0420 a current malfunction?	Go to step 6.	Go to step 9.
6	CHECK DTC. Using the Subaru Select Monitor, read DTC of all the systems. <Ref. to LAN(diag)-31, Read Diagnostic Trouble Code (DTC).>	Is the electric power steering data abnormal detected in several modules?	Replace the power steering CM. <Ref. to PS-36, Power Steering Control Module.>	Go to step 7.
7	REPLACE MODULE. 1) Replace the power steering CM. 2) Read the DTC using Subaru Select Monitor. <Ref. to LAN(diag)-31, Read Diagnostic Trouble Code (DTC).>	Is U0420 a current malfunction?	Go to step 8.	System is normal.
8	CHECK MODULE. 1) Reinstall the power steering CM. 2) Replace the module that the DTC has been detected. 3) Read the DTC using Subaru Select Monitor. <Ref. to LAN(diag)-31, Read Diagnostic Trouble Code (DTC).>	Is U0420 a current malfunction?	Replace the power steering CM. <Ref. to PS-36, Power Steering Control Module.>	System is normal.
9	CHECK HARNESS. 1) Shake the harness, and check for poor contact. 2) Using the Subaru Select Monitor, read DTC of CAN system. <Ref. to LAN(diag)-31, Read Diagnostic Trouble Code (DTC).>	Is U0420 a current malfunction?	Repair the poor contact of harness, or replace the harness.	Go to step 10.
10	CHECK CONNECTOR. Check the connector used for high speed CAN for poor contact.	Is there poor contact of connector?	Repair the connector that has poor contact, or replace harness.	It is possible that temporary poor communication occurs. Delete the DTC.

Diagnostic Procedure with Diagnostic Trouble Code (DTC)

LAN SYSTEM (DIAGNOSTICS)

G: DTC U0422 INVALID DATA RECEIVED FROM BODY CONTROL MODULE

DTC DETECTING CONDITION:

Defective data was transmitted from body integrated unit.

TROUBLE SYMPTOM:

Cooperation control with body integrated unit does not operate properly.

Step	Check	Yes	No
1	CHECK PERFORMING OF BASIC DIAGNOSTIC PROCEDURE.	Go to step 2.	Perform the basic diagnostic procedure. <Ref. to LAN(diag)-2, Basic Diagnostic Procedure.>
2	CHECK DTC. Check the displayed DTC.	Are DTCs other than U*** displayed?	Perform the diagnosis according to DTC.
3	CHECK DTC. Check the displayed DTC.	Is DTC for the bus off or the data no-receive displayed?	Go to step 3.
4	CHECK DTC. Check the displayed DTC.	Is U0422 a current malfunction?	Go to step 4.
5	CHECK DTC. 1) Turn the ignition switch to OFF. 2) Disconnect the body integrated unit connector. 3) Connect the disconnected connectors. 4) Read the DTC using Subaru Select Monitor. <Ref. to LAN(diag)-31, Read Diagnostic Trouble Code (DTC).>	Is U0422 a current malfunction?	Go to step 5.
6	CHECK DTC. Using the Subaru Select Monitor, read DTC of all the systems. <Ref. to LAN(diag)-31, Read Diagnostic Trouble Code (DTC).>	Is U0422 a current malfunction?	Go to step 6.
7	CHECK DTC. Using the Subaru Select Monitor, read DTC of all the systems. <Ref. to LAN(diag)-31, Read Diagnostic Trouble Code (DTC).>	Is the body integrated data abnormal detected in several modules?	Go to step 7.
8	REPLACE MODULE. 1) Replace the body integrated unit. 2) Read the DTC using Subaru Select Monitor. <Ref. to LAN(diag)-31, Read Diagnostic Trouble Code (DTC).>	Is U0422 a current malfunction?	Replace the body integrated unit. <Ref. to SL-72, Body Integrated Unit.>
9	CHECK MODULE. 1) Reinstall the body integrated unit. 2) Replace the module that the DTC has been detected. 3) Read the DTC using Subaru Select Monitor. <Ref. to LAN(diag)-31, Read Diagnostic Trouble Code (DTC).>	Is U0422 a current malfunction?	Go to step 8.
10	CHECK HARNES. 1) Shake the harness, and check for poor contact. 2) Using the Subaru Select Monitor, read DTC of CAN system. <Ref. to LAN(diag)-31, Read Diagnostic Trouble Code (DTC).>	Is U0422 a current malfunction?	Replace the body integrated unit. <Ref. to SL-72, Body Integrated Unit.>
11	CHECK CONNECTOR. Check the connector used for high speed CAN for poor contact.	Is there poor contact of connector?	Repair the poor contact of harness, or replace the harness.
12		Repair the connector that has poor contact, or replace harness.	Go to step 10.
13			It is possible that temporary poor communication occurs. Delete the DTC.

Diagnostic Procedure with Diagnostic Trouble Code (DTC)

LAN SYSTEM (DIAGNOSTICS)

H: DTC U0423 INVALID DATA RECEIVED FROM INSTRUMENT PANEL CLUSTER CONTROL MODULE

DTC DETECTING CONDITION:

Defective data was transmitted from combination meter.

TROUBLE SYMPTOM:

Display of combination meter does not operate properly.

Step	Check	Yes	No	
1	CHECK PERFORMING OF BASIC DIAGNOSTIC PROCEDURE.	Was the basic diagnostic procedure performed up to STEP 3?	Go to step 2.	Perform the basic diagnostic procedure. <Ref. to LAN(diag)-2, Basic Diagnostic Procedure.>
2	CHECK DTC. Check the displayed DTC.	Are DTCs other than U*** displayed?	Perform the diagnosis according to DTC.	Go to step 3.
3	CHECK DTC. Check the displayed DTC.	Is DTC for the bus off or the data no-receive displayed?	Perform the diagnosis according to DTC.	Go to step 4.
4	CHECK DTC. Check the displayed DTC.	Is U0423 a current malfunction?	Go to step 5.	Go to step 9.
5	CHECK DTC. 1) Turn the ignition switch to OFF. 2) Disconnect the combination meter connector. 3) Connect the disconnected connectors. 4) Read the DTC using Subaru Select Monitor. <Ref. to LAN(diag)-31, Read Diagnostic Trouble Code (DTC).>	Is U0423 a current malfunction?	Go to step 6.	Go to step 9.
6	CHECK DTC. Using the Subaru Select Monitor, read DTC of all the systems. <Ref. to LAN(diag)-31, Read Diagnostic Trouble Code (DTC).>	Is the meter data abnormal detected in several modules?	Replace the combination meter. <Ref. to IDI-18, Combination Meter.>	Go to step 7.
7	REPLACE MODULE. 1) Replace the combination meter. 2) Read the DTC using Subaru Select Monitor. <Ref. to LAN(diag)-31, Read Diagnostic Trouble Code (DTC).>	Is U0423 a current malfunction?	Go to step 8.	System is normal.
8	CHECK MODULE. 1) Replace the current combination meter with the original combination meter. 2) Replace the module that the DTC has been detected. 3) Read the DTC using Subaru Select Monitor. <Ref. to LAN(diag)-31, Read Diagnostic Trouble Code (DTC).>	Is U0423 a current malfunction?	Replace the combination meter. <Ref. to IDI-18, Combination Meter.>	System is normal.
9	CHECK HARNESS. 1) Shake the harness, and check for poor contact. 2) Using the Subaru Select Monitor, read DTC of CAN system. <Ref. to LAN(diag)-31, Read Diagnostic Trouble Code (DTC).>	Is U0423 a current malfunction?	Repair the poor contact of harness, or replace the harness.	Go to step 10.
10	CHECK CONNECTOR. Check the connector used for high speed CAN for poor contact.	Is there poor contact of connector?	Repair the connector that has poor contact, or replace harness.	It is possible that temporary poor communication occurs. Delete the DTC.

Diagnostic Procedure with Diagnostic Trouble Code (DTC)

LAN SYSTEM (DIAGNOSTICS)

I: DTC U0424 INVALID DATA RECEIVED FROM HVAC CONTROL MODULE

DTC DETECTING CONDITION:

Defective data was transmitted from A/C control panel.

TROUBLE SYMPTOM:

Cooperation control of air conditioner does not operate properly.

Step	Check	Yes	No
1	CHECK PERFORMING OF BASIC DIAGNOSTIC PROCEDURE.	Go to step 2.	Perform the basic diagnostic procedure. <Ref. to LAN(diag)-2, Basic Diagnostic Procedure.>
2	CHECK DTC. Check the displayed DTC.	Are DTCs other than U*** displayed?	Perform the diagnosis according to DTC.
3	CHECK DTC. Check the displayed DTC.	Is DTC for the bus off or the data no-receive displayed?	Go to step 3.
4	CHECK DTC. Check the displayed DTC.	Is U0424 a current malfunction?	Perform the diagnosis according to DTC.
5	CHECK DTC. 1) Turn the ignition switch to OFF. 2) Disconnect the A/C control panel connector. 3) Connect the disconnected connectors. 4) Read the DTC using Subaru Select Monitor. <Ref. to LAN(diag)-31, Read Diagnostic Trouble Code (DTC).>	Go to step 5.	Go to step 9.
6	CHECK DTC. Using the Subaru Select Monitor, read DTC of all the systems. <Ref. to LAN(diag)-31, Read Diagnostic Trouble Code (DTC).>	Is U0424 a current malfunction?	Go to step 6.
7	CHECK DTC. Using the Subaru Select Monitor, read DTC of all the systems. <Ref. to LAN(diag)-31, Read Diagnostic Trouble Code (DTC).>	Is the air conditioner data abnormal detected in several modules?	Go to step 7.
8	REPLACE MODULE. 1) Replace the A/C control panel. 2) Read the DTC using Subaru Select Monitor. <Ref. to LAN(diag)-31, Read Diagnostic Trouble Code (DTC).>	Is U0424 a current malfunction?	Go to step 8.
9	CHECK MODULE. 1) Restore the A/C control panel. 2) Replace the module that the DTC has been detected. 3) Read the DTC using Subaru Select Monitor. <Ref. to LAN(diag)-31, Read Diagnostic Trouble Code (DTC).>	Is U0424 a current malfunction?	Replace the A/C control panel. <Ref. to AC-45, Control Panel.>
10	CHECK HARNESS. 1) Shake the harness, and check for poor contact. 2) Read the DTC using Subaru Select Monitor. <Ref. to LAN(diag)-31, Read Diagnostic Trouble Code (DTC).>	Is U0424 a current malfunction?	Repair the poor contact of harness, or replace the harness.
10	CHECK CONNECTOR. Check the connector used for high speed CAN for poor contact.	Is there poor contact of connector?	Go to step 10.
		Repair the connector that has poor contact, or replace harness.	It is possible that temporary poor communication occurs. Delete the DTC.

Diagnostic Procedure with Diagnostic Trouble Code (DTC)

LAN SYSTEM (DIAGNOSTICS)

J: DTC U0427 INVALID DATA RECEIVED FROM VEHICLE SECURITY CONTROL MODULE

DTC DETECTING CONDITION:

Defective data was transmitted from keyless access CM.

TROUBLE SYMPTOM:

Cooperation control of keyless access does not operate properly.

Step	Check	Yes	No	
1	CHECK PERFORMING OF BASIC DIAGNOSTIC PROCEDURE.	Was the basic diagnostic procedure performed up to STEP 3?	Go to step 2.	Perform the basic diagnostic procedure. <Ref. to LAN(diag)-2, Basic Diagnostic Procedure.>
2	CHECK DTC. Check the displayed DTC.	Are DTCs other than U*** displayed?	Perform the diagnosis according to DTC.	Go to step 3.
3	CHECK DTC. Check the displayed DTC.	Is DTC for the bus off or the data no-receive displayed?	Perform the diagnosis according to DTC.	Go to step 4.
4	CHECK DTC. Check the displayed DTC.	Is U0427 a current malfunction?	Go to step 5.	Go to step 9.
5	CHECK DTC. 1) Turn the ignition switch to OFF. 2) Disconnect the keyless access CM connector. 3) Connect the disconnected connectors. 4) Read the DTC using Subaru Select Monitor. <Ref. to LAN(diag)-31, Read Diagnostic Trouble Code (DTC).>	Is U0427 a current malfunction?	Go to step 6.	Go to step 9.
6	CHECK DTC. Using the Subaru Select Monitor, read DTC of all the systems. <Ref. to LAN(diag)-31, Read Diagnostic Trouble Code (DTC).>	Is the smart data abnormal detected in several modules?	Replace the keyless access CM. <Ref. to SL-89, Keyless Access CM.>	Go to step 7.
7	REPLACE MODULE. 1) Replace the keyless access CM. NOTE: Do not register the keyless access CM. 2) Read the DTC using Subaru Select Monitor. <Ref. to LAN(diag)-31, Read Diagnostic Trouble Code (DTC).>	Is U0427 a current malfunction?	Go to step 8.	System is normal. NOTE: Be sure to perform keyless access CM registration.
8	CHECK MODULE. 1) Reinstall the keyless access CM. 2) Replace the body integrated unit. <Ref. to SL-72, Body Integrated Unit.> 3) Read the DTC using Subaru Select Monitor. <Ref. to LAN(diag)-31, Read Diagnostic Trouble Code (DTC).>	Is U0427 a current malfunction?	Replace the keyless access CM. <Ref. to SL-89, Keyless Access CM.>	System is normal.
9	CHECK HARNESS. 1) Shake the harness, and check for poor contact. 2) Read the DTC using Subaru Select Monitor. <Ref. to LAN(diag)-31, Read Diagnostic Trouble Code (DTC).>	Is U0427 a current malfunction?	Repair the poor contact of harness, or replace the harness.	Go to step 10.
10	CHECK CONNECTOR. Check the connector used for high speed CAN for poor contact.	Is there poor contact of connector?	Repair the connector that has poor contact, or replace harness.	It is possible that temporary poor communication occurs. Delete the DTC.

Diagnostic Procedure with Diagnostic Trouble Code (DTC)

LAN SYSTEM (DIAGNOSTICS)

K: DTC U0428 INVALID DATA RECEIVED FROM STEERING ANGLE SENSOR MODULE

DTC DETECTING CONDITION:

Defective data was transmitted from steering angle sensor.

TROUBLE SYMPTOM:

VDC CM does not operate normally.

Step	Check	Yes	No
1	CHECK PERFORMING OF BASIC DIAGNOSTIC PROCEDURE.	Go to step 2.	Perform the basic diagnostic procedure. <Ref. to LAN(diag)-2, Basic Diagnostic Procedure.>
2	CHECK DTC. Check the displayed DTC.	Are DTCs other than U*** displayed?	Perform the diagnosis according to DTC.
3	CHECK DTC. Check the displayed DTC.	Is DTC for the bus off or the data no-receive displayed?	Go to step 3.
4	CHECK DTC. Check the displayed DTC.	Is U0428 a current malfunction?	Perform the diagnosis according to DTC.
5	CHECK DTC. 1) Turn the ignition switch to OFF. 2) Disconnect the steering angle sensor connector. 3) Connect the disconnected connectors. 4) Read the DTC using Subaru Select Monitor. <Ref. to LAN(diag)-31, Read Diagnostic Trouble Code (DTC).>	Go to step 5.	Go to step 9.
6	CHECK DTC. Using the Subaru Select Monitor, read DTC of all the systems. <Ref. to LAN(diag)-31, Read Diagnostic Trouble Code (DTC).>	Is U0428 a current malfunction?	Go to step 9.
7	CHECK DTC. Using the Subaru Select Monitor, read DTC of all the systems. <Ref. to LAN(diag)-31, Read Diagnostic Trouble Code (DTC).>	Is the steering angle sensor data abnormal detected in several modules?	Replace the steering angle sensor. <Ref. to VDC-32, Steering Angle Sensor.>
8	REPLACE MODULE. 1) Replace the steering angle sensor. 2) Read the DTC using Subaru Select Monitor. <Ref. to LAN(diag)-31, Read Diagnostic Trouble Code (DTC).>	Is U0428 a current malfunction?	Go to step 7.
9	CHECK MODULE. 1) Reinstall the steering angle sensor. 2) Replace the module that the DTC has been detected. 3) Read the DTC using Subaru Select Monitor. <Ref. to LAN(diag)-31, Read Diagnostic Trouble Code (DTC).>	Is U0428 a current malfunction?	Go to step 8.
10	CHECK HARNESS. 1) Shake the harness, and check for poor contact. 2) Using the Subaru Select Monitor, read DTC of CAN system. <Ref. to LAN(diag)-31, Read Diagnostic Trouble Code (DTC).>	Is U0428 a current malfunction?	Replace the steering angle sensor. <Ref. to VDC-32, Steering Angle Sensor.>
11	CHECK CONNECTOR. Check the connector used for high speed CAN for poor contact.	Is there poor contact of connector?	Repair the poor contact of harness, or replace the harness.
12		Repair the connector that has poor contact, or replace harness.	Go to step 10.
13			It is possible that temporary poor communication occurs. Delete the DTC.

Diagnostic Procedure with Diagnostic Trouble Code (DTC)

LAN SYSTEM (DIAGNOSTICS)

L: DTC U0452 INVALID DATA RECEIVED FROM RESTRAINTS CONTROL MODULE

DTC DETECTING CONDITION:

Invalid data was transmitted from airbag CM.

TROUBLE SYMPTOM:

Cooperation control with airbag does not operate properly.

Step	Check	Yes	No	
1	CHECK PERFORMING OF BASIC DIAGNOSTIC PROCEDURE.	Was the basic diagnostic procedure performed up to STEP 3?	Go to step 2.	Perform the basic diagnostic procedure. <Ref. to LAN(diag)-2, Basic Diagnostic Procedure.>
2	CHECK DTC. Check the displayed DTC.	Are DTCs other than U*** displayed?	Perform the diagnosis according to DTC.	Go to step 3.
3	CHECK DTC. Check the displayed DTC.	Is DTC for the bus off or the data no-receive displayed?	Perform the diagnosis according to DTC.	Go to step 4.
4	CHECK DTC. Check the displayed DTC.	Is U0452 a current malfunction?	Go to step 5.	Go to step 9.
5	CHECK DTC. 1) Turn the ignition switch to OFF. 2) Disconnect the airbag CM connector. 3) Connect the disconnected connectors. 4) Read the DTC using Subaru Select Monitor. <Ref. to LAN(diag)-31, Read Diagnostic Trouble Code (DTC).>	Is U0452 a current malfunction?	Go to step 6.	Go to step 9.
6	CHECK DTC. Using the Subaru Select Monitor, read DTC of all the systems. <Ref. to LAN(diag)-31, Read Diagnostic Trouble Code (DTC).>	Is the airbag data abnormal detected in several modules?	Replace the airbag CM. <Ref. to AB-46, Airbag Control Module.>	Go to step 7.
7	REPLACE MODULE. 1) Replace the airbag CM. 2) Read the DTC using Subaru Select Monitor. <Ref. to LAN(diag)-31, Read Diagnostic Trouble Code (DTC).>	Is U0452 a current malfunction?	Go to step 8.	System is normal.
8	CHECK MODULE. 1) Reinstall the airbag CM. 2) Replace the module that the DTC has been detected. 3) Read the DTC using Subaru Select Monitor. <Ref. to LAN(diag)-31, Read Diagnostic Trouble Code (DTC).>	Is U0452 a current malfunction?	Replace the airbag CM. <Ref. to AB-46, Airbag Control Module.>	System is normal.
9	CHECK HARNESS. 1) Shake the harness, and check for poor contact. 2) Using the Subaru Select Monitor, read DTC of CAN system. <Ref. to LAN(diag)-31, Read Diagnostic Trouble Code (DTC).>	Is U0452 a current malfunction?	Repair the poor contact of harness, or replace the harness.	Go to step 10.
10	CHECK CONNECTOR. Check the connector used for high speed CAN for poor contact.	Is there poor contact of connector?	Repair the connector that has poor contact, or replace harness.	It is possible that temporary poor communication occurs. Delete the DTC.

Diagnostic Procedure with Diagnostic Trouble Code (DTC)

LAN SYSTEM (DIAGNOSTICS)

M: DTC U1433 INVALID DATA RECEIVED FROM EyeSight

DTC DETECTING CONDITION:

Defective data was transmitted from stereo camera.

TROUBLE SYMPTOM:

Cooperation control of EyeSight does not operate properly.

Step	Check	Yes	No
1	CHECK PERFORMING OF BASIC DIAGNOSTIC PROCEDURE.	Go to step 2.	Perform the basic diagnostic procedure. <Ref. to LAN(diag)-2, Basic Diagnostic Procedure.>
2	CHECK DTC. Check the displayed DTC.	Are DTCs other than U*** displayed?	Perform the diagnosis according to DTC.
3	CHECK DTC. Check the displayed DTC.	Is DTC for the bus off or the data no-receive displayed?	Go to step 3.
4	CHECK DTC. Check the displayed DTC.	Is U1433 a current malfunction?	Go to step 4.
5	CHECK DTC. 1) Turn the ignition switch to OFF. 2) Disconnect the stereo camera connector. 3) Connect the disconnected connectors. 4) Read the DTC using Subaru Select Monitor. <Ref. to LAN(diag)-31, Read Diagnostic Trouble Code (DTC).>	Is U1433 a current malfunction?	Go to step 5.
6	CHECK DTC. Using the Subaru Select Monitor, read DTC of all the systems. <Ref. to LAN(diag)-31, Read Diagnostic Trouble Code (DTC).>	Is U1433 a current malfunction?	Go to step 6.
7	CHECK DTC. Using the Subaru Select Monitor, read DTC of all the systems. <Ref. to LAN(diag)-31, Read Diagnostic Trouble Code (DTC).>	Is the EyeSight data abnormal detected in several modules?	Go to step 7.
8	REPLACE MODULE. 1) Replace the stereo camera. 2) Read the DTC using Subaru Select Monitor. <Ref. to LAN(diag)-31, Read Diagnostic Trouble Code (DTC).>	Is U1433 a current malfunction?	Replace the stereo camera. <Ref. to ES-7, Stereo Camera.>
9	CHECK MODULE. 1) Reinstall the stereo camera. 2) Replace the module that the DTC has been detected. 3) Read the DTC using Subaru Select Monitor. <Ref. to LAN(diag)-31, Read Diagnostic Trouble Code (DTC).>	Is U1433 a current malfunction?	Go to step 8.
10	CHECK HARNESS. 1) Shake the harness, and check for poor contact. 2) Using the Subaru Select Monitor, read DTC of CAN system. <Ref. to LAN(diag)-31, Read Diagnostic Trouble Code (DTC).>	Is U1433 a current malfunction?	Replace the stereo camera. <Ref. to ES-7, Stereo Camera.>
11	CHECK CONNECTOR. Check the connector used for high speed CAN for poor contact.	Is there poor contact of connector?	Repair the poor contact of harness, or replace the harness.
			Go to step 10.
			It is possible that temporary poor communication occurs. Delete the DTC.

Diagnostic Procedure with Diagnostic Trouble Code (DTC)

LAN SYSTEM (DIAGNOSTICS)

N: DTC U0100 LOST COMMUNICATION WITH ECM/PCM "A"

DTC DETECTING CONDITION:

No data is received from ECM.

TROUBLE SYMPTOM:

Cooperation control of transmission may not operate properly.

Step	Check	Yes	No
1	CHECK PERFORMING OF BASIC DIAGNOSTIC PROCEDURE.	Go to step 2.	Perform the basic diagnostic procedure. <Ref. to LAN(diag)-2, Basic Diagnostic Procedure.>
2	CHECK DTC. Check the displayed DTC.	Are DTCs other than U*** displayed?	Perform the diagnosis according to DTC.
3	CHECK DTC. Check the displayed DTC.	Is U0100 a current malfunction?	Go to step 3.
4	CHECK DTC. 1) Check CAN communication circuit. <Ref. to LAN(diag)-33, CAN Communication Circuit Check.> 2) Read the DTC using Subaru Select Monitor. <Ref. to LAN(diag)-31, Read Diagnostic Trouble Code (DTC).>	Go to step 4.	Go to step 8.
5	CHECK DTC. Using the Subaru Select Monitor, read DTC of all the systems. <Ref. to LAN(diag)-31, Read Diagnostic Trouble Code (DTC).>	Is U0100 a current malfunction?	Go to step 5.
6	CHECK DTC. Using the Subaru Select Monitor, read DTC of all the systems. <Ref. to LAN(diag)-31, Read Diagnostic Trouble Code (DTC).>	Is the engine data no-receive detected in several modules?	Replace the ECM. <Ref. to FU(H4DO)-98, Engine Control Module (ECM).>
7	REPLACE MODULE. 1) Replace the ECM. 2) Read the DTC using Subaru Select Monitor. <Ref. to LAN(diag)-31, Read Diagnostic Trouble Code (DTC).>	Is U0100 a current malfunction?	Go to step 6.
8	CHECK MODULE. 1) Reinstall the ECM. 2) Replace the module that the DTC has been detected. 3) Read the DTC using Subaru Select Monitor. <Ref. to LAN(diag)-31, Read Diagnostic Trouble Code (DTC).>	Is U0100 a current malfunction?	Go to step 7.
9	CHECK HARNESS. 1) Shake the harness, and check for poor contact. 2) Read the DTC using Subaru Select Monitor. <Ref. to LAN(diag)-31, Read Diagnostic Trouble Code (DTC).>	Is U0100 a current malfunction?	Replace the ECM. <Ref. to FU(H4DO)-98, Engine Control Module (ECM).>
10	CHECK CONNECTOR. Check the connector used for high speed CAN for poor contact.	Is there poor contact of connector?	Repair the poor contact of harness, or replace the harness.
			Go to step 9.
			Repair the connector that has poor contact, or replace harness.
			It is possible that temporary poor communication occurs. Delete the DTC.

Diagnostic Procedure with Diagnostic Trouble Code (DTC)

LAN SYSTEM (DIAGNOSTICS)

O: DTC U0101 LOST COMMUNICATION WITH TCM

DTC detecting condition:

No data is received from TCM.

Trouble symptom:

Cooperation control with transmission is not performed.

Step	Check	Yes	No
1	CHECK PERFORMING OF BASIC DIAGNOSTIC PROCEDURE.	Go to step 2.	Perform the basic diagnostic procedure. <Ref. to LAN(diag)-2, Basic Diagnostic Procedure.>
2	CHECK DTC. Check the displayed DTC.	Are DTCs other than U*** displayed?	Perform the diagnosis according to DTC. Go to step 3.
3	CHECK DTC. Check the displayed DTC.	Is U0101 a current malfunction?	Go to step 4. Go to step 8.
4	CHECK DTC. 1) Check CAN communication circuit. <Ref. to LAN(diag)-33, CAN Communication Circuit Check.> 2) Read the DTC using Subaru Select Monitor. <Ref. to LAN(diag)-31, Read Diagnostic Trouble Code (DTC).>	Is U0101 a current malfunction?	Go to step 5. Go to step 8.
5	CHECK DTC. Using the Subaru Select Monitor, read DTC of all the systems. <Ref. to LAN(diag)-31, Read Diagnostic Trouble Code (DTC).>	Is the transmission data no-receive detected in several modules?	Replace the TCM. <Ref. to CVT(TR580)-148, Transmission Control Module (TCM).> Go to step 6.
6	REPLACE MODULE. 1) Replace the TCM. 2) Read the DTC using Subaru Select Monitor. <Ref. to LAN(diag)-31, Read Diagnostic Trouble Code (DTC).>	Is U0101 a current malfunction?	Go to step 7. System is normal.
7	CHECK MODULE. 1) Reinstall the TCM. 2) Replace the module that the DTC has been detected. 3) Read the DTC using Subaru Select Monitor. <Ref. to LAN(diag)-31, Read Diagnostic Trouble Code (DTC).>	Is U0101 a current malfunction?	Replace the TCM. <Ref. to CVT(TR580)-148, Transmission Control Module (TCM).> System is normal.
8	CHECK HARNESS. 1) Shake the harness, and check for poor contact. 2) Read the DTC using Subaru Select Monitor. <Ref. to LAN(diag)-31, Read Diagnostic Trouble Code (DTC).>	Is U0101 a current malfunction?	Repair the poor contact of harness, or replace the harness. Go to step 9.
9	CHECK CONNECTOR. Check the connector used for high speed CAN for poor contact.	Is there poor contact of connector?	Repair the connector that has poor contact, or replace harness. It is possible that temporary poor communication occurs. Delete the DTC.

Diagnostic Procedure with Diagnostic Trouble Code (DTC)

LAN SYSTEM (DIAGNOSTICS)

P: DTC U0122 LOST COMMUNICATION WITH VEHICLE DYNAMICS CONTROL MODULE

DTC DETECTING CONDITION:

No data from VDCCM is received.

TROUBLE SYMPTOM:

ABS warning light and VDC warning light illuminate.

Step	Check	Yes	No	
1	CHECK PERFORMING OF BASIC DIAGNOSTIC PROCEDURE.	Was the basic diagnostic procedure performed up to STEP 3?	Go to step 2.	Perform the basic diagnostic procedure. <Ref. to LAN(diag)-2, Basic Diagnostic Procedure.>
2	CHECK DTC. Check the displayed DTC.	Are DTCs other than U*** displayed?	Perform the diagnosis according to DTC.	Go to step 3.
3	CHECK DTC. Check the displayed DTC.	Is U0122 a current malfunction?	Go to step 4.	Go to step 8.
4	CHECK DTC. 1) Check CAN communication circuit. <Ref. to LAN(diag)-33, CAN Communication Circuit Check.> 2) Read the DTC using Subaru Select Monitor. <Ref. to LAN(diag)-31, Read Diagnostic Trouble Code (DTC).>	Is U0122 a current malfunction?	Go to step 5.	Go to step 8.
5	CHECK DTC. Using the Subaru Select Monitor, read DTC of all the systems. <Ref. to LAN(diag)-31, Read Diagnostic Trouble Code (DTC).>	Is the VDC data no-receive detected in several modules?	Replace the VDC CM. <Ref. to VDC-9, VDC Control Module and Hydraulic Control Unit (VDCCM&H/U).>	Go to step 6.
6	REPLACE MODULE. 1) Replace the VDC CM. 2) Read the DTC using Subaru Select Monitor. <Ref. to LAN(diag)-31, Read Diagnostic Trouble Code (DTC).>	Is U0122 a current malfunction?	Go to step 7.	System is normal.
7	CHECK MODULE. 1) Reinstall the VDC CM. 2) Replace the module that the DTC has been detected. 3) Read the DTC using Subaru Select Monitor. <Ref. to LAN(diag)-31, Read Diagnostic Trouble Code (DTC).>	Is U0122 a current malfunction?	Replace the VDC CM. <Ref. to VDC-9, VDC Control Module and Hydraulic Control Unit (VDCCM&H/U).>	System is normal.
8	CHECK HARNESS. 1) Shake the harness, and check for poor contact. 2) Read the DTC using Subaru Select Monitor. <Ref. to LAN(diag)-31, Read Diagnostic Trouble Code (DTC).>	Is U0122 a current malfunction?	Repair the poor contact of harness, or replace the harness.	Go to step 9.
9	CHECK CONNECTOR. Check the connector used for high speed CAN for poor contact.	Is there poor contact of connector?	Repair the connector that has poor contact, or replace harness.	It is possible that temporary poor communication occurs. Delete the DTC.

Diagnostic Procedure with Diagnostic Trouble Code (DTC)

LAN SYSTEM (DIAGNOSTICS)

Q: DTC U0126 LOST COMMUNICATION WITH STEERING ANGLE SENSOR MODULE

DTC DETECTING CONDITION:

No data is received from steering angle sensor.

TROUBLE SYMPTOM:

VDC CM does not operate normally.

Step	Check	Yes	No	
1	CHECK PERFORMING OF BASIC DIAGNOSTIC PROCEDURE.	Was the basic diagnostic procedure performed up to STEP 3?	Go to step 2.	Perform the basic diagnostic procedure. <Ref. to LAN(diag)-2, Basic Diagnostic Procedure.>
2	CHECK DTC. Check the displayed DTC.	Are DTCs other than U*** displayed?	Perform the diagnosis according to DTC.	Go to step 3.
3	CHECK DTC. Check the displayed DTC.	Is U0126 a current malfunction?	Go to step 4.	Go to step 8.
4	CHECK DTC. 1) Check CAN communication circuit. <Ref. to LAN(diag)-33, CAN Communication Circuit Check.> 2) Read the DTC using Subaru Select Monitor. <Ref. to LAN(diag)-31, Read Diagnostic Trouble Code (DTC).>	Is U0126 a current malfunction?	Go to step 5.	Go to step 8.
5	CHECK DTC. Using the Subaru Select Monitor, read DTC of all the systems. <Ref. to LAN(diag)-31, Read Diagnostic Trouble Code (DTC).>	Is the steering angle sensor data no-receive detected in several modules?	Replace the steering angle sensor. <Ref. to VDC-32, Steering Angle Sensor.>	Go to step 6.
6	REPLACE MODULE. 1) Replace the steering angle sensor. 2) Read the DTC using Subaru Select Monitor. <Ref. to LAN(diag)-31, Read Diagnostic Trouble Code (DTC).>	Is U0126 a current malfunction?	Go to step 7.	System is normal.
7	CHECK MODULE. 1) Reinstall the steering angle sensor. 2) Replace the module that the DTC has been detected. 3) Read the DTC using Subaru Select Monitor. <Ref. to LAN(diag)-31, Read Diagnostic Trouble Code (DTC).>	Is U0126 a current malfunction?	Replace the steering angle sensor. <Ref. to VDC-32, Steering Angle Sensor.>	System is normal.
8	CHECK HARNESS. 1) Shake the harness, and check for poor contact. 2) Read the DTC using Subaru Select Monitor. <Ref. to LAN(diag)-31, Read Diagnostic Trouble Code (DTC).>	Is U0126 a current malfunction?	Repair the poor contact of harness, or replace the harness.	Go to step 9.
9	CHECK CONNECTOR. Check the connector used for high speed CAN for poor contact.	Is there poor contact of connector?	Repair the connector that has poor contact, or replace harness.	It is possible that temporary poor communication occurs. Delete the DTC.

Diagnostic Procedure with Diagnostic Trouble Code (DTC)

LAN SYSTEM (DIAGNOSTICS)

R: DTC U0131 LOST COMMUNICATION WITH POWER STEERING CONTROL MODULE

DTC DETECTING CONDITION:

No data is received from power steering CM.

TROUBLE SYMPTOM:

Cooperation control with power steering CM does not operate properly.

Step	Check	Yes	No
1	CHECK PERFORMING OF BASIC DIAGNOSTIC PROCEDURE.	Go to step 2.	Perform the basic diagnostic procedure. <Ref. to LAN(diag)-2, Basic Diagnostic Procedure.>
2	CHECK DTC. Check the displayed DTC.	Are DTCs other than U*** displayed?	Perform the diagnosis according to DTC.
3	CHECK DTC. Check the displayed DTC.	Is U0131 a current malfunction?	Go to step 3.
4	CHECK DTC. 1) Check CAN communication circuit. <Ref. to LAN(diag)-33, CAN Communication Circuit Check.> 2) Read the DTC using Subaru Select Monitor. <Ref. to LAN(diag)-31, Read Diagnostic Trouble Code (DTC).>	Go to step 4.	Go to step 8.
5	CHECK DTC. Using the Subaru Select Monitor, read DTC of all the systems. <Ref. to LAN(diag)-31, Read Diagnostic Trouble Code (DTC).>	Is U0131 a current malfunction?	Go to step 5.
6	CHECK DTC. Using the Subaru Select Monitor, read DTC of all the systems. <Ref. to LAN(diag)-31, Read Diagnostic Trouble Code (DTC).>	Is the electric power steering data no-receive detected in several modules?	Replace the power steering CM. <Ref. to PS-36, Power Steering Control Module.>
7	REPLACE MODULE. 1) Replace the power steering CM. 2) Read the DTC using Subaru Select Monitor. <Ref. to LAN(diag)-31, Read Diagnostic Trouble Code (DTC).>	Is U0131 a current malfunction?	Go to step 6.
8	CHECK MODULE. 1) Reinstall the power steering CM. 2) Replace the module that the DTC has been detected. 3) Read the DTC using Subaru Select Monitor. <Ref. to LAN(diag)-31, Read Diagnostic Trouble Code (DTC).>	Is U0131 a current malfunction?	Replace the power steering CM. <Ref. to PS-36, Power Steering Control Module.>
9	CHECK HARNESS. 1) Shake the harness, and check for poor contact. 2) Read the DTC using Subaru Select Monitor. <Ref. to LAN(diag)-31, Read Diagnostic Trouble Code (DTC).>	Is U0131 a current malfunction?	Repair the poor contact of harness, or replace the harness.
10	CHECK CONNECTOR. Check the connector used for high speed CAN for poor contact.	Is there poor contact of connector?	Repair the connector that has poor contact, or replace harness.
			Go to step 9.
			It is possible that temporary poor communication occurs. Delete the DTC.

Diagnostic Procedure with Diagnostic Trouble Code (DTC)

LAN SYSTEM (DIAGNOSTICS)

S: DTC U0140 LOST COMMUNICATION WITH BODY CONTROL MODULE

DTC DETECTING CONDITION:

No data is received from body integrated unit.

TROUBLE SYMPTOM:

Cooperation control with body integrated unit does not operate properly.

Step	Check	Yes	No
1	CHECK PERFORMING OF BASIC DIAGNOSTIC PROCEDURE.	Go to step 2.	Perform the basic diagnostic procedure. <Ref. to LAN(diag)-2, Basic Diagnostic Procedure.>
2	CHECK DTC. Check the displayed DTC.	Are DTCs other than U*** displayed?	Perform the diagnosis according to DTC.
3	CHECK DTC. Check the displayed DTC.	Is U0140 a current malfunction?	Go to step 3.
4	CHECK DTC. 1) Check CAN communication circuit. <Ref. to LAN(diag)-33, CAN Communication Circuit Check.> 2) Read the DTC using Subaru Select Monitor. <Ref. to LAN(diag)-31, Read Diagnostic Trouble Code (DTC).>	Go to step 4.	Go to step 8.
5	CHECK DTC. Using the Subaru Select Monitor, read DTC of all the systems. <Ref. to LAN(diag)-31, Read Diagnostic Trouble Code (DTC).>	Go to step 5.	Go to step 8.
6	CHECK DTC. Using the Subaru Select Monitor, read DTC of all the systems. <Ref. to LAN(diag)-31, Read Diagnostic Trouble Code (DTC).>	Is the body integrated data no-receive detected in several modules?	Replace the body integrated unit. <Ref. to SL-72, Body Integrated Unit.>
7	REPLACE MODULE. 1) Replace the body integrated unit. 2) Read the DTC using Subaru Select Monitor. <Ref. to LAN(diag)-31, Read Diagnostic Trouble Code (DTC).>	Is U0140 a current malfunction?	Go to step 6.
8	CHECK MODULE. 1) Reinstall the body integrated unit. 2) Replace the module that the DTC has been detected. 3) Read the DTC using Subaru Select Monitor. <Ref. to LAN(diag)-31, Read Diagnostic Trouble Code (DTC).>	Is U0140 a current malfunction?	Go to step 7.
9	CHECK HARNESS. 1) Shake the harness, and check for poor contact. 2) Read the DTC using Subaru Select Monitor. <Ref. to LAN(diag)-31, Read Diagnostic Trouble Code (DTC).>	Is U0140 a current malfunction?	Replace the body integrated unit. <Ref. to SL-72, Body Integrated Unit.>
10	CHECK CONNECTOR. Check the connector used for high speed CAN for poor contact.	Is there poor contact of connector?	Repair the poor contact of harness, or replace the harness.
11			Go to step 9.
12			Repair the poor contact of connector that has poor contact, or replace harness.
13			It is possible that temporary poor communication occurs. Delete the DTC.

Diagnostic Procedure with Diagnostic Trouble Code (DTC)

LAN SYSTEM (DIAGNOSTICS)

T: DTC U0151 LOST COMMUNICATION WITH RESTRAINTS CONTROL MODULE

DTC DETECTING CONDITION:

No data is received from airbag CM.

TROUBLE SYMPTOM:

Cooperation control with airbag CM does not operate properly.

	Step	Check	Yes	No
1	CHECK PERFORMING OF BASIC DIAGNOSTIC PROCEDURE.	Was the basic diagnostic procedure performed up to STEP 3?	Go to step 2.	Perform the basic diagnostic procedure. <Ref. to LAN(diag)-2, Basic Diagnostic Procedure.>
2	CHECK DTC. Check the displayed DTC.	Are DTCs other than U*** displayed?	Perform the diagnosis according to DTC.	Go to step 3.
3	CHECK DTC. Check the displayed DTC.	Is U0151 a current malfunction?	Go to step 4.	Go to step 8.
4	CHECK DTC. 1) Check CAN communication circuit. <Ref. to LAN(diag)-33, CAN Communication Circuit Check.> 2) Read the DTC using Subaru Select Monitor. <Ref. to LAN(diag)-31, Read Diagnostic Trouble Code (DTC).>	Is U0151 a current malfunction?	Go to step 5.	Go to step 8.
5	CHECK DTC. Using the Subaru Select Monitor, read DTC of all the systems. <Ref. to LAN(diag)-31, Read Diagnostic Trouble Code (DTC).>	Is the airbag data no-receive detected in several modules?	Replace the airbag CM. <Ref. to AB-46, Airbag Control Module.>	Go to step 6.
6	REPLACE MODULE. 1) Replace the airbag CM. 2) Read the DTC using Subaru Select Monitor. <Ref. to LAN(diag)-31, Read Diagnostic Trouble Code (DTC).>	Is U0151 a current malfunction?	Go to step 7.	System is normal.
7	CHECK MODULE. 1) Reinstall the airbag CM. 2) Replace the module that the DTC has been detected. 3) Read the DTC using Subaru Select Monitor. <Ref. to LAN(diag)-31, Read Diagnostic Trouble Code (DTC).>	Is U0151 a current malfunction?	Replace the airbag CM. <Ref. to AB-46, Airbag Control Module.>	System is normal.
8	CHECK HARNESS. 1) Shake the harness, and check for poor contact. 2) Read the DTC using Subaru Select Monitor. <Ref. to LAN(diag)-31, Read Diagnostic Trouble Code (DTC).>	Is U0151 a current malfunction?	Repair the poor contact of harness, or replace the harness.	Go to step 9.
9	CHECK CONNECTOR. Check the connector used for high speed CAN for poor contact.	Is there poor contact of connector?	Repair the connector that has poor contact, or replace harness.	It is possible that temporary poor communication occurs. Delete the DTC.

Diagnostic Procedure with Diagnostic Trouble Code (DTC)

LAN SYSTEM (DIAGNOSTICS)

U: DTC U0155 LOST COMMUNICATION WITH INSTRUMENT PANEL CLUSTER (IPC) CONTROL MODULE

DTC DETECTING CONDITION:

No data is received from combination meter.

TROUBLE SYMPTOM:

Display of combination meter does not operate properly.

Step	Check	Yes	No	
1	CHECK PERFORMING OF BASIC DIAGNOSTIC PROCEDURE.	Was the basic diagnostic procedure performed up to STEP 3?	Go to step 2.	Perform the basic diagnostic procedure. <Ref. to LAN(diag)-2, Basic Diagnostic Procedure.>
2	CHECK DTC. Check the displayed DTC.	Are DTCs other than U*** displayed?	Perform the diagnosis according to DTC.	Go to step 3.
3	CHECK DTC. Check the displayed DTC.	Is U0155 a current malfunction?	Go to step 4.	Go to step 8.
4	CHECK DTC. 1) Check CAN communication circuit. <Ref. to LAN(diag)-33, CAN Communication Circuit Check.> 2) Read the DTC using Subaru Select Monitor. <Ref. to LAN(diag)-31, Read Diagnostic Trouble Code (DTC).>	Is U0155 a current malfunction?	Go to step 5.	Go to step 8.
5	CHECK DTC. Using the Subaru Select Monitor, read DTC of all the systems. <Ref. to LAN(diag)-31, Read Diagnostic Trouble Code (DTC).>	Is the meter data no-receive detected in several modules?	Replace the meter. <Ref. to IDI-18, Combination Meter.>	Go to step 6.
6	REPLACE MODULE. 1) Replace the combination meter. 2) Read the DTC using Subaru Select Monitor. <Ref. to LAN(diag)-31, Read Diagnostic Trouble Code (DTC).>	Is U0155 a current malfunction?	Go to step 7.	System is normal.
7	CHECK MODULE. 1) Replace the current combination meter with the original combination meter. 2) Replace the module that the DTC has been detected. 3) Read the DTC using Subaru Select Monitor. <Ref. to LAN(diag)-31, Read Diagnostic Trouble Code (DTC).>	Is U0155 a current malfunction?	Replace the combination meter. <Ref. to IDI-18, Combination Meter.>	System is normal.
8	CHECK HARNESS. 1) Shake the harness, and check for poor contact. 2) Read the DTC using Subaru Select Monitor. <Ref. to LAN(diag)-31, Read Diagnostic Trouble Code (DTC).>	Is U0155 a current malfunction?	Repair the poor contact of harness, or replace the harness.	Go to step 9.
9	CHECK CONNECTOR. Check the connector used for high speed CAN for poor contact.	Is there poor contact of connector?	Repair the connector that has poor contact, or replace harness.	It is possible that temporary poor communication occurs. Delete the DTC.

Diagnostic Procedure with Diagnostic Trouble Code (DTC)

LAN SYSTEM (DIAGNOSTICS)

V: DTC U0156 LOST COMMUNICATION WITH INFORMATION CENTER "A"

DTC DETECTING CONDITION:

No data is received from MFD.

TROUBLE SYMPTOM:

Display of MFD does not operate properly.

Step	Check	Yes	No
1	CHECK PERFORMING OF BASIC DIAGNOSTIC PROCEDURE.	Go to step 2.	Perform the basic diagnostic procedure. <Ref. to LAN(diag)-2, Basic Diagnostic Procedure.>
2	CHECK DTC. Check the displayed DTC.	Perform the diagnosis according to DTC.	Go to step 3.
3	CHECK DTC. Check the displayed DTC.	Go to step 4.	Go to step 8.
4	CHECK DTC. 1) Check CAN communication circuit. <Ref. to LAN(diag)-33, CAN Communication Circuit Check.> 2) Read the DTC using Subaru Select Monitor. <Ref. to LAN(diag)-31, Read Diagnostic Trouble Code (DTC).>	Go to step 5.	Go to step 8.
5	CHECK DTC. Using the Subaru Select Monitor, read DTC of all the systems. <Ref. to LAN(diag)-31, Read Diagnostic Trouble Code (DTC).>	Replace the MFD. <Ref. to IDI-25, Multi-function Display (MFD).>	Go to step 6.
6	REPLACE MODULE. 1) Replace the MFD. <Ref. to IDI-25, Multi-function Display (MFD).> 2) Read the DTC using Subaru Select Monitor. <Ref. to LAN(diag)-31, Read Diagnostic Trouble Code (DTC).>	Go to step 7.	System is normal.
7	CHECK MODULE. 1) Reinstall the MFD. 2) Replace the module that the DTC has been detected. 3) Read the DTC using Subaru Select Monitor. <Ref. to LAN(diag)-31, Read Diagnostic Trouble Code (DTC).>	Replace the MFD. <Ref. to IDI-25, Multi-function Display (MFD).>	System is normal.
8	CHECK HARNESS. 1) Shake the harness, and check for poor contact. 2) Read the DTC using Subaru Select Monitor. <Ref. to LAN(diag)-31, Read Diagnostic Trouble Code (DTC).>	Repair the poor contact of harness, or replace the harness.	Go to step 9.
9	CHECK CONNECTOR. Check the connector used for high speed CAN for poor contact.	Repair the connector that has poor contact, or replace harness.	It is possible that temporary poor communication occurs. Delete the DTC.

Diagnostic Procedure with Diagnostic Trouble Code (DTC)

LAN SYSTEM (DIAGNOSTICS)

W: DTC U0164 LOST COMMUNICATION WITH HVAC CONTROL MODULE

DTC DETECTING CONDITION:

No data is received from A/C control panel.

TROUBLE SYMPTOM:

Cooperation control of air conditioner does not operate properly.

Step	Check	Yes	No
1	CHECK PERFORMING OF BASIC DIAGNOSTIC PROCEDURE.	Go to step 2.	Perform the basic diagnostic procedure. <Ref. to LAN(diag)-2, Basic Diagnostic Procedure.>
2	CHECK DTC. Check the displayed DTC.	Are DTCs other than U*** displayed?	Perform the diagnosis according to DTC.
3	CHECK DTC. Check the displayed DTC.	Is U0164 a current malfunction?	Go to step 3.
4	CHECK DTC. 1) Check CAN communication circuit. <Ref. to LAN(diag)-33, CAN Communication Circuit Check.> 2) Read the DTC using Subaru Select Monitor. <Ref. to LAN(diag)-31, Read Diagnostic Trouble Code (DTC).>	Is U0164 a current malfunction?	Go to step 4.
5	CHECK DTC. Using the Subaru Select Monitor, read DTC of all the systems. <Ref. to LAN(diag)-31, Read Diagnostic Trouble Code (DTC).>	Is U0164 a current malfunction?	Go to step 5.
6	REPLACE MODULE. 1) Replace the A/C control panel. 2) Read the DTC using Subaru Select Monitor. <Ref. to LAN(diag)-31, Read Diagnostic Trouble Code (DTC).>	Is the air conditioner data no-receive detected in several modules?	Go to step 4.
7	CHECK MODULE. 1) Restore the A/C control panel. 2) Replace the module that the DTC has been detected. 3) Read the DTC using Subaru Select Monitor. <Ref. to LAN(diag)-31, Read Diagnostic Trouble Code (DTC).>	Is U0164 a current malfunction?	Go to step 8.
8	CHECK HARNESS. 1) Shake the harness, and check for poor contact. 2) Read the DTC using Subaru Select Monitor. <Ref. to LAN(diag)-31, Read Diagnostic Trouble Code (DTC).>	Is U0164 a current malfunction?	Go to step 8.
9	CHECK CONNECTOR. Check the connector used for high speed CAN for poor contact.	Is U0164 a current malfunction?	Go to step 8.
		Is there poor contact of connector?	Repair the poor contact of harness, or replace the harness.
		Repair the connector that has poor contact, or replace harness.	It is possible that temporary poor communication occurs. Delete the DTC.

Diagnostic Procedure with Diagnostic Trouble Code (DTC)

LAN SYSTEM (DIAGNOSTICS)

X: DTC U0327 SOFTWARE INCOMPATIBILITY WITH VEHICLE SECURITY CONTROL MODULE

DTC DETECTING CONDITION:

No data is received from keyless access CM.

TROUBLE SYMPTOM:

Cooperation control of keyless access does not operate properly.

Step	Check	Yes	No	
1	CHECK PERFORMING OF BASIC DIAGNOSTIC PROCEDURE.	Was the basic diagnostic procedure performed up to STEP 3?	Go to step 2.	Perform the basic diagnostic procedure. <Ref. to LAN(diag)-2, Basic Diagnostic Procedure.>
2	CHECK DTC. Check the displayed DTC.	Are DTCs other than U*** displayed?	Perform the diagnosis according to DTC.	Go to step 3.
3	CHECK DTC. Check the displayed DTC.	Is U0327 a current malfunction?	Go to step 4.	Go to step 8.
4	CHECK DTC. 1) Check CAN communication circuit. <Ref. to LAN(diag)-33, CAN Communication Circuit Check.> 2) Read the DTC using Subaru Select Monitor. <Ref. to LAN(diag)-31, Read Diagnostic Trouble Code (DTC).>	Is U0327 a current malfunction?	Go to step 5.	Go to step 8.
5	CHECK DTC. Using the Subaru Select Monitor, read DTC of all the systems. <Ref. to LAN(diag)-31, Read Diagnostic Trouble Code (DTC).>	Is the smart data no-receive detected in several modules?	Replace the keyless access CM. <Ref. to SL-89, Keyless Access CM.>	Go to step 6.
6	REPLACE MODULE. 1) Replace the keyless access CM. NOTE: Do not register the keyless access CM. 2) Read the DTC using Subaru Select Monitor. <Ref. to LAN(diag)-31, Read Diagnostic Trouble Code (DTC).>	Is U0327 a current malfunction?	Go to step 7.	System is normal. NOTE: Be sure to perform keyless access CM registration.
7	CHECK MODULE. 1) Reinstall the keyless access CM. 2) Replace the module that the DTC has been detected. 3) Read the DTC using Subaru Select Monitor. <Ref. to LAN(diag)-31, Read Diagnostic Trouble Code (DTC).>	Is U0327 a current malfunction?	Replace the keyless access CM. <Ref. to SL-89, Keyless Access CM.>	System is normal.
8	CHECK HARNESS. 1) Shake the harness, and check for poor contact. 2) Read the DTC using Subaru Select Monitor. <Ref. to LAN(diag)-31, Read Diagnostic Trouble Code (DTC).>	Is U0327 a current malfunction?	Repair the poor contact of harness, or replace the harness.	Go to step 9.
9	CHECK CONNECTOR. Check the connector used for high speed CAN for poor contact.	Is there poor contact of connector?	Repair the connector that has poor contact, or replace harness.	It is possible that temporary poor communication occurs. Delete the DTC.

Diagnostic Procedure with Diagnostic Trouble Code (DTC)

LAN SYSTEM (DIAGNOSTICS)

Y: DTC U1120 LOST COMMUNICATION WITH AUTOSTART STOP CONTROL MODULE

NOTE:

The electric power steering CM identifies whether the Auto Start Stop function is provided or not using information from the combination meter. Therefore, this DTC may be detected if lost communication with the combination meter occurs.

For the diagnostic procedure, refer to DTC U0155 LOST COMMUNICATION WITH INSTRUMENT PANEL CLUSTER (IPC) CONTROL MODULE. <Ref. to LAN(diag)-118, DTC U0155 LOST COMMUNICATION WITH INSTRUMENT PANEL CLUSTER (IPC) CONTROL MODULE, Diagnostic Procedure with Diagnostic Trouble Code (DTC).>

Diagnostic Procedure with Diagnostic Trouble Code (DTC)

LAN SYSTEM (DIAGNOSTICS)

Z: DTC U1232 LOST COMMUNICATION WITH REAR/SIDE RADAR CONTROL MODULE

DTC DETECTING CONDITION:

No data is received from radar sensor.

TROUBLE SYMPTOM:

Radar sensor does not operate normally.

Step	Check	Yes	No	
1	CHECK PERFORMING OF BASIC DIAGNOSTIC PROCEDURE.	Was the basic diagnostic procedure performed up to STEP 8?	Go to step 2.	Perform the basic diagnostic procedure. <Ref. to LAN(diag)-2, Basic Diagnostic Procedure.>
2	CHECK DTC. Check the displayed DTC.	Are DTCs other than U*** displayed?	Perform the diagnosis according to DTC.	Go to step 3.
3	CHECK DTC. Check the displayed DTC.	Is U1232 a current malfunction?	Go to step 4.	Go to step 8.
4	CHECK DTC. 1) Check CAN communication circuit. <Ref. to LAN(diag)-33, CAN Communication Circuit Check.> 2) Read the DTC using Subaru Select Monitor. <Ref. to LAN(diag)-31, Read Diagnostic Trouble Code (DTC).>	Is U1232 a current malfunction?	Go to step 5.	Go to step 8.
5	CHECK DTC. Using the Subaru Select Monitor, read DTC of all the systems. <Ref. to LAN(diag)-31, Read Diagnostic Trouble Code (DTC).>	Is the radar data no-receive detected in several modules?	Replace the radar sensor LH. <Ref. to RVD-6, Radar Sensor.>	Go to step 6.
6	REPLACE MODULE. 1) Replace the radar sensor LH. 2) Read the DTC using Subaru Select Monitor. <Ref. to LAN(diag)-31, Read Diagnostic Trouble Code (DTC).>	Is U1232 a current malfunction?	Go to step 7.	System is normal.
7	CHECK MODULE. 1) Reinstall the radar sensor LH. 2) Replace the module that the DTC has been detected. 3) Read the DTC using Subaru Select Monitor. <Ref. to LAN(diag)-31, Read Diagnostic Trouble Code (DTC).>	Is U1232 a current malfunction?	Replace the radar sensor LH. <Ref. to RVD-6, Radar Sensor.>	System is normal.
8	CHECK HARNESS. 1) Shake the harness, and check for poor contact. 2) Read the DTC using Subaru Select Monitor. <Ref. to LAN(diag)-31, Read Diagnostic Trouble Code (DTC).>	Is U1232 a current malfunction?	Repair the poor contact of harness, or replace the harness.	Go to step 9.
9	CHECK CONNECTOR. Check the connector used for high speed CAN for poor contact.	Is there poor contact of connector?	Repair the connector that has poor contact, or replace harness.	It is possible that temporary poor communication occurs. Delete the DTC. <Ref. to LAN(diag)-32, Clear Memory Mode.>

Diagnostic Procedure with Diagnostic Trouble Code (DTC)

LAN SYSTEM (DIAGNOSTICS)

AA:DTC U1235 LOST COMMUNICATION WITH EyeSight

DTC DETECTING CONDITION:

No data from stereo camera is received.

TROUBLE SYMPTOM:

Cooperation control of EyeSight does not operate properly.

	Step	Check	Yes	No
1	CHECK PERFORMING OF BASIC DIAGNOSTIC PROCEDURE.	Was the basic diagnostic procedure performed up to STEP 3?	Go to step 2.	Perform the basic diagnostic procedure. <Ref. to LAN(diag)-2, Basic Diagnostic Procedure.>
2	CHECK DTC. Check the displayed DTC.	Are DTCs other than U*** displayed?	Perform the diagnosis according to DTC.	Go to step 3.
3	CHECK DTC. Check the displayed DTC.	Is U1235 a current malfunction?	Go to step 4.	Go to step 8.
4	CHECK DTC. 1) Check CAN communication circuit. <Ref. to LAN(diag)-33, CAN Communication Circuit Check.> 2) Read the DTC using Subaru Select Monitor. <Ref. to LAN(diag)-31, Read Diagnostic Trouble Code (DTC).>	Is U1235 a current malfunction?	Go to step 5.	Go to step 8.
5	CHECK DTC. Using the Subaru Select Monitor, read DTC of all the systems. <Ref. to LAN(diag)-31, Read Diagnostic Trouble Code (DTC).>	Is the EyeSight data no-receive detected in several modules?	Replace the stereo camera. <Ref. to ES-7, Stereo Camera.>	Go to step 6.
6	REPLACE MODULE. 1) Replace the stereo camera. 2) Read the DTC using Subaru Select Monitor. <Ref. to LAN(diag)-31, Read Diagnostic Trouble Code (DTC).>	Is U1235 a current malfunction?	Go to step 7.	System is normal.
7	CHECK MODULE. 1) Reinstall the stereo camera. 2) Replace the module that the DTC has been detected. 3) Read the DTC using Subaru Select Monitor. <Ref. to LAN(diag)-31, Read Diagnostic Trouble Code (DTC).>	Is U1235 a current malfunction?	Replace the stereo camera. <Ref. to ES-7, Stereo Camera.>	System is normal.
8	CHECK HARNESS. 1) Shake the harness, and check for poor contact. 2) Read the DTC using Subaru Select Monitor. <Ref. to LAN(diag)-31, Read Diagnostic Trouble Code (DTC).>	Is U1235 a current malfunction?	Repair the poor contact of harness, or replace the harness.	Go to step 9.
9	CHECK CONNECTOR. Check the connector used for high speed CAN for poor contact.	Is there poor contact of connector?	Repair the connector that has poor contact, or replace harness.	It is possible that temporary poor communication occurs. Delete the DTC.

12. General Diagnostic Table

A: INSPECTION

Item	Operation	Specifications		Note
		YES	NO	
Diagnostic code	DTC is displayed when inspecting all DTCs.	Perform the diagnosis according to DTC.	System is normal.	—
Speedometer	Faster vehicle speed than the actual speed is displayed.	VDC CM data may not be received.	System is normal.	Also, check vehicle speed pulse circuit.
Fuel gauge	Fuel is present, but displayed less than actual amount.	Communication error may be present.	System is normal.	Also, check the fuel gauge.
Fuel level warning light	Fuel is present, but the light illuminates.	Communication error may be present.	System is normal.	Also, check the fuel gauge.
Engine coolant temperature light	Engine coolant temperature light blinks in red and blue alternately.	Communication error may be present.	System is normal.	Check the engine coolant light related items.
[S], [I] or [S#] indicator	Blinking.	Communication error may be present.	System is normal.	Check the intelligent switch.
VDC indicator	Illuminating.	Communication error may be present.	System is normal.	Check that VDC is not operating.
VDC OFF indicator	Illuminating.	Communication error may be present.	System is normal.	Check that VDC is not OFF.
Brake warning, etc.	Illuminating.	Brake fluid may be low in amount, or communication error may be present.	System is normal.	Check brake related items.
Shift position	Not displayed.	Communication error may be present.	System is normal.	Also, check AT system.
AT temperature light	Blinking.	Communication error may be present.	System is normal.	Also, check AT system.
Door indicator	Not displayed.	Communication error may be present.	System is normal.	Check the door switch.
Clearance indicator	Not illuminating.	Communication error may be present.	System is normal.	Check the combination switch.
Hi beam indicator	Not illuminating.	Communication error may be present.	System is normal.	Check the combination switch.
Front fog indicator	Not illuminating.	Communication error may be present.	System is normal.	Check the combination switch.
Illumination	Illuminating at the maximum brightness.	Communication error may be present.	System is normal.	Also, check the illumination switch.
Cruise control indicator	Not illuminating.	Communication error may be present.	System is normal.	Check the cruise control system.
AWD indicator	Not illuminating.	Communication error may be present.	System is normal.	Check TCM.
Hill hold indicator	Not illuminating.	Communication error may be present.	System is normal.	Also, check VDC CM.

Basic Diagnostic Procedure

KEYLESS ACCESS WITH PUSH BUTTON START SYSTEM (DIAGNOSTICS)

1. Basic Diagnostic Procedure

A: PROCEDURE

CAUTION:

- Subaru Select Monitor kit is required for reading DTC, performing diagnosis and reading current data.
- Before removal or installation, be sure to remove any foreign matter (dust, moisture, oil, etc.).
- Registration of immobilizer may be needed after the replacement of control modules, etc. For detailed procedure, refer to the “REGISTRATION MANUAL FOR IMMOBILIZER” provided as a separate volume.

NOTE:

- Using the Function Setting (Customize), check that the keyless access system is not in a cancelled state. <Ref. to SL-108, OPERATION, Function Setting (Customize).>
- Check List for Interview <Ref. to KPS(diag)-4, Check List for Interview.>

Step	Check	Yes	No
1 CHECK BATTERY. Using a tester, measure the voltage of the battery.	Is the voltage 11 V or more?	Go to step 2.	Charge or replace the battery and perform check pre-inspection. Go to step 2.
2 CHECK PRE-INSPECTION. Use the interview check list to interview the user. <Ref. to KPS(diag)-4, Check List for Interview.>	Was the symptoms of the trouble recorded in the interview?	Go to step 3.	Interview the user again.
3 BASIC INSPECTION. Perform the inspection for LAN system. <Ref. to LAN(diag)-2, PROCEDURE, Basic Diagnostic Procedure.>	Is LAN system normal?	Go to step 4.	Check it according to DTC of LAN system. <Ref. to LAN(diag)-2, PROCEDURE, Basic Diagnostic Procedure.>
4 CHECK TROUBLE SYMPTOM. 1) Read DTC for «Keyless Access with Push Button Start». <Ref. to KPS(diag)-25, Read Diagnostic Trouble Code (DTC).> NOTE: If the communication function of the Subaru Select Monitor cannot be executed properly, check the communication circuit. <Ref. to KPS(diag)-22, COMMUNICATION FOR INITIALIZING IMPOSSIBLE, Subaru Select Monitor.> 2) Record all DTCs, time stamp and freeze frame data. NOTE: For time stamp, refer to “LAN SYSTEM”. <Ref. to LAN(diag)-6, TIME STAMP, CAUTION, General Description.>	Is DTC displayed on Subaru Select Monitor?	Perform diagnosis according to the DTC.	Go to step 5.
5 CHECK PHENOMENON LIST. Check the “Phenomenon List”. <Ref. to KPS(diag)-98, General Diagnostic Table.>	Is there a symptom that corresponds in the phenomenon list?	Perform diagnosis according to the procedures in the phenomenon list.	Go to step 6.

Basic Diagnostic Procedure

KEYLESS ACCESS WITH PUSH BUTTON START SYSTEM (DIAGNOSTICS)

Step	Check	Yes	No
6 CHECK TROUBLE PHENOMENON. 1) Perform check of current data. <Ref. to KPS(diag)-26, Read Current Data.> 2) Perform a function check. <Ref. to KPS(diag)-5, KEYLESS ACCESS WITH PUSH BUTTON START SYSTEM, CAUTION, General Description.> 3) Perform a unit check.	Was the trouble cause found?	Repair the cause of trouble.	Repeat a basic check again.

Check List for Interview

KEYLESS ACCESS WITH PUSH BUTTON START SYSTEM (DIAGNOSTICS)

2. Check List for Interview

A: CHECK

Inspect the following items regarding the vehicle's state.

Keyless Access with Push Button Start System Trouble Check List for Interview		Received	Year	Month	Date
Customer's name		Registration No.	Initial year of registration Year Month Date		
		Vehicle model	Frame number		
Interviewer	Inspector	Engine type	Odometer reading		
Customer specified content					
Date and time when the trouble occurred		Frequency of trouble occurrence			
Condition of trouble occurrence		Weather			
Road conditions		Occurrence location			
Accessory installation condition					
Trouble condition					
<input type="checkbox"/> Diagnostic code		<input type="checkbox"/> ()			
<input type="checkbox"/> Immobilizer system	Engine does not start		<input type="checkbox"/> Starter does not operate <input type="checkbox"/> Starter operates but engine does not start <input type="checkbox"/> Engine starts but stops immediately		
	Does not start with remote engine starter				
<input type="checkbox"/> Steering lock system	The steering lock is not released				
	The steering lock does not lock				
<input type="checkbox"/> Keyless access system	Can not lock/unlock using the touch sensor (lock), touch sensor (unlock), trunk opener button or rear gate opener button and rear lock button				
	Cannot lock with the touch sensor (lock)		<input type="checkbox"/> Driver's side door <input type="checkbox"/> Passenger's side door <input type="checkbox"/> Rear gate door		
	Cannot unlock with the touch sensor (unlock)				
	Cannot lock nor unlock with the touch sensor (lock), touch sensor (unlock)				
	Trunk does not open with the trunk opener button. Rear gate can not be locked with the rear lock button				
	Cannot unlock with the rear gate opener button				
	The access key lockout prevention feature does not function		<input type="checkbox"/> Passenger room <input type="checkbox"/> Luggage room		
	The LED does not illuminate when the access key button is pressed				
The external buzzer does not beep					
The passenger room buzzer does not sound					
<input type="checkbox"/> Other	The room light or map light does not illuminate ()				

NOTE:

- Perform the diagnostics according to the basic diagnostic procedure.
- If the room light or map light does not illuminate and the keyless access does not function at the same time, the back-up fuse may be loose or blown.

General Description

KEYLESS ACCESS WITH PUSH BUTTON START SYSTEM (DIAGNOSTICS)

3. General Description

A: CAUTION

1. SRS AIRBAG SYSTEM

The airbag system wiring harness is routed near the keyless access with push button start system.

CAUTION:

- Do not use electrical test equipment on any wiring harnesses and connectors in the airbag system.
- Be careful not to damage the wiring harness of the airbag system when servicing the keyless access with push button start system.

2. KEYLESS ACCESS WITH PUSH BUTTON START SYSTEM

NOTE:

- Using the function setting (ECM customizing), check that the keyless access system is not OFF. <Ref. to SL-108, OPERATION, Function Setting (Customize).>
- The dark current is approx. 400 mA if there is communication between the vehicle and access key.
- The dark current is approx. 40 mA if there is no communication between the vehicle and access key.*

* No communication with the vehicle means that the keyless access function has been cancelled or that the access key has not been near the vehicle for 15 minutes or more after door locking.

1) Keyless access door unlock function check

(1) Touch sensor (unlock)

(2) 40 — 80 cm

(1) When carrying the access key with all doors locked by keyless lock operation, check that when the touch sensor (unlock) built in to the back side surface of door outer handle of front door is touched, the driver's door will unlock (when touched on the driver's side) or all doors will unlock (when touched on the passenger's side) and the answer-back function operates (hazard light blinks twice, access buzzer sounds twice).

(2) In the keyless access door unlock detection area, hold the access key at the same height as the outer handle (approx. 80 cm from the ground) and in the direction shown in the figure, and check that the vehicle becomes unlock mode [access key LED (red) blinks] at 40 to 80 cm from the vehicle.

NOTE:

Check the access key battery if the LED (red) does not illuminate when the access key button is pressed. <Ref. to SL-78, INSPECTION, Access Key.>

General Description

KEYLESS ACCESS WITH PUSH BUTTON START SYSTEM (DIAGNOSTICS)

2) Keyless access door lock function check

(1) Touch sensor (lock)

(2) Approx. 30 cm

(1) When carrying the access key outside of the vehicle with all doors closed and unlocked, check that when the touch sensor (lock) on the surface of door outer handle of front door is touched, all doors will lock and the answer-back function operates (hazard light blinks once, access buzzer sounds once).

CAUTION:

If the access key is within the vehicle but not within the detection area (in the instrument panel, on the rear tray, in the glove box, on the floor, or in the door trim pocket), then lockout protection will not function when the doors are locked and the access key will be locked into the vehicle.

(2) To check the keyless access door lock operation range, hold the access key at a height of 10 cm under the bottom edge of the door glass (approx. 80 cm from the ground), point it in the direction shown in the figure at a distance of approx. 30 cm from the vehicle, and check that all doors lock and the answer-back function operates (hazard light blinks once, access buzzer sounds once) when you touch the touch sensor (lock).

(3) Check the passenger's side door in the same manner.

NOTE:

- When the door cannot lock if the touch sensor (lock) is touched, touch the touch sensor (lock) with palm.
- Since communication is not possible within close range (20 cm or less) of the door outer handle, the access key may not operate if you touch the touch sensor (lock) with the same hand you are holding the access key.
- If the lockout prevention buzzer sounds, it is possible that the interior transmitter has radio wave leakage.

General Description

KEYLESS ACCESS WITH PUSH BUTTON START SYSTEM (DIAGNOSTICS)

3) Check of the keyless access rear gate function

SL-10424

(1) Rear gate opener button

(2) Rear lock button

(3) 40 — 80 cm

(1) With the rear gate locked, the all doors unlocks and the rear gate opens simultaneously and the answer-back function operates (hazard light blinks twice, external buzzer sounds twice) when you press the rear gate opener button while carrying the access key.

(2) To check the range for keyless access rear gate open operation, hold the access key behind and in the center of the vehicle at the same height as the rear gate opener button (90 cm from the ground), point it in the direction shown in the figure at a distance of 40 to 80 cm from the vehicle, and check that the all doors unlocks and the rear gate opens simultaneously and the answer-back function operates (hazard light blinks twice, external buzzer sounds twice) when the rear gate opener button is pressed.

(3) With the rear gate unlock, check that the all doors lock and the answer-back function operates (hazard light blinks once, external buzzer sounds once) when rear lock button is pressed while carrying the access key.

4) Keyless access ignition switching function check

(1) With the ignition OFF, enter the vehicle while carrying the access key. With the shift lever in the P range, check that the push button ignition switch indicator is illuminated in green when you depress the brake pedal, and check that the engine starts when you press the push button ignition switch while the indicator illuminated in green.

(2) While carrying the access key, check that the status changes as follows each time you press the push button ignition switch without depressing the brake pedal: 'Ignition OFF' → 'ACC ON' → 'Ignition ON' → 'Ignition OFF'. However, if the shift lever is a range other than the P range and the push button ignition switch is pressed from ignition ON, then the status does not change to ignition OFF and instead will change to ACC ON.

(3) After the vehicle has stopped, press the push button ignition switch and ignition is turned OFF (engine stopped • all power supplies OFF). However, if the shift lever is in any range except for the P range and the push button ignition switch is pressed with the vehicle stopped, then the ignition is not turned OFF and instead the power supplies changes to ACC ON. Check that the steering lock operates if the door is opened in the ignition OFF state (However, the shift must be in the P range).

General Description

KEYLESS ACCESS WITH PUSH BUTTON START SYSTEM (DIAGNOSTICS)

(4) To check the range of the keyless access ignition operation, check that the engine can start when you set the access key at the check position on the seat in the direction indicated in the figure.

SL-03099

CAUTION:

The access key may not be correctly detected even though it is within the detection area within the passenger room, if it is on the instrument panel, on the rear tray, in the glove box, on the floor, or in the door trim pocket.

NOTE:

Perform the check multiple times, once each with the access key positioned on the driver's seat, on the passenger's seat, and on the rear seat in 2 locations.

5) Lockout protection function check (in the passenger room)

CAUTION:

Open one of the windows before performing this check in order to prevent the key from being locked inside the vehicle.

- (1) Position the access key on the driver's or passenger's seat.
- (2) Close all doors. (With all doors unlocked)
- (3) Check that the doors do not lock and the lockout protection buzzer (exterior) sounds for 2 seconds when you touch the touch sensor (lock) of either the driver's or passenger's door.

General Description

KEYLESS ACCESS WITH PUSH BUTTON START SYSTEM (DIAGNOSTICS)

6) Keyless access cancel function check

- (1) After setting the keyless access cancel function, check that all keyless access and start system (keyless access) functions are inoperable. (For cancel setting, refer to <Ref. to SL-108, OPERATION, Function Setting (Customize).>)

NOTE:

When keyless access is cancelled, door lock and unlock can be operated by access key button operation and the starter system can be operated by passing the access key over the push button ignition switch with the access key button toward you.

SL-03101

7) Access key diagnostic mode

- (1) Connect to the Subaru Select Monitor, and select «Diagnosis» on the «Start» display.
- (2) On «Vehicle selection» display, input the target vehicle information and select «Confirmed».
- (3) On «Main Menu» display, select «Each System».
- (4) On «Select System» display, select «Keyless Access with Push Button Start» and then select «Enter».
- (5) On «Select Function» display, select «Work Support».
- (6) From «Work Support», select «Keyless access system check».
- (7) Select the transmitter to check from the items.
- (8) Check that the door lock buzzer sounds (short blips, a continuous beeping sound for the center room antenna) when the access key is near the selected transmitter or antenna.

Disconnect the control module connector (B572) before checking the following items.

NOTE:

If the measured value is out of standard, it is possible that the vehicle has a fault.

Terminal No.	Item	Measuring condition	Standard
(B572) No. 2 (+B) ↔ (B572) No. 11 (GND)	Voltage	Always	9.5 — 16 V
(B572) No. 11 (GND) ↔ Chassis ground	Resistance	Always	Less than 1 Ω

NOTE:

If the measured value is out of standard, it is possible that the vehicle has a fault.

Terminal No.	Item	Measuring condition	Standard
(B573) No. 15 (IDW) ↔ Chassis ground (For EK, ER, EN models only)	Continuity	Always	Continuity exists

Control Module I/O Signal

KEYLESS ACCESS WITH PUSH BUTTON START SYSTEM (DIAGNOSTICS)

Disconnect the control module connectors (B574) and (B572) before checking the following items.

NOTE:

If the measured value is out of standard, it is possible that the vehicle has a fault.

Terminal No.	Item	Measuring condition	Standard
(B574) No. 4 (ACCD) ↔ Chassis ground	Resistance	Always (20°C)	152.61 — 216.5 Ω
(B572) No. 9 (IG2D) ↔ Chassis ground	Resistance	Always (20°C)	74.15 — 460.88 Ω
(B574) No. 6 (IG1D) ↔ Chassis ground	Resistance	Always (20°C)	50.87 — 72.17 Ω
(B572) No. 18 (STP1) ↔ Chassis ground (AT model only)	Voltage	Brake pedal depressed → released	11 — 14 V → 1 V or less
(B574) No. 25 (P) ↔ Chassis ground (AT model only)	Resistance	Except for shift positions P → Shift position P	40 kΩ or more → 200 Ω or less
(B574) No. 27 (SPD) ↔ Chassis ground	Resistance	Always	30 kΩ or more
(B574) No. 28 (SSW1) ↔ Chassis ground	Resistance	Push button ignition switch pressed → released	Less than 1 Ω → 10 kΩ or more
(B574) No. 29 (SLR+) ↔ Chassis ground	Resistance	Always	10 kΩ or more
(B574) No. 30 (SSW2) ↔ Chassis ground	Resistance	Push button ignition switch pressed → released	Less than 1 Ω → 10 kΩ or more
(B574) No. 17 (LIN) ↔ Chassis ground	Continuity	Always	Continuity does not exist
(B574) No. 14 (CANH) ↔ Chassis ground	Pulse	ACC ON or IGN ON	Pulse generation
(B574) No. 15 (CANL) ↔ Chassis ground	Pulse	ACC ON or IGN ON	Pulse generation

Connect the control module connector before checking the following items.

NOTE:

If the measured value is out of standard, it is possible that the keyless access CM has a fault.

Terminal No.	Item	Measuring condition	Standard
(B574) No. 1 (VC5) ↔ (B574) No. 24 (AGND)	Voltage	30 seconds or more have passed after the door was opened or closed with IG OFF and the brake pedal released.	1 V or less
	Waveform	Within 30 seconds after the push button ignition switch is pressed with IG OFF and access key not in the passenger room	Waveform 1
(B574) No. 2 (CG5B) ↔ (B572) No. 11 (GND)	Pulse	All doors closed, ACC and IG OFF, access key not in passenger room, touch sensor (lock) OFF → ON	No pulse output → Pulse output detected
(B574) No. 3 (CLG5) ↔ (B572) No. 11 (GND)	Pulse	All doors closed, ACC and IG OFF, access key not in passenger room, touch sensor (lock) OFF → ON	No pulse output → Pulse output detected
(B574) No. 4 (ACCD) ↔ (B572) No. 11 (GND)	Voltage	IG OFF → ACC ON	1 V or less → 9 — 14 V
(B574) No. 6 (IG1D) ↔ (B572) No. 11 (GND)	Voltage	ACC ON → IG ON	1 V or less → 9 — 14 V
(B574) No. 7 (CODE) ↔ (B574) No. 24 (AGND)	Voltage	30 seconds or more have passed after the door was opened or closed with IG OFF and the brake pedal released.	1 V or less
	Waveform	Turn the ignition switch to OFF and with the access key near the push button ignition switch, press the push button ignition switch*1	Waveform 2
(B574) No. 9 (TXCT) ↔ (B574) No. 24 (AGND)	Voltage	30 seconds or more have passed after the door was opened or closed with IG OFF and the brake pedal released.	1 V or less
	Waveform	Turn the ignition switch to OFF and with the access key near the push button ignition switch, press the push button ignition switch*1	Waveform 3

Control Module I/O Signal

KEYLESS ACCESS WITH PUSH BUTTON START SYSTEM (DIAGNOSTICS)

Terminal No.	Item	Measuring condition	Standard
(B574) No. 10 (CG2B) ↔ (B572) No. 11 (GND)	Pulse	ACC and IG OFF, all doors closed, all doors locked by lock operation with wireless remote control, access key not in passenger room	No pulse output → Pulse output detected
(B574) No. 11 (CLG2) ↔ (B572) No. 11 (GND)	Pulse	ACC and IG OFF, all doors closed, all doors locked by lock operation with wireless remote control, access key not in passenger room	No pulse output → Pulse output detected
(B574) No. 12 (CLG1) ↔ (B572) No. 11 (GND)	Pulse	ACC and IG OFF, all doors closed, all doors locked by lock operation with wireless remote control, access key not in passenger room	No pulse output → Pulse output detected
(B574) No. 13 (CG1B) ↔ (B572) No. 11 (GND)	Pulse	ACC and IG OFF, all doors closed, all doors locked by lock operation with wireless remote control, access key not in passenger room	No pulse output → Pulse output detected
(B574) No. 19 (POS1) ↔ (B572) No. 11 (GND)	Voltage	ACC and IG OFF → ACC or IG ON	9 — 14 V → less than 2 V
(B574) No. 21 (POS2) ↔ (B572) No. 11 (GND)	Voltage	ACC and IG OFF → ACC or IG ON	9 — 14 V → less than 2 V
(B574) No. 24 (AGND) ↔ Chassis ground	Resistance	Always	Less than 1 Ω
(B574) No. 25 (P) ↔ (B572) No. 11 (GND) (AT model only)	Voltage	Except for shift positions P → Shift position P	9 — 14 V or more → 1.5 V or less
(B574) No. 26 (SLP) ↔ (B572) No. 11 (GND)	Voltage	With ignition switch OFF and shift position P, Steering lock → Steering unlock	11 — 14 V → 1.2 V or less
(B574) No. 27 (SPD) ↔ Chassis ground	Pulse	Driving at approx. 5 km/h	Pulse generation according to vehicle speed (approx. 5 km/h: 3.54 Hz)
(B574) No. 28 (SSW1) ↔ (B572) No. 11 (GND)	Voltage	Push button ignition switch released → pressed	11 — 14 V → 1 V or less
(B574) No. 29 (SLR+) ↔ (B572) No. 11 (GND)	Voltage	When the following conditions are met, the doors are closed → opened, and steering lock motor is driven <ul style="list-style-type: none"> • Steering lock is unlocked • IG OFF • Shift position P 	11 — 14 V (Steering lock motor is stopped) → 1 V or less (Steering lock motor is driven)
(B574) No. 30 (SSW2) ↔ (B572) No. 11 (GND)	Voltage	Push button ignition switch released → pressed	11 — 14 V → 1 V or less
(B573) No. 1 (CG8B) ↔ (B572) No. 11 (GND)	Pulse	ACC and IG OFF, all doors closed, all doors locked, rear gate opener button OFF → ON	No pulse output → Pulse output detected
(B573) No. 2 (CLG8) ↔ (B572) No. 11 (GND)	Pulse	ACC and IG OFF, all doors closed, all doors locked, rear gate opener button OFF → ON	No pulse output → Pulse output detected

Subaru Select Monitor

KEYLESS ACCESS WITH PUSH BUTTON START SYSTEM (DIAGNOSTICS)

6. Subaru Select Monitor

A: OPERATION

For detailed operation procedures, refer to “Application help”.

B: COMMUNICATION FOR INITIALIZING IMPOSSIBLE

NOTE:

Confirm that the LAN system is working properly before the diagnosis.
Subaru Select Monitor communication line is open or shorted.

Detecting condition:

- Defective harness
- Power supply circuit malfunction
- Defective keyless access CM
- Defective CAN communication circuit
- Defective Subaru Select Monitor

Trouble symptom:

Not communicable with Subaru Select Monitor.

Subaru Select Monitor

KEYLESS ACCESS WITH PUSH BUTTON START SYSTEM (DIAGNOSTICS)

Wiring diagram:

- Push button start system <Ref. to WI-186, WIRING DIAGRAM, Push Button Start System.>
- CAN communication system <Ref. to WI-68, WIRING DIAGRAM, CAN Communication System.>

Step	Check	Yes	No
1	CHECK OTHER COMMUNICATION. Communicate with the system other than the keyless access system using the Subaru Select Monitor.	Go to step 2.	Perform the "Communication for Initializing Impossible" of LAN system. <Ref. to LAN(diag)-11, COMMUNICATION FOR INITIALIZING IMPOSSIBLE, Subaru Select Monitor.>

Subaru Select Monitor

KEYLESS ACCESS WITH PUSH BUTTON START SYSTEM (DIAGNOSTICS)

Step	Check	Yes	No
2 CHECK DTC. Read the DTC of the LAN system using the Subaru Select Monitor. <Ref. to LAN(diag)-31, Read Diagnostic Trouble Code (DTC).>	Is DTC detected?	Perform the diagnosis according to DTC.	Go to step 3 .
3 CHECK KEYLESS ACCESS CM. 1) Turn the ignition switch to OFF. 2) Disconnect the keyless access CM connector. 3) Connect the disconnected connectors. 4) Perform communication with the keyless access system using the Subaru Select Monitor.	Is communication possible?	It is possible that temporary poor communication occurs.	Replace the keyless access CM. <Ref. to SL-89, Keyless Access CM.>

CAUTION:

For replacement procedure of keyless access CM, refer to the “REGISTRATION MANUAL FOR IMMOBILIZER” provided as a separate volume.

Read Diagnostic Trouble Code (DTC)

KEYLESS ACCESS WITH PUSH BUTTON START SYSTEM (DIAGNOSTICS)

7. Read Diagnostic Trouble Code (DTC)

A: OPERATION

- 1) On «Start» display, select «Diagnosis».
- 2) On «Vehicle selection» display, input the target vehicle information and select «Confirmed».
- 3) On «Main Menu» display, select «Each System».
- 4) On «Select System» display, select «Keyless Access with Push Button Start» and then select «Enter».
- 5) On «Select Function» display, select «DTC».

NOTE:

- For detailed operation procedures, refer to “Application help”.
- For details concerning DTC, refer to “List of Diagnostic Trouble Code (DTC)”. <Ref. to KPS(diag)-35, List of Diagnostic Trouble Code (DTC).>

Read Current Data

KEYLESS ACCESS WITH PUSH BUTTON START SYSTEM (DIAGNOSTICS)

8. Read Current Data

A: OPERATION

- 1) On «Start» display, select «Diagnosis».
- 2) On «Vehicle selection» display, input the target vehicle information and select «Confirmed».
- 3) On «Main Menu» display, select «Each System».
- 4) On «Select System» display, select «Keyless Access with Push Button Start» and then select «Enter».
- 5) On «Select Function» display, select «Data Monitor».

NOTE:

For detailed operation procedures, refer to “Application help”.

B: LIST

1. Keyless access system

Items to be displayed	Unit of measure	Content	Note
Driver's unlock touch sensor switch	ON/OFF	Keyless access CM input value	ON when the touch sensor (unlock) built on the back surface of the driver's door outer handle is touched
Passenger's unlock touch sensor switch	ON/OFF	Keyless access CM input value	ON when the touch sensor (unlock) built on the back surface of the passenger's door outer handle is touched
Driver's lock touch sensor SW	ON/OFF	Keyless access CM input value	ON when the touch sensor (lock) built on the surface of the driver's door outer handle is touched
Passenger's lock touch sensor SW	ON/OFF	Keyless access CM input value	ON when the touch sensor (lock) built on the surface of the passenger's door outer handle is touched
Rear Gate Request SW	ON/OFF	Keyless access CM input value	ON when rear lock button is pressed
Secret code Keyless registration	Unregistered/ Registered	Keyless access CM input value	Registered when secret code keyless registration
IGN SW	ON/OFF	Keyless access CM input value	ON when ignition is ON
B/up fuse	Connecting/OFF	Keyless access CM internal value	When backup fuse is connected/connecting
ACC SW	ON/OFF	Keyless access CM input value	ON when accessory or ignition is ON
Incorrect vehicle ID	Yes/No	Keyless access CM internal value	Yes when the access key is different when keyless access is performed
No response	Yes/No	Keyless access CM internal value	Yes when there is no response from the access key when keyless access is performed
Incorrect response code, format	Yes/No	Keyless access CM internal value	Yes if the response from the access key differs when keyless access is performed
Battery consumption	Yes/No	Keyless access CM internal value	Yes if the access key battery is depleted
Incorrect response code, ID code	Yes/No	Keyless access CM internal value	Yes if the response from the access key differs when keyless access is performed
Incorrect response code, collation result	Yes/No	Keyless access CM internal value	Yes if the response from the access key differs when keyless access is performed
Incorrect ID code	Yes/No	Keyless access CM internal value	Yes if the response from the access key differs when keyless access is performed
Incorrect rolling code	Yes/No	Keyless access CM internal value	Yes if the response from the access key differs when keyless access is performed
Smart Cancel	Cancel/Normal	Keyless access CM internal value	Cancel in the keyless access function stopped condition
Simple Smart system cancel	Cancel/Normal	Keyless access CM internal value	Cancel in the simple cancel function set condition
ID Code Box W/H Connection State	Connecting/OFF	Keyless access CM internal value	Connecting status of the terminal (B573) No. 15

KEYLESS ACCESS WITH PUSH BUTTON START SYSTEM (DIAGNOSTICS)

Items to be displayed	Unit of measure	Content	Note
ID Code Box Existence Judging	Exist/Not Exist/Existence Judging	Keyless access CM internal value	Normal «Existence Judging»
Immobilizer	Set/Unset	Keyless access CM internal value	Set when the immobilizer is set
Remote engine starter communication ID confirmation	Collation NG/Collation OK	Keyless access CM internal value	Collation OK when using a registered remote control engine starter
Remote engine starter code registration confirmation	Unregistered/Registered	Keyless access CM internal value	Registered when the code is registered
STLC sleep possible status	Possible/Impossible	Steering lock CM internal value	Possible when sleep is possible
STLC wake-up transmission status	Transmission/No transmission	Steering lock CM internal value	Transmission when the wake-up signal is transmitted
Lock side sensor status	ON/OFF	Steering lock CM internal value	OFF in an unlocked status
Unlock side sensor status	ON/OFF	Steering lock CM internal value	OFF in an unlocked status
Lock confirmation	Confirmed/Unconfirmed	Steering lock CM internal value	Confirmed when steering lock is locked
Unlock confirmation	Confirmed/Unconfirmed	Steering lock CM internal value	Confirmed when steering lock is unlocked
Sensor initialization	Complete/incomplete	Steering lock CM internal value	Completed when sensor initial operation is completed
Motor protection control status	Rejected range/Permitted range	Steering lock CM internal value	Rejected range when motor protection control is not activated
Motor operation prohibition voltage evaluation	ON/OFF	Steering lock CM internal value	Prohibition when motor operation is prohibited
Diagnosis response	Normal/response	Steering lock CM internal value	Response when diagnostic communication is in progress
Sensor abnormal	Normal/Abnormal	Steering lock CM internal value	Abnormal when a trouble occurs in steering lock CM
Motor power supply short-circuit abnormal	Normal/Abnormal	Steering lock CM internal value	Abnormal when a trouble occurs in steering lock CM
Motor driver short-circuit abnormal	Normal/Abnormal	Steering lock CM internal value	Abnormal when a trouble occurs in steering lock CM
Lock bar engagement abnormal	Normal/Abnormal	Steering lock CM internal value	ON when the steering lock bar has experienced interference
Push start abnormal	Normal/Abnormal	Steering lock CM internal value	Abnormal when a trouble occurs in steering lock CM
Lock side relay operation	Stopped/Operating	Steering lock CM internal value	Operating in an unlock → lock status
Unlock side relay operation	Stopped/Operating	Steering lock CM internal value	Operating in an lock → unlock status
Motor drive FET drive	Stopped/Operating	Steering lock CM internal value	Operating when motor drive FET is operating
Motor reversal protection control	Stopped/Operating	Steering lock CM internal value	Operating when motor drive FET is operating
Engine start	Engine start permission/Engine start prohibition	Steering lock CM internal value	Permission when ignition ON
Sensor abnormal (past)	Normal/Abnormal	Steering lock CM internal value	Abnormal when a trouble occurs in steering lock CM
Motor power supply short-circuit abnormal (past)	Normal/Abnormal	Steering lock CM internal value	Abnormal when a trouble occurs in steering lock CM
Motor driver short-circuit abnormal (past)	Normal/Abnormal	Steering lock CM internal value	Abnormal when a trouble occurs in steering lock CM
Steering lock lock/unlock command reception history	ON (keep 10 sec)/OFF	Steering lock CM internal value	ON when steering lock is locked → unlocked, unlocked → locked

	IGN1 relay ON status	Keyless access CM output value	Displayed when ignition ON
	IGN2 relay ON status	Keyless access CM output value	Displayed when ignition ON
	STSW Condition	Keyless access CM output value	Displayed when brake pedal is depressed, and push button ignition switch is pressed
Vehicle identification	GAS MT/GAS AT/ HEV AT/Auto Start Stop MT/ Auto Start Stop AT	Keyless access CM output value	Equipped vehicle is displayed.
IGN1 external circuit abnormal	Not Detect/Detect	Keyless access CM output value	Detect when IGN1 external circuit is faulty
IGN2 external circuit abnormal	Not Detect/Detect	Keyless access CM output value	Detect when IGN2 external circuit is faulty
Start SW trouble	Not Detect/Detect	Keyless access CM output value	Detect when start SW is faulty
P signal mismatch	Not Detect/Detect	Keyless access CM output value	Detect when shift P signal is abnormal
Steering lock unlock waiting time out	Not Detect/Detect	Keyless access CM output value	Detect when the steering lock release time out occurred
Key collation waiting time out	Not Detect/Detect	Keyless access CM output value	Detect when the key collation time out occurred

2. Body integrated unit

Refer to the BODY CONTROL SYSTEM (DIAGNOSTICS) for the current data of the body integrated unit.
<Ref. to BC(diag)-12, LIST, Read Current Data.>

Clear Memory Mode

KEYLESS ACCESS WITH PUSH BUTTON START SYSTEM (DIAGNOSTICS)

9. Clear Memory Mode

A: OPERATION

- 1) On «Start» display, select «Diagnosis».
- 2) On «Vehicle selection» display, input the target vehicle information and select «Confirmed».
- 3) On «Main Menu» display, select «Each System».
- 4) On «Select System» display, select «Keyless Access with Push Button Start» and then select «Enter».
- 5) On «Select Function» display, select «DTC».
- 6) On «DTC» display, select «Clear Memory».

NOTE:

- For detailed operation procedures, refer to “Application help”.
- Initial diagnosis of electronic throttle control is performed after memory clearance. Wait for 10 seconds or more after turning the ignition switch to ON, and then start the engine.

Keyless Access System Check

KEYLESS ACCESS WITH PUSH BUTTON START SYSTEM (DIAGNOSTICS)

10. Keyless Access System Check

A: OPERATION

- 1) On «Start» display, select «Diagnosis».
- 2) On «Vehicle selection» display, input the target vehicle information and select «Confirmed».
- 3) On «Main Menu» display, select «Each System».
- 4) On «Select System» display, select «Keyless Access with Push Button Start» and then select «Enter».
- 5) On «Select Function» display, select «Work Support».
- 6) On «Work Support» display, select «Keyless access system check».
- 7) Select a transmitter to be checked.

Data	Customize setting	Remarks
Keyless access system check	Driver side external transmitter - internal tuner	When the setting content on the left is selected, the access key is neared to the selected transmitter (access antenna) and collation matches, the buzzer will sound.
	Passenger side external transmitter - internal tuner	
	Fr internal transmitter - internal tuner	
	Rr internal transmitter - internal tuner	
	R gate internal transmitter - internal tuner	
	R gate external transmitter - internal tuner	
	Immobilizer amplifier transmission	
Collation result history	Operate	
Clear	—	

NOTE:

For detailed operation procedures, refer to “Application help”.

System Operation Check Mode

KEYLESS ACCESS WITH PUSH BUTTON START SYSTEM (DIAGNOSTICS)

11. System Operation Check Mode

A: OPERATION

- 1) On «Start» display, select «Diagnosis».
- 2) On «Vehicle selection» display, input the target vehicle information and select «Confirmed».
- 3) On «Main Menu» display, select «Each System».
- 4) On «Select System» display, select «Keyless Access with Push Button Start» and then select «Enter».
- 5) On «Select Function» display, select «Active Test».
- 6) Select a location to be inspected.

NOTE:

Each output check continues to run for five seconds before stopping automatically.

Data	Keyless access CM output check	Remarks
Tuner power supply ON (indoor tuner)	Output	Perform the power supply check for the receiver.
	Stop	
Driver's external transmitter	Output	Perform the output check for the driver's side door outside antenna.
	Stop	
Passenger's external transmitter	Output	Perform the output check for the passenger's side door outside antenna.
	Stop	
STSW	Output	Turn on the STSW. *2
	Stop	
IGN2	Output	Turn on the IGN2.
	Stop	
IGN1	Output	Turn on the IGN1.
	Stop	
ACC	Output	Turn on the ACC.
	Stop	
Start SW character illumination lighted	Output	Perform ON output of the push button ignition switch back-up light. *1
	Stop	
Start SW indicator lighted (green)	Output	Perform ON output of the push button ignition switch back-up light. *1
	Stop	
Start SW indicator lighted (orange)	Output	Perform ON output of the push button ignition switch back-up light. *1
	Stop	
Steering lock power supply	Output	Output power supply signal from power supply CM to steering lock CM.
	Stop	

*1: When lit by a condition other than for a system operation check mode, it will not become unlit even when set to OFF or no output.

*2: When performed with ignition switch ON, engine will start. Therefore, great care must be exercised.

NOTE:

For detailed operation procedures, refer to "Application help".

List of Diagnostic Trouble Code (DTC)

KEYLESS ACCESS WITH PUSH BUTTON START SYSTEM (DIAGNOSTICS)

12. List of Diagnostic Trouble Code (DTC)

A: LIST

1. Keyless access system

DTC	Item	Content of diagnosis	Note
U0073	CONTROL MODULE COMMUNICATION BUS OFF	Detected when CAN line abnormality is detected.	<Ref. to KPS(diag)-39, DTC U0073 CONTROL MODULE COMMUNICATION BUS OFF, Diagnostic Procedure with Diagnostic Trouble Code (DTC).>
U0100	LOST COMMUNICATION WITH ECM/PCM "A"	Detected when CAN data from the engine control module (ECM) does not arrive.	<Ref. to KPS(diag)-39, DTC U0100 LOST COMMUNICATION WITH ECM/PCM "A", Diagnostic Procedure with Diagnostic Trouble Code (DTC).>
U0101	LOST COMMUNICATION WITH TCM	Detected when CAN data from TCM does not arrive.	<Ref. to KPS(diag)-39, DTC U0101 LOST COMMUNICATION WITH TCM, Diagnostic Procedure with Diagnostic Trouble Code (DTC).>
U0122	LOST COMMUNICATION WITH VEHICLE DYNAMICS CONTROL MODULE	Detected when CAN data from VDC does not arrive.	<Ref. to KPS(diag)-39, DTC U0122 LOST COMMUNICATION WITH VEHICLE DYNAMICS CONTROL MODULE, Diagnostic Procedure with Diagnostic Trouble Code (DTC).>
U0140	LOST COMMUNICATION WITH BODY CONTROL MODULE	Detected when CAN data from BIU does not arrive.	<Ref. to KPS(diag)-39, DTC U0140 LOST COMMUNICATION WITH BODY CONTROL MODULE, Diagnostic Procedure with Diagnostic Trouble Code (DTC).>
U0155	LOST COMMUNICATION WITH INSTRUMENT PANEL CLUSTER (IPC) CONTROL MODULE	Detected when CAN data from meter does not arrive.	<Ref. to KPS(diag)-39, DTC U0155 LOST COMMUNICATION WITH INSTRUMENT PANEL CLUSTER (IPC) CONTROL MODULE, Diagnostic Procedure with Diagnostic Trouble Code (DTC).>
U0401	INVALID DATA RECEIVED FROM ECM/PCM "A"	Detected when there is malfunction in CAN data from the engine control module (ECM).	<Ref. to KPS(diag)-39, DTC U0401 INVALID DATA RECEIVED FROM ECM/PCM "A", Diagnostic Procedure with Diagnostic Trouble Code (DTC).>
U0422	INVALID DATA RECEIVED FROM BODY CONTROL MODULE	Detected when CAN data from BIU is abnormal.	<Ref. to KPS(diag)-39, DTC U0422 INVALID DATA RECEIVED FROM BODY CONTROL MODULE, Diagnostic Procedure with Diagnostic Trouble Code (DTC).>
U1120	LOST COMMUNICATION WITH AUTOSTART STOP CONTROL MODULE	Detected when CAN data from hybrid system or from Auto Start Stop system does not arrive.	<Ref. to KPS(diag)-39, DTC U1120 LOST COMMUNICATION WITH AUTOSTART STOP CONTROL MODULE, Diagnostic Procedure with Diagnostic Trouble Code (DTC).>
B1242	WIRELESS TUNER	When short circuit occurs in harness between keyless access CM and receiver.	<Ref. to KPS(diag)-40, DTC B1242 WIRELESS TUNER, Diagnostic Procedure with Diagnostic Trouble Code (DTC).>
B2271	IGN RELAY CONTROL CIRCUIT	<ul style="list-style-type: none"> When malfunction is detected in IG1 and IG2 drive circuits in the keyless access CM. When malfunction is detected in IG hold circuit in the keyless access CM. 	<Ref. to KPS(diag)-42, DTC B2271 IGN RELAY CONTROL CIRCUIT, Diagnostic Procedure with Diagnostic Trouble Code (DTC).>
B2274	ACC RELAY CONTROL CIRCUIT	When malfunction is detected in ACC relay drive circuit in the keyless access CM or external circuit.	<Ref. to KPS(diag)-44, DTC B2274 ACC RELAY CONTROL CIRCUIT, Diagnostic Procedure with Diagnostic Trouble Code (DTC).>
B2275	ENGINE START REQUEST CONTROL CIRCUIT	<ul style="list-style-type: none"> When malfunction is detected in engine start permission signal output circuit in the keyless access CM. When malfunction is detected in external engine start permission signal circuit. 	<Ref. to KPS(diag)-46, DTC B2275 ENGINE START REQUEST CONTROL CIRCUIT, Diagnostic Procedure with Diagnostic Trouble Code (DTC).>

List of Diagnostic Trouble Code (DTC)

KEYLESS ACCESS WITH PUSH BUTTON START SYSTEM (DIAGNOSTICS)

DTC	Item	Content of diagnosis	Note
B2276	ACC RELAY OFF SIGNAL	When input error occurs in accessory relay cut input signal of keyless access CM.	<Ref. to KPS(diag)-48, DTC B2276 ACC RELAY OFF SIGNAL, Diagnostic Procedure with Diagnostic Trouble Code (DTC).>
B2277	SUBMERGING CIRCUIT	When the water-submersion detection circuit integrated into the keyless access CM detects the water submersion.	<Ref. to KPS(diag)-50, DTC B2277 SUBMERGING CIRCUIT, Diagnostic Procedure with Diagnostic Trouble Code (DTC).>
B2282	VEHICLE SPEED SIGNAL CORRELATION	When the vehicle speed signal transmitted from VDC via solid line and the vehicle speed signal transmitted via CAN communication line do not match.)	<Ref. to KPS(diag)-51, DTC B2282 VEHICLE SPEED SIGNAL CORRELATION, Diagnostic Procedure with Diagnostic Trouble Code (DTC).>
B2283	VEHICLE SPEED SENSOR	Either of the following malfunctions is detected. (Vehicle speed sensor failure is detected.) <ul style="list-style-type: none"> • Vehicle speed signal failure detection 1: Excessive deceleration detection • Vehicle speed signal failure detection 2: Engine speed interlock detection 	<Ref. to KPS(diag)-53, DTC B2283 VEHICLE SPEED SENSOR, Diagnostic Procedure with Diagnostic Trouble Code (DTC).>
B2284	BRAKE SIGNAL CORRELATION	When the brake signal transmitted via solid line and the brake signal transmitted via CAN communication line do not match.	<Ref. to KPS(diag)-55, DTC B2284 BRAKE SIGNAL CORRELATION, Diagnostic Procedure with Diagnostic Trouble Code (DTC).>
B2285	STEERING LOCK POSITION SIGNAL CORRELATION	When the steering lock position signal transmitted from the steering lock CM via solid line and the steering lock position signal transmitted via LIN communication system do not match.	<Ref. to KPS(diag)-57, DTC B2285 STEERING LOCK POSITION SIGNAL CORRELATION, Diagnostic Procedure with Diagnostic Trouble Code (DTC).>
B2286	ENGINE SPEED SIGNAL(WITHOUT Auto Start Stop)	When the engine speed signal transmitted from the ECM via solid line and the engine speed signal transmitted via CAN communication line do not match.	<Ref. to KPS(diag)-60, DTC B2286 ENGINE SPEED SIGNAL(WITHOUT Auto Start Stop), Diagnostic Procedure with Diagnostic Trouble Code (DTC).>
B228A	ENGINE SPEED SIGNAL(WITH Auto Start Stop)	When the engine speed signal transmitted from the ECM via solid line and the engine speed signal transmitted via CAN communication line do not match.	<Ref. to KPS(diag)-62, DTC B228A ENGINE SPEED SIGNAL(WITH Auto Start Stop), Diagnostic Procedure with Diagnostic Trouble Code (DTC).>
B2779	REMOTE CONTROL ENGINE STARTER COLLATION	When the keyless access CM does not respond to engine start even when the remote control engine starter is ON, or when there is a code mismatch.	<Ref. to KPS(diag)-64, DTC B2779 REMOTE CONTROL ENGINE STARTER COLLATION, Diagnostic Procedure with Diagnostic Trouble Code (DTC).>
B2781	STEERING LOCK CM CONTROL CIRCUIT	<ul style="list-style-type: none"> • When malfunction is detected in lock/unlock position detection sensor. • When the open or short circuit in the steering lock motor drive circuit is detected. 	<Ref. to KPS(diag)-64, DTC B2781 STEERING LOCK CM CONTROL CIRCUIT, Diagnostic Procedure with Diagnostic Trouble Code (DTC).>
B2782	STEERING LOCK DRIVE REQUEST SIGNAL CORRELATION	When the open or short circuit in the steering lock motor power supply circuit is detected.	<Ref. to KPS(diag)-65, DTC B2782 STEERING LOCK DRIVE REQUEST SIGNAL CORRELATION, Diagnostic Procedure with Diagnostic Trouble Code (DTC).>

List of Diagnostic Trouble Code (DTC)

KEYLESS ACCESS WITH PUSH BUTTON START SYSTEM (DIAGNOSTICS)

DTC	Item	Content of diagnosis	Note
B2784	ANTENNA CIRCUIT (PUSH ENGINE SWITCH)	When open or short circuit occurs in the antenna coil.	<Ref. to KPS(diag)-67, DTC B2784 ANTENNA CIRCUIT (PUSH ENGINE SWITCH), Diagnostic Procedure with Diagnostic Trouble Code (DTC).>
B2785	LIN COMMUNICATION	When the keyless access CM detects the collation system LIN bus communication error three times in a row.	<Ref. to KPS(diag)-69, DTC B2785 LIN COMMUNICATION, Diagnostic Procedure with Diagnostic Trouble Code (DTC).>
B2786	STEERING LOCK CM COMMUNICATION	When communication between keyless access CM and steering lock CM is interrupted for a set amount of time.	<Ref. to KPS(diag)-71, DTC B2786 STEERING LOCK CM COMMUNICATION, Diagnostic Procedure with Diagnostic Trouble Code (DTC).>
B2788	IGN SIGNAL CORRELATION (STEERING LOCK CM)	When mismatch occurs in the IG1 input of the steering lock CM between LIN communication line input and solid line input.	<Ref. to KPS(diag)-73, DTC B2788 IGN SIGNAL CORRELATION (STEERING LOCK CM), Diagnostic Procedure with Diagnostic Trouble Code (DTC).>
B2789	ID CODE BOX COMMUNICATION	<ul style="list-style-type: none"> • When communication between keyless access CM and ID code box is interrupted for a set amount of time. • Open or short circuit in the wiring harness between keyless access CM and ID code box. 	<Ref. to KPS(diag)-75, DTC B2789 ID CODE BOX COMMUNICATION, Diagnostic Procedure with Diagnostic Trouble Code (DTC).>
B278A	PUSH ENGINE SWITCH POWER SUPPLY CIRCUIT	When the power supply circuit of the push button ignition switch is shorted to ground.	<Ref. to KPS(diag)-77, DTC B278A PUSH ENGINE SWITCH POWER SUPPLY CIRCUIT, Diagnostic Procedure with Diagnostic Trouble Code (DTC).>
B278D	ID CODE BOX JUDGMENT CIRCUIT	<ul style="list-style-type: none"> • When ID code box ON input is detected while the ID code box setting is set to OFF. • When ID code box LIN signal is received while the ID code box setting is set to OFF. 	<Ref. to KPS(diag)-79, DTC B278D ID CODE BOX JUDGMENT CIRCUIT, Diagnostic Procedure with Diagnostic Trouble Code (DTC).>
B2790	ID CODE BOX CIRCUIT	An error has occurred inside the ID code box.	<Ref. to KPS(diag)-80, DTC B2790 ID CODE BOX CIRCUIT, Diagnostic Procedure with Diagnostic Trouble Code (DTC).>
B27A1	DRIVER SIDE EXTERNAL ANTENNA OPEN	When open circuit occurs in the harness between keyless access CM and driver's side front door outer handle.	<Ref. to KPS(diag)-81, DTC B27A1 DRIVER SIDE EXTERNAL ANTENNA OPEN, Diagnostic Procedure with Diagnostic Trouble Code (DTC).>
B27A2	PASSENGER SIDE EXTERNAL ANTENNA OPEN	When open circuit occurs in the harness between keyless access CM and passenger's side front door outer handle.	<Ref. to KPS(diag)-83, DTC B27A2 PASSENGER SIDE EXTERNAL ANTENNA OPEN, Diagnostic Procedure with Diagnostic Trouble Code (DTC).>
B27A5	FRONT INTERNAL ANTENNA OPEN	When open circuit occurs in the harness between keyless access CM and front interior antenna.	<Ref. to KPS(diag)-85, DTC B27A5 FRONT INTERNAL ANTENNA OPEN, Diagnostic Procedure with Diagnostic Trouble Code (DTC).>
B27A7	TRUNK/REAR GATE INTERNAL ANTENNA OPEN	When open circuit occurs in the harness between keyless access CM and rear interior antenna.	<Ref. to KPS(diag)-87, DTC B27A7 TRUNK/REAR GATE INTERNAL ANTENNA OPEN, Diagnostic Procedure with Diagnostic Trouble Code (DTC).>
B27A8	TRUNK/REAR GATE EXTERNAL ANTENNA OPEN	When open circuit occurs in the harness between keyless access CM and rear exterior antenna.	<Ref. to KPS(diag)-89, DTC B27A8 TRUNK/REAR GATE EXTERNAL ANTENNA OPEN, Diagnostic Procedure with Diagnostic Trouble Code (DTC).>

List of Diagnostic Trouble Code (DTC)

KEYLESS ACCESS WITH PUSH BUTTON START SYSTEM (DIAGNOSTICS)

2. Immobilizer (ECM)

DTC	Item	Content of diagnosis	Note
B1571	REFERENCE CODE INCOMPATIBILITY (IMMOBILIZER CM TO ECM)	Reference code mismatch occurs between keyless access CM (model without ID code box) or ID code box (model with ID code box) and ECM.	<Ref. to KPS(diag)-91, DTC B1571 REFERENCE CODE INCOMPATIBILITY (IMMOBILIZER CM TO ECM), Diagnostic Procedure with Diagnostic Trouble Code (DTC).>
B1572	IMM CIRCUIT EXCEPT ANTENNA CIRCUIT	Communication error occurs between keyless access CM (model without ID code box) or ID code box (model with ID code box) and ECM.	<Ref. to KPS(diag)-92, DTC B1572 IMM CIRCUIT EXCEPT ANTENNA CIRCUIT, Diagnostic Procedure with Diagnostic Trouble Code (DTC).>
B1576	EGI CONTROL MODULE EEPROM	ECM malfunctioning	<Ref. to KPS(diag)-96, DTC B1576 EGI CONTROL MODULE EEPROM, Diagnostic Procedure with Diagnostic Trouble Code (DTC).>
B1577	IMM CONTROL MODULE EEPROM	Malfunction occurs in keyless access CM (model without ID code box) or ID code box (model with ID code box).	<Ref. to KPS(diag)-97, DTC B1577 IMM CONTROL MODULE EEPROM, Diagnostic Procedure with Diagnostic Trouble Code (DTC).>

Diagnostic Procedure with Diagnostic Trouble Code (DTC)

KEYLESS ACCESS WITH PUSH BUTTON START SYSTEM (DIAGNOSTICS)

13. Diagnostic Procedure with Diagnostic Trouble Code (DTC)

A: DTC U0073 CONTROL MODULE COMMUNICATION BUS OFF

Detected when CAN line abnormality is detected.

NOTE:

Perform the diagnosis for LAN system. <Ref. to LAN(diag)-2, PROCEDURE, Basic Diagnostic Procedure.>

B: DTC U0100 LOST COMMUNICATION WITH ECM/PCM “A”

Detected when CAN data from the engine control module (ECM) does not arrive.

NOTE:

Perform the diagnosis for LAN system. <Ref. to LAN(diag)-2, PROCEDURE, Basic Diagnostic Procedure.>

C: DTC U0101 LOST COMMUNICATION WITH TCM

Detected when CAN data from TCM does not arrive.

NOTE:

Perform the diagnosis for LAN system. <Ref. to LAN(diag)-2, PROCEDURE, Basic Diagnostic Procedure.>

D: DTC U0122 LOST COMMUNICATION WITH VEHICLE DYNAMICS CONTROL MODULE

Detected when CAN data from VDC does not arrive.

NOTE:

Perform the diagnosis for LAN system. <Ref. to LAN(diag)-2, PROCEDURE, Basic Diagnostic Procedure.>

E: DTC U0140 LOST COMMUNICATION WITH BODY CONTROL MODULE

Detected when CAN data from BIU does not arrive.

NOTE:

Perform the diagnosis for LAN system. <Ref. to LAN(diag)-2, PROCEDURE, Basic Diagnostic Procedure.>

F: DTC U0155 LOST COMMUNICATION WITH INSTRUMENT PANEL CLUSTER (IPC) CONTROL MODULE

Detected when CAN data from meter does not arrive.

NOTE:

Perform the diagnosis for LAN system. <Ref. to LAN(diag)-2, PROCEDURE, Basic Diagnostic Procedure.>

G: DTC U0401 INVALID DATA RECEIVED FROM ECM/PCM “A”

Detected when there is malfunction in CAN data from the engine control module (ECM).

NOTE:

Perform the diagnosis for LAN system. <Ref. to LAN(diag)-2, PROCEDURE, Basic Diagnostic Procedure.>

H: DTC U0422 INVALID DATA RECEIVED FROM BODY CONTROL MODULE

Detected when CAN data from BIU is abnormal.

NOTE:

Perform the diagnosis for LAN system. <Ref. to LAN(diag)-2, PROCEDURE, Basic Diagnostic Procedure.>

I: DTC U1120 LOST COMMUNICATION WITH AUTOSTART STOP CONTROL MODULE

Detected when CAN data from hybrid system or Auto Start Stop CM is abnormal.

NOTE:

Perform the diagnosis for LAN system. <Ref. to LAN(diag)-2, PROCEDURE, Basic Diagnostic Procedure.>

Diagnostic Procedure with Diagnostic Trouble Code (DTC)

KEYLESS ACCESS WITH PUSH BUTTON START SYSTEM (DIAGNOSTICS)

J: DTC B1242 WIRELESS TUNER

DTC detecting condition:

When short circuit occurs in harness between keyless access CM and receiver.

Trouble symptom:

- The keyless access with push button start function (except for emergency function) does not operate properly.
- Operation by the access key button does not function.

CAUTION:

- For replacement procedure of keyless access CM, refer to the “REGISTRATION MANUAL FOR IMMOBILIZER” provided as a separate volume.
- When the harness comes close to the receiver, the performance of keyless access system operation and wireless operation may reduce. So, when replacing or inspecting the receiver and harness, do not change the route and length of the surrounding harnesses.

Wiring diagram:

Push button start system <Ref. to WI-186, WIRING DIAGRAM, Push Button Start System.>

SL-03312

Step	Check	Yes	No
1 CHECK LAN SYSTEM. Inspect LAN system. <Ref. to LAN(diag)-2, PROCEDURE, Basic Diagnostic Procedure.>	Is LAN system normal?	Go to step 2.	Perform the inspection according to the diagnosis for LAN system.
2 CHECK HARNESS. 1) Disconnect the keyless access CM connector. 2) Disconnect the receiver connector. 3) Using the tester, measure the resistance between terminals of keyless access CM connector and receiver connector, and keyless access CM and chassis ground. Connector & terminal (B573) No. 19 — (R296) No. 2: (B573) No. 17 — (R296) No. 5: (B573) No. 5 — (R296) No. 4: (R296) No. 1 — Chassis ground:	Is the resistance less than 1 Ω?	Go to step 3.	Repair or replace the open circuit of harness.

Diagnostic Procedure with Diagnostic Trouble Code (DTC)

KEYLESS ACCESS WITH PUSH BUTTON START SYSTEM (DIAGNOSTICS)

Step	Check	Yes	No
3 CHECK HARNESS. Using a tester, measure the resistance between the keyless access CM connector and chassis ground. Connector & terminal (B573) No. 19 — Chassis ground: (B573) No. 17 — Chassis ground: (B573) No. 5 — Chassis ground:	Is the resistance 10 k Ω or more?	Go to step 4.	Repair or replace the short circuit of the harness.
4 CHECK RECEIVER. 1) Replace the receiver, and then connect it. <Ref. to SL-88, Receiver.> 2) Using the Subaru Select Monitor, clear the memory. <Ref. to KPS(diag)-32, Clear Memory Mode.> 3) Read the DTC using the Subaru Select Monitor. <Ref. to KPS(diag)-25, Read Diagnostic Trouble Code (DTC).>	Is DTC B1242 displayed?	Replace the keyless access CM. <Ref. to SL-89, Keyless Access CM.>	Receiver has a malfunction.

Diagnostic Procedure with Diagnostic Trouble Code (DTC)

KEYLESS ACCESS WITH PUSH BUTTON START SYSTEM (DIAGNOSTICS)

K: DTC B2271 IGN RELAY CONTROL CIRCUIT

DTC detecting condition:

- When malfunction is detected in IG1 and IG2 drive circuits in the keyless access CM.
- When malfunction is detected in IG hold circuit in the keyless access CM.

Trouble symptom:

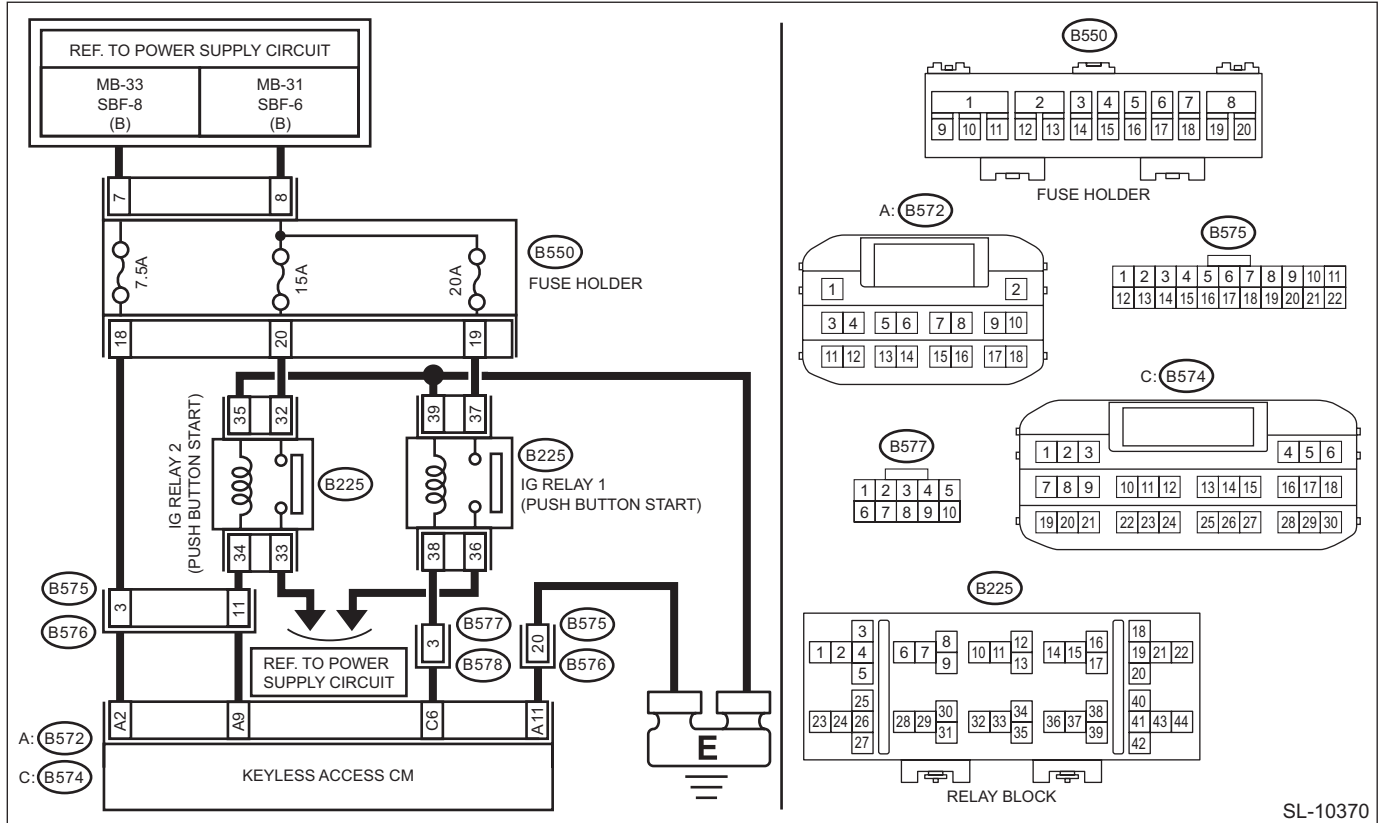

Not all functions operate at IGN ON.

CAUTION:

For replacement procedure of keyless access CM, refer to the “REGISTRATION MANUAL FOR IMMOBILIZER” provided as a separate volume.

Wiring diagram:

Push button start system <Ref. to WI-186, WIRING DIAGRAM, Push Button Start System.>

SL-10370

Step	Check	Yes	No
1	CHECK LAN SYSTEM. Inspect LAN system. <Ref. to LAN(diag)-2, PROCEDURE, Basic Diagnostic Procedure.>	Go to step 2.	Perform the inspection according to the diagnosis for LAN system.
2	CHECK FUSE. Check the fuse. <Ref. to SL-8, Relay and Fuse.>	Go to step 3.	Replace the fuse. When the replaced fuse is blown immediately, check the power supply circuit for short-circuited.

Diagnostic Procedure with Diagnostic Trouble Code (DTC)

KEYLESS ACCESS WITH PUSH BUTTON START SYSTEM (DIAGNOSTICS)

Step	Check	Yes	No
3 CHECK HARNESS. 1) Disconnect the keyless access CM connector. 2) Using a tester, measure the voltage between the keyless access CM connector and chassis ground. Connector & terminal (B572) No. 2 (+) — Chassis ground (-):	Is the voltage 9.5 — 16 V?	Go to step 4.	Check the power supply circuit.
4 CHECK HARNESS. Using a tester, measure the resistance between the keyless access CM connector and chassis ground. Connector & terminal (B572) No. 11 — Chassis ground:	Is the resistance less than 1 Ω ?	Go to step 5.	Repair or replace the open circuit of harness.
5 CHECK HARNESS. 1) Disconnect the keyless access CM connector. 2) Using a tester, measure the resistance between the keyless access CM connector and chassis ground. Connector & terminal (B572) No. 9 — Chassis ground:	Is resistance 74.15 — 460.88 Ω ? (20°C)	Go to step 6.	Check IG relay 2. Go to step 7.
6 CHECK HARNESS. 1) Disconnect the keyless access CM connector. 2) Using a tester, measure the resistance between the keyless access CM connector and chassis ground. Connector & terminal (B574) No. 6 — Chassis ground:	Is resistance 50.87 — 72.17 Ω ? (20°C)	Go to step 8.	Check IG relay 1. Go to step 7.
7 CHECK RELAY. Perform unit inspection of IG relay 1 and IG relay 2. <Ref. to SL-9, CHECK RELAY, INSPECTION, Relay and Fuse.>	Is the relay OK?	Go to step 8.	Replace the relay. <Ref. to SL-98, REMOVAL, IG Relay1 (Push Button Start).> <Ref. to SL-100, REMOVAL, IG Relay2 (Push Button Start).>
8 CHECK KEYLESS ACCESS CM. 1) Connect the keyless access CM connector. 2) Using a tester, measure the voltage between the terminals of keyless access CM connector. Connector & terminal (B574) No. 6 (+) — Chassis ground (-): (B572) No. 9 (+) — Chassis ground (-):	Is the voltage 1 V or less → 9.5 — 16 V when ACC → IGN ON?	Even if DTC is displayed, the circuit has returned to a normal condition at this time. Reproduce the failure, and then perform the diagnosis again. NOTE: In this case, temporary poor contact of connector, temporary open or short circuit of harness may be the cause.	Replace the keyless access CM. <Ref. to SL-89, REMOVAL, Keyless Access CM.>

Diagnostic Procedure with Diagnostic Trouble Code (DTC)

KEYLESS ACCESS WITH PUSH BUTTON START SYSTEM (DIAGNOSTICS)

L: DTC B2274 ACC RELAY CONTROL CIRCUIT

DTC detecting condition:

When malfunction is detected in ACC relay drive circuit in the keyless access CM or external circuit.

Trouble symptom:

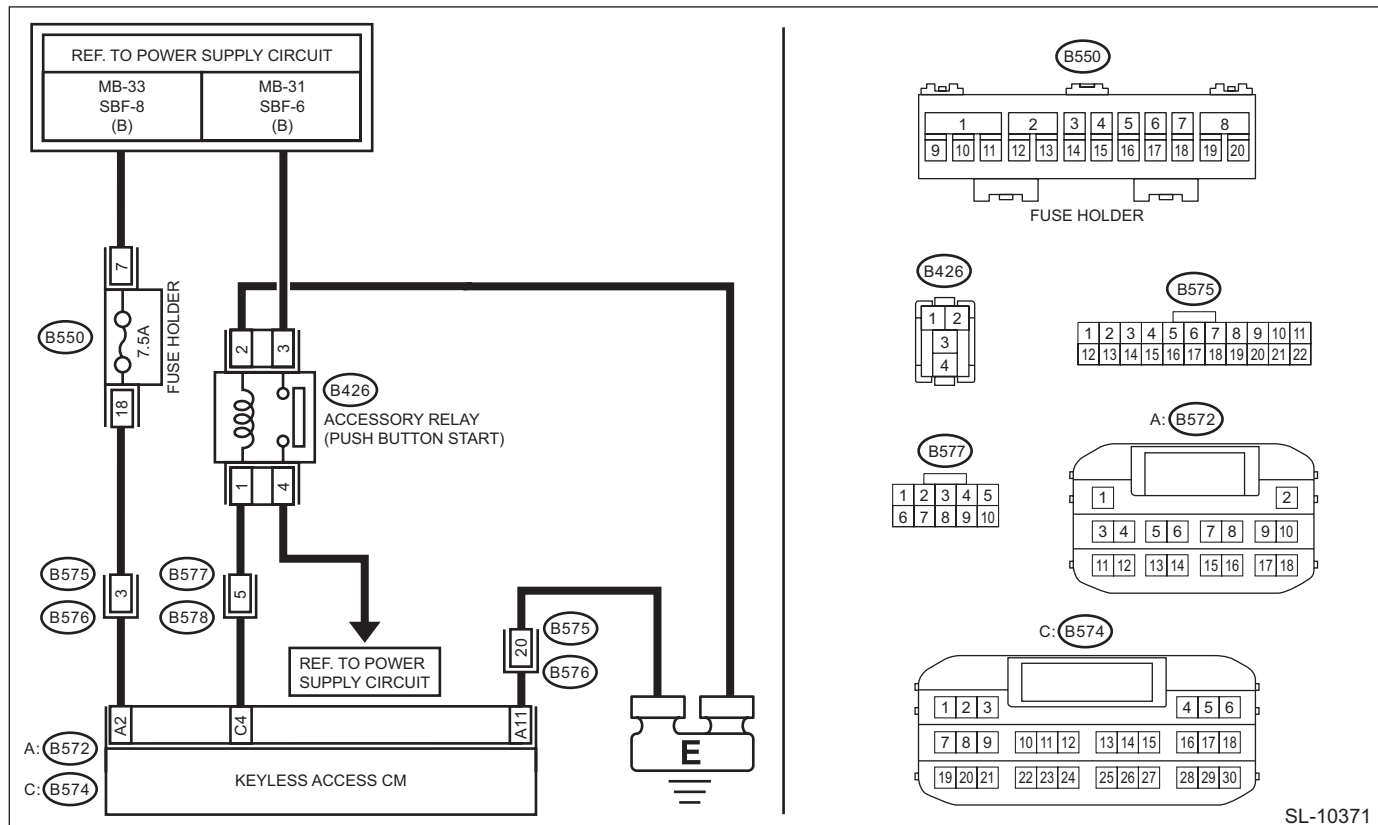

Each function does not operate at the ACC position.

CAUTION:

For replacement procedure of keyless access CM, refer to the “REGISTRATION MANUAL FOR IMMOBILIZER” provided as a separate volume.

Wiring diagram:

Push button start system <Ref. to WI-186, WIRING DIAGRAM, Push Button Start System.>

SL-10371

Step	Check	Yes	No
1	CHECK LAN SYSTEM. Inspect LAN system. <Ref. to LAN(diag)-2, PROCEDURE, Basic Diagnostic Procedure.>	Go to step 2.	Perform the inspection according to the diagnosis for LAN system.
2	CHECK FUSE. Check the fuse. <Ref. to SL-8, Relay and Fuse.>	Go to step 3.	Replace the fuse. When the replaced fuse is blown immediately, check the power supply circuit for short-circuited.
3	CHECK HARNESS. 1) Disconnect the keyless access CM connector. 2) Using a tester, measure the voltage between the keyless access CM connector and chassis ground. Connector & terminal (B572) No. 2 (+) — Chassis ground (-):	Go to step 4.	Check the power supply circuit.

Diagnostic Procedure with Diagnostic Trouble Code (DTC)

KEYLESS ACCESS WITH PUSH BUTTON START SYSTEM (DIAGNOSTICS)

Step	Check	Yes	No
4 CHECK HARNESS. Using a tester, measure the resistance between the keyless access CM connector and chassis ground. <i>Connector & terminal</i> <i>(B572) No. 11 — Chassis ground:</i>	Is the resistance less than 1 Ω ?	Go to step 5.	Repair or replace the open circuit of harness.
5 CHECK HARNESS. 1) Disconnect the keyless access CM connector. 2) Using a tester, measure the resistance between the keyless access CM connector and chassis ground. <i>Connector & terminal</i> <i>(B574) No. 4 — Chassis ground:</i>	Is resistance 152.61 — 216.5 Ω ? (20°C)	Go to step 7.	Go to step 6.
6 CHECK RELAY. Perform inspection of ACC relay unit. <Ref. to SL-102, Accessory Relay (Push Button Start).>	Is the relay OK?	Go to step 7.	Replace the relay.
7 CHECK HARNESS. Using a tester, measure the resistance between the keyless access CM connector and the accessory relay (push button start), and between the accessory relay (push button start) and chassis ground. <i>Connector & terminal</i> <i>(B574) No. 4 — (B426) No. 1:</i> <i>(B426) No. 2 — Chassis ground:</i>	Is the resistance less than 1 Ω ?	Go to step 8.	Repair or replace the open circuit of harness.
8 CHECK KEYLESS ACCESS CM. 1) Connect the keyless access CM connector. 2) Using a tester, measure the voltage between the keyless access CM connector and chassis ground. <i>Connector & terminal</i> <i>(B574) No. 4 (+) — Chassis ground (-):</i>	Is the voltage 1 V or less → 9.5 — 16 V when OFF → ACC ON?	Even if DTC is displayed, the circuit has returned to a normal condition at this time. Reproduce the failure, and then perform the diagnosis again. NOTE: In this case, temporary poor contact of connector, temporary open or short circuit of harness may be the cause.	Replace the keyless access CM. <Ref. to SL-89, Keyless Access CM.>

Diagnostic Procedure with Diagnostic Trouble Code (DTC)

KEYLESS ACCESS WITH PUSH BUTTON START SYSTEM (DIAGNOSTICS)

M: DTC B2275 ENGINE START REQUEST CONTROL CIRCUIT

DTC detecting condition:

- When malfunction is detected in engine start permission signal output circuit in the keyless access CM.
- When malfunction is detected in external engine start permission signal circuit.

Trouble symptom:

Engine will not start.

CAUTION:

For replacement procedure of keyless access CM, refer to the “REGISTRATION MANUAL FOR IMMOBILIZER” provided as a separate volume.

Wiring diagram:

Push button start system <Ref. to WI-186, WIRING DIAGRAM, Push Button Start System.>

SL-02672

Step	Check	Yes	No
1	CHECK LAN SYSTEM. Inspect LAN system. <Ref. to LAN(diag)-2, PROCEDURE, Basic Diagnostic Procedure.>	Go to step 2.	Perform the inspection according to the diagnosis for LAN system.
2	CHECK FUSE. Check the fuse. <Ref. to SL-8, Relay and Fuse.>	Go to step 3.	Replace the fuse. When the replaced fuse is blown immediately, check the power supply circuit for short-circuited.
3	CHECK HARNESS. 1) Disconnect the keyless access CM connector and ECM connector. 2) Using a tester, measure the resistance between the keyless access CM connector and ECM. Connector & terminal (B572) No. 7 — (B137) No. 17:	Go to step 4.	Repair or replace the open circuit of harness.
4	CHECK HARNESS. Using a tester, measure the resistance between the keyless access CM connector and chassis ground. Connector & terminal (B572) No. 11 — Chassis ground:	Go to step 5.	Repair or replace the open circuit of harness.

Diagnostic Procedure with Diagnostic Trouble Code (DTC)

KEYLESS ACCESS WITH PUSH BUTTON START SYSTEM (DIAGNOSTICS)

Step	Check	Yes	No
5 CHECK HARNESS. Using a tester, measure the resistance between the keyless access CM connector and chassis ground. Connector & terminal (B572) No. 7 — Chassis ground:	Is the resistance 10 k Ω or more?	Go to step 6.	Repair or replace the short circuit of the harness.
6 CHECK KEYLESS ACCESS CM. 1) Connect the keyless access CM connector and ECM connector. 2) Using a tester, measure the voltage between the terminals of keyless access CM connector. Connector & terminal (B572) No. 7 (+) — (B572) No. 11 (-):	Is the voltage 2 V or less → 9 V or more when the push button ignition switch is turned on while depressing the brake pedal with the shift position in P or N?	Perform inspection according to the diagnosis of engine. <Ref. to EN(H4DO)(diag)-2, PROCEDURE, Basic Diagnostic Procedure.>	Replace the keyless access CM. <Ref. to SL-89, Keyless Access CM.>

Diagnostic Procedure with Diagnostic Trouble Code (DTC)

KEYLESS ACCESS WITH PUSH BUTTON START SYSTEM (DIAGNOSTICS)

N: DTC B2276 ACC RELAY OFF SIGNAL

DTC detecting condition:

When input error occurs in accessory relay cut input signal of keyless access CM.

Trouble symptom:

- The accessory power supply is not cut during engine start.
- Starter rotation is slow.

CAUTION:

For replacement procedure of keyless access CM, refer to the “REGISTRATION MANUAL FOR IMMOBILIZER” provided as a separate volume.

Wiring diagram:

Push button start system <Ref. to WI-186, WIRING DIAGRAM, Push Button Start System.>

SL-03296

Step	Check	Yes	No
1	CHECK LAN SYSTEM. Inspect LAN system. <Ref. to LAN(diag)-2, PROCEDURE, Basic Diagnostic Procedure.>	Go to step 2.	Perform the inspection according to the diagnosis for LAN system.
2	CHECK HARNESS. 1) Disconnect the keyless access CM connector and ECM connector. 2) Using a tester, measure the resistance between the keyless access CM connector and ECM. Connector & terminal (B573) No. 28 — (B135) No. 32:	Go to step 3.	Repair or replace the open circuit of harness.
3	CHECK HARNESS. Using a tester, measure the resistance between the keyless access CM connector and chassis ground. Connector & terminal (B573) No. 28 — Chassis ground:	Go to step 4.	Repair or replace the short circuit of the harness.
4	CHECK HARNESS. Using a tester, measure the resistance between the keyless access CM connector and chassis ground. Connector & terminal (B572) No. 11 — Chassis ground:	Go to step 5.	Repair or replace the open circuit of harness.

Diagnostic Procedure with Diagnostic Trouble Code (DTC)

KEYLESS ACCESS WITH PUSH BUTTON START SYSTEM (DIAGNOSTICS)

	Step	Check	Yes	No
5	CHECK KEYLESS ACCESS CM. 1) Connect the keyless access CM connector and ECM connector. 2) Using a tester, measure the voltage between terminals of the keyless access CM connector when the push button ignition switch is pressed, while depressing the brake pedal with the shift lever in the "P" range. Connector & terminal (B573) No. 28 (+) — (B572) No. 11 (-):	Is the voltage 9.5 — 16 V → 1 V or less?	Replace the keyless access CM. <Ref. to SL-89, Keyless Access CM.>	Replace the ECM. <Ref. to FU(H4DO)-98, REMOVAL, Engine Control Module (ECM).>

Diagnostic Procedure with Diagnostic Trouble Code (DTC)

KEYLESS ACCESS WITH PUSH BUTTON START SYSTEM (DIAGNOSTICS)

O: DTC B2277 SUBMERGING CIRCUIT

DTC detecting condition:

When the water-submersion detection circuit integrated into the keyless access CM detects the water submersion.

Trouble symptom:

- The ignition can be turned ON, but cannot be turned OFF.
- Engine will not start.

CAUTION:

For replacement procedure of keyless access CM, refer to the “REGISTRATION MANUAL FOR IMMOBILIZER” provided as a separate volume.

	Step	Check	Yes	No
1	CHECK LAN SYSTEM. Inspect LAN system. <Ref. to LAN(diag)-2, PROCEDURE, Basic Diagnostic Procedure.>	Is LAN system normal?	Go to step 2.	Perform the inspection according to the diagnosis for LAN system.
2	CHECK SUBMERSION CONDITION. Check the keyless access CM and environment of equipment, and check the harness for any trace of water submersion.	Is there any trace of water submersion?	Take necessary measures against water submersion and replace the keyless access CM. <Ref. to SL-89, Keyless Access CM.>	Replace the keyless access CM. <Ref. to SL-89, Keyless Access CM.>

Diagnostic Procedure with Diagnostic Trouble Code (DTC)

KEYLESS ACCESS WITH PUSH BUTTON START SYSTEM (DIAGNOSTICS)

P: DTC B2282 VEHICLE SPEED SIGNAL CORRELATION

DTC detecting condition:

When the vehicle speed signal transmitted from VDC via solid line and the vehicle speed signal transmitted via CAN communication line do not match.

CAUTION:

For replacement procedure of keyless access CM, refer to the “REGISTRATION MANUAL FOR IMMOBILIZER” provided as a separate volume.

Wiring diagram:

Push button start system <Ref. to WI-186, WIRING DIAGRAM, Push Button Start System.>

SL-10372

Step	Check	Yes	No
1	CHECK LAN SYSTEM. Inspect LAN system. <Ref. to LAN(diag)-2, PROCEDURE, Basic Diagnostic Procedure.>	Go to step 2.	Perform the inspection according to the diagnosis for LAN system.
2	CHECK COMBINATION METER. Check that the speedometer is displayed normally.	Go to step 3.	Check the VDC. <Ref. to VDC(diag)-2, PROCEDURE, Basic Diagnostic Procedure.>

Diagnostic Procedure with Diagnostic Trouble Code (DTC)

KEYLESS ACCESS WITH PUSH BUTTON START SYSTEM (DIAGNOSTICS)

Step	Check	Yes	No
3 CHECK CURRENT DATA. Check the current data display of «Keyless Access with Push Button Start» using Subaru Select Monitor. <Ref. to KPS(diag)-26, Read Current Data.> <ul style="list-style-type: none"> • «Vehicle speed signal» 	Is the display normal according to the parked state or driving state?	Even if DTC is displayed, the circuit has returned to a normal condition at this time. Reproduce the failure, and then perform the diagnosis again. NOTE: In this case, temporary poor contact of connector, temporary open or short circuit of harness may be the cause.	Go to step 4.
4 CHECK HARNESS (OPEN CIRCUIT). 1) Disconnect the keyless access CM connector. 2) Disconnect the combination meter connector. 3) Using a tester, measure the resistance between the keyless access CM connector and VDC CM connector. Connector & terminal Without EyeSight (B574) No. 27 — (B310) No. 2: With EyeSight (B574) No. 27 — (B310) No. 24:	Is the resistance less than 1 Ω?	Go to step 5.	Repair or replace the open circuit of harness.
5 CHECK HARNESS (OPEN CIRCUIT). Using a tester, measure the resistance between the keyless access CM connector and chassis ground. Connector & terminal (B574) No. 27 — Chassis ground:	Is the resistance 30 kΩ or more?	Go to step 6.	Repair or replace the short circuit of the harness.
6 CHECK KEYLESS ACCESS CM. 1) Connect each connector. 2) Using the Subaru Select Monitor, measure the waveform between the terminals of keyless access CM. Connector & terminal (B574) No. 27 — Chassis ground:	Is 3.54 Hz displayed when the vehicle is driven at approx. 5 km/h? Or does the value change from 3.54 Hz when the vehicle stops?	Replace the keyless access CM. <Ref. to SL-89, Keyless Access CM.>	Check the VDC. <Ref. to VDC(diag)-2, PROCEDURE, Basic Diagnostic Procedure.>

Diagnostic Procedure with Diagnostic Trouble Code (DTC)

KEYLESS ACCESS WITH PUSH BUTTON START SYSTEM (DIAGNOSTICS)

Q: DTC B2283 VEHICLE SPEED SENSOR

DTC detecting condition:

Either of the following malfunctions is detected. (Vehicle speed sensor failure is detected.)

- Vehicle speed signal failure detection 1: Excessive deceleration detection
- Vehicle speed signal failure detection 2: Engine speed interlock detection

Trouble symptom:

The steering lock cannot be released.

CAUTION:

For replacement procedure of keyless access CM, refer to the “REGISTRATION MANUAL FOR IMMOBILIZER” provided as a separate volume.

Wiring diagram:

Push button start system <Ref. to WI-186, WIRING DIAGRAM, Push Button Start System.>

Step	Check	Yes	No
1	CHECK LAN SYSTEM. Inspect LAN system. <Ref. to LAN(diag)-2, PROCEDURE, Basic Diagnostic Procedure.>	Go to step 2.	Perform the inspection according to the diagnosis for LAN system.
2	CHECK COMBINATION METER. Check that the speedometer is displayed normally.	Go to step 3.	Check the VDC. <Ref. to VDC(diag)-2, PROCEDURE, Basic Diagnostic Procedure.>

Diagnostic Procedure with Diagnostic Trouble Code (DTC)

KEYLESS ACCESS WITH PUSH BUTTON START SYSTEM (DIAGNOSTICS)

Step	Check	Yes	No
3 CHECK CURRENT DATA. Check the current data display of «Keyless Access with Push Button Start» using Subaru Select Monitor. <Ref. to KPS(diag)-26, Read Current Data.> <ul style="list-style-type: none"> • «Vehicle speed signal» 	Is the display normal according to the parked state or driving state?	Even if DTC is displayed, the circuit has returned to a normal condition at this time. Reproduce the failure, and then perform the diagnosis again. NOTE: In this case, temporary poor contact of connector, temporary open or short circuit of harness may be the cause.	Go to step 4.
4 CHECK HARNESS (OPEN CIRCUIT). 1) Disconnect the keyless access CM connector. 2) Disconnect the combination meter connector. 3) Using a tester, measure the resistance between the keyless access CM connector and VDC CM connector. Connector & terminal Without EyeSight (B574) No. 27 — (B310) No. 2: With EyeSight (B574) No. 27 — (B310) No. 24:	Is the resistance less than 1 Ω ?	Go to step 5.	Repair or replace the open circuit of harness.
5 CHECK HARNESS (OPEN CIRCUIT). Using a tester, measure the resistance between the keyless access CM connector and chassis ground. Connector & terminal (B574) No. 27 — Chassis ground:	Is the resistance 30 k Ω or more?	Go to step 6.	Repair or replace the short circuit of the harness.
6 CHECK KEYLESS ACCESS CM. 1) Connect each connector. 2) Using the Subaru Select Monitor, measure the waveform between the terminals of keyless access CM. Connector & terminal (B574) No. 27 — Chassis ground:	Is 3.54 Hz displayed when the vehicle is driven at approx. 5 km/h? Or does the value change from 3.54 Hz when the vehicle stops?	Replace the keyless access CM. <Ref. to SL-89, Keyless Access CM.>	Check the VDC. <Ref. to VDC(diag)-2, PROCEDURE, Basic Diagnostic Procedure.>

Diagnostic Procedure with Diagnostic Trouble Code (DTC)

KEYLESS ACCESS WITH PUSH BUTTON START SYSTEM (DIAGNOSTICS)

R: DTC B2284 BRAKE SIGNAL CORRELATION

DTC detecting condition:

When the brake signal transmitted via the hard wire and the brake signal transmitted from body integrated unit via CAN communication line do not match.

Trouble symptom:

CAUTION:

For replacement procedure of keyless access CM, refer to the "REGISTRATION MANUAL FOR IMMOBILIZER" provided as a separate volume.

Wiring diagram:

Stop light system <Ref. to WI-217, WIRING DIAGRAM, Stop Light System.>

Push button start system <Ref. to WI-186, WIRING DIAGRAM, Push Button Start System.>

SL-03313

Step	Check	Yes	No
1	CHECK LAN SYSTEM. Inspect LAN system. <Ref. to LAN(diag)-2, PROCEDURE, Basic Diagnostic Procedure.>	Go to step 2.	Perform the inspection according to the diagnosis for LAN system.
2	CHECK CURRENT DATA. Check the current data display of «Keyless Access with Push Button Start» using Subaru Select Monitor. <Ref. to KPS(diag)-26, Read Current Data.> • «Stop light SW»	Go to step 3.	Check the stop light system.
3	CHECK CURRENT DATA. Confirm the current data display of «Body Control» using Subaru Select Monitor. <Ref. to BC(diag)-12, Read Current Data.> • «Stop light SW»	Go to step 4.	Check body integrated unit <Ref. to BC(diag)-2, PROCEDURE, Basic Diagnostic Procedure.> and the stop light switch circuit.

Diagnostic Procedure with Diagnostic Trouble Code (DTC)

KEYLESS ACCESS WITH PUSH BUTTON START SYSTEM (DIAGNOSTICS)

Step	Check	Yes	No
4 CHECK FUSE. Check the fuse. <Ref. to SL-8, Relay and Fuse.>	Is the fuse OK?	Go to step 5.	Replace the fuse. When the replaced fuse is blown immediately, check the power supply circuit for short-circuited.
5 CHECK HARNESS. 1) Disconnect the keyless access CM connector. 2) Using a tester, measure the voltage between keyless access CM connectors. Connector & terminal (B572) No. 2 (+) — Chassis ground (-):	Is the voltage 9.5 — 16 V?	Go to step 6.	Check the power supply circuit.
6 CHECK HARNESS. Using a tester, measure the resistance between the keyless access CM connector and chassis ground. Connector & terminal (B572) No. 11 — Chassis ground:	Is the resistance less than 1 Ω ?	Go to step 7.	Repair or replace the open circuit of harness.
7 CHECK HARNESS. 1) Disconnect the stop light switch connector. 2) Using a tester, measure the resistance between the keyless access CM connector and stop light switch connector. Connector & terminal (B572) No. 18 — (B65) No. 4:	Is the resistance less than 1 Ω ?	Go to step 8.	Repair or replace the open circuit of harness.
8 CHECK HARNESS. Using a tester, measure the resistance between the keyless access CM connector and chassis ground. Connector & terminal (B572) No. 18 — Chassis ground:	Is the resistance 10 k Ω or more?	Go to step 9.	Repair or replace the short circuit of the harness.
9 CHECK HARNESS. Using a tester, measure the voltage between the keyless access CM connector and chassis ground when the brake pedal is depressed. Connector & terminal (B572) No. 18 (+) — Chassis ground (-):	Does the voltage change as follows? Brake pedal not depressed: 1 V or less → Brake pedal depressed: 11 — 14 V	Replace the keyless access CM. <Ref. to SL-89, REMOVAL, Keyless Access CM.>	Check the power supply circuit of stop light switch.

Diagnostic Procedure with Diagnostic Trouble Code (DTC)

KEYLESS ACCESS WITH PUSH BUTTON START SYSTEM (DIAGNOSTICS)

Step	Check	Yes	No
<p>3</p> <p>CHECK CURRENT DATA. Check the current data display of «Keyless Access with Push Button Start» using Subaru Select Monitor. <Ref. to KPS(diag)-26, Read Current Data.> When locked:</p> <ul style="list-style-type: none"> • Lock side sensor status: ON • Unlock side sensor status: OFF • Lock confirmation: Confirmed • Unlock confirmation: Not confirmed <p>When unlocked:</p> <ul style="list-style-type: none"> • Lock side sensor status: OFF • Unlock side sensor status: ON • Lock confirmation: Not confirmed • Unlock confirmation: Confirmed <p>NOTE: To lock the steering lock, turn off the power, and open → close, or close → open the driver's door. To unlock the steering lock, turn the ignition switch to ACC ON or IGN ON.</p>	<p>Are the readings as shown on the left according to the steering lock status?</p>	<p>Go to step 4.</p>	<p>Replace the steering lock CM. <Ref. to SL-92, REMOVAL, Steering Lock CM.></p>
<p>4</p> <p>CHECK CURRENT DATA. Check the current data display of «Keyless Access with Push Button Start» using Subaru Select Monitor. <Ref. to KPS(diag)-26, Read Current Data.> When locked:</p> <ul style="list-style-type: none"> • Steering unlock switch: OFF <p>When unlocked:</p> <ul style="list-style-type: none"> • Steering unlock switch: ON <p>NOTE: To lock the steering lock, turn off the power, and open → close, or close → open the driver's door. <p>5</p> <p>CHECK FUSE. Check the fuse. <Ref. to SL-8, Relay and Fuse.></p>	<p>Is the fuse OK?</p>	<p>Go to step 6.</p>	<p>Replace the fuse. When the replaced fuse is blown immediately, check the power supply circuit for short-circuited.</p>
<p>6</p> <p>CHECK HARNESS. 1) Disconnect the keyless access CM connector. 2) Using a tester, measure the voltage between keyless access CM connectors. Connector & terminal (B572) No. 2 (+) — Chassis ground (-):</p>	<p>Is the voltage 9.5 — 16 V?</p>	<p>Go to step 7.</p>	<p>Check the power supply circuit.</p>
<p>7</p> <p>CHECK HARNESS (OPEN CIRCUIT). Using a tester, measure the resistance between the keyless access CM connector and chassis ground. Connector & terminal (B572) No. 11 — Chassis ground:</p>	<p>Is the resistance less than 1 Ω?</p>	<p>Go to step 8.</p>	<p>Repair or replace the open circuit of harness.</p>
<p>8</p> <p>CHECK HARNESS. Using a tester, measure the resistance between the steering lock CM connector and chassis ground. Connector & terminal (B424) No. 4 — Chassis ground:</p>	<p>Does the following occur? Steering lock: 10 kΩ or more → Steering unlock: less than 1 Ω</p>	<p>Go to step 9.</p>	<p>Replace the steering lock CM. <Ref. to SL-92, REMOVAL, Steering Lock CM.></p>

Diagnostic Procedure with Diagnostic Trouble Code (DTC)

KEYLESS ACCESS WITH PUSH BUTTON START SYSTEM (DIAGNOSTICS)

Step	Check	Yes	No
9 CHECK HARNESS (OPEN CIRCUIT). 1) Disconnect the keyless access CM connector. 2) Disconnect the steering lock CM connector. 3) Using a tester, measure the resistance between the keyless access CM connector and steering lock CM. Connector & terminal (B574) No. 26 — (B424) No. 4:	Is the resistance less than 1 Ω ?	Go to step 10.	Repair or replace the open circuit of harness.
10 CHECK HARNESS (GROUND SHORT CIRCUIT). Using a tester, measure the resistance between the keyless access CM connector and chassis ground. Connector & terminal (B574) No. 26 — Chassis ground:	Is the resistance 10 k Ω or more?	Replace the keyless access CM. <Ref. to SL-89, REMOVAL, Keyless Access CM.>	Repair or replace the short circuit of the harness.

Diagnostic Procedure with Diagnostic Trouble Code (DTC)

KEYLESS ACCESS WITH PUSH BUTTON START SYSTEM (DIAGNOSTICS)

T: DTC B2286 ENGINE SPEED SIGNAL(WITHOUT Auto Start Stop)

DTC detecting condition:

When the engine speed signal transmitted from the ECM via solid line and the engine speed signal transmitted from the ECM via CAN communication line do not match.

Trouble symptom:

Cannot start the engine, or the engine stops after starting.

CAUTION:

For replacement procedure of keyless access CM, refer to the “REGISTRATION MANUAL FOR IMMOBILIZER” provided as a separate volume.

Wiring diagram:

Push button start system <Ref. to WI-186, WIRING DIAGRAM, Push Button Start System.>

Step	Check	Yes	No
1	CHECK LAN SYSTEM. Inspect LAN system. <Ref. to LAN(diag)-2, PROCEDURE, Basic Diagnostic Procedure.>	Go to step 2.	Perform the inspection according to the diagnosis for LAN system.
2	CHECK COMBINATION METER. Confirm that the speedometer is displayed normally.	Go to step 3.	Perform the diagnosis for the engine. <Ref. to EN(H4DO)(diag)-2, PROCEDURE, Basic Diagnostic Procedure.>

Diagnostic Procedure with Diagnostic Trouble Code (DTC)

KEYLESS ACCESS WITH PUSH BUTTON START SYSTEM (DIAGNOSTICS)

Step	Check	Yes	No
<p>3 CHECK CURRENT DATA. Check the current data display of «Keyless Access with Push Button Start» using Subaru Select Monitor. <Ref. to KPS(diag)-26, Read Current Data.></p> <ul style="list-style-type: none"> • «Engine speed» 	Can the data be read normally?	Even if DTC is displayed, the circuit has returned to a normal condition at this time. Reproduce the failure, and then perform the diagnosis again. NOTE: In this case, temporary poor contact of connector, temporary open or short circuit of harness may be the cause.	Go to step 4.
<p>4 CHECK HARNESS (OPEN CIRCUIT). 1) Disconnect the keyless access CM connector. 2) Disconnect the ECM connector. 3) Using a tester, measure the resistance between the keyless access CM connector and ECM connector. Connector & terminal (B572) No. 17 — (B135) No. 15:</p>	Is the resistance less than 1 Ω?	Go to step 5.	Repair or replace the open circuit of harness.
<p>5 CHECK HARNESS (GROUND SHORT CIRCUIT). Using a tester, measure the resistance between the keyless access CM connector and chassis ground. Connector & terminal (B572) No. 17 — Chassis ground:</p>	Is the resistance 10 kΩ or more?	Go to step 6.	Repair or replace the short circuit of the harness.
<p>6 CHECK HARNESS. 1) Connect the keyless access CM connector and ECM connector. 2) Using the Subaru Select Monitor, measure the waveform between the keyless access CM connector and chassis ground. Connector & terminal (B572) No. 17 — Chassis ground:</p>	Does the pulse stop when the engine is stopped, and does the pulse generate when the engine is started?	Replace the keyless access CM. <Ref. to SL-89, Keyless Access CM.>	Perform the diagnosis for the engine. <Ref. to EN(H4DO)(diag)-2, PROCEDURE, Basic Diagnostic Procedure.>

Diagnostic Procedure with Diagnostic Trouble Code (DTC)

KEYLESS ACCESS WITH PUSH BUTTON START SYSTEM (DIAGNOSTICS)

U: DTC B228A ENGINE SPEED SIGNAL(WITH Auto Start Stop)

DTC detecting condition:

When the engine speed signal transmitted from the ECM via solid line and the engine speed signal transmitted from the ECM via CAN communication line do not match.

Trouble symptom:

Cannot start the engine, or the engine stops after starting.

CAUTION:

For replacement procedure of keyless access CM, refer to the “REGISTRATION MANUAL FOR IMMOBILIZER” provided as a separate volume.

Wiring diagram:

Push button start system <Ref. to WI-186, WIRING DIAGRAM, Push Button Start System.>

SL-10374

Step	Check	Yes	No
1	CHECK LAN SYSTEM. Inspect LAN system. <Ref. to LAN(diag)-2, PROCEDURE, Basic Diagnostic Procedure.>	Go to step 2.	Perform the inspection according to the diagnosis for LAN system.
2	CHECK COMBINATION METER. Confirm that the speedometer is displayed normally.	Go to step 3.	Perform the diagnosis for the engine. <Ref. to EN(H4DO)(diag)-2, PROCEDURE, Basic Diagnostic Procedure.>

Diagnostic Procedure with Diagnostic Trouble Code (DTC)

KEYLESS ACCESS WITH PUSH BUTTON START SYSTEM (DIAGNOSTICS)

Step	Check	Yes	No
<p>3 CHECK CURRENT DATA. Check the current data display of «Keyless Access with Push Button Start» using Subaru Select Monitor. <Ref. to KPS(diag)-26, Read Current Data.></p> <ul style="list-style-type: none"> • «Engine speed» 	Can the data be read normally?	Even if DTC is displayed, the circuit has returned to a normal condition at this time. Reproduce the failure, and then perform the diagnosis again. NOTE: In this case, temporary poor contact of connector, temporary open or short circuit of harness may be the cause.	Go to step 4.
<p>4 CHECK HARNESS (OPEN CIRCUIT). 1) Disconnect the keyless access CM connector. 2) Disconnect the ECM connector. 3) Using a tester, measure the resistance between the keyless access CM connector and ECM connector. Connector & terminal (B572) No. 17 — (B135) No. 15:</p>	Is the resistance less than 1 Ω?	Go to step 5.	Repair or replace the open circuit of harness.
<p>5 CHECK HARNESS (GROUND SHORT CIRCUIT). Using a tester, measure the resistance between the keyless access CM connector and chassis ground. Connector & terminal (B572) No. 17 — Chassis ground:</p>	Is the resistance 10 kΩ or more?	Go to step 6.	Repair or replace the short circuit of the harness.
<p>6 CHECK HARNESS. 1) Connect the keyless access CM connector and ECM connector. 2) Using the Subaru Select Monitor, measure the waveform between the keyless access CM connector and chassis ground. Connector & terminal (B572) No. 17 — Chassis ground:</p>	Does the pulse stop when the engine is stopped, and does the pulse generate when the engine is started?	Replace the keyless access CM. <Ref. to SL-89, Keyless Access CM.>	Perform the diagnosis for the engine. <Ref. to EN(H4DO)(diag)-2, PROCEDURE, Basic Diagnostic Procedure.>

Diagnostic Procedure with Diagnostic Trouble Code (DTC)

KEYLESS ACCESS WITH PUSH BUTTON START SYSTEM (DIAGNOSTICS)

V: DTC B2779 REMOTE CONTROL ENGINE STARTER COLLATION

DTC detecting condition:

When the keyless access CM does not respond to engine start even when the remote control engine starter is ON, or when there is a code mismatch.

Trouble symptom:

Remote engine starter does not function.

Step	Check	Yes	No
1 REGISTER THE REMOTE ENGINE STARTER. 1) Clear the DTC. <Ref. to KPS(diag)-32, Clear Memory Mode.> 2) Register the remote engine starter using the Subaru Select Monitor. (Refer to the "REGISTRATION MANUAL FOR IMMOBILIZER" provided as a separate volume.) NOTE: When the registration failed, refer to "Correspondence table when registration is not possible" in "REGISTRATION MANUAL FOR IMMOBILIZER" provided as a separate volume. 3) Read the DTC again. <Ref. to KPS(diag)-25, Read Diagnostic Trouble Code (DTC).>	Is DTC B2779 displayed?	Replace the remote engine starter.	Even if DTC is displayed, the circuit has returned to a normal condition at this time. Reproduce the failure, and then perform the diagnosis again. NOTE: In this case, temporary poor contact of connector, temporary open or short circuit of harness may be the cause.

W: DTC B2781 STEERING LOCK CM CONTROL CIRCUIT

DTC DETECTING CONDITION:

- When malfunction is detected in lock/unlock position detection sensor.
- When the open or short circuit in the steering lock motor drive circuit is detected.

TROUBLE SYMPTOM:

- The steering lock cannot be released.
- Engine will not start.

CAUTION:

For replacement procedure of steering lock CM, refer to the "REGISTRATION MANUAL FOR IMMOBILIZER" provided as a separate volume.

NOTE:

When all ECMs connected to collation system LIN bus cannot communicate with the keyless access CM, DTC B2785 is output.

Step	Check	Yes	No
1 CHECK DTC. Read the DTC using the Subaru Select Monitor. <Ref. to KPS(diag)-25, Read Diagnostic Trouble Code (DTC).>	Is DTC B2785 displayed?	Perform the diagnosis according to DTC. <Ref. to KPS(diag)-69, DTC B2785 LIN COMMUNICATION, Diagnostic Procedure with Diagnostic Trouble Code (DTC).>	Replace the steering lock CM. <Ref. to SL-92, Steering Lock CM.>

Diagnostic Procedure with Diagnostic Trouble Code (DTC)

KEYLESS ACCESS WITH PUSH BUTTON START SYSTEM (DIAGNOSTICS)

X: DTC B2782 STEERING LOCK DRIVE REQUEST SIGNAL CORRELATION

DTC detecting condition:

When the open or short circuit in the steering lock motor power supply circuit is detected.

Trouble symptom:

- The steering lock cannot be released.
- Engine will not start.

CAUTION:

For replacement procedure of keyless access CM and steering lock CM, refer to the “REGISTRATION MANUAL FOR IMMOBILIZER” provided as a separate volume.

Wiring diagram:

Push button start system <Ref. to WI-186, WIRING DIAGRAM, Push Button Start System.>

SL-03301

Step	Check	Yes	No
1 CHECK STEERING LOCK CM. 1) Disconnect the steering lock CM connector. 2) Using a tester, measure the resistance between the steering lock CM connector and chassis ground. Connector & terminal (B424) No. 1 — Chassis ground:	Is the resistance less than 1 Ω?	Go to step 2.	Repair or replace the open circuit of harness.
2 CHECK STEERING LOCK CM. 1) Connect the steering lock CM connector. 2) Set to ACC OFF, IGN OFF, and shift position P. 3) Using a tester, open the door, and measure the voltage between terminals of steering CM connector when the steering lock motor is driven. Connector & terminal (B424) No. 3 (+) — (B424) No. 1 (-):	Does the voltage change as follows? 1 V or less (steering lock motor in operation) → 11 — 14 V (steering lock motor not in operation)	Go to step 3.	Go to step 4.

Diagnostic Procedure with Diagnostic Trouble Code (DTC)

KEYLESS ACCESS WITH PUSH BUTTON START SYSTEM (DIAGNOSTICS)

Step	Check	Yes	No
3 CHECK DTC. 1) Turn the ignition switch to ON. 2) Using the Subaru Select Monitor, clear the memory. <Ref. to KPS(diag)-32, Clear Memory Mode.> 3) Turn the ignition switch to OFF. 4) Disconnect the battery ground cable and reconnect it, and then clear the abnormal information displayed on the data monitor. 5) Turn the ignition switch to ON. 6) Read the DTC using the Subaru Select Monitor. <Ref. to KPS(diag)-25, Read Diagnostic Trouble Code (DTC).>	Is DTC B2782 displayed?	Replace the steering lock CM. <Ref. to SL-92, Steering Lock CM.>	Even if DTC is displayed, the circuit has returned to a normal condition at this time. Reproduce the failure, and then perform the diagnosis again. NOTE: In this case, temporary poor contact of connector, temporary open or short circuit of harness may be the cause.
4 CHECK CONNECTOR. 1) Disconnect the steering lock CM connector. 2) Disconnect the keyless access CM connector.	Are connectors normal?	Go to step 5.	Repair or replace the connector.
5 CHECK HARNESS. Using a tester, measure the resistance between steering lock CM connector and keyless access CM connector. Connector & terminal (B574) No. 29 — (B424) No. 3:	Is the resistance less than 1 Ω ?	Go to step 6.	Repair or replace the open circuit of harness.
6 CHECK HARNESS. Using a tester, measure the resistance between steering lock CM connector and chassis ground, and between keyless access CM connector and chassis ground. Connector & terminal (B424) No. 3 — Chassis ground: (B574) No. 29 — Chassis ground:	Is the resistance 10 k Ω or more?	Replace the keyless access CM. <Ref. to SL-89, Keyless Access CM.>	Repair or replace the short circuit of the harness.

Diagnostic Procedure with Diagnostic Trouble Code (DTC)

KEYLESS ACCESS WITH PUSH BUTTON START SYSTEM (DIAGNOSTICS)

Y: DTC B2784 ANTENNA CIRCUIT (PUSH ENGINE SWITCH)

DTC detecting condition:

When open or short circuit occurs in the antenna coil.

Trouble symptom:

The keyless access function may not be operable.

CAUTION:

For replacement procedure of keyless access CM and steering lock CM, refer to the "REGISTRATION MANUAL FOR IMMOBILIZER" provided as a separate volume.

Wiring diagram:

Immobilizer system <Ref. to WI-147, WIRING DIAGRAM, Immobilizer System.>

SL-10384

Step	Check	Yes	No
1 CHECK STEERING LOCK CM. 1) Disconnect the push button ignition switch connector. 2) Disconnect the keyless access CM connector. 3) Using the tester, measure the resistance between terminals. Connector & terminal (i150) No. 14 — (B574) No. 1: (i150) No. 9 — (B574) No. 9: (i150) No. 10 — (B574) No. 7: (i150) No. 8 — (B574) No. 24:	Is the resistance less than 1 Ω?	Go to step 2.	Repair or replace the open circuit of harness.
2 CHECK HARNESS. Using the tester, measure the resistance between terminals. Connector & terminal (i150) No. 14 — Chassis ground: (i150) No. 9 — Chassis ground: (i150) No. 10 — Chassis ground:	Is the resistance 10 kΩ or more?	Go to step 3.	Repair or replace the short circuit of the harness.

Diagnostic Procedure with Diagnostic Trouble Code (DTC)

KEYLESS ACCESS WITH PUSH BUTTON START SYSTEM (DIAGNOSTICS)

Step	Check	Yes	No
3 CHECK PUSH BUTTON IGNITION SWITCH. 1) Replace the push button ignition switch. <Ref. to SL-94, Push Button Ignition Switch.> 2) Using the Subaru Select Monitor, clear the memory. <Ref. to KPS(diag)-32, Clear Memory Mode.> 3) Read the DTC using the Subaru Select Monitor. <Ref. to KPS(diag)-25, Read Diagnostic Trouble Code (DTC).>	Is DTC B2784 displayed?	Replace the keyless access CM. <Ref. to SL-89, Keyless Access CM.>	Malfunction occurred in the push button ignition switch.

Diagnostic Procedure with Diagnostic Trouble Code (DTC)

KEYLESS ACCESS WITH PUSH BUTTON START SYSTEM (DIAGNOSTICS)

Z: DTC B2785 LIN COMMUNICATION

DTC detecting condition:

When the keyless access CM detected the collation system LIN bus communication error three times in a row.

Trouble symptom:

The keyless access function may not be operable.

CAUTION:

For replacement procedure of keyless access CM, ID code box and steering lock CM, refer to "REGISTRATION MANUAL FOR IMMOBILIZER" provided as a separate volume.

Wiring diagram:

Push button start system <Ref. to WI-186, WIRING DIAGRAM, Push Button Start System.>

SL-03303

Step	Check	Yes	No
<p>1</p> <p>CHECK DTC.</p> <p>1) Using the Subaru Select Monitor, clear the memory. <Ref. to KPS(diag)-32, Clear Memory Mode.></p> <p>2) Read the DTC using the Subaru Select Monitor. <Ref. to KPS(diag)-25, Read Diagnostic Trouble Code (DTC).></p>	<p>Is DTC B2785 displayed?</p>	<p>Go to step 2.</p>	<p>Even if DTC is displayed, the circuit has returned to a normal condition at this time. Reproduce the failure, and then perform the diagnosis again.</p> <p>NOTE:</p> <p>In this case, temporary poor contact of connector, temporary open or short circuit of harness may be the cause.</p>

Diagnostic Procedure with Diagnostic Trouble Code (DTC)

KEYLESS ACCESS WITH PUSH BUTTON START SYSTEM (DIAGNOSTICS)

Step	Check	Yes	No
<p>2 CHECK HARNESS (OPEN CIRCUIT). 1) Disconnect the keyless access CM connector. 2) Disconnect the steering lock CM connector. 3) Disconnect the ID code box connector. (With ID code box) 4) Using the tester, measure the resistance between terminals. Connector & terminal (B574) No. 17 — (B424) No. 5: (B574) No. 17 — (B422) No. 2: (with ID code box)</p>	Is the resistance less than 1 Ω?	Go to step 3.	Repair or replace the open circuit of harness.
<p>3 CHECK HARNESS (GROUND SHORT CIRCUIT). Using the tester, measure the resistance between terminals. Connector & terminal (B424) No. 5 — Chassis ground: (B574) No. 17 — Chassis ground: (B422) No. 5 — Chassis ground: (with ID code box)</p>	Is the resistance 10 kΩ or more?	Go to step 4.	Repair or replace the short circuit of the harness.
<p>4 CHECK HARNESS. 1) Connect the keyless access CM connector only. 2) Read the DTC using the Subaru Select Monitor. <Ref. to KPS(diag)-25, Read Diagnostic Trouble Code (DTC).></p>	Is DTC B2785 displayed?	Replace the keyless access CM. <Ref. to SL-89, Keyless Access CM.>	Go to step 5.
<p>5 CHECK ID CODE BOX. NOTE: For model without ID code box, go to the next step. 1) Connect the ID code box. 2) Read the DTC using the Subaru Select Monitor. <Ref. to KPS(diag)-25, Read Diagnostic Trouble Code (DTC).></p>	Is DTC B2785 displayed?	Replace the ID code box. <Ref. to SL-91, ID Code Box.>	Go to step 6.
<p>6 CHECK STEERING LOCK CM. 1) Connect the steering lock CM. <Ref. to SL-92, Steering Lock CM.> 2) Using the Subaru Select Monitor, clear the memory. <Ref. to KPS(diag)-32, Clear Memory Mode.> 3) Read the DTC using the Subaru Select Monitor. <Ref. to KPS(diag)-25, Read Diagnostic Trouble Code (DTC).></p>	Is DTC B2785 displayed?	Replace the steering lock CM. <Ref. to SL-92, Steering Lock CM.>	Even if DTC is displayed, the circuit has returned to a normal condition at this time. Reproduce the failure, and then perform the diagnosis again. NOTE: In this case, temporary poor contact of connector, temporary open or short circuit of harness may be the cause.

Diagnostic Procedure with Diagnostic Trouble Code (DTC)

KEYLESS ACCESS WITH PUSH BUTTON START SYSTEM (DIAGNOSTICS)

AA:DTC B2786 STEERING LOCK CM COMMUNICATION

DTC detecting condition:

When communication between keyless access CM and steering lock CM is interrupted for a set amount of time.

Trouble symptom:

The steering lock cannot be released.

CAUTION:

For replacement procedure of keyless access CM and steering lock CM, refer to the "REGISTRATION MANUAL FOR IMMOBILIZER" provided as a separate volume.

Wiring diagram:

Push button start system <Ref. to WI-186, WIRING DIAGRAM, Push Button Start System.>

SL-03304

Step	Check	Yes	No	
1	CHECK DTC. Read the DTC using the Subaru Select Monitor. <Ref. to KPS(diag)-25, Read Diagnostic Trouble Code (DTC).>	Is a DTC other than DTC B2786 displayed?	Perform the diagnosis according to DTC.	Go to step 2.
2	CHECK HARNESS (OPEN CIRCUIT). 1) Disconnect the keyless access CM connector. 2) Disconnect the steering lock CM connector. 3) Using the tester, measure the resistance between terminals. Connector & terminal (B574) No. 17 — (B424) No. 5:	Is the resistance less than 1 Ω?	Go to step 3.	Repair or replace the open circuit of harness.
3	CHECK HARNESS (GROUND SHORT CIRCUIT). Using the tester, measure the resistance between terminals. Connector & terminal (B574) No. 17 — Chassis ground:	Is the resistance 10 kΩ or more?	Go to step 4.	Repair or replace the short circuit of the harness.

Diagnostic Procedure with Diagnostic Trouble Code (DTC)

KEYLESS ACCESS WITH PUSH BUTTON START SYSTEM (DIAGNOSTICS)

Step	Check	Yes	No
4 CHECK HARNESS (OPEN CIRCUIT). Using a tester, measure the resistance between the steering lock CM connector and chassis ground. Connector & terminal (B424) No. 1 — Chassis ground:	Is the resistance less than 1 Ω ?	Go to step 5.	Repair or replace the open circuit of harness.
5 CHECK HARNESS. 1) Turn the ignition switch to ON. 2) Using a tester, measure the voltage between the steering lock CM connector and chassis ground. Connector & terminal (B424) No. 6 (+) — Chassis ground (-): (B424) No. 7 (+) — Chassis ground (-):	Is the voltage 11 — 14 V?	Go to step 6.	Repair or replace the faulty portion of the power supply circuit.
6 CHECK STEERING LOCK CM. 1) Turn the ignition switch to ON. 2) Using the Subaru Select Monitor, clear the memory. <Ref. to KPS(diag)-32, Clear Memory Mode.> 3) Read the DTC using the Subaru Select Monitor. <Ref. to KPS(diag)-25, Read Diagnostic Trouble Code (DTC).>	Is DTC B2785 displayed?	Replace the keyless access CM. <Ref. to SL-89, Keyless Access CM.>	Go to step 7.
7 CHECK STEERING LOCK CM. 1) Turn the ignition switch to ON. 2) Using the Subaru Select Monitor, clear the memory. <Ref. to KPS(diag)-32, Clear Memory Mode.> 3) Read the DTC using the Subaru Select Monitor. <Ref. to KPS(diag)-25, Read Diagnostic Trouble Code (DTC).>	Is DTC B2786 displayed?	Replace the steering lock CM. <Ref. to SL-92, Steering Lock CM.>	Even if DTC is displayed, the circuit has returned to a normal condition at this time. Reproduce the failure, and then perform the diagnosis again. NOTE: In this case, temporary poor contact of connector, temporary open or short circuit of harness may be the cause.

Diagnostic Procedure with Diagnostic Trouble Code (DTC)

KEYLESS ACCESS WITH PUSH BUTTON START SYSTEM (DIAGNOSTICS)

AB:DTC B2788 IGN SIGNAL CORRELATION (STEERING LOCK CM)

DTC detecting condition:

When mismatch occurs in the IG1 input of the steering lock CM for both LIN communication line input (IG1 input value of keyless access CM) and solid line input.

Trouble symptom:

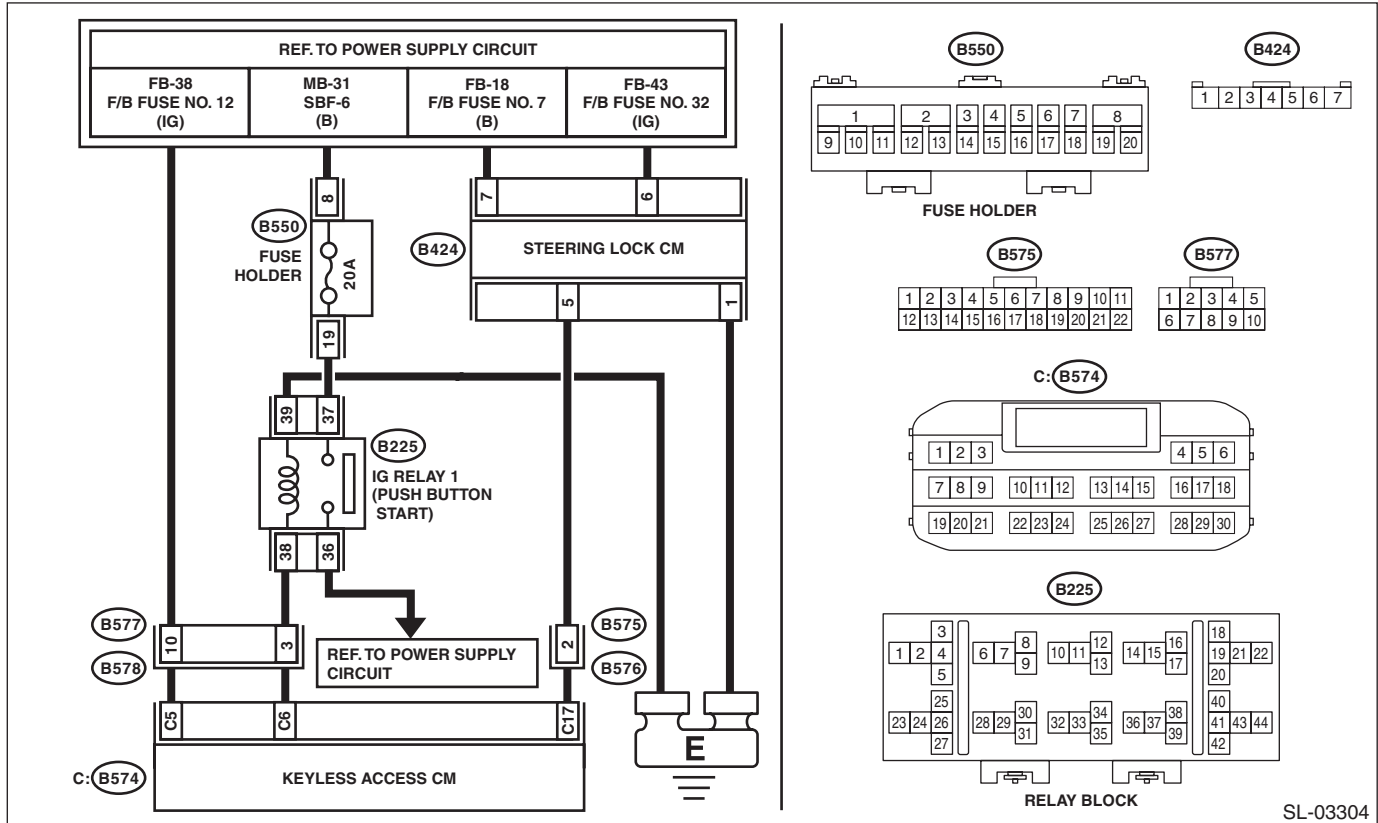

The steering lock cannot be released.

CAUTION:

For replacement procedure of steering lock CM, refer to the "REGISTRATION MANUAL FOR IMMOBILIZER" provided as a separate volume.

Wiring diagram:

Push button start system <Ref. to WI-186, WIRING DIAGRAM, Push Button Start System.>

SL-03304

Step	Check	Yes	No
1	CHECK FUSE. Check the fuse. <Ref. to SL-8, Relay and Fuse.>	Go to step 2.	Replace the fuse. When the replaced fuse is blown immediately, check the power supply circuit for short-circuited.
2	CHECK CURRENT DATA. Check the current data display of «Keyless Access with Push Button Start» using Subaru Select Monitor. <Ref. to KPS(diag)-26, Read Current Data.> • «IGN SW»	Go to step 3.	Go to step 5.

Diagnostic Procedure with Diagnostic Trouble Code (DTC)

KEYLESS ACCESS WITH PUSH BUTTON START SYSTEM (DIAGNOSTICS)

Step	Check	Yes	No
3 CHECK HARNESS (OPEN CIRCUIT). 1) Disconnect the steering lock CM connector. 2) Using a tester, measure the resistance between the steering lock CM connector and chassis ground. Connector & terminal (B424) No. 1 — Chassis ground:	Is the resistance less than 1 Ω ?	Go to step 4.	Repair or replace the open circuit of harness.
4 CHECK HARNESS. 1) Connect the steering lock CM connector. 2) Using the tester, measure the voltage between terminals. Connector & terminal (B424) No. 6 (+) — (B424) No. 1 (-):	Is the voltage 11 — 14 V with IG ON? Is the voltage less than 1 V with IG OFF?	Replace the steering lock CM. <Ref. to SL-92, REMOVAL, Steering Lock CM.>	Check the DC power supply circuit.
5 CHECK DTC. Read the DTC using Subaru Select Monitor. <Ref. to KPS(diag)-25, Read Diagnostic Trouble Code (DTC).>	Is DTC B2271 displayed?	Perform the diagnosis according to DTC B2271. <Ref. to KPS(diag)-42, DTC B2271 IGN RELAY CONTROL CIRCUIT, Diagnostic Procedure with Diagnostic Trouble Code (DTC).>	Replace the keyless access CM. <Ref. to SL-89, REMOVAL, Keyless Access CM.>

Diagnostic Procedure with Diagnostic Trouble Code (DTC)

KEYLESS ACCESS WITH PUSH BUTTON START SYSTEM (DIAGNOSTICS)

AC:DTC B2789 ID CODE BOX COMMUNICATION

DTC detecting condition:

- When communication between keyless access CM and ID code box is interrupted for a set amount of time.
- Open or short circuit in the wiring harness between keyless access CM and ID code box

Trouble symptom:

Engine will not start.

CAUTION:

For replacement procedure of keyless access CM and ID code box, refer to the “REGISTRATION MANUAL FOR IMMOBILIZER” provided as a separate volume.

Wiring diagram:

Push button start system <Ref. to WI-186, WIRING DIAGRAM, Push Button Start System.>

SL-10375

Step	Check	Yes	No
1 CHECK DTC. 1) Using the Subaru Select Monitor, clear the memory. <Ref. to KPS(diag)-32, Clear Memory Mode.> 2) Read the DTC using the Subaru Select Monitor. <Ref. to KPS(diag)-25, Read Diagnostic Trouble Code (DTC).>	Is DTC B2789 displayed?	Go to step 2.	Even if DTC is displayed, the circuit has returned to a normal condition at this time. Reproduce the failure, and then perform the diagnosis again. NOTE: In this case, temporary poor contact of connector, temporary open or short circuit of harness may be the cause.

Diagnostic Procedure with Diagnostic Trouble Code (DTC)

KEYLESS ACCESS WITH PUSH BUTTON START SYSTEM (DIAGNOSTICS)

Step	Check	Yes	No
2 CHECK HARNESS (OPEN CIRCUIT). 1) Disconnect the keyless access CM connector. 2) Disconnect the ID code box connector. 3) Using the tester, measure the resistance between terminals. Connector & terminal (B574) No. 17 — (B422) No. 2:	Is the resistance less than 1 Ω ?	Go to step 3.	Repair or replace the open circuit of harness.
3 CHECK HARNESS (GROUND SHORT CIRCUIT). Using a tester, measure the resistance between the keyless access CM connector and chassis ground, and between ID code box connector and chassis ground. Connector & terminal (B574) No. 17 — Chassis ground:	Is the resistance 10 k Ω or more?	Go to step 4.	Repair or replace the short circuit of the harness.
4 CHECK HARNESS (OPEN CIRCUIT). Using a tester, measure the resistance between ID code box connector and chassis ground. Connector & terminal (B422) No. 5 — Chassis ground:	Is the resistance less than 1 Ω ?	Go to step 5.	Repair or replace the open circuit of harness.
5 CHECK HARNESS. Using a tester, measure the voltage between ID code box connector and chassis ground. Connector & terminal (B422) No. 1 (+) — Chassis ground (-):	Is the voltage 11 — 14 V?	Go to step 6.	Repair or replace the faulty portion of the power supply circuit.
6 CHECK ID CODE BOX. 1) Using the Subaru Select Monitor, clear the memory. <Ref. to KPS(diag)-32, Clear Memory Mode.> 2) Read the DTC using the Subaru Select Monitor. <Ref. to KPS(diag)-25, Read Diagnostic Trouble Code (DTC).>	Is DTC B2785 displayed?	Replace the keyless access CM. <Ref. to SL-89, Keyless Access CM.>	Go to step 7.
7 CHECK STEERING LOCK CM. 1) Turn the ignition switch to ON. 2) Using the Subaru Select Monitor, clear the memory. <Ref. to KPS(diag)-32, Clear Memory Mode.> 3) Read the DTC using the Subaru Select Monitor. <Ref. to KPS(diag)-25, Read Diagnostic Trouble Code (DTC).>	Is DTC B2789 displayed?	Replace the ID code box. <Ref. to SL-91, ID Code Box.>	Even if DTC is displayed, the circuit has returned to a normal condition at this time. Reproduce the failure, and then perform the diagnosis again. NOTE: In this case, temporary poor contact of connector, temporary open or short circuit of harness may be the cause.

Diagnostic Procedure with Diagnostic Trouble Code (DTC)

KEYLESS ACCESS WITH PUSH BUTTON START SYSTEM (DIAGNOSTICS)

AD:DTC B278A PUSH ENGINE SWITCH POWER SUPPLY CIRCUIT

DTC detecting condition:

When the power supply circuit of the push button ignition switch is shorted to ground.

Trouble symptom:

- Engine will not start.
- The keyless access system function does not operate.

CAUTION:

For replacement procedure of keyless access CM, refer to the “REGISTRATION MANUAL FOR IMMOBILIZER” provided as a separate volume.

Wiring diagram:

Immobilizer system <Ref. to WI-147, WIRING DIAGRAM, Immobilizer System.>

SL-10376

Step	Check	Yes	No
<p>1</p> <p>CHECK KEYLESS ACCESS CM.</p> <p>1) Turn the ignition switch to OFF.</p> <p>2) Take the access key out of the passenger room.</p> <p>3) Push the push button ignition switch. Within 30 seconds, use oscilloscope to measure the waveform between connectors.</p> <p>Connector & terminal (i150) No. 14 — (i150) No. 8:</p> <p>SL-00634</p>	<p>Is the waveform shown in the left column displayed?</p>	<p>Replace the push button ignition switch. <Ref. to SL-94, Push Button Ignition Switch.></p>	<p>Go to step 2.</p>

Diagnostic Procedure with Diagnostic Trouble Code (DTC)

KEYLESS ACCESS WITH PUSH BUTTON START SYSTEM (DIAGNOSTICS)

Step	Check	Yes	No
2 CHECK HARNESS (OPEN CIRCUIT). 1) Disconnect the keyless access CM connector. 2) Disconnect the push button ignition switch connector. 3) Using the tester, measure the resistance between terminals. Connector & terminal <i>(i150) No. 14 — (B574) No. 1:</i> <i>(i150) No. 8 — (B574) No. 24:</i>	Is the resistance less than 1 Ω ?	Go to step 3.	Repair or replace the open circuit of harness.
3 CHECK HARNESS (GROUND SHORT CIRCUIT). Using a tester, measure the resistance between the keyless access CM connector and chassis ground. Connector & terminal <i>(B574) No. 1 — Chassis ground:</i>	Is the resistance 10 k Ω or more?	Go to step 4.	Repair or replace the short circuit of the harness.
4 CHECK HARNESS. Using a tester, measure the resistance between the keyless access CM connector and chassis ground. Connector & terminal <i>(B574) No. 24 — Chassis ground:</i>	Is the resistance 1 Ω or less?	Go to step 5.	Repair or replace the harness.
5 CHECK DTC. 1) Using the Subaru Select Monitor, clear the memory. <Ref. to KPS(diag)-32, Clear Memory Mode.> 2) Read the DTC using the Subaru Select Monitor. <Ref. to KPS(diag)-25, Read Diagnostic Trouble Code (DTC).>	Is DTC B278A displayed?	Replace the keyless access CM. <Ref. to SL-89, Keyless Access CM.>	Even if DTC is displayed, the circuit has returned to a normal condition at this time. Reproduce the failure, and then perform the diagnosis again. NOTE: In this case, temporary poor contact of connector, temporary open or short circuit of harness may be the cause.

Diagnostic Procedure with Diagnostic Trouble Code (DTC)

KEYLESS ACCESS WITH PUSH BUTTON START SYSTEM (DIAGNOSTICS)

AE:DTC B278D ID CODE BOX JUDGMENT CIRCUIT

DTC detecting condition:

- When ID code box setting is set to OFF, ID code box ON input is detected.
- When ID code box setting is set to OFF, ID code box LIN signal is received.

Trouble symptom:

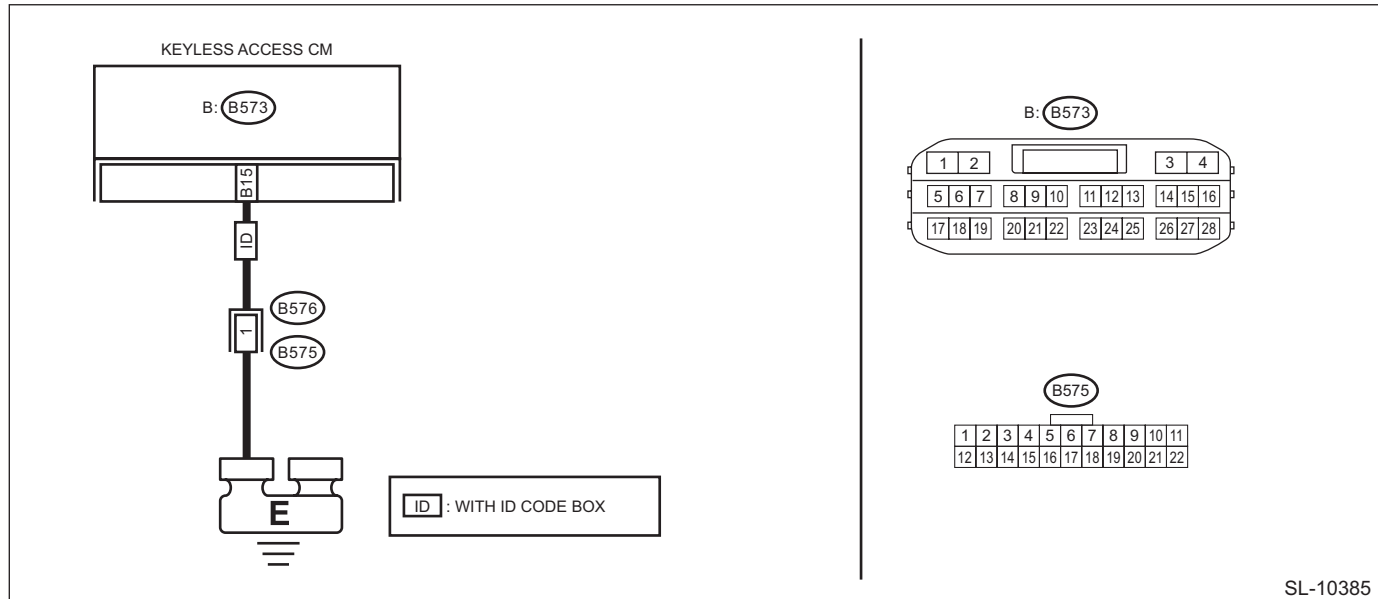

Engine will not start.

CAUTION:

For replacement procedure of keyless access CM, refer to the “REGISTRATION MANUAL FOR IMMOBILIZER” provided as a separate volume.

Wiring diagram:

Push button start system <Ref. to WI-186, WIRING DIAGRAM, Push Button Start System.>

SL-10385

Step	Check	Yes	No
1 CHECK DTC. 1) Turn the ignition switch to OFF. 2) Using the Subaru Select Monitor, clear the memory of «Keyless Access with Push Button Start». <Ref. to KPS(diag)-32, Clear Memory Mode.> 3) Turn the ignition switch to OFF → ON. 4) Read the DTC using Subaru Select Monitor. <Ref. to KPS(diag)-25, Read Diagnostic Trouble Code (DTC).>	Is DTC B278D displayed?	Go to step 2.	Even if DTC is displayed, the circuit has returned to a normal condition at this time. Reproduce the failure, and then perform the diagnosis again. NOTE: In this case, temporary poor contact of connector, temporary open or short circuit of harness may be the cause.
2 CHECK HARNESS. 1) Disconnect the keyless access CM connector. 2) Measure the resistance between keyless access CM connector and chassis ground. Connector & terminal (B573) No. 15 — Chassis ground:	Is the resistance 10 kΩ or more?	Replace the keyless access CM. <Ref. to SL-89, Keyless Access CM.>	Repair or replace the short circuit of the harness.

Diagnostic Procedure with Diagnostic Trouble Code (DTC)

KEYLESS ACCESS WITH PUSH BUTTON START SYSTEM (DIAGNOSTICS)

AF:DTC B2790 ID CODE BOX CIRCUIT

DTC detecting condition:

An error has occurred inside the ID code box.

Trouble symptom:

Engine will not start.

CAUTION:

For replacement procedure of ID code box, refer to the “REGISTRATION MANUAL FOR IMMOBILIZER” provided as a separate volume.

	Step	Check	Yes	No
1	CHECK DTC. 1) Turn the ignition switch to OFF. 2) Using the Subaru Select Monitor, clear the memory of «Keyless Access with Push Button Start». <Ref. to KPS(diag)-32, Clear Memory Mode.> 3) Turn the ignition switch to OFF → ON. 4) Register the ID code box. Refer to the “REGISTRATION MANUAL FOR IMMOBILIZER” provided as a separate volume. 5) Read the DTC using Subaru Select Monitor. <Ref. to KPS(diag)-25, Read Diagnostic Trouble Code (DTC).>	Is DTC B2790 displayed?	Replace the ID code box. <Ref. to SL-91, ID Code Box.>	ID code box registration was not performed properly.

Diagnostic Procedure with Diagnostic Trouble Code (DTC)

KEYLESS ACCESS WITH PUSH BUTTON START SYSTEM (DIAGNOSTICS)

AG:DTC B27A1 DRIVER SIDE EXTERNAL ANTENNA OPEN

DTC detecting condition:

When open circuit occurs in the harness between keyless access CM and driver's side front door outer handle.

Trouble symptom:

Keyless access system does not function.

CAUTION:

For replacement procedure of keyless access CM, refer to the "REGISTRATION MANUAL FOR IMMOBILIZER" provided as a separate volume.

Wiring diagram:

Keyless access system <Ref. to WI-157, WIRING DIAGRAM, Keyless Access System.>

SL-03308

Step	Check	Yes	No
1 CHECK LAN SYSTEM. Inspect LAN system. <Ref. to LAN(diag)-2, PROCEDURE, Basic Diagnostic Procedure.>	Is LAN system normal?	Go to step 2.	Perform the inspection according to the diagnosis for LAN system.
2 CHECK CONNECTOR. 1) Disconnect the keyless access CM connector. 2) Disconnect the front door outer handle connector.	Is the connector OK?	Go to step 3.	Repair or replace the connector.

Diagnostic Procedure with Diagnostic Trouble Code (DTC)

KEYLESS ACCESS WITH PUSH BUTTON START SYSTEM (DIAGNOSTICS)

Step	Check	Yes	No
3 CHECK HARNESS (OPEN CIRCUIT). Using a tester, measure the resistance between the keyless access CM connector and front door outer handle connector, and between front door outer handle connector, keyless access CM connector and chassis ground. Connector & terminal (B574) No. 12 — (D66) No. 6: (B574) No. 13 — (D66) No. 3: (D66) No. 2 — Chassis ground: (B572) No. 11 — Chassis ground:	Is the resistance less than 1 Ω?	Go to step 4.	Repair or replace the open circuit of harness.
4 CHECK HARNESS (GROUND SHORT CIRCUIT). Using a tester, measure the resistance between the keyless access CM connector and chassis ground. Connector & terminal (B574) No. 12 — Chassis ground: (B574) No. 13 — Chassis ground:	Is the resistance 10 kΩ or more?	Go to step 5.	Repair or replace the short circuit of the harness.
5 CHECK DTC. 1) Connect the keyless access CM connector. 2) Using the Subaru Select Monitor, clear the memory. <Ref. to KPS(diag)-32, Clear Memory Mode.> 3) Read the DTC using Subaru Select Monitor. <Ref. to KPS(diag)-25, Read Diagnostic Trouble Code (DTC).>	Is DTC B27A1 displayed?	Go to step 6.	Even if DTC is displayed, the circuit has returned to a normal condition at this time. Reproduce the failure, and then perform the diagnosis again. NOTE: In this case, temporary poor contact of connector, temporary open or short circuit of harness may be the cause.
6 CHECK FRONT DOOR OUTER HANDLE. 1) Replace the driver's side front door outer handle with the passenger's front door outer handle. <Ref. to SL-34, Front Outer Handle.> 2) Using the Subaru Select Monitor, clear the memory. <Ref. to KPS(diag)-32, Clear Memory Mode.> 3) Read the DTC using Subaru Select Monitor. <Ref. to KPS(diag)-25, Read Diagnostic Trouble Code (DTC).>	Is DTC B27A1 displayed?	Replace the keyless access CM. <Ref. to SL-89, Keyless Access CM.>	Replace the driver's side front door outer handle. <Ref. to SL-34, Front Outer Handle.>

Diagnostic Procedure with Diagnostic Trouble Code (DTC)

KEYLESS ACCESS WITH PUSH BUTTON START SYSTEM (DIAGNOSTICS)

AH:DTC B27A2 PASSENGER SIDE EXTERNAL ANTENNA OPEN

DTC detecting condition:

When open circuit occurs in the harness between keyless access CM and passenger's side front door outer handle.

Trouble symptom:

Keyless access system does not function.

CAUTION:

For replacement procedure of keyless access CM, refer to the "REGISTRATION MANUAL FOR IMMOBILIZER" provided as a separate volume.

Wiring diagram:

Keyless access system <Ref. to WI-157, WIRING DIAGRAM, Keyless Access System.>

SL-03309

Step	Check	Yes	No
1 CHECK LAN SYSTEM. Inspect LAN system. <Ref. to LAN(diag)-2, PROCEDURE, Basic Diagnostic Procedure.>	Is LAN system normal?	Go to step 2.	Perform the inspection according to the diagnosis for LAN system.
2 CHECK CONNECTOR. 1) Disconnect the keyless access CM connector. 2) Disconnect the front door outer handle connector.	Is the connector OK?	Go to step 3.	Repair or replace the connector.

Diagnostic Procedure with Diagnostic Trouble Code (DTC)

KEYLESS ACCESS WITH PUSH BUTTON START SYSTEM (DIAGNOSTICS)

Step	Check	Yes	No
3 CHECK HARNESS (OPEN CIRCUIT). Using a tester, measure the resistance between the keyless access CM connector and front door outer handle connector, and between front door outer handle connector, keyless access CM connector and chassis ground. Connector & terminal (B574) No. 11 — (D56) No. 6: (B574) No. 10 — (D56) No. 3: (D56) No. 2 — Chassis ground: (B572) No. 11 — Chassis ground:	Is the resistance less than 1 Ω ?	Go to step 4.	Repair or replace the open circuit of harness.
4 CHECK HARNESS (GROUND SHORT CIRCUIT). Using a tester, measure the resistance between the keyless access CM connector and chassis ground. Connector & terminal (B574) No. 11 — Chassis ground: (B574) No. 10 — Chassis ground:	Is the resistance 10 k Ω or more?	Go to step 5.	Repair or replace the short circuit of the harness.
5 CHECK DTC. 1) Connect the keyless access CM connector. 2) Using the Subaru Select Monitor, clear the memory. <Ref. to KPS(diag)-32, Clear Memory Mode.> 3) Read the DTC using Subaru Select Monitor. <Ref. to KPS(diag)-25, Read Diagnostic Trouble Code (DTC).>	Is DTC B27A2 displayed?	Go to step 6.	Even if DTC is displayed, the circuit has returned to a normal condition at this time. Reproduce the failure, and then perform the diagnosis again. NOTE: In this case, temporary poor contact of connector, temporary open or short circuit of harness may be the cause.
6 CHECK FRONT DOOR OUTER HANDLE. 1) Replace the passenger's side front door outer handle with the driver's front door outer handle. <Ref. to SL-34, Front Outer Handle.> 2) Using the Subaru Select Monitor, clear the memory. <Ref. to KPS(diag)-32, Clear Memory Mode.> 3) Read the DTC using Subaru Select Monitor. <Ref. to KPS(diag)-25, Read Diagnostic Trouble Code (DTC).>	Is DTC B27A2 displayed?	Replace the keyless access CM. <Ref. to SL-89, Keyless Access CM.>	Replace the passenger's side front door outer handle. <Ref. to SL-34, Front Outer Handle.>

Diagnostic Procedure with Diagnostic Trouble Code (DTC)

KEYLESS ACCESS WITH PUSH BUTTON START SYSTEM (DIAGNOSTICS)

AI: DTC B27A5 FRONT INTERNAL ANTENNA OPEN

DTC detecting condition:

When open circuit occurs in the harness between keyless access CM and front interior antenna.

Trouble symptom:

Keyless access system does not function. (When the access key is in the front area of the passenger room)

CAUTION:

For replacement procedure of keyless access CM, refer to the “REGISTRATION MANUAL FOR IMMOBILIZER” provided as a separate volume.

Wiring diagram:

Keyless access system <Ref. to WI-157, WIRING DIAGRAM, Keyless Access System.>

SL-03310

Step	Check	Yes	No	
1	CHECK LAN SYSTEM. Inspect LAN system. <Ref. to LAN(diag)-2, PROCEDURE, Basic Diagnostic Procedure.>	Is LAN system normal?	Go to step 2.	Perform the inspection according to the diagnosis for LAN system.
2	CHECK CONNECTOR. 1) Disconnect the keyless access CM connector. 2) Disconnect the front interior antenna connector.	Is the connector OK?	Go to step 3.	Repair or replace the connector.
3	CHECK HARNESS (OPEN CIRCUIT). Using a tester, measure the resistance between the keyless access CM connector and front interior antenna connector, and between front interior antenna connector, keyless access CM connector and chassis ground. Connector & terminal (B574) No. 3 — (B579) No. 1: (B574) No. 2 — (B579) No. 2: (B572) No. 11 — Chassis ground:	Is the resistance less than 1 Ω?	Go to step 4.	Repair or replace the open circuit of harness.
4	CHECK HARNESS (GROUND SHORT CIRCUIT). Using a tester, measure the resistance between the keyless access CM connector and chassis ground. Connector & terminal (B574) No. 3 — Chassis ground: (B574) No. 2 — Chassis ground:	Is the resistance 10 kΩ or more?	Go to step 5.	Repair or replace the short circuit of the harness.

Diagnostic Procedure with Diagnostic Trouble Code (DTC)

KEYLESS ACCESS WITH PUSH BUTTON START SYSTEM (DIAGNOSTICS)

Step	Check	Yes	No
5 CHECK DTC. 1) Connect the keyless access CM connector. 2) Using the Subaru Select Monitor, clear the memory. <Ref. to KPS(diag)-32, Clear Memory Mode.> 3) Read DTC using the Subaru Select Monitor. <Ref. to KPS(diag)-25, Read Diagnostic Trouble Code (DTC).>	Is DTC B27A5 displayed?	Go to step 6.	Even if DTC is displayed, the circuit has returned to a normal condition at this time. Reproduce the failure, and then perform the diagnosis again. NOTE: In this case, temporary poor contact of connector, temporary open or short circuit of harness may be the cause.
6 CHECK FRONT INTERIOR ANTENNA. 1) Replace the rear interior antenna with the front interior antenna. <Ref. to SL-82, Keyless Access Indoor Antenna.> 2) Using the Subaru Select Monitor, clear the memory. <Ref. to KPS(diag)-32, Clear Memory Mode.> 3) Read the DTC using Subaru Select Monitor. <Ref. to KPS(diag)-25, Read Diagnostic Trouble Code (DTC).>	Is DTC B27A5 displayed?	Replace the keyless access CM. <Ref. to SL-89, Keyless Access CM.>	Malfunction occurred in the front interior antenna.

Diagnostic Procedure with Diagnostic Trouble Code (DTC)

KEYLESS ACCESS WITH PUSH BUTTON START SYSTEM (DIAGNOSTICS)

AJ:DTC B27A7 TRUNK/REAR GATE INTERNAL ANTENNA OPEN

DTC detecting condition:

When open circuit occurs in the harness between keyless access CM and rear interior antenna.

Trouble symptom:

Keyless access system does not function. (When the access key is in the rear area of the passenger room (within luggage compartment))

CAUTION:

For replacement procedure of keyless access CM, refer to the “REGISTRATION MANUAL FOR IMMOBILIZER” provided as a separate volume.

Wiring diagram:

Keyless access system <Ref. to WI-157, WIRING DIAGRAM, Keyless Access System.>

Step	Check	Yes	No
1 CHECK LAN SYSTEM. Inspect LAN system. <Ref. to LAN(diag)-2, PROCEDURE, Basic Diagnostic Procedure.>	Is LAN system normal?	Go to step 2.	Perform the inspection according to the diagnosis for LAN system.
2 CHECK CONNECTOR. 1) Disconnect the keyless access CM connector. 2) Disconnect the rear interior antenna connector.	Is the connector OK?	Go to step 3.	Repair or replace the connector.
3 CHECK HARNESS (OPEN CIRCUIT). Using a tester, measure the resistance between the keyless access CM connector and rear interior antenna connector, and between rear interior antenna connector, keyless access CM connector and chassis ground. Connector & terminal (B573) No. 9 — (R298) No. 1: (B573) No. 8 — (R298) No. 3: (B572) No. 11 — Chassis ground:	Is the resistance less than 1 Ω?	Go to step 4.	Repair or replace the open circuit of harness.

Diagnostic Procedure with Diagnostic Trouble Code (DTC)

KEYLESS ACCESS WITH PUSH BUTTON START SYSTEM (DIAGNOSTICS)

Step	Check	Yes	No
<p>4 CHECK HARNESS (GROUND SHORT CIRCUIT). Using a tester, measure the resistance between the keyless access CM connector and chassis ground.</p> <p style="margin-left: 20px;">Connector & terminal (B573) No. 9 — Chassis ground: (B573) No. 8 — Chassis ground:</p>	Is the resistance 10 kΩ or more?	Go to step 5.	Repair or replace the short circuit of the harness.
<p>5 CHECK DTC. 1) Connect the keyless access CM connector. 2) Using the Subaru Select Monitor, clear the memory. <Ref. to KPS(diag)-32, Clear Memory Mode.> 3) Read DTC using the Subaru Select Monitor. <Ref. to KPS(diag)-25, Read Diagnostic Trouble Code (DTC).></p>	Is DTC B27A7 displayed?	Go to step 6.	Even if DTC is displayed, the circuit has returned to a normal condition at this time. Reproduce the failure, and then perform the diagnosis again. NOTE: In this case, temporary poor contact of connector, temporary open or short circuit of harness may be the cause.
<p>6 CHECK REAR INTERIOR ANTENNA. 1) Replace the rear interior antenna with the front interior antenna. <Ref. to SL-82, Keyless Access Indoor Antenna.> 2) Using the Subaru Select Monitor, clear the memory. <Ref. to KPS(diag)-32, Clear Memory Mode.> 3) Read the DTC using Subaru Select Monitor. <Ref. to KPS(diag)-25, Read Diagnostic Trouble Code (DTC).></p>	Is DTC B27A7 displayed?	Replace the keyless access CM. <Ref. to SL-89, Keyless Access CM.>	Malfunction occurred in the rear interior antenna.

Diagnostic Procedure with Diagnostic Trouble Code (DTC)

KEYLESS ACCESS WITH PUSH BUTTON START SYSTEM (DIAGNOSTICS)

AK:DTC B27A8 TRUNK/REAR GATE EXTERNAL ANTENNA OPEN

DTC detecting condition:

When open circuit occurs in the harness between keyless access CM and rear exterior antenna.

Trouble symptom:

Keyless access system does not function.

(Unable to unlock with the rear gate opener button, or unable to lock with the rear lock button.)

CAUTION:

For replacement procedure of keyless access CM, refer to the “REGISTRATION MANUAL FOR IMMOBILIZER” provided as a separate volume.

Wiring diagram:

Keyless access system <Ref. to WI-157, WIRING DIAGRAM, Keyless Access System.>

Step	Check	Yes	No	
1	CHECK LAN SYSTEM. Inspect LAN system. <Ref. to LAN(diag)-2, PROCEDURE, Basic Diagnostic Procedure.>	Is LAN system normal?	Go to step 2.	Perform the inspection according to the diagnosis for LAN system.
2	CHECK CONNECTOR. 1) Disconnect the keyless access CM connector. 2) Disconnect the rear exterior antenna connector.	Is the connector OK?	Go to step 3.	Repair or replace the connector.
3	CHECK HARNESS (OPEN CIRCUIT). Using a tester, measure the resistance between the keyless access CM connector and rear exterior antenna connector, and between rear exterior antenna connector and chassis ground. Connector & terminal (B573) No. 2 — (R299) No. 1: (B573) No. 1 — (R299) No. 2:	Is the resistance less than 1 Ω?	Go to step 4.	Repair or replace the open circuit of harness.
4	CHECK HARNESS (GROUND SHORT CIRCUIT). Using a tester, measure the resistance between the keyless access CM connector and chassis ground. Connector & terminal (B573) No. 2 — Chassis ground: (B573) No. 1 — Chassis ground:	Is the resistance 10 kΩ or more?	Go to step 5.	Repair or replace the short circuit of the harness.

Diagnostic Procedure with Diagnostic Trouble Code (DTC)

KEYLESS ACCESS WITH PUSH BUTTON START SYSTEM (DIAGNOSTICS)

Step	Check	Yes	No
5 CHECK DTC. 1) Connect the keyless access CM connector. 2) Using the Subaru Select Monitor, clear the memory. <Ref. to KPS(diag)-32, Clear Memory Mode.> 3) Read DTC using the Subaru Select Monitor. <Ref. to KPS(diag)-25, Read Diagnostic Trouble Code (DTC).>	Is DTC B27A8 displayed?	Go to step 6.	Even if DTC is displayed, the circuit has returned to a normal condition at this time. Reproduce the failure, and then perform the diagnosis again. NOTE: In this case, temporary poor contact of connector, temporary open or short circuit of harness may be the cause.
6 CHECK KEYLESS ACCESS CM. 1) Replace the rear exterior antenna with the rear interior antenna. <Ref. to SL-82, Keyless Access Indoor Antenna.> <Ref. to SL-84, Keyless Access Outdoor Antenna.> 2) Using the Subaru Select Monitor, clear the memory. <Ref. to KPS(diag)-32, Clear Memory Mode.> 3) Read the DTC using Subaru Select Monitor. <Ref. to KPS(diag)-25, Read Diagnostic Trouble Code (DTC).>	Is DTC B27A8 displayed?	Replace the keyless access CM. <Ref. to SL-89, Keyless Access CM.>	Malfunction occurred in the rear external antenna.

Diagnostic Procedure with Diagnostic Trouble Code (DTC)

KEYLESS ACCESS WITH PUSH BUTTON START SYSTEM (DIAGNOSTICS)

AL:DTC B1571 REFERENCE CODE INCOMPATIBILITY (IMMOBILIZER CM TO ECM)

DTC detecting condition:

Incompatibility of reference code between keyless access CM (model without ID code box) or ID code box (model with ID code box) and ECM occurs.

Trouble symptom:

Engine will not start.

	Step	Check	Yes	No
1	CHECK ECM. Perform ECM registration. Refer to the "REGISTRATION MANUAL FOR IMMOBILIZER" provided as a separate volume.	Is ECM registration finished? And does the engine start?	ECM registration was not performed properly.	Go to step 2.
2	REPLACE ECM. 1) Install the ECM from other normal operating vehicle (with push button start) which use same ECM to the vehicle to be diagnosed. 2) Perform ECM registration. Refer to the "REGISTRATION MANUAL FOR IMMOBILIZER" provided as a separate volume.	Is ECM registration finished? And does the engine start?	Replace the ECM. <Ref. to FU(H4DO)-98, REMOVAL, Engine Control Module (ECM).> Install the ECM from other vehicle to the original vehicle.	Replace Keyless access CM (model without ID code box), <Ref. to SL-89, Keyless Access CM.> or replace ID code box (model with ID code box). <Ref. to SL-91, ID Code Box.>

Diagnostic Procedure with Diagnostic Trouble Code (DTC)

KEYLESS ACCESS WITH PUSH BUTTON START SYSTEM (DIAGNOSTICS)

AM:DTC B1572 IMM CIRCUIT EXCEPT ANTENNA CIRCUIT

1. EXCEPT FOR C0 AND C5 MODELS

DTC detecting condition:

Communication error between keyless access CM and ECM

Trouble symptom:

Engine will not start.

Wiring diagram:

Push button start system <Ref. to WI-186, WIRING DIAGRAM, Push Button Start System.>

SL-03311

Step	Check	Yes	No
1 CHECK GROUNDING POINT. Check the grounding point of the engine ground and chassis ground.	Are there any loose connections, any foreign objects caught in the ground lines or contact surface, or any fluid stains?	Remove the foreign matters, and tighten to the specified torque. Then start the engine, and check that the fault was removed. Check DTC <Ref. to KPS(diag)-25, Read Diagnostic Trouble Code (DTC).>, and when DTC B1572 is still displayed, Go to step 2.	Go to step 2.
2 CHECK CURRENT DATA. 1) Turn the ignition switch to ON. 2) Check the current data display of «Keyless Access with Push Button Start» using Subaru Select Monitor. <Ref. to KPS(diag)-26, Read Current Data.> 3) Display the next data. “Immobilizer” “Engine start” “Unlock confirmation” Data Immobilizer = Unset: Engine start = Engine start permission: Unlock confirmation = Confirmed:	Is the data displayed as indicated on the left?	Go to step 3.	Perform diagnostics with phenomenon. <Ref. to KPS(diag)-124, ENGINE DOES NOT START, INSPECTION, Diagnostics with Phenomenon.>

Diagnostic Procedure with Diagnostic Trouble Code (DTC)

KEYLESS ACCESS WITH PUSH BUTTON START SYSTEM (DIAGNOSTICS)

Step	Check	Yes	No
<p>3 CHECK CURRENT DATA. Use the Subaru Select Monitor to check the current data of «Keyless Access with Push Button Start» when holding down the push button ignition switch while depressing on the brake pedal. <Ref. to KPS(diag)-26, Read Current Data.></p> <p>Data EGI code reception status = Reception:</p> <p>NOTE: If “Reception” is displayed, the status changes to “Not yet received” in 10 seconds. When performing the check again, perform the check after turning the ignition to OFF.</p>	<p>Is the data displayed as indicated on the left?</p>	<p>Go to step 4.</p>	<p>Repair or replace the harness between keyless access CM and ECM.</p>
<p>4 CHECK WIRING HARNESS. 1) Turn the ignition switch to OFF. 2) Disconnect the keyless access CM connector and ECM connector. 3) Using a tester, measure the resistance between the keyless access CM connector and ECM.</p> <p>Connector & terminal (B572) No. 13 — (B135) No. 25:</p>	<p>Is the resistance less than 10 Ω?</p>	<p>Go to step 5.</p>	<p>Repair or replace the open circuit of harness.</p>
<p>5 CHECK WIRING HARNESS. Using a tester, measure the resistance between the keyless access CM connector and chassis ground.</p> <p>Connector & terminal (B572) No. 11 — Chassis ground:</p>	<p>Is the resistance less than 10 Ω?</p>	<p>Go to step 6.</p>	<p>Repair or replace the open circuit of harness.</p>
<p>6 CHECK ECM. 1) Install the ECM from other normal operating vehicle (with push button start) which use same ECM to the vehicle to be diagnosed. 2) Perform ECM registration. Refer to the “REGISTRATION MANUAL FOR IMMOBILIZER” provided as a separate volume.</p>	<p>Is ECM registration finished? And does the engine start?</p>	<p>Replace the ECM. <Ref. to FU(H4DO)-98, REMOVAL, Engine Control Module (ECM).> Install the ECM from other vehicle to the original vehicle.</p>	<p>Replace the keyless access CM. <Ref. to SL-89, Keyless Access CM.></p>

Diagnostic Procedure with Diagnostic Trouble Code (DTC)

KEYLESS ACCESS WITH PUSH BUTTON START SYSTEM (DIAGNOSTICS)

2. FOR C0 AND C5 MODELS

DTC detecting condition:

Communication error between ID code box and ECM

Trouble symptom:

Engine will not start.

Wiring diagram:

Push button start system <Ref. to WI-186, WIRING DIAGRAM, Push Button Start System.>

Step	Check	Yes	No
1 CHECK GROUNDING POINT. Check the grounding point of the engine ground and chassis ground.	Are there any loose connections, any foreign objects caught in the ground lines or contact surface, or any fluid stains?	Remove the foreign matters, and tighten to the specified torque. Then start the engine, and check that the fault was removed. Check DTC <Ref. to KPS(diag)-25, Read Diagnostic Trouble Code (DTC).>, and when DTC B1572 is still displayed, Go to step 2.	Go to step 2.
2 CHECK CURRENT DATA. 1) Turn the ignition switch to ON. 2) Check the current data display of «Keyless Access with Push Button Start» using Subaru Select Monitor. <Ref. to KPS(diag)-26, Read Current Data.> 3) Display the next data. “Immobilizer” “Engine start” “Unlock confirmation” Data <i>Immobilizer = Unset:</i> <i>Engine start = Engine start permission:</i> <i>Unlock confirmation = Confirmed:</i>	Is the data displayed as indicated on the left?	Go to step 3.	Perform diagnostics with phenomenon. <Ref. to KPS(diag)-124, ENGINE DOES NOT START, INSPECTION, Diagnostics with Phenomenon.>

Diagnostic Procedure with Diagnostic Trouble Code (DTC)

KEYLESS ACCESS WITH PUSH BUTTON START SYSTEM (DIAGNOSTICS)

Step	Check	Yes	No
<p>3 CHECK CURRENT DATA. Use the Subaru Select Monitor to check the current data of «Keyless Access with Push Button Start» when holding down the push button ignition switch while depressing on the brake pedal. <Ref. to KPS(diag)-26, Read Current Data.></p> <p>Data EGI code reception status = Reception:</p> <p>NOTE: If “Reception” is displayed, the status changes to “Not yet received” in 10 seconds. When performing the check again, perform the check after turning the ignition to OFF.</p>	Is the data displayed as indicated on the left?	Go to step 4.	Repair or replace the harness between ID code box and ECM.
<p>4 CHECK WIRING HARNESS. 1) Turn the ignition switch to OFF. 2) Disconnect the ID code box connector and the ECM connector. 3) Using a tester, measure the resistance between ID code box connector and ECM.</p> <p>Connector & terminal (B422) No. 4 — (B135) No. 25:</p>	Is the resistance less than 10 Ω?	Go to step 5.	Repair or replace the open circuit of harness.
<p>5 CHECK WIRING HARNESS. Using a tester, measure the resistance between ID code box connector and chassis ground.</p> <p>Connector & terminal (B422) No. 5 — Chassis ground:</p>	Is the resistance less than 10 Ω?	Go to step 6.	Repair or replace the open circuit of harness.
<p>6 CHECK ECM. 1) Install the ECM from other normal operating vehicle (with push button start) which use same ECM to the vehicle to be diagnosed. 2) Perform ECM registration. Refer to the “REGISTRATION MANUAL FOR IMMOBILIZER” provided as a separate volume.</p>	Is ECM registration finished? And does the engine start?	Replace the ECM. <Ref. to FU(H4DO)-98, REMOVAL, Engine Control Module (ECM).> Install the ECM from other vehicle to the original vehicle.	Replace the ID code box. <Ref. to SL-91, ID Code Box.>

Diagnostic Procedure with Diagnostic Trouble Code (DTC)

KEYLESS ACCESS WITH PUSH BUTTON START SYSTEM (DIAGNOSTICS)

AN:DTC B1576 EGI CONTROL MODULE EEPROM

DTC detecting condition:

- ECM malfunctioning
- When the ROM in ECM was inaccessible during registration.

Step	Check	Yes	No
1 PERFORM ECM REGISTRATION. Perform ECM registration. Refer to the "REGISTRATION MANUAL FOR IMMOBILIZER" provided as a separate volume.	Is ECM registration complete?	Make sure that the engine can start. This completes the work.	Go to step 2 .
2 PERFORM ECM REGISTRATION. Perform ECM registration. Refer to the "REGISTRATION MANUAL FOR IMMOBILIZER" provided as a separate volume.	Is ECM registration complete?	Make sure that the engine can start. This completes the work.	Go to step 3 .
3 PERFORM ECM REGISTRATION. Perform ECM registration. Refer to the "REGISTRATION MANUAL FOR IMMOBILIZER" provided as a separate volume.	Is ECM registration complete?	Make sure that the engine can start. This completes the work.	Replace the ECM. <Ref. to FU(H4DO)-98, REMOVAL, Engine Control Module (ECM).>

Diagnostic Procedure with Diagnostic Trouble Code (DTC)

KEYLESS ACCESS WITH PUSH BUTTON START SYSTEM (DIAGNOSTICS)

AO:DTC B1577 IMM CONTROL MODULE EEPROM

1. EXCEPT FOR C0 AND C5 MODELS

DTC detecting condition:

- Defective keyless access CM
- When inaccessible to ROM in keyless access CM.

Step	Check	Yes	No
1 CHECK DTC. 1) Turn the ignition switch to ON. 2) Perform the clear memory operation of ECM. <Ref. to EN(H4DO)(diag)-66, Clear Memory Mode.> 3) Turn the ignition switch to OFF. 4) Remove and install the battery. 5) Turn the ignition switch to ON. 6) After 5 seconds or more, read DTC. <Ref. to EN(H4DO)(diag)-49, Read Diagnostic Trouble Code (DTC).>	Is DTC B1577 displayed?	Replace the keyless access CM. <Ref. to SL-89, Keyless Access CM.>	Even if DTC is displayed, the circuit has returned to a normal condition at this time. Reproduce the failure, and then perform the diagnosis again. NOTE: In this case, temporary poor contact of connector, temporary open or short circuit of harness may be the cause.

2. FOR C0 AND C5 MODELS

DTC detecting condition:

- ID code box malfunction
- When inaccessible to ROM in ID code box.

Step	Check	Yes	No
1 CHECK DTC. 1) Turn the ignition switch to ON. 2) Perform the clear memory operation of ECM. <Ref. to EN(H4DO)(diag)-66, Clear Memory Mode.> 3) Turn the ignition switch to OFF. 4) Register the ID code box. 5) Read the DTC again. <Ref. to EN(H4DO)(diag)-49, Read Diagnostic Trouble Code (DTC).>	Is DTC B1577 displayed?	Replace the ID code box. <Ref. to SL-91, ID Code Box.>	Even if DTC is displayed, the circuit has returned to a normal condition at this time. Reproduce the failure, and then perform the diagnosis again. NOTE: In this case, temporary poor contact of connector, temporary open or short circuit of harness may be the cause.

General Diagnostic Table

KEYLESS ACCESS WITH PUSH BUTTON START SYSTEM (DIAGNOSTICS)

14. General Diagnostic Table

A: INSPECTION

1. IMMOBILIZER SYSTEM

Symptoms	Note
Engine does not start	<Ref. to KPS(diag)-124, ENGINE DOES NOT START, INSPECTION, Diagnostics with Phenomenon.>
	<Ref. to KPS(diag)-67, DTC B2784 ANTENNA CIRCUIT (PUSH ENGINE SWITCH), Diagnostic Procedure with Diagnostic Trouble Code (DTC).>
	<Ref. to KPS(diag)-77, DTC B278A PUSH ENGINE SWITCH POWER SUPPLY CIRCUIT, Diagnostic Procedure with Diagnostic Trouble Code (DTC).>
	<Ref. to KPS(diag)-69, DTC B2785 LIN COMMUNICATION, Diagnostic Procedure with Diagnostic Trouble Code (DTC).>
	<Ref. to KPS(diag)-75, DTC B2789 ID CODE BOX COMMUNICATION, Diagnostic Procedure with Diagnostic Trouble Code (DTC).>
	<Ref. to KPS(diag)-80, DTC B2790 ID CODE BOX CIRCUIT, Diagnostic Procedure with Diagnostic Trouble Code (DTC).>
	Check the brake switch. <Ref. to BR-74, INSPECTION, Stop Light Switch.>
	Check the parking switch signal. <Ref. to CS-62, INSPECTION, AT Shift Lock Solenoid and "P" Range Switch.>
Cannot register the immobilizer.	Refer to the "REGISTRATION MANUAL FOR IMMOBILIZER".
Engine does not start with the remote engine starter.	<Ref. to KPS(diag)-64, DTC B2779 REMOTE CONTROL ENGINE STARTER COLLATION, Diagnostic Procedure with Diagnostic Trouble Code (DTC).>

2. KEYLESS ACCESS SYSTEM

Symptoms	Reference
All doors cannot be locked/unlocked with keyless access.	<Ref. to KPS(diag)-100, KEYLESS ACCESS LOCK/UNLOCK CANNOT BE PERFORMED FROM ANY OF THE DOORS, INSPECTION, Diagnostics with Phenomenon.>
Cannot lock with keyless access from the driver's door.	<Ref. to KPS(diag)-101, CANNOT LOCK WITH KEYLESS ACCESS FROM THE DRIVER'S DOOR, INSPECTION, Diagnostics with Phenomenon.>
Cannot lock/unlock from the driver's door with keyless access.	<Ref. to KPS(diag)-102, CANNOT LOCK/UNLOCK WITH KEYLESS ACCESS FROM THE DRIVER'S DOOR, INSPECTION, Diagnostics with Phenomenon.>
Cannot unlock from the driver's door with keyless access.	<Ref. to KPS(diag)-103, CANNOT UNLOCK WITH KEYLESS ACCESS FROM THE DRIVER'S DOOR, INSPECTION, Diagnostics with Phenomenon.>
Cannot unlock from the passenger's door with keyless access.	<Ref. to KPS(diag)-106, CANNOT UNLOCK WITH KEYLESS ACCESS FROM THE PASSENGER'S DOOR, INSPECTION, Diagnostics with Phenomenon.>
Cannot lock/unlock from the passenger's door with keyless access.	<Ref. to KPS(diag)-105, CANNOT LOCK/UNLOCK WITH KEYLESS ACCESS FROM THE PASSENGER'S DOOR, INSPECTION, Diagnostics with Phenomenon.>
Cannot lock from the passenger's door with keyless access.	<Ref. to KPS(diag)-104, CANNOT LOCK WITH KEYLESS ACCESS FROM THE PASSENGER'S DOOR, INSPECTION, Diagnostics with Phenomenon.>
Keyless access passenger room buzzer does not sound.	<Ref. to KPS(diag)-107, THE KEYLESS ACCESS PASSENGER ROOM BUZZER DOES NOT SOUND, INSPECTION, Diagnostics with Phenomenon.>
Keyless access external buzzer does not beep.	<Ref. to KPS(diag)-107, THE KEYLESS ACCESS EXTERNAL BUZZER DOES NOT BEEP, INSPECTION, Diagnostics with Phenomenon.>
Interior collation does not function.	<Ref. to KPS(diag)-109, INTERNAL COLLATION DOES NOT FUNCTION, INSPECTION, Diagnostics with Phenomenon.>
Rear gate cannot be unlocked with the rear gate opener button.	<Ref. to KPS(diag)-111, CAN NOT UNLOCK WHEN USING THE REAR GATE OPENER BUTTON, INSPECTION, Diagnostics with Phenomenon.>
Rear gate can not be locked when using the rear lock button.	<Ref. to KPS(diag)-113, CAN NOT LOCK WHEN USING THE REAR LOCK BUTTON, INSPECTION, Diagnostics with Phenomenon.>

General Diagnostic Table

KEYLESS ACCESS WITH PUSH BUTTON START SYSTEM (DIAGNOSTICS)

3. STEERING LOCK SYSTEM

Symptoms	Index
The steering lock cannot be released (cannot start the engine)	<Ref. to KPS(diag)-115, THE STEERING LOCK IS NOT RELEASED, INSPECTION, Diagnostics with Phenomenon.>
The steering lock does not operate	<Ref. to KPS(diag)-116, THE STEERING LOCK DOES NOT OPERATE, INSPECTION, Diagnostics with Phenomenon.>

4. POWER SUPPLY SWITCHING SYSTEM

Symptoms	Index
Power will not turn ON (both accessory and ignition)	<Ref. to KPS(diag)-118, POWER WILL NOT TURN ON (BOTH ACCESSORY AND IGNITION), INSPECTION, Diagnostics with Phenomenon.>
Power will not turn ON (accessory only)	<Ref. to KPS(diag)-120, POWER WILL NOT TURN ON (ACCESSORY DOES NOT TURN ON, BUT IGNITION TURNS ON), INSPECTION, Diagnostics with Phenomenon.>
Power will not turn ON (ignition only)	<Ref. to KPS(diag)-122, POWER WILL NOT TURN ON (ACCESSORY TURNS ON, BUT IGNITION DOES NOT TURN ON), INSPECTION, Diagnostics with Phenomenon.>

Diagnostics with Phenomenon

KEYLESS ACCESS WITH PUSH BUTTON START SYSTEM (DIAGNOSTICS)

15. Diagnostics with Phenomenon

A: INSPECTION

1. KEYLESS ACCESS LOCK/UNLOCK CANNOT BE PERFORMED FROM ANY OF THE DOORS

CAUTION:

- Check that there are no other registered access keys inside the vehicle.
- Inspect LAN system according to the basic diagnostic procedure, and make sure that there is no fault.
- Check that the keyless access function is not stopped.
- When the access key or keyless access CM is replaced, registration of the immobilizer is required. For the relevant procedures, refer to the “REGISTRATION MANUAL FOR IMMOBILIZER” provided as a separate volume.

Step	Check	Yes	No
1 CHECK OPERATION OF KEYLESS DOOR LOCK. Using the keyless function of the access key, check the operation of the door lock.	Does it lock/unlock normally?	Check the exterior antenna, oscillator, touch sensor, lock/unlock buttons.	Go to step 2.
2 CHECK ACCESS KEY. Check for whether lock and unlock is possible with the registered access key.	Is there any access key which can lock/unlock when the touch sensor is operated?	Check the access key that does not operate. Go to step 3.	Go to step 4.
3 CHECK ACCESS KEY. Measure the battery voltage of the access key that does not operate.	Is the voltage 2.5 — 3.2 V?	Replace the access key.	Replace the battery.
4 CHECK DOOR LOCK. Operate the driver's center door lock switch.	Does the door lock operate?	Go to step 5.	Check the door lock control system. <Ref. to SL-10, INSPECTION, Door Lock Control System.>
5 CHECK HARNESS. 1) Disconnect the receiver connector (R296). 2) Using a tester, measure the resistance between receiver and chassis ground. Connector & terminal (R296) No. 1 — Chassis ground:	Is the resistance less than 10 Ω?	Go to step 6.	Repair or replace the open circuit of harness.
6 CHECK HARNESS. 1) Disconnect the keyless access CM connector. 2) Using a tester, measure the resistance between receiver and keyless access CM. Connector & terminal (R296) No. 4 — (B573) No. 5: (R296) No. 5 — (B573) No. 17: (R296) No. 2 — (B573) No. 19:	Is the resistance less than 10 Ω?	Go to step 7.	Repair or replace the open circuit of harness.
7 CHECK RECEIVER. Replace with a receiver that is operating normally. <Ref. to SL-88, REMOVAL, Receiver.>	When the front unlock sensor and the rear gate opener button are operated, does it lock/unlock?	Malfunction occurred in receiver.	Go to step 8.
8 CHECK HARNESS. Using a tester, measure the voltage between the keyless access CM connector and chassis ground. Connector & terminal (B572) No. 2 (+) — Chassis ground (-):	Is the voltage 10 V or more when the ignition switch is turned to ON?	Go to step 9.	Check the keyless access CM power supply circuit.

Diagnostics with Phenomenon

KEYLESS ACCESS WITH PUSH BUTTON START SYSTEM (DIAGNOSTICS)

Step	Check	Yes	No
9 CHECK HARNESS. Using a tester, measure the resistance between the keyless access CM connector and chassis ground. <i>Connector & terminal</i> <i>(B572) No. 11 — Chassis ground:</i>	Is the resistance less than 10 Ω?	Replace the keyless access CM. <Ref. to SL-89, REMOVAL, Keyless Access CM.>	Repair or replace the open circuit of harness.

2. CANNOT LOCK WITH KEYLESS ACCESS FROM THE DRIVER'S DOOR

CAUTION:

- Check that there are no other registered access keys inside the vehicle.
 - Inspect LAN system according to the basic diagnostic procedure, and make sure that there is no fault.
 - Check that the keyless access function is not stopped.
 - When the access key or keyless access CM is replaced, registration of the immobilizer is required.
- For the relevant procedures, refer to the “REGISTRATION MANUAL FOR IMMOBILIZER” provided as a separate volume.

Step	Check	Yes	No
1 CHECK DOOR LOCK SWITCH. Check that the lock/unlock operates with the driver's door lock switch.	Does it lock/unlock normally?	Go to step 2.	Check the door lock circuit. <Ref. to SL-10, SYMPTOM CHART, INSPECTION, Door Lock Control System.>
2 CHECK CURRENT DATA. 1) Display the current data «Driver's seat lock status SW input» of «Body Control» using Subaru Select Monitor. <Ref. to KPS(diag)-26, Read Current Data.> 2) Read the data when locking/unlocking the driver's side lock actuator.	Does the data change from ON/OFF?	Go to step 3.	Check the door lock switch circuit.
3 CHECK CURRENT DATA. 1) Display the current data «Driver's lock touch sensor SW» of «Keyless Access with Push Button Start» using Subaru Select Monitor. <Ref. to KPS(diag)-26, Read Current Data.> 2) Read the data when operating the touch sensor (lock) of the door outer handle.	Does the data change from ON/OFF according to the sensor operation?	Replace the keyless access CM. <Ref. to SL-89, Keyless Access CM.>	Go to step 4.
4 CHECK HARNESS. 1) Disconnect the keyless access CM connector. 2) Disconnect the front outer handle connector. 3) Using a tester, measure the resistance between the keyless access CM connector and front outer handle connector. <i>Connector & terminal</i> <i>(B574) No. 20 — (D66) No. 1:</i>	Is the resistance less than 1 Ω?	Go to step 5.	Repair or replace the open circuit of harness.
5 CHECK HARNESS. Using a tester, measure the resistance between the keyless access CM connector and chassis ground, and between front outer handle connector and chassis ground. <i>Connector & terminal</i> <i>(B574) No. 20 — Chassis ground:</i> <i>(D66) No. 1 — Chassis ground:</i>	Is the resistance 10 kΩ or more?	Go to step 6.	Repair or replace the short circuit of the harness.

Diagnostics with Phenomenon

KEYLESS ACCESS WITH PUSH BUTTON START SYSTEM (DIAGNOSTICS)

Step	Check	Yes	No
6 REPLACE FRONT DOOR OUTER HANDLE. Replace the driver's side front outer handle with the passenger's side front outer handle. <Ref. to SL-34, REMOVAL, Front Outer Handle.>	Does it operate properly?	Replace the driver's front outer handle. <Ref. to SL-34, REMOVAL, Front Outer Handle.>	Replace the keyless access CM. <Ref. to SL-89, Keyless Access CM.>

3. CANNOT LOCK/UNLOCK WITH KEYLESS ACCESS FROM THE DRIVER'S DOOR

CAUTION:

- Check that there are no other registered access keys inside the vehicle.
- Inspect LAN system according to the basic diagnostic procedure, and make sure that there is no fault.
- Check that the keyless access function is not stopped.
- When the access key or keyless access CM is replaced, registration of the immobilizer is required. For the relevant procedures, refer to the "REGISTRATION MANUAL FOR IMMOBILIZER" provided as a separate volume.

Step	Check	Yes	No
1 CHECK DOOR LOCK SWITCH. Check that the lock/unlock operates with the driver's door lock switch.	Does it lock/unlock normally?	Go to step 2.	Check the door lock circuit. <Ref. to SL-10, SYMPTOM CHART, INSPECTION, Door Lock Control System.>
2 CHECK FUSE. Check the fuse.	Is the fuse OK?	Go to step 3.	Replace the fuse.
3 CHECK HARNESS. 1) Disconnect the keyless access CM connector. 2) Disconnect the front outer handle connector. 3) Using a tester, measure the resistance between the keyless access CM connector and front outer handle connector, and between front outer handle connector and chassis ground. Connector & terminal (B574) No. 12 — (D66) No. 6: (B574) No. 13 — (D66) No. 3: (B574) No. 19 — (D66) No. 5: (D66) No. 2 — Chassis ground:	Is the resistance less than 1 Ω?	Go to step 4.	Repair or replace the open circuit of harness.
4 CHECK HARNESS. Using a tester, measure the resistance between the keyless access CM connector and chassis ground, and between front outer handle connector and chassis ground. Connector & terminal (B574) No. 12 — Chassis ground: (D66) No. 6 — Chassis ground: (B574) No. 13 — Chassis ground: (D66) No. 3 — Chassis ground:	Is the resistance 10 kΩ or more?	Go to step 5.	Repair or replace the short circuit of the harness.

Diagnostics with Phenomenon

KEYLESS ACCESS WITH PUSH BUTTON START SYSTEM (DIAGNOSTICS)

Step	Check	Yes	No
5 CHECK KEYLESS ACCESS CM. 1) Connect the keyless access CM connector. 2) Turn the ignition switch to OFF, close all doors and take the access key out of passenger room. 3) Use the Subaru Select Monitor, measure the waveform between the keyless access CM connectors. Connector & terminal (D66) No. 6 — (D66) No. 3:	Does pulse output change from pulse output OFF → pulse output ON by the lock operation using access key?	Go to step 6.	Replace the keyless access CM. <Ref. to SL-89, Keyless Access CM.>
6 REPLACE FRONT DOOR OUTER HANDLE. Replace the driver's side front outer handle with the passenger's side front outer handle. <Ref. to SL-34, REMOVAL, Front Outer Handle.>	Does it operate properly?	Replace the driver's front outer handle. <Ref. to SL-34, Front Outer Handle.>	Replace the keyless access CM. <Ref. to SL-89, Keyless Access CM.>

4. CANNOT UNLOCK WITH KEYLESS ACCESS FROM THE DRIVER'S DOOR

CAUTION:

- Check that there are no other registered access keys inside the vehicle.
- Inspect LAN system according to the basic diagnostic procedure, and make sure that there is no fault.
- Check that the keyless access function is not stopped.
- When the access key or keyless access CM is replaced, registration of the immobilizer is required. For the relevant procedures, refer to the "REGISTRATION MANUAL FOR IMMOBILIZER" provided as a separate volume.

Step	Check	Yes	No
1 CHECK DOOR LOCK SWITCH. Check that the lock/unlock operates with the driver's door lock switch.	Does it lock/unlock normally?	Go to step 2.	Check the door lock circuit. <Ref. to SL-10, SYMPTOM CHART, INSPECTION, Door Lock Control System.>
2 CHECK CURRENT DATA. 1) Display the current data «Driver's seat lock status SW input» of «Body Control» using Subaru Select Monitor. <Ref. to KPS(diag)-26, Read Current Data.> 2) Read the data when locking/unlocking the driver's side lock actuator.	Does the data change from ON/OFF?	Go to step 3.	Check the door lock switch circuit.
3 CHECK CURRENT DATA. 1) Display the current data «Driver's unlock touch sensor switch» of «Keyless Access with Push Button Start» using Subaru Select Monitor. <Ref. to KPS(diag)-26, Read Current Data.> 2) Read the data when operating the touch sensor (unlock) of the door outer handle.	Does the data change from ON/OFF according to the sensor operation?	Replace the keyless access CM. <Ref. to SL-89, Keyless Access CM.>	Go to step 4.
4 CHECK HARNESS. 1) Disconnect the keyless access CM connector. 2) Disconnect the front outer handle connector. 3) Using a tester, measure the resistance between the keyless access CM connector and front outer handle connector. Connector & terminal (B574) No. 22 — (D66) No. 4:	Is the resistance less than 1 Ω?	Go to step 5.	Repair or replace the open circuit of harness.

Diagnostics with Phenomenon

KEYLESS ACCESS WITH PUSH BUTTON START SYSTEM (DIAGNOSTICS)

Step	Check	Yes	No
5 CHECK HARNESS. Using a tester, measure the resistance between the keyless access CM connector and chassis ground, and between front outer handle connector and chassis ground. Connector & terminal (B574) No. 22 — Chassis ground: (D66) No. 4 — Chassis ground:	Is the resistance 10 kΩ or more?	Go to step 6.	Repair or replace the short circuit of the harness.
6 REPLACE FRONT DOOR OUTER HANDLE. Replace the driver's side front outer handle with the passenger's side front outer handle. <Ref. to SL-34, REMOVAL, Front Outer Handle.>	Does it operate properly?	Replace the driver's front outer handle. <Ref. to SL-34, REMOVAL, Front Outer Handle.>	Replace the keyless access CM. <Ref. to SL-89, Keyless Access CM.>

5. CANNOT LOCK WITH KEYLESS ACCESS FROM THE PASSENGER'S DOOR

CAUTION:

- Check that there are no other registered access keys inside the vehicle.
- Inspect LAN system according to the basic diagnostic procedure, and make sure that there is no fault.
- Check that the keyless access function is not stopped.
- When the access key or keyless access CM is replaced, registration of the immobilizer is required. For the relevant procedures, refer to the "REGISTRATION MANUAL FOR IMMOBILIZER" provided as a separate volume.

Step	Check	Yes	No
1 CHECK DOOR LOCK SWITCH. Check that the lock/unlock operates with the driver's door lock switch.	Does it lock/unlock normally?	Go to step 2.	Check the door lock circuit. <Ref. to SL-10, SYMPTOM CHART, INSPECTION, Door Lock Control System.>
2 CHECK CURRENT DATA. 1) Display the current data «Passenger's seat lock status SW input» of «Body Control» using Subaru Select Monitor. <Ref. to BC(diag)-12, Read Current Data.> 2) Read the data when locking/unlocking the passenger's side lock actuator.	Does the data change from ON/OFF?	Go to step 3.	Check the door lock switch circuit.
3 CHECK CURRENT DATA. 1) Display the current data «Passenger's lock touch sensor SW» of «Keyless Access with Push Button Start» using Subaru Select Monitor. <Ref. to KPS(diag)-26, Read Current Data.> 2) Read the data when operating the touch sensor (lock) of the door outer handle.	Does the data change from ON/OFF according to the sensor operation?	Replace the keyless access CM. <Ref. to SL-89, Keyless Access CM.>	Go to step 4.
4 CHECK HARNESS. 1) Disconnect the keyless access CM connector. 2) Disconnect the front outer handle connector. 3) Using a tester, measure the resistance between the keyless access CM connector and front outer handle connector. Connector & terminal (B574) No. 8 — (D56) No. 1:	Is the resistance less than 1 Ω?	Go to step 5.	Repair or replace the open circuit of harness.

Diagnostics with Phenomenon

KEYLESS ACCESS WITH PUSH BUTTON START SYSTEM (DIAGNOSTICS)

Step	Check	Yes	No
5 CHECK HARNESS. Using a tester, measure the resistance between the keyless access CM connector and chassis ground, and between front outer handle connector and chassis ground. <i>Connector & terminal</i> <i>(B574) No. 8 — Chassis ground:</i> <i>(D56) No. 1 — Chassis ground:</i>	Is the resistance 10 kΩ or more?	Go to step 6.	Repair or replace the short circuit of the harness.
6 REPLACE FRONT DOOR OUTER HANDLE. Replace the passenger's side front outer handle with the driver's side front outer handle. <Ref. to SL-34, REMOVAL, Front Outer Handle.>	Does it operate properly?	Replace the passenger's front outer handle. <Ref. to SL-34, REMOVAL, Front Outer Handle.>	Replace the keyless access CM. <Ref. to SL-89, Keyless Access CM.>

6. CANNOT LOCK/UNLOCK WITH KEYLESS ACCESS FROM THE PASSENGER'S DOOR

CAUTION:

- Check that there are no other registered access keys inside the vehicle.
- Inspect LAN system according to the basic diagnostic procedure, and make sure that there is no fault.
- Check that the keyless access function is not stopped.
- When the access key or keyless access CM is replaced, registration of the immobilizer is required. For the relevant procedures, refer to the "REGISTRATION MANUAL FOR IMMOBILIZER" provided as a separate volume.

Step	Check	Yes	No
1 CHECK DOOR LOCK SWITCH. Check that the lock/unlock operates with the driver's door lock switch.	Does it lock/unlock normally?	Go to step 2.	Check the door lock circuit. <Ref. to SL-10, SYMPTOM CHART, INSPECTION, Door Lock Control System.>
2 CHECK FUSE. Check the fuse.	Is the fuse OK?	Go to step 3.	Replace the fuse.
3 CHECK HARNESS. 1) Disconnect the keyless access CM connector. 2) Disconnect the front outer handle connector. 3) Using a tester, measure the resistance between the keyless access CM connector and front outer handle connector, and between front outer handle connector and chassis ground. <i>Connector & terminal</i> <i>(B574) No. 11 — (D56) No. 6:</i> <i>(B574) No. 10 — (D56) No. 3:</i> <i>(B574) No. 21 — (D56) No. 5:</i> <i>(D56) No. 2 — Chassis ground:</i>	Is the resistance less than 1 Ω?	Go to step 4.	Repair or replace the open circuit of harness.
4 CHECK HARNESS. Using a tester, measure the resistance between the keyless access CM connector and chassis ground, and between front outer handle connector and chassis ground. <i>Connector & terminal</i> <i>(B574) No. 11 — Chassis ground:</i> <i>(D56) No. 6 — Chassis ground:</i> <i>(B574) No. 10 — Chassis ground:</i> <i>(D56) No. 3 — Chassis ground:</i>	Is the resistance 10 kΩ or more?	Go to step 5.	Repair or replace the short circuit of the harness.

Diagnostics with Phenomenon

KEYLESS ACCESS WITH PUSH BUTTON START SYSTEM (DIAGNOSTICS)

Step	Check	Yes	No
5 CHECK KEYLESS ACCESS CM. 1) Connect the keyless access CM connector. 2) Turn the ignition switch to OFF, close all doors and take the access key out of passenger room. 3) Use the Subaru Select Monitor, measure the waveform between the keyless access CM connectors. <i>Connector & terminal (D56) No. 6 — (D56) No. 3:</i>	Does pulse output change from pulse output OFF → pulse output ON by the lock operation using access key?	Go to step 6.	Replace the keyless access CM. <Ref. to SL-89, Keyless Access CM.>
6 REPLACE FRONT DOOR OUTER HANDLE. Replace the passenger's side front outer handle with the driver's side front outer handle. <Ref. to SL-34, REMOVAL, Front Outer Handle.>	Does it operate properly?	Replace the passenger's side front outer handle. <Ref. to SL-34, Front Outer Handle.>	Replace the keyless access CM. <Ref. to SL-89, Keyless Access CM.>

7. CANNOT UNLOCK WITH KEYLESS ACCESS FROM THE PASSENGER'S DOOR

CAUTION:

- Check that there are no other registered access keys inside the vehicle.
- Inspect LAN system according to the basic diagnostic procedure, and make sure that there is no fault.
- Check that the keyless access function is not stopped.
- When the access key or keyless access CM is replaced, registration of the immobilizer is required. For the relevant procedures, refer to the "REGISTRATION MANUAL FOR IMMOBILIZER" provided as a separate volume.

Step	Check	Yes	No
1 CHECK DOOR LOCK SWITCH. Check that the lock/unlock operates with the driver's door lock switch.	Does it lock/unlock normally?	Go to step 2.	Check the door lock circuit. <Ref. to SL-10, SYMPTOM CHART, INSPECTION, Door Lock Control System.>
2 CHECK CURRENT DATA. 1) Display the current data «Passenger's seat lock status SW input» of «Body Control» using Subaru Select Monitor. <Ref. to BC(diag)-12, Read Current Data.> 2) Read the data when locking/unlocking the passenger's side lock actuator.	Does the data change from ON/OFF?	Go to step 3.	Check the door lock switch circuit.
3 CHECK CURRENT DATA. 1) Display the current data «Passenger's unlock touch sensor switch» of «Keyless Access with Push Button Start» using Subaru Select Monitor. <Ref. to KPS(diag)-26, Read Current Data.> 2) Read the data when operating the touch sensor (unlock) of the door outer handle.	Does the data change from ON/OFF according to the sensor operation?	Replace the keyless access CM. <Ref. to SL-89, Keyless Access CM.>	Go to step 4.
4 CHECK HARNESS. 1) Disconnect the keyless access CM connector. 2) Disconnect the front outer handle connector. 3) Using a tester, measure the resistance between the keyless access CM connector and front outer handle connector. <i>Connector & terminal (B574) No. 23 — (D56) No. 4:</i>	Is the resistance less than 1 Ω?	Go to step 5.	Repair or replace the open circuit of harness.

Diagnostics with Phenomenon

KEYLESS ACCESS WITH PUSH BUTTON START SYSTEM (DIAGNOSTICS)

Step	Check	Yes	No
5 CHECK HARNESS. Using a tester, measure the resistance between the keyless access CM connector and chassis ground, and between front outer handle connector and chassis ground. Connector & terminal (B574) No. 23 — Chassis ground: (D56) No. 4 — Chassis ground:	Is the resistance 10 kΩ or more?	Go to step 6.	Repair or replace the short circuit of the harness.
6 REPLACE FRONT DOOR OUTER HANDLE. Replace the passenger's side front outer handle with the driver's side front outer handle. <Ref. to SL-34, REMOVAL, Front Outer Handle.>	Does it operate properly?	Replace the passenger's front outer handle. <Ref. to SL-34, REMOVAL, Front Outer Handle.>	Replace the keyless access CM. <Ref. to SL-89, Keyless Access CM.>

8. THE KEYLESS ACCESS PASSENGER ROOM BUZZER DOES NOT SOUND

CAUTION:

- Inspect LAN system according to the basic diagnostic procedure, and make sure that there is no fault.
- Check that the keyless access function is not stopped.
- When the access key or keyless access CM is replaced, registration of the immobilizer is required. For the relevant procedures, refer to the "REGISTRATION MANUAL FOR IMMOBILIZER" provided as a separate volume.

Step	Check	Yes	No
1 CHECK COMBINATION METER. Check the combination meter. <Ref. to IDI(diag)-2, COMBINATION METER, PROCEDURE, Basic Diagnostic Procedure.>	Is combination meter OK?	Replace the keyless access CM. <Ref. to SL-89, Keyless Access CM.>	Replace the combination meter. <Ref. to IDI-18, REMOVAL, Combination Meter.>

9. THE KEYLESS ACCESS EXTERNAL BUZZER DOES NOT BEEP

Step	Check	Yes	No
1 CHECK BODY INTEGRATED UNIT SETTING. Using the Subaru Select Monitor, check the data of «Answer-back Buzzer» of «Body Control». <Ref. to BC(diag)-12, Read Current Data.>	Is the setting "ON"?	Go to step 2.	Change the setting to "ON".
2 CHECK BUZZER OPERATION. Use the Subaru Select Monitor to perform «Body Control» function check «Keyless Buzzer Output». <Ref. to BC(diag)-24, Function Check.>	Does the buzzer sound?	Go to step 3.	Go to step 5.

Diagnostics with Phenomenon

KEYLESS ACCESS WITH PUSH BUTTON START SYSTEM (DIAGNOSTICS)

Step	Check	Yes	No
3 CHECK KEYLESS ACCESS SYSTEM. 1) Turn to IGN ON. 2) With all doors closed and the access key carried, touch the touch sensor (lock) on the driver's door handle.	Does the door lock?	Go to step 4.	Refer to "CANNOT LOCK WITH KEYLESS ACCESS FROM THE DRIVER'S DOOR" and perform inspection. <Ref. to KPS(diag)-101, CANNOT LOCK WITH KEYLESS ACCESS FROM THE DRIVER'S DOOR, INSPECTION, Diagnostics with Phenomenon.>
4 CHECK KEYLESS ACCESS SYSTEM. 1) Open the door glass. 2) Place the access key on the driver's seat, and close the door. 3) Touch the touch sensor (lock) on the driver's door handle.	Does the buzzer sound? (Lock-out protection warning)	System is normal.	Replace the keyless access CM. <Ref. to SL-89, REMOVAL, Keyless Access CM.>
5 CHECK HARNESS. 1) Turn to IGN OFF. 2) Disconnect the connectors of the body integrated unit and keyless buzzer. 3) Measure the resistance between body integrated unit connector and keyless buzzer connector. Connector & terminal (B280) No. 20 — (B164) No. 1:	Is the resistance less than 10 Ω ?	Go to step 6.	Repair or replace the open circuit of harness.
6 CHECK HARNESS. Measure the resistance between keyless buzzer connector and chassis ground. Connector & terminal (B164) No. 1 — Chassis ground:	Is the resistance 10 k Ω or more?	Go to step 7.	Repair or replace the short circuit of the harness.
7 CHECK HARNESS. Measure the resistance between keyless buzzer connector and chassis ground. Connector & terminal (B164) No. 2 — Chassis ground:	Is the resistance less than 10 Ω ?	Go to step 8.	Repair or replace the open circuit of harness.
8 CHECK BODY INTEGRATED UNIT. 1) Connect the connector of body integrated unit. 2) Use the Subaru Select Monitor to perform «Body Control» function check «Keyless Buzzer Output». <Ref. to BC(diag)-24, Function Check.> 3) Measure the voltage between body integrated unit connector and chassis ground using an oscilloscope. Connector & terminal (B280) No. 20 (+) — Chassis ground (-):	Is the frequency 2kHz, voltage 9 V or more?	Replace the keyless buzzer. <Ref. to SL-70, REMOVAL, Keyless Buzzer.>	Replace the body integrated unit. <Ref. to SL-72, Body Integrated Unit.>

Diagnostics with Phenomenon

KEYLESS ACCESS WITH PUSH BUTTON START SYSTEM (DIAGNOSTICS)

10.INTERNAL COLLATION DOES NOT FUNCTION

CAUTION:

When the access key or keyless access CM is replaced, registration of the immobilizer is required. For the relevant procedures, refer to the “REGISTRATION MANUAL FOR IMMOBILIZER” provided as a separate volume.

Step	Check	Yes	No
1 CHECK ACCESS KEY. Check the access key. <Ref. to SL-78, INSPECTION, Access Key.>	Is the battery OK?	Go to step 2.	Replace the battery.
2 CHECK INTERIOR ANTENNA. 1) Using the Subaru Select Monitor, select System check of «Keyless Access with Push Button Start»: «Front interior transmitter + interior tuner». <Ref. to KPS(diag)-33, Keyless Access System Check.> 2) Using a tester, check the output between keyless access CM connector terminals while performing the Keyless access system check. Connector & terminal (B574) No. 2 — No. 3:	Is a pulse output?	Go to step 3.	Replace the keyless access CM. <Ref. to SL-89, Keyless Access CM.>
3 CHECK INTERIOR ANTENNA. 1) Using the Subaru Select Monitor, select System check of «Keyless Access with Push Button Start»: «Trunk internal transmitter + interior tuner» or «Rear gate internal transmitter + interior tuner». <Ref. to KPS(diag)-33, Keyless Access System Check.> 2) Using a tester, check the output between keyless access CM connector terminals while performing the Keyless access system check. Connector & terminal (B573) No. 8 — No. 9:	Is a pulse output?	Go to step 4.	Replace the keyless access CM. <Ref. to SL-89, Keyless Access CM.>
4 CHECK WIRING HARNESS. 1) Disconnect the front interior antenna connector and the keyless access CM connector. 2) Using a tester, check continuity between the front interior antenna connector and the keyless access CM connector. Connector & terminal (B579) No. 1 — (B574) No. 3: (B579) No. 2 — (B574) No. 2:	Is there continuity?	Go to step 5.	Repair or replace the open circuit of harness.
5 CHECK WIRING HARNESS. 1) Disconnect the rear interior antenna connector and the keyless access CM connector. 2) Using a tester, check continuity between the rear interior antenna connector and the keyless access CM connector. Connector & terminal (B573) No. 9 — (R298) No. 1: (B573) No. 8 — (R298) No. 3:	Is there continuity?	Go to step 6.	Repair or replace the open circuit of harness.
6 CHECK ANTENNA. Replace the front interior antenna with a new or properly functioning part.	Does it operate properly?	Replace the front interior antenna. <Ref. to SL-82, REMOVAL, Keyless Access Indoor Antenna.>	Go to step 7.

Diagnostics with Phenomenon

KEYLESS ACCESS WITH PUSH BUTTON START SYSTEM (DIAGNOSTICS)

Step	Check	Yes	No
7 CHECK ANTENNA. Replace the rear interior antenna with a new or properly functioning part.	Does it operate properly?	Replace the rear interior antenna. <Ref. to SL-82, REMOVAL, Keyless Access Indoor Antenna.>	Go to step 8 .
8 CHECK WIRING HARNESS. 1) Disconnect the receiver connector and the keyless access CM connector. 2) Using a tester, check continuity between the receiver connector and keyless access CM connector. Connector & terminal (R296) No. 4 — (B573) No. 5: (R296) No. 5 — (B573) No. 17: (R296) No. 2 — (B573) No. 19:	Is there continuity?	Go to step 9 .	Repair or replace the open circuit of harness.
9 CHECK RECEIVER. Replace the receiver with a new or properly functioning part.	Does it operate properly?	Replace the receiver. <Ref. to SL-88, REMOVAL, Receiver.>	Go to step 10 .
10 CHECK KEYLESS ACCESS SYSTEM CHECK. 1) Using the Subaru Select Monitor, select System check of «Keyless Access with Push Button Start»: «Front interior transmitter + interior tuner». <Ref. to KPS(diag)-33, Keyless Access System Check.> 2) Hold the access key 1 m or more away from the audio panel, then come closer to within 0.8 m.	Does the buzzer sound?	Go to step 11 .	Replace the keyless access CM. <Ref. to SL-89, Keyless Access CM.>
11 CHECK KEYLESS ACCESS SYSTEM CHECK. 1) Using the Subaru Select Monitor, select System check of «Keyless Access with Push Button Start»: «Trunk internal transmitter + interior tuner» or «Rear gate internal transmitter + interior tuner». <Ref. to KPS(diag)-33, Keyless Access System Check.> 2) Hold the access key 1 m or more away from the back of the rear seat, then come closer to within 0.8 m.	Does the buzzer sound?	System is normal.	Replace the keyless access CM. <Ref. to SL-89, Keyless Access CM.>

Diagnostics with Phenomenon

KEYLESS ACCESS WITH PUSH BUTTON START SYSTEM (DIAGNOSTICS)

11. CAN NOT UNLOCK WHEN USING THE REAR GATE OPENER BUTTON

CAUTION:

- Check that there are no other registered access keys inside the rear gate.
- Inspect LAN system according to the basic diagnostic procedure, and make sure that there is no fault.
- Check that the keyless access function is not stopped.
- When the access key or keyless access CM is replaced, registration of the immobilizer is required. For the relevant procedures, refer to the “REGISTRATION MANUAL FOR IMMOBILIZER” provided as a separate volume.

Step	Check	Yes	No
1 CHECK KEYLESS OPERATION. Check that the rear gate unlocks when the trunk open button of the access key is pressed.	Does it operate properly?	Go to step 6.	Go to step 2.
2 CHECK REAR GATE UNLOCK OPERATION. 1) Using the Subaru Select Monitor, select the function check «R gate/trunk UNLK output» of «Body Control». <Ref. to BC(diag)-24, Function Check.> 2) Check that the rear gate unlocks when the R gate/trunk UNLK signal is output.	Does it operate properly?	Go to step 6.	Go to step 3.
3 CHECK HARNESS. 1) Disconnect the body integrated unit connector and rear gate lock actuator connector. 2) Check the continuity between body integrated unit connector and rear gate lock actuator connector. <i>Connector & terminal (i171) No. 7 — (D46) No. 1:</i>	Is there continuity?	Go to step 4.	Repair or replace the open circuit of harness.
4 CHECK HARNESS. 1) Check the continuity between the rear gate lock actuator connector and chassis ground. <i>Connector & terminal (D46) No. 2 — Chassis ground:</i>	Is there continuity?	Go to step 5.	Repair or replace the open circuit of harness.
5 CHECK REAR GATE LOCK ACTUATOR. 1) Check the rear gate lock actuator. <Ref. to SL-51, INSPECTION, Rear Gate Latch and Actuator Assembly.>	Is the rear gate lock actuator normal?	Replace the body integrated unit. <Ref. to SL-72, Body Integrated Unit.>	Replace the rear gate latch and actuator assembly. <Ref. to SL-50, Rear Gate Latch and Actuator Assembly.>
6 CHECK ACCESS KEY. 1) Prepare all access keys registered to the vehicle. 2) Check that the rear gate lock can be unlocked with each access key.	Does it operate properly?	Go to step 7.	Replace the access key. <Ref. to SL-78, REPLACEMENT, Access Key.>
7 CHECK CURRENT DATA. 1) Display the current data «R Gate Release SW input» of «Body Control» using Subaru Select Monitor. <Ref. to BC(diag)-12, Read Current Data.> 2) Read the data when pressing the rear gate opener button.	Does the data display ON?	Go to step 14.	Go to step 8.

Diagnostics with Phenomenon

KEYLESS ACCESS WITH PUSH BUTTON START SYSTEM (DIAGNOSTICS)

Step	Check	Yes	No
8 CHECK WIRING HARNESS. 1) Disconnect the rear gate opener button connector and body integrated unit connector. 2) Using a tester, check the continuity between the rear gate opener button connector and body integrated unit connector. Connector & terminal (D77) No. 1 — (i84) No. 10:	Is there continuity?	Go to step 9.	Repair or replace the open circuit of harness.
9 CHECK WIRING HARNESS. 1) Using a tester, check the continuity between the rear gate opener button connector and chassis ground. Connector & terminal (D77) No. 2 — Chassis ground:	Is there continuity?	Go to step 10.	Repair or replace the open circuit of harness.
10 CHECK REAR GATE OPENER BUTTON. Using a tester, check the continuity between rear gate opener button connector terminals. Terminals No. 1 — No. 2:	Is there continuity when pressing the switch?	Go to step 11.	Replace the rear gate opener button. <Ref. to SL-48, Rear Gate Opener Button.>
11 CHECK WIRING HARNESS. 1) Disconnect the exterior rear antenna connector and the keyless access CM connector. 2) Using a tester, check continuity between the exterior rear antenna connector and keyless access CM connector. Connector & terminal (R299) No. 1 — (B573) No. 2: (R299) No. 2 — (B573) No. 1:	Is there continuity?	Go to step 12.	Repair or replace the open circuit of harness.
12 CHECK OUTSIDE REAR ANTENNA. Replace the outside rear antenna with new or properly working parts.	Does it operate properly?	The outside rear antenna has a failure.	Go to step 13.
13 CHECK CURRENT DATA. 1) Display the current data «R gate lock status SW input» of «Body Control» using Subaru Select Monitor. <Ref. to BC(diag)-12, Read Current Data.> 2) Read the data when locking/unlocking the rear gate lock actuator.	Does the data change from ON ←→ OFF?	Go to step 14.	Check body integrated unit. <Ref. to SL-72, REMOVAL, Body Integrated Unit.>
14 CHECK KEYLESS ACCESS SYSTEM CHECK. 1) Using the Subaru Select Monitor, select System check of «Keyless Access with Push Button Start»: «Rear gate external transmitter + interior tuner». <Ref. to KPS(diag)-33, Keyless Access System Check.> 2) Hold the access key 1 m or more away from the trunk, then come closer to within 0.8 m.	Does the outside buzzer sound?	System is normal.	Replace the keyless access CM. <Ref. to SL-89, Keyless Access CM.>

Diagnostics with Phenomenon

KEYLESS ACCESS WITH PUSH BUTTON START SYSTEM (DIAGNOSTICS)

12. CAN NOT LOCK WHEN USING THE REAR LOCK BUTTON

CAUTION:

- Check that there are no other registered access keys inside the vehicle.
- Check that the keyless access function is not stopped.
- Inspect LAN system or keyless access system according to the basic diagnostic procedure, and make sure that DTC is not input.
- When the access key or keyless access CM is replaced, registration of the immobilizer is required. For the relevant procedures, refer to the “REGISTRATION MANUAL FOR IMMOBILIZER” provided as a separate volume.

Step	Check	Yes	No	
1	CHECK REAR GATE ACTUATOR. While carrying the access key, operate the touch sensor (lock) and touch sensor (unlock).	When the switch is operated, does the rear gate lock/unlock?	Go to step 2.	Go to step 10.
2	CHECK REAR LOCK BUTTON. 1) Display the current data «Rear Gate Request SW» of «Keyless Access with Push Button Start» using Subaru Select Monitor. <Ref. to KPS(diag)-26, Read Current Data.> 2) Read the data when operating the rear lock button.	Does the data change between ON/OFF?	Go to step 8.	Go to step 3.
3	CHECK HARNESS. 1) Disconnect the rear lock button connector and the keyless access CM connector. 2) Using a tester, measure the resistance between harness. Connector & terminal (D77) No. 3 — (B573) No. 27:	Is the resistance less than 10 Ω?	Go to step 4.	Repair or replace the open circuit of the harness.
4	CHECK HARNESS. Using a tester, measure the resistance between harness and chassis ground. Connector & terminal (D77) No. 3 — Chassis ground:	Is the resistance 10 MΩ or more?	Go to step 5.	Repair or replace the short of harness.
5	CHECK HARNESS. Using a tester, measure the resistance between harness and chassis ground. Connector & terminal (D77) No. 4 — Chassis ground:	Is the resistance less than 10 Ω?	Go to step 6.	Repair or replace the open circuit of the harness.
6	CHECK REAR LOCK BUTTON. Measure the resistance when the rear lock button is operated using the tester. Terminals No. 3 — No. 4:	Did the resistance change from 1 MΩ or more to less than 10 Ω?	Go to step 7.	Replace the rear lock button. <Ref. to SL-86, REMOVAL, Rear Lock Button.>
7	CHECK REAR LOCK BUTTON. 1) Display the current data «Rear Gate Request SW» of «Keyless Access with Push Button Start» using Subaru Select Monitor. <Ref. to KPS(diag)-26, Read Current Data.> 2) Read the data when operating the rear lock button.	Does the data change between ON/OFF?	Go to step 8.	Replace the keyless access CM. <Ref. to SL-89, REMOVAL, Keyless Access CM.>
8	CHECK WIRING HARNESS. 1) Disconnect the exterior rear antenna connector and the keyless access CM connector. 2) Using a tester, check continuity between the exterior rear antenna connector and keyless access CM connector. Connector & terminal (R299) No. 1 — (B573) No. 2: (R299) No. 2 — (B573) No. 1:	Is there continuity?	Go to step 9.	Repair or replace the open circuit of harness.

Diagnostics with Phenomenon

KEYLESS ACCESS WITH PUSH BUTTON START SYSTEM (DIAGNOSTICS)

Step	Check	Yes	No
9 CHECK OUTSIDE REAR ANTENNA. Replace the outside rear antenna with new or properly working parts. <Ref. to SL-84, REMOVAL, Keyless Access Outdoor Antenna.>	Does it operate properly?	The outside rear antenna has a failure.	Go to step 10.
10 CHECK BODY INTEGRATED UNIT. 1) Connect the disconnected connectors. 2) Use the Subaru Select Monitor to perform «Body Control» function check. <Ref. to BC(diag)-24, Function Check.> 3) Actuate the door lock actuator LOCK output.	Does the rear gate lock actuator lock?	It is possible that temporary poor communication occurs.	Go to step 11.
11 CHECK HARNESS. 1) Disconnect the body integrated unit connector and rear gate lock actuator connector. 2) Check the continuity between body integrated unit connector and rear gate lock actuator connector. <i>Connector & terminal</i> <i>(i171) No. 7 — (D46) No. 1:</i>	Is there continuity?	Go to step 12.	Repair or replace the open circuit of harness.
12 CHECK HARNESS. 1) Check the continuity between the rear gate lock actuator connector and chassis ground. <i>Connector & terminal</i> <i>(D46) No. 2 — Chassis ground:</i>	Is there continuity?	Go to step 13.	Repair or replace the open circuit of harness.
13 CHECK REAR GATE LOCK ACTUATOR. 1) Check the rear gate lock actuator. <Ref. to SL-51, INSPECTION, Rear Gate Latch and Actuator Assembly.>	Is the rear gate lock actuator normal?	Replace the body integrated unit. <Ref. to SL-72, Body Integrated Unit.>	Replace the rear gate latch and actuator assembly. <Ref. to SL-50, Rear Gate Latch and Actuator Assembly.>

Diagnostics with Phenomenon

KEYLESS ACCESS WITH PUSH BUTTON START SYSTEM (DIAGNOSTICS)

13.THE STEERING LOCK IS NOT RELEASED

CAUTION:

When the steering lock CM is replaced, registration of the immobilizer is required. For the relevant procedures, refer to the “REGISTRATION MANUAL FOR IMMOBILIZER” provided as a separate volume.

Step	Check	Yes	No
1 CHECK OPERATION. 1) Depress the brake pedal. 2) While turning the steering wheel lightly to the left and right, press the push button ignition switch. 3) Confirm that the steering lock is released and the engine starts.	Does the engine fail to start with the steering lock released?	Perform the diagnosis for engine system. <Ref. to EN(H4DO)(diag)-74, Diagnostics for Engine Starting Failure.>	Go to step 2.
2 CHECK DTC. Read keyless access CM DTCs using the Subaru Select Monitor. <Ref. to KPS(diag)-25, Read Diagnostic Trouble Code (DTC).>	Is a DTC displayed?	Perform the diagnosis according to the corresponding procedures of DTC.	Go to step 3.
3 CHECK CURRENT DATA. 1) Using the Subaru Select Monitor, display the current data of «Keyless Access with Push Button Start»: «Steering lock unlock request reception status» and «Steering lock lock/unlock command reception history». <Ref. to KPS(diag)-26, Read Current Data.> 2) Read the data when the push button ignition switch is pressed while in possession of the access key. (Maintain for 10 seconds after switch operation)	Does the data change from “Not yet received” to “Reception”, and from “OFF” to “ON”?	Go to step 4.	Go to step 7.
4 CHECK STEERING LOCK CM. 1) Disconnect the steering lock CM connector. 2) Using a tester, measure the voltage between the steering lock CM connector and chassis ground. Connector & terminal (B424) No. 7 (+) — Chassis ground (-):	Is the voltage 10 V or more?	Go to step 5.	Repair or replace the open circuit of harness.
5 CHECK STEERING LOCK CM. Using a tester, check continuity between the steering lock CM connector and chassis ground. Connector & terminal (B424) No. 1 — Chassis ground:	Is there continuity?	Go to step 6.	Repair or replace the open circuit of harness.
6 CHECK STEERING LOCK CM. 1) Connect the disconnected connectors. 2) Using a tester, measure the voltage between steering lock CM terminals right after the ignition switch is turned to ON. Connector & terminal (B424) No. 3 (+) — (B424) No. 1 (-):	Is the voltage 1 V or less right after the ignition ON?	Replace the steering lock CM. <Ref. to SL-92, REMOVAL, Steering Lock CM.>	Repair or replace the open circuit of harness.
7 CHECK CURRENT DATA. Using the Subaru Select Monitor, display the current data of «Keyless Access with Push Button Start»: «Code collation result between smart ECM and ID code box». <Ref. to KPS(diag)-26, Read Current Data.>	Is data displayed as being normal?	Go to step 9.	Go to step 8.

Diagnostics with Phenomenon

KEYLESS ACCESS WITH PUSH BUTTON START SYSTEM (DIAGNOSTICS)

Step	Check	Yes	No
8 CHECK CURRENT DATA. 1) Replace with a properly functioning or new ID code box. <Ref. to SL-91, ID Code Box.> 2) Using the Subaru Select Monitor, display the current data of «Keyless Access with Push Button Start»: «Code collation result between smart ECM and ID code box». <Ref. to KPS(diag)-26, Read Current Data.>	Is data displayed as being normal?	System is normal.	Replace the keyless access CM. <Ref. to SL-89, Keyless Access CM.>
9 CHECK CURRENT DATA. Using the Subaru Select Monitor, display the current data of «Keyless Access with Push Button Start»: «Code collation result between steering locked ECM and ID code box». <Ref. to KPS(diag)-26, Read Current Data.>	Is data displayed as being normal?	System is normal.	Go to step 10.
10 CHECK ID CODE BOX. 1) Replace with a properly functioning or new ID code box. <Ref. to SL-91, ID Code Box.> 2) Using the Subaru Select Monitor, display the current data of «Keyless Access with Push Button Start»: «Code collation result between steering locked ECM and ID code box». <Ref. to KPS(diag)-26, Read Current Data.>	Is data displayed as being normal?	System is normal.	Go to step 11.
11 CHECK STEERING LOCK CM. 1) Replace with a properly functioning or new steering lock CM. <Ref. to SL-92, REMOVAL, Steering Lock CM.> 2) After registering, the steering lock operates when the ignition is turned to OFF and the driver's door is opened and closed. 3) Turn the ignition to ON. 4) Operate the steering and check for whether the steering lock is released.	Is the steering lock released, and does the engine start?	Replace the steering lock CM. <Ref. to SL-92, REMOVAL, Steering Lock CM.>	Replace the keyless access CM. <Ref. to SL-89, Keyless Access CM.>

14. THE STEERING LOCK DOES NOT OPERATE

CAUTION:

When the keyless access CM or steering lock CM is replaced, registration of the immobilizer is required. For the relevant procedures, refer to the "REGISTRATION MANUAL FOR IMMOBILIZER" provided as a separate volume.

Step	Check	Yes	No
1 CHECK DTC. Read DTCs of «Keyless Access with Push Button Start» using the Subaru Select Monitor. <Ref. to KPS(diag)-25, Read Diagnostic Trouble Code (DTC).>	Is a DTC displayed?	Perform the diagnosis according to the corresponding DTC.	Go to step 2.
2 CHECK CURRENT DATA. 1) Display the current data «Driver's door SW input» of «Body Control» using Subaru Select Monitor. <Ref. to BC(diag)-12, Read Current Data.> 2) Read the data when opening and closing the driver's door.	Does the data change from ON to OFF according to the opening and closing?	Go to step 3.	Inspect door switch circuit.
3 CHECK CURRENT DATA. Display the current data «Shift P Signal» of «Keyless Access with Push Button Start» using Subaru Select Monitor. <Ref. to KPS(diag)-26, Read Current Data.>	Is the status displayed correctly when the shift lever is shifted from P to other than P?	Go to step 4.	Check the P range switch and harness.

Diagnostics with Phenomenon

KEYLESS ACCESS WITH PUSH BUTTON START SYSTEM (DIAGNOSTICS)

Step	Check	Yes	No
4 CHECK CURRENT DATA. Using the Subaru Select Monitor, display the current data of «Keyless Access with Push Button Start»: «Code collation result between smart ECM and ID code box». <Ref. to KPS(diag)-26, Read Current Data.>	Is the status normal?	Go to step 5.	Replace the keyless access CM. <Ref. to SL-89, REMOVAL, Keyless Access CM.>
5 CHECK CURRENT DATA. Using the Subaru Select Monitor, display the current data of «Keyless Access with Push Button Start»: «Code collation result between steering locked ECM and ID code box». <Ref. to KPS(diag)-26, Read Current Data.>	Is the status normal?	Go to step 6.	Replace the steering lock CM. <Ref. to SL-92, REMOVAL, Steering Lock CM.>
6 CHECK CURRENT DATA. 1) Display the current data «Steering lock lock/unlock command reception history» of «Keyless Access with Push Button Start» using Subaru Select Monitor. <Ref. to KPS(diag)-26, Read Current Data.> 2) While in possession of the access key, perform engine start operations, and read data within 10 seconds after starting.	Is data displayed as ON?	Go to step 7.	Replace the keyless access CM. <Ref. to SL-89, REMOVAL, Keyless Access CM.>
7 CHECK STEERING LOCK CM. Using a tester, measure the waveform between steering lock CM terminals immediately after the following operations. Perform ignition ON, driver's side door close → shift lever "P" range, ignition OFF, and close → open the driver's side door. Connector & terminal (B424) No. 3 — (B424) No. 1:	Is the waveform immediately after opening the driver's side door abnormal?	Replace the steering lock CM. <Ref. to SL-92, REMOVAL, Steering Lock CM.>	Go to step 8.
8 CHECK WIRING HARNESS. 1) Disconnect the keyless access CM connector and the steering lock CM connector. 2) Using a tester, check continuity between the keyless access CM connector and steering lock CM connector. Connector & terminal (B424) No. 3 — (B574) No. 29:	Is there continuity?	Go to step 9.	Repair or replace the open circuit of harness.
9 CHECK WIRING HARNESS. Using a tester, check continuity between the keyless access CM connector and chassis ground. Connector & terminal (B572) No. 11 — Chassis ground:	Is there continuity?	Replace the keyless access CM. <Ref. to SL-89, REMOVAL, Keyless Access CM.>	Repair or replace the open circuit of harness.

Diagnostics with Phenomenon

KEYLESS ACCESS WITH PUSH BUTTON START SYSTEM (DIAGNOSTICS)

15. POWER WILL NOT TURN ON (BOTH ACCESSORY AND IGNITION)

CAUTION:

- When the keyless access CM is replaced with a new unit, and the battery ground terminal is connected, it will become ignition ON. Also, if the battery is disconnected, it will resume to a condition with the battery cut off.

- When the keyless access CM is replaced, registration of the immobilizer is required. For the relevant procedures, refer to the “REGISTRATION MANUAL FOR IMMOBILIZER” provided as a separate volume.

Step	Check	Yes	No
1 CHECK FUSE. Check the fuse.	Is the fuse OK?	Go to step 2.	Replace the fuse.
2 CHECK POWER SUPPLY. 1) Remove IG relay 1 (push button start), IG relay 2 (push button start) and accessory relay (push button start). 2) Using a tester, measure the voltage between the relay block connector and chassis ground.	Is the voltage 10 V or more?	Go to step 3.	Check the DC power supply circuit.
3 CHECK CONNECTOR. Check the engagement of each connector and terminal for any deformation or looseness.	Are the connectors and terminals normal?	Go to step 4.	Repair the connector, or replace harness.
4 CHECK WIRING HARNESS. 1) Disconnect the keyless access CM connector. 2) Using a tester, measure the voltage between the keyless access CM connector and chassis ground. Connector & terminal (B572) No. 2 (+) — Chassis ground (-):	Is the voltage between 8 V and 16 V?	Go to step 5.	Repair or replace the open circuit of harness.
5 CHECK WIRING HARNESS. Using a tester, check continuity between the keyless access CM connector and chassis ground. Connector & terminal (B572) No. 11 — Chassis ground:	Is there continuity?	Go to step 6.	Repair or replace the open circuit of harness.
6 CHECK DTC. 1) Connect the keyless access CM connector. 2) While in possession of the access key, depress the brake pedal, and push the push button ignition switch. 3) Read keyless access CM DTCs using the Subaru Select Monitor. <Ref. to KPS(diag)-25, Read Diagnostic Trouble Code (DTC).>	Is a DTC output?	Perform diagnosis according to the DTC.	Go to step 7.
7 CHECK CURRENT DATA. 1) Display the current data «Push start SW 1» and «Push start SW 2» of «Keyless Access with Push Button Start» using Subaru Select Monitor. <Ref. to KPS(diag)-26, Read Current Data.> 2) Read the data when pressing the push button ignition switch.	Does it change from OFF to ON along with the operation?	Go to step 8.	Go to step 15.
8 CHECK RELAY (PUSH BUTTON START). Check IG relay 1 and 2 (push button start), and accessory relay (push button start). <Ref. to SL-99, INSPECTION, IG Relay1 (Push Button Start).>	Is each relay normal?	Go to step 9.	Replace the faulty relay.

Diagnostics with Phenomenon

KEYLESS ACCESS WITH PUSH BUTTON START SYSTEM (DIAGNOSTICS)

Step	Check	Yes	No
9 CHECK WIRING HARNESS. 1) Disconnect the keyless access CM connector, IG relay 1 (push button start), IG relay 2 (push button start) and accessory relay (push button start). 2) Using a tester, check continuity between terminals of keyless access CM connector, IG relay 1 (push button start), IG relay 2 (push button start) and accessory relay (push button start). Connector & terminal <i>(B574) No. 6 — (B225) No. 38:</i> <i>(B572) No. 9 — (B225) No. 34:</i> <i>(B574) No. 4 — (B426) No. 1:</i>	Is there continuity?	Go to step 10.	Repair or replace the open circuit of harness.
10 CHECK WIRING HARNESS. Using a tester, check continuity between the keyless access CM connector and chassis ground. Connector & terminal <i>(B572) No. 9 — Chassis ground:</i> <i>(B574) No. 4 — Chassis ground:</i> <i>(B574) No. 6 — Chassis ground:</i>	Is there continuity?	Repair or replace the short circuit of the harness.	Go to step 11.
11 CHECK WIRING HARNESS. Using a tester, check the continuity between the IG relay 2 (push button start) connector and chassis ground. Connector & terminal <i>(B225) No. 39 — Chassis ground:</i>	Is there continuity?	Go to step 12.	Repair or replace the open circuit of harness.
12 CHECK WIRING HARNESS. Using a tester, check the continuity between the IG relay 1 connector and chassis ground. Connector & terminal <i>(B225) No. 35 — Chassis ground:</i>	Is there continuity?	Go to step 13.	Repair or replace the open circuit of harness.
13 CHECK WIRING HARNESS. Using a tester, check the continuity between the accessory relay connector and chassis ground. Connector & terminal <i>(B426) No. 2 — Chassis ground:</i>	Is there continuity?	Go to step 14.	Repair or replace the open circuit of harness.
14 CHECK KEYLESS ACCESS CM. 1) Connect all the disconnected connectors. 2) Using a tester, measure the voltage between the keyless access CM connector and chassis ground when the ignition is turned from OFF to ON. Connector & terminal <i>(B572) No. 9 (+) — Chassis ground (-):</i> <i>(B574) No. 4 (+) — Chassis ground (-):</i> <i>(B574) No. 6 (+) — Chassis ground (-):</i>	Did the voltage change from 1 V or less to +B-2 V or more?	Go to step 15.	Replace the keyless access CM. <Ref. to SL-89, Keyless Access CM.>
15 CHECK PUSH BUTTON IGNITION SWITCH. 1) Disconnect the push button ignition switch. 2) Using a tester, check the continuity between terminals. Terminals <i>No. 7 — No. 5:</i> <i>No. 2 — No. 5:</i>	When the button was pressed, did it change to continuity exists? (No continuity when button is released)	Go to step 16.	Replace the push button ignition switch. <Ref. to SL-94, REMOVAL, Push Button Ignition Switch.>

Diagnostics with Phenomenon

KEYLESS ACCESS WITH PUSH BUTTON START SYSTEM (DIAGNOSTICS)

Step	Check	Yes	No
16 CHECK WIRING HARNESS. Using a tester, check the continuity between the push button ignition switch connector and chassis ground. Connector & terminal <i>(i150) No. 4 — Chassis ground:</i> <i>(i150) No. 5 — Chassis ground:</i>	Is there continuity?	Go to step 17.	Repair or replace the open circuit of harness.
17 CHECK WIRING HARNESS. 1) Disconnect the keyless access CM connector. 2) Using a tester, check continuity between the keyless access CM connector and push button ignition switch. Connector & terminal <i>(i150) No. 7 — (B574) No. 28:</i> <i>(i150) No. 2 — (B574) No. 30:</i>	Is there continuity?	System is normal.	Repair or replace the open circuit of harness.

16.POWER WILL NOT TURN ON (ACCESSORY DOES NOT TURN ON, BUT IGNITION TURNS ON)

CAUTION:

- When the keyless access CM is replaced with a new unit, and the battery ground terminal is connected, it will become ignition ON. Also, if the battery is disconnected, it will resume to a condition with the battery cut off.
- When the keyless access CM is replaced, registration of the immobilizer is required. For the relevant procedures, refer to the “REGISTRATION MANUAL FOR IMMOBILIZER” provided as a separate volume.

Wiring diagram:

Push button start system <Ref. to WI-186, WIRING DIAGRAM, Push Button Start System.>

SL-10371

Diagnostics with Phenomenon

KEYLESS ACCESS WITH PUSH BUTTON START SYSTEM (DIAGNOSTICS)

Step	Check	Yes	No	
1	CHECK FUSE. Check the fuse.	Is the fuse OK?	Go to step 2.	Replace the fuse.
2	CHECK CONNECTOR. Check the engagement of each connector and terminal for any deformation or looseness.	Are the connectors and terminals normal?	Go to step 3.	Repair the connector, or replace harness.
3	CHECK WIRING HARNESS. 1) Disconnect the keyless access CM connector. 2) Using a tester, measure the voltage between the keyless access CM connector and chassis ground. Connector & terminal (B572) No. 2 (+) — Chassis ground (-):	Is the voltage between 8 V and 16 V?	Go to step 4.	Repair or replace the open circuit of harness.
4	CHECK WIRING HARNESS. Using a tester, check continuity between the keyless access CM connector and chassis ground. Connector & terminal (B572) No. 11 — Chassis ground:	Is there continuity?	Go to step 5.	Repair or replace the open circuit of harness.
5	CHECK ACCESSORY RELAY (PUSH BUTTON START). Check the accessory relay (push button start). <Ref. to SL-103, INSPECTION, Accessory Relay (Push Button Start).>	Is the relay OK?	Go to step 6.	Replace the relay.
6	CHECK WIRING HARNESS. 1) Disconnect the keyless access CM connector and the accessory relay (push button start). 2) Using a tester, check continuity between the keyless access CM connector and accessory relay (push button start). Connector & terminal (B574) No. 4 — (B426) No. 1:	Is there continuity?	Go to step 7.	Repair or replace the open circuit of harness.
7	CHECK WIRING HARNESS. Using a tester, check continuity between the keyless access CM connector and chassis ground. Connector & terminal (B574) No. 4 — Chassis ground:	Is there continuity?	Repair or replace the short circuit of the harness.	Go to step 8.
8	CHECK KEYLESS ACCESS CM. 1) Connect the keyless access CM connector. 2) Using a tester, measure the voltage between the keyless access CM connector and chassis ground when the ignition is turned from OFF to ON. Connector & terminal (B574) No. 4 (+) — Chassis ground (-):	Did the voltage change from 1 V or less → +B-2 V or more?	System is normal.	Replace the keyless access CM. <Ref. to SL-89, Keyless Access CM.>

Diagnostics with Phenomenon

KEYLESS ACCESS WITH PUSH BUTTON START SYSTEM (DIAGNOSTICS)

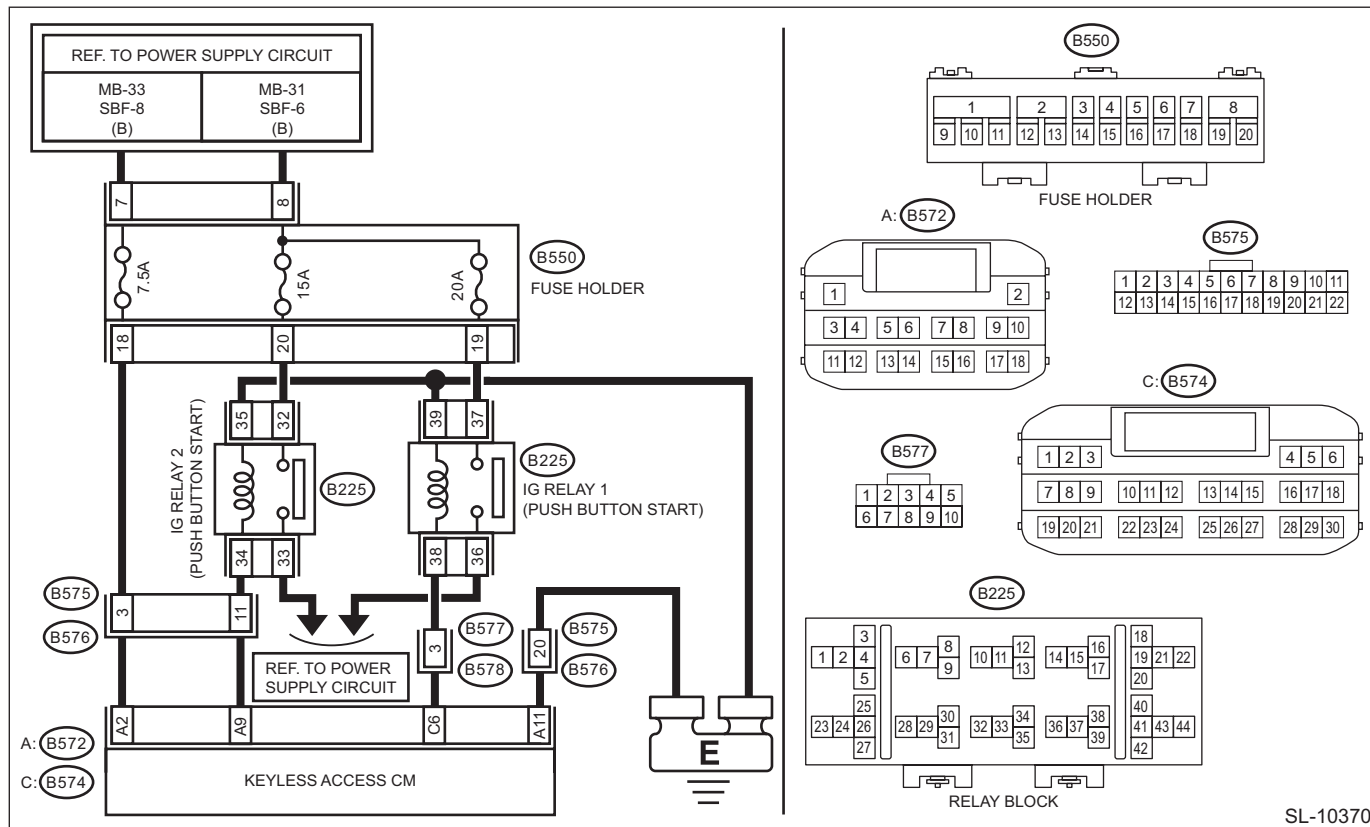

17. POWER WILL NOT TURN ON (ACCESSORY TURNS ON, BUT IGNITION DOES NOT TURN ON)

CAUTION:

When the keyless access CM is replaced with a new unit, and the battery ground terminal is connected, it will become ignition ON. Also, if the battery is disconnected, it will resume to a condition with the battery cut off.

Wiring diagram:

Push button start system <Ref. to WI-186, WIRING DIAGRAM, Push Button Start System.>

SL-10370

Step	Check	Yes	No
1	CHECK FUSE. Check the fuse.	Is the fuse OK?	Go to step 2. Replace the fuse.
2	CHECK CONNECTOR. Check the engagement of each connector and terminal for any deformation or looseness.	Are the connectors and terminals normal?	Go to step 3. Repair the connector, or replace harness.
3	CHECK WIRING HARNESS. 1) Disconnect the keyless access CM connector. 2) Using a tester, measure the voltage between the keyless access CM connector and chassis ground. Connector & terminal (B572) No. 2 (+) — Chassis ground (-):	Is the voltage between 8 V and 16 V?	Go to step 4. Repair or replace the open circuit of harness.
4	CHECK WIRING HARNESS. Using a tester, check continuity between the keyless access CM connector and chassis ground. Connector & terminal (B572) No. 11 — Chassis ground:	Is there continuity?	Go to step 5. Repair or replace the open circuit of harness.

Diagnostics with Phenomenon

KEYLESS ACCESS WITH PUSH BUTTON START SYSTEM (DIAGNOSTICS)

Step	Check	Yes	No
5 CHECK IG RELAY 1 AND 2 (PUSH BUTTON START). Check IG relay 1 (push button start) and IG relay 2 (push button start). <Ref. to SL-99, INSPECTION, IG Relay1 (Push Button Start).>	Is the relay OK?	Go to step 6.	Replace the relay.
6 CHECK WIRING HARNESS. 1) Disconnect the keyless access CM connector and the IG relay 1 and 2 (push button start). 2) Using a tester, check continuity between keyless access CM connector and IG relay 1 (push button start) or IG relay 2 (push button start). <i>Connector & terminal</i> <i>(B572) No. 9 — (B225) No. 34:</i> <i>(B574) No. 6 — (B225) No. 38:</i>	Is there continuity?	Go to step 7.	Repair or replace the open circuit of harness.
7 CHECK WIRING HARNESS. Using a tester, check continuity between the keyless access CM connector and chassis ground. <i>Connector & terminal</i> <i>(B572) No. 9 — Chassis ground:</i> <i>(B574) No. 6 — Chassis ground:</i>	Is there continuity?	Repair or replace the short circuit of the harness.	Go to step 8.
8 CHECK KEYLESS ACCESS CM. 1) Connect the keyless access CM connector. 2) Using a tester, measure the voltage between the keyless access CM connector and chassis ground when the ignition is turned from OFF to ON. <i>Connector & terminal</i> <i>(B572) No. 9 (+) — Chassis ground (-):</i> <i>(B574) No. 6 (+) — Chassis ground (-):</i>	Did the voltage change from 1 V or less → +B-2 V or more?	System is normal.	Replace the keyless access CM. <Ref. to SL-89, Keyless Access CM.>

Diagnostics with Phenomenon

KEYLESS ACCESS WITH PUSH BUTTON START SYSTEM (DIAGNOSTICS)

18.ENGINE DOES NOT START

CAUTION:

- When the keyless access CM is replaced with a new unit, and the battery ground terminal is connected, it will become ignition ON. Also, if the battery is disconnected, it will resume to a condition with the battery cut off.
- When the keyless access CM or ID code box is replaced, registration of the immobilizer is required. For the relevant procedures, refer to the “REGISTRATION MANUAL FOR IMMOBILIZER” provided as a separate volume.

Step	Check	Yes	No
1 INITIALIZE STEERING LOCK. 1) Place the shift lever in the Parking range. 2) Operate the driver's door switch ON/OFF with the ignition switch OFF. 3) Wait for 10 seconds. 4) Place the access key on the driver's seat. 5) Press the push button ignition switch while depressing the brake pedal.	Can the engine start?	System is normal.	Go to step 2.
2 CHECK DTC. Read DTCs of «Keyless Access with Push Button Start» using the Subaru Select Monitor. <Ref. to KPS(diag)-25, Read Diagnostic Trouble Code (DTC).>	Is DTC displayed?	Perform the diagnosis according to the DTC. <Ref. to KPS(diag)-35, LIST, List of Diagnostic Trouble Code (DTC).>	Go to step 3.
3 CHECK POWER SUPPLY SWITCHING. 1) Place the access key on the driver's seat. 2) Press the push button ignition switch without depressing the brake pedal.	When the switch is operated, does the <IG-OFF> → <ACC-ON> → <IG-ON> → <IG-OFF> change occur?	Go to step 4.	Perform the diagnostics according to the symptom for power supply switching system in General Diagnostic Table. <Ref. to KPS(diag)-99, POWER SUPPLY SWITCHING SYSTEM, INSPECTION, General Diagnostic Table.>
4 CHECK CURRENT DATA. 1) Place the access key on the driver's seat. 2) Press the push button ignition switch while depressing the brake pedal. 3) Using the Subaru Select Monitor, confirm the current data «STSW signal monitor» of «Keyless Access with Push Button Start», when pressing the push button ignition switch. <Ref. to KPS(diag)-26, Read Current Data.> NOTE: If it is difficult to confirm, press the push button ignition switch for approximately five seconds longer.	Does the data change from OFF → ON?	Go to step 10.	Go to step 5.
5 CHECK CURRENT DATA. Check the current data «Shift P Signal» of «Keyless Access with Push Button Start» using Subaru Select Monitor. <Ref. to KPS(diag)-26, Read Current Data.>	Is ON displayed in parking position, and OFF displayed in other positions?	Go to step 6.	Go to step 11.

Diagnostics with Phenomenon

KEYLESS ACCESS WITH PUSH BUTTON START SYSTEM (DIAGNOSTICS)

Step	Check	Yes	No
6 CHECK CURRENT DATA. Display the current data «Stop Light Switch» of «Keyless Access with Push Button Start» using Subaru Select Monitor. <Ref. to KPS(diag)-26, Read Current Data.>	Is ON displayed when brake pedal depressed, and OFF displayed when brake pedal not depressed?	Go to step 7.	Go to step 13.
7 CHECK CURRENT DATA. Display the current data «Neutral SW/Clutch SW» of «Keyless Access with Push Button Start» using Subaru Select Monitor. <Ref. to KPS(diag)-26, Read Current Data.>	Is ON displayed in parking and neutral positions, and OFF displayed in other positions?	Go to step 8.	Go to step 15.
8 CHECK STEERING LOCK. Operate the push button ignition switch to perform the power supply switching and check steering lock condition during ACC-ON condition.	Is the steering lock in unlocked condition?	Go to step 9.	Perform the diagnostics according to the symptom for steering lock system in General Diagnostic Table. <Ref. to KPS(diag)-99, STEERING LOCK SYSTEM, INSPECTION, General Diagnostic Table.>
9 CHECK KEYLESS ACCESS CM. 1) Turn the ignition switch to OFF. 2) Disconnect the ECM connector. 3) Using a tester, measure the battery voltage in following procedures. 1. Press the push button ignition switch with the brake pedal depressed. (Measure within 10 seconds.) 2. Release the push button ignition switch from the condition of step 1. above. Connector & terminal (B572) No. 13 (+) — Chassis ground (-):	Does the value change from 1 V or less to +B-2 V or more in the step 1, and return to 1 V or less in the step 2?	Perform the diagnosis for engine system. <Ref. to EN(H4DO)(diag)-74, Diagnostics for Engine Starting Failure.>	Replace the keyless access CM. <Ref. to SL-89, Keyless Access CM.>
10 CHECK CURRENT DATA. 1) Connect the disconnected connectors. 2) Display the current data «Engine start permission request reception status» of «Keyless Access with Push Button Start» using Subaru Select Monitor. <Ref. to KPS(diag)-26, Read Current Data.>	Is “Reception” displayed with ignition switch ON, and “Not yet received” displayed in other positions?	Perform the diagnosis for engine system.	Replace the keyless access CM. <Ref. to SL-89, Keyless Access CM.>
11 CHECK “P” RANGE SWITCH. 1) Turn the ignition switch to OFF. 2) Disconnect the AT shift lever connector. 3) Using a tester, check the continuity of “P” range switch. Terminals No. 1 — No. 2:	Does it change from Continuity ←→ No continuity according to shift lever operation?	Go to step 12.	Replace the “P” range switch. <Ref. to CS-60, REMOVAL, AT Shift Lock Solenoid and “P” Range Switch.>
12 CHECK HARNESS. 1) Turn the ignition switch to OFF. 2) Disconnect the keyless access CM connector. 3) Using a tester, check continuity between the keyless access CM and AT select lever. Connector & terminal (B116) No. 1 — (B574) No. 25: (B116) No. 2 — Chassis ground:	Is there continuity?	Replace the keyless access CM. <Ref. to SL-89, Keyless Access CM.>	Repair or replace the harness.

Diagnostics with Phenomenon

KEYLESS ACCESS WITH PUSH BUTTON START SYSTEM (DIAGNOSTICS)

Step	Check	Yes	No
13 CHECK STOP LIGHT SWITCH. 1) Turn the ignition switch to OFF. 2) Disconnect the stop light switch connector. 3) Using a tester, check the continuity of the stop light switch. Terminals No. 3 — No. 4:	Does it change from Continuity ←→ No continuity according to brake pedal operation?	Go to step 14.	Replace the stop light switch. <Ref. to BR-72, REMOVAL, Stop Light Switch.>
14 CHECK HARNESS. 1) Turn the ignition switch to OFF. 2) Using a tester, check continuity between the keyless access CM and stop light switch. Connector & terminal (B572) No. 18 — (B65) No. 4: (B65) No. 3 — F/B fuse No. 8:	Is there continuity?	Replace the keyless access CM. <Ref. to SL-89, Keyless Access CM.>	Repair or replace the harness.
15 CHECK INHIBITOR SWITCH. Check the inhibitor switch. <Ref. to CVT(TR580)-97, INSPECTION, Inhibitor Switch.>	Is the inhibitor switch working normal?	Go to step 16.	Replace the inhibitor switch. <Ref. to CVT(TR580)-101, REMOVAL, Inhibitor Switch.>
16 CHECK HARNESS. 1) Turn the ignition switch to OFF. 2) Disconnect the inhibitor switch connector. 3) Using a tester, check continuity between the keyless access CM connector and inhibitor switch connector. Connector & terminal (B572) No. 5 — (B12) No. 16: (B12) No. 15 — Starter motor:	Is there continuity?	Replace the keyless access CM. <Ref. to SL-89, Keyless Access CM.>	Repair or replace the harness.

Basic Diagnostic Procedure

BODY CONTROL SYSTEM (DIAGNOSTICS)

1. Basic Diagnostic Procedure

A: PROCEDURE

CAUTION:

- Subaru Select Monitor is required for reading DTC, performing diagnosis and reading current data.
- Remove foreign matter (dust, water, oil, etc.) from the body integrated unit connector during removal and installation.
- Registration of immobilizer may be needed after the replacement of control modules, etc. For detailed procedure, refer to the “REGISTRATION MANUAL FOR IMMOBILIZER” provided as a separate volume.

NOTE:

- To check harness for open or short circuits, shake the suspected trouble spot or connector.
- Check List for Interview <Ref. to BC(diag)-3, Check List for Interview.>

Step	Check	Yes	No
1 CHECK PRE-INSPECTION. Ask the customer when and how the trouble occurred using the interview check list. <Ref. to BC(diag)-3, Check List for Interview.>	Did you interview the customer?	Go to step 2.	Interview the customer.
2 BASIC INSPECTION. Check components which might affect body control. <Ref. to BC(diag)-4, INSPECTION, General Description.>	Is the component that might influence the body control problem normal?	Go to step 3.	Repair or replace each component.
3 CHECK DTC. 1) Read the DTC. <Ref. to BC(diag)-10, Read Diagnostic Trouble Code (DTC).> NOTE: If the communication function of the Subaru Select Monitor cannot be executed properly, check the communication circuit. <Ref. to LAN(diag)-11, COMMUNICATION FOR INITIALIZING IMPOSSIBLE, Subaru Select Monitor.> 2) Record all DTCs, time stamp and freeze frame data. NOTE: For time stamp, refer to “LAN SYSTEM”. <Ref. to LAN(diag)-6, TIME STAMP, CAUTION, General Description.>	Is DTC displayed on Subaru Select Monitor?	Go to step 5.	Go to step 4.
4 PERFORM GENERAL DIAGNOSTICS. Inspect using the “General Diagnostic Table”. <Ref. to BC(diag)-45, General Diagnostic Table.>	Is result of inspection OK?	The body control system is normal.	Go to step 5.
5 PERFORM DIAGNOSIS. 1) Correct the cause of trouble. 2) Perform the Clear Memory Mode. <Ref. to BC(diag)-11, Clear Memory Mode.> 3) Read the DTC. <Ref. to BC(diag)-10, Read Diagnostic Trouble Code (DTC).>	Is DTC displayed on Subaru Select Monitor?	Repeat step 5 until DTC is not shown.	Finish the diagnosis.

Check List for Interview

BODY CONTROL SYSTEM (DIAGNOSTICS)

2. Check List for Interview

A: CHECK

Inspect the following items regarding the vehicle's state.

Body Control System Check List for Interview		Date of Vehicle Bring-in	Year	Month	Day
Customer's name		Registration No.	Initial year of registration		
			Year	Month	Date
		Vehicle model	Frame number		
Interviewer	Inspector	Engine type	Odometer reading		
Customer specified content					
Date and time when the trouble occurred		Frequency of trouble occurrence			
Condition of trouble occurrence		Weather			
Road conditions		Occurrence location			
Accessory installation condition					
Trouble condition					
<input type="checkbox"/> Diagnostic code			<input type="checkbox"/> ()		

General Description

BODY CONTROL SYSTEM (DIAGNOSTICS)

3. General Description

A: CAUTION

1. SRS AIRBAG SYSTEM

Airbag system wiring harness is routed near the body integrated unit and body control circuits.

CAUTION:

- Do not use the electrical test equipment on all airbag system wiring harnesses and connectors.
- Be careful not to damage the airbag system wiring harness, when servicing the body control system.

B: INSPECTION

Before performing diagnosis, check the following items which might affect body control system problems.

- 1) Check the battery. <Ref. to SC(H4DO)-51, Battery.>
- 2) Check the fuse condition.

Make sure that ampere of the fuse is setting value, and it is not blown out.

- 3) Check the connecting condition of harness and harness connector.
- 4) Confirm settings of body integrated unit are corresponded to vehicle equipment. <Ref. to BC(diag)-20, OPERATION, Registration Body Integrated Unit.>
- 5) Make sure that the User Customizing of the body integrated unit matches the vehicle equipment. <Ref. to BC(diag)-17, OPERATION, User Customizing.>
- 6) Confirm "Factory initial setting" of body integrated unit registrations is "Market".

C: PREPARATION TOOL

1. SPECIAL TOOL

ILLUSTRATION	TOOL NUMBER	DESCRIPTION	REMARKS
 STSSM4	—	SUBARU SELECT MONITOR 4	Used for setting of each function and troubleshooting for electrical system. NOTE: For detailed operation procedures of Subaru Select Monitor 4, refer to "Application help".

2. GENERAL TOOL

TOOL NAME	REMARKS
Circuit tester	Used for measuring resistance, voltage and current.
DST-i	Used together with Subaru Select Monitor 4.

BODY CONTROL SYSTEM (DIAGNOSTICS)

5. Control Module I/O Signal

A: ELECTRICAL SPECIFICATION

LAN00445

Description	Terminal No.	Signal (V or Ω)	Note
		Ignition switch ON (Engine OFF)	
Ignition power supply (rear wiper)	A5 \leftrightarrow Chassis ground	Less than 1.5 V \rightarrow 10 — 13 V	Ignition switch OFF \rightarrow ON
Battery power supply (shift lock/ key lock)	B6 \leftrightarrow Chassis ground	10 — 13 V	Always
Battery power supply (door lock)	D1 \leftrightarrow Chassis ground	10 — 13 V	Always
Battery power supply (control)	C6 \leftrightarrow Chassis ground	10 — 13 V	Always
Ground	A1 \leftrightarrow Chassis ground	Less than 1.5 V	Always
	C1 \leftrightarrow Chassis ground		
Battery power supply (back-up)	B7 \leftrightarrow Chassis ground	10 — 13 V	Always
Ignition power supply	B3 \leftrightarrow Chassis ground	Less than 1.5 V \rightarrow 10 — 13 V	Ignition switch OFF \rightarrow ON
ACC power supply	A32 \leftrightarrow Chassis ground	Less than 1.5 V \rightarrow 10 — 13 V	Ignition switch OFF \rightarrow Accessory ON
Key-in switch	A4 \leftrightarrow Chassis ground	Less than 1.5 V \rightarrow 10 — 13 V	Key is inserted (model without the keyless access with push button start system)
ACC input	A4 \leftrightarrow Chassis ground	Less than 1.5 V \rightarrow 10 — 13 V	ACC ON (model with the keyless access with push button start system)
P range SW	B18 \leftrightarrow Chassis ground	Less than 1.5 V \rightarrow 8 V or more	P range to other than P range
Stop light SW	A10 \leftrightarrow Chassis ground	Less than 1.5 V \rightarrow 8 V or more	Stop light switch OFF \rightarrow ON
Door SW (driver's)	C14 \leftrightarrow Chassis ground	8 V or more \rightarrow less than 1.5 V	Front right door closed \rightarrow open

Control Module I/O Signal

BODY CONTROL SYSTEM (DIAGNOSTICS)

Description	Terminal No.	Signal (V or Ω)	Note
		Ignition switch ON (Engine OFF)	
Door SW (passenger's)	C13 \leftrightarrow Chassis ground	8 V or more \rightarrow less than 1.5 V	Front left door closed \rightarrow open
Door SW (rear right)	C25 \leftrightarrow Chassis ground	8 V or more \rightarrow less than 1.5 V	Rear right door closed \rightarrow open
Door SW (rear left)	C24 \leftrightarrow Chassis ground	8 V or more \rightarrow less than 1.5 V	Rear left door closed \rightarrow open
Rear gate SW/trunk SW	C33 \leftrightarrow Chassis ground	8 V or more \rightarrow less than 1.5 V	Rear gate/trunk closed \rightarrow open
Opener SW (trunk/rear gate)	C10 \leftrightarrow Chassis ground	8 V or more \rightarrow less than 1.5 V	Rear gate/trunk opener switch ON
Manual switch (LOCK)	C9 \leftrightarrow Chassis ground	8 V or more \rightarrow less than 1.5 V	Door lock switch ON
Manual switch (UNLOCK)	C20 \leftrightarrow Chassis ground	8 V or more \rightarrow less than 1.5 V	Door unlock switch ON
Lighting AUTO	B16 \leftrightarrow Chassis ground	8 V or more \rightarrow less than 1.5 V	Switch at AUTO position
Lighting II	A34 \leftrightarrow Chassis ground	8 V or more \rightarrow less than 1.5 V	Switch at II position
	B34 \leftrightarrow Chassis ground		
Lighting I	B17 \leftrightarrow Chassis ground	8 V or more \rightarrow less than 1.5 V	Switch at I position
Dimmer passing	B25 \leftrightarrow Chassis ground	8 V or more \rightarrow less than 1.5 V	Switch at passing position
Dimmer Hi beam	B15 \leftrightarrow Chassis ground	8 V or more \rightarrow less than 1.5 V	Switch at Hi beam position
Front fog light SW	B26 \leftrightarrow Chassis ground	8 V or more \rightarrow less than 1.5 V	Front fog light switch ON
Illumination sensor power supply	B1 \leftrightarrow A29	Less than 1.5 V \rightarrow 4.5 V or more	Ignition switch OFF \rightarrow ON
Illumination sensor signal	A19	0.2 — 4.5 V	Ignition switch OFF \rightarrow ON
Ground (illumination sensor)	A29 \leftrightarrow Chassis ground	Less than 1.5 V	Always
Rear wiper SW ON	A12 \leftrightarrow Chassis ground	8 V or more \rightarrow less than 1.5 V	Switch at ON position
Rear wiper SW INT	A22 \leftrightarrow Chassis ground	8 V or more \rightarrow less than 1.5 V	Switch at INT position
Rear washer SW	A30 \leftrightarrow Chassis ground	8 V or more \rightarrow less than 1.5 V	Switch at ON position
Illumination SW (Vi1)	D12 \leftrightarrow Chassis ground	Approx. 5 V	While clearance light illuminates
Illumination SW (Vi2)	D22 \leftrightarrow Chassis ground	0.5 — 4.8 V	
Illumination SW (Vi3)	D28 \leftrightarrow Chassis ground	Less than 1.5 V	Always
Bright SW	C21 \leftrightarrow Chassis ground	8 V or more \rightarrow less than 1.5 V	Switch at ON position
Reverse SW (MT)	B12 \leftrightarrow Chassis ground	Less than 1.5 V \rightarrow 8 V or more	Reverse SW ON
Impact sensor	A11 \leftrightarrow Chassis ground	8 V or more	Apply an impact
Hi-speed CAN communication circuit 1 (Hi)	B20	Serial communication	Except for sleep status*1
Hi-speed CAN communication circuit 1 (Lo)	B28		
Hi-speed CAN communication circuit 2 (Hi)	C27	Serial communication	Except for sleep status*1
Hi-speed CAN communication circuit 2 (Lo)	C35		
Immobilizer antenna (B)	B22	Serial communication	Communication with ignition key in progress (Without keyless access with push button start system)
Immobilizer antenna (A)	B10		
Immobilizer antenna amplifier GND	B30 \leftrightarrow Chassis ground	Less than 1.5 V	Always (Without keyless access with push button start system)
Immobilizer antenna amplifier power supply	B2 \leftrightarrow B30	4.5 — 5.5 V	Communication with ignition key in progress (Without keyless access with push button start system)

Control Module I/O Signal

BODY CONTROL SYSTEM (DIAGNOSTICS)

Description	Terminal No.	Signal (V or Ω)	Note
		Ignition switch ON (Engine OFF)	
Security UART	A21	Serial communication	Always (Without keyless access with push button start system)
Front wiper return	A2 \leftrightarrow Chassis ground	8 V	When front wiper is operated
Door UNLOCK (driver's seat) output	D4 \leftrightarrow Chassis ground	Less than 0.5 V \rightarrow 8 V or more	When driver's side door unlock is output
Keyless entry / TPMS communication circuit	D11	Serial communication	When door lock/unlock is operated with the keyless transmitter, or when TPMS is operated
Rear defogger switch	C18 \leftrightarrow Chassis ground	Less than 1.5 V \rightarrow 8 V or more	When the rear defogger switch is ON
Parking brake switch	C32 \leftrightarrow Chassis ground	8 V or more \rightarrow less than 1.5 V	When parking brake is ON
Shift lock solenoid	B5 \leftrightarrow Chassis ground	Less than 1.5 V \rightarrow 8 V or more	When shift lock is operating (AT models)
Key lock solenoid	B4 \leftrightarrow Chassis ground	Less than 1.5 V \rightarrow 8 V or more	LOCK status is ON (AT model without the keyless access with push button start system)
Rear wiper ON output	A7 \leftrightarrow Chassis ground	Less than 0.5 V \rightarrow 8 V or more	Rear wiper operation in progress
Rear wiper return	A6 \leftrightarrow Chassis ground	Less than 0.5 V \rightarrow 8 V or more	Rear wiper operation in progress
Door LOCK output	D2 \leftrightarrow Chassis ground	Less than 0.5 V \rightarrow 8 V or more	When LOCK signal is output
Door UNLOCK output	D3 \leftrightarrow Chassis ground	Less than 0.5 V \rightarrow 8 V or more	When UNLOCK signal is output
Rear gate/trunk UNLOCK output	D7 \leftrightarrow Chassis ground	Less than 0.5 V \rightarrow 8 V or more	When UNLOCK signal is output
Lighting relay power supply	A3 \leftrightarrow Chassis ground	10 — 13 V	ACC or key-in SW ON
	B19 \leftrightarrow Chassis ground	10 — 13 V	ACC or key-in SW ON
Lighting relay Hi output	A17 \leftrightarrow Chassis ground	8 V or more \rightarrow less than 1.0 V	Dimmer SW at Hi position
Lighting relay Lo output	B35 \leftrightarrow Chassis ground	8 V or more \rightarrow less than 1.0 V	Lighting II SW at ON position
Lighting Lo relay output 2	A27 \leftrightarrow Chassis ground	8 V or more \rightarrow less than 1.0 V	Lighting II SW at ON position
Lighting relay I output	A16 \leftrightarrow Chassis ground	8 V or more \rightarrow less than 1.0 V	Lighting I SW at ON position
Front fog light output	A15 \leftrightarrow Chassis ground	8 V or more \rightarrow less than 1.0 V	Front fog light SW at ON position
DRL cancel output	D10 \leftrightarrow Chassis ground	8 V or more \rightarrow less than 1.0 V	Headlight switch ON or Hi beam ON, passing switch ON
Illumination output	B8	Pulse output	Illumination ON
	C16	Pulse output	Illumination ON
Key ring illumination	A25	Pulse output	Illumination ON (Without keyless access with push button start system)
Room light output	C4	Pulse output	Room light ON (doors interlocked)
Map light output	D8	Pulse output	Map light ON (keyless answer-back, etc.)
Luggage/trunk light output	C3	Pulse output	Luggage/trunk at open state
Rear defogger relay output	A26 \leftrightarrow Chassis ground	8 V or more \rightarrow less than 1.0 V	Rear defogger SW ON
Wiper deicer relay output	D9 \leftrightarrow Chassis ground	8 V or more \rightarrow less than 1.0 V	Wiper deicer SW ON
Turn/hazard output	D18 \leftrightarrow Chassis ground	8 V or more \rightarrow less than 1.0 V	When answer-back is output

Control Module I/O Signal

BODY CONTROL SYSTEM (DIAGNOSTICS)

Description	Terminal No.	Signal (V or Ω)	Note
		Ignition switch ON (Engine OFF)	
Security horn output	A24 \longleftrightarrow Chassis ground	8 V or more \rightarrow less than 1.0 V	When security is operating
Security light	D26	Pulse control	When security light is illuminating
Answer-back buzzer output	A20 \longleftrightarrow Chassis ground	8 V or more \rightarrow less than 1.0 V	When answer-back operates
Immobilizer communication	A31	Serial communication	(Models without the keyless access with push button start system)
Turn signal RH	B9 \longleftrightarrow Chassis ground	8 V or more \rightarrow less than 1.5 V	When turn signal switch RH is ON
Drive mode SW (Eco/X mode)	B14 \longleftrightarrow Chassis ground	8 V or more \rightarrow less than 1.5 V	Mode SW is turned OFF \rightarrow ON
Turn signal LH	B21 \longleftrightarrow Chassis ground	8 V or more \rightarrow less than 1.5 V	When turn signal switch LH is ON
Accessory connector	B29 \longleftrightarrow Chassis ground	8 V or more \rightarrow less than 1.5 V	Rear gate/trunk closed \rightarrow open
Door lock status SW (Driver's)	C12 \longleftrightarrow Chassis ground	8 V or more \rightarrow less than 1.5 V	Driver's door inner remote lock \rightarrow unlock
Door lock status SW (Passenger's)	C23 \longleftrightarrow Chassis ground	8 V or more \rightarrow less than 1.5 V	Passenger's door inner remote lock \rightarrow unlock
SRF OFF SW input	D14 \longleftrightarrow Chassis ground	8 V or more \rightarrow less than 1.5 V	When SRF OFF SW is pressed
LIN communication line	D16	Serial communication	Except for sleep status*1
SRF relay output (R)	D20 \longleftrightarrow Chassis ground	Less than 1.5 V \rightarrow 8 V or more	When SRF RH FOG is operating
SRF relay output (L)	D21 \longleftrightarrow Chassis ground	Less than 1.5 V \rightarrow 8 V or more	When SRF LH FOG is operating

*1: For CAN sleep state, hold on for approx. one minute with ignition OFF and the doors, trunk, and rear gate all closed.

Read Diagnostic Trouble Code (DTC)

BODY CONTROL SYSTEM (DIAGNOSTICS)

6. Read Diagnostic Trouble Code (DTC)

A: OPERATION

- 1) On «Start» display, select «Diagnosis».
- 2) On «Vehicle selection» display, input the target vehicle information and select «Confirmed».
- 3) On «Main Menu» display, select «Each System».
- 4) On «Select System» display, select «Body Control» and then select «Enter».
- 5) On «Select Function» display, select «DTC».

NOTE:

- For detailed operation procedures, refer to “Application help”.
- For details concerning DTC, refer to List of Diagnostic Trouble Code (DTC). <Ref. to BC(diag)-25, List of Diagnostic Trouble Code (DTC).>

7. Clear Memory Mode

A: OPERATION

- 1) On «Start» display, select «Diagnosis».
- 2) On «Vehicle selection» display, input the target vehicle information and select «Confirmed».
- 3) On «Main Menu» display, select «Each System».
- 4) On «Select System» display, select «Body Control» and then select «Enter».
- 5) On «Select Function» display, select «DTC».
- 6) On «DTC» display, select «Clear Memory».

NOTE:

For detailed operation procedures, refer to “Application help”.

Read Current Data

BODY CONTROL SYSTEM (DIAGNOSTICS)

8. Read Current Data

A: OPERATION

- 1) On «Start» display, select «Diagnosis».
- 2) On «Vehicle selection» display, input the target vehicle information and select «Confirmed».
- 3) On «Main Menu» display, select «Each System».
- 4) On «Select System» display, select «Body Control» and then select «Enter».
- 5) On «Select Function» display, select «Data Monitor».

NOTE:

For detailed operation procedures, refer to “Application help”.

9. User Customizing

A: OPERATION

- 1) On «Start» display, select «Diagnosis».
- 2) On «Vehicle selection» display, input the target vehicle information and select «Confirmed».
- 3) On «Main Menu» display, select «Each System».
- 4) On «Select System» display, select «Body Control» and then select «Enter».
- 5) On «Select Function» display, select «Customize».

NOTE:

- If not equipped (depending on destination area or vehicle equipment condition), customizing is not possible.
- For detailed operation procedures, refer to “Application help”.

List of User Customizing item

Data	Initial setting value	Customize setting	Remarks
Off delay time	30 Sec	OFF	Room light off delay time can be selected.
		10 Sec	
		20 Sec	
		30 Sec	
Auto Light Sensitivity Adjustment	Normal	Dull	Slow response
		Normal	Standard
		Sensitive	Quick response
		Very sensitive	Fairly quick response
Power rear gate setting	— (*1)	ON	Fixed at OFF because this is not applicable.
		OFF	
Lane change signal setting	ON	ON	One-touch blinker control is performed.
		OFF	One-touch blinker control is not performed.
Rear wiper auto setting	—	ON	Existence of rear wiper linked with reverse operation can be set.
		OFF	
TPMS Setting	— (*1)	TPMS	Set to “ON” for model with TPMS.
		No TPMS	
Driver’s Door Unlock Setting	Selection	Selection	The door to be unlocked when you touch the driver’s door can be set.
		ALL	
Rear Gate Unlock Setting	Selection	Selection	The door to be unlocked when you touch the rear gate switch can be set.
		ALL	
One-touch Turn Signal System Setup	ON	ON	ON/OFF of the one-touch blinker can be set.
		OFF	
Auto Wiper System (Rear) Setup	OFF	ON	ON/OFF of the rear wiper linked with reverse operation can be set.
		OFF	
Steering Responsive Fog Lamp Setting	OFF	ON	SRF control is performed.
		OFF	SRF control is not performed.
Rear defogger operation mode	Normal	Normal	Automatically stops in 15 minutes after the switch is turned to ON.
		Continuous	Repeats activated for 15 minutes and deactivated for 2 minutes until the switch is turned to OFF.
Security Alarm Setup	ON	ON	Security alarm (hazard, horn or siren) becomes activated.
		OFF	Security alarm becomes deactivated.
Impact Sensor Setup	OFF	ON	Workable when the Impact Sensor Setup is set to “ON”. Impact sensor function becomes activated.
		OFF	Impact sensor function becomes deactivated. (Be sure to set to “OFF” for models without sensors.)

User Customizing

BODY CONTROL SYSTEM (DIAGNOSTICS)

Data	Initial setting value	Customize setting	Remarks
Alarm delay setup	ON		After the keyless lock operation, the alarm monitor starts after the following delay time has passed.
		ON	Delay time is 30 seconds.
		OFF	Delay time is 0 second.
Lockout prevention	ON	ON	key lockout prevention function is activated. (The function does not operate if safety knob is locked by hand.)
		OFF	Key lockout prevention function is deactivated.
Impact sensor (OP)	OFF	ON	Vehicle is controlled in impact sensor equipped mode. (Make sure to set to "OFF" for models without the impact sensor. When "ON", hazard, horn or siren become activated by keyless lock (alarm monitor start).)
		OFF	Vehicle is controlled in impact sensor non-equipped mode.
Buzzer sounding setting	ON	ON	Buzzer operates when lock/unlock is selected by keyless entry system operation.
		OFF	Buzzer does not operate when lock/unlock is selected by keyless entry system operation.
Abnormal warning lamp flashing setting	ON	ON	Hazard blinks when lock/unlock is selected by keyless entry system operation.
		OFF	Hazard is not interlocked when lock/unlock is selected by keyless entry system operation.
Passive Alarm	OFF	ON	
		OFF	
Door open warning	ON	ON	
		OFF	
Dome Light Alarm Setting	OFF	ON	Room light illuminates interlocking with alarm.
		OFF	Room light does not illuminate interlocking with alarm.
Auto A/C ECU Setting	— (*1)	ON	Diagnoses with auto A/C CM.
		OFF	Diagnoses without auto A/C CM.
Wiper Deicer setting	— (*1)	ON	Wiper deicer control is performed.
		OFF	Wiper deicer control is not performed.
Illumination Control On/Off	ON	ON	
		OFF	
Sedan/Wagon Setting	— (*1)	Sedan	Body control is performed for Sedan.
		Wagon	Body control is performed for Wagon.
MT/AT Setting	— (*1)	MT	Body control is performed for MT.
		AT	Body control is performed for AT.
Illumination Sensor Setting	— (*1)	ON	Set to "ON" for model with auto light.
		OFF	
Factory initial setting	Market	Market	Customize setting is reset when mode is switched from Market to Factory.
		Factory	
Welcome Light (Exit)	30 Sec	OFF	Length of the lighting time can be set.
		30 Sec	
		60 Sec	
		90 Sec	
Welcome Light Off Delay Time(Approaching)	30 Sec	OFF	Length of the lighting time can be set.
		30 Sec	
		60 Sec	
		90 Sec	
Keyless Buzzer Volume	5	1 — 7	Buzzer volume can be set.

User Customizing

BODY CONTROL SYSTEM (DIAGNOSTICS)

NOTE:

*1: Customization item according to the actual vehicle equipment

6) When the setting is complete, see «Data monitor» to make sure that the alterations are consistent with the actual equipment on the vehicle.

CAUTION:

- **the above settings must match the actual vehicle equipment.**
- **Do not change settings except for setting above while setting the functions.**
- **Be sure not to change Factory initial setting except when installing a new body integrated unit.**

Registration Body Integrated Unit

BODY CONTROL SYSTEM (DIAGNOSTICS)

10.Registration Body Integrated Unit

A: OPERATION

1. CONFIRM CURRENT SETTING

- 1) On «Start» display, select «Diagnosis».
- 2) On «Vehicle selection» display, input the target vehicle information and select «Confirmed».
- 3) On «Main Menu» display, select «Each System».
- 4) On «Select System» display, select «Body Control» and then select «Enter».
- 5) On «Select Function» display, select «Customize».
- 6) Save the setting.

Required items for new registration. (Except for system not equipped)

Item	Item to confirm				Remarks
	1	2	3	4	
number of regist.					Number of registered ID
Off delay time	OFF	10 Sec	20 Sec	30 Sec	Setting for lighting off time
Auto Light Sensitivity Adjustment	Dull	Normal (Standard)	Sensitive	Very sensitive	1st (slow) — 4th (fairly quick)

Impact Sensor Setup	ON		OFF		Option setting
Alarm delay setup	ON		OFF		—
Lockout prevention	ON		OFF		—
Impact sensor	ON		OFF		Option setting
Buzzer sounding setting	ON		OFF		—
Abnormal warning lamp flashing setting	ON		OFF		—
Passive Alarm	ON		OFF		—
Door open warning	ON		OFF		—
Dome Light Alarm Setting	ON		OFF		—
Auto A/C ECU Setting	ON		OFF		—
Wiper Deicer setting	ON		OFF		Option setting
Illumination Control On/Off	ON		OFF		—
Sedan/Wagon Setting	WAGON		SEDAN		—
MT/AT Setting	MT		AT		—
Illumination Sensor Setting	ON		OFF		—
Factory initial setting	Factory		Market		Do not change to factory mode.
Welcome Light (Exit)	OFF	30 Sec	60 Sec	90 Sec	—
Welcome Light Off Delay Time(Approaching)	OFF	30 Sec	60 Sec	90 Sec	—
Keyless Buzzer Volume	1 2 3 4 5 6 7				—

2. REGISTRATION BODY INTEGRATED UNIT (FUNCTION SETTING)

CAUTION:

For the body integrated unit, function selection is available to control the entire vehicle systems. It is possible to control the original functions of vehicle when registrations of body integrated unit and function setting are corresponded to vehicle equipment.

If registrations and function setting are different from vehicle equipment, vehicle system does not operate normally and diagnosis cannot be performed correctly. Pay attention to following item.

- Be sure to correspond registrations, or User Customizing settings to vehicle equipment.
- Do not change the settings of vehicle improperly.
- Make sure that the key illumination does not blink with ignition switch ON, or that the body integrated unit registration item “Factory initial setting” is set to “Market”. If “Factory initial setting” is set to “Factory”, key illumination blinks when the ignition switch is turned ON, to notify that the settings are not confirmed. (Except for model with the keyless access with push button start system)
- Key illumination does not blink with ignition switch turned to ON and go off with door closed. (Except for model with the keyless access with push button start system)
- Be sure to register immobilizer if body integrated unit is replaced with a new part. (Except for model with the keyless access with push button start system)
- Make a registration of immobilizer when the parts related to immobilizer have been replaced. Refer to the “REGISTRATION MANUAL FOR IMMOBILIZER” provided as a separate volume. (Except for model with the keyless access with push button start system)

1) On «Start» display, select «Diagnosis».

2) On «Vehicle selection» display, input the target vehicle information and select «Confirmed».

3) On «Main Menu» display, select «Each System».

4) On «Select System» display, select «Body Control» and then select «Enter».

5) On «Select Function» display, select «Customize».

NOTE:

For the vehicle requiring the destination setting, if the destination setting is not finished, display can not be shifted into customizing screen. <Ref. to BC(diag)-22, DESTINATION SETTING, OPERATION, Registration Body Integrated Unit.>

6) Change the setting to the contents saved at confirmation of current setting.

CAUTION:

- To perform normal operation of vehicle and diagnosis, the above settings must match the actual vehicle equipment.
- When the body integrated unit is new or in Factory mode, the key illumination blinks, and user customizing is incomplete. Check the user customizing settings. (For models with keyless access with push button start system, the room light illuminates.)
- Be sure not to change Factory initial setting except when installing a new body integrated unit.

NOTE:

“Factory” mode:

- Body integrated unit has not been set yet. It can be recognized by key illumination blinking with ignition switch turned to ON. For model with keyless access with push button start system, it can be recognized by room light blinking with ignition switch turned to ON.
- All replacement body integrated units are set to “Factory” mode. When replacing a body integrated unit, be sure to perform the registration operation.

“Market” mode:

- Each settings have been set. It can be recognized by key ring illumination coming on in concocting with room light and going off with ignition switch turned to ON. For model with keyless access with push button start system, it can be recognized by room light not blinking with ignition switch turned to ON.

7) Perform the Factory initial setting. On the «Customize» display screen of Subaru Select Monitor, select the «Factory initial setting».

8) Change the mode from Factory to Market.

9) Turn the ignition switch to OFF to settle the setting.

10) Perform the User Customizing. <Ref. to BC(diag)-17, OPERATION, User Customizing.>

Registration Body Integrated Unit

BODY CONTROL SYSTEM (DIAGNOSTICS)

11) Change the system selection to «Immobilizer» on Subaru Select Monitor, and perform registration of immobilizer. (Except for model with the keyless access with push button start system)

12) Follow the procedure of the “REGISTRATION MANUAL FOR IMMOBILIZER” provided as a separate volume. (Except for model with the keyless access with push button start system)

13) For vehicles with remote engine starter, refer to “REGISTRATION MANUAL FOR IMMOBILIZER” provided as a separate volume and perform registration of the remote engine starter. (Except for model with the keyless access with push button start system)

NOTE:

For detailed operation procedures, refer to “Application help”.

3. DESTINATION SETTING

NOTE:

For the vehicle requiring the destination setting, if the destination setting is not finished, display can not be shifted into customizing screen.

Step	Check	Yes	No
<p>1 CONFIRM CURRENT SETTING. Always perform confirmation of current setting before replacing the module. Record the contents of the “Destination Setting”.</p> <p>NOTE: Refer to the “Read Current Data” and “CONFIRMATION OF CURRENT SETTING” to confirm the current setting. <Ref. to BC(diag)-20, CONFIRM CURRENT SETTING, OPERATION, Registration Body Integrated Unit.> <Ref. to BC(diag)-12, OPERATION, Read Current Data.></p>	Is the current setting recorded?	Go to step 2.	Confirm the current setting. Go to step 1.
<p>2 CONFIRM DESTINATION SETTING. 1) Connect the Subaru Select Monitor, and run the application. 2) On «Start» display, select «Diagnosis». 3) On «Vehicle selection» display, input the target vehicle information and select «Confirmed». 4) On «Main Menu» display, select «Each System». 5) On «Select System» display, select «Body Control» and then select «Enter». 6) On «Select Function» display, select «Customize». 7) The vehicle destination screen is displayed.</p>	Is the vehicle destination setting screen displayed?	Go to step 3.	Go to step 4.
<p>3 CONFIRM DESTINATION SETTING. Confirm the screen displayed on Subaru Select Monitor and the actual vehicle destination.</p>	Is it necessary to change the destination setting?	Select [Yes], Go to step 4.	Select [No], Go to step 5.
<p>4 ENTER DESTINATION CODE. Enter the appropriate code in the screen. JPN: JP00 KA, KC: KA00 KS: KS00 U4, U5, U6, C6 and C0, C5 (with the keyless access with push button start system): U400 C0, C5 (without the keyless access with push button start system): C000 EK, ER: EK00 Except above: EC00</p>	Is the appropriate code entered?	Select [OK]. Go to step 5.	Enter the destination code. Go to step 5.

Registration Body Integrated Unit

BODY CONTROL SYSTEM (DIAGNOSTICS)

Step	Check	Yes	No
5 REGISTER VEHICLE EQUIPMENT. Customizing screen is displayed. NOTE: Match the each item setting of body integrated unit registration item list with the vehicle equipment.	Do all setting contents match with the vehicle equipment specification?	Go to step 6.	Change the items until each content setting match with the vehicle equipment specification. Go to step 6.
6 CONFIRM MARKET MODE. 1) Customizing screen, select the {Factory initial setting} to change the setting from "Factory" mode to "Market" mode. 2) Turn the ignition switch to OFF. NOTE: When the setting is changed from "Factory" mode to "Market" mode, turning the ignition switch from ON → OFF confirms the setting. 3) Turn the ignition switch to ON, and check the contents of settings.	Is the mode changed to "Market" mode?	Go to step 7.	Perform the destination setting from the first step. Go to step 1.
7 CONFIRM MARKET MODE. Check the following. Make sure that the "Destination Setting" in the current data display is the same as the one you confirmed in step 1.	Is the display the same as indicated?	Registration of body integrated unit is finished.	It is possible that harness malfunction may occur. Perform the diagnosis.

Function Check

BODY CONTROL SYSTEM (DIAGNOSTICS)

11. Function Check

A: OPERATION

NOTE:

In order to check the body integrated unit function, inspect the body integrated unit and actuator using Subaru Select Monitor without operating switches.

- 1) On «Start» display, select «Diagnosis».
- 2) On «Vehicle selection» display, input the target vehicle information and select «Confirmed».
- 3) On «Main Menu» display, select «Each System».
- 4) On «Select System» display, select «Body Control» and then select «Enter».
- 5) On «Select Function» display, select «Active Test».

NOTE:

- If not equipped (depending on destination area or vehicle equipment condition), process will not go on.
- The operation is disabled for the models with keyless access with push button start system because the key lock solenoid is not installed.
- For detailed operation procedures, refer to “Application help”.

List of Diagnostic Trouble Code (DTC)

BODY CONTROL SYSTEM (DIAGNOSTICS)

12.List of Diagnostic Trouble Code (DTC)

A: LIST

DTC	Item	Content of diagnosis	Note
B1010	BODY CONTROL SYSTEM (BIU) MALFUNCTION	Body integrated unit internal error	<Ref. to BC(diag)-26, DTC B1010 BODY CONTROL SYSTEM (BIU) MALFUNCTION, Diagnostic Procedure with Diagnostic Trouble Code (DTC).>
B1011	BATTERY CONTROL POWER SUPPLY	Voltage malfunction caused by poor contact of battery power supply control circuits	<Ref. to BC(diag)-27, DTC B1011 BATTERY CONTROL POWER SUPPLY, Diagnostic Procedure with Diagnostic Trouble Code (DTC).>
B1012	BATTERY BACKUP POWER SUPPLY	Voltage malfunction caused by poor contact of battery power supply backup circuits	<Ref. to BC(diag)-29, DTC B1012 BATTERY BACKUP POWER SUPPLY, Diagnostic Procedure with Diagnostic Trouble Code (DTC).>
B1013	IGNITION POWER	Voltage malfunction caused by poor contact of IGN power supply circuits	<Ref. to BC(diag)-31, DTC B1013 IGNITION POWER, Diagnostic Procedure with Diagnostic Trouble Code (DTC).>
B1014	ACC POWER	Voltage malfunction caused by poor contact of ACC power supply circuits	<Ref. to BC(diag)-33, DTC B1014 ACC POWER, Diagnostic Procedure with Diagnostic Trouble Code (DTC).>
B1015	KEY INTERLOCK CIRCUIT	GND-output short of key interlock circuit	<Ref. to BC(diag)-35, DTC B1015 KEY INTERLOCK CIRCUIT, Diagnostic Procedure with Diagnostic Trouble Code (DTC).>
B1016	SHIFT LOCK CIRCUIT	Voltage malfunction caused by poor contact of shift lock circuits	<Ref. to BC(diag)-38, DTC B1016 SHIFT LOCK CIRCUIT, Diagnostic Procedure with Diagnostic Trouble Code (DTC).>
B1401	METER COLLATION	Malfunction related immobilizer	<Ref. to BC(diag)-40, DTC B1401 METER COLLATION, Diagnostic Procedure with Diagnostic Trouble Code (DTC).>
B1402	IMMOBILIZER KEY COLLATION	Malfunction related immobilizer	<Ref. to BC(diag)-40, DTC B1402 IMMOBILIZER KEY COLLATION, Diagnostic Procedure with Diagnostic Trouble Code (DTC).>
B1405	SCU COLLATION	Malfunction related immobilizer	<Ref. to BC(diag)-40, DTC B1405 SCU COLLATION, Diagnostic Procedure with Diagnostic Trouble Code (DTC).>
B1406	SCU_EEPROM	Malfunction of security control module	<Ref. to BC(diag)-40, DTC B1406 SCU_EEPROM, Diagnostic Procedure with Diagnostic Trouble Code (DTC).>
B1407	MET COMMUNICATION	Communication failure between body integrated unit and combination meter	<Ref. to BC(diag)-40, DTC B1407 MET COMMUNICATION, Diagnostic Procedure with Diagnostic Trouble Code (DTC).>
B1408	METER NON-VOLATILE MEMORY	Combination meter malfunction	<Ref. to BC(diag)-40, DTC B1408 METER NON-VOLATILE MEMORY, Diagnostic Procedure with Diagnostic Trouble Code (DTC).>
B1409	SCU COMMUNICATION	Communication failure between body integrated unit and security control module	<Ref. to BC(diag)-40, DTC B1409 SCU COMMUNICATION, Diagnostic Procedure with Diagnostic Trouble Code (DTC).>
B1410	TRANSPONDER COMMUNICATION	Communication failure between key and body integrated unit	<Ref. to BC(diag)-40, DTC B1410 TRANSPONDER COMMUNICATION, Diagnostic Procedure with Diagnostic Trouble Code (DTC).>
B1411	IMMOBILIZER ANTENNA	Faulty antenna	<Ref. to BC(diag)-40, DTC B1411 IMMOBILIZER ANTENNA, Diagnostic Procedure with Diagnostic Trouble Code (DTC).>
U1500	KEYLESS UART COM. MALFUNCTION	Open or short circuit in keyless UART circuit	<Ref. to BC(diag)-41, DTC U1500 KEYLESS UART COM. MALFUNCTION, Diagnostic Procedure with Diagnostic Trouble Code (DTC).>

Diagnostic Procedure with Diagnostic Trouble Code (DTC)

BODY CONTROL SYSTEM (DIAGNOSTICS)

13. Diagnostic Procedure with Diagnostic Trouble Code (DTC)

A: DTC B1010 BODY CONTROL SYSTEM (BIU) MALFUNCTION

DTC DETECTING CONDITION:

System error in body integrated unit

TROUBLE SYMPTOM:

LAN communication immobilizer function may not be executed normally.

	Step	Check	Yes	No
1	CHECK DTC. Check DTC indicated by body integrated unit. <Ref. to BC(diag)-10, Read Diagnostic Trouble Code (DTC).>	Is B1010 current malfunction?	Go to step 2.	Temporary EEPROM access error occurred.
2	CHECK CONNECTOR. 1) Turn the ignition switch to OFF. 2) Disconnect the body integrated unit connector. 3) Connect the disconnected connectors. 4) Read the DTC of body integrated unit using Subaru Select Monitor. <Ref. to BC(diag)-10, Read Diagnostic Trouble Code (DTC).>	Is B1010 current malfunction?	Replace the body integrated unit. <Ref. to SL-72, Body Integrated Unit.>	Temporary EEPROM access error occurred.

Diagnostic Procedure with Diagnostic Trouble Code (DTC)

BODY CONTROL SYSTEM (DIAGNOSTICS)

B: DTC B1011 BATTERY CONTROL POWER SUPPLY

DTC detecting condition:

- Voltage failure caused by poor contact of battery power supply control circuit
- Battery voltage of body integrated unit is not within the range of 8.5 — 16.5 V.

Trouble symptom:

Functions of body integrated unit stop.

NOTE:

When DTC B1012 BATTERY BACKUP POWER SUPPLY is output at the same time, all the function of body integrated unit may not operate.

Wiring diagram:

Immobilizer system <Ref. to WI-147, WIRING DIAGRAM, Immobilizer System.>

LAN01645

Step	Check	Yes	No
1 CHECK DTC. Read the DTC of body integrated unit using Subaru Select Monitor. <Ref. to BC(diag)-10, Read Diagnostic Trouble Code (DTC).>	Is B1011 current malfunction?	Go to step 2.	Go to step 5.
2 CHECK DTC. 1) Turn the ignition switch to OFF. 2) Disconnect and then connect the body integrated unit connector. 3) Wait approx. 2 minutes. 4) Turn the ignition switch to ON. 5) Read the DTC of body integrated unit using Subaru Select Monitor. <Ref. to BC(diag)-10, Read Diagnostic Trouble Code (DTC).>	Is B1011 current malfunction?	Go to step 3.	Go to step 5.
3 CHECK FUSE. 1) Turn the ignition switch to OFF. 2) Check the fuse.	Is the fuse OK?	Go to step 4.	Replace the defective fuse.

Diagnostic Procedure with Diagnostic Trouble Code (DTC)

BODY CONTROL SYSTEM (DIAGNOSTICS)

Step	Check	Yes	No
4 CHECK HARNESS. 1) Disconnect the body integrated unit connector. 2) Using the tester, measure the voltage between terminals. Connector & terminal (i84) No. 6 (+) — Chassis ground (-):	Is the voltage 8.5 — 16.5 V?	Replace the body integrated unit. <Ref. to SL-72, Body Integrated Unit.>	Repair the harness between body integrated unit and fuse.
5 CHECK CONNECTOR. 1) Turn the ignition switch to OFF. 2) Disconnect the body integrated unit connector.	Is there poor contact of connector?	Repair or replace the poor contact of connector.	Even if DTC is displayed, the circuit has returned to a normal condition at this time. Reproduce the failure, and then perform the diagnosis again. NOTE: In this case, temporary poor contact of connector, temporary open or short circuit of harness may be the cause.

Diagnostic Procedure with Diagnostic Trouble Code (DTC)

BODY CONTROL SYSTEM (DIAGNOSTICS)

C: DTC B1012 BATTERY BACKUP POWER SUPPLY

DTC detecting condition:

Voltage failure caused by poor contact of battery power supply backup circuits

Trouble symptom:

Illuminations for the keyless entry, map light, luggage light, trunk light, room light, and ignition switch do not turn on.

NOTE:

When B1011 BATTERY CONTROL POWER SUPPLY is output at the same time, all the function of body integrated unit may not operate.

Wiring diagram:

Immobilizer system <Ref. to WI-147, WIRING DIAGRAM, Immobilizer System.>

LAN01645

Step	Check	Yes	No
1 CHECK DTC. Read the DTC of body integrated unit using Subaru Select Monitor. <Ref. to BC(diag)-10, Read Diagnostic Trouble Code (DTC).>	Is B1012 current malfunction?	Go to step 2.	Go to step 5.
2 CHECK DTC. 1) Turn the ignition switch to OFF. 2) Disconnect and then connect the body integrated unit connector. 3) Wait approx. 2 minutes. 4) Turn the ignition switch to ON. 5) Read the DTC of body integrated unit using Subaru Select Monitor. <Ref. to BC(diag)-10, Read Diagnostic Trouble Code (DTC).>	Is B1012 current malfunction?	Go to step 3.	Go to step 5.
3 CHECK FUSE. 1) Turn the ignition switch to OFF. 2) Check the fuse.	Is the fuse OK?	Go to step 4.	Replace the defective fuse.

Diagnostic Procedure with Diagnostic Trouble Code (DTC)

BODY CONTROL SYSTEM (DIAGNOSTICS)

Step	Check	Yes	No
<p>4</p> <p>CHECK HARNESS.</p> <p>1) Disconnect the body integrated unit connector.</p> <p>2) Using the tester, measure the voltage between terminals.</p> <p>Connector & terminal (B281) No. 7 (+) — Chassis ground (-):</p>	<p>Is the voltage 8.5 — 16.5 V?</p>	<p>Replace the body integrated unit. <Ref. to SL-72, Body Integrated Unit.></p>	<p>Repair the harness between body integrated unit and fuse.</p>
<p>5</p> <p>CHECK CONNECTOR.</p> <p>1) Turn the ignition switch to OFF.</p> <p>2) Disconnect the body integrated unit connector.</p>	<p>Is there poor contact of connector?</p>	<p>Repair or replace the poor contact of connector.</p>	<p>Even if DTC is displayed, the circuit has returned to a normal condition at this time. Reproduce the failure, and then perform the diagnosis again.</p> <p>NOTE: In this case, temporary poor contact of connector, temporary open or short circuit of harness may be the cause.</p>

Diagnostic Procedure with Diagnostic Trouble Code (DTC)

BODY CONTROL SYSTEM (DIAGNOSTICS)

D: DTC B1013 IGNITION POWER

DTC detecting condition:

Voltage failure caused by poor contact of IGN power supply circuits

Trouble symptom:

Symptoms such as shift lock or wiper not operating may occur.

Wiring diagram:

Shift lock control system <Ref. to WI-213, WIRING DIAGRAM, Shift Lock Control System.>

Step	Check	Yes	No	
1	CHECK DTC. Read the DTC of body integrated unit using Subaru Select Monitor. <Ref. to BC(diag)-10, Read Diagnostic Trouble Code (DTC).>	Is B1013 current malfunction?	Go to step 2.	Go to step 5.
2	CHECK DTC. 1) Turn the ignition switch to OFF. 2) Disconnect and then connect the body integrated unit connector. 3) Wait approx. 2 minutes. 4) Turn the ignition switch to ON. 5) Read the DTC of body integrated unit using Subaru Select Monitor. <Ref. to BC(diag)-10, Read Diagnostic Trouble Code (DTC).>	Is B1013 current malfunction?	Go to step 3.	Go to step 5.
3	CHECK FUSE. 1) Turn the ignition switch to OFF. 2) Check the fuse.	Is the fuse OK?	Go to step 4.	Replace the defective fuse.
4	CHECK HARNESS. 1) Disconnect the body integrated unit connector. 2) Using the tester, measure the voltage between terminals. Connector & terminal (B281) No. 3 (+) — Chassis ground (-):	Is the voltage 8.5 — 16.5 V?	Replace the body integrated unit. <Ref. to SL-72, Body Integrated Unit.>	Repair the harness between body integrated unit and fuse.

Diagnostic Procedure with Diagnostic Trouble Code (DTC)

BODY CONTROL SYSTEM (DIAGNOSTICS)

	Step	Check	Yes	No
5	CHECK CONNECTOR. 1) Turn the ignition switch to OFF. 2) Disconnect the body integrated unit connector.	Is there poor contact of connector?	Repair or replace the poor contact of connector.	Even if DTC is displayed, the circuit has returned to a normal condition at this time. Reproduce the failure, and then perform the diagnosis again. NOTE: In this case, temporary poor contact of connector, temporary open or short circuit of harness may be the cause.

Diagnostic Procedure with Diagnostic Trouble Code (DTC)

BODY CONTROL SYSTEM (DIAGNOSTICS)

E: DTC B1014 ACC POWER

DTC detecting condition:

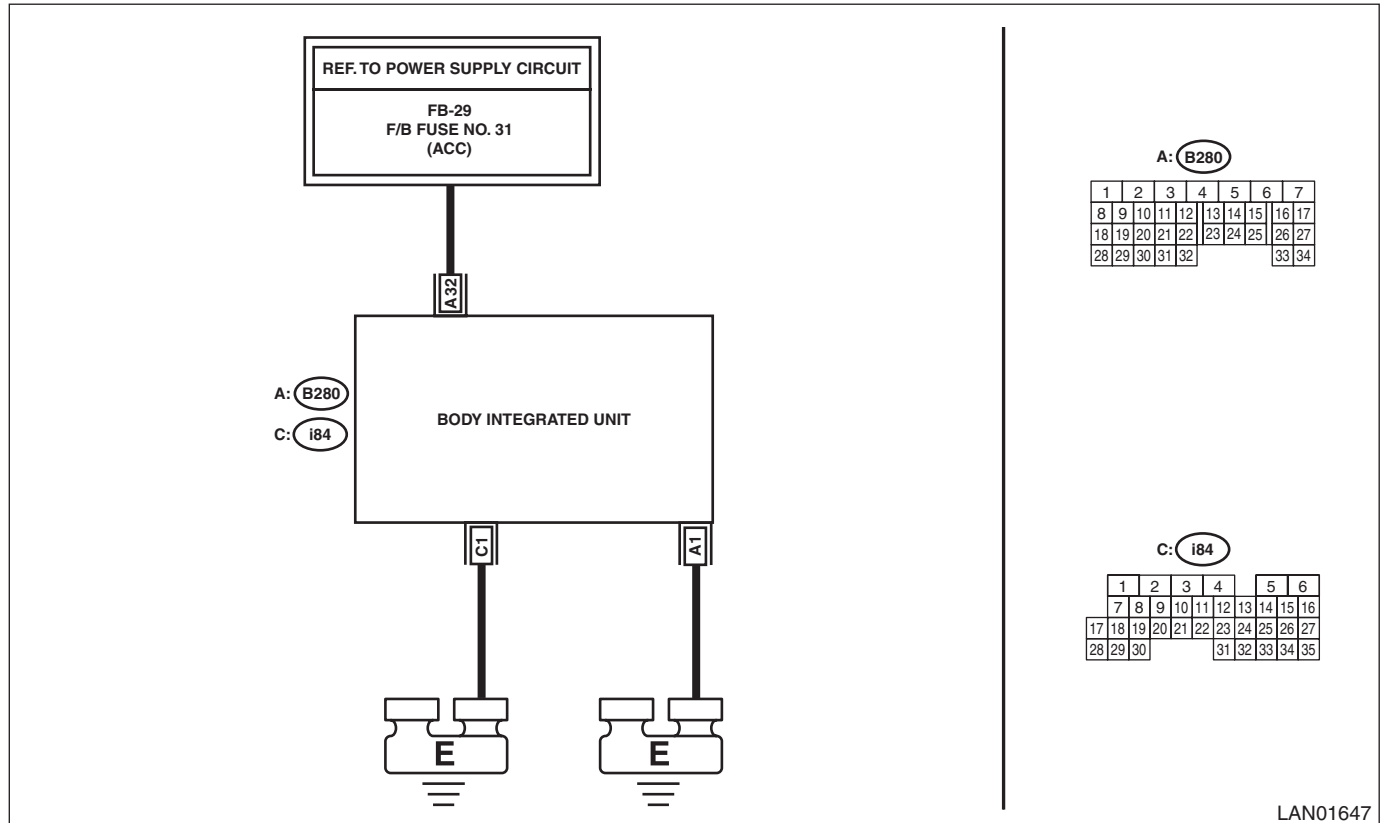

Voltage failure caused by poor contact of ACC power supply circuit

Trouble symptom:

DRL may not illuminate.

Wiring diagram:

Shift lock control system <Ref. to WI-213, WIRING DIAGRAM, Shift Lock Control System.>

Step	Check	Yes	No
1	CHECK DTC. Read the DTC of body integrated unit using Subaru Select Monitor. <Ref. to BC(diag)-10, Read Diagnostic Trouble Code (DTC).>	Go to step 2.	Go to step 5.
2	CHECK DTC. 1) Turn the ignition switch to OFF. 2) Disconnect and then connect the body integrated unit connector. 3) Wait approx. 2 minutes. 4) Turn the ignition switch to ON. 5) Read the DTC of body integrated unit using Subaru Select Monitor. <Ref. to BC(diag)-10, Read Diagnostic Trouble Code (DTC).>	Go to step 3.	Go to step 5.
3	CHECK FUSE. 1) Turn the ignition switch to OFF. 2) Check the fuse.	Go to step 4.	Replace the defective fuse.
4	CHECK HARNESS. 1) Disconnect the body integrated unit connector. 2) Using the tester, measure the voltage between terminals. Connector & terminal (B280) No. 32 (+) — Chassis ground (-):	Replace the body integrated unit. <Ref. to SL-72, Body Integrated Unit.>	Repair the harness between body integrated unit and fuse.

Diagnostic Procedure with Diagnostic Trouble Code (DTC)

BODY CONTROL SYSTEM (DIAGNOSTICS)

Step	Check	Yes	No
5 CHECK CONNECTOR. 1) Turn the ignition switch to OFF. 2) Disconnect the body integrated unit connector.	Is there poor contact of connector?	Repair or replace the poor contact of connector.	Even if DTC is displayed, the circuit has returned to a normal condition at this time. Reproduce the failure, and then perform the diagnosis again. NOTE: In this case, temporary poor contact of connector, temporary open or short circuit of harness may be the cause.

Diagnostic Procedure with Diagnostic Trouble Code (DTC)

BODY CONTROL SYSTEM (DIAGNOSTICS)

F: DTC B1015 KEY INTERLOCK CIRCUIT

DTC detecting condition:

Ground short of key interlock circuit

Trouble symptom:

Key interlock does not keep lock condition.

Wiring diagram:

Shift lock control system <Ref. to WI-213, WIRING DIAGRAM, Shift Lock Control System.>

Step	Check	Yes	No
1 CHECK DTC. 1) Insert the ignition key. 2) Turn the ignition switch to ON. 3) Shift to the Neutral range. 4) Shift into P range. 5) Shift to the Neutral range. 6) Shift into P range. 7) Shift to the Neutral range. 8) Read the DTC of body integrated unit using Subaru Select Monitor. <Ref. to BC(diag)-10, Read Diagnostic Trouble Code (DTC).>	Is B1015 current malfunction?	Go to step 2.	Go to step 8.

Diagnostic Procedure with Diagnostic Trouble Code (DTC)

BODY CONTROL SYSTEM (DIAGNOSTICS)

Step	Check	Yes	No
2 CHECK DTC. 1) Shift the select lever to P range. 2) Remove the ignition key. 3) Disconnect the key actuator connector (B557) and body integrated unit connector (B281). 4) Connect the disconnected connectors. 5) Insert the ignition key. 6) Turn the ignition switch to ON and shift into Neutral. 7) Read the DTC of body integrated unit using Subaru Select Monitor. <Ref. to BC(diag)-10, Read Diagnostic Trouble Code (DTC).>	Is B1015 current malfunction?	Go to step 3.	Go to step 8.
3 CHECK KEY ACTUATOR. 1) Turn the ignition switch to OFF. 2) Disconnect the key actuator connector (B557). 3) Measure the resistance between key actuator connectors. Terminals No. 1 — No. 2:	Is the resistance 103 — 115 Ω ?	Go to step 4.	Replace the key actuator. <Ref. to SL-62, Key Lock Cylinders.>
4 CHECK KEY ACTUATOR. Connect the battery terminals to the key actuator. Terminals No. 2 — Positive terminal: No. 1 — Ground terminal:	Is the actuator activated and then key locked?	Go to step 5.	Replace the key actuator. <Ref. to SL-62, Key Lock Cylinders.>
5 CHECK HARNESS. 1) Disconnect the body integrated unit connector (B281). 2) Measure the resistance between body integrated unit and key actuator using tester. Connector & terminal (B557) No. 1 — (B281) No. 4:	Is the resistance less than 10 Ω ?	Go to step 6.	Repair or replace the open circuit of harness.
6 CHECK HARNESS. Measure the resistance between body integrated unit and chassis ground using tester. Connector & terminal (B281) No. 4 — Chassis ground:	Is the resistance 1 M Ω or more?	Go to step 7.	Repair or replace the short circuit of the harness.
7 CHECK HARNESS. 1) Connect the body integrated unit. 2) Turn the ignition switch to ON. 3) Measure the voltage between body integrated unit and chassis ground using tester. Connector & terminal (B281) No. 4 (+) — Chassis ground (-):	Is the voltage 6 V or more?	Go to step 8.	Replace the body integrated unit. <Ref. to SL-72, Body Integrated Unit.>

Diagnostic Procedure with Diagnostic Trouble Code (DTC)

BODY CONTROL SYSTEM (DIAGNOSTICS)

	Step	Check	Yes	No
8	CHECK CONNECTOR. 1) Turn the ignition switch to OFF. 2) Disconnect the body integrated unit connector (B281) and key actuator connector (B557).	Is there poor contact at disconnected connector terminal?	Repair the terminal where poor contact exists, or replace harness.	Even if DTC is displayed, the circuit has returned to a normal condition at this time. Reproduce the failure, and then perform the diagnosis again. NOTE: In this case, temporary poor contact of connector, temporary open or short circuit of harness may be the cause.

Diagnostic Procedure with Diagnostic Trouble Code (DTC)

BODY CONTROL SYSTEM (DIAGNOSTICS)

G: DTC B1016 SHIFT LOCK CIRCUIT

DTC detecting condition:

Open or power supply-output short, GND-output short in shift lock circuit.

Trouble symptom:

Shift lock does not be released or remain locked.

Wiring diagram:

Shift lock control system <Ref. to WI-213, WIRING DIAGRAM, Shift Lock Control System.>

LAN00728

Step	Check	Yes	No
1 CHECK DTC. 1) Turn the ignition switch to ON. 2) Keep the Parking range for approx. 5 seconds. 3) Read the DTC of body integrated unit using Subaru Select Monitor. <Ref. to BC(diag)-10, Read Diagnostic Trouble Code (DTC).>	Is B1016 current malfunction?	Go to step 6.	Go to step 2.
2 CHECK DTC. 1) Turn the ignition switch to OFF. 2) Disconnect the shift lock solenoid connector. 3) Connect the disconnected connectors. 4) Turn the ignition switch to ON, then keep the Parking range for approx. 5 seconds. 5) Read the DTC of body integrated unit using Subaru Select Monitor. <Ref. to BC(diag)-10, Read Diagnostic Trouble Code (DTC).>	Is B1016 current malfunction?	Go to step 3.	Go to step 7.
3 CHECK HARNESS (OPEN CIRCUIT). 1) Turn the ignition switch to OFF. 2) Disconnect the shift lock solenoid connector. 3) Using the tester, measure the resistance between terminals. Connector & terminal (B116) No. 4 — Chassis ground:	Is the resistance less than 10 Ω?	Go to step 4.	Repair or replace the open circuit of harness.

Diagnostic Procedure with Diagnostic Trouble Code (DTC)

BODY CONTROL SYSTEM (DIAGNOSTICS)

Step	Check	Yes	No
4 CHECK SHIFT LOCK SOLENOID. Using a tester, measure the resistance between shift lock solenoid terminals. Terminals No. 4 — No. 3:	Is the resistance between 27 — 31 Ω ?	Go to step 5.	Replace the shift lock solenoid. <Ref. to CS-60, REMOVAL, AT Shift Lock Solenoid and "P" Range Switch.>
5 CHECK SHIFT LOCK SOLENOID. Connect the battery terminal to shift lock solenoid. Terminals No. 3 — Positive terminal: No. 4 — Ground terminal:	Does the shift lock solenoid operate and then release the lock?	Go to step 6.	Replace the shift lock solenoid. <Ref. to CS-60, REMOVAL, AT Shift Lock Solenoid and "P" Range Switch.>
6 CHECK HARNESS (OPEN CIRCUIT). Use a tester to measure the resistance between harness terminals. Connector & terminal (B116) No. 3 — (B281) No. 5: NOTE: If body integrated unit and shift lock connector are not disconnected, disconnect them first and then perform measurement.	Is the resistance less than 10 Ω ?	Replace the body integrated unit. <Ref. to SL-72, Body Integrated Unit.>	Repair or replace the open circuit of harness.
7 CHECK DTC. 1) Depress the brake pedal at the parking range. 2) Read the DTC of body integrated unit using Subaru Select Monitor. <Ref. to BC(diag)-10, Read Diagnostic Trouble Code (DTC).>	Is B1016 current malfunction?	Go to step 8.	Go to step 9.
8 CHECK DTC. 1) Turn the ignition switch to OFF. 2) Disconnect the body integrated unit connector and shift lock connector. 3) Connect the disconnected connectors. 4) Turn the ignition switch to ON. 5) Depress the brake pedal at the parking range. 6) Read the DTC of body integrated unit using Subaru Select Monitor. <Ref. to BC(diag)-10, Read Diagnostic Trouble Code (DTC).>	Is B1016 current malfunction?	Go to step 4.	Go to step 9.
9 CHECK CONNECTOR. 1) Turn the ignition switch to OFF. 2) Disconnect the body integrated unit connector and shift lock connector.	Is there poor contact of connector terminal?	Repair or replace the poor contact of terminal.	Even if DTC is displayed, the circuit has returned to a normal condition at this time. Reproduce the failure, and then perform the diagnosis again. NOTE: In this case, temporary poor contact of connector, temporary open or short circuit of harness may be the cause.

Diagnostic Procedure with Diagnostic Trouble Code (DTC)

BODY CONTROL SYSTEM (DIAGNOSTICS)

H: DTC B1401 METER COLLATION

For detailed diagnosis procedure, refer to IMMOBILIZER (DIAG). <Ref. to IM(diag)-25, DTC B1401 METER COLLATION, Diagnostic Procedure with Diagnostic Trouble Code (DTC).>

I: DTC B1402 IMMOBILIZER KEY COLLATION

For detailed diagnosis procedure, refer to IMMOBILIZER (DIAG). <Ref. to IM(diag)-25, DTC B1402 IMMOBILIZER KEY COLLATION, Diagnostic Procedure with Diagnostic Trouble Code (DTC).>

J: DTC B1405 SCU COLLATION

For detailed diagnosis procedure, refer to IMMOBILIZER (DIAG). <Ref. to IM(diag)-26, DTC B1405 SCU COLLATION, Diagnostic Procedure with Diagnostic Trouble Code (DTC).>

K: DTC B1406 SCU_EEPROM

For detailed diagnosis procedure, refer to IMMOBILIZER (DIAG). <Ref. to IM(diag)-26, DTC B1406 SCU_EEPROM, Diagnostic Procedure with Diagnostic Trouble Code (DTC).>

L: DTC B1407 MET COMMUNICATION

For detailed diagnosis procedure, refer to IMMOBILIZER (DIAG). <Ref. to IM(diag)-27, DTC B1407 MET COMMUNICATION, Diagnostic Procedure with Diagnostic Trouble Code (DTC).>

M: DTC B1408 METER NON-VOLATILE MEMORY

For detailed diagnosis procedure, refer to IMMOBILIZER (DIAG). <Ref. to IM(diag)-27, DTC B1408 METER NON-VOLATILE MEMORY, Diagnostic Procedure with Diagnostic Trouble Code (DTC).>

N: DTC B1409 SCU COMMUNICATION

For detailed diagnosis procedure, refer to IMMOBILIZER (DIAG). <Ref. to IM(diag)-28, DTC B1409 SCU COMMUNICATION, Diagnostic Procedure with Diagnostic Trouble Code (DTC).>

O: DTC B1410 TRANSPONDER COMMUNICATION

For detailed diagnosis procedure, refer to IMMOBILIZER (DIAG). <Ref. to IM(diag)-30, DTC B1410 TRANSPONDER COMMUNICATION, Diagnostic Procedure with Diagnostic Trouble Code (DTC).>

P: DTC B1411 IMMOBILIZER ANTENNA

For detailed diagnosis procedure, refer to IMMOBILIZER (DIAG). <Ref. to IM(diag)-30, DTC B1411 IMMOBILIZER ANTENNA, Diagnostic Procedure with Diagnostic Trouble Code (DTC).>

Diagnostic Procedure with Diagnostic Trouble Code (DTC)

BODY CONTROL SYSTEM (DIAGNOSTICS)

Q: DTC U1500 KEYLESS UART COM. MALFUNCTION

1. MODEL WITHOUT KEYLESS ACCESS WITH PUSH BUTTON START SYSTEM

DTC detecting condition:

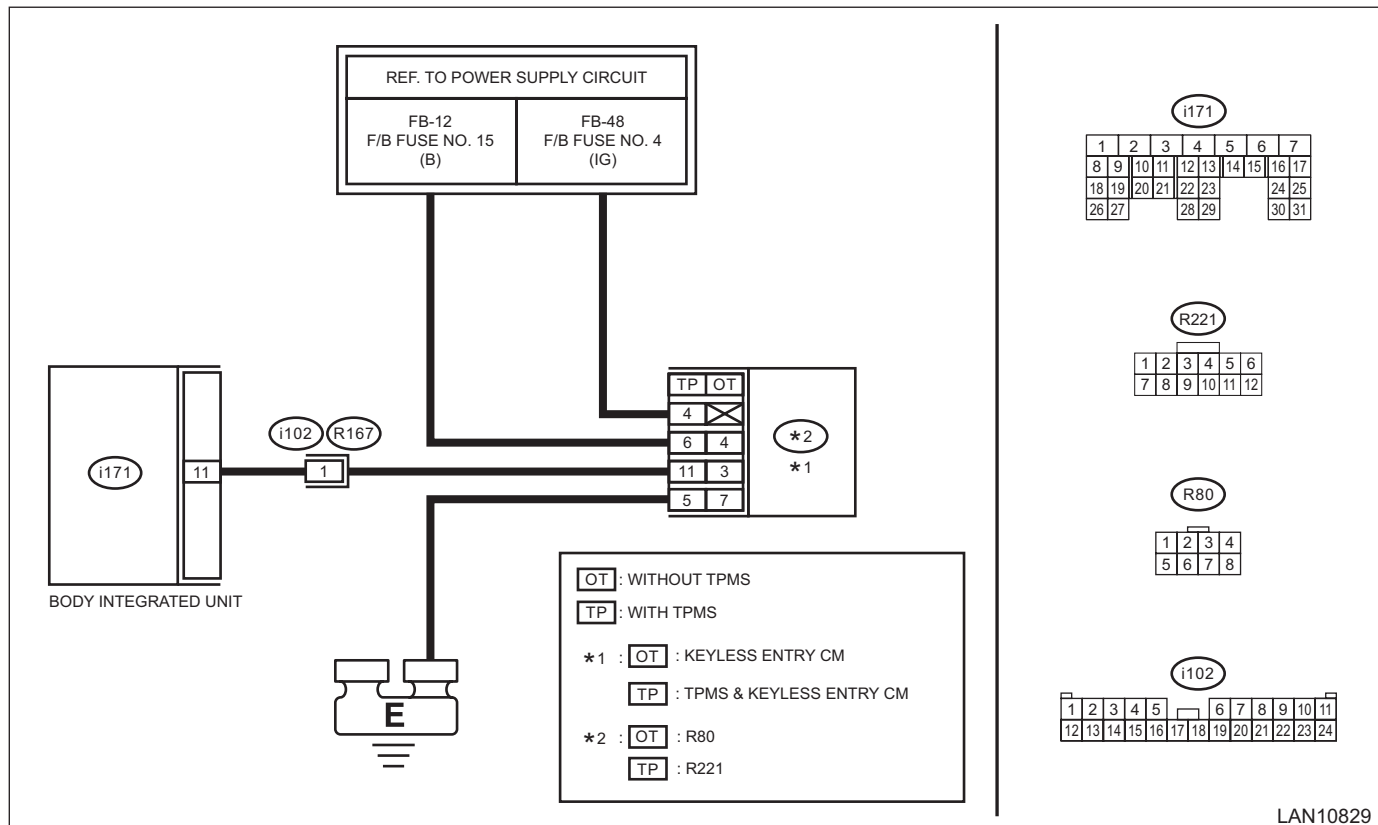

UART between the TPMS & keyless control module or keyless entry CM and the body integrated unit is open or shorted, or has communication failure.

Trouble symptom:

Door lock does not operate with keyless.

Wiring diagram:

Keyless entry system <Ref. to WI-164, WIRING DIAGRAM, Keyless Entry System.>

Step	Check	Yes	No
1	CHECK DTC. 1) Insert the ignition key to the ignition key cylinder and remove. 2) Read the DTC of body integrated unit using Subaru Select Monitor. <Ref. to BC(diag)-10, Read Diagnostic Trouble Code (DTC).>	Go to step 2.	Go to step 7.
2	CHECK DTC. 1) Turn the ignition switch to OFF. 2) Disconnect the body integrated unit and the TPMS & keyless control module or keyless entry CM connector. 3) Connect the disconnected connectors. 4) Insert the ignition key to the ignition key cylinder and remove. 5) Read the DTC of body integrated unit using Subaru Select Monitor. <Ref. to BC(diag)-10, Read Diagnostic Trouble Code (DTC).>	Go to step 3.	Go to step 7.

Diagnostic Procedure with Diagnostic Trouble Code (DTC)

BODY CONTROL SYSTEM (DIAGNOSTICS)

Step	Check	Yes	No
3 CHECK HARNESS (OPEN CIRCUIT). 1) Turn the ignition switch to OFF. 2) Disconnect the body integrated unit and the TPMS & keyless control module or keyless entry CM connector. 3) Using the tester, measure the resistance between terminals. Connector & terminal With TPMS <i>(i171) No. 11 — (R221) No. 11:</i> Without TPMS <i>(i171) No. 11 — (R80) No. 3:</i>	Is the resistance 10 Ω or less?	Go to step 4.	Repair the open circuit of harness or replace harness.
4 CHECK POWER SUPPLY CIRCUIT. 1) Turn the ignition switch to ON. 2) Use a tester to measure the voltage between the terminals. Connector & terminal With TPMS <i>(R221) No. 6 (+) — Chassis ground (-):</i> <i>(R221) No. 4 (+) — Chassis ground (-):</i> Without TPMS <i>(R80) No. 4 (+) — Chassis ground (-):</i>	Is the voltage 10 V or more?	Go to step 5.	Repair the power supply circuit.
5 CHECK HARNESS (OPEN CIRCUIT). Using the tester, measure the resistance between terminals. Connector & terminal With TPMS <i>(R221) No. 5 — Chassis ground:</i> Without TPMS <i>(R80) No. 7 — Chassis ground:</i>	Is the resistance 10 Ω or less?	Go to step 6.	Repair the ground circuit.
6 CHECK DTC. 1) Connect all the disconnected connectors. 2) Turn the ignition switch to ON. 3) Read the DTC of body integrated unit using Subaru Select Monitor. <Ref. to BC(diag)-10, Read Diagnostic Trouble Code (DTC).>	Is any DTC other than U1500 displayed?	Replace the body integrated unit. <Ref. to SL-72, Body Integrated Unit.>	Replace the TPMS & keyless control module or keyless entry CM. <Ref. to SL-69, REMOVAL, Keyless Entry Control Module.> <Ref. to WT-8, REMOVAL, Tire Pressure Monitoring System.>
7 CHECK CONNECTOR. Check for a poor contact between the body integrated unit and the TPMS & keyless control module or keyless entry CM connector.	Is there poor contact of connector?	Repair the connector that has poor contact, or replace harness.	Even if DTC is displayed, the circuit has returned to a normal condition at this time. Reproduce the failure, and then perform the diagnosis again. NOTE: In this case, temporary poor contact of connector, temporary open or short circuit of harness may be the cause.

Diagnostic Procedure with Diagnostic Trouble Code (DTC)

BODY CONTROL SYSTEM (DIAGNOSTICS)

2. MODEL WITH KEYLESS ACCESS WITH PUSH BUTTON START SYSTEM

DTC detecting condition:

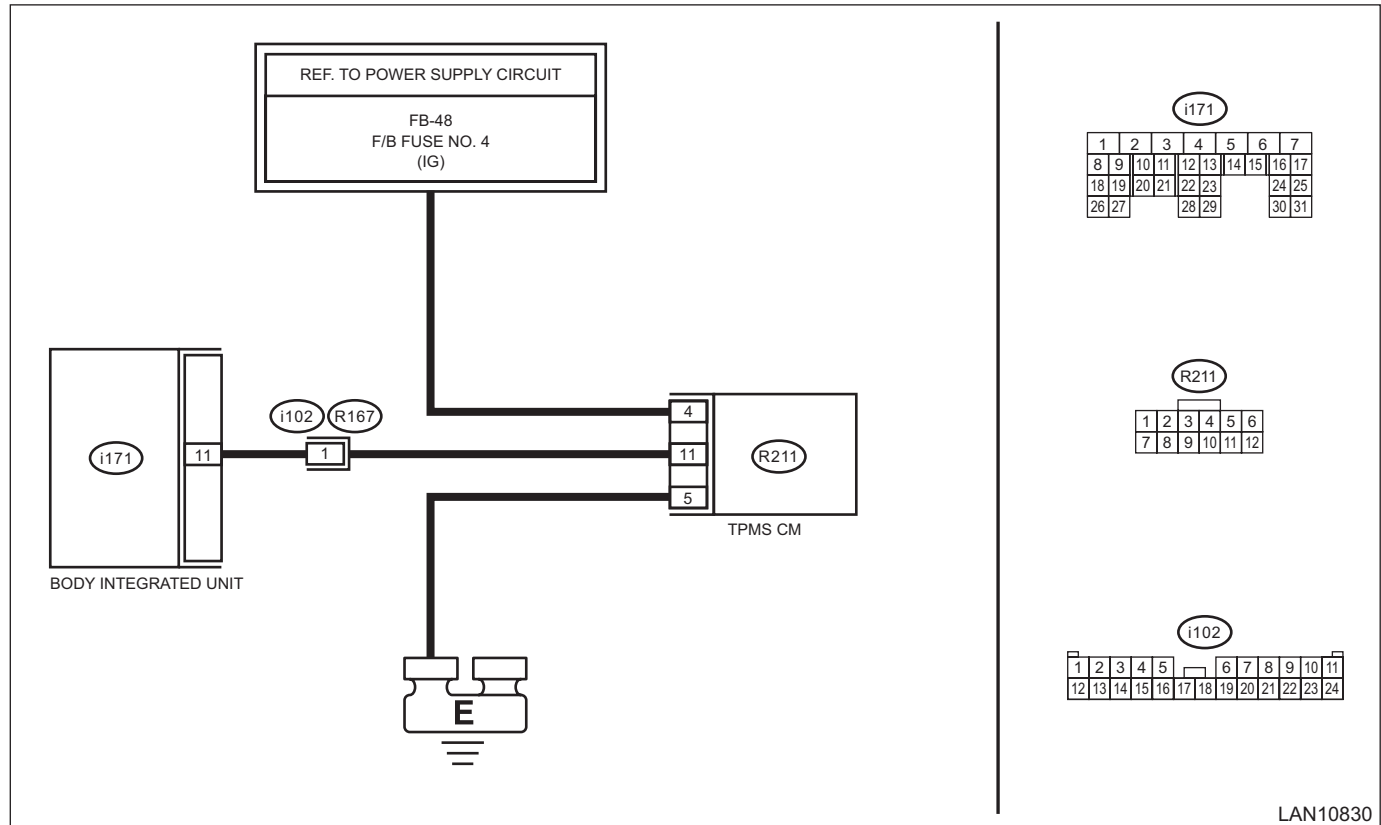

UART between the TPMS CM and the body integrated unit is open or shorted, or has communication failure.

Trouble symptom:

Cannot communicate with TPMS CM.

Wiring diagram:

Tire Pressure Monitoring System <Ref. to WI-224, WIRING DIAGRAM, Tire Pressure Monitoring System.>

LAN10830

Step	Check	Yes	No
1 CHECK DTC. 1) With the access key in the vehicle, press the push button ignition switch twice without depressing the brake to turn the ignition switch to ON. 2) Read the DTC of body integrated unit using Subaru Select Monitor. <Ref. to BC(diag)-10, Read Diagnostic Trouble Code (DTC).>	Is U1500 a current malfunction?	Go to step 2.	Go to step 7.
2 CHECK DTC. 1) Turn the ignition switch to OFF. 2) Disconnect the body integrated unit and the TPMS CM connector. 3) Connect the disconnected connectors. 4) With the access key in the vehicle, press the push button ignition switch twice without depressing the brake to turn the ignition switch to ON. 5) Read the DTC of body integrated unit using Subaru Select Monitor. <Ref. to BC(diag)-10, Read Diagnostic Trouble Code (DTC).>	Is U1500 a current malfunction?	Go to step 3.	Go to step 7.

Diagnostic Procedure with Diagnostic Trouble Code (DTC)

BODY CONTROL SYSTEM (DIAGNOSTICS)

Step	Check	Yes	No
3 CHECK HARNESS (OPEN CIRCUIT). 1) Turn the ignition switch to OFF. 2) Disconnect the body integrated unit and the TPMS CM connector. 3) Using the tester, measure the resistance between terminals. Connector & terminal (i171) No. 11 — (R211) No. 11:	Is the resistance 10 Ω or less?	Go to step 4.	Repair the open circuit of harness or replace harness.
4 CHECK POWER SUPPLY CIRCUIT. 1) Turn the ignition switch to ON. 2) Use a tester to measure the voltage between the terminals. Connector & terminal (R211) No. 4 (+) — Chassis ground (-):	Is the voltage 10 V or more?	Go to step 5.	Repair the power supply circuit.
5 CHECK HARNESS (OPEN CIRCUIT). Using the tester, measure the resistance between terminals. Connector & terminal (R211) No. 5 — Chassis ground:	Is the resistance 10 Ω or less?	Go to step 6.	Repair the ground circuit.
6 CHECK DTC. 1) Connect all the disconnected connectors. 2) Turn the ignition switch to ON. 3) Read the DTC of body integrated unit using Subaru Select Monitor. <Ref. to BC(diag)-10, Read Diagnostic Trouble Code (DTC).>	Is any DTC other than U1500 displayed?	Replace the body integrated unit. <Ref. to SL-72, Body Integrated Unit.>	Replace the TPMS CM. <Ref. to WT-8, REMOVAL, Tire Pressure Monitoring System.>
7 CHECK CONNECTOR. Check for a poor contact between the body integrated unit and the TPMS CM connector.	Is there poor contact of connector?	Repair the connector that has poor contact, or replace harness.	Even if DTC is displayed, the circuit has returned to a normal condition at this time. Reproduce the failure, and then perform the diagnosis again. NOTE: In this case, temporary poor contact of connector, temporary open or short circuit of harness may be the cause.

General Diagnostic Table

BODY CONTROL SYSTEM (DIAGNOSTICS)

14. General Diagnostic Table

A: INSPECTION

Read the DTC using Subaru Select Monitor. <Ref. to BC(diag)-10, Read Diagnostic Trouble Code (DTC).>
Or check the following data under the current data display screen. <Ref. to BC(diag)-12, Read Current Data.>

Item	Operation	Specifications		Note
		YES	NO	
Diagnostic code	DTC is not displayed when inspecting all DTCs.	DTC is not displayed.	Perform the diagnosis according to DTC.	—
Clearance light (Low beam) (High beam)	Clearance light and low/high beams illuminate normally when the switch is operated. Indicator in the meter illuminates at the same time.	System is normal.	Check the lighting system, combination meter system and LAN system.	—
Auto light	When the area around the light control sensor is darkened after the ignition switch and the lighting switch (AUTO) are turned to ON, the clearance light and the low beam illuminate after 5 seconds. Indicator in the combination meter illuminates at the same time.	System is normal.	Check the lighting system, combination meter system and LAN system.	—
	When the ignition switch and the lighting switch (AUTO) are turned to ON after the area around the light control sensor is darkened, the clearance light and the low beam illuminate immediately. Indicator in the combination meter illuminates at the same time.			—
Fog light	Front and rear fog lights illuminate when the switch is operated. Indicator in the meter illuminates at the same time.	System is normal.	Check the lighting system, combination meter system and LAN system.	Rear fog light operates when "Rear fog light setting" of the body integrated unit is set to on.
Rear defogger	Rear defogger operates when the switch is operated. The indicator illuminates at the same time.	System is normal.	Check the rear window defogger system and A/C system.	—
Wiper deicer	Wiper deicer operates by operating the switch. The indicator illuminates at the same time. When the ambient temperature is 5°C (41°F) or higher, press the switch 3 seconds or more to forcibly activate the system.	System is normal.	Check the wiper deicer system and A/C system.	Wiper deicer operates when "Wiper deicer setting" of the body integrated unit is set to on.
DRL	After starting the engine and releasing the parking brake, the DRL illuminates.	System is normal.	Check the lighting system and LAN system.	—
Rear wiper	Rear wiper operates when the switch is operated.	System is normal.	Check wiper or washer system.	Depending on user customizing "Sedan/Wagon Setting" of the body integrated unit, vehicle sensory time varies.
Key interlock	<ul style="list-style-type: none"> Key cannot be removed in other than P range. Key can be removed in other than P range. 	System is normal.	Check the body control system.	—

General Diagnostic Table

BODY CONTROL SYSTEM (DIAGNOSTICS)

Item	Operation	Specifications		Note
		YES	NO	
Shift lock	The select lever can be moved from the P range to other ranges only when the brake pedal is depressed with IG ON.	System is normal.	Check the body control system.	—
Key warning switch alarm	When the driver's door is open without the key removed, the buzzer sounds.	System is normal.	Check the combination meter and body control system.	—
Door lock	The doors lock/unlock when the door switch is operated. Rear gate/trunk opens when the rear gate/trunk release switch is operated.	System is normal.	Check the security & lock and body control system.	If user customizing "Sedan/Wagon Setting" is different, trunk and rear gate do not open.
Keyless entry	The lock locks/unlocks when the keyless transmitter is operated. Trunk/rear gate unlocks when trunk/rear gate unlock button is operated.	System is normal.	Check the keyless entry and body control system.	—
Keyless access with push button start system	The lock locks/unlocks when the access key is operated. With the access key held, the touch sensor (lock) operation locks/touch sensor (unlock) operation unlocks. Rear gate unlocks by operating the rear gate unlock button.	System is normal.	Check the keyless access with push button start system and the body control system.	—
Answer back	Answer-back operates when the keyless entry / keyless access with push button start system locks/unlocks.	System is normal.	Check the security & lock, keyless access with push button start system, and LAN system.	—
Room light	Turns ON/OFF according to the door open/close operation, the lock/unlock operation with the keyless entry/keyless access with push button start system, and the ignition operation.	System is normal.	Check the room light system, security & lock, keyless access with push button start system, and LAN system.	For vehicle with the keyless access with push button start system, the room light blinks when "Factory mode" is selected. For vehicles with the keyless entry, the room light blinks when the keyless registration mode connector is connected.
Map light	Turns ON/OFF according to the door open/close operation, the lock/unlock operation with the keyless entry/keyless access with push button start system, and the ignition operation. (Except for rear gate)	System is normal.	Check the spot map light, security & lock, keyless access with push button start system, and LAN system.	For vehicle with the keyless access with push button start system, the map light blinks when "Factory mode" is selected. For vehicles with the keyless entry, the map light blinks when the keyless registration mode connector is connected.

General Diagnostic Table

BODY CONTROL SYSTEM (DIAGNOSTICS)

Item	Operation	Specifications		Note
		YES	NO	
Luggage/trunk light	The light illuminates/goes off according to the rear gate open/close. The light goes off when the doors are locked with the keyless entry/keyless access with push button start system and the ignition is turned ON while the luggage light is dimming after the rear gate is closed.	System is normal.	Check the luggage/trunk light, security & lock, keyless access with push button start system, and LAN system.	For vehicles with the keyless access with push button start system, the luggage/trunk light blinks when "Factory" mode is selected. For vehicles with the keyless entry, the luggage/trunk light blinks when the keyless registration mode connector is connected.
Key illumination	The light illuminates/goes off according to the driver's door open/close. The light goes off, when the doors are locked with the keyless entry/keyless access with push button start system and the ignition is turned ON while illuminating.	System is normal.	Check the ignition switch illumination, security & lock, and LAN system.	For vehicles with keyless entry, the key illumination blinks when "Factory" mode is selected.
Illumination control	Illumination volume control is available.	System is normal.	Check the illumination control switch, combination meter, and body control system.	Illumination volume control is not available when user customizing "Illumination Control On/Off" of the body integrated unit is set to off.
Engine start	Engine starts.	System is normal.	Check the engine system, immobilizer, and LAN system.	—
Vehicle security	Security monitoring/security canceling can be performed by operating the keyless entry/keyless access with push button start system.	System is normal.	Check the security & lock, keyless access with push button start system, and LAN system.	Security monitoring starts and at the same time the warning buzzer sounds, when impact sensor is not connected and user customizing "Impact Sensor" of the body integrated unit is set to on.
Welcome lighting (enter)	When dimming out around the light control sensor after turning the lighting switch (AUTO) to ON, use keyless transmitter or access key to unlock. At this time, the clearance light and headlight low beam illuminates for the preset time. And, use keyless transmitter or access key to lock. At this time, the clearance light and headlight low beam go off.	System is normal.	Check the lighting system (auto light), security & lock (keyless entry) or keyless access with push button start system.	Operates when user customization item "Illumination Sensor Setting" in body integrated unit is set to ON and "Welcome Light Off Delay Time(Approaching)" is set to other than OFF.
Welcome lighting (exit)	The clearance light and headlight low beam continues to illuminate, when the ignition switch is OFF (or when the key is removed for vehicles without keyless access with push button start system) while the auto light function is operating. Use keyless transmitter or access key to lock two consecutive times. At this time, the clearance light and headlight low beam go off.	System is normal.	Check the lighting system (auto light), security & lock (keyless entry) or keyless access with push button start system.	Operates when user customization item "Illumination Sensor Setting" in body integrated unit is set to ON and "Welcome Light Off Delay Time(Exiting)" is set to other than OFF.

13. Diagnostics with Phenomenon	51

Basic Diagnostic Procedure

TELEMATICS SYSTEM (DIAGNOSTICS)

1. Basic Diagnostic Procedure

A: PROCEDURE

	Step	Check	Yes	No
1	<p>PERFORM CUSTOMER INTERVIEW. Using the Check List for Interview, ask the customer the condition of how the trouble occurred. <Ref. to TEL(diag)-3, CHECK, Check List for Interview.></p>	Did you interview the customer?	Go to step 2.	Interview the customer. <Ref. to TEL(diag)-3, CHECK, Check List for Interview.>
2	<p>CHECK SUBARU SELECT MONITOR COMMUNICATION. Using the Subaru Select Monitor, check whether communication to the telematics system can be executed. NOTE: If the communication function of the Subaru Select Monitor cannot be executed properly, check the communication circuit. (Refer to "Communication for initializing impossible".) <Ref. to TEL(diag)-10, INSPECTION, Subaru Select Monitor.></p>	Is communication possible?	Go to step 3.	Check the communication circuit.
3	<p>CHECK TELEMATICS. Using the Subaru Select Monitor, read DTC of the telematics system. <Ref. to TEL(diag)-15, OPERATION, Diagnostic Code(s) Display.> NOTE: If DTC is detected, only RED LED will illuminate. For details, refer to "LED operation status list". <Ref. to TEL(diag)-4, LED ILLUMINATION STATUS LIST, CHECK, Check List for Interview.></p>	Is DTC displayed?	Perform the diagnosis for the displayed DTCs. <Ref. to TEL(diag)-15, LIST, Diagnostic Code(s) Display.>	Go to step 4.
4	<p>CHECK DIAGNOSTICS WITH PHENOMENON. Check the list of Diagnostics with Phenomenon. <Ref. to TEL(diag)-51, Diagnostics with Phenomenon.></p>	Does the symptom apply?	Perform diagnosis according to the procedures in the diagnostics with phenomenon.	Go to step 5.
5	<p>CHECK TROUBLE PHENOMENON. 1) Perform the basic inspection and function check. <Ref. to TEL(diag)-5, INSPECTION, General Description.> 2) Check the data communication module. <Ref. to TEL(diag)-8, Control Module I/O Signal.> 3) Perform check of current data. <Ref. to TEL(diag)-12, Read Current Data.> 4) Perform a unit check.</p>	Was the trouble cause found?	Perform the Clear Memory after repairing or replacing the cause of trouble. <Ref. to TEL(diag)-17, Clear Memory Mode.>	System is normal.

Check List for Interview

TELEMATICS SYSTEM (DIAGNOSTICS)

2. Check List for Interview

A: CHECK

1. CHECK LIST FOR INTERVIEW

- Inspect the following items regarding the vehicle's state.
- Print out this page for interviewing customers.

Telematics Check List for Interview		Received Year	Month	Date
Customer's name		Registration No.	Initial year of registration Year Month Date	
		Vehicle model	Frame number	
Interviewer ()	Inspector ()	Engine type ()	Odometer reading ()	
Customer specified content • • •				
Date when problem occurred	Year	Month	Date	Frequency of trouble occurrence Always occurs Sometimes occurs (times per day, times per month)

Diagnostic code	

2. LED ILLUMINATION STATUS LIST

LED	Light OFF	Blink	Light ON
RED	Communication with the server and DCM are operating normally (communication failure with the STAR-LINK server. DTCs are not found within the vehicle unit.)	It is possible that communication with the server/DCM are malfunctioning.	It is possible that communication with the server/DCM are malfunctioning.
GREEN	—	Connection to the server is being attempted and in progress.	Communication status with the server is READY.
RED and GREEN	Telematics function is not activated.	Collation with the server is in progress.	Collation with the server failed. It is possible that the server/DCM are malfunctioning.

3. General Description

A: CAUTION

1. AIRBAG SYSTEM

CAUTION:

- Do not use the electrical test equipment on all airbag harnesses and connector circuits.
- Be careful not to damage the airbag harness.

B: INSPECTION

1. BASIC INSPECTION

Before performing the diagnosis, check the following items which may affect the problems relating to the telematics system.

- 1) Check the battery. <Ref. to SC(H4DO)-51, Battery.>
- 2) Check the relay and fuse condition. <Ref. to ET-10, Relay and Fuse.>
- 3) Check the connecting condition of harness and harness connector.

C: PREPARATION TOOL

1. SPECIAL TOOL

ILLUSTRATION	TOOL NUMBER	DESCRIPTION	REMARKS
 STSSM4	—	SUBARU SELECT MONITOR 4	Used for setting of each function and troubleshooting for electrical system. NOTE: For detailed operation procedures of Subaru Select Monitor 4, refer to “Application help”.

2. GENERAL TOOL

TOOL NAME	REMARKS
Circuit tester	Used for measuring resistance, voltage and current.
DST-i	Used together with Subaru Select Monitor 4.

Refer to “TELEMATICS SYSTEM” in the wiring diagram. <Ref. to WI-221, WIRING DIAGRAM, Telematics System.>

C: SYSTEM BLOCK DIAGRAM

Main signals used between DCM and relevant CM

ET-10207

Subaru Select Monitor

TELEMATICS SYSTEM (DIAGNOSTICS)

6. Subaru Select Monitor

A: OPERATION

- For detailed operation procedures, refer to “Application help”.
- When DCM cannot establish communication with Subaru Select Monitor, perform “COMMUNICATION FOR INITIALIZING IMPOSSIBLE”. <Ref. to TEL(diag)-10, INSPECTION, Subaru Select Monitor.>

B: INSPECTION

1. COMMUNICATION FOR INITIALIZING IMPOSSIBLE

When communication with DCM is impossible

Detecting condition:

- Defective harness connector
- Power supply circuit malfunction
- Defective DCM
- Defective CAN communication circuit
- Defective Subaru Select Monitor

Trouble symptom:

Communication is impossible between DCM and Subaru Select Monitor.

CAUTION:

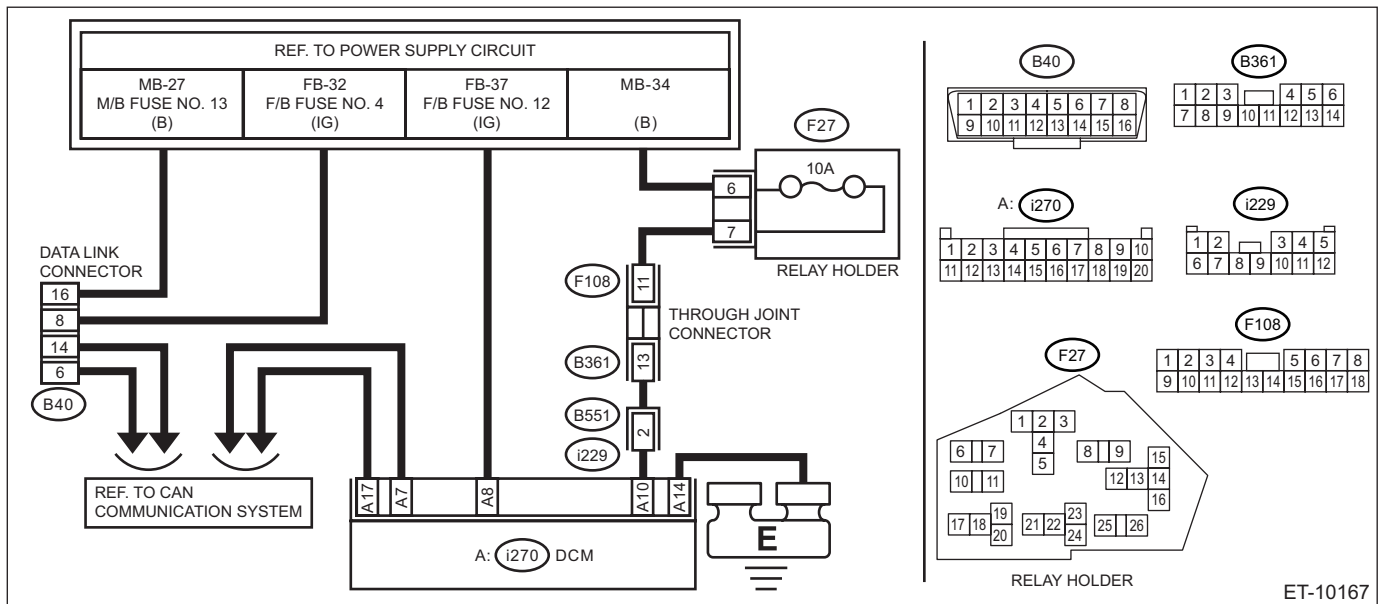

CommCheck is required after replacing the DCM. <Ref. to ET-27, REGISTRATION (COMM CHECK), OPERATION, Telematics System.>

Wiring diagram:

NOTE:

For the coupling connector, refer to “WIRING SYSTEM”.

Telematics <Ref. to WI-221, WIRING DIAGRAM, Telematics System.>

Step	Check	Yes	No
1	CHECK FUSE. 1) Turn the ignition switch to OFF. 2) Check the fuse of the DCM.	Is there any fault? Replace the fuse. If the replaced fuse blows out easily, repair the ground short circuit in harness between the fuse — DCM connector.	Go to step 2.

Subaru Select Monitor

TELEMATICS SYSTEM (DIAGNOSTICS)

Step	Check	Yes	No
<p>2 CHECK HARNESS (OPEN CIRCUIT). 1) Disconnect the DCM connector. 2) Turn the ignition switch to ON. 3) Using a tester, measure the voltage between DCM connector (harness side) and the chassis ground. Connector & terminal <i>(i270) No. 8 (+) — Chassis ground (-):</i> <i>(i270) No. 10 (+) — Chassis ground (-):</i></p>	<p>Is the voltage 10 V or more?</p>	<p>Go to step 3.</p>	<p>Repair the open circuit in the wiring harness between fuse and DCM connector.</p>
<p>3 CHECK HARNESS (OPEN CIRCUIT). 1) Turn the ignition switch to OFF. 2) Using a tester, measure the resistance between DCM connector (harness side) and the chassis ground. Connector & terminal <i>(i270) No. 14 — Chassis ground:</i></p>	<p>Is the resistance 1 Ω or less?</p>	<p>Go to step 4.</p>	<p>Repair the open circuit in the wiring harness between fuse and DCM connector.</p>
<p>4 CHECK LAN SYSTEM. 1) Inspect LAN system.</p>	<p>Is there any fault?</p>	<p>Perform the inspection according to the diagnosis for LAN system.</p>	<p>Go to step 5.</p>
<p>5 CHECK TELEMATICS. Using the Subaru Select Monitor, communicate with the telematics system.</p>	<p>Is communication possible?</p>	<p>Even if DTC is detected, the circuit has returned to a normal condition at this time. Reproduce the failure, and then perform the diagnosis again. In this case, temporary poor contact of connector, temporary open or short circuit of harness may be the cause.</p>	<p>Replace the DCM. <Ref. to ET-44, Data Communication Module.></p>

Read Current Data

TELEMATICS SYSTEM (DIAGNOSTICS)

7. Read Current Data

A: OPERATION

- 1) On «Start» display, select «Diagnosis».
- 2) On «Vehicle selection» display, input the target vehicle information and select «Confirmed».
- 3) On «Main Menu» display, select «Each System».
- 4) On «Select System» display, select «Telematics» and then select «Enter».
- 5) On «Select Function» display, select «Data Monitor».

NOTE:

For detailed operation procedures, refer to “Application help”.

9. Clear Memory Mode

A: OPERATION

- 1) On «Start» display, select «Diagnosis».
- 2) On «Vehicle selection» display, input the target vehicle information and select «Confirmed».
- 3) On «Main Menu» display, select «Each System».
- 4) On «Select System» display, select «Telematics» and then select «Enter».
- 5) On «Select Function» display, select «DTC».
- 6) On «DTC» display, select «Clear Memory».

NOTE:

For detailed operation procedures, refer to “Application help”.

Inspection Mode

TELEMATICS SYSTEM (DIAGNOSTICS)

10. Inspection Mode

A: PROCEDURE

It is possible to diagnose the DTC by performing the indicated inspection mode.

After correcting the DTC, perform a necessary inspection mode and make sure that the function is resumed correctly and the DTC is recorded.

1. INSPECTION MODE 1

DTC	Item	Note
U0073	CONTROL MODULE COMMUNICATION BUS OFF	<Ref. to TEL(diag)-21, DTC U0073 CONTROL MODULE COMMUNICATION BUS OFF, Diagnostic Procedure with Diagnostic Trouble Code (DTC).>
U0100	LOST COMMUNICATION WITH ECM/PCM "A"	<Ref. to TEL(diag)-21, DTC U0100 LOST COMMUNICATION WITH ECM/PCM "A", Diagnostic Procedure with Diagnostic Trouble Code (DTC).>
U0122	LOST COMMUNICATION WITH VEHICLE DYNAMICS CONTROL MODULE	<Ref. to TEL(diag)-21, DTC U0122 LOST COMMUNICATION WITH VEHICLE DYNAMICS CONTROL MODULE, Diagnostic Procedure with Diagnostic Trouble Code (DTC).>
U0140	LOST COMMUNICATION WITH BODY CONTROL MODULE	<Ref. to TEL(diag)-21, DTC U0140 LOST COMMUNICATION WITH BODY CONTROL MODULE, Diagnostic Procedure with Diagnostic Trouble Code (DTC).>
U0151	LOST COMMUNICATION WITH RESTRAINTS CONTROL MODULE	<Ref. to TEL(diag)-21, DTC U0151 LOST COMMUNICATION WITH RESTRAINTS CONTROL MODULE, Diagnostic Procedure with Diagnostic Trouble Code (DTC).>
U0155	LOST COMMUNICATION WITH INSTRUMENT PANEL CLUSTER (IPC) CONTROL MODULE	<Ref. to TEL(diag)-21, DTC U0155 LOST COMMUNICATION WITH INSTRUMENT PANEL CLUSTER (IPC) CONTROL MODULE, Diagnostic Procedure with Diagnostic Trouble Code (DTC).>
U0401	INVALID DATA RECEIVED FROM ECM/PCM "A"	<Ref. to TEL(diag)-21, DTC U0401 INVALID DATA RECEIVED FROM ECM/PCM "A", Diagnostic Procedure with Diagnostic Trouble Code (DTC).>
U0416	INVALID DATA RECEIVED FROM VEHICLE DYNAMICS CONTROL MODULE	<Ref. to TEL(diag)-21, DTC U0416 INVALID DATA RECEIVED FROM VEHICLE DYNAMICS CONTROL MODULE, Diagnostic Procedure with Diagnostic Trouble Code (DTC).>
U0452	INVALID DATA RECEIVED FROM RESTRAINTS CONTROL MODULE	<Ref. to TEL(diag)-21, DTC U0452 INVALID DATA RECEIVED FROM RESTRAINTS CONTROL MODULE, Diagnostic Procedure with Diagnostic Trouble Code (DTC).>
B2A00	VIN READING	<Ref. to TEL(diag)-22, DTC B2A00 VIN READING, Diagnostic Procedure with Diagnostic Trouble Code (DTC).>
B2A01	TEL1 ANTENNA CIRCUIT	<Ref. to TEL(diag)-23, DTC B2A01 TEL1 ANTENNA CIRCUIT, Diagnostic Procedure with Diagnostic Trouble Code (DTC).>
B2A02	TEL2 ANTENNA CIRCUIT	<Ref. to TEL(diag)-25, DTC B2A02 TEL2 ANTENNA CIRCUIT, Diagnostic Procedure with Diagnostic Trouble Code (DTC).>
B2A03	GPS ANTENNA CIRCUIT	<Ref. to TEL(diag)-26, DTC B2A03 GPS ANTENNA CIRCUIT, Diagnostic Procedure with Diagnostic Trouble Code (DTC).>
B2A07	BACKUP BATTERY CHARGE SYSTEM PERFORMANCE	<Ref. to TEL(diag)-35, DTC B2A07 BACKUP BATTERY CHARGE SYSTEM PERFORMANCE, Diagnostic Procedure with Diagnostic Trouble Code (DTC).>
B2A08	SOS BUTTON CIRCUIT	<Ref. to TEL(diag)-36, DTC B2A08 SOS BUTTON CIRCUIT, Diagnostic Procedure with Diagnostic Trouble Code (DTC).>
B2A09	I-CALL BUTTON CIRCUIT	<Ref. to TEL(diag)-38, DTC B2A09 I-CALL BUTTON CIRCUIT, Diagnostic Procedure with Diagnostic Trouble Code (DTC).>
B2A0C	DCM INTERNAL FAULT	<Ref. to TEL(diag)-44, DTC B2A0C DCM INTERNAL FAULT, Diagnostic Procedure with Diagnostic Trouble Code (DTC).>
B2A0D	AIRBAG SIGNAL	<Ref. to TEL(diag)-45, DTC B2A0D AIRBAG SIGNAL, Diagnostic Procedure with Diagnostic Trouble Code (DTC).>
B2A0E	MUTE LINE CIRCUIT	<Ref. to TEL(diag)-47, DTC B2A0E MUTE LINE CIRCUIT, Diagnostic Procedure with Diagnostic Trouble Code (DTC).>
B2A0F	BACKUP BATTERY DEGRADATION	<Ref. to TEL(diag)-49, DTC B2A0F BACKUP BATTERY DEGRADATION, Diagnostic Procedure with Diagnostic Trouble Code (DTC).>
B2A10	BATTERY VOLTAGE HIGH	<Ref. to TEL(diag)-50, DTC B2A10 BATTERY VOLTAGE HIGH, Diagnostic Procedure with Diagnostic Trouble Code (DTC).>

Inspection steps:

- 1) Perform the Clear Memory Mode. <Ref. to TEL(diag)-17, Clear Memory Mode.>
- 2) Read the DTC and check that the DTC is not displayed. <Ref. to TEL(diag)-15, Diagnostic Code(s) Display.>

NOTE:

If the DTC is displayed on the screen, the trouble is still present. Perform the diagnosis according to DTC. After solving the DTC, repeat from step 1).

- 3) Turn the ignition switch to OFF.
- 4) Turn the ignition switch to ON, and wait for 5 seconds or more.
- 5) Read the DTC and check that the DTC is not displayed.

NOTE:

If the DTC is displayed on the screen, the trouble is still present. Perform the diagnosis according to DTC.

2. INSPECTION MODE 2

DTC	Item	Note
B2A04	MIC CIRCUIT	<Ref. to TEL(diag)-27, DTC B2A04 MIC CIRCUIT, Diagnostic Procedure with Diagnostic Trouble Code (DTC).>
B2A05	LEFT SPEAKER/AUDIO CIRCUIT	<Ref. to TEL(diag)-29, DTC B2A05 LEFT SPEAKER/AUDIO CIRCUIT, Diagnostic Procedure with Diagnostic Trouble Code (DTC).>
B2A06	RIGHT SPEAKER/AUDIO CIRCUIT	<Ref. to TEL(diag)-32, DTC B2A06 RIGHT SPEAKER/AUDIO CIRCUIT, Diagnostic Procedure with Diagnostic Trouble Code (DTC).>
B2A0A	RED LED CIRCUIT	<Ref. to TEL(diag)-40, DTC B2A0A RED LED CIRCUIT, Diagnostic Procedure with Diagnostic Trouble Code (DTC).>
B2A0B	GREEN LED CIRCUIT	<Ref. to TEL(diag)-42, DTC B2A0B GREEN LED CIRCUIT, Diagnostic Procedure with Diagnostic Trouble Code (DTC).>

Inspection steps:

- 1) Perform the Clear Memory Mode. <Ref. to TEL(diag)-17, Clear Memory Mode.>
- 2) Read the DTC and check that the DTC is not displayed. <Ref. to TEL(diag)-15, Diagnostic Code(s) Display.>

NOTE:

If the DTC is displayed on the screen, the trouble is still present. Perform the diagnosis according to DTC. After solving the DTC, repeat from step 1).

- 3) Turn the ignition switch to OFF.
- 4) Close all doors. (The vehicle enters CAN sleep state.)
- 5) Wait for approx. 1 minute. After the indicator goes off, wait for another 1 minute. (DCM standby mode)
- 6) Turn the ignition switch to ON, and wait for 5 seconds or more.
- 7) Read the DTC and check that the DTC is not displayed.

NOTE:

If the DTC is displayed on the screen, the trouble is still present. Perform the diagnosis according to DTC.

System Operation Check Mode

TELEMATICS SYSTEM (DIAGNOSTICS)

11. System Operation Check Mode

A: OPERATION

- 1) On «Start» display, select «Diagnosis».
- 2) On «Vehicle selection» display, input the target vehicle information and select «Confirmed».
- 3) On «Main Menu» display, select «Each System».
- 4) On «Select System» display, select «Telematics» and then select «Enter».
- 5) On «Select Function» display, select «Active Test».

NOTE:

For detailed operation procedures, refer to “Application help”.

B: LIST

System operation check mode	Note
GREEN LED Lighting	GREEN LED illuminates/flashes/goes off.
GREEN LED Flashing	
GREEN LED OFF	
RED LED Lighting	RED LED illuminates/flashes/goes off.
RED LED Flashing	
RED LED OFF	
Speaker ON	Outputs to speaker.

12. Diagnostic Procedure with Diagnostic Trouble Code (DTC)

A: DTC U0073 CONTROL MODULE COMMUNICATION BUS OFF

Detected when CAN line abnormality is detected.

NOTE:

Perform the diagnosis for LAN system. <Ref. to LAN(diag)-2, PROCEDURE, Basic Diagnostic Procedure.>

B: DTC U0100 LOST COMMUNICATION WITH ECM/PCM “A”

Detected when CAN data from ECM does not arrive.

NOTE:

Perform the diagnosis for LAN system. <Ref. to LAN(diag)-2, PROCEDURE, Basic Diagnostic Procedure.>

C: DTC U0122 LOST COMMUNICATION WITH VEHICLE DYNAMICS CONTROL MODULE

Detected when CAN data from VDC does not arrive.

NOTE:

Perform the diagnosis for LAN system. <Ref. to LAN(diag)-2, PROCEDURE, Basic Diagnostic Procedure.>

D: DTC U0140 LOST COMMUNICATION WITH BODY CONTROL MODULE

Detected when CAN data is not received from body integrated unit.

NOTE:

Perform the diagnosis for LAN system. <Ref. to LAN(diag)-2, PROCEDURE, Basic Diagnostic Procedure.>

E: DTC U0151 LOST COMMUNICATION WITH RESTRAINTS CONTROL MODULE

Detected when CAN data is not received from airbag CM.

NOTE:

Perform the diagnosis for LAN system. <Ref. to LAN(diag)-2, PROCEDURE, Basic Diagnostic Procedure.>

F: DTC U0155 LOST COMMUNICATION WITH INSTRUMENT PANEL CLUSTER (IPC) CONTROL MODULE

Detected when CAN data from combination meter does not arrive.

NOTE:

Perform the diagnosis for LAN system. <Ref. to LAN(diag)-2, PROCEDURE, Basic Diagnostic Procedure.>

G: DTC U0401 INVALID DATA RECEIVED FROM ECM/PCM “A”

Detected when CAN data from ECM is abnormal.

NOTE:

Perform the diagnosis for LAN system. <Ref. to LAN(diag)-2, PROCEDURE, Basic Diagnostic Procedure.>

H: DTC U0416 INVALID DATA RECEIVED FROM VEHICLE DYNAMICS CONTROL MODULE

This is detected when CAN data from VDC is abnormal.

NOTE:

Perform the diagnosis for LAN system. <Ref. to LAN(diag)-2, PROCEDURE, Basic Diagnostic Procedure.>

I: DTC U0452 INVALID DATA RECEIVED FROM RESTRAINTS CONTROL MODULE

Detected when CAN data from airbag CM is abnormal.

NOTE:

Perform the diagnosis for LAN system. <Ref. to LAN(diag)-2, PROCEDURE, Basic Diagnostic Procedure.>

Diagnostic Procedure with Diagnostic Trouble Code (DTC)

TELEMATICS SYSTEM (DIAGNOSTICS)

J: DTC B2A00 VIN READING

Diagnosis start condition:

When ignition switch is ON.

DTC detecting condition:

When ignition switch is ON, VIN information (CAN) sent from ECM cannot be read.

Trouble symptom:

- Telematics function cannot be used.
- RED LED illuminates.

CAUTION:

CommCheck is required after replacing the DCM. <Ref. to ET-27, REGISTRATION (COMM CHECK), OPERATION, Telematics System.>

Step	Check	Yes	No
1 CHECK DTC. Read the DTC. <Ref. to TEL(diag)-15, Diagnostic Code(s) Display.>	Is DTC B2A00 displayed? (Current malfunction)	Go to step 2.	Even if DTC is displayed, the circuit has returned to a normal condition at this time. Reproduce the failure, and then perform the diagnosis again. In this case, temporary poor contact of connector, temporary open or short circuit of harness may be the cause.
2 CHECK DTC. Check DTCs in the following systems. <ul style="list-style-type: none"> • Telematics <Ref. to TEL(diag)-15, Diagnostic Code(s) Display.> • Engine <Ref. to EN(H4DO)(diag)-49, Read Diagnostic Trouble Code (DTC).> 	Is DTC U**** displayed? (Current malfunction)	Perform the diagnosis for LAN system. <Ref. to LAN(diag)-2, Basic Diagnostic Procedure.>	Go to step 3.
3 CHECK CURRENT DATA. Confirm VIN information from the engine OBD mode. <Ref. to EN(H4DO)(diag)-35, MODE \$09 (REQUEST VEHICLE INFORMATION), OPERATION, General Scan Tool.>	Is VIN information displayed?	Replace the DCM. <Ref. to ET-44, Data Communication Module.>	Replace the ECM. <Ref. to FU(H4DO)-98, Engine Control Module (ECM).>

Diagnostic Procedure with Diagnostic Trouble Code (DTC)

TELEMATICS SYSTEM (DIAGNOSTICS)

K: DTC B2A01 TEL1 ANTENNA CIRCUIT

Diagnosis start condition:

When ignition switch is ON.

DTC detecting condition:

Any of the followings continues for 5 seconds or more.

- TEL1 impedance is more than 1 MΩ. (Detached antenna, etc.)
- TEL1 impedance is less than 1 kΩ. (Short-circuited antenna, etc.)

Trouble symptom:

- Telematics function cannot be used.
- RED LED illuminates.

Wiring diagram:

NOTE:

For the coupling connector, refer to "WIRING SYSTEM".

Telematics <Ref. to WI-221, WIRING DIAGRAM, Telematics System.>

CAUTION:

CommCheck is required after replacing the DCM. <Ref. to ET-27, REGISTRATION (COMM CHECK), OPERATION, Telematics System.>

Step	Check	Yes	No	
1	<p>CHECK DTC. Read the DTC. <Ref. to TEL(diag)-15, Diagnostic Code(s) Display.></p>	Is DTC B2A01 displayed? (Current malfunction)	Go to step 2.	<p>Even if DTC is displayed, the circuit has returned to a normal condition at this time. Reproduce the failure, and then perform the diagnosis again.</p> <p>In this case, temporary poor contact of connector, temporary open or short circuit of harness may be the cause.</p>

Diagnostic Procedure with Diagnostic Trouble Code (DTC)

TELEMATICS SYSTEM (DIAGNOSTICS)

Step	Check	Yes	No
2 CHECK HARNESS (OPEN CIRCUIT). 1) Turn the ignition switch to OFF. 2) Disconnect the antenna connector. 3) Disconnect the DCM connector. 4) Disconnect the PRG DU connector. 5) Measure the resistance between antenna connector and DCM connector. <i>Connector & terminal</i> <i>(AN19) No. 1 — (AN24) No. 1:</i>	Is the resistance less than 1 Ω ?	Go to step 3.	Repair or replace the open circuit of harness.
3 CHECK HARNESS (GROUND SHORT CIRCUIT). Measure the resistance between DCM connector and chassis ground. <i>Connector & terminal</i> <i>(AN19) No. 1 — Chassis ground:</i>	Is the resistance 1 M Ω or more?	Go to step 4.	Repair or replace the short circuit of the harness.
4 CHECK HARNESS (SHORT CIRCUIT TO POWER SUPPLY). 1) Turn the ignition switch to ON. 2) Measure the voltage between DCM connector and chassis ground. <i>Connector & terminal</i> <i>(AN19) No. 1 (+) — Chassis ground (-):</i>	Is the voltage less than 1 V?	Go to step 5.	Repair or replace the short circuit of the harness.
5 CHECK ANTENNA. Check the telematics antenna. <Ref. to ET-34, Antenna.>	Is the telematics antenna OK?	Replace the DCM. <Ref. to ET-44, Data Communication Module.>	Replace the telematics antenna. <Ref. to ET-34, Antenna.>

Diagnostic Procedure with Diagnostic Trouble Code (DTC)

TELEMATICS SYSTEM (DIAGNOSTICS)

L: DTC B2A02 TEL2 ANTENNA CIRCUIT

Diagnosis start condition:

When ignition switch is ON.

DTC detecting condition:

Any of the followings continues for 5 seconds or more.

- TEL2 impedance is more than 1 MΩ. (Detached antenna, etc.)
- TEL2 impedance is less than 1 kΩ. (Short-circuited antenna, etc.)

Trouble symptom:

- Telematics function cannot be used.
- RED LED illuminates.

CAUTION:

CommCheck is required after replacing the DCM. <Ref. to ET-27, REGISTRATION (COMM CHECK), OPERATION, Telematics System.>

	Step	Check	Yes	No
1	CHECK DTC. Read the DTC. <Ref. to TEL(diag)-15, Diagnostic Code(s) Display.>	Is DTC B2A02 displayed? (Current malfunction)	Go to step 2.	Even if DTC is displayed, the circuit has returned to a normal condition at this time. Reproduce the failure, and then perform the diagnosis again. In this case, temporary poor contact of connector, temporary open or short circuit of harness may be the cause.
2	CHECK ANTENNA. Visually check the telematics sub antenna. <Ref. to ET-34, Antenna.>	Is the telematics sub antenna OK?	Replace the DCM. <Ref. to ET-44, Data Communication Module.>	Replace the telematics sub antenna. <Ref. to ET-34, Antenna.>

Diagnostic Procedure with Diagnostic Trouble Code (DTC)

TELEMATICS SYSTEM (DIAGNOSTICS)

M: DTC B2A03 GPS ANTENNA CIRCUIT

Diagnosis start condition:

When ignition switch is ON.

DTC detecting condition:

Any of the followings continues for 5 seconds or more.

- GPS antenna impedance is more than 1 M Ω . (Detached antenna, etc.)
- GPS antenna impedance is less than 10 Ω . (Short-circuited antenna, etc.)

Trouble symptom:

- Telematics function cannot be used.
- RED LED illuminates.

CAUTION:

CommCheck is required after replacing the DCM. <Ref. to ET-27, REGISTRATION (COMM CHECK), OPERATION, Telematics System.>

	Step	Check	Yes	No
1	CHECK DTC. Read the DTC. <Ref. to TEL(diag)-15, Diagnostic Code(s) Display.>	Is DTC B2A03 displayed? (Current malfunction)	Go to step 2.	Even if DTC is displayed, the circuit has returned to a normal condition at this time. Reproduce the failure, and then perform the diagnosis again. In this case, temporary poor contact of connector, temporary open or short circuit of harness may be the cause.
2	CHECK GPS ANTENNA. Visually check the GPS antenna. <Ref. to ET-42, GPS Antenna.>	Is the GPS antenna OK?	Replace the DCM. <Ref. to ET-44, Data Communication Module.>	Replace the GPS antenna. <Ref. to ET-42, GPS Antenna.>

Diagnostic Procedure with Diagnostic Trouble Code (DTC)

TELEMATICS SYSTEM (DIAGNOSTICS)

N: DTC B2A04 MIC CIRCUIT

Diagnosis start condition:

When ACC is ON.

DTC detecting condition:

Any of the followings continues for 1 second or more.

- MIC impedance is more than 10 kΩ. (Detached MIC, etc.)
- MIC impedance is less than 10 Ω. (Short-circuited MIC, etc.)

Trouble symptom:

- Call function cannot be used.
- RED LED illuminates.

Wiring diagram:

NOTE:

For the coupling connector, refer to "WIRING SYSTEM".

Telematics <Ref. to WI-221, WIRING DIAGRAM, Telematics System.>

ET-10160

CAUTION:

CommCheck is required after replacing the DCM. <Ref. to ET-27, REGISTRATION (COMM CHECK), OPERATION, Telematics System.>

Step	Check	Yes	No
1	CHECK DTC. Read the DTC. <Ref. to TEL(diag)-15, Diagnostic Code(s) Display.>	Is DTC B2A04 displayed? (Current malfunction)	Go to step 2.
			Even if DTC is displayed, the circuit has returned to a normal condition at this time. Reproduce the failure, and then perform the diagnosis again. In this case, temporary poor contact of connector, temporary open or short circuit of harness may be the cause.

Diagnostic Procedure with Diagnostic Trouble Code (DTC)

TELEMATICS SYSTEM (DIAGNOSTICS)

Step	Check	Yes	No
<p>2 CHECK HARNESS (OPEN CIRCUIT).</p> <p>1) Turn the ignition switch to OFF. 2) Disconnect the microphone connector. 3) Disconnect the DCM connector. 4) Measure the resistance between microphone connector and DCM connector.</p> <p>Connector & terminal</p> <p>With sunroof and without EyeSight (R56) No. 7 — (i271) No. 14: (R56) No. 8 — (i271) No. 8: (R56) No. 9 — (i271) No. 6:</p> <p>Without sunroof and without EyeSight (R56) No. 4 — (i271) No. 14: (R56) No. 5 — (i271) No. 8: (R56) No. 6 — (i271) No. 6:</p> <p>With EyeSight (R405) No. 4 — (i271) No. 6: (R405) No. 3 — (i271) No. 8: (R405) No. 5 — (i271) No. 14:</p>	Is the resistance 1 Ω or less?	Go to step 3.	Repair or replace the open circuit of harness.
<p>3 CHECK HARNESS (GROUND SHORT CIRCUIT).</p> <p>Measure the resistance between DCM connector and chassis ground.</p> <p>Connector & terminal (i271) No. 8 — Chassis ground: (i271) No. 14 — Chassis ground: (i271) No. 6 — Chassis ground:</p>	Is the resistance 1 MΩ or more?	Go to step 4.	Repair or replace the short circuit of the harness.
<p>4 CHECK THE CONNECTOR (SHORT CIRCUIT TO POWER SUPPLY).</p> <p>Measure the voltage between DCM connector and chassis ground.</p> <p>Connector & terminal (i271) No. 8 (+) — Chassis ground (-): (i271) No. 14 (+) — Chassis ground (-): (i271) No. 6 (+) — Chassis ground (-):</p>	Is the voltage less than 1 V?	Go to step 5.	Repair or replace the short circuit of the harness.
<p>5 CHECK MICROPHONE.</p> <p>Confirm the microphone voice input.</p>	Is the voice input OK?	Replace the DCM. <Ref. to ET-44, Data Communication Module.>	Replace the microphone. <Ref. to ET-40, Microphone.>

Diagnostic Procedure with Diagnostic Trouble Code (DTC)

TELEMATICS SYSTEM (DIAGNOSTICS)

O: DTC B2A05 LEFT SPEAKER/AUDIO CIRCUIT

Diagnosis start condition:

When ACC is ON.

DTC detecting condition:

Speaker impedance is more than 10 kΩ for 100 ms. (Detached speaker connection, etc.)

Trouble symptom:

- Call function cannot be used.
- RED LED illuminates.

Wiring diagram:

NOTE:

For the coupling connector, refer to "WIRING SYSTEM".

Telematics <Ref. to WI-221, WIRING DIAGRAM, Telematics System.>

CAUTION:

CommCheck is required after replacing the DCM. <Ref. to ET-27, REGISTRATION (COMM CHECK), OPERATION, Telematics System.>

Diagnostic Procedure with Diagnostic Trouble Code (DTC)

TELEMATICS SYSTEM (DIAGNOSTICS)

	Step	Check	Yes	No
1	CHECK DTC. Read the DTC. <Ref. to TEL(diag)-15, Diagnostic Code(s) Display.>	Is DTC B2A05 displayed? (Current malfunction)	Go to step 2.	Even if DTC is displayed, the circuit has returned to a normal condition at this time. Reproduce the failure, and then perform the diagnosis again. In this case, temporary poor contact of connector, temporary open or short circuit of harness may be the cause.
2	PERFORM THE SYSTEM OPERATION CHECK. Perform [Speaker ON] in the system operation check mode. <Ref. to TEL(diag)-20, System Operation Check Mode.>	Does it sound?	Even if DTC is displayed, the circuit has returned to a normal condition at this time. Reproduce the failure, and then perform the diagnosis again. In this case, temporary poor contact of connector, temporary open or short circuit of harness may be the cause.	Go to step 3.
3	CHECK HARNESS (OPEN CIRCUIT). 1) Turn the ignition switch to OFF. 2) Disconnect the speaker connector and tweeter connector. 3) Disconnect the DCM connector. 4) Measure the resistance between speaker connector and tweeter connector and DCM connector. Connector & terminal <i>(i271) No. 2 — (D2) No. 2:</i> <i>(i271) No. 2 — (i158) No. 1:</i> <i>(i271) No. 10 — (D2) No. 1:</i> <i>(i271) No. 10 — (i158) No. 3:</i>	Is the resistance 1 Ω or less?	Go to step 4.	Repair or replace the open circuit of harness.
4	CHECK HARNESS (GROUND SHORT CIRCUIT). Measure the resistance between DCM connector and chassis ground. Connector & terminal <i>(i271) No. 2 — Chassis ground:</i> <i>(i271) No. 10 — Chassis ground:</i>	Is the resistance 1 MΩ or more?	Go to step 5.	Repair or replace the short circuit of the harness.
5	CHECK THE CONNECTOR (SHORT CIRCUIT TO POWER SUPPLY). Measure the voltage between DCM connector and chassis ground. Connector & terminal <i>(i271) No. 2 (+) — Chassis ground (-):</i> <i>(i271) No. 10 (+) — Chassis ground (-):</i>	Is the voltage less than 1 V?	Go to step 6.	Repair or replace the short circuit of the harness.

Diagnostic Procedure with Diagnostic Trouble Code (DTC)

TELEMATICS SYSTEM (DIAGNOSTICS)

	Step	Check	Yes	No
6	CHECK THE SPEAKER. Perform the inspection of speaker unit and tweeter unit. <Ref. to ET-31, Front Speaker.>	Are the speaker and tweeter OK?	Replace the DCM. <Ref. to ET-44, Data Communication Module.>	Replace the speaker and tweeter. <Ref. to ET-31, Front Speaker.>

Diagnostic Procedure with Diagnostic Trouble Code (DTC)

TELEMATICS SYSTEM (DIAGNOSTICS)

P: DTC B2A06 RIGHT SPEAKER/AUDIO CIRCUIT

Diagnosis start condition:

When ACC is ON.

DTC detecting condition:

Speaker impedance is more than 10 kΩ for 100 ms. (Detached speaker connection, etc.)

Trouble symptom:

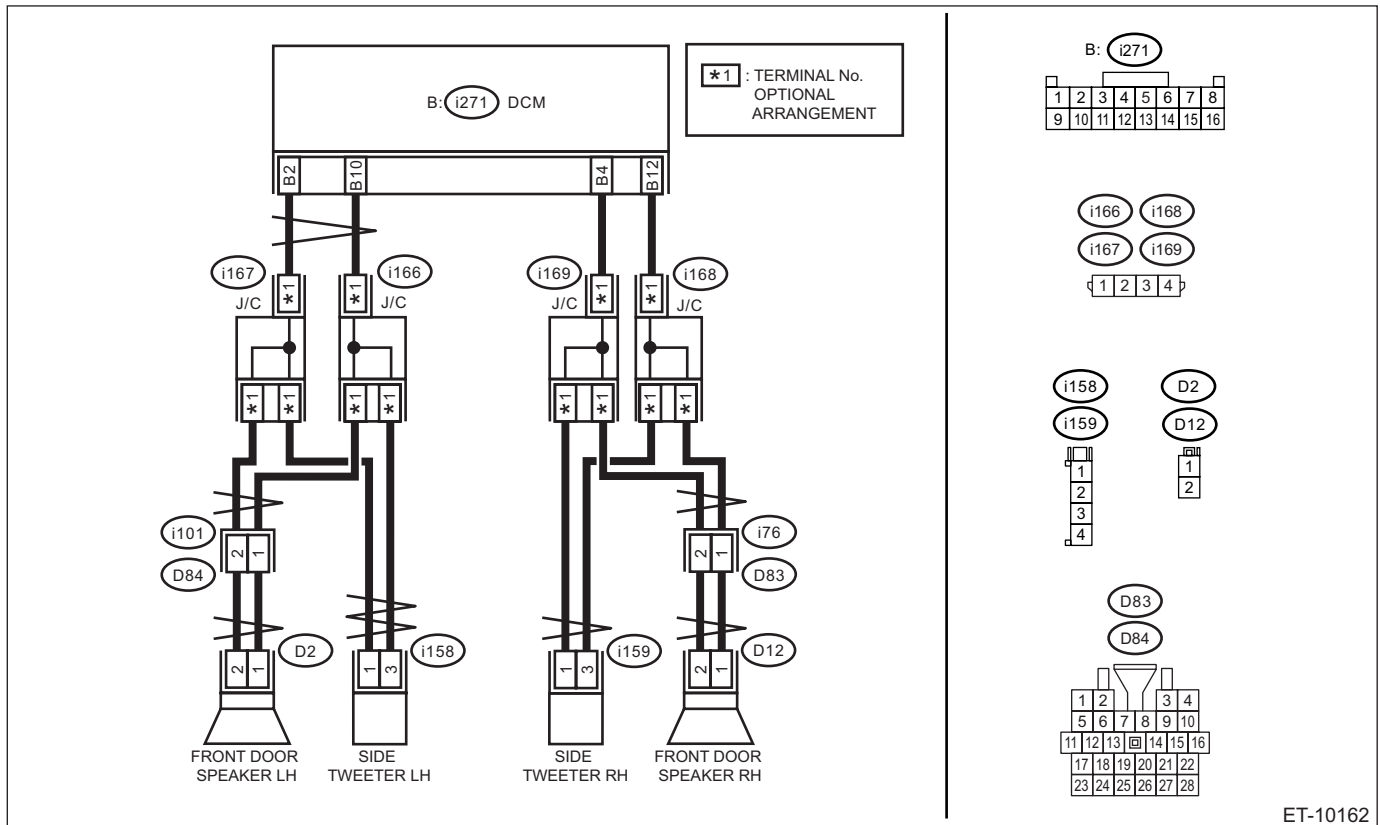

- Call function cannot be used.
- RED LED illuminates.

Wiring diagram:

NOTE:

For the coupling connector, refer to "WIRING SYSTEM".

Telematics <Ref. to WI-221, WIRING DIAGRAM, Telematics System.>

CAUTION:

CommCheck is required after replacing the DCM. <Ref. to ET-27, REGISTRATION (COMM CHECK), OPERATION, Telematics System.>

Diagnostic Procedure with Diagnostic Trouble Code (DTC)

TELEMATICS SYSTEM (DIAGNOSTICS)

	Step	Check	Yes	No
1	CHECK DTC. Read the DTC. <Ref. to TEL(diag)-15, Diagnostic Code(s) Display.>	Is DTC B2A06 displayed? (Current malfunction)	Go to step 2.	Even if DTC is displayed, the circuit has returned to a normal condition at this time. Reproduce the failure, and then perform the diagnosis again. In this case, temporary poor contact of connector, temporary open or short circuit of harness may be the cause.
2	PERFORM THE SYSTEM OPERATION CHECK. Perform [Speaker ON] in the system operation check mode. <Ref. to TEL(diag)-20, System Operation Check Mode.>	Does it sound?	Even if DTC is displayed, the circuit has returned to a normal condition at this time. Reproduce the failure, and then perform the diagnosis again. In this case, temporary poor contact of connector, temporary open or short circuit of harness may be the cause.	Go to step 3.
3	CHECK HARNESS (OPEN CIRCUIT). 1) Turn the ignition switch to OFF. 2) Disconnect the speaker connector and tweeter connector. 3) Disconnect the DCM connector. 4) Measure the resistance between speaker connector and tweeter connector and DCM connector. <i>Connector & terminal</i> <i>(i271) No. 4 — (D12) No. 2:</i> <i>(i271) No. 4 — (i159) No. 1:</i> <i>(i271) No. 12 — (D12) No. 1:</i> <i>(i271) No. 12 — (i159) No. 3:</i>	Is the resistance 1 Ω or less?	Go to step 4.	Repair or replace the open circuit of harness.
4	CHECK HARNESS (GROUND SHORT CIRCUIT). Measure the resistance between DCM connector and chassis ground. <i>Connector & terminal</i> <i>(i271) No. 4 — Chassis ground:</i> <i>(i271) No. 12 — Chassis ground:</i>	Is the resistance 1 MΩ or more?	Go to step 5.	Repair or replace the short circuit of the harness.
5	CHECK THE CONNECTOR (SHORT CIRCUIT TO POWER SUPPLY). Measure the voltage between DCM connector and chassis ground. <i>Connector & terminal</i> <i>(i271) No. 4 (+) — Chassis ground (-):</i> <i>(i271) No. 12 (+) — Chassis ground (-):</i>	Is the voltage less than 1 V?	Go to step 6.	Repair or replace the short circuit of the harness.

Diagnostic Procedure with Diagnostic Trouble Code (DTC)

TELEMATICS SYSTEM (DIAGNOSTICS)

	Step	Check	Yes	No
6	CHECK THE SPEAKER. Perform the inspection of speaker unit and tweeter unit. <Ref. to ET-31, Front Speaker.>	Are the speaker and tweeter OK?	Replace the DCM. <Ref. to ET-44, Data Communication Module.>	Replace the speaker and tweeter. <Ref. to ET-31, Front Speaker.>

Diagnostic Procedure with Diagnostic Trouble Code (DTC)

TELEMATICS SYSTEM (DIAGNOSTICS)

Q: DTC B2A07 BACKUP BATTERY CHARGE SYSTEM PERFORMANCE

DIAGNOSIS START CONDITION:

When ignition switch is ON.

DTC DETECTING CONDITION:

Backup battery is disconnected for at least 5 seconds when the ignition switch is turned ON. (Detached back-up battery connection, etc.)

TROUBLE SYMPTOM:

- ACN/SOS function cannot be used when the main battery is disconnected.
- RED LED illuminates.

CAUTION:

CommCheck is required after replacing the DCM. <Ref. to ET-27, REGISTRATION (COMM CHECK), OPERATION, Telematics System.>

	Step	Check	Yes	No
1	CHECK DTC. Read the DTC. <Ref. to TEL(diag)-15, Diagnostic Code(s) Display.>	Is DTC B2A07 displayed? (Current malfunction)	Go to step 2.	Even if DTC is displayed, the circuit has returned to a normal condition at this time. Reproduce the failure, and then perform the diagnosis again. In this case, temporary poor contact of connector, temporary open or short circuit of harness may be the cause.
2	CHECK BACKUP BATTERY. 1) Remove the DCM. <Ref. to ET-44, Data Communication Module.> 2) Remove the backup battery cover. 3) Disconnect the backup battery connector. 4) Measure the backup battery voltage.	Is the voltage 2.0 V or more?	Replace the DCM. <Ref. to ET-44, Data Communication Module.>	Replace the backup battery. <Ref. to ET-44, Data Communication Module.>

Diagnostic Procedure with Diagnostic Trouble Code (DTC)

TELEMATICS SYSTEM (DIAGNOSTICS)

R: DTC B2A08 SOS BUTTON CIRCUIT

Diagnosis start condition:

When ignition switch is ON.

DTC detecting condition:

The following conditions occur for at least 50 ms.

- SOS button impedance is more than 10 kΩ.
- SOS button is stuck for at least 60 seconds.

Trouble symptom:

- SOS function cannot be used.
- RED LED illuminates.

Wiring diagram:

NOTE:

For the coupling connector, refer to "WIRING SYSTEM".

Telematics <Ref. to WI-221, WIRING DIAGRAM, Telematics System.>

ET-10325

CAUTION:

CommCheck is required after replacing the DCM. <Ref. to ET-27, REGISTRATION (COMM CHECK), OPERATION, Telematics System.>

Step	Check	Yes	No	
1	CHECK DTC. Read the DTC. <Ref. to TEL(diag)-15, Diagnostic Code(s) Display.>	Is DTC B2A08 displayed? (Current malfunction)	Go to step 2.	Even if DTC is displayed, the circuit has returned to a normal condition at this time. Reproduce the failure, and then perform the diagnosis again. In this case, temporary poor contact of connector, temporary open or short circuit of harness may be the cause.

Diagnostic Procedure with Diagnostic Trouble Code (DTC)

TELEMATICS SYSTEM (DIAGNOSTICS)

Step	Check	Yes	No
<p>2 CHECK HARNESS (OPEN CIRCUIT). 1) Turn the ignition switch to OFF. 2) Disconnect the telematics button connector. 3) Disconnect the DCM connector. 4) Measure the resistance between telematics button connector and DCM connector. Connector & terminal <i>(i270) No. 5 — (AD2) No. 6:</i> <i>(AD2) No. 1 — Chassis ground:</i></p>	<p>Is the resistance 1 Ω or less?</p>	<p>Go to step 3.</p>	<p>Repair or replace the open circuit of harness.</p>
<p>3 CHECK HARNESS (GROUND SHORT CIRCUIT). Measure the resistance between DCM connector and chassis ground. Connector & terminal <i>(i270) No. 5 — Chassis ground:</i></p>	<p>Is the resistance 1 MΩ or more?</p>	<p>Go to step 4.</p>	<p>Repair or replace the short circuit of the harness.</p>
<p>4 CHECK THE CONNECTOR (SHORT CIRCUIT TO POWER SUPPLY). Measure the voltage between DCM connector and chassis ground. Connector & terminal <i>(i270) No. 5 (+) — Chassis ground (-):</i> <i>(AD2) No. 1 (+) — Chassis ground (-):</i></p>	<p>Is the voltage less than 1 V?</p>	<p>Go to step 5.</p>	<p>Repair or replace the short circuit of the harness.</p>
<p>5 CHECK THE SOS BUTTON UNIT. Measure the resistance of the SOS button unit. Terminals <i>No. 6 — No. 1:</i></p>	<p>Is the resistance 1 Ω or less when SOS button is ON, and 1.6 (±5%) kΩ or more when SOS button is OFF?</p>	<p>Replace the DCM. <Ref. to ET-44, Data Communication Module.></p>	<p>Replace the telematics button. <Ref. to ET-37, Switches and Harness.></p>

Diagnostic Procedure with Diagnostic Trouble Code (DTC)

TELEMATICS SYSTEM (DIAGNOSTICS)

S: DTC B2A09 I-CALL BUTTON CIRCUIT

Diagnosis start condition:

When ignition switch is ON.

DTC detecting condition:

The following conditions occur for at least 50 ms.

- i-button impedance is more than 10 kΩ.
- i-button is stuck for at least 60 seconds.

Trouble symptom:

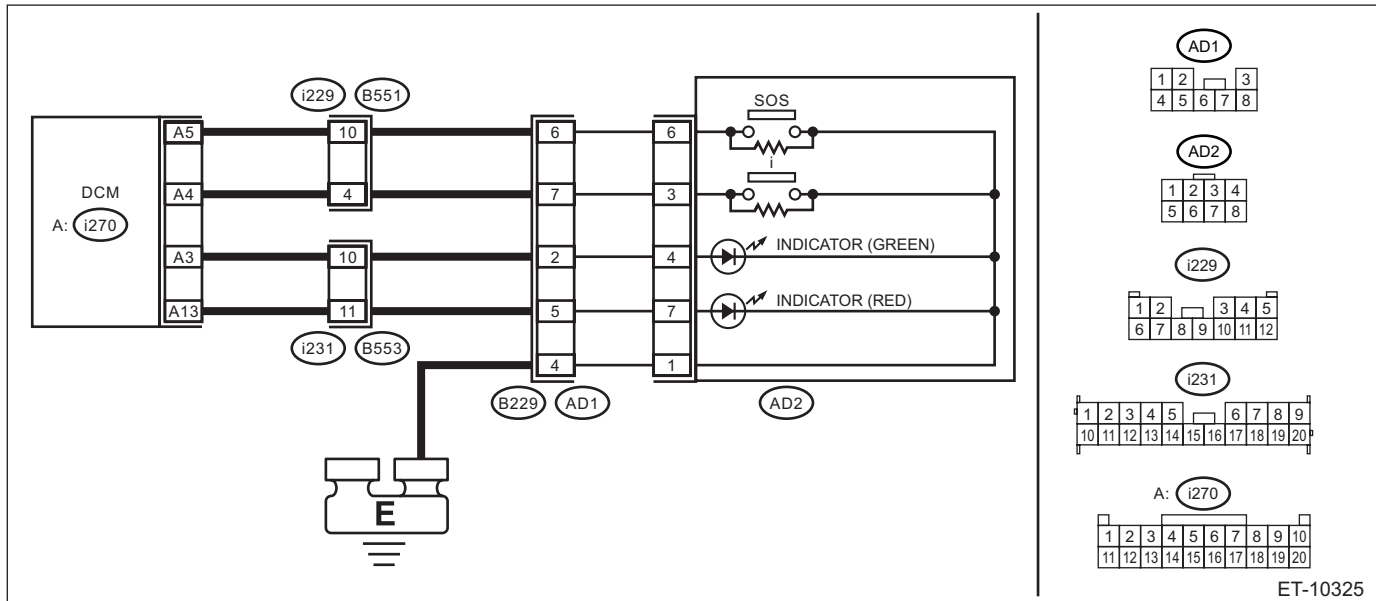

- i-Call function cannot be used.
- RED LED illuminates.

Wiring diagram:

NOTE:

For the coupling connector, refer to "WIRING SYSTEM".

Telematics <Ref. to WI-221, WIRING DIAGRAM, Telematics System.>

CAUTION:

CommCheck is required after replacing the DCM. <Ref. to ET-27, REGISTRATION (COMM CHECK), OPERATION, Telematics System.>

Step	Check	Yes	No	
1	CHECK DTC. Read the DTC. <Ref. to TEL(diag)-15, Diagnostic Code(s) Display.>	Is DTC B2A09 displayed? (Current malfunction)	Go to step 2.	Even if DTC is displayed, the circuit has returned to a normal condition at this time. Reproduce the failure, and then perform the diagnosis again. In this case, temporary poor contact of connector, temporary open or short circuit of harness may be the cause.

Diagnostic Procedure with Diagnostic Trouble Code (DTC)

TELEMATICS SYSTEM (DIAGNOSTICS)

Step	Check	Yes	No
<p>2 CHECK HARNESS (OPEN CIRCUIT). 1) Turn the ignition switch to OFF. 2) Disconnect the telematics button connector. 3) Disconnect the DCM connector. 4) Measure the resistance between telematics button connector and DCM connector. Connector & terminal <i>(i270) No. 4 — (AD2) No. 3:</i> <i>(AD2) No. 1 — Chassis ground:</i></p>	<p>Is the resistance 1 Ω or less?</p>	<p>Go to step 3.</p>	<p>Repair or replace the open circuit of harness.</p>
<p>3 CHECK HARNESS (GROUND SHORT CIRCUIT). Measure the resistance between DCM connector and chassis ground. Connector & terminal <i>(i270) No. 4 — Chassis ground:</i></p>	<p>Is the resistance 1 MΩ or more?</p>	<p>Go to step 4.</p>	<p>Repair or replace the short circuit of the harness.</p>
<p>4 CHECK THE CONNECTOR (SHORT CIRCUIT TO POWER SUPPLY). Measure the voltage between DCM connector and chassis ground. Connector & terminal <i>(i270) No. 4 (+) — Chassis ground (-):</i> <i>(AD2) No. 1 (+) — Chassis ground (-):</i></p>	<p>Is the voltage less than 1 V?</p>	<p>Go to step 5.</p>	<p>Repair or replace the short circuit of the harness.</p>
<p>5 CHECK I-BUTTON. Measure the resistance of the i-button unit. Terminals No. 3 — No. 1:</p>	<p>Is the resistance 1 Ω or less when i-button is ON, and 1.6 (±5%) kΩ or more when i-button is OFF?</p>	<p>Replace the DCM. <Ref. to ET-44, Data Communication Module.></p>	<p>Replace the telematics button. <Ref. to ET-37, Switches and Harness.></p>

Diagnostic Procedure with Diagnostic Trouble Code (DTC)

TELEMATICS SYSTEM (DIAGNOSTICS)

Step	Check	Yes	No
2 PERFORM THE SYSTEM OPERATION CHECK. Perform [RED LED Lighting] in the system operation check mode. <Ref. to TEL(diag)-20, System Operation Check Mode.>	Does the RED LED illuminate?	Even if DTC is displayed, the circuit has returned to a normal condition at this time. Reproduce the failure, and then perform the diagnosis again. In this case, temporary poor contact of connector, temporary open or short circuit of harness may be the cause.	Go to step 3.
3 CHECK HARNESS (OPEN CIRCUIT). 1) Turn the ignition switch to OFF. 2) Disconnect the telematics button connector. 3) Disconnect the DCM connector. 4) Measure the resistance between telematics button connector and DCM connector. <i>Connector & terminal</i> <i>(i270) No. 13 — (AD2) No. 7:</i> <i>(AD2) No. 1 — Chassis ground:</i>	Is the resistance 1 Ω or less?	Go to step 4.	Repair or replace the open circuit of harness.
4 CHECK HARNESS (GROUND SHORT CIRCUIT). Measure the resistance between DCM connector and chassis ground. <i>Connector & terminal</i> <i>(i270) No. 13 — Chassis ground:</i>	Is the resistance 1 MΩ or more?	Go to step 5.	Repair or replace the short circuit of the harness.
5 CHECK THE CONNECTOR (SHORT CIRCUIT TO POWER SUPPLY). Measure the voltage between DCM connector and chassis ground. <i>Connector & terminal</i> <i>(i270) No. 13 (+) — Chassis ground (-):</i> <i>(AD2) No. 1 (+) — Chassis ground (-):</i>	Is the voltage less than 1 V?	Go to step 6.	Repair or replace the short circuit of the harness.
6 CHECK THE TELEMATICS BUTTON (LED) UNIT. Measure the resistance of the telematics button (LED) unit. <i>Terminals</i> <i>No. 7 — No. 1:</i>	Is there continuity?	Replace the DCM. <Ref. to ET-44, Data Communication Module.>	Replace the telematics button. <Ref. to ET-37, Switches and Harness.>

Diagnostic Procedure with Diagnostic Trouble Code (DTC)

TELEMATICS SYSTEM (DIAGNOSTICS)

U: DTC B2A0B GREEN LED CIRCUIT

Diagnosis start condition:

When ACC is ON.

DTC detecting condition:

The following conditions occur for at least 50 ms.

- Current in LED is less than 1 mA. (Improper LED connection, etc.)
- Current in LED is more than 200 mA. (Short-circuited LED, etc.)

Trouble symptom:

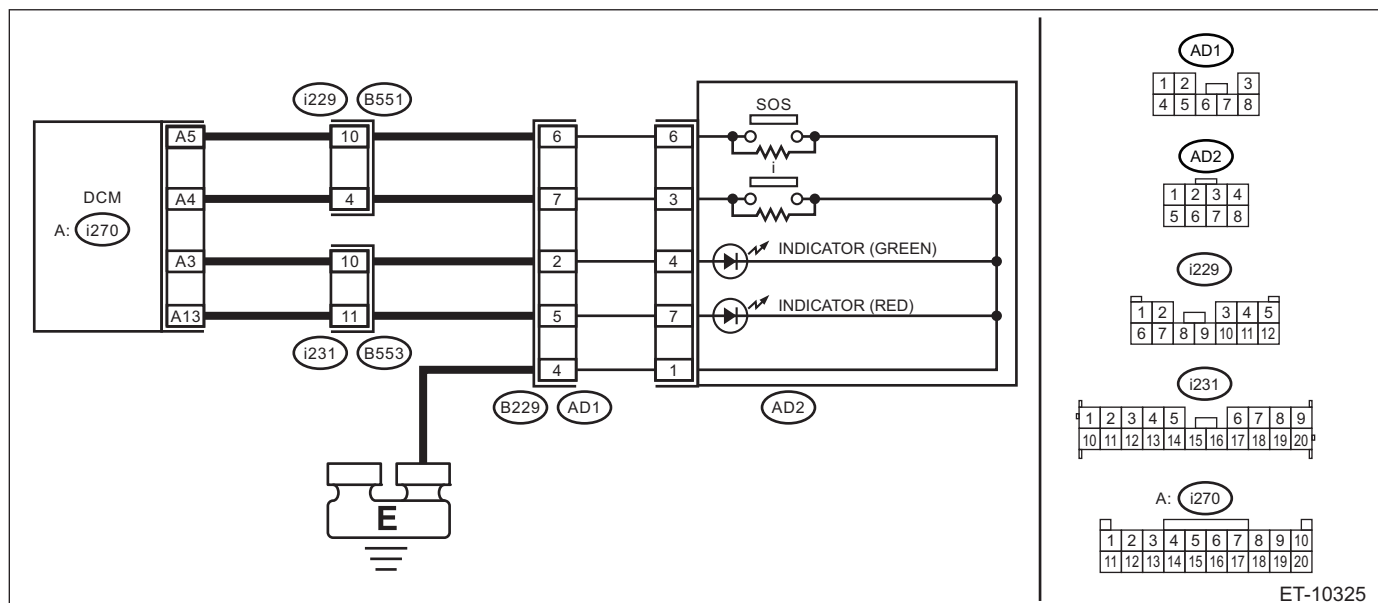

RED LED illuminates.

Wiring diagram:

NOTE:

For the coupling connector, refer to "WIRING SYSTEM".

Telematics <Ref. to WI-221, WIRING DIAGRAM, Telematics System.>

ET-10325

CAUTION:

CommCheck is required after replacing the DCM. <Ref. to ET-27, REGISTRATION (COMM CHECK), OPERATION, Telematics System.>

Step	Check	Yes	No
1	<p>CHECK DTC. Read the DTC. <Ref. to TEL(diag)-15, Diagnostic Code(s) Display.></p>	Is DTC B2A0B displayed? (Current malfunction)	Go to step 2.
			<p>Even if DTC is displayed, the circuit has returned to a normal condition at this time. Reproduce the failure, and then perform the diagnosis again.</p> <p>In this case, temporary poor contact of connector, temporary open or short circuit of harness may be the cause.</p>

Diagnostic Procedure with Diagnostic Trouble Code (DTC)

TELEMATICS SYSTEM (DIAGNOSTICS)

Step	Check	Yes	No
2 PERFORM THE SYSTEM OPERATION CHECK. Perform [GREEN LED Lighting] in the system operation check mode. <Ref. to TEL(diag)-20, System Operation Check Mode.>	Does the GREEN LED illuminate?	Even if DTC is displayed, the circuit has returned to a normal condition at this time. Reproduce the failure, and then perform the diagnosis again. In this case, temporary poor contact of connector, temporary open or short circuit of harness may be the cause.	Go to step 3.
3 CHECK HARNESS (OPEN CIRCUIT). 1) Turn the ignition switch to OFF. 2) Disconnect the telematics button connector. 3) Disconnect the DCM connector. 4) Measure the resistance between telematics button connector and DCM connector. <i>Connector & terminal</i> <i>(i270) No. 3 — (AD2) No. 4:</i> <i>(AD2) No. 1 — Chassis ground:</i>	Is the resistance 1 Ω or less?	Go to step 4.	Repair or replace the open circuit of harness.
4 CHECK HARNESS (GROUND SHORT CIRCUIT). Measure the resistance between DCM connector and chassis ground. <i>Connector & terminal</i> <i>(i270) No. 3 — Chassis ground:</i>	Is the resistance 1 MΩ or more?	Go to step 5.	Repair or replace the short circuit of the harness.
5 CHECK THE CONNECTOR (SHORT CIRCUIT TO POWER SUPPLY). Measure the voltage between DCM connector and chassis ground. <i>Connector & terminal</i> <i>(i270) No. 3 (+) — Chassis ground (-):</i> <i>(AD2) No. 1 (+) — Chassis ground (-):</i>	Is the voltage less than 1 V?	Go to step 6.	Repair or replace the short circuit of the harness.
6 CHECK THE TELEMATICS BUTTON (LED) UNIT. Measure the resistance of the telematics button (LED) unit. <i>Terminals</i> <i>No. 4 — No. 1:</i>	Is there continuity?	Replace the DCM. <Ref. to ET-44, Data Communication Module.>	Replace the telematics button. <Ref. to ET-37, Switches and Harness.>

Diagnostic Procedure with Diagnostic Trouble Code (DTC)

TELEMATICS SYSTEM (DIAGNOSTICS)

V: DTC B2A0C DCM INTERNAL FAULT

DIAGNOSIS START CONDITION:

When ignition switch is ON.

DTC DETECTING CONDITION:

- Main microcomputer and communication circuit IC cannot communicate. (Defective IPC)
- SIM (communication chip) cannot be read. (Defective SIM)

TROUBLE SYMPTOM:

- Telematics function cannot be used.
- RED LED illuminates.

CAUTION:

CommCheck is required after replacing the DCM. <Ref. to ET-27, REGISTRATION (COMM CHECK), OPERATION, Telematics System.>

Step	Check	Yes	No
1 CHECK DTC. Read the DTC. <Ref. to TEL(diag)-15, Diagnostic Code(s) Display.>	Is DTC B2A0C displayed? (Current malfunction)	Replace the DCM. <Ref. to ET-44, Data Communication Module.>	Even if DTC is displayed, the circuit has returned to a normal condition at this time. Reproduce the failure, and then perform the diagnosis again. In this case, temporary poor contact of connector, temporary open or short circuit of harness may be the cause.

Diagnostic Procedure with Diagnostic Trouble Code (DTC)

TELEMATICS SYSTEM (DIAGNOSTICS)

W: DTC B2A0D AIRBAG SIGNAL

Diagnosis start condition:

When ignition switch is ON.

DTC detecting condition:

Either the regular signal or collision signal cannot be detected from the airbag CM for at least 30 seconds.

Trouble symptom:

- ACN function does not operate.
- RED LED illuminates.

Wiring diagram:

NOTE:

For the coupling connector, refer to “WIRING SYSTEM”.

Telematics <Ref. to WI-221, WIRING DIAGRAM, Telematics System.>

ET-10166

CAUTION:

- CommCheck is required after replacing the DCM. <Ref. to ET-27, REGISTRATION (COMM CHECK), OPERATION, Telematics System.>
- Before performing diagnosis, refer to “CAUTION” in “General Description” in Airbag System. <Ref. to AB-9, CAUTION, General Description.>

Step	Check	Yes	No	
1	CHECK DTC. Read the DTC. <Ref. to TEL(diag)-15, Diagnostic Code(s) Display.>	Is DTC B2A0D displayed? (Current malfunction)	Go to step 2.	Even if DTC is displayed, the circuit has returned to a normal condition at this time. Reproduce the failure, and then perform the diagnosis again. In this case, temporary poor contact of connector, temporary open or short circuit of harness may be the cause.
2	CHECK DTC. Read DTC of the airbag. <Ref. to AB(diag)-21, Read Diagnostic Trouble Code (DTC).>	Is DTC displayed? (Current malfunction)	Perform the diagnosis according to DTC.	Go to step 3.

Diagnostic Procedure with Diagnostic Trouble Code (DTC)

TELEMATICS SYSTEM (DIAGNOSTICS)

Step	Check	Yes	No
3 CHECK HARNESS (OPEN CIRCUIT). 1) Turn the ignition switch to OFF, disconnect the battery ground cable, and wait for 60 seconds or more. 2) Disconnect the airbag CM connector. 3) Disconnect the DCM connector. 4) Measure the resistance between airbag CM connector and DCM connector. CAUTION: To measure the voltage and resistance of airbag system component, be sure to use the specified test harness. <Ref. to AB(diag)-4, General Description.> Connector & terminal (i270) No. 18 — (AB6) No. 24:	Is the resistance 1 Ω or less?	Go to step 4.	Repair or replace the open circuit of harness.
4 CHECK HARNESS (GROUND SHORT CIRCUIT). Measure the resistance between DCM connector and chassis ground. Connector & terminal (i270) No. 18 — Chassis ground:	Is the resistance 1 M Ω or more?	Go to step 5.	Repair or replace the short circuit of the harness.
5 CHECK THE CONNECTOR (SHORT CIRCUIT TO POWER SUPPLY). Measure the voltage between DCM connector and chassis ground. Connector & terminal (i270) No. 18 (+) — Chassis ground (-):	Is the voltage less than 1 V?	Replace the DCM. <Ref. to ET-44, Data Communication Module.>	Repair or replace the short circuit of the harness.

Diagnostic Procedure with Diagnostic Trouble Code (DTC)

TELEMATICS SYSTEM (DIAGNOSTICS)

X: DTC B2A0E MUTE LINE CIRCUIT

Diagnosis start condition:

When ignition switch is ON.

DTC detecting condition:

Any of the following conditions occurs continuously for five seconds or more after the ignition switch is turned to ON when DCM does not mute the audio or navigation system.

- Current in the mute line is less than 1 mA. (Improper line connection, etc.)
- Current exceeds 50 mA. (Short-circuited line, etc.)

Trouble symptom:

- The mute function of audio or navigation system does not operate.
- RED LED illuminates.

Wiring diagram:

Telematics <Ref. to WI-221, WIRING DIAGRAM, Telematics System.>

ET-10158

CAUTION:

CommCheck is required after replacing the DCM. <Ref. to ET-27, REGISTRATION (COMM CHECK), OPERATION, Telematics System.>

Step	Check	Yes	No	
1	<p>CHECK DTC. Read the DTC. <Ref. to TEL(diag)-15, Diagnostic Code(s) Display.></p>	Is DTC B2A0E displayed? (Current malfunction)	Go to step 2.	<p>Even if DTC is displayed, the circuit has returned to a normal condition at this time. Reproduce the failure, and then perform the diagnosis again.</p> <p>In this case, temporary poor contact of connector, temporary open or short circuit of harness may be the cause.</p>

Diagnostic Procedure with Diagnostic Trouble Code (DTC)

TELEMATICS SYSTEM (DIAGNOSTICS)

Step	Check	Yes	No
2 CHECK HARNESS (OPEN CIRCUIT). 1) Turn the ignition switch to OFF. 2) Disconnect the audio or navigation connector. 3) Disconnect the DCM connector. 4) Measure the resistance between audio or navigation connector and DCM connector. Connector & terminal (i270) No. 19 — (i272) No. 8:	Is the resistance 1 Ω or less?	Go to step 3.	Repair or replace the open circuit of harness.
3 CHECK HARNESS (GROUND SHORT CIRCUIT). Measure the resistance between DCM connector and chassis ground. Connector & terminal (i270) No. 19 — Chassis ground:	Is the resistance 1 M Ω or more?	Go to step 4.	Repair or replace the short circuit of the harness.
4 CHECK THE CONNECTOR (SHORT CIRCUIT TO POWER SUPPLY). Measure the voltage between DCM connector and chassis ground. Connector & terminal (i270) No. 19 (+) — Chassis ground (-):	Is the voltage less than 1 V?	Replace the DCM. <Ref. to ET-44, Data Communication Module.>	Repair or replace the short circuit of the harness.

Diagnostic Procedure with Diagnostic Trouble Code (DTC)

TELEMATICS SYSTEM (DIAGNOSTICS)

Y: DTC B2A0F BACKUP BATTERY DEGRADATION

DIAGNOSIS START CONDITION:

When ignition switch is ON.

DTC DETECTING CONDITION:

- Backup battery voltage of charger is low.
- Charging attempt of 2 V or more fails after the backup battery has been charged for 1 hour continuously.
- Full charging is not achieved after the backup battery is charged for 7 hours in total (not continuously).

TROUBLE SYMPTOM:

RED LED illuminates.

CAUTION:

CommCheck is required after replacing the DCM. <Ref. to ET-27, REGISTRATION (COMM CHECK), OPERATION, Telematics System.>

Step	Check	Yes	No
1 CHECK DTC. Read the DTC. <Ref. to TEL(diag)-15, Diagnostic Code(s) Display.>	Is DTC B2A0F displayed? (Current malfunction)	Go to step 2.	Even if DTC is displayed, the circuit has returned to a normal condition at this time. Reproduce the failure, and then perform the diagnosis again. In this case, temporary poor contact of connector, temporary open or short circuit of harness may be the cause.
2 CHECK THE BACKUP BATTERY. Check the backup battery unit. <Ref. to ET-44, Data Communication Module.>	Is the backup battery OK?	Replace the DCM. <Ref. to ET-44, Data Communication Module.>	Replace the backup battery. <Ref. to ET-44, Data Communication Module.>

Diagnostic Procedure with Diagnostic Trouble Code (DTC)

TELEMATICS SYSTEM (DIAGNOSTICS)

Z: DTC B2A10 BATTERY VOLTAGE HIGH

Diagnosis start condition:

When ignition switch is ON.

DTC detecting condition:

DCM battery power supply input of 16 V or more continues for 5 seconds.

Trouble symptom:

RED LED illuminates.

CAUTION:

CommCheck is required after replacing the DCM. <Ref. to ET-27, REGISTRATION (COMM CHECK), OPERATION, Telematics System.>

	Step	Check	Yes	No
1	CHECK DTC. Read the DTC. <Ref. to TEL(diag)-15, Diagnostic Code(s) Display.>	Is DTC B2A10 displayed? (Current malfunction)	Go to step 2.	Even if DTC is displayed, the circuit has returned to a normal condition at this time. Reproduce the failure, and then perform the diagnosis again. In this case, temporary poor contact of connector, temporary open or short circuit of harness may be the cause.
2	CHECK CURRENT DATA. Check «Battery Voltage» of «Data Monitor». <Ref. to TEL(diag)-12, Read Current Data.>	Is «Battery Voltage» OK?	Replace the DCM. <Ref. to ET-44, Data Communication Module.>	Go to step 3.
3	CHECK BATTERY. Check the battery unit. <Ref. to SC(H4DO)-52, INSPECTION, Battery.>	Is the battery OK?	Replace the DCM. <Ref. to ET-44, Data Communication Module.>	Replace the battery. <Ref. to SC(H4DO)-51, Battery.>

13. Diagnostics with Phenomenon

A: LIST

No.	Symptoms	Reference
1	The system does not notify the Telematics Service Provider Center automatically after collision.	<Ref. to TEL(diag)-52, THE SYSTEM DOES NOT NOTIFY THE TELEMATICS SERVICE PROVIDER CENTER AUTOMATICALLY AFTER COLLISION, INSPECTION, Diagnostics with Phenomenon.>
2	The system does not notify the center even if the SOS button is pressed.	<Ref. to TEL(diag)-54, THE SYSTEM DOES NOT NOTIFY THE CENTER EVEN IF THE SOS BUTTON IS PRESSED, INSPECTION, Diagnostics with Phenomenon.>
3	The system places an SOS call unintentionally during driving.	<Ref. to TEL(diag)-55, THE SYSTEM PLACES AN SOS CALL UNINTENTIONALLY DURING DRIVING, INSPECTION, Diagnostics with Phenomenon.>
4	The system places an I-CALL unintentionally during driving.	<Ref. to TEL(diag)-55, THE SYSTEM PLACES AN I-CALL UNINTENTIONALLY DURING DRIVING, INSPECTION, Diagnostics with Phenomenon.>
5	The system does not notify the center even if the i-button is pressed upon vehicle malfunction.	<Ref. to TEL(diag)-55, THE SYSTEM DOES NOT NOTIFY THE CENTER EVEN IF THE I-BUTTON IS PRESSED UPON VEHICLE MALFUNCTION, INSPECTION, Diagnostics with Phenomenon.>

(THE MICROPHONE DOES NOT RESPOND TO A VOICE. NO SOUND IS HEARD FROM THE SPEAKER.), INSPECTION, Diagnostics with Phenomenon.>

Diagnostics with Phenomenon

TELEMATICS SYSTEM (DIAGNOSTICS)

B: INSPECTION

1. THE SYSTEM DOES NOT NOTIFY THE TELEMATICS SERVICE PROVIDER CENTER AUTOMATICALLY AFTER COLLISION

NOTE:

Perform the diagnostics for "Phone conversation is not possible. (The microphone does not respond to a voice. No sound is heard from the speaker.)". <Ref. to TEL(diag)-68, PHONE CONVERSATION IS NOT POSSIBLE. (THE MICROPHONE DOES NOT RESPOND TO A VOICE. NO SOUND IS HEARD FROM THE SPEAKER.), INSPECTION, Diagnostics with Phenomenon.>

CAUTION:

CommCheck is required after replacing the DCM. <Ref. to ET-27, REGISTRATION (COMM CHECK), OPERATION, Telematics System.>

	Step	Check	Yes	No
1	CHECK COLLISION TYPE. Check the collision type of the vehicle.	Is it any of a head-on collision, rear-end collision, or rollover?	Go to step 2.	If it is a rear-end collision, Go to step 4.
2	CHECK AIRBAG WARNING LIGHT. Check the airbag warning light.	Does the airbag warning light always illuminate?	Go to step 3.	The airbag system is normal. If it is a minor collision, the airbag CM does not transmit a collision detection signal. Therefore, it is normal that the automatic notification function does not operate.
3	CHECK DTCS. Read DTC of the airbag. <Ref. to AB(diag)-21, Read Diagnostic Trouble Code (DTC).>	Is DTC any of «Front Impact Deployment»«Side Impact Deployment»«Rollover Deployment History»?	The airbag system is normal. Go to step 7.	Perform the diagnosis of the airbag system. <Ref. to AB(diag)-2, Basic Diagnostic Procedure.>
4	CHECK RECEPTION STATUS OF COLLISION DETECTION SIGNAL. Display the current data «TimeStamp at ACN Event» of the Telematics. <Ref. to TEL(diag)-12, Read Current Data.>	Are the time stamps recorded?	Go to step 7. (A rear-end collision was detected.)	Go to step 5.
5	CHECK DTCS. Read DTCs of the Telematics. <Ref. to TEL(diag)-15, Diagnostic Code(s) Display.>	Is DTC displayed?	Perform the diagnosis according to DTC. <Ref. to TEL(diag)-15, LIST, Diagnostic Code(s) Display.>	Go to step 6.
6	CHECK AIRBAG WARNING LIGHT. Check the airbag warning light.	Does the airbag warning light always illuminate?	Perform the diagnosis of the airbag system. <Ref. to AB(diag)-2, Basic Diagnostic Procedure.>	The airbag system is normal. If it is a minor collision, the airbag CM does not transmit a collision detection signal. Therefore, it is normal that the automatic notification function does not operate.

Diagnostics with Phenomenon

TELEMATICS SYSTEM (DIAGNOSTICS)

Step	Check	Yes	No
7 CHECK SUBSCRIPTION STATUS. Display the current data «ACN Active» of the Telematics. <Ref. to TEL(diag)-12, Read Current Data.>	Is the data «TRUE»?	Go to step 8.	The user does not have a service subscription; therefore, it is not a failure.
8 CHECK DTCS. Read DTCs of the Telematics. <Ref. to TEL(diag)-15, Diagnostic Code(s) Display.>	Is DTC displayed?	Perform the diagnosis according to DTC. <Ref. to TEL(diag)-15, LIST, Diagnostic Code(s) Display.>	Go to step 9.
9 CHECK RECEIVED SIGNAL STRENGTH AT TIME OF ACCIDENT (CHECK CURRENT DATA). Display the current data «RSSI at ACN Event» of the Telematics. <Ref. to TEL(diag)-12, Read Current Data.>	Is the data 26% or more?	Go to step 11.	Go to step 10.
10 CHECK AT&T CELLULAR COVERAGE AREA. 1) Check whether the collision occurred within the cellular coverage area. 2) Display the current data «GPS Data at ACN Event» of the Telematics. <Ref. to TEL(diag)-12, Read Current Data.>	Is the displayed location data indicated within the AT&T cellular coverage area? (For the AT&T cellular coverage area, refer to the AT&T website. The system operates only on 3G and 4G technology.)	Go to step 11.	The collision occurred outside the cellular coverage area.
11 CHECK COMMUNICATION STATUS AT TIME OF ACCIDENT (CHECK CURRENT DATA). Display the current data «Call Status at ACN Event» of the Telematics. <Ref. to TEL(diag)-12, Read Current Data.>	If the data shows «Call Started» or «Call Connected»; Go to A. If the data shows «Call Not Started»; Go to B. If the data shows «No Network Service»; Go to C. If the data shows «Call Ended by SXM»; Go to D.	A: Go to step 12. B: Replace the DCM. <Ref. to ET-44, Data Communication Module.> C: Replace the antenna. <Ref. to ET-34, Antenna.> D: The connection ended due to a server-side reason; therefore, there is no failure on the vehicle.	—
12 CHECK TIME OF ACCIDENT (CHECK CURRENT DATA). Display the current data «TimeStamp at ACN Event» of the Telematics. <Ref. to TEL(diag)-12, Read Current Data.> NOTE: The time stamp is displayed in the Coordinated Universal Time (UTC), which is different from actual time at each location. Therefore, time difference needs to be corrected for use. Example: [12/22 01:30 in UTC time] is corrected as [12/21 20:30 in New York time].	Does the time of the accident match with the data?	Replace the antenna. <Ref. to ET-34, Antenna.>	Replace the DCM. <Ref. to ET-44, Data Communication Module.>

Diagnostics with Phenomenon

TELEMATICS SYSTEM (DIAGNOSTICS)

2. THE SYSTEM DOES NOT NOTIFY THE CENTER EVEN IF THE SOS BUTTON IS PRESSED

NOTE:

Perform the diagnostics for "Phone conversation is not possible. (The microphone does not respond to a voice. No sound is heard from the speaker.)". <Ref. to TEL(diag)-68, PHONE CONVERSATION IS NOT POSSIBLE. (THE MICROPHONE DOES NOT RESPOND TO A VOICE. NO SOUND IS HEARD FROM THE SPEAKER.), INSPECTION, Diagnostics with Phenomenon.>

CAUTION:

CommCheck is required after replacing the DCM. <Ref. to ET-27, REGISTRATION (COMM CHECK), OPERATION, Telematics System.>

Step	Check	Yes	No
1 CHECK SUBSCRIPTION STATUS. Display the current data «SOS Active» of the Telematics. <Ref. to TEL(diag)-12, Read Current Data.>	Is the data «TRUE»?	Go to step 2.	The user does not have a service subscription; therefore, it is not a failure.
2 CHECK DTCS. Read DTCs of the Telematics. <Ref. to TEL(diag)-15, Diagnostic Code(s) Display.>	Is DTC displayed?	Perform the diagnosis according to DTC.	Go to step 3.
3 CHECK RECEIVED SIGNAL STRENGTH WHEN SOS BUTTON WAS PRESSED (CHECK CURRENT DATA). Display the current data «RSSI at SOS/ ICALL(1)» of the Telematics. <Ref. to TEL(diag)-12, Read Current Data.>	Is the data 26% or more?	Go to step 5.	Go to step 4.
4 CHECK AT&T CELLULAR COVERAGE AREA. 1) Check whether the SOS button was pressed within the cellular coverage area. 2) Display the current data «GPS Data at Time of Button Push(1)» of the Telematics. <Ref. to TEL(diag)-12, Read Current Data.>	Is the displayed location data indicated within the AT&T cellular coverage area? (For the AT&T cellular coverage area, refer to the AT&T website. The system operates only on 3G and 4G technology.)	Go to step 5.	The SOS button was pressed outside the cellular coverage area.
5 CHECK COMMUNICATION STATUS OF WHEN SOS BUTTON WAS PRESSED (CHECK CURRENT DATA). Display the current data «Call status at SOS/ ICALL Event(1)» of the Telematics. <Ref. to TEL(diag)-12, Read Current Data.>	If the data shows «Call Started» or «Call Connected»; Go to A. If the data shows «Call Not Started»; Go to B. If the data shows «No Network Service»; Go to C. If the data shows «Call Ended by SXM»; Go to D.	A: Go to step 6. B: Go to step 7. C: Replace the antenna. <Ref. to ET-34, Antenna.> D: The connection ended due to a server-side reason; therefore, there is no failure on the vehicle.	—
6 CHECK TIME OF WHEN SOS BUTTON WAS PRESSED (CHECK CURRENT DATA). Display the current data «Timestamp at Time of Button Push(1)» of the Telematics. <Ref. to TEL(diag)-12, Read Current Data.> NOTE: The time stamp is displayed in the Coordinated Universal Time (UTC), which is different from actual time at each location. Therefore, time difference needs to be corrected for use. Example: [12/22 01:30 in UTC time] is corrected as [12/21 20:30 in New York time].	Does the time of the SOS button operation match with the data?	Go to step 7.	Replace the DCM. <Ref. to ET-44, Data Communication Module.>

Diagnostics with Phenomenon

TELEMATICS SYSTEM (DIAGNOSTICS)

Step	Check	Yes	No
7 CHECK SOS BUTTON. Check the SOS button. <Ref. to TEL(diag)-36, DTC B2A08 SOS BUTTON CIRCUIT, Diagnostic Procedure with Diagnostic Trouble Code (DTC).>	Is there any fault?	Replace the SOS button. <Ref. to ET-37, Switches and Harness.>	Replace the DCM. <Ref. to ET-44, Data Communication Module.>

3. THE SYSTEM PLACES AN SOS CALL UNINTENTIONALLY DURING DRIVING

Step	Check	Yes	No
1 CHECK DTCS. Read DTCs of the Telematics. <Ref. to TEL(diag)-15, Diagnostic Code(s) Display.>	Is DTC displayed?	Perform the diagnosis according to DTC.	Check the SOS button. <Ref. to ET-37, Switches and Harness.>

4. THE SYSTEM PLACES AN I-CALL UNINTENTIONALLY DURING DRIVING

Step	Check	Yes	No
1 CHECK DTCS. Read DTCs of the Telematics. <Ref. to TEL(diag)-15, Diagnostic Code(s) Display.>	Is DTC displayed?	Perform the diagnosis according to DTC.	Check the i-button. <Ref. to ET-37, Switches and Harness.>

5. THE SYSTEM DOES NOT NOTIFY THE CENTER EVEN IF THE I-BUTTON IS PRESSED UPON VEHICLE MALFUNCTION

NOTE:

Perform the diagnostics for "Phone conversation is not possible. (The microphone does not respond to a voice. No sound is heard from the speaker.)".

CAUTION:

CommCheck is required after replacing the DCM. <Ref. to ET-27, REGISTRATION (COMM CHECK), OPERATION, Telematics System.>

Step	Check	Yes	No
1 CHECK SUBSCRIPTION STATUS. Display the current data «ICALL Active» of the Telematics. <Ref. to TEL(diag)-12, Read Current Data.>	Is the data «TRUE»?	Go to step 2.	The user does not have a service subscription; therefore, it is not a failure.
2 CHECK DTCS. Read DTCs of the Telematics. <Ref. to TEL(diag)-15, Diagnostic Code(s) Display.>	Is DTC displayed?	Perform the diagnosis according to DTC.	Go to step 3.
3 CHECK RECEIVED SIGNAL STRENGTH WHEN I-BUTTON WAS PRESSED (CHECK CURRENT DATA). Display the current data «RSSI at SOS/ICALL(1)» of the Telematics. <Ref. to TEL(diag)-12, Read Current Data.>	Is the data 26% or more?	Go to step 5.	Go to step 4.
4 CHECK AT&T CELLULAR COVERAGE AREA. 1) Check whether the i-button was pressed within the cellular coverage area. 2) Display the current data «GPS Data at Time of Button Push(1)» of the Telematics. <Ref. to TEL(diag)-12, Read Current Data.>	Is the displayed location data indicated within the AT&T cellular coverage area? (For the AT&T cellular coverage area, refer to the AT&T website. The system operates only on 3G and 4G technology.)	Go to step 5.	The i-button was pressed outside the cellular coverage area.

Diagnostics with Phenomenon

TELEMATICS SYSTEM (DIAGNOSTICS)

6. REMOTE VEHICLE LOCATOR CANNOT LOCATE THE VEHICLE

Step	Check	Yes	No
1 CHECK SUBSCRIPTION STATUS. Display the current data «Account Status» of the Telematics. <Ref. to TEL(diag)-12, Read Current Data.>	Is the data «TRUE»?	Go to step 2.	The user does not have a service subscription; therefore, it is not a failure.
2 CHECK CURRENT COMMUNICATION ENVIRONMENT OF USER'S SMARTPHONE. Check that the user's smartphone can be connected to the Internet.	Can it be connected to the Internet?	Go to step 3.	The user's smartphone or the Internet environment has a problem.
3 CHECK CURRENT COMMUNICATION ENVIRONMENT OF USER'S SMARTPHONE. Check that the user's smartphone can display the current location.	Is the current location displayed?	Currently no failure is found. If the current location is not displayed, the user's Internet environment (radio waves, etc.) possibly had a problem.	Go to step 4.
4 CHECK CURRENT RECEIVED SIGNAL STRENGTH (CHECK CURRENT DATA). Display the current data «Signal Strength» of the Telematics. <Ref. to TEL(diag)-12, Read Current Data.>	Is the data 26% or more?	Go to step 6.	Go to step 5.
5 CHECK AT&T CELLULAR COVERAGE AREA. Ask the user where he/she operated the remote control.	Is the location of the remote control operation within the AT&T cellular coverage area? (For the AT&T cellular coverage area, refer to the AT&T website. The system operates only on 3G and 4G technology.)	Go to step 6.	The location of the remote control operation was outside the cellular coverage area.
6 CHECK DTCS. Check DTCs in the following systems; <ul style="list-style-type: none"> • Body control <Ref. to BC(diag)-10, Read Diagnostic Trouble Code (DTC).> • Telematics <Ref. to TEL(diag)-15, Diagnostic Code(s) Display.> 	Is DTC displayed?	Perform the diagnosis according to DTC. <Ref. to BC(diag)-25, LIST, List of Diagnostic Trouble Code (DTC).> <Ref. to TEL(diag)-15, LIST, Diagnostic Code(s) Display.>	Check the Starlink Server report to verify that there was no server outage that coincides with the day/time the customer reported that the issue occurred. (Refer to STARLINK Server Maintenance/Down Report under Reports and Starlink section in Subarunet.) If no outage exists for that time frame, it is possible that there was environmental interference (radio waves, etc.) when the user performed the operation. No further actions are recommended.

Diagnostics with Phenomenon

TELEMATICS SYSTEM (DIAGNOSTICS)

7. REMOTE VEHICLE LOCATOR INDICATES AN INCORRECT LOCATION FOR THE VEHICLE

CAUTION:

CommCheck is required after replacing the DCM. <Ref. to ET-27, REGISTRATION (COMM CHECK), OPERATION, Telematics System.>

Step	Check	Yes	No
1 CHECK DTCS. Read DTCs of the Telematics. <Ref. to TEL(diag)-15, Diagnostic Code(s) Display.>	Is DTC displayed?	Perform the diagnosis according to DTC.	Go to step 2.
2 CHECK CURRENT COMMUNICATION ENVIRONMENT OF USER'S SMARTPHONE. Check that the user's smartphone can display the current location.	Is it displayed correctly? (Is there a deviation of 100 m (328 ft) or more?)	Currently no failure is found. When the user had a problem, there was a failure with the GPS antenna reception environment, etc.	Go to step 3.
3 CHECK CURRENT COMMUNICATION ENVIRONMENT OF USER'S SMARTPHONE. Check again that the user's smartphone can display the current location in a place where the sky is open.	Is it displayed correctly? (Is there a deviation of 100 m (328 ft) or more?)	Currently no failure is found. When the user had a problem, there was a failure with the GPS antenna reception environment, etc.	Replace the DCM. <Ref. to ET-44, Data Communication Module.>

8. REMOTE DOOR LOCK DOES NOT LOCK THE DOORS OF THE VEHICLE

Step	Check	Yes	No
1 CHECK SUBSCRIPTION STATUS. Display the current data «Account Status» of the Telematics. <Ref. to TEL(diag)-12, Read Current Data.>	Is the data «TRUE»?	Go to step 2.	The user does not have a service subscription; therefore, it is not a failure.
2 CHECK CURRENT COMMUNICATION ENVIRONMENT OF USER'S SMARTPHONE. Check that the user's smartphone can be connected to the Internet.	Can it be connected to the Internet?	Go to step 3.	The user's smartphone or the Internet environment has a problem.
3 CHECK DOOR LOCK FUNCTION. Check that the user's smartphone can lock the doors in the current situation.	Are the doors locked?	Currently no failure is found. When the user had a problem, there was a failure with the Internet connection environment, etc.	Go to step 4.
4 CHECK CURRENT RECEIVED SIGNAL STRENGTH (CHECK CURRENT DATA). Display the current data «Signal Strength» of the Telematics. <Ref. to TEL(diag)-12, Read Current Data.>	Is the data 26% or more?	Go to step 6.	Go to step 5.
5 CHECK AT&T CELLULAR COVERAGE AREA. Ask the user where he/she operated the remote control.	Is the location of the remote control operation within the AT&T cellular coverage area? (For the AT&T cellular coverage area, refer to the AT&T website. The system operates only on 3G and 4G technology.)	Go to step 6.	The location of the remote control operation was outside the cellular coverage area.

Diagnostics with Phenomenon

TELEMATICS SYSTEM (DIAGNOSTICS)

Step	Check	Yes	No
6 CHECK DOOR LOCK FUNCTION. Check that the keyless transmitter can lock the doors of the vehicle.	Are the doors locked?	Go to step 7.	Perform the diagnosis according to the inspection for the door lock control system. <Ref. to SL-10, INSPECTION, Door Lock Control System.>
7 CHECK DTCS. Check DTCs in the following systems; <ul style="list-style-type: none"> • Body control <Ref. to BC(diag)-10, Read Diagnostic Trouble Code (DTC).> • Telematics <Ref. to TEL(diag)-15, Diagnostic Code(s) Display.> 	Is DTC displayed?	Perform the diagnosis according to DTC. <Ref. to BC(diag)-25, LIST, List of Diagnostic Trouble Code (DTC).> <Ref. to TEL(diag)-15, LIST, Diagnostic Code(s) Display.>	Check the Starlink Server report to verify that there was no server outage that coincides with the day/time the customer reported that the issue occurred. (Refer to STARLINK Server Maintenance/Down Report under Reports and Starlink section in Subarunet.) If no outage exists for that time frame, it is possible that there was environmental interference (radio waves, etc.) when the user performed the operation. No further actions are recommended.

Diagnostics with Phenomenon

TELEMATICS SYSTEM (DIAGNOSTICS)

9. THE DOORS LOCK UNINTENTIONALLY

Step	Check	Yes	No
<p>1 CHECK DOOR LOCK SWITCH. Check the door lock switch. <Ref. to SL-10, INSPECTION, Door Lock Control System.></p>	Is the door lock switch OK?	Check the Starlink Server report to verify that there was no server outage that coincides with the day/time the customer reported that the issue occurred. (Refer to STARLINK Server Maintenance/Down Report under Reports and Starlink section in Subarunet.) If no outage exists for that time frame, it is possible that there was environmental interference (radio waves, etc.) when the user performed the operation. No further actions are recommended.	Perform the diagnosis according to the inspection for the door lock switch. <Ref. to SL-10, INSPECTION, Door Lock Control System.>

10. THE DOORS UNLOCK UNINTENTIONALLY

Step	Check	Yes	No
<p>1 CHECK DOOR LOCK SWITCH. Check the door unlock switch. <Ref. to SL-10, INSPECTION, Door Lock Control System.></p>	Is the door lock switch OK?	Check the Starlink Server report to verify that there was no server outage that coincides with the day/time the customer reported that the issue occurred. (Refer to STARLINK Server Maintenance/Down Report under Reports and Starlink section in Subarunet.) If no outage exists for that time frame, it is possible that there was environmental interference (radio waves, etc.) when the user performed the operation. No further actions are recommended.	Perform the diagnosis according to the inspection for the door lock switch. <Ref. to SL-10, INSPECTION, Door Lock Control System.>

Diagnostics with Phenomenon

TELEMATICS SYSTEM (DIAGNOSTICS)

11.REMOTE HORN & HAZARD LIGHTS DO NOT OPERATE UPON REQUEST

	Step	Check	Yes	No
1	CHECK SUBSCRIPTION STATUS. Display the current data «Account Status» of the Telematics. <Ref. to TEL(diag)-12, Read Current Data.>	Does the data display «TRUE»?	Go to step 2.	The user does not have a service subscription; therefore, it is not a failure.
2	CHECK CURRENT COMMUNICATION ENVIRONMENT OF USER'S SMARTPHONE. Check that the user's smartphone can be connected to the Internet.	Can it be connected to the Internet?	Go to step 3.	The user's smartphone or the Internet environment has a problem.
3	CHECK HORN AND HAZARD LIGHT FUNCTIONS. Check that the horn and hazard light currently operate by the user's smartphone.	Do the horn and hazard light operate?	Currently no failure is found. When the user had a problem, there was a failure with the Internet connection environment, etc.	Go to step 4.
4	CHECK CURRENT RECEIVED SIGNAL STRENGTH (CHECK CURRENT DATA). Display the current data «Signal Strength» of the Telematics. <Ref. to TEL(diag)-12, Read Current Data.>	Does the data indicate 26% or more?	Go to step 6.	Go to step 5.
5	CHECK AT&T CELLULAR COVERAGE AREA. Ask the user where he/she operated the remote control.	Is the location of the remote control operation within the AT&T cellular coverage area? (For the AT&T cellular coverage area, refer to the AT&T website. The system operates only on 3G and 4G technology.)	Go to step 6.	The location of the remote control operation was outside the cellular coverage area.
6	CHECK HORN AND HAZARD LIGHT FUNCTIONS. Check that the horn and hazard light operate by the keyless transmitter. (Press the lock button three times.)	Do the horn and hazard light operate?	Go to step 8.	Go to step 7.
7	CHECK HORN OPERATION. Activate the function check «Horn Output» of the body integrated unit. <Ref. to BC(diag)-24, Function Check.>	Does the horn sound?	Check the keyless transmitter. <Ref. to SL-75, Keyless Transmitter.> <Ref. to SL-77, Access Key.>	Check the horn circuit. <Ref. to WI-146, Horn System.>

Diagnostics with Phenomenon

TELEMATICS SYSTEM (DIAGNOSTICS)

Step	Check	Yes	No
8 CHECK DTCS. Check DTCs in the following systems; <ul style="list-style-type: none"> • Body control <Ref. to BC(diag)-10, Read Diagnostic Trouble Code (DTC).> • Telematics <Ref. to TEL(diag)-15, Diagnostic Code(s) Display.> 	Is DTC displayed?	Perform the diagnosis according to DTC. <Ref. to BC(diag)-25, LIST, List of Diagnostic Trouble Code (DTC).> <Ref. to TEL(diag)-15, LIST, Diagnostic Code(s) Display.>	Check the Starlink Server report to verify that there was no server outage that coincides with the day/time the customer reported that the issue occurred. (Refer to STARLINK Server Maintenance/Down Report under Reports and Starlink section in Subarunet.) If no outage exists for that time frame, it is possible that there was environmental interference (radio waves, etc.) when the user performed the operation. No further actions are recommended.

Diagnostics with Phenomenon

TELEMATICS SYSTEM (DIAGNOSTICS)

12. WHEN THE VEHICLE SECURITY ALARM IS ACTIVATED, NOTIFICATION IS NOT SENT

Step	Check	Yes	No
1 CHECK SUBSCRIPTION STATUS. Display the current data «Account Status» of the Telematics. <Ref. to TEL(diag)-12, Read Current Data.>	Does the data display «TRUE»?	Go to step 2.	The user does not have a service subscription; therefore, it is not a failure.
2 CHECK CURRENT COMMUNICATION ENVIRONMENT OF USER'S SMARTPHONE. Check that the user's smartphone can be connected to the Internet.	Can it be connected to the Internet?	Go to step 3.	The user's smartphone or the Internet environment has a problem.
3 CHECK SECURITY ALERT SYSTEM. Operate the security alert system.	Does it operate?	Go to step 4.	Check the security alert system. <Ref. to SL-28, INSPECTION, Security System.>
4 CHECK CURRENT COMMUNICATION ENVIRONMENT OF USER'S SMARTPHONE. Check that a notification is sent to the user's smartphone after the security alert is activated.	Does the smartphone receive a notification?	Currently no failure is found.	Go to step 5.
5 CHECK CURRENT RECEIVED SIGNAL STRENGTH (CHECK CURRENT DATA). Display the current data «Signal Strength» of the Telematics. <Ref. to TEL(diag)-12, Read Current Data.>	Does the data indicate 26% or more?	Go to step 7.	Go to step 6.
6 CHECK AT&T CELLULAR COVERAGE AREA. Ask the user where he/she operated the remote control.	Is the location of the remote control operation within the AT&T cellular coverage area? (For the AT&T cellular coverage area, refer to the AT&T website. The system operates only on 3G and 4G technology.)	Go to step 7.	The location of the remote control operation was outside the cellular coverage area.
7 CHECK DTCS. Check DTCs in the following systems; <ul style="list-style-type: none"> • Body control <Ref. to BC(diag)-10, Read Diagnostic Trouble Code (DTC).> • Telematics <Ref. to TEL(diag)-15, Diagnostic Code(s) Display.> 	Is DTC displayed?	Perform the diagnosis according to DTC. <Ref. to BC(diag)-25, LIST, List of Diagnostic Trouble Code (DTC).> <Ref. to TEL(diag)-15, LIST, Diagnostic Code(s) Display.>	Check the Starlink Server report to verify that there was no server outage that coincides with the day/time the customer reported that the issue occurred. (Refer to STARLINK Server Maintenance/Down Report under Reports and Starlink section in Subarunet.) If no outage exists for that time frame, it is possible that there was environmental interference (radio waves, etc.) when the user performed the operation. No further actions are recommended.

Diagnostics with Phenomenon

TELEMATICS SYSTEM (DIAGNOSTICS)

13. WHEN A MALFUNCTION INDICATOR LIGHT/WARNING LIGHT IS LIT, NOTIFICATION IS NOT SENT

Step	Check	Yes	No
1 CHECK SUBSCRIPTION STATUS. Display the current data «Diagnostic Alert Active» of the Telematics. <Ref. to TEL(diag)-12, Read Current Data.>	Does the data display «TRUE»?	Go to step 2.	The user does not have a service subscription; therefore, it is not a failure.
2 CHECK WARNING LIGHT. Check if the warning light illuminates.	Does it illuminate?	Go to step 3.	Currently no failure is found. Since the warning light is not lit, notification is not sent.
3 CHECK DTCS. Check the DTC of telematics. <Ref. to TEL(diag)-15, Diagnostic Code(s) Display.>	Is DTC displayed?	Perform the diagnosis according to DTC.	Go to step 4.
4 CHECK AT&T CELLULAR COVERAGE AREA. Ask the user where he/she turned the ignition switch to OFF after the warning light was lit.	Is the location, where the ignition switch was turned to OFF after the warning light was lit, within the AT&T cellular coverage area? (For the AT&T cellular coverage area, refer to the AT&T website. The system operates only on 3G and 4G technology.)	Check the Starlink Server report to verify that there was no server outage that coincides with the day/time the customer reported that the issue occurred. (Refer to STARLINK Server Maintenance/Down Report under Reports and Starlink section in Subarunet.) If no outage exists for that time frame, it is possible that there was environmental interference (radio waves, etc.) when the user performed the operation. No further actions are recommended.	The location where the ignition switch was turned to OFF (where warning light illumination information was sent) was outside the cellular coverage area.

Diagnostics with Phenomenon

TELEMATICS SYSTEM (DIAGNOSTICS)

14.MAINTENANCE NOTIFICATIONS ARE NOT SENT

Step	Check	Yes	No
1 CHECK SUBSCRIPTION STATUS. Display the current data «Maintenance Alert Active» of the Telematics. <Ref. to TEL(diag)-12, Read Current Data.>	Does the data display «TRUE»?	Go to step 2.	The user does not have a service subscription; therefore, it is not a failure.
2 CHECK DTCS. Read DTCs of the Telematics. <Ref. to TEL(diag)-15, Diagnostic Code(s) Display.>	Is DTC displayed?	Perform the diagnosis according to DTC. <Ref. to TEL(diag)-15, LIST, Diagnostic Code(s) Display.>	Check the Starlink Server report to verify that there was no server outage that coincides with the day/time the customer reported that the issue occurred. (Refer to STARLINK Server Maintenance/Down Report under Reports and Starlink section in Subarunet.) If no outage exists for that time frame, it is possible that there was environmental interference (radio waves, etc.) when the user performed the operation. No further actions are recommended.

Diagnostics with Phenomenon

TELEMATICS SYSTEM (DIAGNOSTICS)

15. THE LED DOES NOT DISPLAY THE STATUS. (LED MALFUNCTION)

CAUTION:

CommCheck is required after replacing the DCM. <Ref. to ET-27, REGISTRATION (COMM CHECK), OPERATION, Telematics System.>

Step	Check	Yes	No
1 CHECK THE SUBSCRIPTION STATUS. Display the current data «Account Status» of the Telematics. <Ref. to TEL(diag)-12, Read Current Data.>	Is the data «TRUE»?	Go to step 2.	The user does not have a service subscription; therefore, it is not a failure. (Both LEDs are turned off.)
2 CHECK THE LED. 1) Turn the ignition switch to ON. 2) Check the LED condition.	Does the RED LED go off and the GREEN LED illuminate?	The circuit has returned to a normal condition at this time. Reproduce the failure, and then perform the diagnosis again. NOTE: In this case, temporary poor contact of connector, temporary open or short circuit of harness may be the cause.	Go to step 3.
3 CHECK DTCS. Read DTCs of the Telematics. <Ref. to TEL(diag)-15, Diagnostic Code(s) Display.>	Is DTC B2A0A or B2A0B displayed?	Perform the diagnosis according to DTC. <Ref. to TEL(diag)-40, DTC B2A0A RED LED CIRCUIT, Diagnostic Procedure with Diagnostic Trouble Code (DTC).> <Ref. to TEL(diag)-42, DTC B2A0B GREEN LED CIRCUIT, Diagnostic Procedure with Diagnostic Trouble Code (DTC).>	Go to step 4.
4 CHECK THE LED ILLUMINATION CONDITION. Perform the telematics system operation check. <Ref. to TEL(diag)-20, System Operation Check Mode.>	Is the LED turned on or off?	Go to step 5.	Go to step 6.

Diagnostics with Phenomenon

TELEMATICS SYSTEM (DIAGNOSTICS)

Step	Check	Yes	No
5 CHECK THE LED. 1) Turn the ignition switch to ON. 2) Check the LED condition.	Does the RED LED go off and the GREEN LED illuminate?	The circuit has returned to a normal condition at this time. Reproduce the failure, and then perform the diagnosis again. NOTE: In this case, temporary poor contact of connector, temporary open or short circuit of harness may be the cause.	Replace the DCM. <Ref. to ET-44, Data Communication Module.>
6 CHECK THE LED. Measure the continuity of the telematics button (LED) unit. <i>Terminals</i> <i>No. 7 — No. 1:</i> <i>No. 4 — No. 1:</i>	Is there continuity?	Replace the DCM. <Ref. to ET-44, Data Communication Module.>	Replace the telematics button. <Ref. to ET-37, Switches and Harness.>

Diagnostics with Phenomenon

TELEMATICS SYSTEM (DIAGNOSTICS)

16. PHONE CONVERSATION IS NOT POSSIBLE. (THE MICROPHONE DOES NOT RESPOND TO A VOICE. NO SOUND IS HEARD FROM THE SPEAKER.)

Step	Check	Yes	No
1 CHECK DTCS. Read DTCs of the Telematics. <Ref. to TEL(diag)-15, Diagnostic Code(s) Display.>	Is DTC B2A04, B2A05 or B2A06 displayed?	Perform the diagnosis according to DTC. <Ref. to TEL(diag)-27, DTC B2A04 MIC CIRCUIT, Diagnostic Procedure with Diagnostic Trouble Code (DTC).> <Ref. to TEL(diag)-29, DTC B2A05 LEFT SPEAKER/AUDIO CIRCUIT, Diagnostic Procedure with Diagnostic Trouble Code (DTC).> <Ref. to TEL(diag)-32, DTC B2A06 RIGHT SPEAKER/AUDIO CIRCUIT, Diagnostic Procedure with Diagnostic Trouble Code (DTC).>	Go to step 2.
2 CHECK SPEAKER OPERATION. Perform [Speaker ON] in the telematics system operation check. <Ref. to TEL(diag)-20, System Operation Check Mode.>	Does it sound?	Go to step 3.	Go to step 4.
3 CHECK MICROPHONE. Perform the microphone voice input.	Is the voice recognized?	Go to step 4.	Replace the microphone.
4 CHECK SPEAKER. Check the speaker.	Is there any fault?	Replace the speaker.	Go to step 5.
5 CHECK TELEPHONE CALL. 1) Place the mobile phone in the vehicle. 2) Establish a Bluetooth connection between the mobile phone in the vehicle and the vehicle unit. 3) Make a call from outside to the mobile phone in the vehicle. 4) Check that a telephone call is available through the in-vehicle microphone with the hands-free function.	Is a telephone call successful?	The circuit has returned to a normal condition at this time. Reproduce the failure, and then perform the diagnosis again. NOTE: In this case, temporary poor contact of connector, temporary open or short circuit of harness may be the cause.	Perform the diagnosis according to inspection for DTC B2A04 MIC CIRCUIT. <Ref. to TEL(diag)-27, DTC B2A04 MIC CIRCUIT, Diagnostic Procedure with Diagnostic Trouble Code (DTC).>

This service manual has been prepared to provide SUBARU service personnel with the necessary information and data for the correct maintenance and repair of SUBARU vehicles.

This manual includes the procedures for maintenance, disassembling, reassembling, inspection and adjustment of components and diagnostics for guidance of experienced mechanics.

Please peruse and utilize this manual fully to ensure complete repair work for satisfying our customers by keeping their vehicle in optimum condition. When replacement of parts during repair work is needed, be sure to use SUBARU genuine parts.

All information, illustration and specifications contained in this manual are based on the latest product information available at the time of publication approval.

1. Basic Diagnostic Procedure

A: BASIC PROCEDURES

1. GENERAL DESCRIPTION

The most important purpose of diagnostics is to quickly determine which part is malfunctioning, to save time and labor.

2. IDENTIFICATION OF TROUBLE SYMPTOM

Determine what the problem is based on the symptom.

3. PROBABLE CAUSE OF TROUBLE

Look at the wiring diagram and check the system's circuit. Then check the switch, relay, fuse, ground, etc.

4. LOCATION AND REPAIR OF TROUBLE

- 1) Using the diagnostics, narrow down the causes.
- 2) If necessary, use a voltmeter, ohmmeter, etc.
- 3) Before replacing certain component parts (switch, relay, etc.), check the power supply, ground, for open wiring harness, poor connectors, etc. If no problem is encountered, check the component parts.

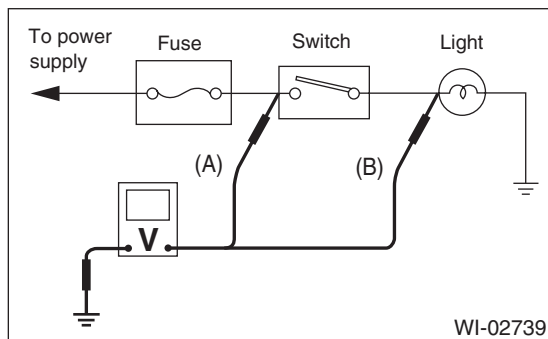

5. SYSTEM OPERATION CHECK

After repairing, ensure that the system operates properly.

B: BASIC INSPECTION

1. VOLTAGE MEASUREMENT

- 1) Using a voltmeter, connect the negative lead to a good ground point or negative battery terminal and the positive lead to the connector or component terminal.
- 2) Contact the positive lead of the voltmeter on connector (A). The voltmeter will indicate a voltage.
- 3) Touch connector (B) with the positive probe. The voltmeter will indicate no voltage.

- 4) With the test set-up held as it is, turn the switch to ON. The voltmeter will indicate a voltage and, at the same time, the light will illuminate.

- 5) The circuit is in good order. If a problem such as a light failing to illuminate occurs, use the procedures outlined above to track down the malfunction.

2. CIRCUIT CONTINUITY CHECKS

- 1) Disconnect the battery terminal or connector so there is no voltage between the check points. Contact the two leads of an ohmmeter to each of the check points.

If the circuit has diodes, reverse the two leads and check again.

- 2) Use an ohmmeter to check for diode continuity. When contacting the negative lead to the diode positive side and the positive lead to the negative side, there should be continuity.

When contacting the two leads in reverse, there should be no continuity.

- 3) The symbol "○ — ○" indicates that continuity exists between two points or terminals. For example, when a switch position is at "3", continuity exists among terminals 1, 3 and 6, as shown in the table below.

Terminal	Switch Position					
Switch Position	1	2	3	4	5	6
OFF						
1	○ — ○				○ — ○	
2	○ — ○			○ — ○		
3	○ — ○		○ — ○			○ — ○
4	○ — ○	○ — ○				○ — ○

WI-02741

Basic Diagnostic Procedure

WIRING SYSTEM

3. HOW TO DETERMINE AN OPEN CIRCUIT

1) WITH VOLTMETER:

An open circuit is determined by measuring the voltage between respective connectors and ground using a voltmeter, starting with the connector closest to the power supply. The power supply must be turned ON so that current flows in the circuit. If voltage is not present between a particular connector and ground, the circuit between that connector and the previous connector is open.

2) WITH OHMMETER:

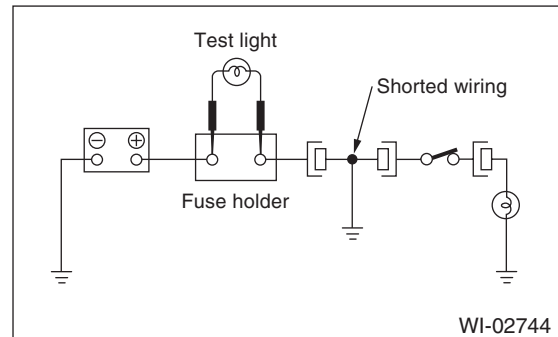

Disconnect all connectors affected, and check continuity in the wiring between adjacent connectors. When the ohmmeter indicates "infinite", the wiring is open.

4. HOW TO DETERMINE A SHORT CIRCUIT

1) WITH TEST LIGHT:

Connect a test light (rated at approx. 3 watts) in place of the blown fuse and allow current to flow through the circuit. Disconnect one connector at a time from the circuit. Starting with the one located farthest from the power supply. If the test light goes out when a connector is disconnected, the wiring between that connector and the next connector (farther from the power supply) is shorted.

2) WITH OHMMETER:

Disconnect all affected connectors, and check continuity between each connector and ground. When the ohmmeter indicates continuity between a particular connector and a ground, that connector is shorted.

C: HOW TO READ WIRING DIAGRAMS

1. WIRING DIAGRAM

The wiring diagram of each system is illustrated so that you can understand the path through which the electric current flows from the battery.

Sketches and codes are used in the diagrams. They should read as follows:

- Each connector and its terminal position are indicated by a sketch of the connector in a disconnected state which is viewed from the front.

- The number of poles or pins, presence of a lock are indicated in the sketch of each connector. In the sketch, the highest pole number refers to the number of poles which the connector has. For example, the sketch of the connector shown in figure indicates the connector has 9 poles.

Connector used in vehicle	Connector shown in wiring diagram		
	Sketch	Symbol	Number of poles
	<p>Double frames</p> <p>Indicates a lock is included.</p> <p>Indicates the number of poles.</p>		Numbered in order from upper right to lower left.
	<p>Indicates a lock is included.</p> <p>Single frame</p>		Numbered in order from upper left to lower right.

WI-02747

Basic Diagnostic Procedure

WIRING SYSTEM

- When one set of connectors is viewed from the front side, the pole numbers of one connector are symmetrical to those of the other. When these two connectors are connected as a unit, the poles which have the same number are joined.

Wiring diagram:

The connectors are numbered along with the number of poles, external colors, and mating connections in the accompanying list.

- The sketch of each connector in the wiring diagram usually shows the (A) side of the connector. The relationship between the wire color, terminal number and connector is described in the figure.

NOTE:

A wire which runs in one direction from a connector terminal sometimes may have a different color from that which runs in the other direction from that terminal.

- In the wiring diagram, connectors which have no terminal number refer to one-pole types. Sketches of these connectors are omitted intentionally.

- The following color codes are used to indicate the colors of the wires.

Color code	Color
L	Blue
B	Black
Y	Yellow
G	Green
R	Red
W	White
Br	Brown
Lg	Light green
Gr	Gray
P	Pink
Or	Orange
Sb	Light blue
V	Violet
SA	Sealed (inner)
SB	Sealed (outer)

- The wire color code, which consists of two letters (or three letters including Br or Lg), indicates the standard color (base color of the wire covering) by its first letter and the stripe marking by its second letter.

- The table lists the nominal sectional areas and allowable currents of the wires.

CAUTION:

When replacing or repairing a wire, be sure to use the same size and type of the wire which was originally used.

NOTE:

- The allowable current in the table indicates the tolerable amperage of each wire at an ambient temperature of 40°C (104°F).
- The allowable current changes with ambient temperature. Also, it changes if a bundle of more than two wires is used.

Nominal sectional area mm ²	No. of strands/ strand diameter	Outside diameter of wiring mm	Allowable current Amps/ 40°C (104°F)
0.3	7/0.26	1.8	7
0.5	7/0.32	2.2 (or 2.0)	12
0.75	30/0.18	2.6 (or 2.4)	16
0.85	11/0.32	2.4 (or 2.2)	16
1.25	16/0.32	2.7 (or 2.5)	21
2	26/0.32	3.1 (or 2.9)	28
3	41/0.32	3.8 (or 3.6)	38
5	65/0.32	4.6 (or 4.4)	51
8	50/0.45	5.5	67

- Each unit is either directly grounded to the body or indirectly grounds through a harness ground terminal. Different symbols are used in the wiring diagram to identify the two grounding systems.

- The ground points shown in the wiring diagram refer to the following:

NOTE:

All wiring harnesses are provided with a ground point which must be securely connected.

Basic Diagnostic Procedure

WIRING SYSTEM

- Relays are classified as normally-open or normally-closed.
- The normally-closed relay has one or more contacts. The wiring diagram shows the relay mode when the energizing circuit is OFF.

Key to symbols:

- —▶ : Current flows.
- × —▶ : Current does not flow.

WI-16724

Basic Diagnostic Procedure

- Each connector number shown in the wiring diagram corresponds to that in the wiring harness. The location of each connector in the actual vehicle is determined by reading the first character of the connector (for example, a "F" for F8, "i" for i16, etc.) and the type of wiring harness. The first character of each connector number corresponds to the area or system of the vehicle.

Symbol	Wiring harness and cord
F	Front wiring harness
B	Bulkhead wiring harness
E	Engine wiring harness
T	Transmission cord
D	Door cord LH & RH, Rear gate cord Rear door cord LH & RH, Rear defogger cord
i	Instrument panel wiring harness
R	Rear wiring harness, Fuel tank cord, Roof cord, Rear gate cord
AB	Airbag wiring harness

Basic Diagnostic Procedure

WIRING SYSTEM

D: SYMBOLS IN WIRING DIAGRAMS

A number of symbols are used in each wiring diagram to easily identify parts or circuits.

1. RELAY

A symbol used to indicate a relay.

2. CONNECTOR 1

The sketch of the connector indicates the one-pole types.

3. WIRING CONNECTION

Some wiring diagrams are indicated in foldouts for convenience. Wiring destinations are indicated where necessary by corresponding symbols. (When two pages are needed for clear indication)

4. FUSE NO. & RATING

The "FUSE No. & RATING" corresponds with that used in the fuse box (main fuse box, fuse and joint box).

5. CONNECTOR 2

- Each connector is indicated by a symbol.
- Each terminal number is indicated in the corresponding wiring diagram in an abbreviated form.
- For example, terminal number "G4" refers to No. 4 terminal of connector (G: F41) shown in the connector sketch.

6. CONNECTOR SKETCH

- Each connector sketch clearly identifies the shape and color of a connector as well as terminal locations. Non-colored connectors are indicated in natural color.
- When more than two types of connector number are indicated in a connector sketch, it means that the same type connectors are used.

7. GROUND

Each grounding point can be located easily by referring to the corresponding wiring harness.

8. DIODE

A symbol is used to indicate a diode.

9. WIRE TRACING ON EXTENDED WIRING DIAGRAMS

For a wiring diagram extending over at least two pages, a symbol (consisting of the same characters with arrows), facilitates wire tracing from one page to the next.

A ↔ A, B ↔ B

10. SYMBOLS OF WIRE CONNECTION AND CROSSING

WI-02755

11. POWER SUPPLY CIRCUIT

A symbol is used to indicate the power supply in each wiring diagram.

"MB - 5", "MB - 6", etc., which are used as power-supply symbols throughout the text, correspond with those shown in the "DC POWER SUPPLY CIRCUIT" in the wiring diagram.

Accordingly, using the "DC POWER SUPPLY CIRCUIT" and wiring diagrams permits service personnel to understand the entire electrical arrangement of a system.

12. CLASSIFICATION BY SPECIFICATION

When the wiring diagram differ according to vehicle specifications, the specification difference is described by using abbreviations.

13. TWISTED PAIR LINE

The twisted pair line is indicated by a symbol in the wiring diagrams.

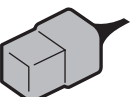

WI-25264

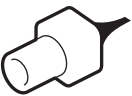

Basic Diagnostic Procedure

WIRING SYSTEM

E: CONNECTOR SYMBOL IN WIRING HARNESS

A number of connector symbols are used in each wiring diagram to easily identify the wiring harness connectors.

Standard type: Female		
Pole: From 1 to 8	Pole: From 9 to 20	Pole: More than 21
		
		
Standard type: Male		
		
		

Water proof type: Female		
Pole: From 1 to 8	Pole: From 9 to 20	Pole: More than 21

F: ABBREVIATION IN WIRING DIAGRAMS

Abbr.	Full name
ABS	Anti-lock Brake System
ACC	Accessory
A/C	Air Conditioner
ASSY	Assembly
AT	Automatic Transmission
A/F	Air/Fuel (air fuel ratio sensor)
ATF	Automatic Transmission Fluid
AUX	Auxiliary Audio Input Terminal
AWD	All Wheel Drive
B, BAT	Battery
BSD/RCTA	Blind Spot Detection/Rear Cross Traffic Alert
CAN	Controller Area Network
CM	Control Module
CVT	Continuously Variable Transmission
D	Drive range or Down
DN	Down
E	Ground
ELCM	Evaporative Leak Check Module
ECO	Economy
ECM	Engine Control Module
EEPROM	Electrically Erasable Programmable Read-Only Memory
EGR	Exhaust Gas Recirculation
F/B	Fuse & Relay Box
FL	Front Left
FR	Front Right
G	Gravity (G sensor)
H/L	Headlight
HI	High
I/F	Interface
IG	Ignition
INT	Intermittent
ISO	International Organization for Standardization
J/C	Joint Connector
LCD	Liquid Crystal Display
LH	Left Hand
LO	Low
LWR	Lower
M	Motor
M/B	Main Fuse Box
MFD	Multi Function Display
MT	Manual Transmission
N	Neutral Range
NAVI	Navigation
OP	Open or Optional Parts
P	Parking or Parking range
PASS	Passing

Abbr.	Full name
PCV	Positive Crankcase Ventilation Valve
R	Reverse Range
RH	Right Hand
RL	Rear Left
RR	Rear Right
SBF	Slow Blow Fuse
SRF	Steering responsive fog light
ST	Starter
SW	Switch
TCM	Transmission Control Module
TEL	Telephone
TFT	Thin Film Transistor
TPMS	Tire Pressure Monitor System
UPR	Upper
VDC	Vehicle Dynamics Control
WASH	Washer

2. Working Precautions

A: PRECAUTIONS WHEN WORKING WITH THE PARTS MOUNTED ON THE VEHICLE

- 1) When working under a vehicle which is jacked-up, always be sure to use rigid rack.
- 2) The parking brake must always be applied during working. Also, in automatic transmission vehicles, keep the select lever set to the P (Parking) range.
- 3) Be sure the workshop is properly ventilated when running the engine. Further, be careful not to touch the belt or fan while the engine is operating.
- 4) Be careful not to touch hot metal parts, especially the radiator and exhaust system immediately after the engine has been turned off.

B: PRECAUTIONS IN TROUBLE DIAGNOSIS AND REPAIR OF ELECTRIC PARTS

- 1) The battery cable must be disconnected from the battery's (-) terminal, and the ignition switch must be set to the OFF position, unless otherwise required by the diagnostics.
- 2) Securely fasten the wiring harness with clamps and clips so that the harness does not interfere with the body end parts, edges, bolts or screws.
- 3) When installing parts, be careful not to catch them on the wiring harness.
- 4) When disconnecting a connector, do not pull the wires, but pull while holding the connector body.

- 5) Some connectors are provided with a lock. One type of such a connector is disconnected by pushing the lock, and the other, by moving the lock up. In either type the lock shape must be identified before attempting to disconnect the connector. To connect, insert the connector until it snaps and confirm that it is connected securely.

- 6) When checking continuity between connector terminals, or measuring voltage across the terminal and ground, always touch tester probe(s) to terminals from the wiring connection side. If the probe is too thick to gain access to the terminal, use "mini" test leads.

To check water-proof connectors (which are not measurable from the wiring side), touch test probes on the terminal side and be careful not to bend or damage the terminals.

- 7) When measuring the voltage or resistance of individual sensor or all electrical control modules, use a tapered pin with a diameter of 0.6 mm (0.024 in) or less and touch it to the tip of terminal. Never insert the tapered pin into the terminal at this time. Doing so may cause internal deformation and a malfunction can occur.

- 8) Sensors, relays, electrical unit, etc., are sensitive to strong impacts. Handle them with care so that they are not dropped or mishandled.
